Because the County has not yet completed its regional study, the only appropriate density denominator is the subject property. In this case, the subject property is only 13.28 acres, and the ODFW-recommended overall residential density of one dwelling per 80 acres is exceeded. An ESEE analysis is required. Because no ESEE analysis has been provided, the Planning Director's approval must be reversed.

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

[8] This Goal 2 discussion is not necessary for the Hearings Official's conclusion in this appeal. The Policy 11 interpretation set forth above stands on its own. If, on appeal, LUBA disagrees with the Goal 2 discussion, it could still affirm the Hearings Official's decision.

NOTICE OF PENDING LAND USE DECISION BY THE LANE COUNTY PLANNING DIRECTOR

Mailing Date:	JAN 2 7 2021
Department File:	**509-PA20-05066**
Owner/Applicant:	Edward J. King
Agent:	Kim O'Dea – Law Office of Bill Kloos
Map & Tax Lot:	21-35-07-30-02800
Address:	N/A
Size:	13.28+/- Acres
Base Zone:	Impacted Forest Lands (F-2), Non-Impacted Forest Lands (F-1)
Combining Zone:	Airport Safety Combining Zone (/AS)
Comprehensive Plan:	Lane County Rural Comprehensive Plan (/RCP)

You own or occupy property near the above referenced property that is the subject of a land use application and pending decision for conditional **Approval** of this application by the Lane County Planning Director.

Notice to mortgagee, lien holder, vendor or seller: ORS Chapter 215 requires that if you receive this notice, it must be forwarded to the purchaser.

The purpose of this notice is to inform you about the proposal and pending decision, where you may receive more information and the requirements if you wish to appeal the pending decision by the Director to the Lane County Hearings Official. Any person who is adversely affected or aggrieved or who is entitled to written notice may appeal the decision by filing a written appeal in the manner and within the time period as provided below. Mailing of this notice to you precludes an appeal directly to the Land Use Board of Appeals.

PROPOSAL: A request for Director Approval of dwelling in the Impacted Forest Lands (F-2) Zone pursuant to the 'Template Dwelling' provisions of Lane Code 16.211(5) and (8) and House Bill 2225.

Enclosed is a vicinity map and site plan that shows the proposed location of the dwelling.

The proposed use that could be authorized by approval of the land use application is: One single family dwelling on the subject property.

The application, all documents and evidence relied upon by the applicant, the applicable criteria, and a copy of the Lane County Planning Director's report can be made available electronically at no cost, and copies will be provided at reasonable cost. The Lane County Land Management Division representative to contact is **Shawna Adams** at **(541) 682-8904** or **shawna.adams@co.lane.or.us**.

This decision will become final at 4 P.M. on FEB 0 8 2021 unless before this time a completed **APPLICATION FOR AN APPEAL OF A DECISION BY THE PLANNING DIRECTOR** form is submitted to and received by the Lane County Land Management Division. **This form is enclosed and must be used if you wish to appeal this decision. To complete this form and appeal the decision:**

1. Fill in the required information along with all of the materials and information required in the appeal form, the appeal fee, and all materials required by LC 14.080(1).
2. Submit the completed appeal to the Planning Director so that the Director receives it prior to the date and time that the decision becomes final (see above deadline). The Director will reject an appeal if it: (a) is not received prior to the date and time that the decision becomes final or (b) is incomplete.
3. To be accepted, appeals must satisfy all the requirements of Lane Code 14.080(1). A Type II decision issued by the Director for which a hearing has not been held may be appealed by a person who is entitled to written notice or any person who is adversely affected or aggrieved by the application.

Failure to raise an issue in a hearing—in person or in writing—or failure to provide statements of evidence sufficient to afford the Approval Authority an opportunity to respond to the issue precludes raising the issue in an appeal to the Land Use Board of Appeals (LUBA).

Prepared by: _____ **Date:** JAN 27 2021

CONDITIONS OF APPROVAL
509-PA20-05066

All of the following conditions are binding on the applicant or successive owner(s) of the parcel or successive applicant(s) who exercise this approval action.

1. Approval of 509-PA20-05066 is valid for a four-year period from the final date of approval unless and extension is granted in accordance with Lane Code Chapter 14 provisions in effect at the time the request is made.

2. The dwelling must be located within the reduced home site area (200 x150-foot minus 105x50 feet at northwest corner) shown in **Exhibit C**.

3. The dwelling must be located at least 30 feet away from any ravine, ridge or slope greater than 40 percent.

4. The subject properties are located within the Airport Safety Combining Zone (/AS) and the Transitional Surface of the Oakridge Airport. Development shall comply with the applicable requirements of LC 16.246. Pursuant to LC 16.246(3)(a) and (5)(e), no structure or object shall be erected, altered, allowed to grow or be maintained in such a manner as to penetrate the Transitional Surface.

The following conditions must be met prior to the expiration date in condition #1 and prior to approval of a building or placement permit for a dwelling, septic system, or accessory structure. Failure to meet conditions of approval as specified prior to the expiration date, if no extension has been granted prior to that date, shall invalidate this approval, and the development rights conditionally allowed by this planning action shall cease:

5. Complete, have notarized, and record the enclosed *Farm and Forest Management Agreement* with an attached "Exhibit A" depicting the legal description of the property (which must be recorded together with the Agreement at the Lane County Deeds and Records office).

6. Submit a stocking survey report for the subject parcel prepared by a qualified forester to the Lane County Assessor. Submit a copy of the stocking survey report to Lane County Land Management Division with evidence of receipt by Lane County Assessment and Taxation.

7. Obtain Lane County Facility Permit to verify the shared access easement approach to Airport Road is adequate to support a shared approach to multiple properties/dwellings as proposed. For more information about Facility Permits, contact 541-682-6902 or visit: https://lanecounty.org/ government/ county departments/ public works/right-of-way permits/facility permits/.

8. Any private access easements serving the subject property must comply with LC 15.055(4), (5), and (7), specifically including provisions for utilities. Submit a copy of the recorded access easement(s) demonstrating compliance with this requirement, including documentation verifying legal right of use for any segments coinciding with BPA access and transmission line easements. This can be satisfied by providing a copy of BPA approval or court rulings.

9. Improve the existing roadway access Airport Road and the dwelling site to the minimum standards of LC 16.211(8)(e) and the applicable standards of Lane Code Chapter 15. The shared access easement road between Airport Road and the easternmost driveway for the approved dwelling on Tax Lot 2900 and any additional portion of the access beyond the driveway used by the BPA, must be improved to road standards

with turnarounds spaced not more than 500 feet. Between that portion of the access and the home site, the driveway must be improved to driveway standards. If the driveway is over 200 feet long, turnouts spaced not more than 400 feet must be provided. As specified in LC 16.211(8)(e), Oregon Registered Professional Engineer or fire district certifications must be provided for the road and driveway grades that exceed eight percent and for any culverts or bridges.

10. Submit written verification from the Hazeldell Rural Fire Protection District, or written certification from an Oregon Registered Professional Engineer, stating that the route of access for firefighting equipment from the fire station to the building site, across public roads, bridges, and driveways comply with and meet the construction standards Lane Code 16.211(8)(e) and the Fire District standards.

11. Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(8)(c)(i). These fuel breaks shall be maintained in perpetuity. The minimum primary safety zone surrounding the proposed dwelling shall be at least 30 feet plus the Additional Safety Zone Down Slope as applicable. The minimum secondary fuel breaks surrounding the primary safety zone shall be at least 100 feet to the extent this can be established on lands owned or controlled by the owner. Primary fuel breaks, including any Additional Safety Zone Down Slopes, must be fully accommodated on site. The approved preliminary site plan in **Exhibit C** must be revised accordingly.

12. Provide evidence to the Planning Director that the domestic water supply is from a source authorized in accordance with the Water Resources Department's administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rule (OAR Chapter 629). This can be satisfied by providing a copy of the Well Log for the property that complies with the requirements outlined in Lane Manual Chapter 9.160, specifically a five-hour flow test.

13. Upon completion of **conditions #5 through #12**, the applicant shall complete and submit a Land Use Application form to Verify Compliance with Conditions of Approval, with the required processing fee. **Attach to this form a copy of:**

- Signed, notarized, and recorded Farm Use and Forest Management Agreement and description of property, along with all required exhibits;
- Recorded shared access easement(s) with BPA right of use documentation;
- Approved facility permit;
- Forest stocking survey with evidence of receipt from the County Assessor;
- Well log or well constructor's report and pump test that complies with the Lane Manual 9.160;
- Verification letter from the Hazeldell Rural Fire Protection District, or written certification from an Oregon Registered Professional Engineer, regarding adequacy of access route and the adequacy of the constructed road and driveway improvements;
- A revised final Site Plan that conforms with the approved plan, drawn to scale, including the same information, and meeting other minimum standards of the Land Management Division. These plans shall show the primary and secondary fuel breaks surrounding the proposed dwelling as required by Lane Code 16.211(8)(c)(i), the entire access between Airport Road and the home site, surfacing widths, turnouts, turnarounds, bridges, culverts, airport surface, easements, including BPA easements, transmission lines etc.

14. As part of the Verification of Conditions process, the access road, driveway and fuel breaks must be field inspected by Planning Office staff to verify that requirements stated in **conditions #3, #9, and #11** have been met. Failure to meet minimum fuel break and/or driveway and/or grade standards as in LC 16.211(8)(e) and (c) upon first inspection may require an additional application for fuel break and road inspection, with the applicable fee, at the determination of the Planning Director.

15. Upon completion of Verification of Conditions, submit a building permit to verify that the construction of the dwelling meets current Oregon Structural Specialty Code application for the proposed dwelling, with the appropriate deposit fee. Contact the Building Program at 541-682-4651 and the On-Site Wastewater Program at 541-682-3754 with questions regarding building and sanitation requirements.

16. In the building or placement permit application submittal, the applicant shall submit a site plan demonstrating that the parcel configuration, and the proposed dwelling, driveway, and septic system, are located consistent with the final approved site development plan, except as authorized by the Planning Director. Per Lane Code Chapter 14, modifications to the final approved site plan not within the scope of the original approval may be subject to a new Type II or Type III Modification of Approval.

The following condition shall be met prior to building permit issuance for above ground construction.

17. Prior to building permit submittal, the applicant must submit documentation demonstrating compliance with LC 16.246(3)(a) and (5)(e), with the maximum height limitation to be indicated on the building permit plans. Preliminary calculations under **Finding 28** indicate a single-story structure is feasible.

18. Prior to building permit submittal, the property owner must complete a FAA Form 7460-1 for the proposed dwelling and return to Seth Thompson, Aviation Planner at ODA and receive a Letter of Determination for the proposed construction as required by OAR 738-070-0060. Submit a copy of the completed form and letter of determination to Lane County Land Management Division at the time of building permit.

The following condition shall be met prior to approval for legal occupancy of the proposed dwelling.

19. The proposed dwelling shall meet the following requirements, to be indicated on the building permit plans and verified by the Lane County Building Official:
    a. All buildings or structures with chimneys shall have a spark arrester on all chimneys.
    b. Wood shingles, wood shakes, or shingles made from wood products for use as roof covering materials for dwellings and accessory structures are prohibited. Such use is a violation of ORS 215.730(1)(b)(A) and subject to civil penalties as contained in Chapter 5, Lane Code. This provision applies to new roofs, reinstallation of roofs, and repair of roofs.

The following conditions are provided for informational purposes and shall be fulfilled as they apply to the proposed development:

20. The applicant is responsible for complying with any applicable local, state, and federal laws, including Oregon Department of State Lands (DSL) and/or Army Corps of Engineers (ACOE) wetland regulations and Oregon Department of Aviation (ODA) and Federal Aviation Administration (FAA) requirements. See **Exhibit H** for more information about ODA and FAA requirements.

21. Future development must comply with the limitations and standards of the Airport Safety Combining Zone, LC 16.246.

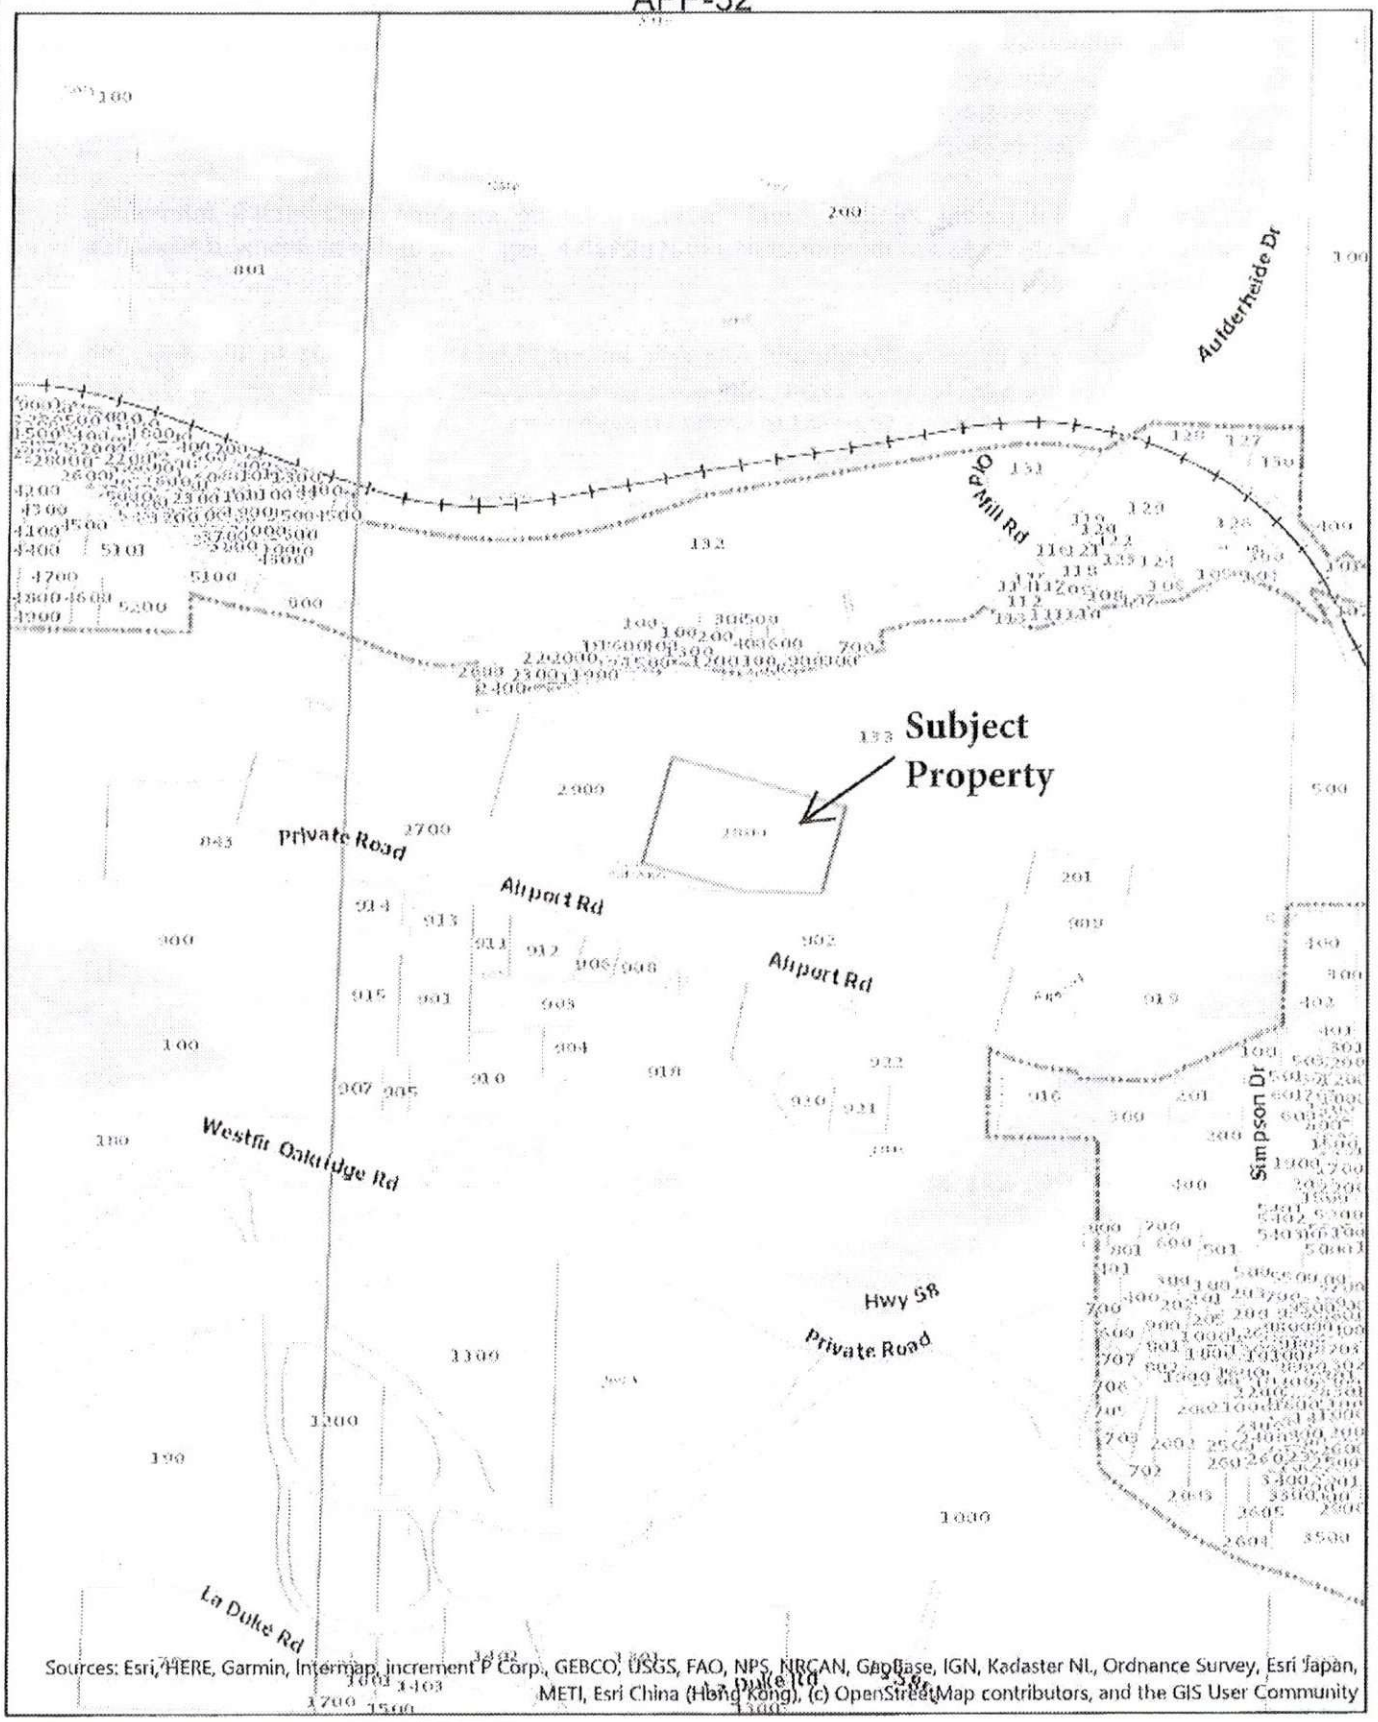
22. The applicant is responsible for procuring the necessary agreements with the Bonneville Power Association. Recent and past BPA communications indicate that portions of Tax Lot 2800 and the existing roadway between Airport Road and the home site are encumbered by an easement for high-voltage transmission lines and an access road easement. Per the BPA, these easements grant certain rights to BPA and limit the landowner's use within the easement area. A portion of BPA's rights include the right of ingress and egress, and the right to keep the easements free and clear of vegetation and buildings, sheds, fences, roads or any other type of structure. All activities planned within the BPA easement need to be reviewed by BPA prior to their

occurrence. Do not build, dig or plant within the easement area without first contacting BPA. Requests for information regarding the process for reviewing proposed uses of the easement may be addressed to Janai Soto at jasoto@bpa.gov or 541/988-7409.

23. Per LC 16.005, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and the character of soils for fill and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose.

24. The subject property is within a "Moderate" landslide susceptibility area according to DOGAMI. This designation may require a geotechnical report with submittal of a building permit. Please contact the Lane County Building Department at 541-682-4651 to confirm requirements.

25. Any future naming of the proposed shared access easement road is subject to the provisions of LC 15.305 through 15.335.



26. Storm water runoff from the subject property shall not be directed to the Lane County road right-of-way or into any Lane County drainage facility, including roadside ditches.

27. The owner shall plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in Department of Forestry administrative rules. It is the owner's responsibility to document that the required tree planting was done in conformance with the criteria of Lane Code 16.211(5)(e). If the Department of Forestry determines that the tract does not meet those requirements and notifies the owner and the Assessor that the land is not being managed as forest land, the Assessor will remove the forest land designation pursuant to ORS 321.359 and impose the additional tax pursuant to ORS 321.372. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry at (541) 935-2283 (in western Lane County); (541) 726-2501 (in eastern Lane County).

28. The following is provided for informational purposes as an **Advisory Notice:** Section 93.040(1) of the Oregon Revised Statutes requires the following statement to be included in the body of any instrument transferring or contracting to transfer fee title to real property:

    "THIS INSTRUMENT WILL NOT ALLOW USE OF THE PROPERTY DESCRIBED IN THIS INSTRUMENT IN VIOLATION OF APPLICABLE LAND USE LAWS AND REGULATIONS. BEFORE SIGNING OR ACCEPTING THIS INSTRUMENT, THE PERSON ACQUIRING FEE TITLE TO THE PROPERTY SHOULD CHECK WITH THE APPROPRIATE CITY OR COUNTY PLANNING DEPARTMENT TO VERIFY APPROVED USES AND TO DETERMINE ANY LIMITS ON LAWSUITS AGAINST FARMING OR FOREST PRACTICES AS DEFINED IN ORS 30.930."

    This Oregon Law disclosure requirement serves a constructive purpose. Approval of a residence for this property is contingent upon compliance with the conditions of the special use permit, and any future owners of the subject property need to understand and adhere to these conditions. This disclosure statement should alert the cautious and potential purchaser to inquire with the Lane County Land Management Division about the conditions of this special use permit.

DRAFT

MAR ~ 1982
COMPREHENSIVE PLAN REVISION
LANE COUNTY, OREGON

EXHIBIT N

LUBA Record 000227

BIG GAME RANGE

LCDC Orders to Comply required implementing measures for the protection and/or resolution of conflicts with Big Game Range. The County must clarify the types of uses which conflict with big game habitat, and would therefore be reviewable by the County under any implementing measures developed. The primary conflicting use mentioned by LCDC is residential use at certain densities.

Location. The Oregon Department of Fish and Wildlife (ODFW) has divided big game range in Lane County into three categories as follows:

> Major Big Game Range - That portion of the County which supports the majority of big game. In general these lands are sparsely developed commercial forest lands. They also provide the majority of big game recreational opportunity.
>
> Peripheral Big Game Range - Foothill areas of the County generally located between commercial forest lands and valley floors. These lands support substantial big game populations and serve as a wintering area for animals in severe winters.
>
> Impacted Big Game Range - Those areas of the County that have existing levels of land use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity. These areas frequently contain populations of big game animals.

These areas are mapped on Lane County Wildlife Inventory maps. As a general depiction, Major Big Game Range occurs on federal lands, large timber company holdings, and some private lands which are sparsely developed. Peripheral Big Game Range encompasses primarily foothills and smaller valleys. Impacted Range includes cultivated fields and developed areas, often on valley floors.

Because of the large amount of undeveloped timberland in Lane County, the majority of the County is Major Big Game Range. But, due to scattered ownership patterns, many areas within the Major Range are small, private parcels. Peripheral Range often falls along small valley floors which are privately owned and often fairly extensively developed. For example, most of the Fall Creek, Mohawk and Lorane valleys are within Peripheral Range, as well as large tracts of land west of Elmira.

Wildlife Inventory maps have not been included in this Working Paper due to budget constraints, but are available for review in the Planning Department office.

Quality. The majority of big game use occurs on Major Range. This can be considered the highest quality habitat as man's intrusion with developments is the least. Peripheral Range is also important habitat, and can be particularly crucial in severe winters, but has enough development to limit big game use and management options. Impacted Range is the lowest quality habitat of the three categories. It is already developed to an extent that precludes viable management of the species, although populations may still exist there.

LUBA Record 000228

One other category of lands should be mentioned here. Outside Urban Growth Boundaries, areas exist which are committed to nonresource use. Exceptions for these areas will be taken as "Built Upon and Committed Lands" and acknowledged by LCDC. These small pockets of development within Major or Peripheral Range are essentially Impacted areas due to their level of use by man. They were not large enough, generally to include on the Big Game maps as Impacted. These areas will be treated as Impacted areas for implementation purposes.

Quantity. Areas of of Major, Peripheral and Impacted Big Game Range have not been computed. Figures for acreage of some other categories of land may be useful, though, for illustrative purposes.

Total amount of land in Lane County	2,959,400 acres
Commercial forest land (primarily Major Range)	1,813,220 acres
Other public lands (primarily Major Range, some Peripheral Range)	735,112 acres
Farms (primarily Impacted Range)	255,712 acres

Over 61 percent of the County is considered commercial forest land, a category with essentially no residential development. Including other public lands, such as the Dunes National Recreation Area, Oregon State lands, Corps of Engineers lands and County parks, approximately 85 percent of the County is not available for residential use. A good portion of the remaining acreage is farmland, a category very difficult to justify as available for residential use, but also not prime big game habitat.

Conflict Identification

The clearing of natural vegetation for agricultural purposes decreases an area's habitat value for big game. But since important, existing agricultural lands are already considered Impacted Big Game Range, this is not an issue now. Impacted Range has essentially been "written off" for big game management.

Management of land for timber production does not conflict with big game habitat. With proper forest management techniques, big game habitat can be significantly enhanced. The forage provided to deer and elk in clear-cut areas is very important, but the combination of areas in various successional stages is probably the vital factor in enhancing numbers of deer and elk. Lands zoned for the primary purpose of timber production are subject to the requirements of the Oregon Forest Practices Act. For our purposes, timber harvesting activities do not constitute a conflict to Big Game Range.

The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 areas; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game.

The following paragraphs basically outline procedures to be used for implementation of the ODFW density recommendations in big game ranges. The premise is to work overall density figures into minimum lot size recommendations for regions of the County, rather than postponing the issue by referrals to ODFW for every land division application. The anticipated result is to base zoning

DELETED BY ADDENDUM

by region on the overall residential densities or ODFW minimum parcel size recommendations, thereby creating no conflict with Goal 5.

The County will be divided into regions convenient for planning purposes. These have not yet been determined, but will probably result in 10-20 regions in the County.

Within these regions, determinations will be made of acreages, number of existing residences, and additional number of residences allowable to still fall within the overall density level. Built upon and committed areas are subtracted out, as they are treated as Impacted Range. From the figure of remaining residences and acreage, a residential carrying capacity will be determined. This figure, or the ODFW figure of 40 or 80 acres, whichever is lesser, will be recommended in the region for residential density for big game purposes. This, along with other resource land requirements will be used to determine appropriate zoning in an area.

If this figure is ever exceeded, it constitutes a conflict with Big Game Range. ESEE consequences must be determined and analyzed at that time. Prior to dividing the County into regions and making the above determinations, it is impossible to determine if conflicts will exist in any regions. The expectation, based on examining trial areas, is that the recommendations of ODFW can be incorporated without creating a conflict.

Special uses which may be allowed in resource zones have the potential of conflicting with Big Game Range. To preclude that conflict, criteria will be incorporated into the Special Use review considering the effect on big game. Recommendations will be requested from ODFW and considered as part of the review process.

As a final note regarding residences in Big Game Range, damage to landscaping and gardens is a common problem around these residences. For new residential building permits within Major and Peripheral Range, the applicant will be notified that compatibility problems with big game may exist.

Several recommendations in the Policies Section of this Working Paper relate to the method the County will use to protect Big Game Range.

DEFINED BY ASSOCIATION

LUBA Record 000230

ADDENDUM TO WORKING PAPER:

FLORA & FAUNA

November, 1983

EXHIBIT O

J. DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place:

Although this is a useful index, officials of the ODFW stress the fact that a mere "numbers game" is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.

A prime example is that of "clustering" dwelling units in Peripheral or Major Range areas -- siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.

— siting standards

The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirments of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.

= Coordination between Goals 3, 4 + 5

Within Developed and Committed areas, ODFW officials are examining the utility of continuing to designate some of these lands as either Peripheral or Major Range. Developed and Committed areas should be considered as Impacted, and conflicting uses permitted.

The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner -- including the involvement of that agency in land use regulation development. If the zoning procedure described above does not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the ESEE process and determine new ways of dealing with conflicts. The process should follow the Goal 5 Rule format, and center on weighing the relative benefits of dwelling unit construction against those of Big Game Range maintenence.

Policies concerning this issue are proposed in the concluding section of this Working Paper.

6. To existing Policies 10 and 11, add the following words (underlined):

"...the 1982 Lane County Working Paper on Flora and Fauna, as revised and updated in 1983...."

7. Add to existing Policy 12 the following statement:

"The County shall work with ODFW officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program."

8. Add a new Policy 14 as follows:

"14. In its program of protecting "1C" resources, the County shall make maximum practical use of existing land use regulations (e.g., Willamette Greenway Permit, Coastal Resources Zoning overlays, rural forest and agricultural resource zones) to achieve such protection. Duplication of existing standards shall be avoided wherever practicable, provided County-determined Goal 5 and OAR 660-16-000/025 objectives are met."

Existing (December 1982) Policies are duplicated on the following two pages of this document. They do not include the changes proposed above.

III. Conclusion and Necessary Action

The preceding pages of material is intended to meet LCDC requirements and thereby assist the County in complying with statewide planning Goal 5 requirements. It is recommended that the Planning Commissions and the Board of County Commissioners

- Receive the material and review it as technical supportive data,
- Consider the proposed Policy revisions in light of the new data,
- Carry the proposed Policy revisions -- or modified versions thereof -- forward to public hearings and adoption as amendments to the General Plan Policies document.

Ordinance language intended to implement the Policy proposals is now being prepared and will be brought before the Planning Commissons and Board as a part of the Lane Code revision effort. Changes to the Policies will possibly require parallel changes to the proposed ordinance language.

###

EXISTING FLORA AND FAUNA POLICIES from GENERAL PLAN POLICIES Document....

Flora and Fauna

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Provide special consideration to protection of sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies are encouraged to work with landowners to conserve wildlife habitats.

5. Lane County is encouraged to investigate fee acquisitions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to protect Goal 5 resources.

6. Riparian vegetation along all Class I streams is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Maintenance of this vegetation shall be encouraged with setbacks from Class I streams and shall be a consideration in Special Use Permits and Zone Changes.

7. Because of the inadequate inventory in Lane County, freshwater wetlands are being placed in a 1B category (insufficient data existing, per Goal 5 requirements, to decide on preserving the resource or not). When National Wetland Inventory (or equivalent) maps are available for all private lands in the County, these wetlands will be evaluated for quality and quantity as per the Goal 5 administrative rule (OAR 660-16-000). If the wetlands are determined to be significant, they will be evaluated against the rule's standardized set of ESEE (Environmental-Special-Economic-Energy) factors and conflict resolution proposed. This action will take place within one plan update period after the maps are available.

8. Lane County shall rely on the Oregon Forest Practices Act for protection of wildlife habitats and areas on lands zoned for the primary use of commercial growing and harvesting of forest tree species. Such habitats and areas shall include sensitive fish and waterfowl areas, riparian vegetation, wetlands areas, and big game ranges.

9. Sensitive Fish and Waterfowl Areas, as identified in the 1982 Lane County Working Paper on Flora and Fauna, are recognized as the most valuable habitat of their type in the County. Maintenance of riparian vegetation shall be a prime consideration in zoning districts in these areas.

10. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

11. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna.

How Policy Read prior to previous page Recommendations

12. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.

13. If uses are identified (which were not previously identified in the plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

Lane County
Rural Comprehensive Plan
Policies Document
Adopted February, 1984

7. Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal/state ownership; where these do not occur, an appropriate wetlands zoning district shall be developed and applied. Other wetlands from the National Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per Goal 5 requirements if it is clearly demonstrated that an unprotected significant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction. (Modification in process)

8. Sensitive Fish and Waterfowl Areas as identified in the 1983 Revision the Flora an Fauna Working Paper, shall be considered "significant" "1C" resources per OAR 660-16-000/025, and protected per "3C" requirements through protection of riparian and wetland resources as described in the above Policy statement.

9. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, and as revised and updated in 1983, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

10. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna and as revised and updated in 1983.

11. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program.

12. If uses are identified (which were not previously identified in the Plan) which would conflict with a Goal 5 resource, an evaluation of the

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE

Lane County
and
Rural Portion of Eugene/Springfield Metro Plan
Goal 2--Nonresource Lands, Goal 5, Goal 15

Response from Denial Order of November 6, 1981
and from Continuance Order of November 6, 1981

DATE RECEIVED:
March 15, 1984

DATE OF COMMISSION ACTION:
August 17, 1984

REQUEST

The County has requested that its comprehensive plan and implementing measures be acknowledged as in compliance with the Statewide Planning Goals for areas outside adopted urban growth boundaries. Also, the County and the Cities of Eugene and Springfield request acknowledgment of compliance for the rural portions of the Eugene/Springfield Area General Plan.

SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission continue Lane County's request to allow amendments to the plan to comply with Statewide Planning Goals 2, 5, and 15. The Commission should hear testimony on these issues July 19, 1984, but not take final action until the August hearing.

Recommends the Commission continue the request to allow amendments to the Eugene/Springfield Metro Area General Plan under Goals 2, 5, and 15. The Commission should not take final action on this until the August Commission hearing.

EXHIBIT C.24

Nevertheless, the County has decided to allow small sites in its F-1 and F-2 Zones conditionally. Larger sites will require plan amendments, along with application of the Goal 5 Rule, exceptions to appropriate goals and possible development and application of a special zone. The County has adopted a policy commitment to this effect. In the meantime, resource zoning will help prevent potential sites from being lost to other uses. (See, however, the Goal 4 section of this report for a discussion of problems with the F-2 Zone.)

* pre-existing Please Highlight. ignora.

Fish and Wildlife Areas and Habitats

Inventory

Information about Lane County's fish and wildlife resources is contained in its Flora and Fauna Working Paper and the addendum to that working paper. Pages 5-10 describe in general each of the 11 major habitat types in the County, along with a discussion of the value of the habitat type to wildlife, and general location of each habitat type. These include:

1. Estuary and Bay
2. Inland Marsh
3. Wet Meadows
4. Lakes and Reservoirs
5. Riparian Vegetation
6. Annual and Perennial Grasslands
7. Coastal Shore Pine/Spruce
8. Douglas Fir/Trailing Blackberry
9. True Fir/Alpine
10. Deciduous Hardwoods
11. Agricultural Lands.

The County prefaces this material by stating that this information "is not considered an inventory and is not accompanied by maps. It is intended merely as background information."

The Working Paper and its addendum contain special sections addressing endangered, threatened, and special concern species, riparian and wetland areas, sensitive fish and waterfowl areas, and big game range. These are discussed separately below.

Endangered, Threatened and Special Concern Species: The Working Paper lists plants and animals which are threatened, endangered, or of special interest (pp. 11-12). Further information is provided for six of these species--northern spotted owl, northern bald eagle, wolverine, silverspot

EXHIBIT C,25

butterfly, western snowy plover, and American osprey (pp. 12-13). This information does not provide location, quality, or quantity information on any specific habitat areas or sites. However, the County indicates that:

1. No spotted owl or bald eagle nests are known to occur on private property;

2. Wolverine habitat is in high elevation, remote areas and therefore in federal ownership;

3. Snowy plover habitat is within state jurisdiction.

4. Osprey nests are found throughout the County, although not in great numbers. The County indicates the ODFW maps show their locations, but these maps have not been adopted or submitted for review.

5. Silverspot butterfly habitat is found only "along a small section of the Oregon Coast." It is recognized in the Coastal Resource Management Plan of Lane County.

Lane County has indicated that Silverspot butterfly habitat occurs on federal land adjacent to the Big Creek (Reneghan) Exception Area as well as on the Renaghan property itself (Exhibit E--Renaghan Amendment, pp. 27, 31). It should be noted that the Exception document contains one statement (Finding 37e) on page 27 which appears to contradict this. Specifically, finding 37e states there are no sensitive species on the property, and that the Silverspot butterfly habitat is located on adjacent federal land only. The Exception document contains several other statements indicating that such habitat occurs in the northwest corner of the property.

The County provides no information at all regarding great blue heron rookeries or pigeon mineral springs, which are considered sensitive bird habitat areas by the Department of Fish and Wildlife. (The exception to this is for two rookeries in the Willamette Greenway. They are addressed in the Goal 15 section of this report.) The inventory of sensitive bird sites developed by ODFW and provided to the Department of Forestry (DOF) as part of a recent management agreement between those agencies, identifies 15 great blue heron rookeries, 21 osprey nest sites, three pigeon mineral springs, and at least one bald eagle nest site in Lane County, most of which are on nonfederal land. According to Flora and Fauna Policy 15, "currently known pigeon springs, heron and raptor (hawk, osprey, and eagle) nest sites. . . shall be placed in a '1B' category."

Pre-existing. Highlight. Please ignore.

Riparian and Wetland Areas: Riparian lands are defined by the County as all lands along both banks of Class I streams in Lane County, to a setback line of 100 feet from ordinary high water (Addendum, p. 7).

The County indicates in its Flora and Fauna Working Paper (p. 16) that all lakes, reservoirs, and Class I streams in Lane County have been mapped, but were not included because of budgetary limitations. They are

available in the Planning Department offices. The Addendum to the Working Paper (p. 6) states that ODFW has provided maps of all Class I streams, as well as major significant wetland areas. Detailed maps are available for review in County offices, and a generalized summary map is included in the Addendum (p. 20).

The Flora and Fauna Working Paper discusses the values associated with wetlands and riparian areas for both fish and other wildlife types (pp. 14-15). The County notes that the U.S. Fish and Wildlife Service has identified a number of wetland types in its National Wetland Inventory. Currently, about half of the County has been mapped, enabling identification of major wetlands. These include:

1. Fern Ridge periphery, exclusive of parkland;

2. Old Long Tom River channel below Fern Ridge dam, including lands between it and new channel;

3. North Fork Siuslaw fresh-water marsh;

4. Maple Creek marsh;

5. Amazon Canal at its confluence with the waters of Fern Ridge Reservoir.

The County indicates that these areas are mapped in detail on the Plan Diagram maps. More specific location, quality, and quantity information for each of these five wetland areas is contained in the Working Paper Addendum (pp. 11-13).

The County has not inventoried a wetland south of Sutton Lake and east of Highway 101, or a Darlingtonia bog east of Florence. As noted in the 1983 Coastal Goals review of Lane County (p. 8), these wetland were to be addressed under Goal 5:

> The County notes there are only two Goal 18 resource areas east of Highway 101 which do not fall within the coastal shorelands boundary. They are two wetland habitat areas identified in the coastal resource inventory maps. The County should note that it will have to adequately address these two areas later under Goal 5 when it brings the remainder of the County plan into compliance.

The Darlingtonia bog is addressed in more detail in the Natural Areas section of this report.

Sensitive Fish and Waterfowl Areas: The County notes that this is a subcategory of the previous section, Riparian and Wetland Areas (p. 20). Maps have been provided the County by ODFW showing important waterfowl nesting habitat and streams that receive high use by anglers and/or game fish (p. 20), but were not submitted for review. A large-scale map is available in the County Planning offices (Addendum, p. 5). A

generalized, small-scale map is included on page 20 of the Addendum which shows the locations of important streams and stream reaches. A list of these specific reaches, by basin, is included in the Addendum (pp. 2-4). All identified areas are of high quality and are considered important (Working Paper, p. 21). The extent of riparian vegetation is described in the previous subsection of this report. The County notes that there are native anadramous fish runs in Big Creek within the Big Creek Exception Area (Exhibit E--Renaghan Amendment, p. 44). These include coho salmon, cutthroat trout and steelhead.

Big Game Range: The County notes that ODFW divides big game range in Lane County into three categories--Major, Peripherial, and Impacted. The Major Range supports the majority of big game and, in general, consists of sparcely developed commercial forest lands. Peripheral Range is generally located on foothill areas between commercial forest lands and valley floors. Peripheral Range supports substantial big game populations and serves as wintering areas for animals in severe winters. Impacted Range consists of those areas that have existing levels of development which preclude future wildlife management options for maintaining viable wildlife populations and recreational opportunity, although they frequently contain big game populations.

All three big game range areas are depicted on Lane County Wildlife Inventory Maps, according to the Flora and Fauna Working Paper (p. 23). However, these maps were not submitted for review because of budget constraints. They are available in the Planning Department Office (p. 23). The Working Paper notes that the highest quality big game range is in the Major Range because development is limited. Peripheral Range is important, but has enough development to limit big game use and managment options. Impacted Range is of the lowest quality because of existing development (p. 23). The County provides acreages for these three categories (p. 24).

The County recognizes major elk habitat on a portion of the Big Creek Exception site (Exhibit E-Renaghan Amendment, p. 52).

Conflicting Uses/ESEE Consequences Analyses

Endangered, Threatened and Special Concern Species: As indicated earlier, Lane County knows of no spotted owl or bald eagle nest sites on private land. Similarly, wolverine habitat is on federal land. The County notes that the State Parks Division of ODOT regulates vehicular uses in snowy plover habitat (Working Paper pp. 12-13). Specific conflicts with osprey nest areas are not identified, but the County notes that protective measures in riparian areas (e.g., Willamette Greenway permit requirements, coastal shorelands overlays, riparian and wetland area provisions) will resolve conflicts (Addendum, p. 15).

The Working Paper indicates that the Coastal Resources Management Plan of Lane County recognizes the Silverspot butterfly and applies a prime wildlife managment unit to its habitat (p. 13). Specific conflicts and ESEE consequences are not discussed in the Working Paper, however.

EXHIBIT C.37

sensitive. Missing are designations of heron rookeries and pigeon mineral springs. Policy 15 addresses all sensitive species (bald eagle nests, heron rookeries, snowy plover habitat, spotted owl nests, osprey nests and pigeon mineral springs). Further, objectors point out that Policy 15 places these species in a (1B) category. Both ODFW and 1000 Friends indicate that the County possesses inventory information (including recent ODFW updated information) which is sufficient to complete the Goal 5 process for this resource category. ODFW indicates that the location, quality, and quantity information provided the County is similar to that provided to other counties which have completed the Goal 5 process and which have been acknowledged. The League of Women Voters is concerned that two years is too long for these resource sites to be without protection. Most are not in the Greenway, and therefore do not even receive minimal protection.

1000 Friends also objects to the fact that neither Flora and Fauna Policy 2 or 3 provides adequate protection for these sensitive species. Policy 2 simply indicates the County will recognize existing programs that protect species; it does not bind the County to any particular course of action. 1000 Friends believes the County must make an affirmative commitment to protect threatened and endangered fish and wildlife species. Policy 3 also fails to guarantee protection of sensitive species since it requires the County to seek to minimize adverse impacts through County regulations (including zoning). 1000 Friends suggests that present zoning may be construed to "minimize adverse impacts" but this may not necessarily provide adequate protection for particular sites.

1000 Friends also objects to the use of the definition of "sensitive species" used in Policy 3. Objectors believe it is overly general and could be construed by decision-makers to exclude certain species. Objectors believe that County Policy 3 should reference the list of "species of special concern" that appears in the Working Paper, rather than use a vague term in the policy. Similar comments have been filed by Oregon Forest Industries Council.

2. ODFW and 1000 Friends have objected to Flora and Fauna Policy 11 since it regards densities above ODFW's recommendations in big game areas to constitute a conflict. ODFW regards its recommended densities as the approach to resolve conflicts between dwellings and game range. 1000 Friends states that Policy 11 allows residential densities to exceed ODFW recommendations "if conflicts can be resolved in accordance with OAR 660-16-000." Objectors believe this allows the County to justify density levels which exceed those recommended by ODFW through an analysis of ESEE consequences. Objectors do not believe this exclusion is consistent with the Goal 5 Rule.

OBJECTIONS NOTED BY DLCD

3. ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements

CONT. ⇒

that need to accompany the density levels allowed in those zones. Similar objections have been filed by 1000 Friends of Oregon. Objectors point out the the F-1 zone establishes a minimum lot size of 40 acres, but smaller divisions can be made without regard to big game impacts. The F-2 zone establishes minimum lot sizes of 20 and 40 acres for forest and farm uses, which also fail to meet ODFW's recommended densities for Peripheral Range, according to objectors. 1000 Friends points out that the Flora and Fauna Working Paper Addendum and Policy 11 prescribe clustering and siting of standards, but these are not carried out in the F-2 zone. The Addendum (p. 14) also references forest land minimum lot sizes which are no longer current.

4. ODFW and 1000 Friends object because Goal 5 has apparently not been applied in the process of designating marginal and nonresource lands. Objectors are particularly concerned how this affects big game range areas. ODFW contends that the County's plan provisions for lots of record, resource and nonresource-related dwellings, marginal lands, and nonresource lands could allow considerable development in game range. The County's F-1 and F-2 zones do not adequately assure that recommended densities will be maintained. This is further complicated by the fact that it is unclear where marginal and nonresource lands are located, and therefore the extent to which they are in game range areas, since the zone map format and resource inventory map formats are not easily comparable. 1000 Friends points out the Goal 5 must be applied whereever Goal 5 resources occur, even in areas designated marginal or nonresource land.

5. ODFW, 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's treatment of the Pudding Creek Heronry. Objectors point out that the County conducted a Goal 5 ESEE consequences analysis, but that inasmuch as the sand and gravel plan and zone designations have been retained on the site, conflicts have not been resolved. Please refer to the Goal 15 section of this report for further details concerning objections to the zoning of this site.

6. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Objectors indicate that the County has not adopted a program that is adequate to protect and/or resolve conflicts with the site under Section (3C) of the Goal 5 Rule. Objectors point out that the 1981 LCDC order for the Eugene/Springfield Metro area include a requirement that the ESEE consequences of designating the island for sand and gravel use must be evaluated in the context of regional aggregate supply and demand. The IOTC further required that if the island were to retain a partial sand and gravel designation, the Metro Area Plan and the Lane Code (Section 10.210) must be amended to require that limited aggregate extraction will minimize the impact on scenic and wildlife values.

process. Depending upon this analysis, the policies may have to be modified, and implementing measures will have to be adopted. The concern that Policy 3 is unclear as to which species or habitat areas are covered by the policy is valid.

2. Policy 11 states:

> Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program.

Response to objections by DLCD

Objectors are not correct that this policy violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU Zones which ensure that ODFW's density standards will be achieved.

The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or prevent conflicts between dwellings and big game habitat. However, as discussed below, the County has not adopted such standards in its zoning ordinance.

3. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone.

EXHIBIT C.7B

Conclusion - Goal 5

Lane County does not comply with Goal 5.

Lane County has compiled inventory information for most Goal 5 resource categories and has made (1A), (1B) and (1C) decisions, based on this information. Conflicting uses for most categories have been analyzed. Based upon this work, the County has made protection/nonprotection decisions and has adopted plan policies and applied several implementing measures to many Goal 5 sites. Most noteworthy of these implementing measures are the County's riparian setback and vegetation maintenance standards, its groundwater protection provisions, and its Natural Resource zone. However, there are a number of deficiencies in the County's Goal 5 element which must be corrected before acknowledgement can be granted. These deficiencies have been summarized in the previous sections of this report.

In order to comply with Goal 5, Lane County and the Cities of Springfield and Eugene must:

1. Mineral and Aggregate Resources: Apply the Goal 5 process to sites zoned SG which are not included on the County's (1C) inventory and, based on an analysis of the ESEE consequences of conflicting uses, either (1) add them to the (1C) inventory if justified, or (2) rezone the sites for other uses.

2. Fish and Wildlife Habitats:

   a. Amend the Natural Resource Zone to include riparian setback and vegetation maintenance standards.

   b. Amend the C-1, C-2, C-3, M-1, M-2, M-3, and RG zones to either (1) include riparian setback and vegetation maintenance standards, or (2) incorporate by reference another section of the Lane Code which contains such standards.

   c. Apply riparian setback and vegetation maintenance requirements along lakes and Class II streams, or otherwise justify not providing such protection, based on an ESEE consequences analysis of conflicting uses.

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.

   e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.(*)

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

i. Carry out Forest Lands Policy 17 (Plan, p. 10) by identifying sites that are considered more important than commercial timber management activities, based on a Goal 5 ESEE consequences analysis, and adopt appropriate implementing measures to protect and/or resolve timber management conflicts with those sites, consistent with that policy.

4. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.(*)

5. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

6. Historic Sites:

   a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

   b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

7. Oregon Recreation Trails:

   a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

M E M O R A N D U M

August 17, 1984

TO: Land Conservation and Development Commission

FROM: James F. Ross, Director

SUBJECT: ITEM 7.1: LANE COUNTY ACKNOWLEDGMENT REVIEW

TOPICS: Response to Exceptions to the Lane County Acknowledgment Review and Proposed Amendments to the Lane County Acknowledgment Review for Goals 5, 15, and Goal 2 Nonresource Areas.

This memorandum is divided into two parts. Part I includes by Goal topic responses to exceptions filed by objectors to the Lane County Acknowledgment Review. Part II contains by Goal Topic the Department's recommended changes to the Lane County Continuance Report along with the reasons to support those changes.

I. Response to Exceptions

A. Goal 2--"Nonresource" Lands

1. David Hemenway and Paul Mehnert regarding Dillard Highlands Second Addition

Mr. Hemenway indicates that some errors are contained within the Department's Report discussing Dillard Highlands' Second Addition. We concur with Mr. Hemenway regarding objections 1 (page 112 of the Department's report), 2 (page 113), and 4 (page 115). Corrections to the Department's report for the objections discussed above are contained in Part II of this memorandum. We disagree with Mr. Hemenway regarding objections 3 and 5.

Objection 3 claims that the Department's report is incorrect because the "County's" soils investigation report, quoted by the Department, is inaccurate. The Department is unable to reconcile the factual inconsistencies contained within the County's findings for Dillard Highlands' Second Addition.

EXHIBIT R

EXHIBIT D.2

The two sets of soils data, provided as findings, present different conclusions about the characteristics of the site. The County must review this material to determine which soils data are accurate. We recommend that Mr. Hemenway be afforded the opportunity to be involved in this determination.

Objection 5 claims that the Department's recommendation for Dillard Highlands' Second Addition is in error. The record lacks substantial evidence indicating that Goals 3 and 4 do not apply to this land. Until the County clearly indicates from revised soils information, that Goal 3 is not applicable to this site, the County lacks substantial evidence supporting its claim regarding Goal 3. Additionally, reliance on a forester's economic analysis to support the conclusion that Goal 4 does not apply to this site, when the record indicates it is composed predominantly of soils with commercial forest capabilities (Site Class III and IV, County's Findings, p. 14) is inconsistent with Goal 4's requirements (see amended conclusion for Dillard Highlands' Second Addition).

2. Canfield and Associates on behalf of Cerro Gordo

Mr. Canfield's exceptions to the Department's report are only partially sustained. The issues regarding the proposed density of this development as discussed in the report remain. However, the Department concurs with Mr. Canfield that amendments to clarify the Department's position are necessary (see amendments to the report).

B. Goal 5

1. Lane County

Lane County filed an exception to in-order-to-comply requirements 2c, d, e, f, and i. All pertain to fish and wildlife habitat issues.

Response: On August 8, DLCD staff met with Lane County planners to discuss these issues. All were resolved. IOTC 2c, d, e, and f remain, but 2i should be eliminated (see amendments to staff report in the Part II of this memo).

2. Wildish Sand and Gravel Company

Wildish believes that several statements in the July 19, 1984, report are inaccurate. Specifically:

Response

Lane County has responded to this JOTC by amending the Flora and Fauna Working Paper Addendum (p. 7) to include the following justification for not applying riparian setback and vegetation maintenance requirements to lakes or Class II streams (Ord. No. PA 892):

> "For purposes of this analysis, only Class I riparian lands are considered. Class II streams (using ODF standards) are not fish-bearing streams, according to Oregon Fish and Wildlife Department staff, and often dry up in the summer months. Additionally, they are located in remote areas in public ownership or limited to resource uses by resource zones. Many of them have not been inventoried, and location maps are not easily available. Most lakes outside of the coast are impoundments, such as Fern Ridge Reservoir, and have COE easements plus County PR zoning to protect their shorelines. The remaining natural lakes are protected by coastal overlays or are in High Cascade Wilderness areas such as Waldo. The Oregon Fish & Wildlife Department, which worked closely with the County in devising a method of protecting Class I riparian lands, did not indicate a need to similarly protect Class II riparian lands. In the nomenclature of the Goal 5 Rule, the County determines the Class II streams are to be considered '1A' resources--not to be included on the Plan inventory."

Conclusion

Requirement 2c has been met.

Requirement

2. Fish and Wildlife Habitats:

d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.

Response

Lane County has added the following new language to both the F-2 and EFU Zones:

> "(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of

- clustering + siting stds

EXHIBIT E.26

proposed residences consistent with the purposes the F-2 [EFU] Zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts,

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Conclusion

Requirement 2d has been met.

Requirement

2. Fish and Wildlife Habitats:

e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

Response

Lane County has adopted (Ord. No. PA 892) as part of its Flora and Fauna Working Paper, an inventory of known sensitive bird sites, including location, quality and quantity information. The County has identified conflicting uses and analyzed ESEE consequences. Based on this analysis, Lane County has decided to adopt a procedure for "flagging" areas in which such sites occur and requiring conflicting uses to be subject to conditional use approval. For all conflicting uses except timber management activities, the County has adopted "Sensitive Bird Habitat Protection Standards and Criteria" as part of the Lane Code (Ord. No. 11-84). Excerpts from that zone section are as follows (LC 16.005(4)(i)):

"(b) Development Plan Submittal. The person proposing the development shall submit plans to the

EXHIBIT E.36

Conclusion

Requirement 7b has been met.

Requirement

8. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflicting-resolution recommendations contained in the Metro Plan Update Working Paper.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 5

Lane County complies with Goal 5.

GOAL 7: AREAS SUBJECT TO NATURAL DISASTERS AND HAZARDS

Requirement

1. Amend the Development Code to require review of any propcsed development within known geologic hazard areas.

Response

Lane County Development Code was amended (ORD. 9-84) to include the following provision (LC 16.005):

> "(2) Grading, Excavation and Clearing. Grading and clearing by mechanical equipment for either road and/or development purposes may be restricted or regulated by the Approval Authority either at the time of approval of a development permit or of an application if there is a finding that such grading or clearing presents a real threat of pollution, contamination, silting of water bodies or water supplies, erosion and slide damage, or alteration of natural drainage patterns in the area. In all cases, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose."

Lane County

Gary Darnielle
Lane County Heanings Official
North Plaza Level PSB
125 E. 8th Ave.
Eugene, OR 97401

September 11, 1986

RE: PA2131-86

Dear Mr. Darnielle:

In your September 9, 1986 memorandum to Roy Burns, you requested staff to prepare responses to 2 questions in regards to the above referenced application. This memorandum is in response to your request.

Question 1). Which Rural Comprehensive Plan policies and implementation regulations determine allowable residential densities within areas designated as Big Game Range? Specifically, how does County staff reconcile the clear language of Rural Comprehensive Plan Flora and Fauna Policy #11 with the residential density analysis suggested by the "Flora & Fauna Working Paper" (March 1982) and the revised language to the working paper in the "Addendum to Working Paper: Flora & Fauna" (November 1983)?

Response: Goal 5 Flora and Fauna Policy #11 together with the clustering requirements of the F-2/RCP zone (LC16.211(8)) and of the EFU/RCP zone (LC16.212(8)) determine allowable residential densities within Big Game Range Habitat areas.

A better understanding of how Policy #11 and the implementing measures for clustering in the F-2/RCP and EFU/RCP zones can be obtained by reviewing the DLCD review comments for Lane County's Rural Comprehensive Plan.

In the DLCD Report, July 19, 1984, page 75, 2.e., DLCD indicated that the F-2/RCP and EFU/RCP zones must either be amended to contain larger minimum lot sizes or to contain clustering requirements for residences in Big Game Range Habitat areas. The reasoning for this recommendation was discussed in pages 33, 34, 35, 36 and 39 of the July 19, 1984 DLCD Staff Report.

In response to the DLCD recommendations in their July 19, 1984 report, Lane County amended it's F-2/RCP and EFU/RCP zones to contain clustering provisions for the siting of residences. In the Sept. 12, 1984 DLCD report, pp 25-26, DLCD noted their recommendations from their July 19th report and the amendments Lane County enacted to its F-2/RCP and EFU/RCP zones and concluded that the intent of Flora & Fauna Policy #11 had been carried out and met the Goal 5 requirements.

EXHIBIT T
LUBA Record 000254

Question 2) To what extent has County staff been pursuing the development of a Goal #2 "developed and committed" exception to the Baxter's Acres Subdivision? What specific factors have the staff examined or will the staff be examining which they believe will determine whether the subdivision is committed to nonresource use?

Response: County Staff have discussed a "developed" exception with Dave Pedersen who has represented Weyerhaeuser and a number of lot owners in Baxter's Acres. Our last discussion with Dave Pedersen occurred on September 9, 1986 during which we agreed that it would not be appropriate to proceed with initiating a Plan Amendment at this time due to the multiple applications for the same property being contested with the Hearings Official. Staff had intended to bring to the Lane County Planning Commission facts relating to the developed nature of Baxter's Acres and to let the LCPC decide if there appears to be a basis for taking a developed exception. The LCPC could then initiate a Plan Amendment/ Zone Change to more formally consider the matter.

Another impetus for initiating an amendment is the fact that if, through an arduous hearing process, dwellings could be allowed in the F-2/RCP zone, then a much simpler process would be to amend the Plan and change the zoning. The factors to be considered for a developed exception would be those required by the OAR for a developed exception (i.e., roads, utilities, sewage disposal systems, etc.).

IMPACTED FOREST LANDS ZONE (F-2, RCP)

RURAL COMPREHENSIVE PLAN

F-2 Zone Table of Contents

(1) Purpose	92
(2) Use Table	92
(3) Use Standards	100
(4) Conditional Use Review Criteria	112
(5) Siting Standards for Uses, Activities, and Structures in Forest Zones	112
(6) Fire-Siting Standards for Dwellings and Structures	115
(7) Land Divisions	119
(8) Telecommunication Facilities.	124

16.211 Impacted Forest Lands (F-2, RCP)

(1) Purpose

The purpose of the Impacted Forest Land (F-2) Zone is to protect and maintain forest lands for grazing, and rangeland use and forest use, consistent with existing and future needs for agricultural and forest products. The F-2 zone is also intended to allow other uses that are compatible with agricultural and forest activities, to protect scenic resources and fish and wildlife habitat, and to maintain and improve the quality of air, water, and land resources of the county.

The F-2 zone has been applied to lands designated as Forest in the Comprehensive Plan. The provisions of the F-2 zone reflect the forest land policies of the Comprehensive Plan as well as the requirements of ORS Chapter 215 and OAR 660-006. The minimum parcel size and other standards established by this zone are intended to promote commercial forest operations.

(2) Use Table

Table of Permitted Uses

Table 16.211-1 sets forth the uses allowed in the F-2 zone subject to Type I, II, or III approval processes. This table applies to all new uses, expansions of existing uses, and changes of use when the expanded or changed use would require a Type I, II, or, III process, unless otherwise specified on Table 16.211-1. All uses and their accessory buildings are subject to the general provisions, special conditions, additional restrictions, siting standards, fire siting standards, and exceptions set forth in LC 16.211.

As used in Table 16.211-1:

(a) Use Type:

(i) "A" means the use is allowed outright or permitted subject to standards.

(ii) "C" means the use is a Conditional Use, subject to Section (4) and other listed criteria.

(b) Local Procedure Type:

(i) "P" means the use is permitted outright; uses and activities and their accessory buildings and uses are permitted subject to the general provisions set forth by this Chapter.

(ii) "AL" means Assembly License, subject to LC 3.995.

(iii) Type I uses and activities are permitted subject to the general provisions and exceptions set forth by this chapter of Lane Code.

(iv) Type II uses may be allowed provided a land use application is submitted and approved by the Director pursuant to LC Chapter 14.

(v) Type III uses may be allowed provided a land use application is submitted and approved by the Hearings Official pursuant to LC Chapter 14.

(c) The "Subject To" column identifies any specific provisions of LC 16.211 to which the use is subject. All uses and development are subject to the development standards provisions of LC 16.211(5)(b) and (6)(c). Residences, dwellings, and structures must comply with LC 16.211(5) and (6). Any new structure subject to LC 16.211(5)(a) is subject to a Type II procedure pursuant to LC Chapter 14.

(d) A determination by the Director for whether or not a use fits within the classification of uses listed as Type I, Permitted Outright, or Assembly License in the use table may constitute a "permit" as defined by ORS 215.402(4), "...discretionary approval of a proposed development of land..." an owner of land where the use would occur therefore may request to elevate review of a Type I, Permitted Outright, or Assembly License use to a Type II land use application pursuant to LC Chapter 14. The burden of proof in the application will be upon the owner of land to demonstrate that the proposed use fits within the classification.

3.10.	Private accommodations for fishing occupied on a temporary basis	C	II	(3)(h), (4), (5), (6)
3.11.	Marijuana processing, provided an on-site dwelling is present	C	II	LC 16.420, (4)
4.	**Mineral, Aggregate, Oil and Gas Uses**			
4.1.	Exploration for aggregate resources as defined in ORS chapter 517	A	P	
4.2.	Exploration for and production of geothermal, gas, oil and other associated hydrocarbons, including the placement and operation of compressors, separators and other customary production equipment for an individual well adjacent to the well head	A	P	
4.3.	Mining and processing of oil, gas or other subsurface resources, as defined in ORS chapter 520, and not otherwise permitted by 4.2 above (e.g. compressors, separators, and storage servicing multiple wells), and mining and processing of aggregate and mineral resources as defined in ORS chapter 517	C	III	(4), (4)(d)
4.4.	Temporary asphalt and concrete batch plants as accessory uses to specific highway projects	C	II	(4)
5.	**Transportation Uses**			
5.1.	Climbing and passing lanes within the right of way existing as of July 1, 1987	A	P	
5.2.	Reconstruction or modification of public roads and highways, including the placement of utility facilities overhead and in the subsurface of public roads and highways along the public right of way, but not including the addition of travel lanes, where no removal or displacement of buildings would occur, or no new land parcels result	A	P	

Table 16.211-1: Use Table for Impacted Forest Zones I = Type I II = Type II III = Type III P = Permitted Outright AL = Assembly License				
	Use	**Use Type**	**Local Procedure Type**	**Subject to**
5.3.	Temporary public road and highway detours that will be abandoned and restored to condition or use in effect prior to construction of the detour at such time as no longer needed	A	P	
5.4.	Minor betterment of existing public road and highway related facilities such as maintenance yards, weigh stations and rest areas, within right of way existing as of July 1, 1987, and contiguous public-owned property utilized to support the operation and maintenance of public roads and highways	A	P	
5.5.	Operations, maintenance, and repair as defined in LC 15.010 of existing transportation facilities, services, and improvements, including road, bicycle, pedestrian, port, airport and rail facilities, and major regional pipelines and terminals	A	P	
5.6.	Dedication of right-of-way, authorization of construction and the construction of facilities and improvements, where the improvements are consistent with clear and objective dimensional standards	A	P	
5.7.	Preservation as defined in LC 15.010, and rehabilitation activities and projects as defined in LC 15.101 for existing transportation facilities, services, and improvements, including road bicycle, pedestrian, port, airport and rail facilities, and major regional pipelines and terminals	A	P	
5.8.	Changes in the frequency of transit, rail and airport services	A	P	
5.9.	Construction of additional passing and travel lanes requiring the acquisition of right of way but not resulting in the creation of new land parcels	C	II	(4)
5.10.	Reconstruction or modification of public roads and highways involving the removal or displacement of buildings but not resulting in the creation of new land parcels	C	II	(4)
5.11.	Improvement of public road and highway related facilities, such as maintenance yards, weigh stations and rest areas, where additional property or right of way is required but not resulting in the creation of new land parcels	C	II	(4)
5.12.	Bikeways, footpaths, and recreation trails not otherwise allowed as a modification or part of an existing road	C	II	(4)
5.13.	Park and ride lots	C	II	(4)
5.14.	Railroad mainlines and branch lines	C	II	(4)

Table 16.211-1: Use Table for Impacted Forest Zones I = Type I II = Type II III = Type III P = Permitted Outright AL = Assembly License				
	Use	**Use Type**	**Local Procedure Type**	**Subject to**
5.15.	Pipelines	C	II	(4)
5.16.	Navigation channels	C	II	(4)
5.17.	Realignment as defined in LC 15.010 not otherwise permitted pursuant to this chapter	C	II	(3)(I), (4)
5.18.	Replacement of an intersection with an interchange	C	II	(3)(I), (4)
5.19.	Continuous median turn lanes	C	II	(3)(I), (4)
5.20.	New roads as defined in LC 15.010 that are County Roads functionally classified as Local Roads or Collectors, or are Public Roads or Local Access Roads as defined in LC 15.010(35) in areas where the function of the road is to reduce local access to or local traffic on a state highway	C	II	(3)(I), (4)
5.21.	Transportation facilities, services, and improvements other than those listed in LC 16.211 that serve local travel needs	C	II	(3)(I), (4)
5.22.	Expansion of lawfully existing airports	C	II	(4), (5), (6)
6.	**Utility and Power Generation, Solid Waste**			
6.1.	Local distribution lines (e.g. electric, telephone, natural gas) & accessory equipment (e.g. electric distribution transformers, poles, meter cabinets, terminal boxes, pedestals), or equipment that provides service hookups, including water service hookups	A	P	
6.2.	Water intake facilities, canals and distribution lines for farm on and ponds	A	P	
6.3.	Disposal site for solid waste approved by the governing body of a city or county or both and for which the Oregon Department of Environmental Quality has granted a permit under ORS 459.245, together with equipment, facilities or buildings necessary for its operation;	C	II	(4), (5), (6)
6.4.	Television, microwave and radio communication facilities and transmission towers	C	II	(4), (5), (6)
6.5.	New electric transmission lines with right-of-way widths of up to 100 feet as specified in ORS 772.210. New distribution lines (e.g. gas, oil, geothermal, telephone, fiber optic cable) with rights-of-way 50 feet or less in width	C	II	(4)

Table 16.211-1: Use Table for Impacted Forest Zones I = Type I II = Type II III = Type III P = Permitted Outright AL = Assembly License				
	Use	**Use Type**	**Local Procedure Type**	**Subject to**
6.6.	Water intake facilities, related treatment facilities, pumping stations and distribution lines	C	II	(4), (5), (6)
6.7.	Reservoirs and water impoundments	C	II	(4)
6.8.	Commercial utility facilities for the purpose of generating power	C	II	(3)(i), (4), (5), (6)
6.9.	Telecommunication tower changeout	A	I	(8)
6.10.	Collocation to an existing telecommunication tower: Spectrum Act exemption eligible	A	I	(8)
6.11.	Telecommunication tower collocation	A	II	(8)
6.12.	New telecommunication tower or replacement tower	C	III	(4), (5), (6), (8)
7.	**Public and Quasi-public Uses**			
7.1.	Towers and fire stations for forest fire protection	A	II	(5), (6)
7.2.	Youth camps	A	II	(3)(m), (5), (6)
7.3.	Aids to navigation and aviation	C	II	(4), (5), (6)
7.4.	Firearms training facility as provided in ORS 197.770	C	II	(4), (5), (6)
7.5.	Fire stations for rural fire protection	C	II	(4), (5), (6)
7.6.	Cemeteries	C	II	(4)
7.7.	Public parks and public campgrounds, including those uses specified under OAR 660-034-0035 or OAR 660-034-0040	C	II	(4), (5), (6)
7.8.	Private parks and private campgrounds	C	II	(3)(j), (4), (5), (6)
7.9.	Storage structures for emergency supplies	C	II	(3)(n), (4), (5), (6)
8.	**Outdoor Gatherings**

	Use	**Use Type**	**Local Procedure Type**	**Subject to**
8.1.	An outdoor gathering of fewer than 3,000 persons, that is not anticipated to continue for more than 120 hours in any three-month period	A	P or AL (if over 1,000 persons)	LC 3.995
8.2.	An outdoor mass gathering of more than 3,000 persons, that is not anticipated to continue for more than 120 hours in any three-month period, and which is held primarily in open spaces and not in any permanent structure as provided in ORS 433.735-760	A	III	ORS 433.735-760
8.3.	Any outdoor gathering of more than 3,000 persons that is anticipated to continue for more than 120 hours in any three-month period is subject to review by the Planning Commission under ORS 433.763, notwithstanding Type III Hearings Official review	C	III (LCPC)	(3)(o)
9.	**Accessory Uses**			
9.1.	Uses and buildings accessory to existing uses and development permitted by LC 16.211.	A	P or II	(3)(r), (5), (6)

(3) Use Standards

(a) A large tract forest dwelling may be allowed on a lot or parcel zoned for forest use, but it must comply with other provisions of law, including the following:

(i) The tract does not include a dwelling.

(ii) The tract is at least 160 contiguous acres or 200 acres in one ownership that are not contiguous but are in Lane County or adjacent counties and zoned for forest use.

(aa) A tract cannot be considered to consist of less than 160 acres because it is crossed by a public road or a waterway.

(iii) Prior to issuance of a building permit, a deed restriction must be filed for all tracts that are used to meet the acreage requirements of this subsection pursuant to:

(aa) The applicant must provide evidence that the covenants, conditions, and restrictions form adopted as "Exhibit A" in OAR chapter 660, division 6 has been recorded with the county clerk of the county or counties where the property subject to the covenants, conditions, and restrictions is located.

(bb) The covenants, conditions, and restrictions are irrevocable, unless a statement of release is signed by an authorized representative of the county or counties where the property subject to the covenants, conditions and restrictions is located.

(b) A lot of record dwelling may be allowed on a lot or parcel zoned for forest use pursuant to the following:

(i) The lot or parcel on which the dwelling will be sited was lawfully created and was acquired and owned continuously by the present owner as defined in paragraph (iv):

(aa) Since prior to January 1, 1985; or

(bb) By devise or by intestate succession from a person who acquired and had owned continuously the lot or parcel since prior to January 1, 1985;

(ii) The tract on which the dwelling will be sited does not include a dwelling;

(iii) If the lot or parcel on which the dwelling will be sited was part of a tract on November 4, 1993, no dwelling exists on another lot or parcel that was part of that tract;

(iv) For purposes of this subsection, "owner" includes the wife, husband, son, daughter, mother, father, brother, brother-in-law, sister, sister-in-law, son-in-law, daughter-in-law, mother-in-law, father-in-law, aunt, uncle, niece, nephew, stepparent, stepchild, grandparent or grandchild of the owner or a business entity owned by any one or combination of these family members;

(v) The dwelling must be located on a tract that is composed of soils not capable of producing 5,000 cubic feet per year of commercial tree species and is located within 1,500 feet of a public road as defined in LC Chapter 15 that provides or will provide access to the subject tract. The road must be maintained and either paved or surfaced with rock and cannot be:

(aa) A United States Bureau of Land Management road; or

(bb) A United States Forest Service road unless the road is paved to a minimum width of 18 feet, there is at least one defined lane in each direction and a maintenance agreement exists between the United States Forest Service and landowners adjacent to the road, a local government or a state agency;

(vi) When the lot or parcel on which the dwelling will be sited is part of a tract, the remaining portions of the tract must be consolidated into a single lot or parcel when the dwelling is allowed; and

(vii) When the lot or parcel on which the dwelling will be sited lies within an area designated in the Rural Comprehensive Plan as habitat of big game, the siting of the dwelling must be consistent with the limitations on density upon which the Rural Comprehensive Plan and land use regulations intended to protect the habitat are based.

(c) A single family "template" dwelling authorized on a lot or parcel located within a forest zone pursuant to the following:

(i) If the lot or parcel is predominantly composed of soils that are:

(aa) Capable of producing zero to 49 cubic feet per acre per year of wood fiber if:

(A) All or part of at least three other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

(bb) Capable of producing 50 to 85 cubic feet per acre per year of wood fiber if:

(A) All or part of at least seven other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

(cc) Capable of producing more than 85 cubic feet per acre per year of wood fiber if:

(A) All or part of at least 11 other lots or parcels that existed on January 1, 1993, are within a 160 acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

(ii) Lots or parcels within urban growth boundaries cannot be used to satisfy the eligibility requirements of subsection (i) above;

(iii) A dwelling, as used in subsection (i) above, is considered to be in the 160-acre template if any part of the parcel is in the 160-acre template;

(iv) Except as provided by subsection (v) below, if the subject tract abuts a road that existed on January 1, 1993, the measurement required in (i) above may be made by creating a 160 acre rectangle that is one mile long and 1/4 mile wide centered on the center of the subject tract and that is to the maximum extent possible, aligned with the road;

(v) The following applies where a tract 60 acres or larger abuts a road or perennial stream:

(aa) The measurement must be made in accordance with paragraph (iv). However, one of the three required dwellings must be on the same side of the road or stream as the tract, and:

(A) Be located within a 160-acre rectangle that is one mile long and one-quarter mile wide centered on the center of the subject tract and that is, to the maximum extent possible aligned with the road or stream; or

(B) Be within one-quarter mile from the edge of the subject tract but not outside the length of the 160 acre rectangle, and on the same side of the road or stream as the tract;

(bb) If a road crosses the tract on which the dwelling will be located, at least one of the three required dwellings must be on the same side of the road as the proposed dwelling;

(vi) A proposed "template" dwelling under this section is not allowed:

(aa) Unless no dwellings are allowed on other lots or parcels that make up the tract and deed restrictions established under paragraph (3)(a)(iii) for the other lots or parcels that make up the tract are met; or

(bb) If the tract on which the dwelling will be sited includes a dwelling;

(vii) Where other lots or parcels that make up a tract in Subsection (vi):

(aa) The applicant must provide evidence that the covenants, conditions, and restrictions form adopted as "Exhibit A" in OAR chapter 660, division 6 has been recorded with the county clerk of the county or counties where the property subject to the covenants, conditions, and restrictions is located;

(bb) The covenants, conditions, and restrictions are irrevocable, unless a statement of release is signed by an authorized representative of the county or counties where the property subject to the covenants, conditions, and restrictions is located;

(viii) The Director shall maintain a copy of the covenants, conditions, and restrictions filed in the county deed records pursuant to this section and a map or other record depicting tracts do not qualify for the siting of a dwelling under the covenants, conditions, and restrictions filed in the county deed records pursuant to this section. The map or other record required by this subsection shall be readily available to the public in the county planning office.

(d) Alteration, restoration, or replacement of a lawfully established dwelling, subject to the following:

(i) The dwelling was lawfully established;

(ii) The lawfully established dwelling:

(aa) Has intact exterior walls and roof structures;

(bb) Has indoor plumbing consisting of a kitchen sink, toilet and bathing facilities connected to a sanitary waste disposal system;

(cc) Has interior wiring for interior lights; and

(dd) Has a heating system;

(iii) In the case of replacement, is removed, demolished, or converted to an allowable nonresidential use within three months of the completion of the replacement dwelling.

(e) A temporary hardship dwelling is subject to the following:

(i) One manufactured dwelling (MH), recreational vehicle (RV), or the temporary residential use of an existing building may be allowed in conjunction with an existing dwelling as a temporary use for the term of the hardship suffered by the existing resident or relative, subject to the following:

(aa) The hardship dwelling must use the same subsurface sewage disposal system used by the existing dwelling, if that disposal system is adequate to accommodate the additional dwelling. If a public sanitary sewer system is available, the hardship dwelling may connect to the public system and not use a subsurface sewage disposal system;

(bb) Except as provided in (3)(e)(i)(cc) below, approval of a temporary hardship dwelling permit is valid until December 31 of the year following the year of original permit approval and may be renewed once every two years until the hardship situation ceases or unless in the opinion of the Lane County Sanitarian the on-site sewage disposal system no longer meets DEQ requirement;

Report - Major Big Game Range in Lane County RCP

There were three objectives for the analysis:

1. Determine the acreage of the Major Big Game Range within Lane County's Rural Comprehensive Plan outside of Metro Plan, UGB's and Developed and Committed Areas.
2. Identify the number of dwellings that fall within that amount of acreage.
3. Determine the overall density of dwellings per acre.

ESRI GIS software and geoprocessing tools in combination with various data (see sources below) was used to perform the analysis, which included filtering specific data both spatially and tabularly.

The acreage within the study area was calculated from the digitized boundary layer of the Major Big Game Range. This acreage was then refined by subtracting acreage that was found to be within the Metro Plan, UGB's and Developed and Committed Areas. Analysis was also performed separately for the east and west parts of the County as the Major Big Game Range is not contiguous across the lands within and adjacent to the I-5 corridor.

Spatial and tabular filters were applied to the Lane County's Rural Plan Designation layer, specifically, those designated Residential, Commercial, or Industrial. All lands that have a plan designation of R, C or I that are outside of UGB's and the Metro Plan boundary by necessity must be within a Developed and Committed Lands Exception (D&C) Area to receive that Plan designation. All areas within a D&C Area are considered Impacted Big Game Range (per Lane County RCP Goal 5 Flora and Fauna Policy #10) and not Major Big Game Range. Therefore, any of the D&C areas that lie within the digitized boundary layer of the Major Big Game Range were excluded from the total acreage calculation. Since there is no specific digitized layer for D&C areas outside of the Metro Plan, the only way to identify and exclude these lands was to utilize the Rural Plan Designation layer.

Tabular filters were also applied to the regional address layer to determine residential dwellings outside of exclusion areas. Specifically, only addresses with a HUD/BPR residential use code (D,K,M,N,S,Q) were used. The official reference for the HUD/BPR codes (also commonly known as the SLUCM codes) is the Standard Land Use Code Manual from the Urban Renewal Administration, Bureau of Public Roads published in 1965. The coding scheme has been modified in its details to meet the local needs of Lane County. Address points are almost always located where the structure/dwelling exists, and there may be instances where a portion of a given parcel or property is within an exclusion area, while the dwelling is not.

Analysis Results (acreage values are as mapped):
Total Acres (land & water) in Lane County = 2,955,953
Major Big Game Range in Lane County (no exclusions) = 2,596,120 acres

Map 1:
Major Big Game Range in Lane County with exclusions = 2,571,426 acres
Residential Addresses (dwellings) outside of exclusion areas = 3,137
Overall Density = 1 dwelling / 819 acres

Map 2:
Major Big Game Range in Lane County east of I-5 with exclusions = 1,818,537 acres
Residential Addresses (dwellings) outside of exclusion areas and east of Interstate 5 = 1,285
Overall Density = 1 dwelling / 1,415 acres

Map 3:
Major Big Game Range in Lane County west of I-5 with exclusions = 752,889 acres
Residential Addresses (dwellings) outside of exclusion areas and west of Interstate 5 = 1,852
Overall Density = 1 dwelling / 406 acres

MOTION TO INTERVENE

I.

LANDWATCH LANE COUNTY hereby moves to intervene on the side of Respondent Lane County, in the above-captioned appeal. This Motion to Intervene is filed within 21 days of the date of the Notice of Intent to Appeal (filed April 26, 2021) and is therefore timely. OAR 661-010-0050(2). The appeal challenges the decision of the Lane County Hearings Official entitled "Appeal of a Planning Director Approval of a Template Dwelling within an F-2 District," PA 20-05064.

II.

The name, address, and telephone number of the attorney for proposed

intervenor is as follows:

Sean T. Malone, OSB # 084060
Attorney at Law
259 E. 5th Ave., Suite 200-C
Eugene OR 97401
(303) 859-0403
seanmalone8@hotmail.com

III.

LandWatch Lane County appeared and participated before the Hearings Official and is listed as a party of record in the attached decision. *See* Exhibit A at 1. Accordingly, LandWatch Lane County has standing to intervene pursuant to OAR 661-010-0050(1), and the intervention fee for each appeal is enclosed herein.

Respectfully submitted, Dated: May 17, 2021

Sean T. Malone, OSB # 084060
Attorney at Law
259 E. Fifth Ave, Ste 200-C
Eugene OR 97401

Dated this 17th day of May, 2021

Sean T. Malone
Attorney for Proposed Intervenor

Exhibit A

RECEIVED APR 19 2021

BEFORE THE LANE COUNTY HEARINGS OFFICIAL

APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On February 5, 2020, the applicant, E.J.K Investments, filed an application seeking to establish a dwelling in the Impacted Forest Lands (F–2) zone on tax lot 2900, assessor's map 21–35–07–30. PA 20-05064. The application was deemed complete on March 6, 2020. On January 27, 2021, the Director approved the application, and on February 8, 2021, a timely appeal was submitted by LandWatch Lane County (LandWatch).

On January 21, 2021, six days before the Planning Director issued their decision approving the subject application, the Oregon Land Use Board of Appeals (LUBA) issued its decision in *LandWatch Lane County v. Lane County (Nimpkish)*, ___ Or LUBA ___ (LUBA No. 2020-030, January 21, 2021). As discussed further below, LandWatch based its appeal in this case on LUBA's holding in *Nimpkish*. In its staff report to the Hearings Official, staff concurred with LandWatch as to the significance of *Nimpkish* to the resolution of this appeal, and recommended denial.

Parties of Record

E.J.K. Investments (Kim O'Dea)

Decision Date: April 19, 2021

Appeal Deadline

A party may request reconsideration of this decision by the Hearings Official, pursuant to Lane Code 14.080(1)(a)(iii) and (1)(b), by filing a notice of appeal within 12 business days after the date the notice of decision was mailed. If a party seeking further review chooses not to seek reconsideration, they must file an appeal directly with LUBA within the timelines set forth in state law. See LUBA's website for more information on appeal deadlines.

//////////////

Statement of Criteria

Lane Code 16.211(5) and (8)
House Bill 2225

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 2900, assessor's map 21–35–07–30, which is immediately north of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries.

   The property is approximately 12.05 acres and is vacant except for an existing roadway and powerlines largely within an east-west Bonneville Power Administration easement that transects the property.

   The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The entire property is designated Major Big Game by the Oregon Department of Fish and Wildlife (ODFW) Habitat Maps.

2. The subject application is one of two template dwelling applications approved by the Planning Director on the same date. The other application concerns a forest template dwelling proposal on a contiguous 13.28-acre parcel identified as tax lot 2800 of the same assessor's map, which is also designated Big Game Range.

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 20–05064) BY E.J.K. INVESTMENTS FOR A FOREST TEMPLATE DWELLING ON TAX LOT 2900, ASSESSOR'S MAP 21–35–07–30 IS REVERSED.

Justification for the Decision

The applicant is requesting approval to construct a single–family forest template dwelling in the F-2 zone as provided by Lane Code 16.211(5)(c).

A. Goal 5

The subject property is designated Major Big Game Habitat. Big Game Habitat is a Statewide Planning Goal 5 resource and thus is entitled to certain protections. Goal 5 (Open Spaces, Scenic and Historic Areas and Natural Resources) sets forth a process for evaluating, inventorying, and protecting significant natural resources, including big game habitat. The evaluation includes consideration of uses that conflict with the protected significant resource. In order to implement Goal 5, local governments are required to

adopt programs that will protect natural resources, and includes consideration and weighing the values of conflicting uses and the natural resource. OAR 660-015-0000(5).

ODFW has determined that the main use that conflicts with, and poses a significant threat to, big game habitat is residential development. Lane County's Goal 5 program includes the following comprehensive plan policy that implements Goal 5 and is intended to address this main conflict:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."* Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.[1]

The *Nimpkish* appeal referenced above involved a request for a forest template dwelling on a 10-acre property. The appellant in that case argued that a dwelling on a 10-acre property would violate the recommended density limitation (80 dwellings per acre), and thus violated Policy 11. The applicant asserted that Policy 11 did not apply to discrete land use applications for forest template dwellings. LUBA held that Policy 11 does apply to an application for a forest template dwelling.

As LUBA explained, the first sentence of Policy 11 acknowledges that the County is using the ODFW density recommendations as the baseline. The first sentence, and the County's Working Paper, also acknowledges that the County intended to study different regions of the County (most likely the County would be divided into 10 to 20 different regions in that study) to come up with a "residential carrying capacity." That information would then be used to determine appropriate zoning in the area. The petitioners in *Nimpkish* focused on the second sentence of Policy 11, arguing that the County is prohibited from allowing residential density above the ODFW-recommended limits without first conducting an Economic, Social, Environmental, and Energy (ESEE) analysis. LUBA agreed.

The applicant in this case does not challenge that holding *per se*. Rather, it argues that the addition of this one dwelling does not violate the ODFW-recommended limits, and therefore, an ESEE analysis is not required. That contention is based on the applicant's interpretation of the significance of the term "overall" in Policy 11.

---

[1] The ODFW recommendation for overall residential density in the Major Big Game Range Habitat is no more than 80 dwellings per acre. For Peripheral Big Game Range Habitat, the recommended density is no more than 40 dwellings per acre.

Anybody who has studied residential densities, either in urban or rural settings, understand that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings / acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county. The applicant argues that the denominator here should be the entire County, or at least a very large portion of the County, because Policy 11 uses the term "overall residential density."[2]

LandWatch relies on one sentence in LUBA's decision in *Nimpkish* in support of its argument that the subject property, not the entire County, must serve as the density denominator: "There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres." Slip op. 15.[3]

The applicant contends that LandWatch cannot rely on that statement because it was technically *dicta*. The issue addressed in that statement (whether the addition of the proposed dwelling would constitute a conflict that triggered an ESEE analysis) was not before LUBA in the *Nimpkish* appeal. The issue in that appeal was whether Policy 11 applied to a discrete application for a forest template dwelling. The Hearings Official had held that it did not, and LUBA overturned that ruling. On that basis, the decision was remanded. LUBA was not called upon to address (and the parties presumably did not brief) the issue of what the appropriate density denominator would be once it was determined that Policy 11 applied.

It may well be that LUBA's statement in *Nimpkish* that "the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres" was *dicta*. That said, even if that statement was *dicta* and, thus, is not clear precedent in this case, it seems clear that LUBA believed that, if Policy 11 applied, the appropriate density denominator would be the subject property. In other words, if the issue had been before LUBA, we now know how LUBA would have ruled. However, because LUBA made that statement somewhat in passing, it did not conduct a full interpretation of Policy 11 to reach that conclusion. That analysis is now provided here.

Text

The applicant argues that the term "overall" in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County

[2] Applicant submitted evidence supporting his conclusion that the "overall density" when viewed at the County level, is well below the ODFW recommended "overall density." He also submitted documentation regarding the residential density of smaller subsets of the County; *i.e.*, the area east of Interstate 5 and the area west of Interstate 5; regions divided by highway corridors; and watershed regions. All sets of numbers confirmed his theory that the residential densities are well below the ODFW recommended "overall" densities. Thus, the addition of one dwelling would not result in a Goal 5 conflict.

[3] LUBA then went on to make the following legal conclusion: "Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.'"

on the east or west side of Interstate 5. LandWatch points out that the use of the term "overall" in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of "overall residential density." The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to "determine the allowable number of residential dwelling units within regions of the county." The next sentence does not use the "overall" modifier: "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal.

Context/Caselaw

RCP Policy 11 implements Goal 5. Accordingly, Policy 11 must be interpreted in a manner that is consistent with the Goal that it implements. As stated above, Goal 5 is aimed at preserving and protecting significant natural resources, such as big game habitat. The evident purpose of applying a residential density limit is to minimize human impacts to wildlife habitat. LandWatch asserts that the applicant's proposed interpretation would effectively permit large areas protected as wildlife habitat to be developed at densities that destroy its value as wildlife habitat.

In a 2003 LUBA appeal, Douglas County made an interpretation of its code that is similar to the interpretation of Policy 11 that the applicant presents in this appeal. *See Wetherell v. Douglas County*, 44 Or LUBA 745 (2003). The application in that case was for approval of a site plan for a destination resort. The property fell within an area designated as Peripheral Big Game Habitat. The request was therefore subject to a code provision (LUDO 3.32.300) that limited residential density to one dwelling unit per 40 acres.[4] As is the case here, the code provision did not explicitly state the appropriate density denominator. The County determined that the appropriate density denominator under the applicable code provisions was an area of the county that included 1,121,378 acres.[5] On appeal to LUBA, the opponent argued that the proper denominator was a 500-acre portion of the subject 2,700-acre ranch. The Hearings Official sets forth LUBA's analysis in that case at length, because the analysis is the exact same analysis the Hearings Official adopts in this appeal:

> "LUDO 3.32.200 provides no express denominator for the density standard, so the county's view that the pertinent denominator is a 1,121,378-acre area of the county is not necessarily inconsistent with the text of LUDO 3.32.200. However, we agree with petitioners that that view is inconsistent with the purpose of the

[4] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[5] The area the county used was the Calapooya and Elk Creek geographic Planning Advisory Committee area.

density standard, to "preserve identified peripheral habitat areas." See n 4. Neither intervenors nor the county's decision provides any basis to question petitioners' view that the purpose of the density standard is to preserve big game wildlife habitat by minimizing human impacts on that habitat, specifically by limiting the density of residential uses. Under the county's view, large areas of Goal 5-protected wildlife habitat may be developed at residential densities that significantly exceed one dwelling per 40 acres, as long as the average density over a much larger area of the county does not exceed that standard. As the county interpreted LUDO 3.32.300, it will have no regulatory effect at all until over 28,000 dwellings are built in the 1,121,378-acre PBGHO. At that point, its regulatory effect would change from nonexistent to exceedingly harsh, because it would effectively impose a residential building moratorium throughout the PBGHO. * * * It seems exceedingly unlikely to us that anyone who thought about how LUDO 3.32.300 would be implemented could possibly have intended that it work in that way.

* * *

A construction of LUDO 3.32.300 that is far more consistent with its apparent purpose and the language of LUDO 3.32.300 is that the denominator for the one dwelling per 40-acre density limit is the subject property, in this case the 500 acres that make up the proposed destination resort.

* * *

We recognize that a density standard that permitted selection of some larger local area, i.e., a local area larger than the 500-acre subject property but smaller than the 1,121,378-acre applied here, might provide the county with desirable flexibility to permit clustered residential development in areas with lesser habitat value if some way could be found to further limit or bar residential development altogether in areas with high habitat value. However desirable that flexibility might be, as written, LUDO 3.32.300 does not permit application of the one dwelling unit per 40 acres standard over an area that is larger than the property that is the subject of the application. If the county wishes the density limit to apply in some other manner, it must amend LUDO 3.32.300 to achieve that result. In sum, the county's view that the denominator required by the LUDO 3.32.300 density standard is a 1,121,378-acre portion of the county is not reasonable and correct."[6]

The Hearings Official believes that the applicant's proposed interpretation in this case is similar to the position taken by Douglas County in *Wetherell.*[7] LUBA rejected that

[6] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[7] The applicant attempts to distinguish *Wetherell—Wetherell* did not involve a forest template dwelling application; *Wetherell* interpreted a code provision, not a comp plan policy; and the Douglas County code provision at issue did not include the term "overall." While the posture of that case was a bit different, the policy considerations and analysis are the same. The term "overall" in Policy 11 refers to the ODFW

interpretation, and the Hearings Official feels certain that LUBA would, for the reasons set forth above, also reject the applicant's interpretation in this case. Until the County conducts its region-by-region analysis, which is called for in Policy 11, the density denominator must be the subject property.

The applicant may assert that this approach is overly restrictive because it essentially means that a forest template dwelling proposed on a property smaller than 80 acres in the Major Big Game Habitat area will always be deemed to conflict with the resource. The Hearings Official responds that the determination of a conflict does not result in the development being prohibited. It merely requires that an ESEE analysis be conducted to determine whether the additional dwelling would harm the protected resource.

Summary

The subject property in this case is only 13.28 acres in size. If the forest template dwelling were approved, the residential density would exceed the ODFW recommended density of one dwelling per 80 acres, and, absent an ESEE analysis, would violate Policy 11.

B. Goal 2

Even if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that the applicant could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan.

Statewide Planning Goal 2 (Land Use Planning) requires that land use decisions be based on an "adequate factual base." There are circumstances where that requirement demands that the "factual base" upon which the quasi-judicial decision is based be found in the comprehensive plan. For instance, both LUBA and the Oregon Court of Appeals have held that for purposes of Statewide Planning Goal 10, an inventory of buildable lands that is relied upon for a quasi-judicial decision must first be adopted as part of the comprehensive plan. *See D.S. Parklane Development Inc. v. Metro*, 165 Or App 1, 994 P2d 1205 (2000); *1000 Friends of Oregon v. City of Dundee*, 203 Or App 207, 216, 124 P3d 1249 (2005); *Lengkeek v. City of Tangent*, 50 Or LUBA 367 (2005); *Lengkeek v. City of Tangent*, 52 Or LUBA 509, 515 (2006). This requirement reflects the emphasis in Goal 2 on consistency and predictability. "Citizens must be able to rely on the fact that the acknowledged comprehensive plan and information integrated in that plan will serve

---

density recommendation, which is apparently stated as an "overall residential density" standard. As LandWatch points out, the second sentence of Policy 11 does not use the "overall" modifier. Accordingly, this case is similar to *Wetherell*, where the text of the code did not spell out the density denominator. The context provided by the policies furthered by Goal 5 protections are the same in both cases--in *Wetherell*, those policies were set forth in the code's purpose section; in this case, the Goal 5 policies are relevant to the interpretation because Policy 11 implements Goal 5 and must be interpreted in a manner that is consistent with Goal 5. An interpretation that does nothing to protect big game habitat from conflicting residential uses is not consistent with Goal 5.

as the basis for land use decisions, rather than running the risk of being 'sandbagged' by government's reliance on new data." *1000 Friends of Oregon v. City of Dundee*, 203 Or App at 216.

The question here is whether the information provided by the applicant is regular, run of the mill evidence that can be relied upon, or whether it is more in the vein of a buildable lands inventory, which must be incorporated into the comprehensive plan, so that future applicants are using the same data.

As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study. Until that work is completed, Policy 11 makes clear, any density above the ODFW recommended density limits "shall be considered to conflict with Goal 5" and will be allowed only following an ESEE analysis.

The ideal solution is for the County to conduct the regional studies that Policy 11 and the Working Paper call for. Arguably, an applicant could perform all or some part of that work. However, if it were relied upon by an applicant to justify foregoing the ESEE analysis called for in Policy 11, then the documentation would have to first be adopted into the comprehensive plan.[8]

Conclusion

The applicant's argument for approval hinges on its proposed interpretation of Policy 11, which allows a density calculation that is based on using the entire County (or a very large swath of the County) as the density denominator. As discussed above, that interpretation would do little if anything to protect the County's designated Major Big Game Range from conflicting residential development. It is thus inconsistent with Goal 5 and is not reasonable or correct.

Because the County has not yet completed its regional study, the only appropriate density denominator is the subject property. In this case, the subject property is only 13.28 acres, and the ODFW-recommended overall residential density of one dwelling per 80 acres is exceeded. An ESEE analysis is required. Because no ESEE analysis has been provided, the Planning Director's approval must be reversed.

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

[8] This Goal 2 discussion is not necessary for the Hearings Official's conclusion in this appeal. The Policy 11 interpretation set forth above stands on its own. If, on appeal, LUBA disagrees with the Goal 2 discussion, it could still affirm the Hearings Official's decision.

Exhibit A
RECEIVED APR 19 2021

BEFORE THE LANE COUNTY HEARINGS OFFICIAL

APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F-2 DISTRICT

Application Summary

On February 5, 2020, the applicant, Edward J. King, filed an application seeking to establish a dwelling in the Impacted Forest Lands (F-2) zone on tax lot 2800, assessor's map 21-35-07-30. PA 20-05066. The application was deemed complete on March 6, 2020. On January 27, 2021, the Director approved the application, and on February 8, 2021, a timely appeal was submitted by LandWatch Lane County (LandWatch).

On January 21, 2021, six days before the Planning Director issued their decision approving the subject application, the Oregon Land Use Board of Appeals (LUBA) issued its decision in *LandWatch Lane County v. Lane County (Nimpkish)*, ___ Or LUBA ___ (LUBA No. 2020-030, January 21, 2021). As discussed further below, LandWatch based its appeal in this case on LUBA's holding in *Nimpkish*. In its staff report to the Hearings Official, staff concurred with LandWatch as to the significance of *Nimpkish* to the resolution of this appeal, and recommended denial.

Statement of Criteria

Lane Code 16.211(5) and (8)
House Bill 2225

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 2800, assessor's map 21–35–07–30, which is immediately north of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries.

   The property is approximately 13.28 acres and is vacant except for an existing roadway and powerlines largely within an east-west Bonneville Power Administration easement that transects the property.

   The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The entire property is designated Major Big Game by the Oregon Department of Fish and Wildlife (ODFW) Habitat Maps.

2. The subject application is one of two template dwelling applications approved by the Planning Director on the same date. The other application concerns a forest template dwelling proposal on a contiguous 12.05-acre parcel identified as tax lot 2900 of the same assessor's map, which is also designated Big Game Range.

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 20–05066) BY EDWARD J. KING FOR A FOREST TEMPLATE DWELLING ON TAX LOT 2800, ASSESSOR'S MAP 21–35–07–30 IS REVERSED.

Justification for the Decision

The applicant is requesting approval to construct a single–family forest template dwelling in the F-2 zone as provided by Lane Code 16.211(5)(c).

A. Goal 5

The subject property is designated Major Big Game Habitat. Big Game Habitat is a Statewide Planning Goal 5 resource and thus is entitled to certain protections. Goal 5 (Open Spaces, Scenic and Historic Areas and Natural Resources) sets forth a process for evaluating, inventorying, and protecting significant natural resources, including big game habitat. The evaluation includes consideration of uses that conflict with the protected significant resource. In order to implement Goal 5, local governments are required to

adopt programs that will protect natural resources, and includes consideration and weighing the values of conflicting uses and the natural resource. OAR 660-015-0000(5).

ODFW has determined that the main use that conflicts with, and poses a significant threat to, big game habitat is residential development. Lane County's Goal 5 program includes the following comprehensive plan policy that implements Goal 5 and is intended to address this main conflict:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."* Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.[1]

The *Nimpkish* appeal referenced above involved a request for a forest template dwelling on a 10-acre property. The appellant in that case argued that a dwelling on a 10-acre property would violate the recommended density limitation (80 dwellings per acre), and thus violated Policy 11. The applicant asserted that Policy 11 did not apply to discrete land use applications for forest template dwellings. LUBA held that Policy 11 does apply to an application for a forest template dwelling.

As LUBA explained, the first sentence of Policy 11 acknowledges that the County is using the ODFW density recommendations as the baseline. The first sentence, and the County's Working Paper, also acknowledges that the County intended to study different regions of the County (most likely the County would be divided into 10 to 20 different regions in that study) to come up with a "residential carrying capacity." That information would then be used to determine appropriate zoning in the area. The petitioners in *Nimpkish* focused on the second sentence of Policy 11, arguing that the County is prohibited from allowing residential density above the ODFW-recommended limits without first conducting an Economic, Social, Environmental, and Energy (ESEE) analysis. LUBA agreed.

The applicant in this case does not challenge that holding *per se*. Rather, he argues that the addition of this one dwelling does not violate the ODFW-recommended limits, and therefore, an ESEE analysis is not required. That contention is based on his interpretation of the significance of the term "overall" in Policy 11.

---

[1] The ODFW recommendation for overall residential density in the Major Big Game Range Habitat is no more than 80 dwellings per acre. For Peripheral Big Game Range Habitat, the recommended density is no more than 40 dwellings per acre.

Anybody who has studied residential densities, either in urban or rural settings, understand that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings / acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county. The applicant argues that the denominator here should be the entire County, or at least a very large portion of the County, because Policy 11 uses the term "overall residential density."[2]

LandWatch relies on one sentence in LUBA's decision in *Nimpkish* in support of its argument that the subject property, not the entire County, must serve as the density denominator: "There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres." Slip op. 15.[3]

The applicant contends that LandWatch cannot rely on that statement because it was technically *dicta*. The issue addressed in that statement (whether the addition of the proposed dwelling would constitute a conflict that triggered an ESEE analysis) was not before LUBA in the *Nimpkish* appeal. The issue in that appeal was whether Policy 11 applied to a discrete application for a forest template dwelling. The Hearings Official had held that it did not, and LUBA overturned that ruling. On that basis, the decision was remanded. LUBA was not called upon to address (and the parties presumably did not brief) the issue of what the appropriate density denominator would be once it was determined that Policy 11 applied.

It may well be that LUBA's statement in *Nimpkish* that "the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres" was *dicta*. That said, even if that statement was *dicta* and, thus, is not clear precedent in this case, it seems clear that LUBA believed that, if Policy 11 applied, the density denominator would be the subject property. In other words, if the issue had been before LUBA, we now know how LUBA would have ruled. However, because LUBA made that statement somewhat in passing, it did not conduct a full interpretation of Policy 11 to reach that conclusion. That analysis is now provided here.

Text

The applicant argues that the term "overall" in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County

[2] Applicant submitted evidence supporting his conclusion that the "overall density" when viewed at the County level, is well below the ODFW recommended "overall density." He also submitted documentation regarding the residential density of smaller subsets of the County; *i.e.*, the area east of Interstate 5 and the area west of Interstate 5; regions divided by highway corridors; and watershed regions. All sets of numbers confirmed his theory that the residential densities are well below the ODFW recommended "overall" densities. Thus, the addition of one dwelling would not result in a Goal 5 conflict.

[3] LUBA then went on to make the following legal conclusion: "Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.'"

on the east or west side of Interstate 5. LandWatch points out that the use of the term "overall" in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of "overall residential density." The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to "determine the allowable number of residential dwelling units within regions of the county." The next sentence does not use the "overall" modifier: "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal.

Context/Caselaw

RCP Policy 11 implements Goal 5. Accordingly, Policy 11 must be interpreted in a manner that is consistent with the Goal that it implements. As stated above, Goal 5 is aimed at preserving and protecting significant natural resources, such as big game habitat. The evident purpose of applying a residential density limit is to minimize human impacts to wildlife habitat. LandWatch asserts that the applicant's proposed interpretation would effectively permit large areas protected as wildlife habitat to be developed at densities that destroy its value as wildlife habitat.

In a 2003 LUBA appeal, Douglas County made an interpretation of its code that is similar to the interpretation of Policy 11 that the applicant presents in this appeal. *See Wetherell v. Douglas County*, 44 Or LUBA 745 (2003). The application in that case was for approval of a site plan for a destination resort. The property fell within an area designated as Peripheral Big Game Habitat. The request was therefore subject to a code provision (LUDO 3.32.300) that limited residential density to one dwelling unit per 40 acres.[4] As is the case here, the code provision did not explicitly state the appropriate density denominator. The County determined that the appropriate density denominator under the applicable code provisions was an area of the county that included 1,121,378 acres.[5] On appeal to LUBA, the opponent argued that the proper denominator was a 500-acre portion of the subject 2,700-acre ranch. The Hearings Official sets forth LUBA's analysis in that case at length, because the analysis is the exact same analysis the Hearings Official adopts in this appeal:

> "LUDO 3.32.200 provides no express denominator for the density standard, so the county's view that the pertinent denominator is a 1,121,378-acre area of the county is not necessarily inconsistent with the text of LUDO 3.32.200. However, we agree with petitioners that that view is inconsistent with the purpose of the

[4] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[5] The area the county used was the Calapooya and Elk Creek geographic Planning Advisory Committee area.

density standard, to "preserve identified peripheral habitat areas." See n 4. Neither intervenors nor the county's decision provides any basis to question petitioners' view that the purpose of the density standard is to preserve big game wildlife habitat by minimizing human impacts on that habitat, specifically by limiting the density of residential uses. Under the county's view, large areas of Goal 5-protected wildlife habitat may be developed at residential densities that significantly exceed one dwelling per 40 acres, as long as the average density over a much larger area of the county does not exceed that standard. As the county interpreted LUDO 3.32.300, it will have no regulatory effect at all until over 28,000 dwellings are built in the 1,121,378-acre PBGHO. At that point, its regulatory effect would change from nonexistent to exceedingly harsh, because it would effectively impose a residential building moratorium throughout the PBGHO. * * * It seems exceedingly unlikely to us that anyone who thought about how LUDO 3.32.300 would be implemented could possibly have intended that it work in that way.

* * *

A construction of LUDO 3.32.300 that is far more consistent with its apparent purpose and the language of LUDO 3.32.300 is that the denominator for the one dwelling per 40-acre density limit is the subject property, in this case the 500 acres that make up the proposed destination resort.

* * *

We recognize that a density standard that permitted selection of some larger local area, i.e., a local area larger than the 500-acre subject property but smaller than the 1,121,378-acre applied here, might provide the county with desirable flexibility to permit clustered residential development in areas with lesser habitat value if some way could be found to further limit or bar residential development altogether in areas with high habitat value. However desirable that flexibility might be, as written, LUDO 3.32.300 does not permit application of the one dwelling unit per 40 acres standard over an area that is larger than the property that is the subject of the application. If the county wishes the density limit to apply in some other manner, it must amend LUDO 3.32.300 to achieve that result. In sum, the county's view that the denominator required by the LUDO 3.32.300 density standard is a 1,121,378-acre portion of the county is not reasonable and correct."[6]

The Hearings Official believes that the applicant's proposed interpretation in this case is similar to the position taken by Douglas County in *Wetherell*.[7] LUBA rejected that

[6] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[7] The applicant attempts to distinguish *Wetherell—Wetherell* did not involve a forest template dwelling application; *Wetherell* interpreted a code provision, not a comp plan policy; and the Douglas County code provision at issue did not include the term "overall." While the posture of that case was a bit different, the policy considerations and analysis are the same. The term "overall" in Policy 11 refers to the ODFW

interpretation, and the Hearings Official feels certain that LUBA would, for the reasons set forth above, also reject the applicant's interpretation in this case. Until the County conducts its region-by-region analysis, which is called for in Policy 11, the density denominator must be the subject property.

The applicant may assert that this approach is overly restrictive because it essentially means that a forest template dwelling proposed on a property smaller than 80 acres in the Major Big Game Habitat area will always be deemed to conflict with the resource. The Hearings Official responds that the determination of a conflict does not result in the development being prohibited. It merely requires that an ESEE analysis be conducted to determine whether the additional dwelling would harm the protected resource.

Summary

The subject property in this case is only 13.28 acres in size. If the forest template dwelling were approved, the residential density would exceed the ODFW recommended density of one dwelling per 80 acres, and, absent an ESEE analysis, would violate Policy 11.

B. Goal 2

Even if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that he could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan.

Statewide Planning Goal 2 (Land Use Planning) requires that land use decisions be based on an "adequate factual base." There are circumstances where that requirement demands that the "factual base" upon which the quasi-judicial decision is based be found in the comprehensive plan. For instance, both LUBA and the Oregon Court of Appeals have held that for purposes of Statewide Planning Goal 10, an inventory of buildable lands that is relied upon for a quasi-judicial decision must first be adopted as part of the comprehensive plan. *See D.S. Parklane Development Inc. v. Metro*, 165 Or App 1, 994 P2d 1205 (2000); *1000 Friends of Oregon v. City of Dundee*, 203 Or App 207, 216, 124 P3d 1249 (2005); *Lengkeek v. City of Tangent*, 50 Or LUBA 367 (2005); *Lengkeek v. City of Tangent*, 52 Or LUBA 509, 515 (2006). This requirement reflects the emphasis in Goal 2 on consistency and predictability. "Citizens must be able to rely on the fact that the acknowledged comprehensive plan and information integrated in that plan will serve

---

density recommendation, which is apparently stated as an "overall residential density" standard. As LandWatch points out, the second sentence of Policy 11 does not use the "overall" modifier. Accordingly, this case is similar to *Wetherell*, where the text of the code did not spell out the density denominator. The context provided by the policies furthered by Goal 5 protections are the same in both cases--in *Wetherell*, those policies were set forth in the code's purpose section; in this case, the Goal 5 policies are relevant to the interpretation because Policy 11 implements Goal 5 and must be interpreted in a manner that is consistent with Goal 5. An interpretation that does nothing to protect big game habitat from conflicting residential uses is not consistent with Goal 5.

as the basis for land use decisions, rather than running the risk of being 'sandbagged' by government's reliance on new data." *1000 Friends of Oregon v. City of Dundee*, 203 Or App at 216.

The question here is whether the information provided by the applicant is regular, run of the mill evidence that can be relied upon, or whether it is more in the vein of a buildable lands inventory, which must be incorporated into the comprehensive plan, so that future applicants are using the same data.

As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study. Until that work is completed, Policy 11 makes clear, any density above the ODFW recommended density limits "shall be considered to conflict with Goal 5" and will be allowed only following an ESEE analysis.

The ideal solution is for the County to conduct the regional studies that Policy 11 and the Working Paper call for. Arguably, an applicant could perform all or some part of that work. However, if it were relied upon by an applicant to justify foregoing the ESEE analysis called for in Policy 11, then the documentation would have to first be adopted into the comprehensive plan.[8]

Conclusion

The applicant's argument for approval hinges on his proposed interpretation of Policy 11, which allows a density calculation that is based on using the entire County (or a very large swath of the County) as the density denominator. As discussed above, that interpretation would do little if anything to protect the County's designated Major Big Game Range from conflicting residential development. It is thus inconsistent with Goal 5 and is not reasonable or correct.

Because the County has not yet completed its regional study, the only appropriate density denominator is the subject property. In this case, the subject property is only 13.28 acres, and the ODFW-recommended overall residential density of one dwelling per 80 acres is exceeded. An ESEE analysis is required. Because no ESEE analysis has been provided, the Planning Director's approval must be reversed.

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

[8] This Goal 2 discussion is not necessary for the Hearings Official's conclusion in this appeal. The Policy 11 interpretation set forth above stands on its own. If, on appeal, LUBA disagrees with the Goal 2 discussion, it could still affirm the Hearings Official's decision.

BEFORE THE LAND USE BOARD OF APPEALS
OF THE STATE OF OREGON

EDWARD J. KING,
Petitioner,

vs.

LANE COUNTY
Respondent.

LUBA No. 2021-047

E.J.K. INVESTMENTS,
Petitioner,

vs.

LANE COUNTY,
Respondent.

LUBA No. 2021-052

ORDER ON CONSOLIDATION

Under OAR 661-010-0055, LUBA "may consolidate two or more proceedings, provided the proceedings seek review of the same or closely related land use decision(s) or limited land use decision(s)." Petitioners request that LUBA consolidate LUBA Nos. 2021-047 and 2021-052 because, petitioners argue, the appeals seek review of "closely related * * * decision(s)." Petitioners state that the county agrees with petitioners' consolidation request. Accordingly, LUBA Nos. 2021-047 and 2021-052 shall be consolidated for LUBA review.

LUBA Record 000312

The county shall submit separate records for each appeal. The records in this consolidated proceeding shall be transmitted to the Board on or before May 31, 2021.

Dated this 10th day of May 2021.

Melissa M. Ryan
Board Member

LUBA Record 000313

Certificate of Mailing

I hereby certify that I served the foregoing for LUBA No. 2021-047/052 on May 10, 2021, by mailing to said parties or their attorney a true copy thereof contained in a sealed envelope with postage prepaid addressed to said parties or their attorney as follows:

Andrew Clark

Re: *E.J.K. Investments v. Lane County*

Dear LUBA:

Enclosed is an original and two copies of a NITA in the matter above, which I thought I had filed with its companion appeal, now designated 2021-047.

Also enclosed is my $800 check for the filing fees in both appeals.

Finally, my initial filing included a Motion to Consolidate, which stated the concurrence of the County.

My apologies, again, for the wrinkles in my filings.

Sincerely,

Bill Kloos

Dear Mr. Kloos,

On April 28, 2021, we received a Notice of Intent to Appeal that was accompanied by your check payable to LUBA in the amount of $800. That Notice of Intent to Appeal was assigned LUBA No. 2021-047. The filing fee and deposit for costs for filing a notice of intent to appeal is $400. Therefore, we are returning the check in the amount of $800 to you.

Not later than May 6, 2021, you must remit a new check payable to the Land Use Board of Appeals in the amount of $400 for the filing fee and deposit for costs for LUBA No. 2021-047. If you do not remit a new check on or before that date, the Board will dismiss your appeal pursuant to OAR 661-010-0015(1)(c).

Re: EJK Investments v. Lane County
LUBA No. 2021-052

Dear Board Members:

Enclosed is a thumb drive of the electronic version of the original RECORD OF PROCEEDING UNDER REVIEW. The thumb drive will also contain a recording from Lane County Hearings Official from March 4, 2021. A copy of the above is being mailed to Bill Kloos, attorney for Petitioner, and Sean Malone, attorney for intervenor, in a thumb drive format.

Sincerely,

LANE COUNTY OFFICE OF LEGAL COUNSEL

Hearing official Decision

To the person(s) shown on the attached copy of mailing label &/or attached letter & delivered said information to the authorized for the US Post Office in Springfield, Oregon on

Date Mailed: APR 2 2 2021

End of Comment Period:

Appeal Deadline: MAY 0 4 2021

Hearing Date:

Rachel Adams

NOTE: Surrounding property owners listed are "the owners of record of all property on the most recent property tax assessment rolls" on RLID as per Lane Code 14.060(4)(a)(iv). If a tax lot appears on the notice list & there are no corresponding addresses than the tax records have not been updated; therefore, these property owners were not notified.

RECEIVED APR 19 2021

BEFORE THE LANE COUNTY HEARINGS OFFICIAL

APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On February 5, 2020, the applicant, E.J.K Investments, filed an application seeking to establish a dwelling in the Impacted Forest Lands (F–2) zone on tax lot 2900, assessor's map 21–35–07–30. PA 20-05064. The application was deemed complete on March 6, 2020. On January 27, 2021, the Director approved the application, and on February 8, 2021, a timely appeal was submitted by LandWatch Lane County (LandWatch).

On January 21, 2021, six days before the Planning Director issued their decision approving the subject application, the Oregon Land Use Board of Appeals (LUBA) issued its decision in *LandWatch Lane County v. Lane County (Nimpkish)*, ___ Or LUBA ___ (LUBA No. 2020-030, January 21, 2021). As discussed further below, LandWatch based its appeal in this case on LUBA's holding in *Nimpkish*. In its staff report to the Hearings Official, staff concurred with LandWatch as to the significance of *Nimpkish* to the resolution of this appeal, and recommended denial.

Parties of Record

E.J.K. Investments (Kim O'Dea)
Michael Farthing
LandWatch Lane County (Lauri Segel; Sean Malone)

Jim McLaughlin

Application History

Hearing Date: March 4, 2021
(Record Held Open Until April 8, 2021)

Decision Date: April 19, 2021

Appeal Deadline

A party may request reconsideration of this decision by the Hearings Official, pursuant to Lane Code 14.080(1)(a)(iii) and (1)(b), by filing a notice of appeal within 12 business days after the date the notice of decision was mailed. If a party seeking further review chooses not to seek reconsideration, they must file an appeal directly with LUBA within the timelines set forth in state law. See LUBA's website for more information on appeal deadlines.

//////////////

Statement of Criteria

Lane Code 16.211(5) and (8)
House Bill 2225

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 2900, assessor's map 21–35–07–30, which is immediately north of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries.

   The property is approximately 12.05 acres and is vacant except for an existing roadway and powerlines largely within an east-west Bonneville Power Administration easement that transects the property.

   The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The entire property is designated Major Big Game by the Oregon Department of Fish and Wildlife (ODFW) Habitat Maps.

2. The subject application is one of two template dwelling applications approved by the Planning Director on the same date. The other application concerns a forest template dwelling proposal on a contiguous 13.28-acre parcel identified as tax lot 2800 of the same assessor's map, which is also designated Big Game Range.

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 20–05064) BY E.J.K. INVESTMENTS FOR A FOREST TEMPLATE DWELLING ON TAX LOT 2900, ASSESSOR'S MAP 21–35–07–30 IS REVERSED.

Justification for the Decision

The applicant is requesting approval to construct a single–family forest template dwelling in the F-2 zone as provided by Lane Code 16.211(5)(c).

A. Goal 5

The subject property is designated Major Big Game Habitat. Big Game Habitat is a Statewide Planning Goal 5 resource and thus is entitled to certain protections. Goal 5 (Open Spaces, Scenic and Historic Areas and Natural Resources) sets forth a process for evaluating, inventorying, and protecting significant natural resources, including big game habitat. The evaluation includes consideration of uses that conflict with the protected significant resource. In order to implement Goal 5, local governments are required to

adopt programs that will protect natural resources, and includes consideration and weighing the values of conflicting uses and the natural resource. OAR 660-015-0000(5).

ODFW has determined that the main use that conflicts with, and poses a significant threat to, big game habitat is residential development. Lane County's Goal 5 program includes the following comprehensive plan policy that implements Goal 5 and is intended to address this main conflict:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."* Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.[1]

The *Nimpkish* appeal referenced above involved a request for a forest template dwelling on a 10-acre property. The appellant in that case argued that a dwelling on a 10-acre property would violate the recommended density limitation (80 dwellings per acre), and thus violated Policy 11. The applicant asserted that Policy 11 did not apply to discrete land use applications for forest template dwellings. LUBA held that Policy 11 does apply to an application for a forest template dwelling.

As LUBA explained, the first sentence of Policy 11 acknowledges that the County is using the ODFW density recommendations as the baseline. The first sentence, and the County's Working Paper, also acknowledges that the County intended to study different regions of the County (most likely the County would be divided into 10 to 20 different regions in that study) to come up with a "residential carrying capacity." That information would then be used to determine appropriate zoning in the area. The petitioners in *Nimpkish* focused on the second sentence of Policy 11, arguing that the County is prohibited from allowing residential density above the ODFW-recommended limits without first conducting an Economic, Social, Environmental, and Energy (ESEE) analysis. LUBA agreed.

The applicant in this case does not challenge that holding *per se*. Rather, it argues that the addition of this one dwelling does not violate the ODFW-recommended limits, and therefore, an ESEE analysis is not required. That contention is based on the applicant's interpretation of the significance of the term "overall" in Policy 11.

---

[1] The ODFW recommendation for overall residential density in the Major Big Game Range Habitat is no more than 80 dwellings per acre. For Peripheral Big Game Range Habitat, the recommended density is no more than 40 dwellings per acre.

Anybody who has studied residential densities, either in urban or rural settings, understand that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings / acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county. The applicant argues that the denominator here should be the entire County, or at least a very large portion of the County, because Policy 11 uses the term "overall residential density."[2]

LandWatch relies on one sentence in LUBA's decision in *Nimpkish* in support of its argument that the subject property, not the entire County, must serve as the density denominator: "There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres." Slip op. 15.[3]

The applicant contends that LandWatch cannot rely on that statement because it was technically *dicta*. The issue addressed in that statement (whether the addition of the proposed dwelling would constitute a conflict that triggered an ESEE analysis) was not before LUBA in the *Nimpkish* appeal. The issue in that appeal was whether Policy 11 applied to a discrete application for a forest template dwelling. The Hearings Official had held that it did not, and LUBA overturned that ruling. On that basis, the decision was remanded. LUBA was not called upon to address (and the parties presumably did not brief) the issue of what the appropriate density denominator would be once it was determined that Policy 11 applied.

It may well be that LUBA's statement in *Nimpkish* that "the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres" was *dicta*. That said, even if that statement was *dicta* and, thus, is not clear precedent in this case, it seems clear that LUBA believed that, if Policy 11 applied, the appropriate density denominator would be the subject property. In other words, if the issue had been before LUBA, we now know how LUBA would have ruled. However, because LUBA made that statement somewhat in passing, it did not conduct a full interpretation of Policy 11 to reach that conclusion. That analysis is now provided here.

Text

The applicant argues that the term "overall" in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County

[2] Applicant submitted evidence supporting his conclusion that the "overall density" when viewed at the County level, is well below the ODFW recommended "overall density." He also submitted documentation regarding the residential density of smaller subsets of the County; *i.e.*, the area east of Interstate 5 and the area west of Interstate 5; regions divided by highway corridors; and watershed regions. All sets of numbers confirmed his theory that the residential densities are well below the ODFW recommended "overall" densities. Thus, the addition of one dwelling would not result in a Goal 5 conflict.

[3] LUBA then went on to make the following legal conclusion: "Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.'"

on the east or west side of Interstate 5. LandWatch points out that the use of the term "overall" in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of "overall residential density." The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to "determine the allowable number of residential dwelling units within regions of the county." The next sentence does not use the "overall" modifier: "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal.

Context/Caselaw

RCP Policy 11 implements Goal 5. Accordingly, Policy 11 must be interpreted in a manner that is consistent with the Goal that it implements. As stated above, Goal 5 is aimed at preserving and protecting significant natural resources, such as big game habitat. The evident purpose of applying a residential density limit is to minimize human impacts to wildlife habitat. LandWatch asserts that the applicant's proposed interpretation would effectively permit large areas protected as wildlife habitat to be developed at densities that destroy its value as wildlife habitat.

In a 2003 LUBA appeal, Douglas County made an interpretation of its code that is similar to the interpretation of Policy 11 that the applicant presents in this appeal. *See Wetherell v. Douglas County*, 44 Or LUBA 745 (2003). The application in that case was for approval of a site plan for a destination resort. The property fell within an area designated as Peripheral Big Game Habitat. The request was therefore subject to a code provision (LUDO 3.32.300) that limited residential density to one dwelling unit per 40 acres.[4] As is the case here, the code provision did not explicitly state the appropriate density denominator. The County determined that the appropriate density denominator under the applicable code provisions was an area of the county that included 1,121,378 acres.[5] On appeal to LUBA, the opponent argued that the proper denominator was a 500-acre portion of the subject 2,700-acre ranch. The Hearings Official sets forth LUBA's analysis in that case at length, because the analysis is the exact same analysis the Hearings Official adopts in this appeal:

> "LUDO 3.32.200 provides no express denominator for the density standard, so the county's view that the pertinent denominator is a 1,121,378-acre area of the county is not necessarily inconsistent with the text of LUDO 3.32.200. However, we agree with petitioners that that view is inconsistent with the purpose of the

[4] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[5] The area the county used was the Calapooya and Elk Creek geographic Planning Advisory Committee area.

density standard, to "preserve identified peripheral habitat areas." See n 4. Neither intervenors nor the county's decision provides any basis to question petitioners' view that the purpose of the density standard is to preserve big game wildlife habitat by minimizing human impacts on that habitat, specifically by limiting the density of residential uses. Under the county's view, large areas of Goal 5-protected wildlife habitat may be developed at residential densities that significantly exceed one dwelling per 40 acres, as long as the average density over a much larger area of the county does not exceed that standard. As the county interpreted LUDO 3.32.300, it will have no regulatory effect at all until over 28,000 dwellings are built in the 1,121,378-acre PBGHO. At that point, its regulatory effect would change from nonexistent to exceedingly harsh, because it would effectively impose a residential building moratorium throughout the PBGHO. * * * It seems exceedingly unlikely to us that anyone who thought about how LUDO 3.32.300 would be implemented could possibly have intended that it work in that way.

* * *

A construction of LUDO 3.32.300 that is far more consistent with its apparent purpose and the language of LUDO 3.32.300 is that the denominator for the one dwelling per 40-acre density limit is the subject property, in this case the 500 acres that make up the proposed destination resort.

* * *

We recognize that a density standard that permitted selection of some larger local area, i.e., a local area larger than the 500-acre subject property but smaller than the 1,121,378-acre applied here, might provide the county with desirable flexibility to permit clustered residential development in areas with lesser habitat value if some way could be found to further limit or bar residential development altogether in areas with high habitat value. However desirable that flexibility might be, as written, LUDO 3.32.300 does not permit application of the one dwelling unit per 40 acres standard over an area that is larger than the property that is the subject of the application. If the county wishes the density limit to apply in some other manner, it must amend LUDO 3.32.300 to achieve that result. In sum, the county's view that the denominator required by the LUDO 3.32.300 density standard is a 1,121,378-acre portion of the county is not reasonable and correct."[6]

The Hearings Official believes that the applicant's proposed interpretation in this case is similar to the position taken by Douglas County in *Wetherell*.[7] LUBA rejected that

[6] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[7] The applicant attempts to distinguish *Wetherell*—*Wetherell* did not involve a forest template dwelling application; *Wetherell* interpreted a code provision, not a comp plan policy; and the Douglas County code provision at issue did not include the term "overall." While the posture of that case was a bit different, the policy considerations and analysis are the same. The term "overall" in Policy 11 refers to the ODFW

interpretation, and the Hearings Official feels certain that LUBA would, for the reasons set forth above, also reject the applicant's interpretation in this case. Until the County conducts its region-by-region analysis, which is called for in Policy 11, the density denominator must be the subject property.

The applicant may assert that this approach is overly restrictive because it essentially means that a forest template dwelling proposed on a property smaller than 80 acres in the Major Big Game Habitat area will always be deemed to conflict with the resource. The Hearings Official responds that the determination of a conflict does not result in the development being prohibited. It merely requires that an ESEE analysis be conducted to determine whether the additional dwelling would harm the protected resource.

Summary

The subject property in this case is only 13.28 acres in size. If the forest template dwelling were approved, the residential density would exceed the ODFW recommended density of one dwelling per 80 acres, and, absent an ESEE analysis, would violate Policy 11.

B. Goal 2

Even if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that the applicant could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan.

Statewide Planning Goal 2 (Land Use Planning) requires that land use decisions be based on an "adequate factual base." There are circumstances where that requirement demands that the "factual base" upon which the quasi-judicial decision is based be found in the comprehensive plan. For instance, both LUBA and the Oregon Court of Appeals have held that for purposes of Statewide Planning Goal 10, an inventory of buildable lands that is relied upon for a quasi-judicial decision must first be adopted as part of the comprehensive plan. *See D.S. Parklane Development Inc. v. Metro*, 165 Or App 1, 994 P2d 1205 (2000); *1000 Friends of Oregon v. City of Dundee*, 203 Or App 207, 216, 124 P3d 1249 (2005); *Lengkeek v. City of Tangent*, 50 Or LUBA 367 (2005); *Lengkeek v. City of Tangent*, 52 Or LUBA 509, 515 (2006). This requirement reflects the emphasis in Goal 2 on consistency and predictability. "Citizens must be able to rely on the fact that the acknowledged comprehensive plan and information integrated in that plan will serve

---

density recommendation, which is apparently stated as an "overall residential density" standard. As LandWatch points out, the second sentence of Policy 11 does not use the "overall" modifier. Accordingly, this case is similar to *Wetherell*, where the text of the code did not spell out the density denominator. The context provided by the policies furthered by Goal 5 protections are the same in both cases--in *Wetherell*, those policies were set forth in the code's purpose section; in this case, the Goal 5 policies are relevant to the interpretation because Policy 11 implements Goal 5 and must be interpreted in a manner that is consistent with Goal 5. An interpretation that does nothing to protect big game habitat from conflicting residential uses is not consistent with Goal 5.

as the basis for land use decisions, rather than running the risk of being 'sandbagged' by government's reliance on new data." *1000 Friends of Oregon v. City of Dundee*, 203 Or App at 216.

The question here is whether the information provided by the applicant is regular, run of the mill evidence that can be relied upon, or whether it is more in the vein of a buildable lands inventory, which must be incorporated into the comprehensive plan, so that future applicants are using the same data.

As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study. Until that work is completed, Policy 11 makes clear, any density above the ODFW recommended density limits "shall be considered to conflict with Goal 5" and will be allowed only following an ESEE analysis.

The ideal solution is for the County to conduct the regional studies that Policy 11 and the Working Paper call for. Arguably, an applicant could perform all or some part of that work. However, if it were relied upon by an applicant to justify foregoing the ESEE analysis called for in Policy 11, then the documentation would have to first be adopted into the comprehensive plan.[8]

Conclusion

The applicant's argument for approval hinges on its proposed interpretation of Policy 11, which allows a density calculation that is based on using the entire County (or a very large swath of the County) as the density denominator. As discussed above, that interpretation would do little if anything to protect the County's designated Major Big Game Range from conflicting residential development. It is thus inconsistent with Goal 5 and is not reasonable or correct.

Because the County has not yet completed its regional study, the only appropriate density denominator is the subject property. In this case, the subject property is only 13.28 acres, and the ODFW-recommended overall residential density of one dwelling per 80 acres is exceeded. An ESEE analysis is required. Because no ESEE analysis has been provided, the Planning Director's approval must be reversed.

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

[8] This Goal 2 discussion is not necessary for the Hearings Official's conclusion in this appeal. The Policy 11 interpretation set forth above stands on its own. If, on appeal, LUBA disagrees with the Goal 2 discussion, it could still affirm the Hearings Official's decision.

This form is required for request for reconsideration of a Type III Hearings Official decision or a Hearings Official decision on an appeal of a Type II Director decision. Please note that your appeal application requesting reconsideration will be rejected if it does not meet all the requirements of Lane Code 14.080(1)(a) through (c). A notice of appeal must be filed with the Director prior to 4 p.m. Pacific Time 12 days after the date the notice of decision is mailed (see deadline specified on the decision).

1. A copy of the decision being appealed, with the Department file number: _____ and the date of the decision_____

2. The $1,216 appeal fee, payable to Lane County.

3. The appeal deadline, as stated in the Hearings Official's Decision: MAY 04 2021

4. Address each of the following:

   a. Check one of the items below demonstrating how the person filing the appeal is a party as that term is defined in LC 14.015(22) with the right to appeal the Hearings Official's decision:

      ☐ I am the applicant for the subject application;

      ☐ I am the owner or contract purchaser of the subject property;

Revised on 12/2019

☐ Prior to the decision, I provided testimony before the Hearings Official;

☐ I am not one of the persons mentioned above, but wish to appeal the Hearings Official's decision and my appeal submittal identifies how I qualify as a party (provide written description).

b. Please provide a written statement explaining the reason(s) why the decision of the Hearings Official was made in error or why the Hearings Official should reconsider the decision;

c. Please provide an explanation with detailed support specifying one or more of the following assignments of error, or request for reconsideration:

☐ The Hearings Official exceeded his or her authority;

☐ The Hearings Official failed to follow the procedure applicable to the matter;

☐ The Hearings Official rendered a decision that is unconstitutional;

☐ The Hearings Official misinterpreted the Lane Code, Lane Manual, State Law, or other applicable criteria; or

☐ Reconsideration of the decision is requested in order to submit additional evidence not available in the record at the hearing and addressing compliance with relevant standards and criteria.

d. Include any additional information in support of your appeal.

5. Per Lane Code 14.080(4)(a), if the applicant is requesting reconsideration, the applicant must first agree to extension of any statutory application timelines, and such extension must be in addition to any other extensions already given.

Notes:

- Lane County Ordinance No. 19-03, the adopting Ordinance for Lane Code Chapter 14 that regulates the Hearings Official decision and appeals process is under appeal to the Oregon Land Use Board of Appeals (LUBA). In the event that an appeal to LUBA results in a remand or reversal, the Ordinance will no longer be effective and the applicable version of Lane Code Chapter 14 will revert back to Lane County Ordinance No. 14-09 (December 2014).

- An appeal of a Hearings Official decision to the Lane County Board of County Commissioners is no longer allowed per the regulations of Lane Code Chapter 14 (Lane County Ordinance No. 19-03).

FINAL RESPONSE/ARGUMENT

Anne Davies
Lane County Hearings Official
c/o Shawna Adams
Lane County Land Management
3050 N. Delta Hwy.
Eugene, OR 97401

Re: King and EJK Inv.; Reissue Expired Director's Decision for Template Dwellings; PA 20-05066 and PA 20-05064, Map 21-35-07-30, TL 2800 and 2900

Ms. Davies:

Please accept this as my final Response. At the center of this analysis is RCP Policy 11. What does it say; what does it mean?

Policy 11 of the Lane County RCP Goal 5 Flora and Fauna element, states:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."*

This policy has several elements:

- It identifies the standard: "[ODFW] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units ***."[1]
- It identifies the anticipated scope of the analysis: "*** within regions of the County."

[1] ODFW recommended densities are found in the Flora and Fauna Working Paper, page 24, *"ODFW has recommended overall densities for Peripheral Big Game Range at one dwelling unit per 40 [acres]; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than *** one dwelling unit/80 acres in Major Range conflicts with habitat for big game."*

- It identifies the trigger for "conflict" and ESEE analysis, "Any density above [ODFW recommendations on overall residential density] shall be considered to conflict with Goal 5," and required an ESEE analysis.
- It states the program to achieve the goal, "The County shall work with [ODFW] to prevent conflicts *** through land use regulation *** siting requirements and similar activities" that are already part of Lane Code.

The County did not get divided into regions. However, that does not lift the burden of complying with Policy 11. As LUBA stated in *Nimpkish*,

> "*"*** the county's failure to take the steps of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that the county is absolved from protecting land included on the Big Game Habitat Inventory as Major Big Game Range through the residential density recommendations referred to in the RCP Goal 5, Flora and Fauna Policy 11, or that the density recommendations simply do not apply. Rather *** Policy 11 remains operative, and it provides that "[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict ***." Pg 13. (Emphasis added)*

Policy 11 applies directly and, per LUBA the County must apply the "*residential density recommendations referred to in *** Policy 11.*" Those density recommendations are, "overall residential density," per the plain language of Policy 11. The specific densities are identified in the Flora and Fauna Working paper, which also refers to "overall" density. See Footnote 1.

Based on the above, Policy 11 applies directly, and Policy 11 and the F&F Working paper both refer to "overall" density. We are now left to determine what "overall density" means and how to apply it. Per *Nimpkish*, "*The county must interpret a provision of the RCP *** adopted to *** protect Big Game *** through density standards, in a manner that is not inconsistent with Goal 5.*" Pg. 14, Exhibit C.

I. Landwatch Objection

Landwatch offers only one objection: the scope of the analysis must be the subject property itself. Landwatch hangs their entire argument on one sentence in *Nimpkish*,

> *"There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres."*

However, there was "no dispute" because the meaning of "overall density" was not at issue in *Nimpkish*. The issue in *Nimpkish* was whether Policy 11 applied, not what it meant. And while LUBA, within the scope of the question at hand, did review Policy 11, it reviewed it for applicability, not precise language. LUBA's statement is mere dicta, and conflicts with evidence

and language throughout the decision. In fact, the above quoted statement is directly contrary to LUBA's statement on page 14.

> "*We understand DLCD to have concluded that the county's Goal 5 program protects habitat because it adopts residential densities in accordance with ODFW's recommendations* ***."

The densities referred to are "overall" densities. See Policy 11 and Footnote 3 of the LUBA decision. In short, despite having acknowledged throughout the decision that the density requirements are those stated in the RCP and F&F Working Paper, LUBA misstated the factual outcome because the question before us now was not in front of the Board at the time.

Landwatch claims that LUBA extinguished the "overall" language from Policy 11, and dismisses the Flora and Fauna Working Paper as being irrelevant. Both of these claims are inconsistent with *Nimpkish* and the RCP. A block quote from LUBA is set out on page 2, above. In the emphasized language, LUBA makes clear that the ODFW densities outlined in the F&F Working Paper continue to apply despite the fact that the county was not divided into regions. Those densities are articulated in Footnote 3 of the *Nimpkish* decision[2], and are "overall" densities. Even ODFW acknowledges that the subject property is not the basis for the analysis. See ODFW letter submitted by Landwatch.

By relying on language in the Working Papers, LUBA acknowledged Part 1 of the RCP which establishes that the Working Papers, regardless of adoption status, are the technical data supporting the adopted policies and are to be used to help interpret and understand policies. See Exhibit L, Part 1.C, page 4.

Landwatch has failed to provide an alternate analysis that is consistent with Policy 11 and *Nimpkish*. It could have; it chose not to. The applicant has provided four. Landwatch did provide an alternate analysis which left out all public lands, but there is no support for such exclusions. Those lands are designated Major Big Game per the RCP. Further, if Landwatch's map is used, the resulting density is one unit per 390 acres. This is less than the ODFW overall density requirement. As such, no conflict exists and no ESEE is required.

II. Overall Density

What does "overall" mean? "Overall" is something more than the subject property. This position is supported by the definition of "overall," RCP Policy 11, the Flora and Fauna Working Paper, and even ODFW. See applicant's previous letters for a complete analysis.

Thus, the last question to be answered is what is the breadth of overall; how overall is "overall?" The applicant has the burden of making an interpretation.

---

[2] Citing the RCP F&F Working Paper

The applicant has provided four alternatives:

1. Overall density over the entire Major Big Game region. LCOG Report dated March 2, 2021, Map 1. This results in a density 1 unit per 819 acres. See applicant's hearing submission, Exhibit A.
2. Overall density over non-contiguous regions[3] of Major Big Game (east and west of I-5). LCOG Report dated March 2, 2021, Maps 2 and 3. This results in a density 1 unit per 1,415 acres, east of I-5. See applicant's hearing submission, Exhibit A.
3. Overall density over regions of Major Big Game defined by highway corridors (barrier-based). LCOG Report dated March 17, 2021, Map 1. This results in a density 1 unit per 1979 acres in Region E. See applicant's open record submission, Exhibit F.
4. Overall density over regions of Major Big Game defined by historic RCP subareas (adopted subarea based). LCOG Report dated March 17, 2021, Map 1. This results in a density 1 unit per 7,370 acres in the UMFS subarea. See applicant's open record submission, Exhibit I.

The subject property is located near Oakridge, north of Hwy 58. It lies east of I-5, in Region E and in the UMFS (subarea). Regardless of which option is used, the overall density is less than 1 unit per 80 acres.

Option 1 best represents the true meaning of "overall density." This option elicits a knee-jerk reaction from Staff and Landwatch because the density is so low. However, this results from LUBA's flawed analysis of county history, not the density calculation. The County was not required under the Statewide Planning Goals to preserve F-1 land. F-1 land could have been available for residential development. ODFW's density recommendation was not based on the F-1/F-2 distinction, it was an overall density for all Major Big Game habitat. F-1 land could have been available for residential development, but it was not. This results in low density. It does not matter how many new houses could be built before ODFW's density figure it exceeded. That is not the proper analysis. What matters is that up until the point where density is exceeded, there is no conflict and no ESEE analysis is required.

The smallest area that should be considered is Option 4, the historic RCP subareas. These subareas were based on watersheds and adopted by the Board[4], but were not adopted into the final RCP due to LCDC objections relating to how regulations were implemented in these subareas[5]. Despite this flaw, and despite that fact that subarea requirements were deleted from the F&F Working Paper[6], this is the best evidence of the smallest analysis area contemplated by the County. Said another way, if the County was still considering any sort of division of the

---

[3] Land on either side of Interstate 5 is designated Impacted or Peripheral Big Game, which is excluded from the Major Big Game analysis. As such, I-5 provides not only a potential physical barrier division, but a convenient planning division.

[4] Exhibits G and H.

[5] LCDC did not object to the regions, but objected to the county's proposal to have different regulations for each regions. LCDC found that such regulation was not "comprehensive planning."

[6] The language in the F&F Working Paper contemplating regions was deleted. See Applicant's April 1 submission.

county into "areas convenient for planning purposes" after the deletion of such language from the F&F Working Paper, these areas appear to be the best candidate for what was intended, and there is no evidence of any more limited or narrow review area.

In short, if Policy 11 was instructional, and the Board had intended to divide the county into "regions convenient for planning purposes," the best evidence of what those regions would be is represented by the already adopted subarea maps[7]. However, the County decided against such subareas by deleting the language from the F&F Working Paper. Exhibits N and O. Instead, the County was left whole, clustering was applied, and the overall density analysis is applied across the county to Major Big Game range.

Even OAR 660-023-0010(3) support the applicant's position because it requires the analysis "over an impact area," not just the subject property.

The smallest analysis area justified by evidence in the record is the subarea maps, the largest analysis area justified by evidence in the record is the entire Major Big Game range. Under either of these analysis areas, and everything in between, the proposal exceeds overall density, there is no conflict, and as such no ESEE analysis is required.

III. CONCLUSION:

LUBA's decision in *Nimpkish* relies on F&F Working Paper language that was deleted from the F & F Working Paper, and replaced with other language. For this, and other reasons outlined in previous submission, *Nimpkish* does not provide sound precedent. See Applicant's April 1 letter, pages 5-6. Further, the issue of "overall" was not discussed or briefed in either *Nimpkish* or *Cattoche*. Therefore, neither are precedent for this issue.

Even if LUBA's holding in *Nimkish* is correct, the proposal does not exceed ODFW recommended overall density under any of the scenarios provided. As such, there is no conflict. An ESEE analysis is only required when a conflict occurs.

Sincerely,
/s/ *Kimberly JR O'Dea*
Kimberly J.R. O'Dea

RESPONSE LETTER

Anne Davies
Lane County Hearings Official
c/o Shawna Adams
Lane County Land Management
3050 N. Delta Hwy.
Eugene, OR 97401

Re: King and EJK Inv.; Reissue Expired Director's Decision for Template Dwellings; PA 20-05066 and PA 20-05064, Map 21-35-07-30, TL 2800 and 2900

Ms. Davies:

Please accept this as my response to Staff's memo of March 18 and Landwatch's letter of March 18.

I. Staff's Memo

This appears to be an opinion statement, more than an analysis of the law and the facts. Staff appears to argue that the RCP density analysis must be based on individual lot size ("subject property"), and thus any parcel less than 80 acres in the Major Big Game area cannot qualify for a dwelling without an ESEE analysis. That position conflicts with the term, "overall" in RCP Goal 5 Big Game Policy 11, RCP Goal 4 Forestland Policy 15, which pushes residential development onto parcels less than 80 acres, and other language in the RCP acknowledgment paperwork.

A. Overall Density

The definition of "overall" is addressed in my previous letter. Inherent in the term "overall" is the idea that some things will meet the standard and some will not. For example, "the overall color of the bananas will be yellow." By definition, some bananas will not be yellow. As applied to density, some units of land will be larger than 80 acres and some will be smaller. This is not inconsistent with the purpose of Major Big Game range, as big game does not view or use its habitat on a parcel-by-parcel basis. If one parcel is 10 acres, one parcel is 30 acres and one parcel is 200 acres, the big game will just stroll on through. This scenario results in an "overall density" of 1 house per 80 acres, which is consistent with ODFW overall density requirements.

The concept of "overall" density is specifically noted by ODFW, and is found in numerous places in the Comprehensive Plan. See discussion below. That parcel size alone should not be

the sole focus of a density analysis is reflected in the 1983 Addendum to the Flora and Fauna Working Paper, page 14.

> *"***officials of the ODFW stress the fact that a mere 'numbers game' is not the optimum manner to deal with conflicts ***. While overall densities are important indicators of conflict, the manner in which these densities occur can either create *** conflict or reduce [it]."* (emphasis added)

B. Goal 4

Staff's position that parcel size alone is determinative of compliance with overall density is contrary to RCP Goal 4 Forestland Policy 15. SWPG 4 was addressed and adopted into RCP Goal 4, which is implemented by LC 16.210 and LC 16.211. The RCP and Chapter 16 have been acknowledged by LCDC as being consistent with all statewide planning Goals. Thus, it has been found that RCP Goal 4 is consistent with RCP Goal 5, and visa versa. If fact, this coordination between RCP Goal 4 and RCP Goal 5 is found throughout the Goal 5 working papers.

Policy 15 of RCP Goal 4 divides all forestlands in Lane County into two zoning districts: F-1 and F-2. Exhibit L. Per OAR 660-06-026, minimum lot size in both zones is 80-acres. Per LC 16.210 and LC 16.211, new dwellings are only allowed in the F-2 zone. Policy 15 anticipates dwellings on parcels less than 80 acres. In fact, Policy 15 encourages dwellings on parcels less than 80 acres[1].

---

[1] *Policy 15. Lands designated within the Rural Comprehensive Plan as forest land shall be zoned Non-Impacted Forest Lands (F-1, RCP) or Impacted Forest Lands (F-2, RCP). A decision to apply one of the above zones or both of the above zones in a split zone fashion shall be based upon:*

a. A conclusion that characteristics of the land correspond more closely to the characteristics of the proposed zoning than the characteristics of the other forest zone. The zoning characteristics referred to are specified below in subsections b and c. This conclusion shall be supported by a statement of reasons explaining why the facts support the conclusion.

b. Non-impacted Forest Land Zone (F-1,RCP) Characteristics:

(1) Predominantly ownerships not developed by residences or non-forest uses.

(2) Predominantly contiguous, ownerships of 80 acres or larger in size.

(3) Predominantly ownerships contiguous, to other lands utilized for commercial forest or commercial farm uses.

(4) Accessed by arterial roads or roads intended primarily for forest management.

(5) Primarily under commercial forest management.

c. Impacted Forest Land Zone (F-2, RCP) Characteristics

(1) Predominantly ownerships developed by residences or non-forest uses.

(2) Predominantly ownerships 80 acres or less in size.

(3) Ownerships generally contiguous to tracts containing less than 80 acres and residences and/or adjacent to developed or committed areas for which an exception has been taken in the Rural Comprehensive Plan.

> *Lands designated within the Rural Comprehensive Plan as forest land shall be zoned Non-Impacted Forest Lands (F-1, RCP) or Impacted Forest Lands (F-2, RCP). A decision to apply one of the above zones or both of the above zones in a split zone fashion shall be based upon *** a conclusion that characteristics of the land correspond more closely to the characteristics of the proposed zoning than the characteristics of the other forest zone.*

A defining characteristic is whether the land is 80 acres or larger in size. If the land is larger than 80-acres in size (conforming to minimum lot size), it is weighted toward F-1 zoning under Policy 15.b.2. New residential development is prohibited on F-1 land. If the land is less than 80 acres in size (nonconforming to minimum lot size), it is weighted toward F-2 zoning under Policy 15.c.2. New residential development is allowed on F-2 land. As such, the county specifically intended to allow residential development on lands that were less than 80 acres in size. This policy choice was acknowledged by LCDC as being consistent with all statewide planning goals, including Goal 5 Big Game. This coordination is reflected in the RCP working papers. Exhibit O.

C. Text and context

Staff argues that "*a lot size denominator is the most reasonable measure of compliance *** with consideration of the text and context.*"

First, staff points to *Nimpkish*. However, as addressed previously, the question before LUBA was whether Policy 11 applied directly, not what Policy 11 means. *Nimpkish* is not helpful because the issue at hand was not briefed or squarely in front of the Board. *Nimpkish* is addressed in more detail under Section II, below.

Second, staff cites the working papers, but ignores the term, "overall." This is a fatal flaw. Staff goes on to discuss zoning. The applicant concurs that the working papers do coordinate Goal 4 zoning and Goal 5 protection. See my point above, which establishes that subject property lot size cannot be the basis for the density analysis. In her footnote (i), staff cites page 24 of the working paper, which includes the word "overall." Then she quotes a paragraph that was deleted from working paper. See Working Paper Addendum, page 14. Exhibit O. In a unique twist, staff appears to argue here what the Intervenor argued in *Nimpkish* … and lost.

It is unclear what staff's footnote (ii) is intended to show. All of the Big Game issues noted were resolved. See Order to Comply, page 75, item 2.d., which was further addressed on the 9/12/84 acknowledgment order, page 25, item 2.d. Exhibit Q and S. Again, it appears staff is arguing that *Nimpkish* was decided incorrectly, and that the County adopted protections into the zoning districts. While I concur, that is not helpful here.

---

(4) Provided with a level of public facilities and services, and roads, intended primarily for direct services to rural residences.

Staff goes on to make the 'absurd result' argument, couched in the term "reasonable." As the hearing official has noted in previous decisions, LUBA disfavors the 'absurd result' argument. Further, the applicant's position does not result in an absurd result. While it is true that theoretically many dwellings can be approved before the ODFW overall density is exceeded, the reality is that much of that land is zoned F-1, can never be developed, and is preserved in posterity as Big Game habitat. Exhibit M. There is limited F-2 land available in the Major Big Game area, Exhibit M, and not all that land can meet the template test. Thus, only some of the land zoned F-2 is available for residential development. The end result is that, regardless of overall density, only a small portion of land within the Major Big Game range will be available for development. Staff and LW's "absurd result" arguments are akin to the boy crying wolf.

Staff cites *Wetherell v. Douglas County* (*Conway*) to support her interpretation. However, *Conway* is distinguishable. In *Conway*, LUBA concedes that the subject property is not necessarily the denominator that must be applied. LUBA's denial is based on the precise language of LUDO 3.32.300, which imposes a "density of 1 dwelling unit per 40 acres" and ORS 197.467. That is not the case here. First, there is no Big Game density requirement in either the F-1, F-2 or EFU zone. There is no Big Game zone. Here, a plan policy is being applied. Second, the density requirement is an "overall" density. The code language in *Conway* does not include this broader term. Finally, ORS 197.467 does not apply to template dwellings. In short, *Conway* is a different application in a different county with different underly code and plan requirements. It has no value in the interpretation needed here. Here, the Hearings Official must give weight to the term "overall."

D. ODFW interpretation

Staff's position that parcel size alone is determinative of compliance with overall density is contrary to ODFW interpretation. As discussed throughout this letter, ODFW's intent to based analysis on "overall density" is found in Policy 11 and throughout the RCP and supporting documents. Further, there appears to have been no ODFW objection to RCP Policy 15 of Goal 4 pushing development onto parcels less than 80 acres, or to Goal 3 policies. Even on a case-by-case basis, ODFW concedes that the analysis includes more than the subject property, though how much more remains undetermined. See 2017 ODFW letter submitted by Landwatch discussed further below.

II. Landwatch Letter of March 18

A. Nimpkish and "overall density"

Landwatch applies *Nimpkish* too broadly. Landwatch claims that in *Nimpkish,* LUBA makes the ultimate decision that the analysis scope is the subject property. That is not true. The question of what Policy 11 meant was not before LUBA. It was not briefed. The question of what "overall" means is not discussed.

Landwatch claims that "overall" must be excluded from the analysis because 'LUBA said so.' Landwatch is taking LUBA's determination out of context. The term "overall density" is used throughout the working papers. It is the ODFW standard that the County was attempting to comply with throughout the acknowledgment process. That LUBA found that the process for meeting the standard was not done, does not change the standard itself. In fact, throughout the decision, LUBA makes clear that the county continues to have the burden to meet "densities recommended by ODFW."

> *"Rather, the second sentence of RCP Goal 5 *** remains operative, and it provides that any density above [the ODFW recommended density] limit shall be considered to conflict."*

LUBA goes on to clarify that its objection to the first sentence of Policy 11 relates to the "zoning areas that were never completed." It does not relate to the standard articulated in the sentence, "overall density," which is supported throughout the record. Examples include:

> RCP Policy 11: *"[ODFW] recommendations on <u>overall</u> residential density ***. Any density above <u>that</u> limit shall *** conflict."* Emphasis added.
>
> F&F Working Paper, Big Game Range, page 24, *"The primary conflict to big game *** is residential use at certain densities. ODFW has recommended <u>overall</u> residential densities *** for Major Big Game at one dwelling unit per 80 acres. Therefore, to restate the conflict: <u>overall</u> residential density greater than *** one dwelling unit/80 acres in Major Range conflicts with habitat for big game."* See additional supporting language on pages 24-25.
>
> November 1983 Addendum to F&F working paper, page 14, *"***<u>overall</u> densities are important indicators of conflict."*

In short, LUBA did not make a determination that ODFW's overall density recommendation was no longer applicable. In fact, the opposite is true.

B. <u>*Nimpkish* in general</u>

Landwatch's reliance on *Nimpkish* is risky, as LUBA failed to consider some key information. The RCP Flora and Fauna Working Paper, Big Game section, pages 24-25 *"outline procedures to be used for implementation of the ODFW density recommendations of big game ranges."* Exhibit N. Those procedures are outlined in the last paragraph of page 24, and the following paragraphs on page 25. Within those paragraphs lies the concept of dividing the county into regions and determining a carrying capacity. Exhibit N. However, those paragraphs were deleted in the 1983 Addendum to the F&F Working Paper, page 14. Exhibit O. New language was added to address *"overall density."* This new language included clustering and siting

standards. It also included coordination between Goal 3, Goal 4 and Goal 5. Additional language was added at page 17[2].

The February 1984 adopted RCP policies includes the updated Policy 11 language. Exhibit P.

The July 19, 1984 acknowledgement report identifies ODFW's and 1000 Friends' objections. Exhibit Q, page 35-36. LCDC's response to these objections are found on page 39. LCDC's instructions to Lane County state,

> *"d. Amend the F-2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portion of those zones, or contain clustering requirements in those areas." (Emphasis added).* At p. 75.

This is an "or" requirement intended to ensure that no conflict would occur.

The August 17, 1984 DLCD report notes that item d remains. Exhibit R.

The September 12, 1984 Acknowledgement Order addresses d. Exhibit S. The Order restates the deficiency, explains what the County did to address the deficiency, and finds that the issue was resolved. Pgs 25-26.

To address the 2.d. deficiency, the county seized on the "or" language of the LCDC's recommendation. The county decided that rather than increasing minimum lot size, it would adopt siting standards. LCDC found that the adoption of the siting standards addressed Big Game concerns regardless of minimum lot size. This history is set out in memorandum to Lane County Hearings Official Gary Darnielle, dated September 11, 1986. Exhibit T.

The siting requirements were adopted into the Lane code and remain there. As such, Policy 11 does not apply directly, because by complying with LC 16.211, no conflict exists.

C. Alternate mapping

The map submitted by Landwatch is in error. The lands that Landwatch attempts to exclude are designated Major Big Game. See previously submitted maps. As such, they cannot be excluded from the analysis regardless of zoning, or lack thereof. If the County had intended to exclude Federal Land from Major Big Game consideration, they would not have designated them as such.

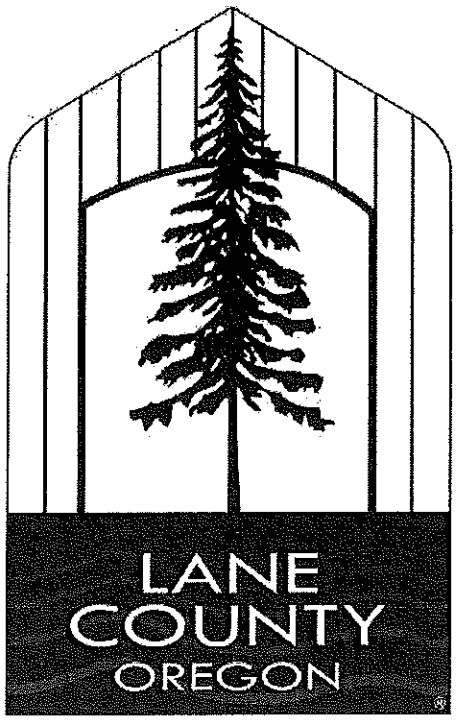
Further, even if there was some basis for excluding Federal Lands, the data provided by Landwatch establishes a density of 1 dwelling per 390 acres. Per the RCP, no conflict occurs, and no ESEE analysis is required.

D. ODFW letter

[2] What is now Policy 11, was then Policy 12. See page 19 of Addendum.

Landwatch includes a 2017 letter from ODFW district wildlife biologist Brian Wolfer relating to a Plan Amendment/Zone Change. It is unclear how this letter is useful, other than to support the applicant's position. It does not discuss Policy 11, it misquotes the density requirement by leaving out the term "overall," and it relates to Peripheral Big Game. Further, it uses the phrases, "I think" and "I believe," and provides no authority for the statements contained within. And finally, the entire letter is a recommendation. See last sentence. This is an opinion letter by a local employee for a specific proposal. However, the letter does concede that the subject property is not analysis denominator, and support the applicant's position that the analysis must go beyond the subject property.

III. Conclusion



Resolution requires a simple *PGE* analysis. The first step in *PGE* is to determine whether ambiguity exists. Potentially, the word "overall" is ambiguous. However, per plain language, "overall" means something beyond the subject property. Subject property is the only interpretation Landwatch and Staff are offering. Staff's and Landwatch's position that the lot size of each parcel is the end-all and be-all of the density analysis is indefeasible based on the working paper, Policy 11, and even ODFW's comment.

The applicant has provided the only interpretation that honors the ordinary meaning of all the language. There is support for the applicant's interpretation in early versions of the RCP working papers and in old county documents. There is no evidence to the contrary.

Sincerely,
/s/ *Kimberly JR O'Dea*

PART 1: INTRODUCTORY MATERIAL

A. INTRODUCTION TO THE RURAL COMPREHENSIVE PLAN

The Lane County Rural Comprehensive Plan applies to all unincorporated lands within the County beyond the Urban Growth Boundaries of incorporated cities in the County and beyond the boundary of the Eugene-Springfield Metropolitan Area Plan. Where these lands are beyond County jurisdiction (such as National Forest lands), the Plan applies but its application is regulated by federal law. In addition, it does contain provisions and representations of County positions on various issues, to be used by those agencies, such as the US Forest Service, in their own management actions, and also used in the event that lands not in County jurisdiction enter County jurisdiction.

The Plan follows the format of the LCDC Statewide Planning Goals, recognizing that they must be met by all local jurisdictions in Oregon. It is composed of two major elements:

1. County General Plan Policies: For each LCDC Goal, there are one or more Policies to be applied by the County toward land use and other planning and resource-management issues, in the interests of compliance with sound planning principles and statewide planning law. Policies are binding commitments, but will be carried out within established work programs and over all County priorities. The application of Policies which call for any programs or studies will occur as County resources in terms of both staff and budgetary allocations permit.

2. Plan Diagrams: Two major planning regions are identified for Lane County--the Coastal Region and the Inland Region. For each, detailed representations of land use are depicted on maps, on Plan Diagrams. Land use regulation methods, such as zoning, are applied to carry out the intent of the designations. The application of the general plan is primarily through zoning. In fact planning and zoning designations are set forth on the same map.

Chart One diagrams the relationship of these elements, and also indicates relationships with other portions of the County Comprehensive Plan.

The document now before the reader is one of the two above components--the County General Plan Policies document. The Policies document is the broad, direction-setting portion of the Plan, and lays out approaches for interpretation of County planning needs and means of complying with State of Oregon planning law. This law attaches great importance to local jurisdictions having adopted comprehensive plans which in turn meet the requirements of Statewide Planning Goals. Accordingly, matters of interpretation concerning the General Plan are to be resolved in favor of compliance with these Goals, and the Plan itself shall be recognized as representing the County's best effort in meeting the requirements of LCDC and its policy expressions, including Goals.

B. INTRODUCTION TO THE COUNTY POLICIES COMPONENT OF THE GENERAL PLAN

County Policies are broad, somewhat generalized statements that provide direction to County decision makers in their efforts to choose between competing uses for given resources, and in their efforts to solve historic problems and prevent new ones from occurring. The Policies cover complex topics and lay the groundwork for future actions of various kinds. The Policies expressed here apply to rural Lane County, outside of the Urban Growth Boundaries of cities and beyond the Plan Diagram Boundary of the Eugene-Springfield Metropolitan Area General Plan. They are designed to be compatible with similar Policies--and planning efforts--of other governmental jurisdictions in the County.

In some respects, the Policies can be considered the basis of the County plan, in that they provide the lead, or the general direction, for subsequent County actions to deal with various land use and resource management decisions. In doing so, they are directly intended to fulfill the mandate of the LCDC statewide planning Goals.

Four statewide planning Goals are not addressed in this document: the four "Coastal Goals" (LCDC Goals 16-19). These, and Policies connected with them, are located in a special-purpose Coastal Resource Management Plan developed and adopted for use in the Coastal portion of the County. They should be used in concert with the "basic fifteen" Goals. Since they are special-purpose in nature, and deal more specifically with particular concerns of the Coastal area, conflicts may arise or be generated between the Coastal Policies and the "basic fifteen" and should be resolved in favor of the Coastal Policies until, and if one or the other conflicting statement is changed to eliminate the conflict.

The Willamette Greenway Goal is considered to be part of the "basic fifteen".

C. HISTORY OF THE POLICIES DOCUMENT

The Policies contained in this document were developed during a period of more than a year, beginning in early 1983. A process was devised at the beginning of the period to utilize existing working papers and to prepare a series of new working papers which, along with other sources, were to serve as the technical data based for the Policies. The Working Papers were written and published from mid-1981 to early 1984. Each Working Paper contained information on a given topic or topics, and a number of them contained preliminary Policies which were drawn from the information in the Papers and which were presented for initial discussion purposes.

Hearings were held on the Papers as they were published. Each Planning Commission reported to the Board of County Commissioners containing its reaction to the Paper and draft Policies. Often the Policy statements drew on sources other than the Working Papers--existing County Plan information (such as special-purpose plans or technical studies),comments or testimony of individuals or groups appearing at the hearings, the judgment and views of Planning Commission members and so on--and so represented a broad array of perspectives and attitudes. Each Planning Commission Report cited information used in Policy development, in order to provide a firm basis for Policy use. The background information, including the Working Papers, is to be used to help interpret and understand General Plan

approaches but is not itself designed to be adopted as legislative law. The Board formally adopted the Policies in February of 1984.

D. CITIES, COMMUNITIES AND RURAL LANDS

While the Policies in this document are directed at Lane County government, it is clearly recognized that the County has a responsibility to, and must coordinate efforts closely with, the incorporated cities within its boundaries. Statewide planning law requires that each incorporated city develop and adopt its own land use plan which must itself comply with LCDC Goals. The plan must contain essentially the same elements as the County General Plan, with an additional element of an identified Urban Growth Boundary (required by Goal 14). Future urban growth for each city is to take place within that Boundary. In the case of the Eugene-Springfield Metropolitan Area Plan, a mutual Boundary is adopted by both cities and the County. For all other cities, the County must ratify the cities UGBs by independent evaluation of, and adoption of, appropriate city plan provisions.

Through this method, the County becomes responsible for administering the provisions of city plans within the city UGBs but outside of the corporate city limits. "Joint Agreements for Planning Coordination" drawn up between the County and each city lay the framework for cooperative action in the effort. Policies concerning Goal 14 in this document further indicate County" posture toward city plans. County adoption of city plans--or amendments thereto--ensures that conflicts between city plans and County Plan do not readily occur.

Unincorporated communities are treated differently. They are identified as "community" on the Plan Diagrams, but are not given official Urban Growth Boundaries. Instead, the probable limits of growth over the planning period are reflected in the area within the "community" designation. Since lands within these areas are under County jurisdictions, no Joint Agreements are required, but development there must be justified by "committed lands" exceptions.

Areas within rural Lane County qualifying as Exception areas on the basis of pre-committed uses are not necessarily "communities" as such, but do have some of the characteristics of community development--higher densities, for example. These areas are treated much as unincorporated communities are within the General Plan, in that they are solely under the County jurisdiction, and they are provided with specific land use designations and zoning reflective of their characteristics. They are not portrayed, however, with the broad "community" designation in most cases. For purposes of Plan administration, a parcel of land is either within a UGB or designated: community or it is not--the deciding factor is the portrayal on the Plan Diagram. Lands adjacent to such "boundaries are not considered to be within them until and if the boundaries are adjusted to accommodate them.

Finally, lands considered as agricultural, forest or natural resources are lands not within any of the above classifications. These lands include the vast majority of total Lane County acreage, and are under the jurisdiction of the County plus state and federal governments (National Forests). The Statewide Planning Goals and the Policies of this Plan limited substantial rural development. However, it is recognized that such development may occur provided it is consistent with the policies contained in this document.

E. IMPLEMENTATION

As stated earlier, the County Policies are intended to guide actions and decisions. Although the policies have a common feature (i.e., relating to one or more aspects of land use) they cover a broad range of topics and concerns. Because of this wide range, it is not reasonable to assume all policies are to be implemented in the same manner. Visualizing a policy as being in one or more of the following categories will provide a better understanding as to its application.

Advisory Policies

These are statements describing the County's position on a certain topic or issue; generally but not always, relating neither to a subject, nor under the direct jurisdiction of the County. These policies are primarily intended to inform or influence the actions of other parties. They do not have direct influence on the implementation of the General Plan through Plan Map designation, zoning of land or County Regulations.

Examples: "Lane County recommends that no new wilderness areas be designated without a complete analysis of the revenue and employment impacts on Lane County. Where designations are made, negative employment and revenue impacts should be mitigated by increasing allowable timber harvests on other public lands."

Commitment Policies

These are statements describing a future action the County intends to undertake. The policies cover a variety of topics including (a) guidance in County operations, procedures and relationships with other agencies, (b) recognition of state and federal requirements, and (c) general direction or intent. Where the County believes the action is necessary to carry out State Planning Goals or the General Plan the commitment will be in a mandatory, binding form (i.e., Lane County shall . . .). Where the action may be desirable, however, not absolutely necessary, the statement may be phrased in a non-mandatory, advisory manner (i.e., Lane County is encouraged to...). As with advisory policies, the commitment policies do not have a direct influence in plan diagram designations or zoning. Actions resulting from the commitment may, however, have a direct influence. Inasmuch as these policies are describing a future action, lack of achievement at any particular point in time due to lack of resources shall not be construed as a failure to carry out the plan.

Examples: "Lane County shall actively support and assist progressive solid waste management efforts. The Lane County Solid Waste Management Plan shall be the primary instrument to affect this policy".

"Lane County is encouraged to investigate and utilize fee acquisition, easements, cluster development, preferential assessment, development rights acquisition and similar techniques to implement these policies."

"Avoidance and/or control of soil erosion shall be a major criterion addressed in all applicable County review procedures."

GOAL 4: FOREST LANDS

1. Conserve forest lands by maintaining the forest land base and protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture.

   Forest land shall include lands which are suitable for commercial forest uses including adjacent or nearby lands which are necessary to permit forest operations or practices and other forested lands that maintain soil, air, water, and fish and wildlife resources.

2. Forest lands will be segregated into two categories, Non-impacted and Impacted and these categories shall be defined and mapped by the general characteristics specified in the Non-Impacted and Impacted Forest Land Zones General Characteristics.

3. Forest lands that satisfy the requirements of ORS 197.247 may designate as Marginal Lands and such designations shall also made in accordance with other Plan policies. Uses and land divisions allowed on Marginal Lands ands shall be those allowed by ORS 197.247.

4. Forest operations, practices and auxiliary uses shall be allowed on forest lands subject only to such regulation of uses as are found in the Oregon Forest Practices Act, ORS 527.722.

5. Prohibit residences on Non-Impacted Forest Lands except for the maintenance, repair or replacement of existing residences.

6. Dwellings shall be allowed in the Impacted Forest Land (F-2/RCP) Zone District as provided in OAR 660-06.

7. The minimum land division size for the Non-impacted Forest Lands (F-1/RCP) Zone shall be 80 acres pursuant to OAR 660-06-026(2)(a) except parcels smaller than 80 acres may be authorized for certain uses pursuant to OAR 660-06_026(3) and (4). Area requirements for Impacted Forest Land must be adequate to conserve forest land for impacted farm and forest uses and be consistent with the following criteria:

   (a) Except as provided in subsection (2) below, for the creation of a wood lot for the purpose of the propagation or harvesting of a forest product, the minimum area shall be at least 20 acres, and that which is consistent with the Douglas fir cubic foot site indexes and minimum area computations promulgated by the Oregon Department of Forestry and specified below, and additional area to accommodate a home site, access and fire breaks, and a logical parcel layout and use of the parcel. There shall be presented for each application sufficient factual documentation to verify that each proposed tract meets the above requirements.

Cubic Foot Site Class	Potential Yield cu.ft./acre/yr	Acreage Minimum
6	20-49 cf/ac	64
5	40-84 cf/ac	43
4	85-119 cf/ac	34
3	120-164 cf/ac	24
2	165-224 cf/ac	17

(b) To substantially limit any adverse impacts upon commercial forest management which might result from land divisions and subsequent residential development (accessory and necessary to commercial forest management) a minimum area of 80 acres shall be required for the division of large forest tracts:

(i) Zoned F-2
(ii) Containing at least 160 acres
(iii) For the creation of lots or parcels adjacent to F-1, RCP zoned lands.

(c) Deviation from the standard specified in subsections 7(a) and 7(b) above, for a 40 acre parcel on impacted forest land to be used for farm land may be allowed.

(d) Deviation from the standard specified in subsections 7(a) and 7(b) above, of the impacted forest land for the creation of a parcel not smaller than 20 acres may be allowed when at least 19 acres of the parcel being created are currently managed or planned to be managed by a farm management plan for a farm operation consisting of one or more of the following: berries, grapes, or horticultural specialties.

(e) Lot line adjustments consistent with the definition of "divide" in LC 16.090 are permissible.

(f) Parcels smaller than specified in subsections (1)-(4) above may be authorized for certain uses pursuant to OAR 660-06-026(3) and (4).

8. New structures must comply with the Siting and Fire Safety Standards of OAR 660-06-029 and 660-06-035.

9. Recreational activities in the Park and Recreation (PR/RCP) Zone District within resource areas that are outside lands for which a built or committed exception to a Statewide Planning Goal has been taken shall be limited to those uses consistent with Statewide Planning Goals 3 and 4.

10. The effects of a projected shortfall in timber supplies within the near future are of considerable concern to Lane County. The County supports efforts by state and federal agencies in developing plans that will address this situation. The County intends to be an active, committed participant in such plan development.

11. Encourage the consolidation of forest land ownership in order to form larger more viable forest resource units.

12. Encourage the conversion of under-productive forest lands through silvicultural practices and reforestation efforts.

13. Encourage the development of assistance programs, tax laws, educational programs and research that will assist small woodland owners with the management of their forest land.

14. Lane County recognizes that the Oregon Forest Practices Act shall be the only mechanism regulating the growing and harvesting of forest tree species on commercial forest lands unless Goal #5 resource sites have been recognized and identified as being more important through an analysis of ESEE consequences and conflict resolution as per Goal #5. No other findings, assumptions, goal policy or other planning regulation shall be construed as additional regulation of forest management activities.

15. Lands designated within the Rural Comprehensive Plan as forest land shall be zoned Non-Impacted Forest Lands (F-1, RCP) or Impacted Forest Lands (F-2, RCP). A decision to apply one of the above zones or both of the above zones in a split zone fashion shall be based upon:

a. A conclusion that characteristics of the land correspond more closely to the characteristics of the proposed zoning than the characteristics of the other forest zone. The zoning characteristics referred to are specified below in subsections b and c. This conclusion shall be supported by a statement of reasons explaining why the facts support the conclusion.

b. Non-impacted Forest Land Zone (F-1,RCP) Characteristics:

(1) Predominantly ownerships not developed by residences or non-forest uses.

(2) Predominantly contiguous, ownerships of 80 acres or larger in size.

(3) Predominantly ownerships contiguous, to other lands utilized for commercial forest or commercial farm uses.

(4) Accessed by arterial roads or roads intended primarily for forest management.

(5) Primarily under commercial forest management.

c. Impacted Forest Land Zone (F-2, RCP) Characteristics

(1) Predominantly ownerships developed by residences or non-forest uses.

(2) Predominantly ownerships 80 acres or less in size.

(3) Ownerships generally contiguous to tracts containing less then 80 acres and residences and/or adjacent to developed or committed areas for which an exception has been taken in the Rural Comprehensive Plan.

(4) Provided with a level of public facilities and services, and roads, intended primarily for direct services to rural residences.

March 31, 2021

F1 & F2 Land within Major Big Game Range in Lane County RCP

I. OBJECTIVES AND PROCESS

There were two objectives for the analysis:

1. Determine the acreage of land zoned Non-Impacted Forest (F1) within the Major Big Game Range and in Lane County's Rural Comprehensive Plan, but outside of the Metro Plan, UGB's and Developed and Committed Areas.
2. Determine the acreage of land zoned Impacted Forest (F2) within the Major Big Game Range and in Lane County's Rural Comprehensive Plan, but outside of the Metro Plan, UGB's and Developed and Committed Areas.

ESRI GIS software and geoprocessing tools in combination with various data (see sources below) was used to perform the analysis, which included filtering specific data both spatially and tabularly.

The acreage within the study area was calculated from the digitized boundary layers of the Major Big Game Range & Lane County Zoning. All non F1 and F2 areas we filtered out, and then areas outside of the Major Big Game Range and exclusion area were removed.

Spatial and tabular filters were applied to the Lane County's Rural Plan Designation layer, specifically, those designated Residential, Commercial, or Industrial. All lands that have a plan designation of R, C or I that are outside of UGB's and the Metro Plan boundary by necessity must be within a Developed and Committed Lands Exception (D&C) Area to receive that Plan designation. All areas within a D&C Area are considered Impacted Big Game Range (per Lane County RCP Goal 5 Flora and Fauna Policy #10) and not Major Big Game Range. Therefore, any of the D&C areas that lie within the digitized boundary layer of the Major Big Game Range were excluded from the calculation. Since there is no specific digitized layer for D&C areas outside of the Metro Plan, the only way to identify and exclude these lands was to utilize the Rural Plan Designation layer.

II. ANALYSIS

The above analysis was performed for the area within Lane County as mapped on Map 1.

Background Analysis Results (acreage values are as mapped):

EXHIBIT M

Total Acres (land & water) in Lane County = 2,955,953
Major Big Game Range in Lane County (outside of exclusion areas) = 2,596,120 acres

Map 1:
Land zoned F1 within Major Big Game Habitat Area and outside of exclusion areas = 2,386,627 acres
Land zoned F2 within Major Big Game Habitat Area and outside of exclusion areas = 106,945 acres

III. EXHIBITS

Map 1: Map of F1 & F2 zoning specific to the Major Big Game Range within Lane County.

WORKING PAPER:

Flora & Fauna

DRAFT

MAR ~ 1982
COMPREHENSIVE PLAN REVISION
LANE COUNTY, OREGON

EXHIBIT N

BIG GAME RANGE

LCDC Orders to Comply required implementing measures for the protection and/or resolution of conflicts with Big Game Range. The County must clarify the types of uses which conflict with big game habitat, and would therefore be reviewable by the County under any implementing measures developed. The primary conflicting use mentioned by LCDC is residential use at certain densities.

Location. The Oregon Department of Fish and Wildlife (ODFW) has divided big game range in Lane County into three categories as follows:

Major Big Game Range - That portion of the County which supports the majority of big game. In general these lands are sparsely developed commercial forest lands. They also provide the majority of big game recreational opportunity.

Peripheral Big Game Range - Foothill areas of the County generally located between commercial forest lands and valley floors. These lands support substantial big game populations and serve as a wintering area for animals in severe winters.

Impacted Big Game Range - Those areas of the County that have existing levels of land use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity. These areas frequently contain populations of big game animals.

These areas are mapped on Lane County Wildlife Inventory maps. As a general depiction, Major Big Game Range occurs on federal lands, large timber company holdings, and some private lands which are sparsely developed. Peripheral Big Game Range encompasses primarily foothills and smaller valleys. Impacted Range includes cultivated fields and developed areas, often on valley floors.

Because of the large amount of undeveloped timberland in Lane County, the majority of the County is Major Big Game Range. But, due to scattered ownership patterns, many areas within the Major Range are small, private parcels. Peripheral Range often falls along small valley floors which are privately owned and often fairly extensively developed. For example, most of the Fall Creek, Mohawk and Lorane valleys are within Peripheral Range, as well as large tracts of land west of Elmira.

Wildlife Inventory maps have not been included in this Working Paper due to budget constraints, but are available for review in the Planning Department office.

Quality. The majority of big game use occurs on Major Range. This can be considered the highest quality habitat as man's intrusion with developments is the least. Peripheral Range is also important habitat, and can be particularly crucial in severe winters, but has enough development to limit big game use and management options. Impacted Range is the lowest quality habitat of the three categories. It is already developed to an extent that precludes viable management of the species, although populations may still exist there.

000044

One other category of lands should be mentioned here. Outside Urban Growth Boundaries, areas exist which are committed to nonresource use. Exceptions for these areas will be taken as "Built Upon and Committed Lands" and acknowledged by LCDC. These small pockets of development within Major or Peripheral Range are essentially Impacted areas due to their level of use by man. They were not large enough, generally to include on the Big Game maps as Impacted. These areas will be treated as Impacted areas for implementation purposes.

Quantity. Areas of of Major, Peripheral and Impacted Big Game Range have not been computed. Figures for acreage of some other categories of land may be useful, though, for illustrative purposes.

Total amount of land in Lane County	2,959,400 acres
Commercial forest land (primarily Major Range)	1,813,228 acres
Other public lands (primarily Major Range, some Peripheral Range)	735,112 acres
Farms (primarily Impacted Range)	255,712 acres

Over 61 percent of the County is considered commercial forest land, a category with essentially no residential development. Including other public lands, such as the Dunes National Recreation Area, Oregon State lands, Corps of Engineers lands and County parks, approximately 85 percent of the County is not available for residential use. A good portion of the remaining acreage is farmland, a category very difficult to justify as available for residential use, but also not prime big game habitat.

Conflict Identification

The clearing of natural vegetation for agricultural purposes decreases an area's habitat value for big game. But since important, existing agricultural lands are already considered Impacted Big Game Range, this is not an issue now. Impacted Range has essentially been "written off" for big game management.

Management of land for timber production does not conflict with big game habitat. With proper forest management techniques, big game habitat can be significantly enhanced. The forage provided to deer and elk in clear-cut areas is very important, but the combination of areas in various successional stages is probably the vital factor in enhancing numbers of deer and elk. Lands zoned for the primary purpose of timber production are subject to the requirements of the Oregon Forest Practices Act. For our purposes, timber harvesting activities do not constitute a conflict to Big Game Range.

The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 areas; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game.

The following paragraphs basically outline procedures to be used for implementation of the ODFW density recommendations in big game ranges. The premise is to work overall density figures into minimum lot size recommendations for regions of the County, rather than postponing the issue by referrals to ODFW for every land division application. The anticipated result is to base zoning

DELETED BY ADDENDUM

by region on the overall residential densities or ODFW minimum parcel size recommendations, thereby creating no conflict with Goal 5.

The County will be divided into regions convenient for planning purposes. These have not yet been determined, but will probably result in 10-20 regions in the County.

Within these regions, determinations will be made of acreages, number of existing residences, and additional number of residences allowable to still fall within the overall density level. Built upon and committed areas are subtracted out, as they are treated as Impacted Range. From the figure of remaining residences and acreage, a residential carrying capacity will be determined. This figure, or the ODFW figure of 40 or 80 acres, whichever is lesser, will be recommended in the region for residential density for big game purposes. This, along with other resource land requirements will be used to determine appropriate zoning in an area.

If this figure is ever exceeded, it constitutes a conflict with Big Game Range. ESEE consequences must be determined and analyzed at that time. Prior to dividing the County into regions and making the above determinations, it is impossible to determine if conflicts will exist in any regions. The expectation, based on examining trial areas, is that the recommendations of ODFW can be incorporated without creating a conflict.

Special uses which may be allowed in resource zones have the potential of conflicting with Big Game Range. To preclude that conflict, criteria will be incorporated into the Special Use review considering the effect on big game. Recommendations will be requested from ODFW and considered as part of the review process.

As a final note regarding residences in Big Game Range, damage to landscaping and gardens is a common problem around these residences. For new residential building permits within Major and Peripheral Range, the applicant will be notified that compatibility problems with big game may exist.

Several recommendations in the Policies Section of this Working Paper relate to the method the County will use to protect Big Game Range.

DELETED BY ADDENDUM

000046

ADDENDUM TO WORKING PAPER:

FLORA & FAUNA

November, 1983

EXHIBIT O

J. DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place:

Although this is a useful index, officials of the ODFW stress the fact that a mere "numbers game" is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.

A prime example is that of "clustering" dwelling units in Peripheral or Major Range areas -- siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.

— siting standards

The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirments of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.

= Coordination between Goals 3, 4 + 5

Within Developed and Committed areas, ODFW officials are examining the utility of continuing to designate some of these lands as either Peripheral or Major Range. Developed and Committed areas should be considered as Impacted, and conflicting uses permitted.

The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner -- including the involvement of that agency in land use regulation development. If the zoning procedure described above does not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the ESEE process and determine new ways of dealing with conflicts. The process should follow the Goal 5 Rule format, and center on weighing the relative benefits of dwelling unit construction against those of Big Game Range maintenence.

Policies concerning this issue are proposed in the concluding section of this Working Paper.

6. To existing Policies 10 and 11, add the following words (underlined):

"...the 1982 Lane County Working Paper on Flora and Fauna, as revised and updated in 1983...."

7. Add to existing Policy 12 the following statement:

"The County shall work with ODFW officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program."

8. Add a new Policy 14 as follows:

"14. In its program of protecting "1C" resources, the County shall make maximum practical use of existing land use regulations (e.g., Willamette Greenway Permit, Coastal Resources Zoning overlays, rural forest and agricultural resource zones) to achieve such protection. Duplication of existing standards shall be avoided wherever practicable, provided County-determined Goal 5 and OAR 660-16-000/025 objectives are met."

Existing (December 1982) Policies are duplicated on the following two pages of this document. They do not include the changes proposed above.

III. Conclusion and Necessary Action

The preceding pages of material is intended to meet LCDC requirements and thereby assist the County in complying with statewide planning Goal 5 requirements. It is recommended that the Planning Commissions and the Board of County Commissioners

- Receive the material and review it as technical supportive data,
- Consider the proposed Policy revisions in light of the new data,
- Carry the proposed Policy revisions -- or modified versions thereof -- forward to public hearings and adoption as amendments to the General Plan Policies document.

Ordinance language intended to implement the Policy proposals is now being prepared and will be brought before the Planning Commissons and Board as a part of the Lane Code revision effort. Changes to the Policies will possibly require parallel changes to the proposed ordinance language.

###

EXISTING FLORA AND FAUNA POLICIES from GENERAL PLAN POLICIES Document....

Flora and Fauna

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Provide special consideration to protection of sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies are encouraged to work with landowners to conserve wildlife habitats.

5. Lane County is encouraged to investigate fee acquisitions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to protect Goal 5 resources.

6. Riparian vegetation along all Class I streams is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Maintenance of this vegetation shall be encouraged with setbacks from Class I streams and shall be a consideration in Special Use Permits and Zone Changes.

7. Because of the inadequate inventory in Lane County, freshwater wetlands are being placed in a 1B category (insufficient data existing, per Goal 5 requirements, to decide on preserving the resource or not). When National Wetland Inventory (or equivalent) maps are available for all private lands in the County, these wetlands will be evaluated for quality and quantity as per the Goal 5 administrative rule (OAR 660-16-000). If the wetlands are determined to be significant, they will be evaluated against the rule's standardized set of ESEE (Environmental-Special-Economic-Energy) factors and conflict resolution proposed. This action will take place within one plan update period after the maps are available.

8. Lane County shall rely on the Oregon Forest Practices Act for protection of wildlife habitats and areas on lands zoned for the primary use of commercial growing and harvesting of forest tree species. Such habitats and areas shall include sensitive fish and waterfowl areas, riparian vegetation, wetlands areas, and big game ranges.

9. Sensitive Fish and Waterfowl Areas, as identified in the 1982 Lane County Working Paper on Flora and Fauna, are recognized as the most valuable habitat of their type in the County. Maintenance of riparian vegetation shall be a prime consideration in zoning districts in these areas.

10. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

11. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna.

12. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.

How Policy Read prior to previous page Recommendations

13. If uses are identified (which were not previously identified in the plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

Lane County
Rural Comprehensive Plan
Policies Document
Adopted February, 1984

EXHIBIT P

7. Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal/state ownership; where these do not occur, an appropriate wetlands zoning district shall be developed and applied. Other wetlands from the National Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per Goal 5 requirements if it is clearly demonstrated that an unprotected significant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction. (Modification in process)

8. Sensitive Fish and Waterfowl Areas as identified in the 1983 Revision the Flora an Fauna Working Paper, shall be considered "significant" "1C" resources per OAR 660-16-000/025, and protected per "3C" requirements through protection of riparian and wetland resources as described in the above Policy statement.

9. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, and as revised and updated in 1983, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

10. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna and as revised and updated in 1983.

11. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program.

REFLECTS ADDITIONAL LANGUAGE FROM ADDENDUM

12. If uses are identified (which were not previously identified in the Plan) which would conflict with a Goal 5 resource, an evaluation of the

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE

Lane County
and
Rural Portion of Eugene/Springfield Metro Plan
Goal 2--Nonresource Lands, Goal 5, Goal 15

Response from Denial Order of November 6, 1981
and from Continuance Order of November 6, 1981

DATE RECEIVED:
March 15, 1984

DATE OF COMMISSION ACTION:
August 17, 1984

REQUEST

The County has requested that its comprehensive plan and implementing measures be acknowledged as in compliance with the Statewide Planning Goals for areas outside adopted urban growth boundaries. Also, the County and the Cities of Eugene and Springfield request acknowledgment of compliance for the rural portions of the Eugene/Springfield Area General Plan.

SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission continue Lane County's request to allow amendments to the plan to comply with Statewide Planning Goals 2, 5, and 15. The Commission should hear testimony on these issues July 19, 1984, but not take final action until the August hearing.

Recommends the Commission continue the request to allow amendments to the Eugene/Springfield Metro Area General Plan under Goals 2, 5, and 15. The Commission should not take final action on this until the August Commission hearing.

EXHIBIT Q

Nevertheless, the County has decided to allow small sites in its F-1 and F-2 Zones conditionally. Larger sites will require plan amendments, along with application of the Goal 5 Rule, exceptions to appropriate goals and possible development and application of a special zone. The County has adopted a policy commitment to this effect. In the meantime, resource zoning will help prevent potential sites from being lost to other uses. (See, however, the Goal 4 section of this report for a discussion of problems with the F-2 Zone.)

* Pre-existing. Please Highlight. ignore.

Fish and Wildlife Areas and Habitats

Inventory

Information about Lane County's fish and wildlife resources is contained in its Flora and Fauna Working Paper and the addendum to that working paper. Pages 5-10 describe in general each of the 11 major habitat types in the County, along with a discussion of the value of the habitat type to wildlife, and general location of each habitat type. These include:

1. Estuary and Bay
2. Inland Marsh
3. Wet Meadows
4. Lakes and Reservoirs
5. Riparian Vegetation
6. Annual and Perennial Grasslands
7. Coastal Shore Pine/Spruce
8. Douglas Fir/Trailing Blackberry
9. True Fir/Alpine
10. Deciduous Hardwoods
11. Agricultural Lands.

The County prefaces this material by stating that this information "is not considered an inventory and is not accompanied by maps. It is intended merely as background information."

The Working Paper and its addendum contain special sections addressing endangered, threatened, and special concern species, riparian and wetland areas, sensitive fish and waterfowl areas, and big game range. These are discussed separately below.

Endangered, Threatened and Special Concern Species: The Working Paper lists plants and animals which are threatened, endangered, or of special interest (pp. 11-12). Further information is provided for six of these species--northern spotted owl, northern bald eagle, wolverine, silverspot

butterfly, western snowy plover, and American osprey (pp. 12-13). This information does not provide location, quality, or quantity information on any specific habitat areas or sites. However, the County indicates that:

1. No spotted owl or bald eagle nests are known to occur on private property;

2. Wolverine habitat is in high elevation, remote areas and therefore in federal ownership;

3. Snowy plover habitat is within state jurisdiction.

4. Osprey nests are found throughout the County, although not in great numbers. The County indicates the ODFW maps show their locations, but these maps have not been adopted or submitted for review.

5. Silverspot butterfly habitat is found only "along a small section of the Oregon Coast." It is recognized in the Coastal Resource Management Plan of Lane County.

Lane County has indicated that Silverspot butterfly habitat occurs on federal land adjacent to the Big Creek (Reneghan) Exception Area as well as on the Renaghan property itself (Exhibit E--Renaghan Amendment, pp. 27, 31). It should be noted that the Exception document contains one statement (Finding 37e) on page 27 which appears to contradict this. Specifically, finding 37e states there are no sensitive species on the property, and that the Silverspot butterfly habitat is located on adjacent federal land only. The Exception document contains several other statements indicating that such habitat occurs in the northwest corner of the property.

The County provides no information at all regarding great blue heron rookeries or pigeon mineral springs, which are considered sensitive bird habitat areas by the Department of Fish and Wildlife. (The exception to this is for two rookeries in the Willamette Greenway. They are addressed in the Goal 15 section of this report.) The inventory of sensitive bird sites developed by ODFW and provided to the Department of Forestry (DOF) as part of a recent management agreement between those agencies, identifies 15 great blue heron rookeries, 21 osprey nest sites, three pigeon mineral springs, and at least one bald eagle nest site in Lane County, most of which are on nonfederal land. According to Flora and Fauna Policy 15, "currently known pigeon springs, heron and raptor (hawk, osprey, and eagle) nest sites. . . shall be placed in a '1B' category."

Pre-existing Highlight. Please ignore.

Riparian and Wetland Areas: Riparian lands are defined by the County as all lands along both banks of Class I streams in Lane County, to a setback line of 100 feet from ordinary high water (Addendum, p. 7).

The County indicates in its Flora and Fauna Working Paper (p. 16) that all lakes, reservoirs, and Class I streams in Lane County have been mapped, but were not included because of budgetary limitations. They are

available in the Planning Department offices. The Addendum to the Working Paper (p. 6) states that ODFW has provided maps of all Class I streams, as well as major significant wetland areas. Detailed maps are available for review in County offices, and a generalized summary map is included in the Addendum (p. 20).

The Flora and Fauna Working Paper discusses the values associated with wetlands and riparian areas for both fish and other wildlife types (pp. 14-15). The County notes that the U.S. Fish and Wildlife Service has identified a number of wetland types in its National Wetland Inventory. Currently, about half of the County has been mapped, enabling identification of major wetlands. These include:

1. Fern Ridge periphery, exclusive of parkland;

2. Old Long Tom River channel below Fern Ridge dam, including lands between it and new channel;

3. North Fork Siuslaw fresh-water marsh;

4. Maple Creek marsh;

5. Amazon Canal at its confluence with the waters of Fern Ridge Reservoir.

The County indicates that these areas are mapped in detail on the Plan Diagram maps. More specific location, quality, and quantity information for each of these five wetland areas is contained in the Working Paper Addendum (pp. 11-13).

The County has not inventoried a wetland south of Sutton Lake and east of Highway 101, or a Darlingtonia bog east of Florence. As noted in the 1983 Coastal Goals review of Lane County (p. 8), these wetland were to be addressed under Goal 5:

> The County notes there are only two Goal 18 resource areas east of Highway 101 which do not fall within the coastal shorelands boundary. They are two wetland habitat areas identified in the coastal resource inventory maps. The County should note that it will have to adequately address these two areas later under Goal 5 when it brings the remainder of the County plan into compliance.

The Darlingtonia bog is addressed in more detail in the Natural Areas section of this report.

Sensitive Fish and Waterfowl Areas: The County notes that this is a subcategory of the previous section, Riparian and Wetland Areas (p. 20). Maps have been provided the County by ODFW showing important waterfowl nesting habitat and streams that receive high use by anglers and/or game fish (p. 20), but were not submitted for review. A large-scale map is available in the County Planning offices (Addendum, p. 5). A

generalized, small-scale map is included on page 20 of the Addendum which shows the locations of important streams and stream reaches. A list of these specific reaches, by basin, is included in the Addendum (pp. 2-4). All identified areas are of high quality and are considered important (Working Paper, p. 21). The extent of riparian vegetation is described in the previous subsection of this report. The County notes that there are native anadramous fish runs in Big Creek within the Big Creek Exception Area (Exhibit E--Renaghan Amendment, p. 44). These include coho salmon, cutthroat trout and steelhead.

Big Game Range: The County notes that ODFW divides big game range in Lane County into three categories--Major, Peripherial, and Impacted. The Major Range supports the majority of big game and, in general, consists of sparcely developed commercial forest lands. Peripheral Range is generally located on foothill areas between commercial forest lands and valley floors. Peripheral Range supports substantial big game populations and serves as wintering areas for animals in severe winters. Impacted Range consists of those areas that have existing levels of development which preclude future wildlife management options for maintaining viable wildlife populations and recreational opportunity, although they frequently contain big game populations.

All three big game range areas are depicted on Lane County Wildlife Inventory Maps, according to the Flora and Fauna Working Paper (p. 23). However, these maps were not submitted for review because of budget constraints. They are available in the Planning Department Office (p. 23). The Working Paper notes that the highest quality big game range is in the Major Range because development is limited. Peripheral Range is important, but has enough development to limit big game use and managment options. Impacted Range is of the lowest quality because of existing development (p. 23). The County provides acreages for these three categories (p. 24).

The County recognizes major elk habitat on a portion of the Big Creek Exception site (Exhibit E-Renaghan Amendment, p. 52).

Conflicting Uses/ESEE Consequences Analyses

Endangered, Threatened and Special Concern Species: As indicated earlier, Lane County knows of no spotted owl or bald eagle nest sites on private land. Similarly, wolverine habitat is on federal land. The County notes that the State Parks Division of ODOT regulates vehicular uses in snowy plover habitat (Working Paper pp. 12-13). Specific conflicts with osprey nest areas are not identified, but the County notes that protective measures in riparian areas (e.g., Willamette Greenway permit requirements, coastal shorelands overlays, riparian and wetland area provisions) will resolve conflicts (Addendum, p. 15).

The Working Paper indicates that the Coastal Resources Management Plan of Lane County recognizes the Silverspot butterfly and applies a prime wildlife managment unit to its habitat (p. 13). Specific conflicts and ESEE consequences are not discussed in the Working Paper, however.

sensitive. Missing are designations of heron rookeries and pigeon mineral springs. Policy 15 addresses all sensitive species (bald eagle nests, heron rookeries, snowy plover habitat, spotted owl nests, osprey nests and pigeon mineral springs). Further, objectors point out that Policy 15 places these species in a (1B) category. Both ODFW and 1000 Friends indicate that the County possesses inventory information (including recent ODFW updated information) which is sufficient to complete the Goal 5 process for this resource category. ODFW indicates that the location, quality, and quantity information provided the County is similar to that provided to other counties which have completed the Goal 5 process and which have been acknowledged. The League of Women Voters is concerned that two years is too long for these resource sites to be without protection. Most are not in the Greenway, and therefore do not even receive minimal protection.

1000 Friends also objects to the fact that neither Flora and Fauna Policy 2 or 3 provides adequate protection for these sensitive species. Policy 2 simply indicates the County will recognize existing programs that protect species; it does not bind the County to any particular course of action. 1000 Friends believes the County must make an affirmative commitment to protect threatened and endangered fish and wildlife species. Policy 3 also fails to guarantee protection of sensitive species since it requires the County to seek to minimize adverse impacts through County regulations (including zoning). 1000 Friends suggests that present zoning may be construed to "minimize adverse impacts" but this may not necessarily provide adequate protection for particular sites.

1000 Friends also objects to the use of the definition of "sensitive species" used in Policy 3. Objectors believe it is overly general and could be construed by decision-makers to exclude certain species. Objectors believe that County Policy 3 should reference the list of "species of special concern" that appears in the Working Paper, rather than use a vague term in the policy. Similar comments have been filed by Oregon Forest Industries Council.

2. ODFW and 1000 Friends have objected to Flora and Fauna Policy 11 since it regards densities above ODFW's recommendations in big game areas to constitute a conflict. ODFW regards its recommended densities as the approach to resolve conflicts between dwellings and game range. 1000 Friends states that Policy 11 allows residential densities to exceed ODFW recommendations "if conflicts can be resolved in accordance with OAR 660-16-000." Objectors believe this allows the County to justify density levels which exceed those recommended by ODFW through an analysis of ESEE consequences. Objectors do not believe this exclusion is consistent with the Goal 5 Rule.

OBJECTIONS NOTED BY DLCD

3. ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements

CONT. →

that need to accompany the density levels allowed in those zones. Similar objections have been filed by 1000 Friends of Oregon. Objectors point out the the F-1 zone establishes a minimum lot size of 40 acres, but smaller divisions can be made without regard to big game impacts. The F-2 zone establishes minimum lot sizes of 20 and 40 acres for forest and farm uses, which also fail to meet ODFW's recommended densities for Peripheral Range, according to objectors. 1000 Friends points out that the Flora and Fauna Working Paper Addendum and Policy 11 prescribe clustering and siting of standards, but these are not carried out in the F-2 zone. The Addendum (p. 14) also references forest land minimum lot sizes which are no longer current.

4. ODFW and 1000 Friends object because Goal 5 has apparently not been applied in the process of designating marginal and nonresource lands. Objectors are particularly concerned how this affects big game range areas. ODFW contends that the County's plan provisions for lots of record, resource and nonresource-related dwellings, marginal lands, and nonresource lands could allow considerable development in game range. The County's F-1 and F-2 zones do not adequately assure that recommended densities will be maintained. This is further complicated by the fact that it is unclear where marginal and nonresource lands are located, and therefore the extent to which they are in game range areas, since the zone map format and resource inventory map formats are not easily comparable. 1000 Friends points out the Goal 5 must be applied whereever Goal 5 resources occur, even in areas designated marginal or nonresource land.

5. ODFW, 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's treatment of the Pudding Creek Heronry. Objectors point out that the County conducted a Goal 5 ESEE consequences analysis, but that inasmuch as the sand and gravel plan and zone designations have been retained on the site, conflicts have not been resolved. Please refer to the Goal 15 section of this report for further details concerning objections to the zoning of this site.

6. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Objectors indicate that the County has not adopted a program that is adequate to protect and/or resolve conflicts with the site under Section (3C) of the Goal 5 Rule. Objectors point out that the 1981 LCDC order for the Eugene/Springfield Metro area include a requirement that the ESEE consequences of designating the island for sand and gravel use must be evaluated in the context of regional aggregate supply and demand. The IOTC further required that if the island were to retain a partial sand and gravel designation, the Metro Area Plan and the Lane Code (Section 10.210) must be amended to require that limited aggregate extraction will minimize the impact on scenic and wildlife values.

EXHIBIT C.41

process. Depending upon this analysis, the policies may have to be modified, and implementing measures will have to be adopted. The concern that Policy 3 is unclear as to which species or habitat areas are covered by the policy is valid.

2. Policy 11 states:

> Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program.

Response to objections by DLCD

Objectors are not correct that this policy violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU Zones which ensure that ODFW's density standards will be achieved.

The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or prevent conflicts between dwellings and big game habitat. However, as discussed below, the County has not adopted such standards in its zoning ordinance.

3. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone.

Conclusion - Goal 5

Lane County does not comply with Goal 5.

Lane County has compiled inventory information for most Goal 5 resource categories and has made (1A), (1B) and (1C) decisions, based on this information. Conflicting uses for most categories have been analyzed. Based upon this work, the County has made protection/nonprotection decisions and has adopted plan policies and applied several implementing measures to many Goal 5 sites. Most noteworthy of these implementing measures are the County's riparian setback and vegetation maintenance standards, its groundwater protection provisions, and its Natural Resource zone. However, there are a number of deficiencies in the County's Goal 5 element which must be corrected before acknowledgement can be granted. These deficiencies have been summarized in the previous sections of this report.

In order to comply with Goal 5, Lane County and the Cities of Springfield and Eugene must:

1. Mineral and Aggregate Resources: Apply the Goal 5 process to sites zoned SG which are not included on the County's (1C) inventory and, based on an analysis of the ESEE consequences of conflicting uses, either (1) add them to the (1C) inventory if justified, or (2) rezone the sites for other uses.

2. Fish and Wildlife Habitats:

   a. Amend the Natural Resource Zone to include riparian setback and vegetation maintenance standards.

   b. Amend the C-1, C-2, C-3, M-1, M-2, M-3, and RG zones to either (1) include riparian setback and vegetation maintenance standards, or (2) incorporate by reference another section of the Lane Code which contains such standards.

   c. Apply riparian setback and vegetation maintenance requirements along lakes and Class II streams, or otherwise justify not providing such protection, based on an ESEE consequences analysis of conflicting uses.

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.

   e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.(*)

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

i. Carry out Forest Lands Policy 17 (Plan, p. 10) by identifying sites that are considered more important than commercial timber management activities, based on a Goal 5 ESEE consequences analysis, and adopt appropriate implementing measures to protect and/or resolve timber management conflicts with those sites, consistent with that policy.

4. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.(*)

5. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

6. Historic Sites:

a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

7. Oregon Recreation Trails:

a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

EXHIBIT D.1

VICTOR ATIYEH
GOVERNOR

Department of Land Conservation and Development

1175 COURT STREET N.E., SALEM, OREGON 97310-0590 PHONE (503) 378-4926

M E M O R A N D U M

August 17, 1984

TO: Land Conservation and Development Commission

FROM: James F. Ross, Director

SUBJECT: ITEM 7.1: LANE COUNTY ACKNOWLEDGMENT REVIEW

TOPICS: Response to Exceptions to the Lane County Acknowledgment Review and Proposed Amendments to the Lane County Acknowledgment Review for Goals 5, 15, and Goal 2 Nonresource Areas.

This memorandum is divided into two parts. Part I includes by Goal topic responses to exceptions filed by objectors to the Lane County Acknowledgment Review. Part II contains by Goal Topic the Department's recommended changes to the Lane County Continuance Report along with the reasons to support those changes.

I. Response to Exceptions

A. Goal 2--"Nonresource" Lands

1. David Hemenway and Paul Mehnert regarding Dillard Highlands Second Addition

Mr. Hemenway indicates that some errors are contained within the Department's Report discussing Dillard Highlands' Second Addition. We concur with Mr. Hemenway regarding objections 1 (page 112 of the Department's report), 2 (page 113), and 4 (page 115). Corrections to the Department's report for the objections discussed above are contained in Part II of this memorandum. We disagree with Mr. Hemenway regarding objections 3 and 5.

Objection 3 claims that the Department's report is incorrect because the "County's" soils investigation report, quoted by the Department, is inaccurate. The Department is unable to reconcile the factual inconsistencies contained within the County's findings for Dillard Highlands' Second Addition.

EXHIBIT R

The two sets of soils data, provided as findings, present different conclusions about the characteristics of the site. The County must review this material to determine which soils data are accurate. We recommend that Mr. Hemenway be afforded the opportunity to be involved in this determination.

Objection 5 claims that the Department's recommendation for Dillard Highlands' Second Addition is in error. The record lacks substantial evidence indicating that Goals 3 and 4 do not apply to this land. Until the County clearly indicates from revised soils information, that Goal 3 is not applicable to this site, the County lacks substantial evidence supporting its claim regarding Goal 3. Additionally, reliance on a forester's economic analysis to support the conclusion that Goal 4 does not apply to this site, when the record indicates it is composed predominantly of soils with commercial forest capabilities (Site Class III and IV, County's Findings, p. 14) is inconsistent with Goal 4's requirements (see amended conclusion for Dillard Highlands' Second Addition).

2. Canfield and Associates on behalf of Cerro Gordo

Mr. Canfield's exceptions to the Department's report are only partially sustained. The issues regarding the proposed density of this development as discussed in the report remain. However, the Department concurs with Mr. Canfield that amendments to clarify the Department's position are necessary (see amendments to the report).

B. Goal 5

1. Lane County

Lane County filed an exception to in-order-to-comply requirements 2c, d, e, f, and i. All pertain to fish and wildlife habitat issues.

Response: On August 8, DLCD staff met with Lane County planners to discuss these issues. All were resolved. IOTC 2c, d, e, and f remain, but 2i should be eliminated (see amendments to staff report in the Part II of this memo).

2. Wildish Sand and Gravel Company

Wildish believes that several statements in the July 19, 1984, report are inaccurate. Specifically:

EXHIBIT 1

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE
Lane County
(Rural Portion, Excluding Eugene Metro Area)
Supplement to Staff Reports of June 29, 1984 and July 19, 1984 as Amended

DATE RECEIVED:
August 16, 1984 through September 13, 1984

DATE OF COMMISSION ACTION:
September 13, 1984

I. REQUEST

Acknowledgment of Compliance with the Statewide Planning Goals for the comprehensive plan and implementing measures.

II. SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission acknowledge the rural portion of Lane County's plan and land use regulations to be in compliance with Statewide Planning Goals 1-14, (C).

FIELD REPRESENTATIVES: Bob Rindy, Glen Hale
Phone: 378-4095

LEAD REVIEWER: Doug White, Mike Rupp, Claire Puchy
Phone: 378-4926

PLANNING DIRECTOR: Roy Burns
Phone: 687-3958

Date of Supplemental Report: September 12, 1984

EXHIBIT S

Response

Lane County has responded to this IOTC by amending the Flora and Fauna Working Paper Addendum (p. 7) to include the following justification for not applying riparian setback and vegetation maintenance requirements to lakes or Class II streams (Ord. No. PA 892):

> "For purposes of this analysis, only Class I riparian lands are considered. Class II streams (using ODF standards) are not fish-bearing streams, according to Oregon Fish and Wildlife Department staff, and often dry up in the summer months. Additionally, they are located in remote areas in public ownership or limited to resource uses by resource zones. Many of them have not been inventoried, and location maps are not easily available. Most lakes outside of the coast are impoundments, such as Fern Ridge Reservoir, and have COE easements plus County PR zoning to protect their shorelines. The remaining natural lakes are protected by coastal overlays or are in High Cascade wilderness areas such as Waldo. The Oregon Fish & Wildlife Department, which worked closely with the County in devising a method of protecting Class I riparian lands, did not indicate a need to similarly protect Class II riparian lands. In the nomenclature of the Goal 5 Rule, the County determines the Class II streams are to be considered '1A' resources--not to be included on the Plan inventory."

Conclusion

Requirement 2c has been met.

Requirement

2. Fish and Wildlife Habitats:

d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy II. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.

Response

Lane County has added the following new language to both the F-2 and EFU Zones:

> "(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of

- Clustering + Siting Stds

proposed residences consistent with the purposes the F-2 [EFU] Zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Conclusion

Requirement 2d has been met.

Requirement

2. Fish and Wildlife Habitats:

e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

Response

Lane County has adopted (Ord. No. PA 892) as part of its Flora and Fauna Working Paper, an inventory of known sensitive bird sites, including location, quality and quantity information. The County has identified conflicting uses and analyzed ESEE consequences. Based on this analysis, Lane County has decided to adopt a procedure for "flagging" areas in which such sites occur and requiring conflicting uses to be subject to conditional use approval. For all conflicting uses except timber management activities, the County has adopted "Sensitive Bird Habitat Protection Standards and Criteria" as part of the Lane Code (Ord. No. 11-84). Excerpts from that zone section are as follows (LC 16.005(4)(1)):

"(b) Development Plan Submittal. The person proposing the development shall submit plans to the

Conclusion

Requirement 7b has been met.

Requirement

8. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflicting-resolution recommendations contained in the Metro Plan Update Working Paper.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 5

Lane County complies with Goal 5.

GOAL 7: AREAS SUBJECT TO NATURAL DISASTERS AND HAZARDS

Requirement

1. Amend the Development Code to require review of any proposed development within known geologic hazard areas.

Response

Lane County Development Code was amended (ORD. 9-84) to include the following provision (LC 16.005):

> "(2) Grading, Excavation and Clearing. Grading and clearing by mechanical equipment for either road and/or development purposes may be restricted or regulated by the Approval Authority either at the time of approval of a development permit or of an application if there is a finding that such grading or clearing presents a real threat of pollution, contamination, silting of water bodies or water supplies, erosion and slide damage, or alteration of natural drainage patterns in the area. In all cases, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose."

Lane County

Gary Darnielle
Lane County Heanings Official
North Plaza Level PSB
125 E. 8th Ave.
Eugene, OR 97401

September 11, 1986

RE: PA2131-86

Dear Mr. Darnielle:

In your September 9, 1986 memorandum to Roy Burns, you requested staff to prepare responses to 2 questions in regards to the above referenced application. This memorandum is in response to your request.

Question 1). Which Rural Comprehensive Plan policies and implementation regulations determine allowable residential densities within areas designated as Big Game Range? Specifically, how does County staff reconcile the clear language of Rural Comprehensive Plan Flora and Fauna Policy #11 with the residential density analysis suggested by the "Flora & Fauna Working Paper" (March 1982) and the revised language to the working paper in the "Addendum to Working Paper: Flora & Fauna" (November 1983)?

Response: Goal 5 Flora and Fauna Policy #11 together with the clustering requirements of the F-2/RCP zone (LC16.211(8)) and of the EFU/RCP zone (LC16.212(8)) determine allowable residential densities within Big Game Range Habitat areas.

A better understanding of how Policy #11 and the implementing measures for clustering in the F-2/RCP and EFU/RCP zones can be obtained by reviewing the DLCD review comments for Lane County's Rural Comprehensive Plan.

In the DLCD Report, July 19, 1984, page 75, 2.e., DLCD indicated that the F-2/RCP and EFU/RCP zones must either be amended to contain larger minimum lot sizes or to contain clustering requirements for residences in Big Game Range Habitat areas. The reasoning for this recommendation was discussed in pages 33, 34, 35, 36 and 39 of the July 19, 1984 DLCD Staff Report.

In response to the DLCD recommendations in their July 19, 1984 report, Lane County amended it's F-2/RCP and EFU/RCP zones to contain clustering provisions for the siting of residences. In the Sept. 12, 1984 DLCD report, pp 25-26, DLCD noted their recommendations from their July 19th report and the amendments Lane County enacted to its F-2/RCP and EFU/RCP zones and concluded that the intent of Flora & Fauna Policy #11 had been carried out and met the Goal 5 requirements.

EXHIBIT T

Question 2) To what extent has County staff been pursuing the development of a Goal #2 "developed and committed" exception to the Baxter's Acres Subdivision? What specific factors have the staff examined or will the staff be examining which they believe will determine whether the subdivision is committed to nonresource use?

Response: County Staff have discussed a "developed" exception with Dave Pedersen who has represented Weyerhaeuser and a number of lot owners in Baxter's Acres. Our last discussion with Dave Pedersen occurred on September 9, 1986 during which we agreed that it would not be appropriate to proceed with initiating a Plan Amendment at this time due to the multiple applications for the same property being contested with the Hearings Official. Staff had intended to bring to the Lane County Planning Commission facts relating to the developed nature of Baxter's Acres and to let the LCPC decide if there appears to be a basis for taking a developed exception. The LCPC could then initiate a Plan Amendment/ Zone Change to more formally consider the matter.

Another impetus for initiating an amendment is the fact that if, through an arduous hearing process, dwellings could be allowed in the F-2/RCP zone, then a much simpler process would be to amend the Plan and change the zoning. The factors to be considered for a developed exception would be those required by the OAR for a developed exception (i.e., roads, utilities, sewage disposal systems, etc.).

[EXTERNAL ⚠]

Please note my error in the first paragraph of my letter that state's the density on the subject property is less than the ODFW-recommended density. That was a typo. I intended to say the density was greater than the ODFW-recommended density, consistent with all other points I've made.

Lane County Hearings Official
c/o Lane County Planning Department
Land Management Division
3050 North Delta Highway
Eugene OR 97408
(541) 682-4065

Re: LandWatch Lane County Response Letter re request for two forest template dwelling, 509-PA20-05066 and -05064 (King).

LandWatch submits this responsive testimony in support of its appeals. LandWatch respectfully requests that the Hearings Official reverse the planning director's decision approving the two requests because the applicant has not prepared an ESEE analysis. An ESEE analysis is necessary because the residential density on the applicant's property is far less than the ODFW-recommended densities, which have been adopted by Lane County, for dwellings within major big game range (*i.e.*, a conflict exists if a dwelling is proposed within major big game range on less than 80 acres).

It is clear that the applicant is attempting to re-litigate the *Nimpkish* case. The Hearings Official should not accept the applicant's invitation. LUBA was very clear in its decision that, as a result of Policy 11, the applicant must perform an ESEE analysis to resolve the conflict created by proposing a dwelling on less than 80 acres. The first sentence of policy 11, which the applicant relies upon for the "overall" argument, was never performed or accomplished by the County. LUBA expressly acknowledged this failure and then focused on the second sentence:

> "However, the county's failure to take the step of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that the county is absolved from protecting

land included on the Big Game Habitat Inventory as Major Big Game Range through the residential density recommendations simply do not apply. Rather, the *second sentence* of RCP Goal 5, Flora and Fauna Policy 11, remains operative, and it provides that '[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-015-000.' The second sentence is not tethered to or derivative of the first sentence, which envisions the creation of zoning areas that eh county has never completed. The second sentence does not mention or refer to zoning areas. To find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the county to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgment of its Goal 5 program, and it would have the effect of eliminating the Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program. Moreover, the county must interpret a provision of the RCP that was adopted to implement its Goal 5 program, which protects Big Game Range form conflicting residential development through density standards, in a manner that is not inconsistent with Goal 5. ORS 197.829(1)(d)."

LandWatch Lane County v. Lane County (Nimpkish), __ Or LUBA __ (LUBA No. 2020-030, Jan. 20, 2021) *slip op at 13-14. (italics in original; underlined emphasis added). LUBA has already interpreted policy 11, as well as the issues that the applicant complains of here. The first sentence of policy 11, which was never implemented, contains the issue that the applicant relies upon here, and LUBA found that the second sentence is what is operative, which does not contain the "overall" language. In other words, the applicant is hinging its case on a phrase (*i.e.*, "overall density") that was never actually implemented by the County.

LandWatch also notes, as it did in its open record testimony, that the applicable analysis area was the property. *See Nimpkish*, slip op at 5 ("the density of the subject property with a forest template dwelling would be one dwelling unit per 10 acres, which would exceed the ODFW recommendations on overall density for protection of Major Big Game Range"). The applicant has not established that any other metric has been adopted and implemented by the County, yet LUBA has identified the subject property as the applicable metric in the *Nimpkish* case because *that is where the conflict arises.*[1]

[1] It is notable that within an ESEE analysis, the analysis must define the "impact area," which is the "geographic area within which conflicting uses [*i.e.*, the dwelling] could

The applicant also relies on the working paper, which is not part of the comprehensive plan, instead of focusing on policy 11 itself. The applicant also concedes, as it must, that the language it highlights from the working paper "was not adopted." Applicant Open Record Letter at 1. If it was not adopted, then it has no bearing on the issues at hand.

Next, the applicant alleges that it "provided two regions for Major Big Game, based on connectivity," including "one big region or two regions divided by a break in connectivity," "five regions divided by major highway corridors," and areas "divided by watershed regions." Applicant's Open Record Letter at 1-2. The obvious problem is that the applicant cannot simply create regions out of whole cloth. That is a legislative task for the County Board of Commissioners to accomplish through the appropriate means, not for an applicant to do on an *ad hoc* basis, regardless of whether the applicant believes such an approach is "logical." Applicant Open Record Letter at 1.

The applicant also attempts to recast what was at issue in *Nimpkish* in order to avoid the relevant references to the "subject property." LandWatch has attached the relevant excerpt of their petition for review to demonstrate what was at issue in the *Nimpkish* brief. *See* Exhibit A. The applicant also alleges that "[w]hat policy 11 meant, and how it should be applied was not before LUBA." Applicant Open Record Letter at 2-3. To the contrary, LUBA interpreted policy 11 to find that where a conflict existed because the ODFW-recommended residential density standards were not satisfied, resolution of that conflict would have to occur in accordance with OAR 660-16-000, which is the administrative rule in place at the time that governed goal 5 and an ESEE analysis. In fact, in *Cattoche*, as quoted at Exhibit A, Page 11, LUBA noted that, in reference to the ODFW-density recommendation, "[i]f this figure is exceeded, there is a conflict and an ESEE analysis is required." As noted in the block quote at Exhibit A, Page 12, even the Working Papers understood that an ESEE analysis would be required if the residential density recommendations were exceeded:

> "If uses are identified (which were not previously identified in the plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental, and energy consequences shall be used to determine the level of protection necessary for the resource. The procedures outlined in OAR 660-16-000 will be followed."

---

adversely affect a significant goal 5 resource," OAR 660-023-0010(3), but to get to that point, the applicant must accept that an ESEE analysis is required.

That citation is from Record Page 552 from the *Nimpkish* record, which the applicant appears to have included in its open record submissions. Petitioners include Record Pages 551-552 here as Exhibit B.

The applicant argues that "[n]either LUBA nor LandWatch can wish away the term 'overall,'" but there is no need for wishes because the County never implemented that particular sentence, and, instead, used the ODFW-recommended densities. LUBA made this clear in *Nimpkish* and *Cattoche*. Any other conclusion would be contrary to Goal 5, as indicated by LUBA in the *Nimpkish* decision. The applicant next incorporates the attorney's response briefing and arguments from Mr. Evans[2]. Apart from the problem that the exhibits are hundreds of pages and the applicant allegedly "incorporates" certain arguments that are unidentified, the bigger problem is that those arguments were already unsuccessful in *Nimpkish* and cannot be re-litigated here.

Because the applicant has failed to prepare an ESEE analysis due to the conflict (i.e., the property will exceed the ODFW-recommended residential density), LandWatch's appeals must be sustained and the applications denied.

Sincerely,

Sean T. Malone
Attorney for LandWatch Lane County

III. JURISDICTION

LUBA has jurisdiction under ORS 197.015(10)(a)(A) and ORS 197.825(1).

IV. ARGUMENT

A. FIRST ASSIGNMENT OF ERROR – The Hearings Official misconstrued applicable law regarding the interpretation of the protections afforded Major Big Game Ranges, in accordance with the Lane County Rural Comprehensive Plan.

1. Preservation of assignment of error

This assignment of error was preserved at R 48-52, 252-253, 502-579, 606-612, 777-780, 831-833.

2. Standard of review

A local government's interpretation of state law and local law that implements state law is not entitled to the deferential standard of review under *Siporen v. City of Medford*, 349 Or 247, 266 (2010). A local government's interpretation of issues not pertaining to state law is afforded *Siporen* deference only if the interpretation is from the governmental entity that promulgated the standards at issue. Where the matter is not one of state law and the approval authority was not the same that promulgated the provisions at issue, then LUBA reviews such interpretations under ORS 197.835(9)(a)(D) to determine whether the

County "[i]mproperly construed applicable law." *Waverly Landing Condo. Owners' Assoc. v. City of Portland,* 61 Or LUBA 448 (2010). If there is no interpretation or the interpretation is inadequate for review, ORS 197.829(2) provides that LUBA may interpret the local provision in the first instance. Where there is no reviewable express or implied interpretation, LUBA has nothing to defer to. *Heitsch v. City of Salem*, 65 Or LUBA 187 (2012). Here, the issues are largely dependent upon state law, including administrative, as well as Lane County's comprehensive plan. Under either circumstance, the County's decision is not due *Siporen* deference because the final decision was made by the Hearings Official and not the Board of Commissioners.

Under ORS 197.829(1), LUBA shall "affirm a local government's interpretation of its comprehensive plan and land use regulations, unless the board determines that the local government's interpretation:

> "(a) Is inconsistent with the express language of the comprehensive plan or land use regulation;
> (b) Is inconsistent with the purpose for the comprehensive plan or land use regulation;
> (c) Is inconsistent with the underlying policy that provides the basis for the comprehensive plan or land use regulation; or
> (d) Is contrary to a state statute, land use goal or rule that the comprehensive plan provision or land use regulation implements."

See also PGE v. Bureau of Labor and Industries, 317 Or 606, 859 P2d 1143, 1146 (1993), *modified by State v. Gaines*, 346 Or 160, 171-172, 206 P3d 1042 (2009). Here, the primary issues arising in Petitioner's assignments of error are that the

decision is inconsistent with applicable goals and inconsistent with the comprehensive plan.

When a local government's interpretation of a provision adopted to implement a Statewide Planning Goal is inconsistent with that Goal, under ORS 197.829(1)(d), LUBA shall not affirm that interpretation. *See Oregon Coast Alliance v. Curry County*, __ Or LUBA __ (LUBA No. 2013-033, Oct. 11, 2013) ("LUBA is not required to affirm an interpretation that is inconsistent with the goals."); *Leathers v. Marion County*, 144 Or App 123, 130-31, 925 P2d 148 (1996) (county interpretation of acknowledged land use legislation is reversible under ORS 197.829(1)(d) if the interpretation would allow uses that are prohibited by the statewide planning goals that the legislation was adopted to implement); *Jackson County Citizens League v. Jackson County*, 171 Or App 149, 156, 15 P3d 42 (2000) (a county comprehensive plan urbanization policy that was adopted to implement Goal 14 must be interpreted consistently with Goal 14's prohibition against approval of urban uses on rural land).

"[U]nder ORS 197.829(1), LUBA is required to defer to a local government's interpretation of its land use regulations unless the interpretation is inconsistent with the express text of the regulation, the purpose of the regulation, the underlying policy implemented by the regulation, or a state law that the

regulation carries out." *Kaplowitz v. Lane County,* 285 or App 764, 775, 398 P3d 478 (2017).

3. Argument

a. The Hearings Official's findings below

In response to Petitioner's arguments below that comprehensive plan policies, and specifically Goal 5, should apply to template dwelling applications, the Hearings Official's findings are set forth below:

> "2. ***The Director's decision is not consistent with the protections afforded Major Big Game ranges in accordance with the Lane County Rural Comprehensive Plan.***
>
> The subject property lies within an area designated as Major Big Game Habitat. The Appellant contends that the proposed template dwelling does not comply with the 80-acre minimum density requirement for Major Big Game Habitat mandated by OAR 660-006-0027(1)(d) and (f), and Goal 4, Policy 11 of the Rural Comprehensive Plan.
>
> Lane County's Rural Comprehensive Plan and Chapter 16 of the Lane Code were acknowledged by LCDC in 1984. Big Game Habitat was recognized as a 1C significant Goal 5 resource and the County incorporated some of the protections recommended in two Flora and Fauna Working Papers into the Rural Comprehensive Plan. Thus, Flora and Fauna Policy 11, of Goal 5 of the Rural Comprehensive Plan states that Orgon Department of Fish and Wildlife recommendations on overall residential density for protection of big game were to be used to determine the allowable number of residential units within regions of the County. This policy stated that any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.
>
> The Appellant relies upon LUBA's decision in *Cattoche v. Lane County* for the proposition that density in the Impacted Forest Lands District is determined by the Rural Comprehensive Plan's March 1992 Flora & Fauna Working Paper as it applies to Flora & Fauna Policy # 11 of the Rural

Comprehensive Plan. The Big Game Range section of the 1982 Flora & Fauna Working Paper notes that the County was to be divided into regions convenient for planning purposes; probably between 10 to 20 regions. Within the regions, excluding the Impacted Big Game Ranges, a residential carrying capacity was to be determined. The ODFW recommended a density of one dwelling unit per 80 acres for major big game range areas. Lane County never divided the County into geographic Big Game Range regions and the Appellant has not alleged that its analysis encompasses one of those regions.

It is important to distinguish between the planning work Lane County did in preparation for acknowledgment of compliance and what was actually acknowledged by LCDC. As noted above, the Flora and Fauna Working Paper's strategy of dividing the County up into regions was never implemented.

The DLCD staff report of July 19, 1984 indicates a concern with the minimum lot sizes in the resource zones coupled with a lack of siting and clustering requirements. The minimum parcel size was the County's chosen method to comply with the ODFW recommended maximum densities. The recommended densities – one dwelling per 40 acres in the peripheral big game range – depended entirely on the size of the area being studied. When considering an 80-acre study area, the recommendation would only allow two dwellings. However, the recommendation was intended to apply at a much higher level; which is why the County originally anticipated dividing the County into regions. Ultimately, the County, with the blessing of DLCD and ODFW, decided to rely on minimum parcel sizes to implement the ODFW recommendations. This view is borne out in DLCD's staff report which stated: '*Without clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be double to be acceptable.)*' At this time, Lane County's proposal was to have a minimum lot size of 0 acres for the F-1 Zone, minimum lot size of 20 acres in the F-2 Zone, minimum lot size of 40 acres in the EFU Zone, and no clustering or siting standards for dwellings.

DLCD staff issued a second acknowledge [*sic*] of compliance report regarding Lane County's Rural Comprehensive Plan and implementing ordinances on September 12, 1984. The recommendation in this report was:

> '*Amend the F-2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum parcel sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.*'

Kent Howe, former Lane County Planning Director, and Jim Mann, Former Principle Planner with Lane County, were working on the adoption of the rural Comprehensive Plan in 1983 and 1984. Their recollection was that at the last hour, facing a negative DLCD staff review regarding compliance with Goal 5 issues dealing with wildlife and big game habitat, Lane County made significant changes to how big game habitat was to be protected. Last minute changes included increasing the minimum lot size to 80 acres in the F-2 Zone and adopting siting and clustering requirements in that zone. Where Policy #11 states that '*any density above that limit shall be considered a conflict*' it was referring to when the density prescribed by the minimum parcel size was to be lessened through a land division or rezoning. At that point in time, an ESEE analysis, via a comprehensive plan amendment, would be required.

The template dwelling regulations were adopted by the Legislature in 1993 and subsequently incorporated into administrative rule. These regulations were adopted verbatim by Lane County through a post-acknowledgement plan amendment which was not challenged.

Ultimately, the acknowledged zoning ordinance did not apply the Big Game limitations except in circumstances, such as in the Exclusive Farm Use Zone. And in that case only properties lying within a Major Big Game area were affected. No specific siting regulations for forest template dwellings located within a peripheral big game range were adopted by the acknowledged Chapter 16 zoning code. That is, the Big Game Range density standards were integrated into the zoning classifications and minimum lot size recommendations within the Impact Forest Lands Zone. The density recommendations were not applicable to existing parcels but were to be considered only in rezoning and land division applications. Therefore, the approval of dwellings under a template dwelling test does not involve a determination of consistency with Big Game Range density standards.

This allegation of error is dismissed."

R 8-10 (Appx 7-9) (emphasis in Hearings Official's decision). The Hearings Official's analysis can be summarized as follows: The County's program to achieve Goal 5 for Big Game Range is allegedly to rely on siting standards and minimum lot or parcel sizes incorporated into the zoning. Moreover, Flora and Fauna Policy 11, ODFW's residential density standards, and an ESEE analysis is allegedly only implicated for land divisions.

b. Petitioner's argument

Uses authorized in Forest Zones are set forth in OAR 660-006-0025 and statute, and OAR 660-006-0025(1)(d) provides for "[d]wellings authorized by ORS 215.705 to 215.757[,]" which includes forest template dwellings, the type of dwelling at the center of the challenged approval. *See* ORS 215.750. OAR 660-006-0025(6), in turn, provides that "[n]othing in this rule relieves governing bodies from complying with other requirements contained in the comprehensive plan or implementing ordinances such as the requirements addressing other resource values (e.g., Goal 5) that exist on forest lands." *See also* ORS 215.416(4)(a); OAR 660-006-0027(6)(a) ("A proposed 'template' dwelling under this rule is not allowed … if it is prohibited by or will not comply with the requirements of an acknowledged comprehensive plan, acknowledged land use regulations, or other provisions of law."). On its face, this provision, which the Hearings Official fails to address, appears to acknowledge that comprehensive plan policies, and

explicitly those comprehensive plan policies that implement Goal 5, apply to dwelling approvals and other uses in the forest zone, including requests for template dwellings.

For a comprehensive plan to act as decision criteria, LUBA has determined that the text and context of the comprehensive plan must establish both (1) that the plan requirement is mandatory (rather than hortatory or aspirational) and (2) that the mandate must be applied directly as a permit approval standard for the permit decision on appeal. *Friends of the Hood River Waterfront v. City of Hood River,* 68 Or LUBA 459 (2013). Here, when coupled with the administrative and statutory provisions cited above, Flora and Fauna Policy 11's use of mandatory terms and that Policy 11 applies in circumstances where residential density exceeds the ODFW recommendations, Policy 11 must apply as an approval standard or criterion.

The Lane County Rural Comprehensive Plan contains policies related to big game range, and Flora and Fauna policy 11 provides as follows:

> "*Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.* The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

Appx 14; R 506. The two italicized sentences at the beginning of the policy are mandatory, using the word "shall" on two occasions and "will" and the operative command is that any density above the ODFW recommendation will result in a conflict that must be resolved through an ESEE analysis. The administrative rule cited is the old Goal 5 administrative rule, which contained the requirement for an ESEE analysis at the time the county plan was adopted.

The plain import of the Flora and Fauna working paper, in turn, identifies the residential densities referenced in policy 11:

> "The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 acres; for Major Big Game Range at one dwelling unit per 80 acres. * * * to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range * * * conflicts with habitat for big game."

R 542 (Flora and Fauna Draft Working Paper, Page 24); R 506. The policies themselves are not expressly or implicitly limited to land divisions but they are expressly implicated when the density recommendations are exceeded.

LUBA previously addressed policy 11 and Goal 5 in *Cattoche v. Lane County,* __ Or LUBA __ (LUBA No. 2018-109, May 22, 2019), albeit in the context of a zone change and plan amendment, but the analysis of the Lane County's program to achieve Goal 5 for the Big Game Range is relevant. There, LUBA understood and explained that the County did not "quantify a residential density allowed in the F-2 zone, and instead used the ODFW 40-acre standard for

areas inventoried as Peripheral Big Game Range," despite that the County's "initial intent was to preserve the 40-acre standard through *zoning*":

> "As discussed below, as part of its program to achieve Goal 5, the county has adopted a standard of no more than one dwelling per 40-acres to protect Peripheral Big Game Range (Residential Density Standard). That standard is found in the Flora & Fauna March 1992 Lane County Comprehensive Plan Working Paper Revisions document (Flora and Fauna Working Paper), [ ]. The Flora and Fauna Working Paper indicates that the initial intent was to preserve the 40-acre standard through *zoning*. However, the county's inclusion of the subject property in the Peripheral Big Game Range inventory is geographical and is not tied to or dependent on the current F-2 zoning. The challenged decision does not purport to remove the subject property from the Peripheral Big Game Range inventory and associated habitat protections, including the limitation of one dwelling per 40 acres.
>
> * * *
>
> The Flora and Fauna Working Paper the county incorporated into its findings explains that the Big Game Range protection:
>
> > 'premise is to work overall density figures into minimum lot size recommendations for regions of the County, rather than postponing the issue by referrals to ODFW for every land division application. The anticipated result is to base zoning by region on the overall residential densities or ODFW minimum parcel size recommendations, thereby creating no conflict with Goal 5.' [ ].
>
> The Flora and Fauna Working Paper states that the county will be divided into regions and the county will determine the number of existing residences and the:
>
> > 'additional number of residences allowable to still fall within the overall density level. Built upon and committed areas are subtracted out, as they are treated as Impacted Range. From the figure of remaining residences and acreage, a residential carrying capacity will be determined. This figure, or the ODFW figure of 40 [or 80] acres, whichever is lesser, will be recommended in the region for residential density for big game purposes.

* * * * *

If this figure is ever exceeded, it constitutes a conflict with Big Game Range. [ ].'

The Body of the Flora and Fauna Working Paper therefore states that the lesser of this figure or the county's 40-acre figure [or in this case the 80-acre figure because the property is designated Major Big Game] will be 'recommended in the region for residential density for big game purposes.' *Id.* If this figure is exceeded, there is a conflict and an ESEE analysis is required. *Id. Ultimately, however, the Flora and Fauna Working Paper identified as its selected strategy that 'ODFW recommendations on overall residential density with Peripheral and Major Big Game Range shall be a determinant in minimum parcel size for regions of the County.'* [].

In the challenged decision, the county did not identify the level of residential density allowed in the F-2 zone * * * *

We observe that the F-2 zone does not provide a general residential density standard. The use table for impacted forest zones lists six types of dwellings allowed in the F-2 zone. LC Table 16.211, 2.1-2.6. Those dwellings include: (1) caretaker residence for public parks and pubic fish hatcheries, (2) large tract forest dwelling, (3) lot of record dwelling, (4) template dwelling, (5) replacement dwelling, (6) temporary hardship dwelling. *Id.* A large tract forest dwelling may be allowed in the F-2 zone on a tract that is 'at least 160 contiguous acres or 200 acres in one ownership that are not contiguous but are in Lane County or adjacent counties and zoned for forest use.' LC 16.211(3)(a)(ii). The remaining five types of dwellings do not require a particular minimum lot or parcel size. LC 16.211(3). The minimum lot or parcel size for new or adjusted lots or parcels in the F-2 zone is 80 acres. LC 16.211(7); *see also* ORS 215.780 (providing generally applicable 80-acre minimum requirement); OAR 660-006-0026 (same). However, the F-2 zoning indicates that predominant land ownerships are 80 acres or less. *Accordingly, as we understand it, the county did not quantify a residential density allowed in the F-2 zone, and instead used the ODFW 40-acre standard for areas inventoried as Peripheral Big Game Range.*"

Cattoche, slip op *16-21 (emphasis added). Densities were not incorporated into the zoning – let alone the F-2 zoning, and regions were not identified. Instead, it was the 40- and 80-acre residential density standards for Peripheral and Major Big Game designations, respectively, that were adopted and this standard is the program to achieve Goal 5 when conflicts exist. Moreover, Policy 11 requires that an ESEE analysis occur if residential densities exceed the ODFW's recommendations, which is acknowledged in the Flora and Fauna Working Paper:

> "If uses are identified (which were not previously identified in the plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental, and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed."

R 552. Again, *Cattoche* was a plan amendment/zone change case, and there is no dispute that an ESEE analysis is required under those circumstances. The question presented here is whether OAR 660-006-0025(6) and OAR 660-006-0027(6)(a) and ORS 215.416(4)(a) require compliance with Flora and Fauna Policy 11 for a development application because the residential density on the property will far exceed ODFW's residential density recommendation for Major Big Game Range. Flora and Fauna Policy 11 plainly requires that such a conflict be resolved through an ESEE analysis: "Any density above that limit shall be considered to conflict

with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000."[1]

Here, the County approved an application for a dwelling on 10 acres, far below the minimum residential dwelling densit of 80 acres per dwelling in Major Big Game range. The application should have been denied in the absence of resolving the conflict through an ESEE analysis. *See* R 507 ("because minimum residential density is exceeded, pursuant to the plain terms of the comprehensive plan and the working paper, an ESEE analysis is necessary to resolve the conflict.").

Despite the Hearings Official's cautionary statement that "[i]t is important to distinguish between the planning work that Lane County did in preparation for acknowledgment of compliance and what was actually acknowledged by LCDC," R 9 (Appx 8), the Hearings Official failed to give effect to the policy itself, which was adopted, and, instead, gave more credence to the unsubstantiated "recollections" of former LMD staff and issues in the DLCD staff reports. The

[1] OAR 660-16-000 was the first Goal 5 rule. "The initial Goal 5 administrative rule was adopted in 1981, and was in effect when the county's RCP was acknowledged by LCDC in 1984. *See Delta Property Company LLC v. Lane County*, 69 Or LUBA 305, 309-17 (2014), *rev'd and rem'd in part, aff'd in part*, 271 Or App 612, 352 P3d 86 (2015) (discussing the evolution of the Goal 5 rule and the acknowledgment of the Lane County RCP at length)." *Save TV Butte*, slip op at 24-25.

Cattoche case understands that the County "used the ODFW 40-acre standard for areas inventoried as Peripheral Big Game Range."

In addition to Policy 11 and the ODFW recommendations, there are also, however, the siting standards that were carried forward as part of the acknowledgement process. ODFW objected to Lane County's comprehensive plan because "contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones *do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones*." R 209 (emphasis added). The DLCD Supplemental Staff Report (September 12, 1984) provides as follows:

> "2. Fish and Wildlife Habitats:
>
> d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy II. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas."

R 649. Assuming the above applies to Policy 11 (it appears as a Roman Numeral II in the staff report), it would apply to the last sentence of Policy 11, which expressly addresses "siting requirements": "The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, *siting requirements* and similar activities which are already a part of the County's

rural resources zoning program." Appx 14; R 506. In response to the staff report's recommendation,

> "Lane County [] added the following new language to both the F-2 and EFU Zones:
>
> > '(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of proposed residences consistent with the purposes [*sic*] the F-2 [EFU] Zone.
> >
> > (i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:
> >
> > (aa) Near residences on other tracts.
> >
> > (bb) With minimal intrusion into forest areas undeveloped by nonforest uses.
> >
> > (cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU.'
>
> Conclusion
>
> Requirement 2d has been met."

R 649-650. These siting standards apply regardless of whether the particular property proposed for a dwelling is less than or greater than 80 acres, but if the property proposed for a dwelling is less than the residential density, then the first two sentences of Policy 11 serve to carry out the program to achieve Goal 5 by

requiring an ESEE analysis. In other words, together, the adopted Policy 11 and the siting standards carry out the Goal 5 for big game range.

Further support is found in DLCD's resolution of the ODFW objection addressed above, where DLCD recites Policy 11 and finds that Policy 11 is consistent with Goal 5:

> "Objectors are not correct that this policy violates Goal 5. *Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis.* However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU Zones which ensure that ODFW's density standards will be achieved."

R 209. This unequivocally demonstrates that Policy 11 is implicated when the "[d]ensities above those recommended by ODFW" occur, which is not limited to land division applications. It plainly applies to those instances where a new dwelling would exceed those recommendations, and it is without question that a dwelling on a 10-acre unit of land exceeds those recommendations.

As noted above, the Hearings Official relied upon the recollections of Kent Howe and Jim Mann during their time at Lane County's Land Management Division. *See* R 763 and 764-765. LUBA has already disagreed with much of

what is contained in these Howe and Mann letters.[2] For example, the Howe letter alleges that "Policies9, 10, and 11 of the 1982 Flora and Fauna Working Paper do not designate any Big Game Habitat areas as significant '1C.'" R 763. In *Save TV Butte v. Lane County*, __ Or LUBA __ (LUBA No. 2017-031, January 8, 2018), LUBA determined that the inventoried big game habitat is a "significant or important" resource (i.e., 1C):

> "The county's Flora & Fauna Working Paper (1) identifies the Lane County Wildlife Inventory Maps that were developed based on ODFW big game range maps, (2) identifies the location, quality and quantity of the big game range, (3) identifies conflicts with big game range and (4) explains how those conflicts are to be mitigated by existing zoning. Supp. Rec. 4785-89. Based on what the county did in the Flora & Fauna Working Paper, it is most accurate to say the county adopted a 1C inventory decision, *i.e.*, that the inventoried big game habitat is 'significant or important.' While one can question whether the Flora & Fauna Working Paper complies fully with the Goal 5 rule, it is quite clear the county did not adopt a 1A decision, and despite the planner's suggestions to the contrary, it did not a 1B decision either, because it adopted in the Flora & Fauna Working Paper, which explains the count will go about implementing ODFW's density recommendations in big game ranges. We agree with petitioners that the county erroneously determined that its adopted inventory of big game habitat is not 'an acknowledged list of significant resources ...."

Slip at 26-27. Given the inaccuracies, these letters should be treated with skepticism. Moreover, the letters speak to the backroom deals at the "11th hour of the public hearings process" (R 764), but these "11th hour" allegations are not

[2] These former planners routinely submit letters on behalf of development applications, and it is unclear whether they have been compensated for their testimony.

supported by any actual evidence in the record. More importantly, the letters fail to give effect to the plain, mandatory language of Policy 11's first two sentences. If the "11th hour" deals about 84% of the county that would be prohibited from development were correct, then one would expect them to be addressed or substantiated in the staff reports or working papers.

The crux of the issue is that policy 11 uses ODFW's recommendations to trigger an ESEE analysis. If ODFW's residential density recommendations are exceeded, then a Goal 5 ESEE analysis is required according to the express language of Policy 11. R 49. Indeed, there is no restriction on the County's policy to use the framework provided by the ESEE analysis to carry out the intent of Policy 11. Therefore, the Hearings Official's decision is contrary to the express language and intent of the Lane County Comprehensive Plan.

B. SECOND ASSIGNMENT OF ERROR – The Hearings Official misconstrued applicable law when the Hearings Official unlawfully deferred findings of compliance and discretionary decision-making to a county official without allowing the opponents an opportunity to comment, participate, and appeal the decision.

1. Preservation of assignment of error

This issue was preserved below at R 12 (Appx 11) (Hearings Official addressing *Rhyne* v. Multnomah County, 23 Or LUBA 442, 447 (1992); R 261 ("Mr. Malone has objected in other correspondence to the use of the K & A Engineering report stating somehow we are deferring 'discretionary decision-

POLICY DISCUSSION

Several existing policies relate to flora and fauna. These are:

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize and support existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Provide special consideration to protection of sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies shall be encouraged to work with landowners to conserve wildlife habitats.

5. Lane County shall be encouraged to investigate and utilize fee acquistions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to implement these policies.

While these policies are adequate as far as they go, there are other areas discussed in this Working Paper for which policies have not been developed. The general areas with policy gaps will be mentioned and examples of possible policies given.

- Policy gap: Riparian and wetland vegetation. Examples of policies are:

    1. Riparian and wetland vegetation is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Maintenance of this vegetation shall be encouraged with setbacks from Class I streams and wetlands, and consideration of the areas in other land use activities such as Special Use Permits and Zone Changes.

    2. Drainage of wetland areas will not be promoted by Lane County. Any drainage project over which Lane County has permit authority shall be approved only after analysis of the ESEE consequences of such an action.

- Policy gap: Sensitive Fish and Waterfowl areas. An example of a policy is:

    1. Sensitive Fish and Waterfowl areas are recognized as the most valuable habitat of their type in the County. Maintenance of riparian vegetation shall be a prime consideration in zoning districts in these areas.

- Policy gap: Big Game Ranges. Some policy examples are:

    1. Residential building permits issued within Major or Peripheral Big Game Range shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

    2. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range.

3. ODFW recommendations on overall residential density with Peripheral and Major Big Game Range shall be a determinant in minimum parcel size for regions of the County.

- Policy gap: Conflicts not anticipated or identified in the plan. Example of policy:

1. If uses are identified (which were not previously identified in the plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-00 will be followed.

Lane County Hearings Official
c/o Lane County Planning Department
Land Management Division
3050 North Delta Highway
Eugene OR 97408
(541) 682-4065

Re: LandWatch Lane County Open Record Letter re request for two forest template dwelling, reconsideration, 509-PA20-05066 and -05064 (King).

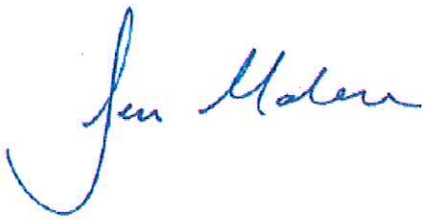
LandWatch submits this open record testimony in support of its appeals. LandWatch respectfully requests that the Hearings Official reverse the planning director's decision approving the two requests.

At its simplest, the applicant must prepare an ESEE analysis because the proposed template dwellings will not satisfy the ODFW standard of one dwelling per 80 acres within the major big game range. The applicant attempts to circumvent this basic conclusion by arguing that "the acreage of the subject property is irrelevant to this analysis." Such a statement completely misreads the *Nimpkish* decision. In fact, the problem arose in *Nimpkish* because the size of the property was too small to satisfy the ODFW recommendation. As noted in the decision, the issue was focused on the acreage of the subject property:

> "During the proceedings below, petitioner and intervenor-petitioner (together, petitioners) argued that RCP Goal 5, Flora and Fauna Policy 11, applied to the application and that, because *the density of the subject property with a forest template dwelling would be one dwelling unit per 10 acres, which would exceed the ODFW recommendations on overall density for protection of Major Big Game*

> *Range*, the application could not be approved absent 'resolution in accordance with OAR 660-16-000.'"

Slip op at 5 (emphasis added). Under the applicant's theory, ODFW's recommendation of one dwelling per 80 acres in major big game range would not be implicated until many, many years into the future, assuming template dwellings continue to be approved. It makes no sense to enact a standard that will never be implicated. In support of the applicant's argument, the applicant seizes upon the word "overall," but LUBA, however, understood that what was anticipated by the county and the term "overall" never actually occurred:



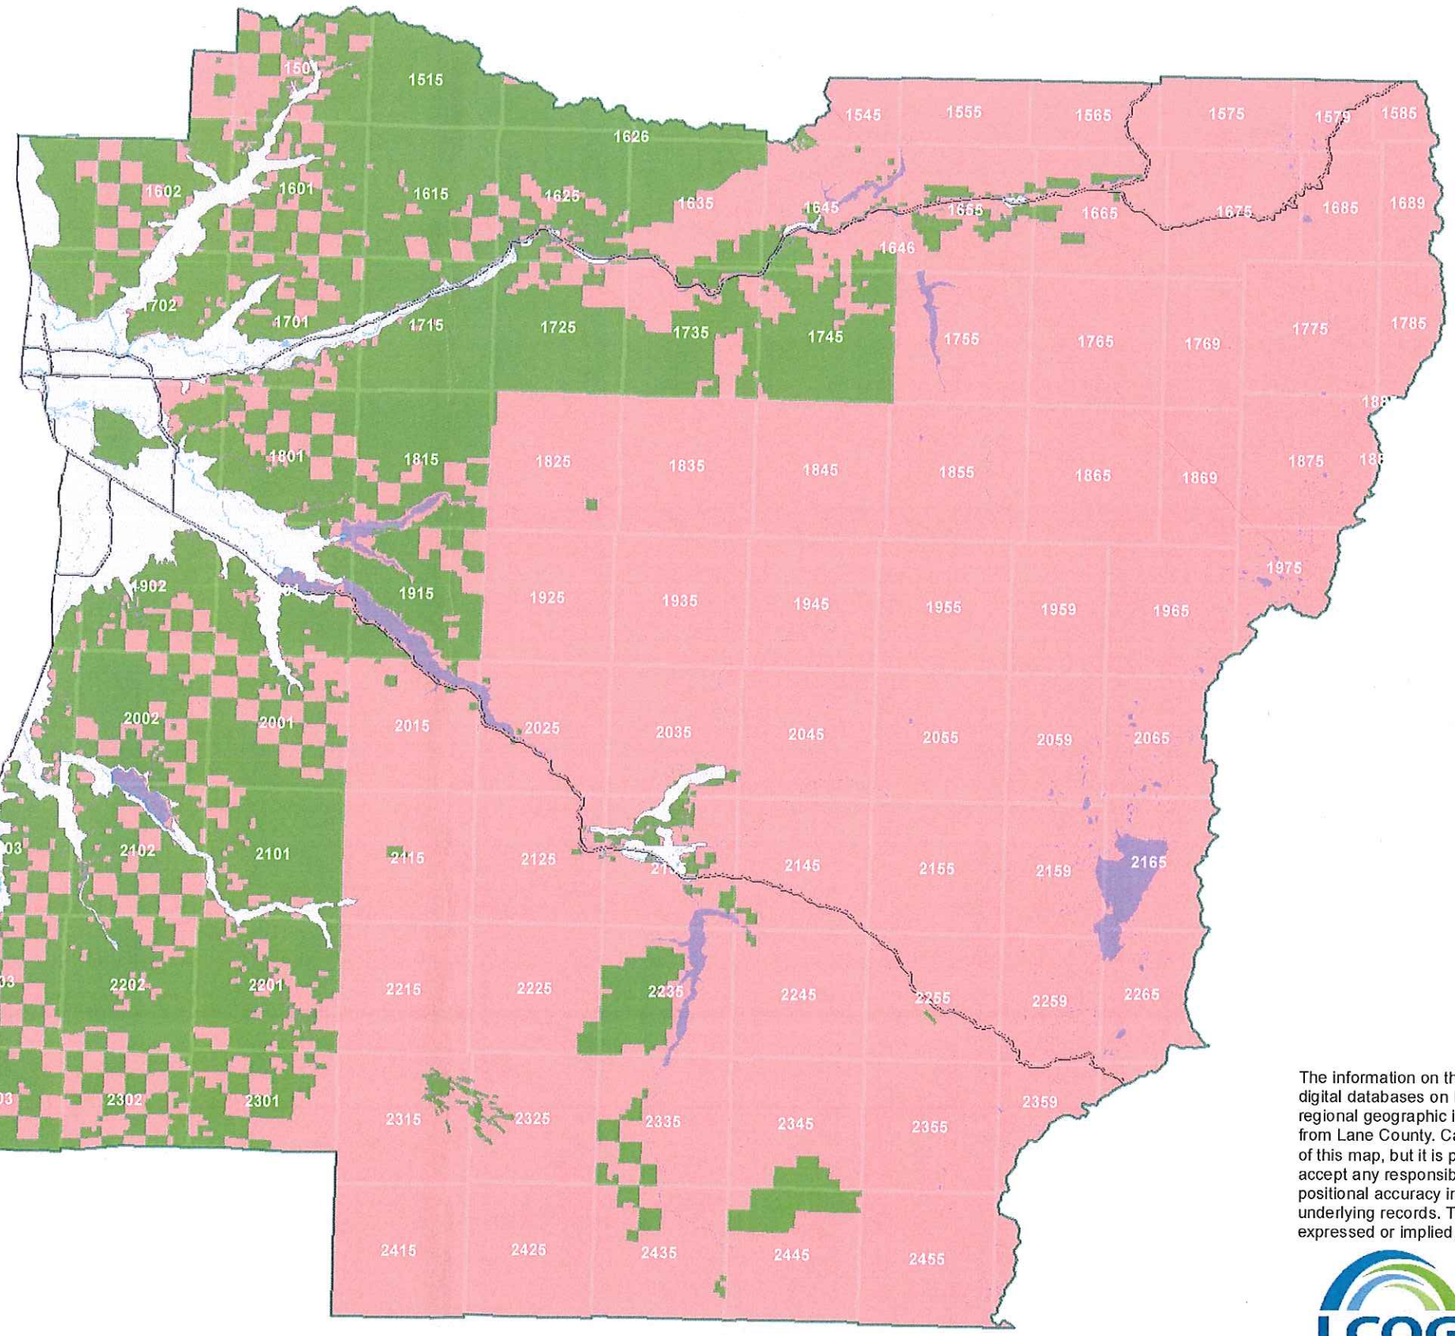
> "The first sentence of RCP Goal 5, Flora and Fauna Policy 11, refers to the process that the county was supposed to follow, which included taking actions to identify '10-20 regions' and to 'base zoning by region on the overall residential densities or ODFW minimum parcel size recommendations.' [ ]. All parties agree that, during the 36 years since its Goal 5 program was acknowledged, the county has never taken the steps described in the first sentence [of policy 11] and has never created any 'regions' or 'base[d] zoning by region on the overall residential densities or ODFW minimum parcel size recommendations.'"

Slip op at 12. The applicant is simply incorrect to rely on the word "overall" as the crux of its argument. The word "overall" was part of a process that never actually occurred.

The second sentence of policy 11, however, "remains operative, and it provides that '[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. [*i.e.*, the old provision for requiring an ESEE analysis]." Slip op at 13. If there were any remaining question as to what scale applies, the following statement from LUBA resolves those uncertainties: "There is no dispute that *the density of the subject property with the proposed dwelling* would exceed one dwelling unit per 80 acres. Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with [an ESEE analysis].'" Slip op at 15-16 (emphasis added). This final statement on the matter unequivocally demonstrates that the applicable scale is the *subject property*, not the entirety of the county's big game range, and, therefore, an ESEE analysis is necessary to resolve the conflict imposed by the failure to satisfy the ODFW-recommended density.

Even if the applicant's argument were correct, which it is not, the applicant's LCOG map skews the analysis. Attached is a map prepared by LCOG at the request of LandWatch showing appropriate exclusions from any such analysis, including Federal lands, Major Big Game Habitat not including Federal lands, and water features.

Sincerely,



Sean T. Malone

Re: Proposed Minor Plan Amendment and Zone Change, File No. 509-PA15-05722

Commissioners,

Please except my comments regarding the Gimple Hill Properties LLC proposed Plan Amendment to the County's Rural Comprehensive Plan, File No. 509-PA-15-05722.

The property proposed for rezoning occurs in Peripheral Big Game Range, meaning big game populations are substantial but existing development limits big game use and also limits big game management options when compared with Major Big Game Range. Within Peripheral Big Game Range, the Oregon Department of Fish and Wildlife (ODFW) recommends residential development densities not to exceed one dwelling per 40 acres.

In Exhibit O, the Goal Five Economic, Social, Environmental and Energy Analysis (ESEE), at 13, the applicant references a conversation with me regarding the lack of elk on the property as confirmation that the habitat on this property is not critically important to big game. For context, it is true that I am not aware of Roosevelt elk residing in the immediate vicinity of the applicant property. There is a herd of elk that can frequently be found a few miles west of the property. It is also true that viewed independently, it is uncommon that a single development action would have a critical impact on big game. However, development has a cumulative effect on wildlife habitat and associated wildlife populations as well as many other natural resource and social issues important to Oregonians and the residents of Lane County. It was the need to plan and account for these cumulative impacts that resulted in the development of the Lane County Rural Comprehensive Plan (RCP) and it is in the context of cumulative effects that impacts of proposed amendments should be considered.

In Exhibit O, the applicant minimizes the importance of habitat for the maintenance of healthy big game populations and points to the big game population increases over the last century, a period that also experienced dramatic increases in human populations, as proof that development is not necessarily detrimental to big game. *Id.* at 7. It is true that in the late 1800's many population of big game and other wildlife were severely depleted due to the lack of protections and the occurrence of market hunting. Modern wildlife management has been successful at restoring many of these big game populations with habitat protection through land use planning playing a positive role in the restoration.

The applicant references the declining black-tailed deer population, stating the decline is "likely the result of changing forest management practices, disease, and increased predation rather than as a result of development of the type proposed in this application." *Id.* at 8. This statement is very similar to a statement in the *Oregon Black-tailed Deer Management Plan*, at 2, (ODFW, November 12, 2008), where ODFW states the reduction in the black-tailed deer population "is likely related to the quality and quantity of habitat, increased incidences of disease, and higher rates of predation." The applicant appears to minimize the role the reduction of habitat quantity can have on big game populations.

In Exhibit O, ESEE, at 9, the applicant analyzed the economic losses that could occur due to conflict with big game if this application is approved. The only economic loss recognized by the applicant is the potential for browsing damage to domestic gardens by deer. The applicant did not recognize the potential for loss due to black bear and/or cougar predation of domestic animals if the additional residents raise domestic animals and livestock as part of their rural lifestyle. *Id.* at 11. Although I have not visited the applicant property, I am familiar with the area and would expect black bear and cougar to be part time residents on the property. Development of the property would not necessarily exclude these species from the property but may affect the frequency of their visits to the property. An increase in human residences and associated domestic animals would likely increase the opportunities for depredation or other conflicts to occur.

In Exhibit O, ESEE, at 10, the applicant analyzed the existing dwelling density in the area surrounding the applicant property and found the density to vary from 12.4 to 13.3 acres per dwelling depending on the analysis parameters and argues that approval of the proposal would have minimal impact on dwelling densities. It appears the applicant chose analysis parameters that would minimize the apparent impact of the proposal on existing dwelling densities in the area. One variation of the existing dwelling density analysis included residences occurring outside the analysis area if portion of the lot fell within the analysis area which inaccurately inflated the number of residences considered for the analysis. All but one variation failed to include the applicant property in the analysis. The applicant stated the impact of changing each of these parameters individually but not cumulatively. That shape of the analysis area also appears to affect the analysis. As a result of analyzing a square shaped area, the northeast portion of the two square mile analysis included some residences in the Eugene Urban Growth Boundary and the northeast portion of the three square mile analysis included residences inside the Eugene City Limits. I do not believe it is appropriate to include residences occurring in inside city limits, urban growth boundaries, or Impacted Big Game Range when assessing the impact of this proposal on dwelling densities in Peripheral Big Game Range. I think an appropriate dwelling density analysis for this proposal would include all acres and residences that occur within a set distance of the applicant property (i.e. one mile radius), include the applicant property, and exclude any land and associated residences that are not in Peripheral Big Game Range. If conducted in this manner, I would expect the analysis to show approval of this property to have a greater impact on dwelling densities than reported in the ESEE, however the existing dwelling density would likely be higher than the ODFW recommendation of one dwelling per 40 acres. Even so, ODFW continues to recommend that development in Peripheral Big Game Habitat should be limited to one dwelling per 40 acres.

Respectfully,

Brian Wolfer
District Wildlife Biologist

SUPPLEMENTAL STAFF MEMORANDUM

To: **Anne Davies, Lane County Hearings Official**

From: **Shawna Adams, Senior Planner**

Date: **March 18, 2021**

Re: **Appeals of Application File No. 509-PA20-05064 & 509-PA20-05066**

At the March 4, 2021 hearing for the above referenced appeals, the applicant's agent provided testimony asserting that the subject applications comply with the one dwelling per 80-acre ODFW residential density recommendations required by RCP Goal 5, Flora & Fauna Policy 11. In support of this argument, the applicant's hearing exhibit presents an analysis of existing residential density based on assigned addresses throughout the entire Lane County Major Big Game area, as well as the portions of that area lying east and west of 1-5. The applicant emphasizes that the RCP Policy requires compliance with ODFW's 'overall' residential density recommendations, and contends that this necessarily demands a density calculation based on a countywide Big Game Range area denominator versus a denominator based on a smaller area, specifically including a denominator based on lot size.

Staff do not concur with the applicant's interpretation of RCP Goal 5, Flora & Fauna Policy 11 nor with the assertion that the subject template dwelling proposals comply with the ODFW residential density recommendations as required by the Policy. The applicant's assertions appear to overlook the fact that the RCP Policy language employs 'overall' as a qualifier for ODFW density recommendations for regions that have not yet been identified by Lane County and ODFW. In any case, calculating residential density based on a lot size denominator would not be inconsistent with the requirement to comply with ODFW 'overall' residential density requirements, as the applicant appears to suggest. As one example, the term 'overall' helps to clarify that a dwelling on an 80-acre parcel would meet the density requirement when clustered closely with other dwellings on other 80-acre parcels such that an 80-acre area centered on the dwellings would not otherwise meet the standard.

In staff's view, and in the absence of larger regions identified by Lane County and ODFW, a lot size denominator is the most reasonable measure of compliance with the ODFW residential density recommendation and RCP Goal 5 Flora & Fauna Policy 11, with consideration of the text and context of RCP Goal 5, Flora & Fauna Policy 11 and LUBA's *Nimpkish* decision. In *Nimpkish*, LUBA addressed the petitioners' argument that the subject 10-acre parcel resulted in a one dwelling unit per 10 acre residential density (pgs. 5-6) to be in conflict with ODFW recommendations on overall density for protection of Major Big Game Range. LUBA sustained the petitioners' assertion, finding that RCP Goal 5, Flora & Fauna Policy 11 applied directly to template dwelling applications as part of the County's acknowledged program to achieve Goal 5 compliance and that the proposed template dwelling was in conflict with the ODFW density recommendation (pg. 15). Per LUBA, there was "no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres".

The RCP, Flora & Fauna working papers, and DLCD review letters provided in **Exhibit A-E** contain multiple references to the prescribed ODFW residential density recommendations in relation to minimum lot sizes. The other denominators staff find to be indicated are the regions that have yet to be identified by the County in consultation with ODFW. The applicant's hearing exhibit cites Flora and Fauna Working Paper

language in support of the position that ODFW density recommendations should be calculated based on a countywide Big Game Range Area denominator. However, the applicant leaves out the context of the referenced citation, which directly support a density calculation based on a lot size denominator[i]. As noted, residential use at certain densities is the primary conflict to Big Game and the prescribed procedures for implementation of the ODFW density recommendations is to *"work the overall density figures into the minimum lot size recommendations for regions of the County...The anticipated result is to base zoning on the overall residential densities or ODFW minimum parcel size recommendations, thereby creating no conflict with Goal 5."*

Irrespective of the merits of calculating ODFW residential density recommendations based on lot size and any unresolved questions that may remain concerning methodology, staff do not find that calculating residential density based on the total countywide Big Game Range area to be a reasonable interpretation of RCP Goal 5 Flora & Fauna Policy 11, with consideration of the text and context. The total countywide Major Big Game Range and residential density that existed at the time was known when the Policy developed and adopted (**Exhibit C**, pg. 25). Applying the ODFW 80-acre density standard to the total 2,571,426-acre countywide Big Game Range area, or even the portion of that area lying east and west of 1-5, obviates the policy and undermines its purpose as part of the County's acknowledged program for Goal 5 compliance to avoid conflicts with Big Game as a result of residential use at certain densities. DLCD's analysis of compliance and RCP and working paper text recognizes that the absence of an 80-acre lot area zoning development standard allows for conflicts that could only be resolved by applying the entire Goal 5 ESEE process via a plan amendment.[ii] As the ODFW overall density recommendation is interpreted by the applicant, there could be no such conflict to be resolved via the prescribed ESEE process unless and until 29,006 more dwellings are added to the County's Big Game Range area- nearly 10 times the number of 3,137 dwelling that currently exist. In the unlikely event that density threshold would ever be reached, the regulatory effect would change from nonexistent to exceedingly harsh, with little bearing on the intended Goal 5 big game protections. This conclusion is in keeping with LUBA's ruling that such a large area was not a reasonable or correct denominator for determining compliance with ODFW density standards under other circumstances in *Wetherell v. Douglas County*, 44 Or LUBA 745 (2003).

Staff would note that the context provided in the DLCD review letters prior to acknowledgment (**Exhibits C-D**) gives rise to the question as to whether ODFW density recommendations for Big Game Range areas might also be met with a smaller minimum 40 acre parcel size, versus a minimum 80-acre parcel size with adoption of siting standards.[iii] While this question warrants further analysis, it is irrelevant for the subject template dwelling applications proposed on contiguous parcels that total less than 40 acres combined.

For the reasons explained above, staff confirms its recommendation that the Hearings Official sustain the appellant's assertion of error and reverse the Planning Director approvals of the subject applications.

EXHIBITS ADDED TO PHYSICAL FILE RECORD:

A. RCP Flora & Fauna Working Paper, March 1982
B. RCP Addendum to Flora & Fauna Working Paper, November 1983

EXHIBITS ATTACHED:

C. July 1984, DLCD staff report
D. August 17, 1984 DLCD memorandum with amendments to July 19, 1984 Staff Report
E. September 12, 1984 DLCD Supplemental Report (excerpts)

[i] Excerpt from Flora & Fauna Working Paper , pg. 24
"The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 areas [sic]; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict:***

.

The following paragraphs basically outline procedures to be used for implementation of the ODFW density recommendations in big game ranges. The premise is to work overall density figures into minimum lot size recommendations for regions of the County, rather than postponing the issue for referrals to ODFW for every land division application. The anticipated result is to base zoning by region on the overall residential densities or ODFW minimum parcel size recommendations, thereby creating no conflict with Goal 5."

ii DLCD Response to Objections, July 19, 1984 DLCD memo pg. 39
"2. Objectors are not correct that [RCP Goal 5, Flora and Fauna Policy 11,] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU zones which ensure that ODFW's density standards will be achieved.

The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or present conflicts between dwellings and big game habitat. However, as discussed below, the County has not adopted such standards in its zoning ordinance.

3. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 zone, since in general, dwellings are not permitted in that zone."

iii Excerpt from July 19, 1984 DLCD Staff Report, pg. 33:
"The F-2 (Impacted Forest Lands) Zone (Lane Code, Section 16.211) requires a minimum of 20 acres for creation of a woodlot or farm parcel for growing grapes, berries, or horticultural specialties, and 40 acres for creation of a farm parcel. However, there is no requirement that, in the big Game Range portions of that zone, densities will not exceed those recommended by ODFW (i.e., one unit per 40 acres in the Peripheral Range, or one unit per 20 acres with clustering and siting standards; one unit per 80 acres in the Major Range, or one unit per 40 acres with clustering and siting standards)"

EXHIBIT C.1

VICTOR ATIYEH
GOVERNOR

Department of Land Conservation and Development

1175 COURT STREET N.E., SALEM, OREGON 97310-0590 PHONE (503) 378-4926

July 19, 1984

The Honorable Peter DeFazio
Chairman, Board of Commissioners
Lane County Courthouse
125 East Eighth
Eugene, OR 97401

Dear Chairman DeFazio:

Enclosed is the Department's report on the Lane County and the Eugene/Springfield Metro area request for Acknowledgment of Compliance with Statewide Planning Goals 5 and 15. The Department's recommendation to the Commission is that your request be continued to the August 16-17, 1984 meeting to complete necessary revisions to your plan and land use regulations for Goals 5 and 15.

The Commission will consider your acknowledgment request on August 16 or 17, 1984, at the State Capitol. You and other officials and citizens are welcome to attend this meeting and participate in the Commission's review of your acknowledgment request. You have 10 calendar days from the date the attached report was mailed to file written exceptions to the report with the Commission at the Salem office (OAR 660-03-025(2)). We would urge you to send copies of any exceptions to commentors or objectors affected by exceptions.

Please contact your Field Representatives, Bob Rindy at 378-4095 or Glen Hale at 265-8869, if you have any questions and for the time when your item will appear on the agenda.

Sincerely,

James F. Ross
Director

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE

Lane County
and
Rural Portion of Eugene/Springfield Metro Plan
Goal 2--Nonresource Lands, Goal 5, Goal 15

Response from Denial Order of November 6, 1981
and from Continuance Order of November 6, 1981

DATE RECEIVED:
March 15, 1984

DATE OF COMMISSION ACTION:
August 17, 1984

REQUEST

The County has requested that its comprehensive plan and implementing measures be acknowledged as in compliance with the Statewide Planning Goals for areas outside adopted urban growth boundaries. Also, the County and the Cities of Eugene and Springfield request acknowledgment of compliance for the rural portions of the Eugene/Springfield Area General Plan.

SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission continue Lane County's request to allow amendments to the plan to comply with Statewide Planning Goals 2, 5, and 15. The Commission should hear testimony on these issues July 19, 1984, but not take final action until the August hearing.

Recommends the Commission continue the request to allow amendments to the Eugene/Springfield Metro Area General Plan under Goals 2, 5, and 15. The Commission should not take final action on this until the August Commission hearing.

FIELD REPRESENTATIVES: Bob Rindy/Glen Hale (Coastal)

LEAD REVIEWERS: Mike Rupp (Goals 2--Nonresource Lands
Claire Puchy (Goals 5 and 15)
Phone: 378-4926

COORDINATOR: Gary Darnielle
Phone: 687-4283

Date of Report: July 19, 1984

GOAL 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

This Goal 5 report is divided into two major parts. The first part is the review for all areas of Lane County outside the Metro Plan Boundary. The second part is for those areas inside the Metro Plan Boundary, but outside the Metro Area UGB.

PART I--AREAS OUTSIDE THE METRO PLAN BOUNDARY

Introduction

All Goal 5 resource categories are applicable to Lane County, and are addressed in separate subsections of this report.

According to Section 660-16-025 of the Goal 5 Administrative Rule (OAR 660-6-000 through 660-16-025), the Goal 5 Rule requirements apply to jurisdictions under denial orders as of the date the adoption of the Rule (June 1981). Lane County was issued a denial order in March of 1981. Therefore, the Goal 5 Rule has been used during this review for purposes of judging compliance.

In the following discussion, the numbers and letters in parentheses refer to sections of the Goal 5 Administrative Rule (e.g., (1A), (1B), (1C), (2A), (3A), (3B), (3C)). It should be noted, however, that these are the citations used by the Commission in its June 1981 adoption of the Rule. Since that time, the Secretary of State's office has recodified the Rule and has assigned different numbers and letters to its various subsections. The references in this report are to the Commission's 1981 version, since it is the one with which most readers are familiar. A copy of this Rule is attached to this report for reference.

Goals 16 and 17 establish more specific inventory and protection requirements for some Goal 5 resources that are located in estuarine or coastal shorelands areas.

Lane County's plan and implementing measures were acknowledged as being in compliance with the Coastal Goals in July, 1983. Therefore, this Goal 5 review does not address the following Goal 5 resources in those areas:

	Addressed Under	
Goal 5 Resource	Goal 16	Goal 17
Open Space	X	
Mineral and Aggregate Resources		
Energy Sources		

Fish and Wildlife	X	X (only "riparian," "major marshes and significant wildlife habitats")
Ecologically Significant Natural Areas	X	X
Scientifically Significant Natural Areas	X	
Outstanding Scenic Views and Sites		X (where the quality is primarily derived from or related to the association with coastal water areas)
Watersheds		
Groundwater Resources		
Wetlands	X	X (only "major marshes," "significant wildlife habitat," and wetlands with "exceptional aesthetic quality")
Historic/Archaeological Sites		X
Wilderness	X	X
Oregon Recreation Trails		
Wild and Scenic Rivers and Waterways		

Land Needed or Desirable for Open Space

Inventory

Lane County's Recreational Resources Working Paper contains a section addressing open space (pp. 4-5). The County discusses the various kinds of open space, and the benefits of preserving open space. The County indicates that it considers "all lands designated for agricultural or forest use, or for other clearly similar resource-production use" to be open space (p. 5). Additionally, the County concedes that recreational

areas, including parks, and significant or scientific natural areas also contain open space qualities. Because of "its broad nature, open space is not mapped as a site-specific, separate resource item. Instead...other designations with open space qualities are mapped..." (p. 5). Please refer to the Goal 3, 4, 9, 15 and other Goal 5 portions of this report for more detailed information about Lane County's inventories of lands possessing open space values. See also the July 1983 staff report adopted by the Commission for a discussion of compliance with inventory requirements of Goals 16-18.

Policies

Lane County has adopted one policy which addresses open space resources, per se (Open Space and Scenic Areas Policy 1, Plan, p. 16):

> Lane County has determined that all resource lands in the County are also open space lands. Resource related activities shall predominate on these lands. Where proposals are developed land uses are made consistent with the Comprehensive Plan and Statewide Goals, development standards shall be applied which minimize loss of open space.

In addition, the County has adopted numerous policies regarding agricultural and forest lands, a variety of Goal 5 resources which possess open space values, the Willamette Greenway recreation areas, and coastal resources. Please refer to the Goal 3, 4, 8, 15 and remaining Goal 5 sections of this report for details. See also the July, 1983 Commission action for a discussion of policies addressing Goals 16-18.

Implementing Measures

As noted in the Goal 3 and 4 sections of this report, Lane County has several resource zones which it has applied throughout the County. It has also adopted and applied a Greenway Permit ordinance to lands within the Willamette Greenway (see the Goal 15 section of this report for details). However, these Goals have not yet been fully satisfied, nor have some Goal 2 exceptions been justified. Several coastal zones have been developed and applied in coastal shorelands, estuarine, and beaches and dunes areas (see the July, 1983 staff report adopted by the Commission regarding compliance with Goals 16-18).

Finally, as noted in the remaining subsections of the Goal 5 section of this report, the County has adopted several implementing measures for the protection and/or resolution of conflicts with Goal 5 resource sites containing open space values.

In particular, the County has adopted a Natural Resource Zone (NR-RCP) (Lane Code, Section 16.213), which is intended to protect areas having unique and irreplaceable natural resources which are vital elements for a safe, healthful and pleasant environment for human life. The Natural Resource Zone states that it may be applied to public and private lands where the Rural Comprehensive Plan requires natural resource site

protection, but that the zone is not intended to be applied to other types of resource land, such as agricultural land and forest land. This is not to say, however, that the Natural Resource Zone cannot be applied to agricultural and forest lands. If a Goal 5 resource site is located on agricultural or forest land, Natural Resource zoning will be applied after an analysis of the ESEE consequences of conflicting uses has been completed demonstrating the appropriateness of Natural Resource zoning (confirmed by Jim Mann, Senior Planner, personal communication, June 20, 1984).

Emphasis of the Natural Resource Zone will be placed on limiting and regulating human activity in areas where:

(a) The acceptable water quality of streams, lakes, estuaries of the ocean may be endangered;
(b) Watersheds and their streams or lakes are used for domestic water supplies;
(c) Vegetative cover is essential to maintain soil stability and prevent erosion;
(d) Natural conditions are vital for either unique vegetative ecosystems, aquatic or wildlife habitat; and
(e) Scenic quality or vistas or open space is unique and/or irreplaceable.

In the NR Zone, the following uses are allowed outright (Section 16.213(2):

(a) The following recreational facilities and uses owned by a governmental agency of a nonprofit community organization limited to day use.

(i) Exhibitions of the natural conditions of shorelands, dunelands, forested areas, streams and lakes, marshlands, or similar areas of unique and irreplaceable value, and the vegetation and wildlife supported by such lands and waters provided that in no event shall such activity destroy, or endanger the relationships between the natural conditions being exhibited.

(ii) Picnicking areas, day parks and playgrounds.

(iii) Accessory facilities for outdoor recreation activity such as fishing, clam digging and hunting (provided such activity is conducted only in those areas allowed pursuant to Federal, State and Local fish and game regulations) and hiking and horseback riding.

(b) Fish and wildlife habitat management and the propagation of fish and wildlife.

Single family dwellings or mobile homes for residential purposes for a watchman, caretaker or operator in conjunction with a permitted use, in the NR Zone above, are considered "Special Uses" subject to approval by the Planning Director (Section 16.213(3)). The following "Special Uses" are subject to approval by a Hearings Officer (Section 16.213(4)):

(a) Piers and boat houses.
(b) Single-family dwelling or mobile home and accessory structures.
(c) Farm uses as defined by ORS 215.203(2), and any accessory uses.
(d) Forest uses and any accessory uses.

Uses in Section 16.213(4) above are subject to compliance with the following conditional use criteria (Section 16.213(5)):

(a) (i) Evidence is provided supporting reasons why the proposed use should be sited in a natural resource area.
(ii) That the proposed site is on land generally unsuitable for natural resource uses.
(b) That the proposed use will not significantly impact natural resource uses on adjacent and nearby natural resource lands, and will not significantly impact natural resources on the site of the proposed uses;
(c) That the proposed use will not significantly increase the costs of natural resource management on adjacent and nearby resource lands;
(d) That the site is limited in size to that area suitable and appropriate only for the needs of the proposed use;
(e) That, where necessary, measures are taken to minimize potential negative impacts on adjacent and nearby NR zoned lands, and these measures may be established as conditions of approval; and
(f) That the proposed use is consistent with the policies contained in the Rural Comprehensive Plan and the purpose of the NR zone.

Property development standards for all uses allowed in the NR Zone are set forth in Section 16.213(6) and include setbacks from front, side and rear yards.

Specific application of the Natural Resource Zone is discussed in the other Goal 5 sections of this report. A review of the County's zoning maps indicates that the NR Zone has been applied to a number of Goal 5 areas in the County.

Section 16.215 of the Zone Code is the County's Park and Recreation (PR-RCP) zone which has been applied to a number of sites in the County. The zone permits a number of recreational uses outright and conditionally. However, as noted in the Goal 2 Section of this report, the PR Zone allows a number of uses which could conflict with the purpose of the zone. Some of these uses could also conflict with a number of

Goal 5 resources including open space. This issue is dealt with in the Goal 2 portion of this report.

Conclusion--Open Space

Lane County has not inventoried any specific open space areas, per se. However, it considers farm and forest lands, recreation areas as well as natural areas to possess open space values. These have been inventoried as part of other Goal requirements. The County has a policy recognizing all resource lands as open space lands and indicating that resource-related activities shall predominate in these areas. Open space loss will be minimized where development is proposed, according to the County's policy. Resource zoning has been applied to most of the County, along with special zoning districts which help protect open space (e.g., Willamette Greenway, Natural Resource Zones).

Mineral and Aggregate Resources

Inventory

Lane County's inventory of mineral and aggregate resources is contained in its Mineral and Aggregate Working Paper.

Mineral Resources: The Working Paper addresses the following minerals: clay, copper, lead, gold, zinc, silver, mercury, antimony, arsenic, tourmaline, molybdenum, and pumice (pp. 3-5). The general locations of these mineral deposits are shown on a map (Appendix A), and are concentrated in four main areas: Hobart Butte, Bohemia, Fall Creek, and Blue River. The locations of these four areas are shown on the map as well. Information about the general quality, and quantity of these resources is provided. The County has not provided information on the location, quality, and quantity of specific sites, however.

Aggregate Resources: Lane County inventoried its aggregate supplies by examining permit lists from the Department of Geology and Mineral Industries and the Division of State Lands, by conducting telephone searches, taking on-site tours of aggregate-producing areas; and by talking with industry representatives (p. 6). The locations of 30 identified sites appear on a map in Appendix C and are listed by legal descriptions and tax lot numbers in Appendix D. A more extensive list of all tax parcels having any record of previous aggregate extraction is included in Appendices E and F. Appendix D is considered the County's (1C) inventory for lands outside the Metro Planning Area. Appendix E is the (1B) inventory for lands inside the Metro Area. Appendix F is the (1B) inventory for lands outside the Metro Area (confirmed by Mike Copely, Lane County Planner, personal communication, July 16, 1984).

Information on quantity of (1C) sites is presented in cubic yards, but the County cautions that the accuracy of this information is limited. In many cases, individual suppliers had only a cursory knowledge of the extent of their resources (p. 7). Quality of the supplies was not evaluated, due to time and budget constraints as well as the variability of resource materials.

Supply estimates were compiled by region (there are four regions in the County) and then coupled with demand estimates for each region in order to assess localized needs and supply/demand situations (p. 7). Demand forecasts were based on population projections and a per capita consumption figure of 22 tons annually (p. 7). Based on these estimates, cumulative demands for each region were projected. This analysis shows that existing supplies will be sufficient to satisfy demand to the year 2000. This will be particularly true if actual population growth rates are on the low side of the estimates. The available supply for the non-metropolitan area of the County is about three times the figure for projected consumption even when assuming the high population projections (p. 8). However, in terms of the supply/demand situation for each region, the margin of supply over demand for the southern section is relatively small. This is true also (but less so) for the western region. Also, the Metro Area will use some of the County supplies. Similarly, 5 to 10 percent of the U.S. Forest Service and BLM needs are supplied by the private market (p. 9).

Conflicting Uses/ESEE Consequences Analyses

Mineral Resources: Lane County reports that most of the mineral areas are on public lands (either the BLM or U.S. Forest Service). As such, federal laws govern prospecting, claims, and mining activities. Current forest resource designation and zoning for these areas "do not appear to preclude their development potential. Forest management and mining activities are considered to be compatible activites by most authorities" (p. 5).

Aggregate Resources: Each of the 30 inventoried sites was evaluated in terms of the following potential conflicts:

1. Areas of significant natural value contained in the Oregon Natural Heritage Program inventory;
2. Historical resources contained in the Working Paper on Historical Resources;
3. Willamette Greenway;
4. Park and recreation sites contained in the Lane County Parks and Open Space Master Plan;
5. Sensitive fish and waterfowl habitat identified in the Working Paper on Flora and Fauna; and
6. Existing or planned residential development.

Appendix J summarizes the results of the County's analysis. No conflicts were noted for any of the sites. Sites were not evaluated in terms of conflicts with agricultural or forest lands, since all of the sites are existing sites and therefore no longer available for these uses (p. 10).

Policies

A number of mineral and aggregate resources policies have been adopted (Plan, pp. 13-14). These include:

1. Known mineral resource sites within the County, which include those identified in Appendix "D" of the "Mineral and Aggregate Resources Working Paper," shall be conserved for both present and future uses through the application of Plan designations and compatible land use regulation measures. Such designation and regulation is to follow the requirements of the Goal 5 rule (OAR 660-16-000 through 660-16-025), which is addressed in Appendix "J" of the "Mineral and Aggregate Resources Working Paper."

2. Exploration for mineral resources (in contrast to actual mining) shall be a permitted activity in the rural portions of the County. Areas designated primarily for residential purposes are to be excluded from this policy as are areas that, having undergone analysis in accordance with OAR 660-16-000, are designated as having some unique natural, historical or cultural value. Exploratory drilling for gas, oil or other hydrocarbons is not within the scope of this policy.

3. Mining operations are regulated by state and federal government agencies. County regulations shall supplement these actions only as necessary to ensure compatibility in the area, or to protect other resources.

4. Conserve and manage land, soil and mineral resources by respecting their physical limitations and environmental assets.

5. Update, in cooperation with local aggregate operations, federal, state and local agencies, past sand and gravel inventories to ensure supply/demand information is current.

6. Protect aggregate deposits from encroachment of incompatible uses and ensure that aggregate material in close proximity to its point of use will be available when needed.

7. Present and future land use controls shall be implemented to allow for the discovery of new mineral and aggregate resources when it is demonstrated that the projected demand for those resources in a given area will exceed available supply and conflict with adjacent uses can be minimized. Conflict analysis and resolution shall follow the methodology set forth in Appendix "J" of the Working Paper: Mineral and Aggregate Resources; however possible impact on agricultural lands, forest lands and residential

development (existing or planned) must also be considered. For sites within the Willamette Greenway or near Goal 5 inventoried resources, notification of the potential conflict shall be sent to the appropriate body (e.g., Pioneer Museum, Oregon Department of Transportation, Oregon Department of Fish and Wildlife, etc.).

8. Encourage farm and forestry use of aggregate land prior to extraction; minimize negative environmental impacts during extraction; require reclamation after extraction which is compatible with adjacent uses.

9. Lane County shall apply the appropriate district (SG, SG/CP, /QM) to the sites listed in Appendix "J" of the Mineral and Aggregate Working Paper. Those sites with potential conflicts shall be placed in the SG/CP or QM/SR Districts.

10. Sites for which not enough information is presently available to determine quality, quantity and conflicts with other uses which include those sites listed in Appendix "F" of the "Mineral and Aggregate Working Paper," shall be considered "Significant" in terms of OAR 660-16-000 through 660-16-025, but requiring that the Goal 5 evaluation process be delayed (the "1B" option). At such a time as it is clear that these sites will be needed within the County's advance framework, they shall be evaluated per the Goal 5 rule including conflict analysis and implementation of protective measures. Such evaluation will take the form of Plan amendment or revision studies. Notwithstanding the above schedule, all "1B" sites will be evaluated within five years of the date of this Policy adoption. These sites are included herein as Goal #5 Mineral and Aggregate Exhibit A.

11. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with section C.3.i. of the Goal. Major adverse effects of extraction on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, scenic quality, noise and safety are to be minimized, and such values reclaimed where possible. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Policy 11 above indicates that significant fish and wildlife habitat areas in the Greenway shall be protected in accordance with Section C.3.i. of Goal 15. Section C.3.i. requires that aggregate extraction be allowed only when "subject to compliance with local regulations designated to minimize adverse effects on water quality,

fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise, safety and to guarantee necessary reclamation" (emphasis added). The Goal standard for significant fish and wildlife habitat areas, however, is stronger. It is spelled out in Section C.3.d. of Goal 15, rather than simply Section C.3.i. (This is also addressed in the Goal 15 section of this report).

Implementing Measures

Lane County has adopted a Quarry and Mine Operations Combining (/QM-RCP) Zone to protect major deposits of minerals, rock, and related material resources, and to resolve conflicts with surrounding uses (Lane Code, Section 16.216).

The Quarry and Mine Operations Combining Zone shall be available for use by the County for new or existing operations when requests are received as part of an areawide or legislative rezoning, or a specific property or quasi-judicial rezoning. When property under consideration of /QM zoning is in close proximity to existing and planned uses potentially incompatible with /QM uses, the application of the zone may be limited to a specific portion of a property in order to encourage the compatibility and proper management of land uses.

The Quarry and Mine Operations Combining Zone is intended to be applied only to those operations which have been evaluated through the Goal 5 Administrative Rule process. Other quarry and mining operations of short-term or intermittent duration should be provided pursuant to the special use provisions of the various zones.

In the Quarry and Mine Operations Combining Zone, the following types of buildings and uses are permitted, subject to the provisions of the Quarry and Mining Operation Reclamation Permit and exceptions set forth in the code (Section 16.216(4)).

(a) Uses permitted in the parent zone with which the /QM zone is combined.
(b) Extracting and storing of minerals, including equipment and materials necessary to carry out these functions.
(c) Plants for the processing of minerals from quarry and mine extraction operations.
(d) Sale of products generated from the quarrying and mining operation.
(e) Activities pemitted as part of the reclamation process provided for in the Reclamation Plan.
(f) Structures an buildings used in conjunction with the extracting and storing of minerals.

The zone requires that a surface mining permit first be obtained from the Department of Geology and Mineral Industries (Section 16.216(5). Section 16.216(6) sets forth blasting notice and records requirements.

Section 16.217 of the Lane Code is the County's Sand, Gravel, and Rock Products (SG-RCP) Zone. The SG Zone "shall only be applied to those sites which have been evaluated consistently with the Statewide Planning Goal No. 5 Administrative Rule conflict resolution process (Sec. 16.217(4)). In the SG-RCP Zone, sand and gravel operations are permitted subsequent to the following restrictions: For any property designated in the Eugene-Springfield Metropolitan Plan as significant in terms of OAR 660-16-000/025 and designated as '1B', a Goal 5 ESEE consequences analysis per the Goal No. 5 Administrative Rule must first be completed. If the landowner and County do not agree on the method to achieve the Goal, the matter shall be forwarded to the Hearings Official for processing consistent with LC 16.100.

A number of uses are allowed in the SG-RCP Zone when conducted in conjunction with a sand and gravel operation (Sec. 16.217), including asphalt paving-mix plant and accessory buildings; cement concrete batching plant; aggregate products fabrication and sale; sand and gravel resource-related equipment storage yard, maintenance and storage buildings, offices and warehouses "appropriate to the uses permitted in this District"; retail or wholesale sales of products related to the use of sand, gravel and related products; agriculture, grazing or timber raising; dwellings for owners, operators or help required; and signs. The zone contains site improvement standards, as well as setback standards, cover, planting, drainage and topsoil standards, and operating standards.

The SG-RCP Zone establishes a Sand and Gravel Review Committee to determine if operating plans or revised plans comply with the requirements of the zone or with "a river plan which may be adopted by the Board." The committee is made up of the Planning Director, the Public Works Director, the Parks and Recreation Director, the Chief Sanitarian, the County Hydrologist, and the County Floodplain Specialist. The Review Committee is notified of all operating plans and revised plans, and has seven days to approve the plan or require modification of the plan.

It appears, from an examination of zoning maps, that the SG Zone has been applied to a number of sites that are not included on any plan inventory of (1C) sites. Yet, contrary to the zone's purpose statements, the County has not applied the Goal 5 process to these sites to justify SG zoning.

Section 16.218 of the Lane Code is the County's Sand, Gravel and Rock Products-Controlled Process (SG-CP-RCP) Zone. The zone is intended to provide more restrictive control of processing activities than the SG-RCP Zone (described above) for the protection of surrounding properties or for greater control over the location and operation of processing activities. The SG-CP-RCP Zone shall apply only to sites which have been evaluated via the Goal 5 Rule process (Sec. 16.216(3)).

The requirements of the SG-CP-RCP Zone are the same as in the SG-RCP Zone except that the Sand and Gravel Review Committee, in its evaluation of operational plans, must evaluate "the location for the erection or enlargement of all processing equipment and activities, including, but not limited to asphalt paving mix and cement concrete batching plants" according to the following "Operational Plan Approval Criteria":

(1) Conformity with the Rural Comprehensive Plan for Lane County.

(2) The location, size, design and operating characteristics of the proposed use:

(a) Will be compatible with and will not adversely affect the livability or appropriate development of abutting properties and the surrounding vicinity; and

(b) Will not be adversely affected by the development of abutting properties and the surrounding vicinity. (Consideration may be given to harmony in scale, bulk, coverge and density; to the availability of public facilities and utilities; to the harmful effect, if any, upon desirable neighborhood character, to the generation of traffic and the capacity of surrounding streets and roads; and to any other relevant impact of the use.)

(c) Will not be adversely affected by known natural hazards, such as floods, slides, erosion.

(d) Will not create a hazardous natural condition such as erosion, landslide, flooding.

Among the permitted uses in the F-1 Zone are (1) mining and quarrying and processing of rock permitted in accordance with the FPA for forest road construction or other forest related uses, or when used solely in conjunction with a farm use on which the mining or quarrying occurs, and (2) operations conducted for the exploration of aggregate or other mineral and subsurface resources (Lane Code, Section 16.210(2)(c) and (g)). Mining, quarry, and processing of mineral, geothermal and other subsurface resources; and rock mining, quarrying and processing which exceeds the standards in 16.210(2)(c), above, are allowed conditionally subject to a Hearings Official approval. Conditional use criteria in the F-1 Zone have been discussed in the Goal 4 section of this report.

In the F-2 Zone, mining, quarrying, and processing of rock for forest or farm road construction is permitted outright on the same tract as the mining or quarrying occurs (Sec. 16.211(2)(c)), as are operations for the exploration for aggregate or other mineral or subsurface resources (Sec. 16.211(2)(e)). The mining, quarrying, and processing of mineral and other subsurface resources; and rock mining and quarrying and processing that exceeds the standards in Section 16.211(2)(c), above are

considered Special Uses, subject to Hearings Official approval (Sec. 16.211(5)(d)). This is also the case for operations conducted for the exploration, mining and processing of aggregate or other mineral resources or other subsurface resources (Sec. 16.211(5)(k)). Criteria for permitting these uses are found in Section 16.211(6).

In the Exclusive Farm Use Zone, operations for the exploration, mining and processing of aggregate and other mineral resources or other subsurface resources are Special Uses, subject to Hearings Official Approval (Sec. 16.212(4)(b)).

Please refer to the Goal 15 section of this report for a discussion of the County's approach to mineral and aggregate sites located within the Willamette Greenway.

Objections

1. Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the sand and gravel plan and zone designations given to a site known as the Pudding Creek Heronry. Since this site is within the Willamette River Greenway, please refer to the Goal 15 section of this report for details about these objections.

2. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Inasmuch as this site is within the Willamette Greenway Boundary, the objections are presented in greater detail in the Goal 15 section of this report.

3. James Spickerman (on behalf of Leon Funke and Michael Horton) has objected to the zoning of farm lands for sand and gravel extraction and processing uses.

   a. Objectors are specifically concerned about the following parcels:

      17-03-06 TL 400, 500, 300, 201
      17-03-05 TL 300, 1500, 1300, 1900
      16-03-31 TL 901, 500 and 101

      The 455 acres in these parcels are primarily agricultural land and have been zoned SG-RCP according to objectors. Allowed uses include sand and gravel extraction as well as asphalt paving mix plant, concrete batching plant, aggregate products fabrication and sale, and retail or wholesale sales of products. The land was previously designated EFU. Objectors point out that in Westerburg v. Linn County, LUBA held that a Goal 2 exception to Goal 3 was required when a zone change was made from EFU to aggregate extraction and processing where the new zone permitted

manufacturing processes and activities. Objectors believe, therefore, that Lane County should have taken an exception prior to rezoning these parcels.

b. Objectors claim that the County applied SG zoning to parcel 16-03-31 Tax Lot 601 and 602 without the necessary ESEE consequences analysis of conflicts with Goal 3 uses and other Goal 5 uses. Objectors point out that the site has a "long history of documented conflict between the sand and gravel extraction use and adjacent agricultural and residential uses. Objectors further point out that in Olsen et al. vs. Scappoose Sand and Gravel Co., LUBA indicated that the Goal 5 Rule requires that, where conflicting uses have been identified, the Goal 5 resource site (e.g., mining) may itself have an impact on other uses and these impacts must be considered in analyzing the ESEE consequences.

c. Objectors believe that plan policies do not address the Goals adequately because there is no method set forth in the plan for Goal 5 conflict resolution analysis. The plan states that such analysis and resolution of conflicts shall follow the methodology in Appendix J of the Mineral and Aggregate Working Paper. Objectors, however, state that Appendix J contains no such methodology, but only a statement of conclusions regarding particular sites.

d. Objectors point out that the plan policies set forth no method to reconcile Goal 5 and Goal 3 conflicts (specifically, where agricultural soils are underlaid with aggregate resources).

e. Objectors claim that plan policies make no provision for ESEE analysis of conflicting Goal 5 uses.

f. Objectors claim that the plan does not comply with Goal 5 Guideline B9 which states:

> Areas identified as having non-renewable mineral and aggregate resources should be planned for interim, transitional and "second use" utilization, as well as for the primary use.

g. Objectors claim that, although a number of sites are to be considered under the (1B) process at a later date, the sites are not included on the plan inventory as a "special category," as required by the Goal 5 Rule.

h. Objectors believe the plan is not internally consistent. Specifically, objectors point out that EFU lands are zoned SG-RCP, but there is no basis for this in policies or in working papers. A number of parcels are zoned for sand and gravel extraction, but not all have been designated for such uses.

Objectors also point out that SG-RCP zoning is contrary to agricultural lands policies (to provide maximum protection for agricultural activities by minimizing activities that could conflict with such uses.

i. Objectors point out that no consideration is given to the effects of SG-RCP zoning on the groundwater resources of agricultural lands adjacent to the land designated SG-RCP.

Response to Objections

1. The response to the objections regarding the Pudding Creek heronry is presented in the Goal 15 section of this report.

2. The response to the objections regarding the Confluence Heronry is presented in the Goal 15 section of this report.

3. a. Objectors contend that sites 17-03-06, TL 400, 500, 300, 201; 17-03-05 TL 300, 1500, 1300, 1900; 16-03-31 TL 901, 500, and 1001 were all rezoned from EFU to S-G-RCP without an exception. Objectors cite Westerberg vs. Linn County as requiring this be done where the new zone permits processing activities. This was based on the fact that ORS 215.213 allows processing conditionally, but at the time of Westerberg vs. Linn County, "processing" did not include the batching and blending of aggregate. However, the 1983 Legislature changed the statutory definition of "processing" (ORS 517.750(9)) to include "crushing, washing, milling, screening as well as the batching and blending of mineral aggregate into asphaltic and portland cement concrete product . . .". Therefore, objectors are not correct in suggesting that a Goal 2 exception be taken for such sites. However, this is not to say that the Goal 5 Rule process does not apply. In the case of the parcels cited by objectors, this process has been completed for only 17-03-06 TL 400, 17-03-05 TL 300, 16-03-31 TL 901, and 16-03-31 TL 1001. The Mineral and Aggregate Working Paper (p. 10) indicates that, because these are existing operating sites, these sites are no longer available for agricultural use. No conflicts were found to exist for any of these four sites.

b. Objectors are correct that parcel 16-03-31 TL 601 has not been analyzed according to the Goal 5 process. Site 16-03-31 TL 602, however, is included as Site No. 21 in Appendix D of the County's Mineral and Aggregate Working Paper. No conflicts were found to exist with Site No. 21. Conflicts with agricultural uses for the site were not analyzed because the site is an operating site and it is assumed it is no longer available for agricultural use (Working Paper, p. 10). Objectors are correct, however, that the County did not address conflicts with adjacent agricultural and residential uses. This has not been required except when a new site or expansion of an existing site is

proposed. Policies 7 and 10 require Goal 5 analysis in such circumstances, including analyzing and resolving conflicts with surrounding uses.

c. Objectors are not correct that the County lacks a method for analyzing and resolving conflicts pertaining to (1C) mineral and aggregate resources in Appendix D. The County indicates that there are no conflicting uses for these sites, and therefore either the SG ,/QM or SG/CP zone will apply. It also indicates that sites with potential conflicts shall be placed in the SG/CP or QM/SR Districts (Mineral and Aggregate Policy 9). All (1B) sites require a full Goal 5 evaluation, including conflict resolution and plan amendments or revision studies before extraction activities are allowed, according to Mineral and Aggregate Policy 10.

Objectors are correct that Appendix J is a statement of conclusions about the conflicts with the 30 (1C) sites, and not a methodology for analyzing and resolving conflicts per se. However, the policy should be interpreted as requiring that the same methodology used in producing Appendix J will be used in future conflict/resolution situations (i.e., determining whether there are conflicts with other Goal 5, 8, and 15 resources, or with planned or existing development). The policy would also require consideration of possible impact or agricultural and forest lands in approval of any new site or expansion of an existing site.

d. Objectors are not correct that there is no plan policy method to reconcile conflicts on agricultural lands that contain aggregate resources for those (1B) sites in Appendix F. Specifically, Mineral and Aggregate Policy 10 requires a full Goal 5 Rule evaluation of (1B) sites. This will require a site-by-site analysis of conflicts (including those with agricultural lands), an ESEE consequences determination of those conflicts, and application of measures to resolve conflicts.

e. There is no specific Goal 5 requirement to adopt plan policies which require analysis of ESEE consequences of identified conflicting uses. Rather, such conflicts are to be resolved during the planning process, based on such an analysis which is to be incorporated into the plan. (The exception to this is for (1B) sites. Jurisdictions must adopt policies to apply all applicable steps of the Goal 5 Rule to such sites. Lane County has such a policy for its (1B) mineral and aggregate resources--Mineral and Aggregate Policy 10).

f. Guidelines do not carry the same weight as the Goals, and therefore, this objector's concern is not a Goal requirement. However, objectors do raise an important concern, and the County is urged to plan such sites for interim, transitional and "second" use.

g. Contrary to objector's statements, the County has placed its (1B) sites on a special category inventory--Appendix E and F of the Mineral and Aggregate Resources Working Paper. It also has expressed this in Mineral and Aggregate Policy 10.

h. Objectors are correct that some lands are zoned SG that are not on the (1C) inventory, nor has the Goal 5 process been applied to them to justify SG zoning rather than EFU, or some other zoning.

SG zoning for a particular site may be counter to the County's policy of providing maximum protection for agricultural activities by minimizing activities that could conflict with such uses. However, Goal 5 requires protection of mineral and aggregate resources. These Goal requirements must be balanced. This is done through the Goal 5 process. When analyzing the ESEE consequences of conflicting uses for a particular site, the requirements of other Statewide Goals must be considered and balanced against Goal 5 requirements.

i. Objectors have not provided information demonstrating how SG zoning will have an effect on groundwater resources of adjacent agricultural lands. Other state statutes require that this concern be addressed.

Conclusion--Mineral and Aggregate Resources

Lane County has inventoried its mineral and aggregate resources and has identified 30 specific aggregate sites which are considered (1C) sites. The amount of aggregate contained in these 30 sites is sufficient to satisfy the demand to the year 2000. The County indicates there are no conflicting uses with any of these sites, and has applied QM-RCP, SG-RCP, or SG-CP-RCP zoning to those sites. These zones assure that extraction can occur, subject to appropriate conditions regarding such things as setbacks, drainage, traffic and operation.

The County has identified a number of (1B) sites which will be evaluated according to the Goal 5 process (including plan amendments, where necessary), within the next five years.

A number of sites not in any plan inventory have been zoned for sand and gravel extraction, but have not been justified as such, based on an analysis of ESEE consequences of conflicting uses.

Energy Sources

Inventory

Lane County has adopted an Energy Working Paper which describes energy consumption and both conventional and alternative energy sources. Conventional sources includes electrical energy from seven utility

companies and natural gas and petroleum from out-of-state sources (pp. 7-15). Alternative sources include solar, hydroelectric, biomass, cogeneration, wind, and geothermal energy (pp. 15-29). Of these, the County considers only hydro power and geothermal sites to be site-specific (p. 39).

The Working Paper identifies eight dams currently generating power or having the potential to do so (p. 18), as well as eight existing nonpower dams with hydroelectric generation potentials exceeding 200kW (p. 18). Maps showing the general locations of these sites are on page 19 of the Working Paper. Information about the dam height, hydraulic head and capacity for each site is presented on page 18. Proposed dams with generation potentials exceeding 25MW and those with potentials between 200kW and 25MW are identified on page 21 of the Working Paper and mapped on page 22. Information about dam height (where known), hydraulic head, system head, and capacity is presented (p. 21).

Wind potential in Lane County is through to be highest along the Coast and Coast Range. Eugene Water and Electric Board (EWEB) and 19 public utilities operate an experimental windmill in the Coast Range north of Lane County, and PP&L operates a wind turbine near Coos Bay. Average wind speeds in Lane County, however are too low to power such windmills (p. 26).

There are two known Geothermal Resource Areas (KGRA's), both of which are in the eastern portion of the County on federal land. Both are under study by the Oregon Department of Geology and Mineral Industries (p. 29). The locations of the two KGRA's--Belknap-Foley KGRA and McCredie KGRA--are shown on Map 7 (p. 30). Information regarding their reservoir temperatures, mean reservoir volume, wellhead thermal energy and thermal power, and resource to land distance is presented in Table 11 (p. 31). The Energy Working Paper also describes the stages of geothermal energy development and discusses the constraints upon geothermal power generation (pp. 28-29). Although the potential for geothermal energy development in Lane County is "significant," further information is needed regarding its potential in the two KGRA's and the environmental impacts associated with such development (p. 29).

A cogeneration facility capable of producing 28,000 kilowatts of power exists at the Weyerhaeuser plant in Springfield, and another facility capable of producing 800 kilowatts is being installed in the Lane Plywood Company of Eugene (pp. 25-26).

The Working Paper disucsses the potential for biomass as an energy source in Lane County (pp. 23-25). There are two major sources--forest lands and farm lands. The potential for energy generation from these sources is great, but economic feasibility and environmental impacts are primary constraints to development of these sources at this time (p. 25).

Conflicting Uses/ESEE Consequences Analyses

General, non-site-specific conflicts are discussed for each of the major energy source categories identified (i.e., hydroelectric, biomass, solar, cogeneration, wind).

Regarding hydro sites, the County states:

> Maps have been presented illustrating a number of alternative hydro sites on various rivers in the County. Since these sites are, at present, in the proposal stage, it is premature to evaluate conflicting uses for each one, but the sites need to be acknowledged by designation on Plan Diagrams, and some effort made to ensure their availability when needed. Conflicting uses will be examined and resolved at such a time as the sites are actually being proposed for development; this could probably be done most efficiently as part of the elaborate permitting process hydro power must undergo before approved. In most cases, conflict resolution is a major factor in hydro development even through many of the sites are located on public land, or lands presently set aside for resource uses--especially timber lands. Existing resource-based zoning can do much to prevent them from being subjected to development if energy considerations are incorporated into the zoning requirements. In Goal 5 language, the "1B" option should be taken at this time (p. 39).

Regarding geothermal sites, the County indicates that because they are located on federal lands, they will have to go through a series of state and federal permit approvals. Zoning "only reflects the County's desire that the sites be protected from conflicting uses." Therefore, the County has not conducted an analysis of conflicting uses (p. 39).

Solar access does not appear to be endangered at this time in the rural areas. However, this is not the case in newly developing residential and commercial areas (p. 39).

Policies

Five Energy Resource policies have been adopted by Lane County (Plan, p. 17):

1. Lane County shall identify energy resource areas within the County and protect such areas through the use of existing ordinances and regulations. Such regulations shall address hydroelectirc, geothermal, and wind power sites.

2. Lane County shall encourage the exploration and development by other agencies of renewable energy resources such as geothermal, wind, biomass, hydroelectric and solar, and shall monitor such development to ensure that the development does not cause adverse effects within the County.

3. Lane County will use the work of the L-COG Committee on Energy, and its report, "Lane County Electic Energy Planning Program, Final Report (1983)" as a source of resource identification and site protection measures. This will supplement the County's own measure expressed in Policy and Zoning Statements.

4. The County shall protect the sites of hydroelectric resources through conditional or special use provisions of its resource zones. Sites for which a license has been applied for with federal and state authorities, or for which water impoundments of more than 100 acre-feet are proposed, or which will generate power in excess of 75KW, shall be shown on the Plan as a special designation, an Exception to applicable LCDC Goals taken if necessary, and a special zoning district applied. At that time, the Goal 5 rule conflict analysis shall also be carried out.

5. For additional energy policies see Goal 3.

Implementing Measures

Hydroelecric generating facilities with water impoundments of less than 100 acre-feet are allowed conditionally subject to Hearing Official approval in the F-1 and F-2 Zones (Lane Code, Sections 16.210(4)(g), 16.211(5)(g)).

A hydroelectric generating facility not exceeding 10 acres in size and located at an existing water impoundment which will not be increased in size because of the generating facility is also permitted conditionally (subject to Hearings Official approval) in the F-1 and F-2 zones (Section 16.210(4)(h), 16.211(5)(h)).

The conditional use criteria for approving or denying these hydroelectric facilities are those for other nonforest uses (Sec. 16.210(5)(a) through (f); 16.211(5)(f)(i) through (vi)).

Hydroelectric facilities having impoundments over 100 acre-feet are not permitted outright or conditionally in the Lane Code. Instead, the County shall analyze the conflicts per the Goal 5 Rule, take an Exception to the applicable Goal if necessary, and apply a special zone to those sites, as specified in Energy Policy 4.

As noted in the Working Paper, resource zoning will help prevent possible sites from being developed for other uses.

Conclusion - Energy Sources

Lane County has identified a number of potential energy sources, many of which are on federal land, and all of which are (1B) sites at this time. There is potential for hydroelectric developments on nonfederal land, but the County contends that it is premature to evaluate conflicting uses.

Nevertheless, the County has decided to allow small sites in its F-1 and F-2 Zones conditionally. Larger sites will require plan amendments, along with application of the Goal 5 Rule, exceptions to appropriate goals and possible development and application of a special zone. The County has adopted a policy commitment to this effect. In the meantime, resource zoning will help prevent potential sites from being lost to other uses. (See, however, the Goal 4 section of this report for a discussion of problems with the F-2 Zone.)

Fish and Wildlife Areas and Habitats

Inventory

Information about Lane County's fish and wildlife resources is contained in its Flora and Fauna Working Paper and the addendum to that working paper. Pages 5-10 describe in general each of the 11 major habitat types in the County, along with a discussion of the value of the habitat type to wildlife, and general location of each habitat type. These include:

1. Estuary and Bay
2. Inland Marsh
3. Wet Meadows
4. Lakes and Reservoirs
5. Riparian Vegetation
6. Annual and Perennial Grasslands
7. Coastal Shore Pine/Spruce
8. Douglas Fir/Trailing Blackberry
9. True Fir/Alpine
10. Deciduous Hardwoods
11. Agricultural Lands.

The County prefaces this material by stating that this information "is not considered an inventory and is not accompanied by maps. It is intended merely as background information."

The Working Paper and its addendum contain special sections addressing endangered, threatened, and special concern species, riparian and wetland areas, sensitive fish and waterfowl areas, and big game range. These are discussed separately below.

Endangered, Threatened and Special Concern Species: The Working Paper lists plants and animals which are threatened, endangered, or of special interest (pp. 11-12). Further information is provided for six of these species--northern spotted owl, northern bald eagle, wolverine, silverspot

butterfly, western snowy plover, and American osprey (pp. 12-13). This information does not provide location, quality, or quantity information on any specific habitat areas or sites. However, the County indicates that:

1. No spotted owl or bald eagle nests are known to occur on private property;

2. Wolverine habitat is in high elevation, remote areas and therefore in federal ownership;

3. Snowy plover habitat is within state jurisdiction.

4. Osprey nests are found throughout the County, although not in great numbers. The County indicates the ODFW maps show their locations, but these maps have not been adopted or submitted for review.

5. Silverspot butterfly habitat is found only "along a small section of the Oregon Coast." It is recognized in the Coastal Resource Management Plan of Lane County.

Lane County has indicated that Silverspot butterfly habitat occurs on federal land adjacent to the Big Creek (Reneghan) Exception Area as well as on the Renaghan property itself (Exhibit E--Renaghan Amendment, pp. 27, 31). It should be noted that the Exception document contains one statement (Finding 37e) on page 27 which appears to contradict this. Specifically, finding 37e states there are no sensitive species on the property, and that the Silverspot butterfly habitat is located on adjacent federal land only. The Exception document contains several other statements indicating that such habitat occurs in the northwest corner of the property.

The County provides no information at all regarding great blue heron rookeries or pigeon mineral springs, which are considered sensitive bird habitat areas by the Department of Fish and Wildlife. (The exception to this is for two rookeries in the Willamette Greenway. They are addressed in the Goal 15 section of this report.) The inventory of sensitive bird sites developed by ODFW and provided to the Department of Forestry (DOF) as part of a recent management agreement between those agencies, identifies 15 great blue heron rookeries, 21 osprey nest sites, three pigeon mineral springs, and at least one bald eagle nest site in Lane County, most of which are on nonfederal land. According to Flora and Fauna Policy 15, "currently known pigeon springs, heron and raptor (hawk, osprey, and eagle) nest sites. . . shall be placed in a '1B' category."

Riparian and Wetland Areas: Riparian lands are defined by the County as all lands along both banks of Class I streams in Lane County, to a setback line of 100 feet from ordinary high water (Addendum, p. 7).

The County indicates in its Flora and Fauna Working Paper (p. 16) that all lakes, reservoirs, and Class I streams in Lane County have been mapped, but were not included because of budgetary limitations. They are

available in the Planning Department offices. The Addendum to the Working Paper (p. 6) states that ODFW has provided maps of all Class I streams, as well as major significant wetland areas. Detailed maps are available for review in County offices, and a generalized summary map is included in the Addendum (p. 20).

The Flora and Fauna Working Paper discusses the values associated with wetlands and riparian areas for both fish and other wildlife types (pp. 14-15). The County notes that the U.S. Fish and Wildlife Service has identified a number of wetland types in its National Wetland Inventory. Currently, about half of the County has been mapped, enabling identification of major wetlands. These include:

1. Fern Ridge periphery, exclusive of parkland;

2. Old Long Tom River channel below Fern Ridge dam, including lands between it and new channel;

3. North Fork Siuslaw fresh-water marsh;

4. Maple Creek marsh;

5. Amazon Canal at its confluence with the waters of Fern Ridge Reservoir.

The County indicates that these areas are mapped in detail on the Plan Diagram maps. More specific location, quality, and quantity information for each of these five wetland areas is contained in the Working Paper Addendum (pp. 11-13).

The County has not inventoried a wetland south of Sutton Lake and east of Highway 101, or a Darlingtonia bog east of Florence. As noted in the 1983 Coastal Goals review of Lane County (p. 8), these wetland were to be addressed under Goal 5:

> The County notes there are only two Goal 18 resource areas east of Highway 101 which do not fall within the coastal shorelands boundary. They are two wetland habitat areas identified in the coastal resource inventory maps. The County should note that it will have to adequately address these two areas later under Goal 5 when it brings the remainder of the County plan into compliance.

The Darlingtonia bog is addressed in more detail in the Natural Areas section of this report.

Sensitive Fish and Waterfowl Areas: The County notes that this is a subcategory of the previous section, Riparian and Wetland Areas (p. 20). Maps have been provided the County by ODFW showing important waterfowl nesting habitat and streams that receive high use by anglers and/or game fish (p. 20), but were not submitted for review. A large-scale map is available in the County Planning offices (Addendum, p. 5). A

generalized, small-scale map is included on page 20 of the Addendum which shows the locations of important streams and stream reaches. A list of these specific reaches, by basin, is included in the Addendum (pp. 2-4). All identified areas are of high quality and are considered important (Working Paper, p. 21). The extent of riparian vegetation is described in the previous subsection of this report. The County notes that there are native anadramous fish runs in Big Creek within the Big Creek Exception Area (Exhibit E--Renaghan Amendment, p. 44). These include coho salmon, cutthroat trout and steelhead.

Big Game Range: The County notes that ODFW divides big game range in Lane County into three categories--Major, Peripherial, and Impacted. The Major Range supports the majority of big game and, in general, consists of sparcely developed commercial forest lands. Peripheral Range is generally located on foothill areas between commercial forest lands and valley floors. Peripheral Range supports substantial big game populations and serves as wintering areas for animals in severe winters. Impacted Range consists of those areas that have existing levels of development which preclude future wildlife management options for maintaining viable wildlife populations and recreational opportunity, although they frequently contain big game populations.

All three big game range areas are depicted on Lane County Wildlife Inventory Maps, according to the Flora and Fauna Working Paper (p. 23). However, these maps were not submitted for review because of budget constraints. They are available in the Planning Department Office (p. 23). The Working Paper notes that the highest quality big game range is in the Major Range because development is limited. Peripheral Range is important, but has enough development to limit big game use and managment options. Impacted Range is of the lowest quality because of existing development (p. 23). The County provides acreages for these three categories (p. 24).

The County recognizes major elk habitat on a portion of the Big Creek Exception site (Exhibit E-Renaghan Amendment, p. 52).

Conflicting Uses/ESEE Consequences Analyses

Endangered, Threatened and Special Concern Species: As indicated earlier, Lane County knows of no spotted owl or bald eagle nest sites on private land. Similarly, wolverine habitat is on federal land. The County notes that the State Parks Division of ODOT regulates vehicular uses in snowy plover habitat (Working Paper pp. 12-13). Specific conflicts with osprey nest areas are not identified, but the County notes that protective measures in riparian areas (e.g., Willamette Greenway permit requirements, coastal shorelands overlays, riparian and wetland area provisions) will resolve conflicts (Addendum, p. 15).

The Working Paper indicates that the Coastal Resources Management Plan of Lane County recognizes the Silverspot butterfly and applies a prime wildlife managment unit to its habitat (p. 13). Specific conflicts and ESEE consequences are not discussed in the Working Paper, however.

It should be noted that a portion of the critical habitat for the Silverspot butterfly is included in the Rock Creek Federal Wilderness Area, recently approved by Congress. Another portion of the habitat is located within the County's Big Creek Exception Area. That exception indicates that the applicant "will enter into contractual arrangements with the Siuslaw National Forest or Western Oregon State College to take whatever measures are necessary to mitigate any potential conflicts or adverse impacts associated with the development" (Exhibit E--Renaghan Amendment, p. 27). According to the Exception (p. 28), the U.S. Fish and Wildlife Service's Endangered Species Office indicates that this project will have not significant adverse impact on the Silverspot's habitat.

Conflicting uses and ESEE consequences analysis have not been conducted for sensitive bird habitat areas, since these resource sites have been placed in a (1B) category.

Inasmuch as the County failed to inventory a number of nonfederal sites as (1C) resource sites (e.g., great blue heron rookeries, pigeon mineral springs, bald eagle nest, osprey nests), the County has not identified conflicting uses or ESEE consequences of those conflicting uses with these sites. Information does exist for these sites, however, as indicated earlier, enabling the County to conduct such analyses.

Riparian and Wetland Areas: Two major activities conflict with riparian and wetland habitat areas, according to the County's Working Paper (p. 17)--destruction of vegetation for any purpose (e.g., forestry, agriculture, construction, recreation, aggregate extraction), and draining surface or subsurface water which then changes the vegetative structure and generally the habitat value. The County has developed separate ESEE consequence analyses for riparian lands and wetlands.

The riparian lands ESEE consequence analysis is further divided into three categories--(1) resource areas (forest and agricultural lands), (2) rural lands (partially or sparsely developed), and (3) developed and committed lands, including communities (Addendum, pp. 7-10). Based on these analyses, the County decided to develop a (3C) approach in order to limit conflicting uses. ODFW has recommended a 50 foot setback along all class I streams in rural development zones and a 100 foot setback in rural resource zones (Addendum, p. 10).

Separate conflicting uses/ESEE consequences analyses have been conducted for each of the five major wetlands identified (Addendum, pp. 11-13). Based on these analyses, the County has determined that areas owned by the Corps of Engineers (Fern Ridge Reservoir, part of Lower Long Tom, Amazon Canal) have sufficient protection, and furthermore, cannot be regulated by the County since they are in federal ownership. Areas under Coastal Resources Zoning (North Fork Siuslaw, Maple Creek Marsh) are also assumed to be adequately protected. A (3C) approach (e.g., Natural Resource Zoning) is appropriate for all other privately-owned areas (part of Lower Long Tom) (p. 13).

Sensitive Fish and Waterfowl Areas: Removal of riparian vegetation in identified sensitive areas is considered the major conflicting use with these resources (Working Paper, p. 21). The County notes that the ESEE consequences analysis is generally the same as that for riparian areas and wetlands, summarized in the previous section of this report (Working Paper, p. 21). However, the County indicates that since the sensitive fish and waterfowl areas are considered more valuable than others in the County, the effects of vegetation removal can be more significant (p. 21). Based on these analyses, Lane County has chosen a (3C) approach to protect riparian vegetation in such areas "whenever possible" (p. 22). The County notes that ODFW has recommended setbacks of 50 to 100 feet along waterways designated as sensitive fish habitat, plus natural resource zoning for wetlands not within that riparian strip (Addendum, p. 5).

Conflicting uses and ESEE consequences of conflicting uses with fish habitat in the Big Creek Exception Area are addressed on pages 54-56 of the Exception. Based on this analysis, the applicant will be required to protect the anadromous fish through development of a management plan and protection or riparian vegetation (pp. 27, 55).

Big Game Range: The primary conflict with big game range is identified as residential use at densities over one dwelling unit per 40 acres in Peripheral Range, and one unit per 80 acres in Major Range (Working Paper, p. 24). The County indicates that its 80-acre commercial timber zoning is very restrictive in terms of dwelling unit placement, and therefore, "it is unlikely that conflicts will occur" in Major Range areas (Addendum, p. 14). Similarly, the County believes its 40-acre zone will satisfy ODFW's recommended density in Peripheral Range (p. 14). Developed and committed exception areas are considered impacted, and the County has decided that conflicting uses should be permitted in those areas (p. 14).

The conflicts and ESEE consequences of conflicts with major elk habitat in the Big Creek Exception area are discussed on pages 53-54, and 56 of the Exception document. Based on this analysis, the applicant will be required to protect elk winter forage areas (p. 27) and to develop an elk managment plan (p. 32).

Policies

Lane County has adopted numerous policies regarding its fish and wildlife resources (Flora and Fauna Policies, Plan, pp. 14-16). These policies include the following:

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Through the use of County regulations including zoning, seek to minimize the adverse impacts of land use changes on sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies are encouraged to work with landowners to conserve wildlife habitats.

5. Lane County shall investigate fee acquisitions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to protect Goal 5 resources.

6. Riparian vegetation along all Class I streams in the County is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Riparian lands shall be defined as the lands within 100 feet of ordinary high water on Class I streams, and shall be considered "Significant" "1C" areas (in the language of OAR 660-16-000/025); "3C" protection of the riparian resource shall be achieved through development setbacks and vegetation management regulations within the riparian strip. The setback distance will vary from 100 feet from ordinary high water in rural resource zones to 50 feet from ordinary high water in developed and committed areas; provided a means is made available for review and modification of these requirements where it can be demonstrated that an unduly restrictive burden would be placed on the property owner or, that riparian vegetation does actually extend all the way into the 500 foot or 100 foot setback to the location of the proposed improvements.

   Such review and modification shall be spelled out in the zoning districts affected, and shall involve consultation with officials of the Oregon Department of Fish and Wildlife.

7. Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal state ownership; where these do not occur, an appropriate wetlands zoning district shall be developed and applied. Other wetlands from the National Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per

Goal 5 requirements if it is clearly demonstrated that an unprotected signficiant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction. (Modification in process.)

8. Sensitive Fish and Waterfowl Areas as identified in the 1983 Revision the Flora and Fauna Working Paper, shall be considered "significant" "1C" resources per OAR 660-16-000/025, and protected per "3C" requirements through protection of riparian and wetland resources as described in the above Policy statement.

9. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, and as revised and updated in 1983, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

10. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna and as revised and updated in 1983.

11. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program.

12. If uses are identified (which were not previously identified in the Plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

13. In its program of protecting "1C" resources, the County shall make maximum practical use of existing land use regulations (e.g., Willamette Greenway Permit, Coastal Resources Zoning overlays, rural forest and agricultural resource zones) to achieve such protection. Duplication of existing standards shall be avoided wherever practicable, provided County-determined Goal 5 and OAR 660-16-000/025 objectives are met.

14. A group known as the "Lane County Flora and Fauna Committee" is to be established and given permanent status by the Board of County Commissioners. The committee shall represent a wide array of environmental interests and the interests of property owners. Its tasks shall include: evaluation of LCDC Goal 5 concerns and resources, development of information to help the County comply with OAT [sic] 660-16-000/025 ("Goal 5 Rule"), research and provision of resource site data to the County, and response to work in progress. Outputs of the Committee shall be presented to the Planning Commissions and subsequently to the Board of County Commissioners.

15. Currently known pigeon springs, heron and raptor (hawk, osprey and eagle) nest sites shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluation per "1B" requirements within two years of the date of plan adoption. Lane County shall consider enlarging the list of significant nest sites whenever information about additional sites becomes available. The significant nest sites shall be those identified by Jim Greer and Jim Hutchison (Department of Fish and Wildlife biologists) in a 12/20/83 letter to Jim Mann (Senior Planner, Lane County Land Management Division), and these sites shall be incorporated into the Lane County General Plan Policies document as Flora and Fauna Exhibit A.

16. Rare and endangered vascular plants, identified in the 1/8/84 list prepared by the Native Plant Society of Oregon shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluated per "1B" requirements within two years of the date of plan adoption. This list of rare and endangered vascular plants is included into the Lane County General Plan Policies document as Flora and Fauna Exhibit B.

17. Lane County recognizes that Douglas fir old growth stands provide valuable and unique wildlife habitat and will encourage the Forest Service and Bureau of Land Management to maintain acreage in this age class sufficient to ensure viable populations of dependent wildlife species.

Policy 22 (Plan. p. 5) states:

> Sites considered 'significant' in terms of OAR 660-16-000 through 660-16-025 but requiring that the Goal 5 ESEE consequences analysis process be delayed (the '1B' option) shall be protected by Lane County through the application of interim protection measures. Such interim protective measures shall be considered and applied at the beginning of the plan refinement

process for the "significant" sites and after sufficient information is available regarding the location, quality and quantity of the "significant" sites.

Lane County's Forest Lands Policy 17 (Plan, p. 10) states:

> Lane County recognizes that the Oregon Forest Practices Act shall be the only mechanism regulating the growing and harvesting of forest tree species on commercial forest lands unless Goal 5 resource sites have been recognized and identified as being more important through an analysis of ESEE consequences and conflict resolution as per Goal 5. No other findings, assumption, goal policy, or other planning regulation shall be construed as additional regulation of forest management activities.

Implementing Measures

Lane County has adopted the following riparian setback standards and riparian vegetation maintenance standards in its F-1, F-2, E-RCP, ML-RCP, PR-RCP, and DR-RCP Zones (Lane Code, Sections 16.210(7)(a) and (b), 16.211 (9)(b) and (c), 16.212 (8)(b) and (c), 16.214(7)(b) and (c), 16.215(6)(a) and (b), and 16.232(5)(b) and (c), respectively):

> (b) Class I Stream Setbacks. No structure other than a fence or sign shall be located closer than 100 feet from the ordinary high water of a Class I stream designated for riparian vegetation protection by the Comprehensive Plan. A lesser setback may be allowed if:
>
> (i) The Department of Fish and Wildlife is consulted by the Department at least 10 days prior to issuing a permit for a structure; and
>
> (ii) The riparian vegetation does not actually extend all the way into the 100-foot setback to the location of the proposed structure, and the riparian vegetation has not been removed in violation of the below riparian vegetation maintenance standards; or
>
> (iii) An application for a variance to the above setback standard has been approved pursuant to LC 16.256 with findings of compliance to the Comprehensive Plan policies for the protection of Class I streams and riparian vegetation.
>
> (c) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Comprehensive Plan:
>
> (i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.212(8)(c)(i) above. Where vegetation removal beyond that allowed in LC 16.212(8)(c)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(a) Commercial forest practices regulated by the Oregon Forest Practices Act.

(b) Vegetation removal necessary to provide water access for a water dependent use.

(c) Removal of dead or diseased vegetation that poses a safety or health hazard.

(d) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

In the PF/RCP C-R, RCP, RA-RCP, and RR-RCP Zones (Sections 16.219(4)(b) and (c); 16.223(5)(b) and (c); 16.229(7)(b) and (c); and 16.231(7)(b) and (c), respectively), the setback is 50 feet, rather than 100 feet.

The following zones indicate the Class I Stream and Riparian Vegetation requirements of LC 16.229-35(2) and (3) shall apply: C-1, RCP (Section 16.220); C-2, RCP (Section 16.221); C-3,RCP (Section 16.222); M-1, RCP (Section 16.224); M-2, RCP (Section 16.225); and M-3, RCP (Section 16.226). The RG-RCP Zone (Section 16.230) indicates that Section 16.299(2) and (3) shall apply. However, the Lane Code does not contain any section with the numbers 16.299-35(2) and (3) or 16.229 (2) and (3).

As discussed in the open space section of this report, Lane County has adopted a Natural Resource Zone (NR-RCP) (Lane Code, Section 16.213) which is, in part, intended to protect aquatic and other wildlife habitat areas. Please refer to that section of this report for details. It should be pointed out that the NR zone does not contain riparian setback and vegetative maintenance standards. Although major development in the NR zone is not anticipated, the NR zone permits a variety of structures. These structures should be required to be set back in order to protect riparian vegetation, just as they are in other zoning districts. In fact, since the purpose of the NR zone is to protect wildlife and aquatic habitats, there is even more reason why such setbacks should be required.

A review of the County's zoning maps indicates that the NR Zone has been applied to a number of habitat areas in the County. One of the sites zoned NR is the Big Creek Exception Area, which contains fish and big game habitat, and habitat for the endangered Silverspot butterfly.

According to the Exception (p. 27), no alteration of the riparian vegetation will occur, and the owner has agreed to enter into contractual arrangements to protect elk winter forage areas. The applicant will also take measures that may be necessary to protect the habitat of the Silverspot butterfly.

Contrary to statements contained in the Flora and Fauna Working Paper, Lane County's F-1 (Nonimpacted Forest Lands) Zone establishes a 40-acre (rather than an 80-acre) minimum lot size (Lane Code, Section 16.210(6)), except that (a) a land division to create a parcel of less than 40 acres may be allowed conditionally if it is for separating an existing residence from adjoining forest land, and (b) a common property boundary may be adjusted so long as no additional parcels are created. As noted in the Flora and Fauna Working Paper (p. 24), and as discussed earlier in this report, ODFW's recommended density in Major Big Game Range (which, according to the County, is mostly zoned F-1) is one unit per 80 acres. Inasmuch as the F-1 zone does not allow dwellings, this density standard has less meaning in Lane County's F-1 Zone.

The F-2 (Impacted Forest Lands) Zone (Lane Code, Section 16.211) requires a minimum of 20 acres for creation of a woodlot or farm parcel for growing grapes, berries, or horticultural specialties, and 40 acres for creation of a farm parcel. However, there is no requirement that, in the Big Game Range portions of that zone, densities will not exceed those recommended by ODFW (i.e., one unit per 40 acres in the Peripheral Range, or one unit per 20 acres with clustering and siting standards; one unit per 80 acres in the Major Range, or one unit per 40 acres with clustering and siting standards).

In the Exclusive Farm Use Zone (Lane Code, Section 16.212), a dwelling or mobile home not in conjunction with farm use may be approved if it meets certain criteria; similarly, a division of land may be allowed for a dwelling not in conjunction with farm use if it meets those criteria and does not conflict with the purpose of the zone. However, none of the criteria address ODFW's dwelling density recommendations, and the purpose statement of the zone does not refer to maintaining wildlife habitat values. As noted in the Goal 3 section of this report, minimum lot size is from 20 to 60 acres, depending upon location. As noted in the Flora and Fauna Working Paper (p. 24) and as discussed earlier in this report, ODFW's recommended density in Peripheral Big Game Range (which, according to the County, is mostly zoned Exclusive Farm Use) is one unit per 40 acres. There are no standards in the zone which require lot sizes to be 40 acres or greater in the Peripheral Big Game Range portions of the zone, or alternatively, that require clustering of dwellings (to allow densities as great as one unit per 20 acres.

Lane County has adopted a Marginal Lands (ML-RCP) Zone (Lane Code, Section 16.214) which appears to have been applied to wildlife habitat areas, and could be applied to other areas in the future. (The County did not submit maps showing the locations of its big game habitat areas, so it cannot be determined with certainty whether it has been applied in big game habitat areas). ORS 197.247(8) requires that application of

such a zone satisfy all requirements of other Goals, in this case, Goal 5. The County has not adopted findings demonstrating how the specific applications of the ML zone comply with the Goal 5 Rule. Criteria for approval of future ML zoning (Section 16.214(4)) do not include compliance with Goal 5.

Section 16.215 of the Lane Code is the County's Park and Recreation (PR-RCP) zone which has been applied to a number of sites in the County. The zone permits a number of recreational uses and activities outright, and a number of others if within a built and committed exception area that is designated as nonresource land. The zone also lists uses that are subject to hearings official approval. Section 16.215(5)(e) of the zone contains the following conditional use approval critera:

> When a use is proposed in an area designated as Major Peripheral Big Game Range or as Sensitive Fish and Waterfowl areas as shown on the Lane County Wildlife inventory, the Oregon Department of Fish and Wildlife shall be notified and their comments shall be considered in evaluating the proposed use.

The PR zone allows a number of uses that could conflict with wildlife habitat and other Goal 5 values, and with the purpose of the zone, as noted in the Goal 2 section of this report.

The County has not adopted any implementing measures to protect and/or resolve conflicts with sensitive bird habitat sites.

As noted in previous acknowledgment reviews (e.g., Tillamook County), the Commission has allowed counties to adopt plan policies and ordinance language which clearly expresses the intent to rely on the FPA, Rules, and the March 1984 agreement between the Board of Forestry (BOF) and the Fish and Wildlife Commission (F&WC) to resolve conflicts between timber management activities and sensitive bird sites. Lane County has no such policy commitment, and it has not inventoried all sites on the BOF/F&WC list of sites covered by this agreement. However, even if such a policy is adopted by counties, they are still required to adopt implementing measures to resolve conflicts between other uses (e.g., development) and sensitive bird sites. Lane County has not adopted such measures.

Lane County has not identified sites that are considered to be more important than commercial forest operations based on a Goal 5 ESEE consequences analysis, per Forest Lands Policy 17 (Plan, p. 10), nor has it adopted and applied any implementing mesures to such sites which regulate timber management activities.

Objections

1. The Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon and the Legue of Women Voters of Central Lane County (LWV) have objected to the County's approach to sensitive bird nesting and use sites. Specifically objectors point out that the Flora and Fauna Working Paper discusses only some of the species considered

sensitive. Missing are designations of heron rookeries and pigeon mineral springs. Policy 15 addresses all sensitive species (bald eagle nests, heron rookeries, snowy plover habitat, spotted owl nests, osprey nests and pigeon mineral springs). Further, objectors point out that Policy 15 places these species in a (1B) category. Both ODFW and 1000 Friends indicate that the County possesses inventory information (including recent ODFW updated information) which is sufficient to complete the Goal 5 process for this resource category. ODFW indicates that the location, quality, and quantity information provided the County is similar to that provided to other counties which have completed the Goal 5 process and which have been acknowledged. The League of Women Voters is concerned that two years is too long for these resource sites to be without protection. Most are not in the Greenway, and therefore do not even receive minimal protection.

1000 Friends also objects to the fact that neither Flora and Fauna Policy 2 or 3 provides adequate protection for these sensitive species. Policy 2 simply indicates the County will recognize existing programs that protect species; it does not bind the County to any particular course of action. 1000 Friends believes the County must make an affirmative commitment to protect threatened and endangered fish and wildlife species. Policy 3 also fails to guarantee protection of sensitive species since it requires the County to seek to minimize adverse impacts through County regulations (including zoning). 1000 Friends suggests that present zoning may be construed to "minimize adverse impacts" but this may not necessarily provide adequate protection for particular sites.

1000 Friends also objects to the use of the definition of "sensitive species" used in Policy 3. Objectors believe it is overly general and could be construed by decision-makers to exclude certain species. Objectors believe that County Policy 3 should reference the list of "species of special concern" that appears in the Working Paper, rather than use a vague term in the policy. Similar comments have been filed by Oregon Forest Industries Council.

2. ODFW and 1000 Friends have objected to Flora and Fauna Policy 11 since it regards densities above ODFW's recommendations in big game areas to constitute a conflict. ODFW regards its recommended densities as the approach to resolve conflicts between dwellings and game range. 1000 Friends states that Policy 11 allows residential densities to exceed ODFW recommendations "if conflicts can be resolved in accordance with OAR 660-16-000." Objectors believe this allows the County to justify density levels which exceed those recommended by ODFW through an analysis of ESEE consequences. Objectors do not believe this exclusion is consistent with the Goal 5 Rule.

3. ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements

that need to accompany the density levels allowed in those zones. Similar objections have been filed by 1000 Friends of Oregon. Objectors point out the the F-1 zone establishes a minimum lot size of 40 acres, but smaller divisions can be made without regard to big game impacts. The F-2 zone establishes minimum lot sizes of 20 and 40 acres for forest and farm uses, which also fail to meet ODFW's recommended densities for Peripheral Range, according to objectors. 1000 Friends points out that the Flora and Fauna Working Paper Addendum and Policy 11 prescribe clustering and siting of standards, but these are not carried out in the F-2 zone. The Addendum (p. 14) also references forest land minimum lot sizes which are no longer current.

4. ODFW and 1000 Friends object because Goal 5 has apparently not been applied in the process of designating marginal and nonresource lands. Objectors are particularly concerned how this affects big game range areas. ODFW contends that the County's plan provisions for lots of record, resource and nonresource-related dwellings, marginal lands, and nonresource lands could allow considerable development in game range. The County's F-1 and F-2 zones do not adequately assure that recommended densities will be maintained. This is further complicated by the fact that it is unclear where marginal and nonresource lands are located, and therefore the extent to which they are in game range areas, since the zone map format and resource inventory map formats are not easily comparable. 1000 Friends points out the Goal 5 must be applied whereever Goal 5 resources occur, even in areas designated marginal or nonresource land.

5. ODFW, 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's treatment of the Pudding Creek Heronry. Objectors point out that the County conducted a Goal 5 ESEE consequences analysis, but that inasmuch as the sand and gravel plan and zone designations have been retained on the site, conflicts have not been resolved. Please refer to the Goal 15 section of this report for further details concerning objections to the zoning of this site.

6. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Objectors indicate that the County has not adopted a program that is adequate to protect and/or resolve conflicts with the site under Section (3C) of the Goal 5 Rule. Objectors point out that the 1981 LCDC order for the Eugene/Springfield Metro area include a requirement that the ESEE consequences of designating the island for sand and gravel use must be evaluated in the context of regional aggregate supply and demand. The IOTC further required that if the island were to retain a partial sand and gravel designation, the Metro Area Plan and the Lane Code (Section 10.210) must be amended to require that limited aggregate extraction will minimize the impact on scenic and wildlife values.

The IOTC also referenced Goal 15 requirements and IOTCs. Objectors contend that neither the Goal 5 nor Goal 15 IOTCs have been adequately addressed. These objections are also contained in the Goal 15 section of this report.

7. 1000 Friends of Oregon has objected to the fact that Lane County has placed only five noncoastal wetlands in its (1C) inventory, and has placed all others in a (1B) category. 1000 Friends believes the County has sufficient information to be able to classify the others as either (1A) or (1C), since such information was given to the County by ODFW, interested citizens, and the Lane County Flora and Fauna Committee. Objectors indicate that Goal 2 Policy 22 is inadequate for these (1B) sites since it requires only that interim protection be applied at the beginning of the plan refinement process --no sooner. Objectors point out that Goal 15 requires protective measures be applied as soon as their significance has been determined.

   Finally, 1000 Friends indicates that the U.S. Fish and Wildlife Service's National Wetland Inventory is the basis for Lane County's wetland inventory. Flora and Fauna Policy 7 states that this inventory, although incomplete in Lane County, will be used to evaluate (1B) wetlands within two years of the date of plan adoption or when the national inventory is completed. 1000 Friends points out, however, that such an inventory is not scheduled for completion for another 5-10 years, and Lane County is not within a priority inventory area. Objectors believe the County should amend Policy 7 and the Addendum to the Flora and Fauna Working Paper (p. 6) to recognize alternative sources of data shall be used to assess the significance of wetlands and to identify their boundaries.

8. 1000 Friends has objected because the County definition of wetlands in its Working Paper is much narrower than that contained in the Statewide Planning Goals or the U.S. Fish and Wildlife Service, but the County has not justified how such a definition is consistent with Goal 5. The Working Paper states that a wetland is "an area in which open, standing water is present for at least six months out of the year and is a minimum size of one acre." Objectors indicate the County has no definition of wetlands in either its plan policy document or in its zoning ordinance.

9. 1000 Friends objects to the fact that Lane County is relying on the FPA to maintain riparian corridors along Class I streams and wetlands, and will take no actions to limit conflicting uses in areas subject to the FPA. Objectors state that there is no analysis in the submittal materials which demonstrates how the FPA and Rules provide protection for riparian resources consistent with Goal 5. Therefore, 1000 Friends objects to LC 16.210(7) and 16.211(9).

10. 1000 Friends objects to the County's failure to apply riparian protection measures around lakes and along Class II streams. Objectors point out that Class II streams regulate water temperature, quality, and quantity of downstream Class I streams.

11. Friends of the Oregon Coast has objected to the County's Renaghan Amendment (Big Creek Exception) for a number of reasons, some of which relate to fish and wildlife concerns. These are as follows:

    a. Objectors believe that many of the findings are "contractory and irrelevant." Objectors cite two examples. The first is that finding 37d (p. 27) conflicts within finding 37e (p. 27). One calls for establishing permanent elk forage areas; the other calls for maintaining the property in forest. Objectors also indicate that the County's claim that there are no sensitive species on the property contradicts findings 40a (5) and 44b(6) which state that the northwest corner of the property contains Silverspot butterfly habitat.

    b. Objectors claim that because the applicant retained a consulting wildlife biologist, his statements in the record should be expected to support the establishment of a destination resort. Objectors believe that his statements are treated by the County as findings of fact although they sometimes "are argumentative of the County's Coastal Sub-Area Plan and of the Oregon Department of Fish and Wildlife's Management plans."

    c. Objectors believe that, although the applicant and ODFW will be required to work together to mitigate adverse impacts on fish and wildlife, these efforts will be "experimental" and therefore cannot justify the resort complex in the the middle of prime and sensitive habitats.

    d. Objectors point out that the Exception recognizes ODFW's concerns about increased fishing pressure on Big Creek as a result of the development, and that potential harm can only be mitigated by regulating sport fishing (through reductions) on the creek. Objectors feel that long-time anglers will therefore be penalized by the development.

Response to Objections

1. Objectors are correct in pointing out deficiencies in the County's inventory of sensitive bird nesting and use sites. Information on location, quality, and quantity is available, yet the County has taken a (1B) approach to several of the species identified. Sufficient information exists for the County to be able to complete the Goal 5 process for this resource category.

   Objectors are also correct that Flora and Fauna Policies 2 an 3, themselves, do not guarantee protection for sensitive species, particularly in light of the absence of implementing measures to provide such protection. The adequacy of these policies can be judged only after the County completes the Goal 5 process for the habitat areas of these species. Lane County has erroneously placed such species in a (1B) category, and has not yet completed the Goal 5

process. Depending upon this analysis, the policies may have to be modified, and implementing measures will have to be adopted. The concern that Policy 3 is unclear as to which species or habitat areas are covered by the policy is valid.

2. Policy 11 states:

> Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program.

Objectors are not correct that this policy violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU Zones which ensure that ODFW's density standards will be achieved.

The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or prevent conflicts between dwellings and big game habitat. However, as discussed below, the County has not adopted such standards in its zoning ordinance.

3. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone.

4. Objectors are correct that Goal 5 has not been applied by the County in the process of designating marginal lands. ORS 197.247(8) requires that applications of a marginal lands zone must satisfy all requirements of other Goals, including Goal 5.

5. The response to the objections regarding Pudding Creek Heronry is presented in the Goal 15 section of this report.

6. The response to the objections regarding Big Island is presented in the Goal 15 section of this report.

7. The County has indicated it has sufficient inventory information on only five noncoastal wetlands at this time. 1000 Friends has not provided location, quality, or quantity information on specific wetlands it believes should be (1C) sites, rather than (1B) sites.

   ODFW has not objected to the County's determination that only five wetlands are (1C) and the remainder are (1B) sites. 1000 Friends is correct that Policy 22 calls for protection of (1B) sites only at the beginning of the plan refinement process. However, the Goal 5 Rule does not require any interim protection for (1B) sites.

   Although the incomplete National Wetlands Inventory is the basis for the County's wetlands inventory, 1000 Friends is not correct that the County must wait until the National Inventory is completed before it can apply the Goal 5 process to (1B) sites. Furthermore, Policy 7 does not prevent the County from considering information about other sites not on the national inventory during its plan update process. 1000 Friends, or other parties may supply the County with information about wetlands, and the County would be required to apply the Goal 5 process to those sites. Plan Policy 7 states:

   > Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal; state ownership; where these do not occur, an appropriate wetlands zoning district shall be developed and applied. Other wetlands from the national Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per Goal 5 requirements if it is clearly demonstrated that an unprotected significant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction. (Modification in process).

While the policy does not permit the use of alternative sources of information during the update process, 1000 Friends is correct in suggesting that the policy could be improved by actually stating that other sources of information (besides the National Inventory) will be used.

8. 1000 Friends is correct in pointing out that the County's Working Paper definition of "wetlands" is narrower than that contained in the Statewide Planning Goals. Wetlands very often do not have open, standing water present at least six months out of the year. Reliance on the County's definition could result in some wetlands possibly being excluded from the County's (1C) inventory.

9. 1000 Friends is correct that the County is relying on the FPA to resolve conflicts between timber management activities and riparian areas along Class I streams and wetlands, although the County has not made a statement to this effect. It is clear in Forest Lands Policy 17 and in various sections of the Zone Code that the County is not regulating harvest activites. Objectors are also correct that the County has not provided an analysis demonstrating how the FPA and Rules provide protection for the Goal 5 resource. However, it has been Commission practice not to require counties to adopt implementing measures to resolve conflicts between timber management activities and riparian corridors.

10. 1000 Friends is correct that the County has not applied riparian protection measures around lakes or along Class II streams, or otherwise justified not providing such protection, based on an ESEE consequences analysis of conflicting uses. Information in the Flora and Fauna Working Paper (pp. 6 and 15) suggests that these are important Goal 5 resources.

11. The objections of Friends of the Oregon Coast are not sustained with regard to fish and wildlife concerns for the following reasons:

    a. Objectors are correct that the Exceptions document contains some conflicting statements, particularly whether the property contains Silverspot butterfly habitat. Specifically, finding 37e (p. 27) is misleading, since the site does contain Silverspot habitat. In light of the fact that the County's intent is clearly to take whatever actions are necessary to protect the Silverspot butterfly, this inconsistency is not a Goal violation.

       With regard to the Exception documents' statements regarding elk forage, it can be assumed that, although the main intent is to keep the property in forest, portions of the property will be in other uses. These findings are broadly written, and, as such, are not contradictory.

    b. Objectors have not indicated how findings 47d(1) through (13) violate Goal 5, only that they are sometimes "argumentative" of other documents.

c. Objectors have not indicated why they believe ODFW's attempt to mitigate impacts on habitats will be experimental, or otherwise why they cannot suceed in providing adequate protection.

d. Objectors have not indicated how regulating sport fishing on Big Creek to protect the resource long-term violates Goal 5. While it is unfortunate that long-term anglers may be "penalized," this is not a Goal issue.

Comments

Oregon Forest Industries Council (OFIC) and the Lane County Landowners Association have commented that Policy 22's intent is unclear, since it calls for interim protection measures for "significant" Goal 5 resource sites. However, the policy addresses (1B) sites. The association indicates that (1B) applies where some information exists but is inadequate for purposes of identifying a site and determining its significance. Commentors also point out that interim protective measures are neither required nor appropriate for Goal 5 compliance.

Response to Comments

Policy 22 (Plan p. 5) states:

> Sites considerd 'significant' in terms of OAR 660-16-000 through 660-16-025 but requiring that the Goal 5 ESEE consequences analysis process be delayed (the '1B' option) shall be protected by Lane County through the application of interim protection measures. Such interim protective measures shall be considered and applied at the beginning of the plan refinement process for the 'significant' sites and after sufficient information is available regarding the location, quality, and quantity of the 'significant sites.

While it is true that Policy 22 is somewhat ambiguous, the policy appears to recognize the fact that certain Goal 5 resource categories have significance (e.g., all eagle nests are significant), although their specific locations may not be known at this time. Therefore a (1B) classification is appropriate. The Goal 5 Rule does not require interim protection measures for (1B) sites. However, the Rule does not prohibit jurisdictions from adopting and applying interim measures to (1B) sites.

Conclusion -- Fish and Wildlife Habitats

Lane County has adopted inventory information for a number of fish and wildlife habitat areas, and has identified conflicting uses and ESEE consequences of those conflicting uses. Implementing measures including riparian setbacks and vegetation maintenance standards and a Natural Resource Zone have been adopted. However, a number of deficiencies still remain and must be corrected before acknowledgement can be granted. These are summarized below.

Lane County has placed all sensitive bird habitat sites in a (1B) category, even though information is currently available and is adequate for completing the Goal 5 Rule process. The County needs to adopt a (1C) inventory for known sites and complete the Goal 5 process.

Implementing measures which carry out ODFW's development density recommendations in Major and Peripheral Big Game Range areas have not been adopted, particularly in the F-2, ML and EFU zones. The County has not applied the Goal 5 process to "nonresource" lands.

The County's three commercial, three industrial, and its garden-apartment zones reference a nonexisting code section for their riparian setback and vegetation maintenance standards. It is obvious that the County intended to apply such standards in those zones but until the zones are amended to either (1) reference the correct section of the code containing those standards, or (2) incorporate such standards themselves, there are no riparian standards in effect in those seven zones. Riparian protection measures have not been applied around lakes, in the Natural Resources Zone, or along Class II streams, or justified as not being necessary, based on an analysis of ESEE consequences of conflicting uses.

The County uses a narrower definition of "wetlands" than in the Goals, and therefore, some wetlands may be left off any future (1C) inventory.

The Parks and Recreation zone allows a number of uses which could conflict with the purpose of that zone, and with Goal 5 resources present (including fish and wildlife habitat values).

A Natural Resources Zone has been developed and applied to lands in the County, but it is unclear which habitat sites have been given NR zoning or whether it has been appropriately applied.

Ecologically and Scientifically Significant Natural Areas

Inventory

The County's Flora and Fauna Working Paper contains the County's inventory information on natural areas (pp. 26-32). This working paper indicates that the County evaluated the 86 sites on the Natural Heritage Inventory and the nine sites identified by the Natural Areas Preserves Advisory Committee. (Note: The Committee is now known as the Natural Heritage Advisory Council). These sites were evaluated by Lane County, first of all, to determine whether there was adequate information on location, quality and quantity. If this was the case, and that information suggested that a site was "significant," it was placed in a (1C) category. If information existed, but the site was determined to be not significant, it was classified (1A). If there was inadequate information, sites were placed in a (1B) category (pp. 26-27).

The County placed six sites in the (1B) category:

1. Booth Island/Siltcoos Lake
2. McKenzie River Island (not be confused with the island at the confluence of the McKenzie and Willamette Rivers)
3. South Fork Gate Creek
4. Swamp Creek
5. Marshall Island Heronry
6. Willamette Valley Quaking Aspen Grove

The County has provided justification why it believes the (1B) classification is appropriate for each of the site sites (pp. 27-28). The Nature Conservancy has indicated it has no updated information for any of the six sites at this time and that a (1B) classification is appropriate (Curt Soper, personal communication, June 15, 1984).

Fifty-six other sites were determined to be in a (1C) category and therefore constitute the County's natural areas inventory (p. 28). The County has grouped these sites according to their ownership. There are 23 sites on U.S. Forest Service land, six on BLM land, four sites within state parks, and 25 that are either in the Willamette Greenway or covered by the Coastal Resources Management Plan (pp. 30-32). Two additional sites (Upper Yachats Elk Pasture and Fern Ridge) are also (1C) sites, but do not fall into the above categories (p. 32).

No information regarding location, quality or quantity of the federally-owned sites is provided in the Working Paper. Information regarding the natural features present in the State park sites and at the 25 Greenway or Coastal sites is summarized (pp. 30-32). All are significant in terms of quality. Locations of these sites have not been provided.

It should be noted that, during the review of the coastal portion of the Lane County plan, a privately-owned Darlingtonia bog, east of Highway 101 and east of the City of Florence, was identified. The bog did not quailify as an ecologically significant natural area under the Coastal Goal requirements. It does, however, possess natural values that could qualify it as a Goal 5 (1C) natural area. However, Lane County has not addressed this site in its Working Paper or other submittal materials.

Conflicting Uses/ESEE Consequences Analyses

Because of their ownership by the U.S. Forest Service or the BLM, the County believes no conflicts exist for the 29 federal sites (Flora and Fauna Working Paper, p. 28).

The County indicates that no conflicts exist for the four state park sites based on uses allowed in zoning districts applied to those sites (p. 29). The Flora and Fauna Working Paper Addendum (p. 15) states, "the State of Oregon Parks and Recreation Division has, in a letter to Lane County, stated that the natural area values of these parks are being and will be protected, and that no conflicts with the resource are foreseen." However, as noted in the Goal 2 section of this report, the Parks and Recreation zone which has been applied to these state parks, allows a number of uses which could conflict with natural area values.

No conflicts have been identified for the Coastal or Greenway sites because of programs and zoning districts applied to them (p. 30).

With regard to the two remaining sites (the Elk Pasture and Fern Ridge), the County indicates there are no conflicts. The Siuslaw National Forest and ODFW own the site and have an agreement concerning use of the site as an elk wintering area. Fern Ridge is owned by the Corps of Engineers and, under a 1980 management plan for the reservoir, the natural values present will be protected (p. 32).

It should be pointed out that public ownership, in and of itself, does not necessarily mean there are no conflicting uses, nor does it guarantee site protection. Although several of the U.S. Forest Service and BLM sites are formally protected by those agencies (e.g., wilderness areas, designated research natural areas), others are not. Unless the federal agencies have formal protection programs in place for natural areas, it cannot be assumed that no conflicts exist, nor can they be considered "2A" (protected) Goal 5 resource sites. However, since the Commission has not required counties to complete steps (2) and (3) of the Goal 5 Rule for sites on federal land, it is recommended--but not required--that Lane County correct the statement on page 28 of the Flora and Fauna Working Paper regarding conflicts on federal land.

Policies

Lane County has adopted the following policies regarding natural areas (Flora and Fauna Policies, Plan, pp. 14-16):

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Through the use of County regulations including zoning, seek to minimize the adverse impacts of land use changes on sensitive species (those susceptible to significant population declines resulting from habitat modification).

12. If uses are identified (which were not previously identified in the Plan which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

16. Rare and endangered vascular plants, identified in a 1/8/84 list prepared by the Native Plant Society of Oregon shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluated per "1B" requirements within two years of the date of plan adoption. This list of rare and endangered vascular plants is included into the Lane County General Plan Policies document as Flora and Fauna Exhibit B.

Policy 22 (Plan, p. 5) states:

> Sites considerd "significant" in terms of OAR 660-16-000 through 660-16-025 but requiring that the Goal 5 ESEE consequences analysis process be delayed (the '1B' option) shall be protected by Lane County through the application of interim protection measures. Such interim protective measures shall be considered and applied at the beginning of the plan refinement process for the "significant" sites and after sufficient information is available regarding the location, quality, and quantity of the "significant sites".

See also the Goal 15 section of this report and the coastal review of the Lane County Plan for a discussion of other relevant plan policies which address natural area.

Implementing Measures

As indicated by the County, a number of natural area sites are located on federal land, over which the County lacks jurisdiction. A number of other sites are significant natural areas within the Coastal Planning Area and the implementing measures applied to them have been acknowledged as being in compliance with the Coastal Goals. The two Greenway sites are actually riparian areas along the Middle Fork and the Coast Fork of the Willamette River. The County's Greenway Permit ordinance and its riparian setback and maintenance standards provide a degree of protection for these areas. (See, however, the Goal 15 section of this report for a discussion of specific deficiencies in the Greenway ordinance).

The four state parks have been zoned Parks and Recreation. However, as noted in the Goal 2 section of this report, the PR zone allows a number of uses that could conflict with the natural area values of the sites. ODOT has indicated it does not forsee conflicts with the four sites, according to the County. However, there are no management plans for the sites, or letters from ODOT which confirm that this is the case.

Objections

1. The League of Women Voters of Central Lane County (LWV) has objected to the fact that the County has placed rare and endangered plant species in a (1B) category with a two year time delay for their evaluation through the Goal 5 process. The LWV is concerned because it believes two years it too long for these resources to be without protection. Objectors point out that since most of these resources are not within the Willamette Greenway, they will not receive even minimum interim protection.

2. Lane County Audubon Society and 1000 Friends of Oregon have objected because the County has not provided adequate protection to a natural area known as Russel Creek Basin. This objection is described in more detail in Part II of this Goal 5 Report.

Response to Objections

1. Flora and Fauna Policy 16, which requires Lane County to evaluate the (1B) rare and endangered plant species list in two years does not refer to any particular sites containing these species, nor have objectors provided a list of sites which they believe should have been placed in a (1C) rather that a (1B) category. If sites are not known at this time, then a (1B) classification is appropriate, including policy commitment to address them in the future.

2. Objectors are correct that protection and/or conflict resolution measures have not been applied to the Russel Creek Basin natural area, in spite of an ESEE consequences analysis and recommendations regarding protection of the site in the Metro Working Paper. This issue is addressed in greater detail in the Part II section of this Goal 5 report.

Comments

1. Lane County Landowners Association has pointed out that the County's list of rare and endangered plants is simply a list of species and does not address any specific or general sites. Commentors believe, therefore, the Goal 5 Rule does not apply to these species until sites are identified. (Flora and Fauna Policy 16 indicates that certain plants are considered significant and shall be placed in a (1B) category and evaluated with two years).

2. Lane County Landowners Association also comments that, contrary to Flora and Fauna Policy 7, wetland resources cannot be considered "significant" while placed in a (1B) category.

Response to Comments

1. Commentors are correct that Policy 16 refers only to a list of species, and does not address any sites. Therefore, the Goal 5 Rule will apply if and when sites containing these species are identified.

2. Contrary to the commentor's statements, wetlands--as a resource category--can be (and generally are) considered "significant," even through individual sites may be in a (1B) category because of lack of site-specific inventory information.

Conclusion -- Natural Areas

Lane County has identified 62 natural areas, 56 of which it has classified as (1C) sites. The County has provided sufficient justification for the (1B) classification of the other six sites. Most of the 56 (1C) sites are on federal land, within the Coastal Planning area, or the Willamette Greenway. Therefore, the County has found that the sites are either not within its jurisdiction to regulate, or implementing measures have been applied which provide adequate protection.

Four state parks contain natural area values. The County indicates that because of their zoning (Parks and Recreation), they are adequately protected. However, an examination of that zone reveals that a number of uses are allowed in that zone which could conflict with the natural values present. State ownership in and of itself does not guarantee protection of these values, unless the agency has an adopted park managment plan, which requires protection. As noted in Goal 2, state agencies are also subject to Goal compliance and acknowledged plans. This is an issue which should be further explored through State Agency Coordination agreements.

The County has not applied the Goal 5 Administrative Rule to a Goal 5 Darlingtonia bog located east of the City of Florence that is not covered by the Coastal Goals.

Outstanding Scenic Views and Sites

Inventory

The County's scenic views and sites inventory information is contained in the Recreational Resources Working Paper (pp. 5-13). This consists of a discussion of several inventories and rating systems used by other public entities (e.g., Bureau of Land Management, U.S. Forest Service, State Department of Transportation, former Coastal Conservation and Development Commission, several parks and open space plans of Lane County and the City of Eugene) (p. 6). However, the Working Paper contains no location, quality or quantity information for any specific sites, nor are any of the aforementioned inventories adopted by reference. Instead, the County has decided that, given the time and resources available as well as the difficulty, it cannot conduct site-specific inventory (p. 7). The County suggests that this be undertaken before the first plan review/revision

occurs (p. 7). The County describes in some detail how such an inventory could be conducted, including defining the objective, determining what areas or types of scenic types are "critical", establishing an evaluating or rating system, applying a rating system, and implementing decisions made regarding such areas (pp. 6-14).

The County's Exception for the Big Creek area recognizes scenic values on he property, and on surrounding federal lands (Exhibit E--Renaghan Amendment, p. 53).

Conflicting Uses/ESEE Consequences Analyses

Because the County has not conducted an inventory of outstanding scenic reviews and sites, it has not identified conflicting uses with specifies sites or ESEE consequences of those conflicting uses.

Policies

Lane County's policy regarding scenic resources is as follows (Open Space and Scenic Areas Policy 3, Plan, p. 17):

> Initiate a program to identify areas of outstanding scenic value, identify and resolve conflicts after consideration of social, economic, energy and environmental consequences and protect sites for which conflict resolution indicates protection is desirable. This program will be initiated prior to the next scheduled Plan update (five years from adoption of revised Plan). The County is encouraged to investigate and utilize fee acquisition, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to implement this policy.

Implementing Measures

Because Lane County has decided to put off the application of the Goal 5 process for this resource category until a later date, no implementing measures regarding the protection and/or resolution of conflicts with scenic views sites have been adopted or applied.

The scenic values of the Big Creek Exception Area are to be maintained through a combination of measures, including keeping 87 percent of the property in open space; placing development away from Big Creek and east of Highway 101 (so it is not visible from the north and will not interfere with the most viewed coastal areas); designating the site Conservation/Recreation/Open Space; and by imposing site review requirements. The site will be zoned NR, as well (Exhibit E--Renaghan Amendment, p. 56).

Objection

Friends of the Oregon Coast object because they believe the proposed development in the Big Creek Exception Area will not enhance the outstanding scenic view associated with the site, and would, in fact, destroy the "picture-book" setting.

Response to Objection

Objectors have not provided specific information as to why the combination of plan and zone designations for the site, site review and the requirement for 87 percent open space is not sufficient to protect scenic resources associated with the site.

Determining what is sufficient to protect scenic views and sites is more difficult and more subjective than for other Goal 5 resource categories. However, in the absence of more specific information from objectors, the objection cannot be sustained.

Conclusion--Scenic Views and Sites

Lane County has not inventoried outstanding scenic views or sites, nor has it identified conflicting uses and ESEE consequences of conflicting uses. No implementing measures addressing this resource category have been adopted or applied on the ground. Instead, the County has a policy to initiate a program to address this resource category prior to the next plan update (five years from adoption of the revised plan).

Lane County should be commended for the serious thought and consideration it has given to this subject, and for its commitment to initiate a comprehensive program to identify and protect outstanding scenic resources. Understandably, such a program can be complex and time-consuming, particularly as it is outlined in the County's Working Paper. However, the Goal 5 Rule requires counties to develop programs prior to acknowledgment, based on information that is currently available. According to the County's own Working Paper, several inventories already exist. For example, the County recognizes that there are several state scenic highways, sites recognized in its own Parks and Open Space Master Plan, as well as sites within federal wilderness areas or on other federal lands. It should be noted that, in the 1981 denial order for Lane County, there were in-order-to-comply requirements directing the County to inventory scenic resources and to apply Goal 5 to those sites.

Neither the Goal nor the planning process itself requires that new information be generated or that information be perfect before planning decisions are made. If this were to case, nearly all planning decisions would be put off until the post-acknowledgment period. It is recommended that Lane County embark on a comprehensive scenic resources program during post-acknowledgment, as called for in its plan. However, prior to

acknowledgment, the County must, at a minimum, inventory known sites, and complete the Goal 5 process for those sites. This work may be refined during post-acknowledgment as part of the County's more detailed, comprehensive scenic resources program work.

Water Areas, Wetlands, Watersheds and Groundwater Resources

Inventory

Lane County has developed a separate document, Water Resources Working Paper, which contains inventory information, and conflicting uses/ESEE consequences analyses for this Goal 5 topic.

Watersheds: A map showing the locations of Lane County's water basins is contained in the Appendix to the Working Paper (Map 2). The County does not provide quality or quantity information for each individual basin, but rather indicates that quality and size vary (p. 5). The County does note, however, that the Upper Middle Fork Willamette, Mosby Creek, and the entire Siuslaw River have severe sedimentation problems. The remainder of the Willamette and the tributary streams to the Willamette and the Siuslaw have moderate sedimentation problems. According to DEQ, the Siuslaw River basin is a "regional hot spot," (i.e., a considerable portion has a severe problem but is not as important as compared to other hot spots, statewide). DEQ has indicated that 410 miles of streams in Lane County have streambank erosion problems, 67 of them having severe erosion. This is particularly true in the Siuslaw Basin, and in tributary streams to the Willamette and short reaches of the Willamette River itself (p. 4).

Wetlands: Please refer to the Fish and Wildlife section of this report for a discussion of the County's wetlands inventory.

Surface Waters: Lane County streams are shown on Map 2 in the Appendix to the Water Resources Working Paper. More complete mapping of surface water is available in the Planning Department office, however (p. 7). Based on a 1974 Water Quality Report and its 1981 update, the County reports that the quality of water in Lane County is generally quite high (p. 7) However, the Mowhawk, Long Tom, and portions of the Coast Fork and Main Stem of the Willamette have slow, meandering reaches and are affected by extensive development (p. 7). Specific problems along these rivers are discussed briefly (pp. 7-8). The Water Resources Working Paper contains a brief discussion of minimum stream flows, particularly those on the Willamette which are regulated by reservoir releases determined by the Corps of Engineers (pp. 8-9).

The Flora and Fauna Working Paper (p. 16) indicates that all lakes and reservoirs have been mapped and are available in the County Planning Department offices. There are about 300 Alpine Cascade Lakes in the County, varying in size from Waldo Lake (6,420 acres) to Mouse Lake (.05 acres) (Water Resource Working Paper, p. 8).

Groundwater: The principal aquifiers which yield moderate to high volumes of water are located on the coast near Florence in dunal sands, along the lower McKenzie Valley, the lower Middle Fork Willamette Valley, the Lower Coast Fork Willamette Valley, and on the valley floor north of Eugene along the Willamette River (p. 10). Map 3 in the Working Paper shows the quantity of groundwater in Lane County; groundwater quality is depicted on Map 3.

Conflicting Uses/ESEE Consequences Analyses

Watersheds: The County states that the only conflict that is specifically a watershed conflict, and not a surface or groundwater conflict, is contamination or possible contamination of surface water supplies used for domestic purposes. Timber propagation and harvesting activities, particularly herbicide use and erosion caused by ground disturbance can affect municipal water sources (p. 5) Residential development and road construction also cause erosion problems (p. 5). The County notes that resolution of timber harvesting conflicts is beyond its regulatory scope. It also points out that several watersheds used for domestic water supplies are "substantially within federal owernship." The County notes that the watershed for the City of Cottage Grove is almost entirely within federal ownership. The Umpqua National Forest and the U.S. EPA have adopted a plan to address problems, yet these problems continue (p. 5). The County indicates that the potential for similar problems exist for domestic suppies from federally-owned watersheds such as Mapleton, Tide, London Springs, and Eugene's supply, the McKenzie River (p. 5).

The County has not conducted an ESEE consequences analysis because the problem is outside its jurisdiction to resolve. However, the County supports adoption of policies or amendments to state and federal laws (including the FPA) which provide greater levels of protection for watershed (p. 6).

Development -- which is regulated by the County -- could impact the Clear Lake watershed. This watershed serves the Heceta Water District and provides a portion of the water for the City of Florence (p. 6). The County discusses the possibility of designating a "protected watershed" but has decided to take no action until sufficient information is gathered on the sources of pollutants. (p. 6). An intensive study is presently underway in response to a temporary DEQ rule (p. 6).

Wetlands: Please refer to the Fish and Wildlife section of this report for a discussion of the County's conflicting uses/ESEE consequences analysis for wetlands.

Surface Waters: A number of conflicts exist for surface waters of the County, but the County asserts they are not consequences of County actions. Rather, it believes they are the result of federal agency management programs (e.g., reservoirs have certain congressioally authorized uses, but these often do not include some uses that are of importance of the County, such as waste dilution, fish and wildlife and recreation). The Corps of Engineers is in the process of reviewing authorized uses on six reservoirs, and could propose reauthorization (p. 9).

Similarly, certain streams such as the Coast Fork Willamette, Coyote Creek, Long Tom River and Lost Creek, appear to have been overallocated. The County recognizes that the State Water Resources Department (WRD) has responsibility for establishing minimum streamflows. The County believes WRD should initiate adjudication, including establishing minimum streamflows for major waterways (p. 9).

Erosion from forest lands is also a conflict with water quality, but the County points out that it is regulated by the FPA or federal regulations. (p. 9). Agriculturally caused water quality problems are being addressed by DEQ and soil and water conservation districts, although three SWDs in the County have not yet adopted model Best Management Practices by DEQ (p. 9). Outside UGBs, urban runoff is primarily from industrial facilities, especially hazardous materials stored at this sites (p. 9-10). This is also regulated by DEQ.

Groundwater: Two conflicts have been identified for groundwater resources -- development in quantity-limited aquifers, and development in areas where groundwater quality may be polluted. Separate ESEE consequences analyses are presented for these two types of conflicts. The County has concluded that:

1. For a quality-limited aquifer, otherwise acceptable development should be allowed if there is an adequate showing that water will be available for a forseeable period in the future, and that the additional withdrawal will not negatively impact surrounding water users. A number of specific code revisions are recommended to carry out these requirements (p. 12).

2. For groundwater quality problem areas, the County has determined that resolution of conflicts should be different for different types of contaminants (p. 14). These include:

    a. For development in aquifers contaminated by natural means, there should be a system to inform people of potential problems, and to suggest that well drilling and testing take place prior to construcion. Areas of quality limitation could be placed on a computerized land file, and could be checked when a building permit application is reviewed. Similarly, notification would be a matter of public record and would be available to future parties interested in these properties as well.

b. Old and smaller solid waste sites in the County are mapped, but not enough is known about specific leachate problems or groundwater characteristics to designate hazard notification areas around them. The Working Paper recommends inventorying each site, including period of operation, type of wastes deposited, and groundwater characteristics. Based on the information, a hazard notification system should be established (p. 14).

c. Two sensitive aquifers are currently subject to DEQ rules for sewage system installation -- the River Road/Santa Clara area, and the North Florence area. For other developed areas located on sensitive aquifers and which have known or suspected contamination problems (Mapleton, Noti, Elmira, Crow, Coburg, Goshen, Creswell urbanizing area, Saginaw, Marcola, Dexter, Cedar Flats, Walterville, Leaburg, Vida, Blue River, and McKenzie Bridge), current County policy calls for a minimum parcel size of one acre if community water is available, or two acres if individual wells are used. The County points out that this policy does not correct the existing situation, but should prevent aggravation of the situation (p. 15). These quality-limited aquifier areas will be placed on the County computer file, and applicants for building permits involving new wells will be informed of possible sewage contamination in the groundwater.

Policies

The following policies address water resource issues in Lane County (Water Resources Policies, Plan, pp. 17-18):

1. State policy normally promotes multiple use of surface waters throughout Lane County. Under such policy, use conflicts can and do occur. As the first step in addressing this problem, the County urges the Oregon Water Policy Review Board and the Department of Environmental Quality to update the existing water basin plans and establish priorities among the varous beneficial uses for specific water areas. The economic, social, environmental and energy consequences of each use should be considered in establishing priorities and resolving any identified conflicts. Lane County will cooperate to the maximum extent practicable in such a program.

2. The County supports congressional reauthorization of upper Willamette basin reservoirs, to reflect actual use priorities. To the extent practicable, the County will cooperate with the Corps of Engineers in resolving existing use conflicts and accommodating the needs of competing uses.

3. Adequacy of water supply, particularly those relying on groundwater sources, shall be a major concern in reviewing major land use changes. For the purpose of applying this policy, major land use change shall be any application reviewed by the Hearings Official or the Planning Commission.

4. The primary means of evaluating groundwater resources for land use planning purposes shall be through the land division review process. The Little Butte Volcanics, Eugene Formation, Fisher Formation, Spencer Formation, Flourney Formation, Alluvium and Older Dunes geological units shall be designated as quality and/or quantity limited aquifers. As such the provisions of Chapter 13, Lane Code (Land Divisions) regarding areas so designated will apply.

5. Land use designations in the Comprehensive Plan and implementing zoning shall be commensurate with groundwater aquifer capacities.

Additional policies regarding water resources, including wetlands, are discussed in the Fish and Wildlife section of this report, as well as in the Goal 6 and 11 sections.

Implementing Measures

As noted in the Fish and Wildlife section of this report, the County has adopted riparian setback and vegetation maintenance standards in a number of zoning districts.

A Natural Resources Zone has been applied to several wetlands (confirmed by Mike Copely, County Planner, personal communication, July 16, 1984).

Section 13.050(13) of the Lane Code addresses the provision of water in the County. This section requires lots and parcels to be served by an approved public, community, or individual water system. Aquifer and quality tests are required for public and community systems, and may be required for individual water sytems. These tests are as follows (Section 13.050(13)):

> (c) Aquifer and quality tests or geological evaluation may be required by Lane County for any lot or parcel. These requirements may include, but need not be limited to, evaluation of existing well logs and preparation of a geological report on the area, and evaluation of the site by a professional geologist, or engineering geologist or full scale aquifer tests as required. In determining the detail of analysis required, the following apply:
>
> (i) Areas designated by Board order as having problems in the quantity or quality of available water as adopted, documented in Lane Manual and filed in the office of the Department shall meet

the following requirements for all parcesl less than 20 acres in size. The applicant must affirmatively demonstrate, in a manner acceptable to Lane County, that the proposed subdivision/partition is capable of sustaining the devlopment anticipated with sufficient potable water. This demonstration must include, but need not be limited to, aquifer tests. More specifically, the aquifer test shall show coefficient of transmissivity, permeabiltiy, storage and the specific yield. The bacteriology/ chemical tests shall show compliance with standards set by the Oregon State Health Division and Lane County. The test procedure shall utilize standard acceptable practices for aquifer tests using pumped and observation wells and records of static water level, date, clock, elapsed time (in min.), depth of water, drawdown and recovery. Analysis using the non-equilibrium method (or other methods where appropriate) must be performed by a licensed geologist or engineer. A copy of all field notes and test results shall be submitted with the report, together with summary statements which indicate whether the proposed use of the aquifer could adversely impact the neighboring wells or properties or deplete the aquifer and the general impact of the proposed use.

(d) For all areas not designated as problem areas by the procedures documented in LC 13.050(13)(a) above, a pump test report or a well log report shall be supplied, unless determined by Lane County to be not necessary.

Pump test and well log reports shall be prepared according to criteria in the ordinance.

Conclusion -- Water Resources

The County has done a good job of inventorying its water resources and problems associated with those resources. The County has analyzed the ESEE consequences of conflicting uses, and has adopted some excellent implementing measures to help resolve conflicts, particularly riparian setback and vegetation maintenance standards and aquifer and quality requirements.

Wilderness Areas

Inventory

Lane County's inventory of designated wilderness areas is contained in its Recreational Resources Working Paper on a map entitled, Recreational Resources. The locations of three wilderness areas are depicted--Mt. Washington Wilderness, Three Sisters Wilderness, and Diamond Park Wilderness.

Page 4 of the Working Paper describes in general the County's role in managing such areas.

It should be noted that recently, new wilderness legislation was passed by the U.S. Congress, establishing a number of new wilderness areas in Oregon. Several of these are within Lane County. These include Rock Creek, Cummins Creek, Three Sisters Additions, Diamond Peak Additions, and Waldo Lake.

Because of the fact that Congressional action occurred so recently (after Lane County submitted its plan), it is suggested--but not required until first plan update--that the plan be amended to inventory these new areas.

Conflicting Uses/ESEE Consequences Analyses

Because of their federal ownership, remote locations and federal protection for wilderness values, the County indicates that wilderness areas are "free from County-generated conflicts" (p. 4).

Policies

Lane County has one policy addressing wilderness areas (Open Space and Scenic Areas Policy 2; Plan, p. 17):

> Lane County will recommend that no new wilderness areas be designated in the County without a complete analysis of the revenue and employment impacts to Lane County. Where designations are made, negative employment and revenue impacts should be mitigated by increasing allowable timber harvest on other public lands.

Implementing Measures

Forest resource zoning has been applied to wilderness areas. The County explains in its Recreational Resources Working Paper (p. 4) that this zoning "will pay homage to the concept of County 'protection' of them, but in practical fact they are simply out of the relm of County authority."

Conclusion--Wilderness Areas

Lane County has inventoried the three wilderness areas within its boundaries and has adopted a plan policy recommending that no new wilderness areas be designated without an analysis of revenue and employment impacts. The areas have been given forest resource zoning. It is recommended that, by first plan update, the County amend its plan to inventory the recently designated new wilderness areas.

Historic and Cultural Resources

Inventory

The Working Paper identifies each of the approximately 500 sites identified in Lane County on a preliminary inventory and survey of historic and archaeological resources. Each is identified by site number or name, by location (township, range, section) and by map symbol. Each appears on a quad map included in that document. A map symbol for each site indicates whether it is an archaeological site, a transportation site or route, a settlement feature, an agricultural site, a mining site, a logging site, a marine site, an historical site, or a natural feature.

Lane County has adopted an Historical Resources Working Paper which explains the process and criteria used in evaluating the "significance" of the 500 sites identified in the County (Addendum to the Working Paper, pp. 1-2). All sites on the National Register of Historic Places are considered significant and are in the (1C) category of the Goal 5 Rule. All sites or structures still in existence contained in the Statewide Inventory are also considered significant, and where sufficient information is available to carry out a conflicting uses analysis, a (1C) label has been given. Archaeological sites are considered (1B) sites, but the County indicates they should be given special interim protection until a data and a protective program for them are developed. All other sites identified are (1A) sites (pp. 1-2).

In all, the County determined there are 63 (1C) sites. These are listed on pages 3 and 4 of the Working Paper Addendum, along with their locations and map numbers. These sites are mapped on quadrangle maps that are included in the Working Paper. Each site has been given a map code which specifies the "theme" of the site (i.e., archaeological, transportation, settlement features, cemetery, century farm, grange hall, old barn, mining, logging, marine industry, historical site, natural landmark, and hot springs). Further information about each (1C) site that is also on the Statewide Inventory is appended to the addendum to the Working Paper. The Addendum to the Working Paper also summarizes the quality and quantity of these (1C) sites (pp. 5-9).

It should be noted that the County has indicated that several (1C) sites on the historic sites inventory in the Working Paper Addendum (pp. 3-4) were deleted by the Board of Commissioners during final plan adoption, including sites # 32, 34, 39, and 42 (Mike Copely, County Planner, personal communication, June 15, 1984). There is no indication of this in any of the resubmittal materials. Site 34 is within the Creswell UGB. However, there are no reasons presented supporting deletion of sites # 32, 39, or 42 (the Andrew Keeney House, the Paschelke House, and Fall Creek Christian Church, respectively).

Conflicting Uses/ESEE Consequences Analyses

Pages 5-9 of the Addendum to the Working Paper contain the County's conflicting uses identification and ESEE consequences analyses for the (1C) sites. These analyses are presented by category for the following categories: Transportation Sites (bridges), Settlement Features, Barns, Marine Sites, Historical Sites/Landmarks, and Archaeological Sites.

In its Working Paper, the County recognizes destruction of the structural sites as a conflict, but fails to recognize major exterior alteration as a conflicting activity. However, it is clear in the County's zoning ordinance that the County considers major exterior alteration as an activity which could conflict with historic resources. For archaeological sites, the County identifies any land use or activity which damages the integrity of the site as a conflict.

Policies

Lane County has adopted a number of plan policies which address historic and archaeological resources (Plan, pp. 12-13). These include the following:

1. A group known as the "Lane County Historic Resource Committee" is to be established and given permanent status by the Board of County Commissioners. The Committee shall represent a wide array of historical interests and the interest of property owners. Its tasks shall include: general concern with historical matters in the County; to monitor conditions affecting such resources; to devise criteria and methods for the selection of newly-designated historical resources; to advise the staff and officials of the County on proposed new historical sites and structures; to oversee the administration of the Historic Structures or Sites ordinance; and other related tasks and duties. Outputs of the Committee shall be presented to the Planning Commissions and subsequently to the Board of County Commissioners.

2. The County shall administer the "Historic Structures or Sites" section of Lane Code Chapter 10 as a means of protecting historic resources. These regulations shall be applied to all sites contained in [the] list of "Historic Structures or Sites" referenced by the ordinance, which are sites deemed significant by the County, and therefore meriting protection from conflicting uses by a limitation of such conflicting uses.

3. The Goal 5 conflict resolution process (OAR 660-16-000 through 660-16-025) which has been applied in the selection of historical sites and structures contained in the General Plan and implemented through the "Historic Structures or

Sites" ordinance, shall continue to be applied, where appropriate, to historic sites and places prior to regulation of them.

4. The County shall seek to enlist voluntary compliance with individual landowners in the addition of their property as historical sites, and landowners shall be notified of Public Hearings, including information about inclusion as a Historical Site.

5. The County shall encourage its own agencies, and communities within the County, to emphasize their historical, geographic and other unique qualities.

6. The County shall review proposals for development or change in land use for possible impacts with designated historical sites. When proposed development or land use changes will cause harm or degradation of a designated site, such effects shall be mitigated in a satisfactory manner.

7. The County shall continually develop and refine, through review, and update, its inventory of historic sites and resources. A long-term objective shall be in the inclusion of historical sites in the County's geo-data system.

8. The County shall take advantage, where practical, of state and federal programs to assist in the identification and protection of historical resources, including the use of financial assistance from these programs.

9. The County shall work with concern local, state and federal agencies to coordinate efforts to identify and protect historical resources.

10. Archeological sites identified in the Historical Resources Working Paper and Addendum to the Historic Resources Working Paper shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluated per "1B" requirements within two years of the date of plan adoption. These significant sites shall be incorporated into the Lane County General Plan Policies document as Historical Resources Exhibit A.

Note: Policy 2, above, incorrectly refers to Lane Code Chapter 10, rather than Chapter 16 as its implementing measure for historic sites.

Implementing Measures

Section 16.233 of the Lane County Development Code is the Historic Structures of Sites Combining Zone (/H-RCP), the stated purpose of which is to allow the County to review building and demolition permits to

ensure historic resources are preserved. The Code specifies that "no person may alter or demolish any Historic Structure or Site" unless a permit to do so has been issued. Upon receipt of an application for such a permit, the Planning Director shall notify the Lane County Museum Director and the State Historic Preservation Officer.

A demolition permit shall be approved only if evidence is submitted demonstrating that "every reasonable effort shall be made to maintain the Historic Structure by acquisition, protection, stabilization, rehabilitation, restoration or reconstruction project (a demonstrated lack of private and public funding for maintenance of a structure is sufficient cause to allow demolition)." A permit to alter an historic site or structure shall be approved only upon submission of evidence that (a) any use or change "should be compatible with the historical nature of the property," and (2) only the minimum alteration of the structure or site and its environment necessary to achieve the intended use shall be allowed. Consideration shall be given to four alteration guidelines in satisfying the second criteria, above. These guidelines are as follows:

(1) Only the minimum alteration of the designated historic building, structure or site and its environment necessary to achieve the intended use shall be allowed.

(2) The distinguishing original qualities or character of a designated building, structure or site and its environment should not be destroyed. The removal or alteration of any historical material or distinctive architectural features should be avoided.

(3) All designated buildings, structures and sites shall be recognized as products of their own time. Alterations which have no historical basis and which seek to create an earlier appearance should be discouraged.

(4) Changes which may have taken place in the course of time are evidence of the history and development of a building, structure or site and its environment. These changes may have acquired significance in their own right and this significance shall be recognized and respected.

It must be noted that the zoning maps do not show that the combining zone has been applied to all 63 inventoried (1C) sites as intended. Specifically, the maps do not show that the combining zone is applied to (1C) sites 1-20, 24, 35, 38, 44, 45, 46, 48, 55, 57, 59 or 61. The ordinance also does not indicate which sites fall within that zone designation. This is also contrary to Historic Policy 2, which states that the zone shall be applied to all sites on a list referenced in the ordinance.

Objections

1. The Oregon Department of Transportation (ODOT) has objected because of a conflict between the historic resources working papers and the ordinance. Specifically, ODOT finds that the historic ordinance applies only to sites and structures on the National Register of Historic Places, and does not cover other (1C) sites identified in the working papers.

2. Friends of the Oregon Coast object because of the failure of Lane County to address cultural and archaeological resources of the Big Creek Exception Area. Specifically, objectors indicate that Goal 5 requires such resources to be inventoried. Yet, according to objectors, the Exception does not address this topic "in any way." Objectors provide information indicating that such resources are common at the mouths of coastal rivers. Due to the probability of Indian graves and/or a significant archeological site at the mouth of Big Creek, and the fact that, based on the County's own definition of conflicting uses, road building, building construction and land clearing for a destination resort are considered conflicting uses, objectors believe that "the new zoning of the Renaghan property is in violation of Goal 5 until an intenstive cultural resources inventory has been conducted and this portion of Goal 5 addressed."

Response to Objections

1. ODOT has misread the Lane Code with regarding to the County's Historic Structures of Sites Combining Zone. ODOT has apparently reviewed the County ordinance which applies inside UGBs. That zone does limit the zone's application to National Register sites. However, ODOT has failed to note that the ordinance which applies outside UGB's (in rural Lane County) is somewhat different. Specifically, the rural zone does not contain language that limits application to National Register sites. Therefore, the objection is not sustained.

2. Objectors are correct that the exception for the Renaghan property does not address historic or cultural resources. However, as pointed out by the objectors themselves, the State Historic Preservation Office knows of no site on the property, nor do anthropoligists at Oregon State University. County's are required, under Goal 5, to rely on whatever information is available in producing comprehensive plans. They are not required to conduct extensive archaeological surveys. Therefore, the County's exception does not violate Goal 5 for cultural or archeological resources. If, in the event, such resources are discovered during site development, the Goal 5 Rule would have to be applied by the County, including possible plan amendments.

Conclusion--Historic Resources

Lane County has adopted an inventory of historic resources and has analyzed conflicts and ESEE consequences of conflicts with these resources. The County has a combining zone which is intended to be applied to historic sites.

The zone provides procedures and criteria for resolving conflicts with inventoried sites, particularly major exterior alterations and demolitions. However, the County has not applied the zone to all 63 (1C) sites identified in its plan, as intended.

Oregon Recreation Trails

Inventory

Lane County's inventory of Oregon Recreation Trails is included in its Recreational Resources Working Paper (p. 15, Recreational Resources Map).

The County describes these trails as follows:

1. Coast Range Trail--not developed. Funding limitations and the desire of the state not to condemn private land for trail development suggests that it will be some time before it is completed. Mapped route is general in nature.

2. TransAmerica Bike Trail--fully signed and marked, with route maps published by the state.

3. Eugene to Pacific Crest Trail--a few portions are developed with work now underway by a local chapter of the Sierra Club. Uses bikeways in Eugene Area.

4. High Divide Trail--proposal only, same as #1 above.

5. Coast Trail--Lane County developed portions occur in Cape Perpetua and Heceta Head recreational areas, with preparations being made for inclusion of Oregon Dunes National Recreation Area lands. No private lands involved at this point.

6. Coast Bicycle Trail--designated, signed and mapped.

7. Pacific Crest Trail--fully developed. No private lands involved in Lane County. Located in Willamette National Forest.

These descriptions are basically accurate. It should be noted that, according to Jack Remington, State Trails Coordinator, ODOT has proposed general routes for the unbuilt portions of the Eugene to Pacific Crest Trail and the Coast Trail. Portions of the High Divide Trail already exist since they follow several other developed trails. However, only general routes have been proposed for the unbuilt portions of the High Divide Trail (personal communication, June 20, 1984).

The general location of each of the seven trails is depicted on the County's Recreational Resources Map in the Working Paper. No specific locations have been provided in either the text or on the map, however, for existing trails. Specific routes for the Pacific Crest Trail, the TransAmerica Bike Trail, the Coast Bike Route, and portions of the High Divide Trail and the Eugene to Pacific Crest Trail are known, since these trails are developed.

Conflicting Uses/ESEE Consequences Analyses

The County has not identified specific conflicting uses with the seven proposed or existing Oregon Recreation Trails.

However, the Coast Bicycle Trail, TransAmerica Bike Trail and the Pacific Crest Trail are fully developed and are either on federal or other public lands or on public rights-of-way, as are portions of Eugene to Pacific Crest Trail and portions of the Coast Trail. Therefore, the County concludes that they are likely to experience few conflicts.

No specific routes for the Coast Range Trail or the unbuilt segments of the Coast Trail, the Eugene to Pacific Crest Trail, or the High Divide Trail have been determined by ODOT. Although most of these proposed trails would cross public lands, segments of these trails are proposed to cross private lands, and conflicts could occur. However, since their locations are only generally known at this time, specific conflicts cannot be determined.

Policies

Lane County's recreational trails policy (Open Space and Scenic Areas Policy 4, Plan, p. 17) is:

> The County shall acknowledge recreational trails which are developed by the Oregon Parks Outdoor Recreation Plan and shall display the routes on its Plan documents.

Lane County lacks a policy to cooperate with ODOT in the protection of existing trails. The County also lacks a policy to coordinate with the Oregon Department of Transportation in applying the steps of the Goal 5 Rule during any future identification or establishment of proposed trails or trail segments.

Implementing Measures

No specific implementing measures have been adopted by Lane County for the protection and/or resolution of conflicts with existing or proposed trails.

Conclusion--Recreation Trails

Lane County has identified the seven existing or potential state recreation trails in its Recreational Resources Working Paper, but has not provided a description or map of the specific locations of existing trails. It has, however, recognized the fact that ODOT has maps of these trails. The County lacks a plan policy to coordinate with ODOT in applying the Goal 5 Rule if and when any of the unbuilt trail segments are identified or proposed for construction or designation. The County also lacks a policy to cooperate with ODOT in the protection of existing trails.

No conflicts exist with developed trails and trail segments, and therefore, special implementing measures are not necessary in those areas. Implementing measures have not been adopted for the protection and/or resolution of conflicts with the proposed trails and trail segments, nor are any appropriate at this time since their specific locations are not yet known.

Potential and Approved Scenic Rivers and Waterways

Inventory

The County's Recreational Resources Working Paper briefly describes both the State Scenic Waterways Program and the Federal Wild and Scenic Rivers Program (p. 16). The County correctly notes that there are no designated federal rivers in Lane County at this time. However, the County fails to note that during the 1983 Legislative Session, a bill was passed (HB 2435) designating Waldo Lake and the North Fork of the Middle Fork of the Willamette River (from Waldo Lake to about one mile upstream from Westfir) as a State Scenic Waterway. The County's working paper incorrectly indicates there are no state designated waterways.

The Working Paper correctly recognizes that five river stretches are on the U.S. Interior Department's inventory of potential scenic rivers (p. 17):

1. Upper McKenzie (from Tamolitch Falls to McKenzie Bridge);

2. Steamboat Creek (from its source to its confluence with the Umpqua River);

3. Alsea (entire length; only a small upper portion in Lane County);

4. Siuslaw (from its source to Lake Creek confluence); and

5. Willamette (from Eugene to Corvallis).

All five of these river segments are shown in a general fashion on the Recreational Resources Map contained in the County's Recreational Resources Working Paper.

The County correctly notes that the Upper McKenzie (from Tamolitch Falls to McKenzie Bridge) is also on the state potential scenic waterways list. However, the County fails to mention that Steamboat Creek and Alsea River (the same stretches as on the federal potential list) are also on the state potential list.

The County recognizes that the area affected along each of the inventoried rivers is one-quarter mile on each side measured from ordinary high water (p. 16).

Policies

The following policy has been adopted regarding wild and scenic rivers (Open Space and Scenic Areas Policy 5, Plan, p. 17):

> The County shall cooperate with appropriate state and federal agencies in the selection of scenic and wild rivers.

This policy does not commit the County to coordinate with those agencies in applying the Goal 5 Rule process in studying rivers for possible state or federal designation and in making such selections.

Conflicting Uses/ESEE Consequences Analyses

Lane County suggests that conflicting uses and ESEE/consequences should be identified at the time a river is studied for designation (pp. 17-18). The County also suggests that resource zoning should provide protection for such rivers (p. 17).

Implementing Measures

Waldo Lake and the stretch of the North Fork of the Middle Fork of the Willamette River that is designated as a State Scenic Waterway are located entirely on federal land (confirmed by Jim Payne, State Rivers Program Coordinator, personal communication, June 14, 1984). The portion of the Alsea River that is on the state and federal potential lists is also in federal ownership. The Willamette River is within the Willamette River Greenway, to which the County has applied a Greenway Development ordinance (see the Goal 15 section of this report for details).

Portions of the McKenzie River, Steamboat Creek, and the Siuslaw River flow through federally-owned lands. However, some stretches are in non-federal, private ownership. Developed and committed exceptions have been taken along all of these stretches of the McKenzie and Siuslaw Rivers and Steamboat Creek, most of which have been found to be valid under the Goal 2 analysis in this report. However, as noted in that report section, exceptions in plats 23, 204, 230 (Siuslaw River), 627, 628, 629, 630 and 631 (McKenzie River) have not been justified. No needs exceptions have been taken along the McKenzie River, Steamboat Creek, or the Siuslaw River. It has been the practice of the Commission to require jurisdictions to analyze the ESEE consequences of taking needs exceptions along potential federal or state scenic rivers and waterways, but not to require such an analysis for built and committed exceptions.

Conclusion--Scenic Rivers and Waterways

Lane County has inventoried five federal potential scenic rivers and one state potential scenic waterway (the McKenzie River) but has failed to note that, besides the McKenzie River, two of the federal potential rivers are also potential state waterways (i.e., the Alsea River and Steamboat Creek). The County has also failed to mention that Waldo Lake and the North Fork of the Middle Fork of the Willamette River are designated State Scenic Waterways.

The County lacks a policy commitment to coordinate with appropriate state and federal agencies in applying the Goal 5 Rule process in studying rivers for possible designation as well as in the actual selection of rivers for designation.

Built and committed exceptions have been taken along all nonfederal lands along state and federal potential scenic rivers, some of which have not been found to be valid under Goal 2. The County needs to either not take these exceptions, or justify them as being built or committed.

PART II--EUGENE/SPRINGFIELD METROPOLITAN AREA OUTSIDE THE METRO UGB

In August, 1982, the Commission reviewed and acknowledged the Eugene/Springfield Metro Area Plan and implementing measures for lands within the Metro UGB. However, the cities of Eugene and Springfield as well as Lane County were granted a continuance for lands outside the UGB but within the Metro Planning Area Boundary in order to comply with Goal 5, (as well as several other Goals). The following section of this report analyzes Lane County's responses to the "in-order-to-comply" requirements contained in the August, 1982 staff report, adopted by the Commission.

Requirement

1. Amend the Metro Plan to include a separate evaluation of the "ESEE" consequences of allowing conflicting uses for those sites which are the subject of a Goal 5 objection filed pursuant to OAR 660-116-00 (i.e., Sites 4, 5, 7, 12, 19, 21 and 28 shown on Figure D-3). For specific direction on individual sites see underscored portions of Comments and Objections subsection, preceeding.

Response

The following sites were to be addressed under this requirement:

Site	Name
4	Bertelsen Slough
5	Willow Creek Wetlands
7	Confluence Heronry
12	Gillespie Butte
19	Spencer Butte Ridgetop
21	Russel Creek Basin
28	Pudding Creek Heronry

Sites 4, 5, 12 and 19 are located within the Metro UGB and have been acknowledged by the Commission (see the August 19, 1982 Commission action, pp. 10-11). Therefore, they are not addressed in this report.

The Confluence Heronry, Pudding Creek Heronry and Russel Creek Basin are outside the Metro UGB and inside the Metro Planning Area Boundary and were therefore addressed in this plan submittal. Specific Goal 5 analyses for each of the three sites are presented separately below.

Confluence (Big Island) Heronry: The Lane County Rural Comprehensive Plan, Plan Diagram Zoning Maps and Metro Area of Influence document (January 1984) contains a 1982 working paper entitled, "Metropolitan Plan Update, Natural Resource Areas: Conflict Resolution For Potential Significant Areas." Part V of that working paper addresses a site known as the Confluence Heronry, or the Big Island Heronry. This working paper supplements Lane Council of Governments' (L-COG's) inventory in the Natural Assets and Constraints working papers of April 1978.

As explained in the 1982 working papers, p. V-1, the 235-acre island is located in the Willamette River near the confluence with the McKenzie River. The County has specifically mapped the location of the island as well as a large Great Blue Heron rookery located on the island. The heronry has been determined to be of local and statewide significance, and is on the State Natural Heritage Inventory. The island's other resources (e.g., agricultural land, vegetation, wildlife and wildlife habitats, sand and gravel resources, scenery and water are described (pp. V-1 through V-5). The island is within the Willamette Greenway and is a potential Greenway acquisition site in the ODOT Greenway Plan (Working Paper, p. V-7).

L-COG has reassessed the significance of the resources on the island and has provided more detailed locational information about the heronry and its significances, statewide, based on information on other heronries (p. V-8). More refined information has also been adopted regarding vegetation, soils, agricultural values, and sand and gravel resources (pp. V-8, V-11 through V-17).

Conflicting uses are identified (pp. V-8 through V-10) as recreation, sand and gravel extraction, timber harvest, agricultural practices, wildlife and wildlife habitat, scenic assets and public improvements. Each of these uses is described, particularly as it could affect the heronry. Pages V-11 through V-17 contain L-COG's ESEE consequences analysis.

The analysis concludes that the heronry and vegetative fringe of the island are significant resources that should be protected. However, not allowing sand and gravel extraction on the island would result in negative impacts on property owners and the public. Extraction can be conducted in a manner that is compatible with the heronry (p. V-18). Recommendations regarding the island are made on page V-18. Among these are recommendations to:

1. Designate the heronry and buffer area as "natural resource" and designate the fringe of the island as "park and open space." The interior of the island should be designated "sand and gravel."

2. Exchange land (between property owners and the state) so that the heronry and buffer are in perpetual public ownership.

3. Protect the riparian habitat on the island periphery by maintaining an adequate Willamette River Greenway vegetative fringe.

4. Develop controls on sand and gravel extraction between the operator and ODFW in order to protect the heronry.

5. Rely on state and County permits for addressing the details of sand and gravel operations.

See also the Goal 15 section of this report.

Pudding Creek Heronry: The Lane County Rural Comprehensive Plan, Plan Diagram Zoning Maps and Metro Area of Influence document (January 1984) contains a 1982 working paper entitled, "Metropolitan Plan Update, Natural Resource Areas: Conflict Resolution For Potential Significant Areas." Part VI of that working paper as well as 1984 Addendum to Part VI addresses a site known as the Pudding Creek Heronry. These working appears supplement L-COG's inventory in the Natural Assets and Constraints working papers of April 1978.

The heronry is one of the largest in Western Oregon (about 54 nests) and continues to be productive (Addendum, p. 1). The heronry is currently designated and zoned "sand and gravel," and potential mining operations

could conflict with the heronry. The site is on the Middle Fork of the Willamette River (Working Paper, p. VI-5). The Addendum indicates that the site is also within the Willamette Greenway.

The 1982 Working Paper summarizes in greater detail the resource values of the site (pp. VI-1 through VI-5), as well as the nature of the potential conflicts (pp. VI-6 though VI-7). Inasmuch as the heronry is in the middle of the potential extraction operation, and the owner has an operating permit from the Oregon Department of Geology and Mineral Industries, this appears to be the greatest conflict. Timber harvest and vegetative clearing, which normally precede extraction, would also conflict with the heronry (pp. VI-5, V-6).

Pages VI-7 through VI-12 analyze the ESEE consequences of the various competing uses for the site, and conflict-resolution alternatives ranging from no protection for the heronry to full protection of the heronry through public acquisition or land trade are analyzed (pp. VI-13 and VI-14).

The Working Paper recommends interim protection for the heronry, plus possible land exchange or transfer of mining rights. It also recommends that ODFW cooperate with the landowner to develop a management plan for the site (should no land exchange take place).

The 1984 Addendum to the 1982 Working Paper reassesses the significance of the heronry, updates the inventory, and summarizes the results of negotiations which have taken place between Lane County, ODFW and the landowner (Wildish Land Company).

The 1984 Addendum to the Working Paper contains a discussion of the conflict-resolution process that took place in 1983 (pp. 1-2). ODFW drafted a trade agreement for an exchange of land and mineral rights of like value between State Parks Division, Lane County, and the Wildish Land Company (pp. 1-2). Such a trade would result in protection of the heronry and protection of the landowner's ability to extract aggregate (p. 3). Based on the analysis of conflicts, ESEE consequences, and the possibility of a land exchange, the Addendum contains the following updated recommendations (p. 4):

1. Change the plan designation for the heronry and surrounding buffer area from "sand and gravel" and "park and open space" to "natural resources."

2. Change the plan designation for an equal value land within Buford Park from "parks and open space" to "sand and gravel."

3. Lane County should rezone each area to correspond to these plan designations.

4. The potential land exchange area should be contiguous to existing Wildish holdings to avoid creating noncontiguous park boundaries.

See also the Goal 15 section of this report.

Russel Creek Basin: The Lane County Rural Comprehensive Plan, Plan Diagram Zoning Map and Metro Area of Influence document (January 1984) contains a working paper which is entitled, "Metropolitan Plan Update, Natural Resource Areas: Conflict Resolution For Potential Significant Areas--Russel Creek Basin Addendum." This working paper supplements Lane Council of Governments' inventory in the Natural Assets and Constraints working appers of 1978 and the 1982 Natural Assets: Conflict Resolution for Significant Areas.

The 1984 working paper provides a history of the treatment of Russel Creek in the Metro Plan update process (pp. 1-5), and notes that LCDC's 1981 review of the plan required an ESEE consequences analysis of the site (p. 4). The working paper describes the natural features of the five subbasins comprising Russel Creek Basin as well as the specific ownerships and conflicting uses present (pp. 5-10). Maps are also provides showing the specific location of the basin, its subbasins, and vaious natural features. Species lists--both plant and animal--are appended to the working paper as well. The site is a significant natural area and, among other things, contains at least one threatened plan species, and several other species of special significance. Major conflicting uses on the 410-acre site include timber harvesting, agriculture, and certain types of recreation (p. 10).

The ESEE consequences of these conflicting uses are presented on pages 11-12 of the working paper, and, based on this analysis, the following recommendations are made (p. 14):

1. Lane County should adopt interim protective measures that prohibit grazing, logging and any other activity that may adversely affect future protection of the proposed natural area.

2. Conflict resolution and resulting plan amendments required for preserving Russel Creek should occur in conjunction with the Metropolitan Plan mid-period review.

3. Russel Creek property owners should be contacted, and negotiations should commence regarding conflict resolution for the proposed natural area.

4. The options of acquisition, donation or long-term lease should be explored along with the possibility of a joint program of interest among identified groups and governments.

Conclusion: Requirement 1 has been satisfied.

The Metro Plan has been amended to include separate evaluations of ESEE consequences of allowing conflicting uses for sites within the Metro Planning Area Boundary but outside the Metro UGB, namely, Confluence Heronry, Pudding Creek Heronry, and Russel Creek Basin.

Requirement

2. Amend the Metro Plan to include mandatory policy language requiring local governments to adopt resource protection/conflict resolution measures consistent with the plan's adopted text and findings.

Response

The Metro Plan was amended to include mandatory policy language requiring local governments to adopt implementing measures consistent with the plan's text and findings. These amendments were made and acknowledged by the Commission in August 1982 as part of the review of Metro Area (see Commission action, p. 12). Since these policies also apply outside the Metro UGB and inside the Metro Planning Area Boundary, this requirement has been satisfied.

Conclusion: Requirement 2 has been satisfied.

The Metro Plan has been amended as required, and acknowledged in August 1982.

Requirement

3. Eugene, Springfield and Lane County must amend their implementing measures to clarify the meaning of Policy 12 in habitat/scenic areas, as applied in the "Forest" and "Parks and Open Space" plan designation outside the UGB.

Response

Policy 12 referred to in this IOTC is on page III-C-8 of the 1980 Metro Plan. It reads:

> When evaluating the desirability of harvesting commercial timber on forest lands within the jurisdictional boundary but outside the urban growth boundary, great emphasis shall be placed on preserving scenic and water quality, as well as protection of wildlife, open space, and recreational potential.

In its most recent submittal, Lane County has not amended its implementing measures to clarify how this policy will be carried out in habitat or scenic areas that are designated "Forest" or "Parks and Open Space."

The meaning of Policy 12 is further confused by the more recent adoption by Lane County of Forest Lands Policy 17 (Plan, p. 10) which states:

> Lane County recognizes the Oregon Forest Practices Act shall be the only mechanism regulating the growing and harvesting of forest trees species on commercial forest lands unless Goal 5 resource sites have been recognized and identified as being more important through an analysis of ESEE consequences and conflict

resolution as per Goal 5. No other findings, assumption, goal policy, or other planning regulation shall be construed as additional regulation of forest management activities.

As noted in Part I of the Goal 5 section of this report, the County has not indicated which sites are "more important" based on a Goal 5 ESEE consequences analysis, nor has it adopted implementing measures to protect such sites through the regulation of forest management activities, or to otherwise resolve such conflicts, per Policy 12.

The Cities of Eugene and Springfield have adopted "tree-cutting" ordinances in response to this IOTC and have been acknowledged by the Commission.

Conclusion: Requirement 3 has not been satisfied.

Lane County has not amended its implementing measures to clarify how Policy 12 is to be carried out in habitat and scenic areas designated "Forest" and "Parks and Open Space."

Requirement

4. Eugene, Springfield and Lane County must ensure that Metro Area Plan policies are implemented in all natural resource areas as mapped in accordance with compliance requirements outlined above.

Response

As noted earlier, the plans for lands within the cities of Springfield and Eugene and lands within the Metro UGB have been acknowledged as being in compliance with Goal 5. Implementing measures that are adequate for protection and/or conflict resolution for the resource sites outside the Metro UGB but inside the Metro Planning Area Boundary (i.e., Russel Creek Basin, Confluence Heronry, Pudding Heronry) have not been adopted. The Russel Creek site is designated and zoned for forestry and residential use. Recommendations contained in the Working Paper of the Metro Plan Update document have not been carried out. Implementing measures for Pudding Creek and Confluence Heronries are addressed in the Goal 15 section of this report, since they are located within the Willamette River Greenway, and Goal 15 implementation requirements are more stringent than--and therefore supercede--those for Goal 5. As explained in the Goal 15 section of this report, adequate implementing measures for these two Greenway sites have not yet been adopted.

Objections

1. 1000 Friends of Oregon and Lane County Audubon Society have objected to the fact that Russel Creek Basin has been designated "Forest" and has been zoned for forest and residential uses. Specifically, objectors point out that in its 1981 review of the Metro Plan, LCDC found that the County identified this 410-acre site as a significant Goal 5 resource (because of its diversity, wetland, riparian

vegetation, unique species, wildlife, and climax ecosystems, including old growth). LCDC also found, however, that the County needed to analyze the ESEE consequences of conflicting uses with the site, and to complete the Goal 5 process. Objectors contend that although the County's resubmittal indicates that continued logging and future grazing may destroy these values, and the site is designated "forest" in the Metro Plan, and zoned for forest and residential uses. This would allow timber harvest, grazing and development which could adversely affect the resource. Objectors indicate the County has not taken steps to resolve these conflicts in accordance with the Goal 5 Rule, or with recommendations in the plan itself. Objectors also indicate that the County's "conflict resolution" document simply postpones the resolution of conflicts by recommending a negotiation phase and because interim protection (which is also recommended) has not been implemented.

2. Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the sand and gravel plan and zone designations given to a site known as the Pudding Creek Heronry. Since this site is within the Willamette River Greenway, please refer to the Goal 15 section of this report for details about these objections.

3. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willametter Rivers. Inasmuch as this site is within the Willamette Greenway Boundary, the objections are presented in greater detail in th Goal 15 section of this report.

Response to Objections

1. Objectors are correct that Lane County has taken no action to resolve conflicting uses for Russel Creek Basin, based on its own ESEE consequences analysis.

2. The response to the objections regarding the Pudding Creek Heronry is presented in the Goal 15 section of this report.

3. The response to the objections regarding the Confluence Heronry is presented in the Goal 15 section of this report.

Conclusion: Requirement 4 has not been satisfied.

Adequate implementing measures have not yet been adopted for the Confluence Heronry, Pudding Creek Heronry, or Russel Creek Basin.

Conclusion - Goal 5

Lane County does not comply with Goal 5.

Lane County has compiled inventory information for most Goal 5 resource categories and has made (1A), (1B) and (1C) decisions, based on this information. Conflicting uses for most categories have been analyzed. Based upon this work, the County has made protection/nonprotection decisions and has adopted plan policies and applied several implementing measures to many Goal 5 sites. Most noteworthy of these implementing measures are the County's riparian setback and vegetation maintenance standards, its groundwater protection provisions, and its Natural Resource zone. However, there are a number of deficiencies in the County's Goal 5 element which must be corrected before acknowledgement can be granted. These deficiencies have been summarized in the previous sections of this report.

In order to comply with Goal 5, Lane County and the Cities of Springfield and Eugene must:

1. Mineral and Aggregate Resources: Apply the Goal 5 process to sites zoned SG which are not included on the County's (1C) inventory and, based on an analysis of the ESEE consequences of conflicting uses, either (1) add them to the (1C) inventory if justified, or (2) rezone the sites for other uses.

2. Fish and Wildlife Habitats:

   a. Amend the Natural Resource Zone to include riparian setback and vegetation maintenance standards.

   b. Amend the C-1, C-2, C-3, M-1, M-2, M-3, and RG zones to either (1) include riparian setback and vegetation maintenance standards, or (2) incorporate by reference another section of the Lane Code which contains such standards.

   c. Apply riparian setback and vegetation maintenance requirements along lakes and Class II streams, or otherwise justify not providing such protection, based on an ESEE consequences analysis of conflicting uses.

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.

   e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.(*)

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

i. Carry out Forest Lands Policy 17 (Plan, p. 10) by identifying sites that are considered more important than commercial timber management activities, based on a Goal 5 ESEE consequences analysis, and adopt appropriate implementing measures to protect and/or resolve timber management conflicts with those sites, consistent with that policy.

4. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.(*)

5. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

6. Historic Sites:

   a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

   b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

7. Oregon Recreation Trails:

   a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

b. Adopt policies to:

(1) Cooperate with ODOT in the protection of existing trails; and

(2) Coordinate with ODOT in applying the Goal 5 Rule during any future identification, or establishment of proposed trail segments.

8. Scenic Rivers and Waterways:

a. Amend the Recreational Resources Working Paper to recognize that:

(1) Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir are within the designated State Scenic Waterway system; and

(2) The portions of the Alsea River, and Steamboat Creek that are on the federal potential list are also on the state list of potential scenic waterways.(*)

b. Amend Open Space and Scenic Areas Policy 5 (p. 17) to also indicate that the County will coordinate with appropriate state and federal agencies in applying all applicable steps of the Goal 5 Administrative Rule in studying rivers for possible designation and in actually selecting wild and scenic rivers for designation.(*)

9. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflict-resolution recommendations contained in the Metro Plan Update Working Paper.

Note: Those IOTC's which pertain only to Lane County are followed by an asterisk (*).

Suggestions for Plan and Implementing Measures Improvement

It is suggested that on or before the first plan update, Lane County:

1. Amend the plan to inventory the recently designated wilderness areas (Rock Creek, Cummins Creek, Three Sisters Additions, Diamond Peak Additions, and Waldo Lake).

2. Amend page 28 of the Flora and Fauna Working Paper to indicate that not all sites on federal land are necessarily protected (i.e., there may be conflicts with sites unless they are formally protected by the federal resource agency).

3. Amend Flora and Fauna Policy 7 to indicate that in evaluating (1B) wetland sites for possible inclusion on its (1C) inventory, information sources besides the National Wetlands Inventory will be used.

4. Adopt implementing measures to carry out Flora and Fauna Policy 9 (requiring residential building permits in Big Game Range areas to include a note indicating that the site is in Big Game Range and conflicts may occur).

GOAL 15: WILLAMETTE RIVER GREENWAY

This Goal 15 report is divided into two major parts. The first part is the review for all areas within the Willamette Greenway Boundary in Lane County outside the Metro Plan Boundary. The second part is for those Greenway areas inside the Metro Plan Boundary, but outside the Metro UGB.

PART I--GREENWAY AREAS
OUTSIDE THE METRO PLAN BOUNDARY

Inventory

Lane County has adopted a Willamette Greenway Working Paper which states (p. 7) that inventories of various Greenway resources are contained in the Greenway Plan. This Greenway Plan is incorporated into the Working Paper by reference (p. 7). As noted in the 1981 review of the Lane County plan and ordinances, the County's Greenway inventories are contained in its Greenway Technical Report, and are summarized in its Greenway Plan. This information was determined to adequately address the fifteen resource topics listed in Section B of Goal 15.

Greenway Boundary

Lane County has displayed the LCDC-approved Greenway Boundary on both its plan maps and its zoning maps, as required under sections E.1 and F.1 of the Goal. The boundary is clearly labeled and, for the most part, its location is accurately drawn. However, there are several minor inconsistencies on map Nos. 304, 304A, 305, 347, 437, and 528. The boundary is not shown on map Nos. 330, 332, 396, 411, 417, 418, 425, 440, 448, 471, 1005, 1006, 1008, 1010, 1011, 1012, and 1013.

The recently adopted Willamette Greenway Working Paper (p. 8) states that the Greenway Boundary is correctly displayed in the County's Greenway Plan and in the Eugene-Springfield Metro Area General Plan (which supercedes the 1990 Plan).

The County notes that the separate subarea plans and diagrams are being replaced by single documents for Coastal and Inland Regions. The Greenway is in the Inland Region (p. 8). The County indicates that in future documents, the LCDC-approved Greenway Boundary maps will be referenced and the Boundary will be shown on the Plan Diagram (p. 8).

Section 16.254(1)(j) of the Lane Code (the Greenway Development Ordinance) states that the boundaries for the Willamette River Greenway are those adopted by the Land Conservation and Development Commission in 1977, together with any changes when and as approved by LCDC.

Policies

Lane County has adopted 37 policies address the Willamette Greenway (Plan, pp. 33-35). These policies address all Use Management Considerations of Goal 15 (Section C.3.). Among these policies are the following:

1. Maintain and support continuation of existing uses within the Greenway Boundary.

2. Intensification and change of use of lands within the Greenway Boundary shall remain compatible with the protection, conservation and enhancement of the natural, scenic, historic, agricultural, economic and recreational qualities of the Willamette River Greenway Program.

3. Recognize that the Greenway consists of a multitude of resources and due to continued growth, 100 percent protection to all resources will never be realized.

4. Protect, conserve and preserve important economic uses such as, but not limited to agriculture, sand and gravel, tourism and recreation, fish and wildlife, urban lands and timber within the Greenway.

5. Maintain sufficient water flows to support water uses such as municipal, agricultural, industrial, natural resources (i.e., fish, aquatic life, wildlife) and recreation within the Greenway.

6. Prioritize water quality management controls along the Coast Fork and the Main Stem, especially in the Metropolitan area.

7. Acquisitions for Greenway purposes must be consistent with noninterference or interruption of farm uses.

8. Recognize that DOT cannot condemn for a scenic or use easements of lands devoted to farm use; however, easements may be given by owners of lands being used for farm purposes.

9. Protect water rights and access to the river for irrigation purposes.

10. Development shall be directed away from the river, to the greatest degree possible.

11. A setback line shall be established in order to protect, maintain, preserve and enhance the natural, scenic, historic and recreational qualities of the Greenway.

12. The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or, is not covered by the FPA, then with an approved plan under the Greenway compatibility review provisions. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

13. Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resource.

14. Where feasible, point bar removal shall be accommodated by temporary access points.

15. In assessing the impact which an extraction and/or processing operation has on the natural and cultural attributes of the Greenway, the County shall require (within its realm of authority) mining methods which reduce or mitigate adverse impacts, as well as considering the economic and other benefits which will accrue in both short and long terms.

16. Aggregate operations occuring within the Greenway shall comply with the provisions of applicable state statutes and local zoning ordinances in regard to safety, operational standards, public review, reclamation and protection of Greenway values.

17. The relationship between the demand for the resource and the amount and location of land available for aggregate extraction and/or processing shall be closely monitored, so as to ensure the future availability of aggregate material in close proximity in conjunction with the industry and state and local efforts.

18. Protect vegetation resources which are identified as having unique recreational, aesthetic, scientific or wildlife habitat values. Encourage acquisition of these areas or obtain a protective scenic easement.

19. The County shall require to the maximum feasible extent the protection of the vegetative fringe within the Greenway, and shall require the re-establishment of vegetative cover where it has been significantly removed during the land development process.

20. Conserve the rural character of the river bank as a primary objective within the Greenway.

21. Encourage a river-related mixture of industrial, commercial, residential and public land uses where appropriate in the Greenway.

22. In instances where a public agency has acquired productive farmlands or other resource lands as long-range reserve for recreational use, if possible, such property should be leased back for agricultural or other resource use until it is required for public purposes.

23. Provide and encourage use of public lands within the Greenway.

24. Accommodate public access to the river and to public lands within the Greenway by:
    a. Controlled, clearly designated, access points;
    b. Establishment of an integrated system of safe river lands, hiking and cycle paths, and public roads leading in and out of the Greenway at strategic locations;
    c. Use of a limited number of access points, each with improved facilities, good roads and high-visibility connectors.

25. Provide appropriate levels of police protection in those areas subject to public use.

26. Encourage additional police security for private and publicly owned lands within the Greenway.

27. Protect, conserve or preserve the scenic and recreational qualities of the land within the Greenway Boundary.

28. Public recreation use areas shall be located in or near the more populated urban areas and shall emphasize access to the river.

29. The sensitivity of lands within the Greenway shall determine the level of human activity.

30. Recreation development shall include a variety of river-oriented opportunities in urban areas but shall be limited in rural areas to those river-oriented recreation uses that are compatible with the sensitive character of the river and other important resources.

31. Consider and minimize the possibility that public recreation use might disturb adjacent private property owners.

32. Scenic easements shall not be acquired through the exercise of the power of eminent domain on lands in farm use.

33. Control vehicle access to the river.

34. Consider and adopt policies that would not hinder the physically handicapped from using public recreation facilities within the Greenway Boundary.

35. Emphasize public access to the river in the metropolitan area and other urban areas which discouraging upland access in rural areas.

36. Measures should be taken to minimize disturbance to private property, including the implementation of programs to eliminate trespass and vandalism on private lands and destruction of ecological fragile areas.

37. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Sections C.3.d. and C.3.i. of the Goal. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Mineral and Aggregate Policy 11 also addresses mineral and aggregate sites within the Greenway:

> Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Section C.3.i. of the Goal. Major adverse effects of extraction on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, scenic quality, noise, and safety are to be minimized, and such values reclaimed where possible. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

As discussed in the Goal 5 section of this report, the policy fails to reference Section C.3.d. of Goal 15 regarding the protection of significant fish and wildlife habitats. Therefore, the policy is inconsistent with Goal 15 as well as with the County's Greenway Policy 37.

Plan Designations

In the 1981 review of Lane County's Greenway element, the Commission determined that plan designations in subarea plans, the 1990 Plan, and the County Greenway Plan were inconsistent in several locations. The new Greenway Working Paper explains that subarea plans in the Greenway are

being replaced by the Inland Region document, whose Plan Diagram will show land use designation "in a manner consistent with other County and metro area plan documents" (p. 8). See the Goal 2 section of this report for further discussion regarding the County's plan designations.

Implementing Measures

Included in the Lane Code are Greenway Development Permit procedures for the review of certain land use activities in the Willamette River Greenway (Lane Code, Section 16.254). A Greenway Development Permit is required for any new intensification, change of use or development, including public improvements and partitions and subdivisions. The County's ordinance defines the terms "intensification," "change of use," and "development" consistent with definitions contained in Goal 15.

Section 16.254(2) of the Lane Code lists those uses and activities that do not require a Greenway Development Permit. All are consistent with Goal 15 except subsections (a) and (k). Subsection (a) exempts uses "where the location is within areas designated as 'urban' on Greenway maps adopted by the Oregon Land Conservation and Development Commission and is beyond 150 feet of the ordinary low waterline." As noted in the 1981 denial order for Lane County, any intensification, change of use or development in "urban" Greenway areas, as defined in Goal 15, and as designated in the ODOT Greenway Plan, is subject to local Greenway review. (Note: The term, "urban" as used in the context of Goal 15 is not the same as that used in Goal 14. In this case, "urban" refers to designations in the ODOT Greenway Plan). However, as noted in the 1981 review of the County's ordinance, there was only one area where this provision applies--just outside of the Cottage Grove UGB. The County has not requested that LCDC change the designation of this area from "urban" to "rural" nor has it deleted Section 16.254(2)(a).

Subsection 16.254(2)(k) exempts the propagation of timber or the cutting of timber for public safety or personal noncommercial use or where the harvest is consistent with an approved permit under the FPA "(i) for a farm woodlot of less than 20 acres, or (ii) consistent with recommendations made by" ODOT to the Department of Forestry, designed to address Goal 15, Sections c-h. It is acceptable to exempt timber propagation and harvest for public safety or personal noncommercial use, under Goal 15. However, subsection (i) in the second part of subsection (k) appears to be based on language in the Greenway Interim Order. Such language was eliminated in the adoption of Goal 15. Subsection (ii) of subsection (k) has no procedure for implementation, since, according to the Department of Forestry's directive for operations in the Greenway, it can make recommendations to operations regarding Greenway concerns, but cannot enforce them.

A decision to approve a Greenway Development Permit--where one is required by the Code--requires findings that the proposed intensification, change of use or development conforms to certain criteria, guidelines and setback requirements set forth in Sections 16.254(3)(a), (b), and (c), respectively. Specifically, the "criteria" in subsection (a) include the following:

(i) The development protects or enhances the existing vegetative fringe between the activity and the river. Where such protective action is shown to be impractical under the circumstances, the maximum landscaped area or open space shall be provided between the activity and the river and the development provides for the re-establishment of vegetative cover where it will be significantly removed during the process of land development.

(ii) Public access to and along the river either is not necessary or the necessary access will be provided by appropriate legal means.

(iii) A development which is mining or a mineral extraction and/or processing operation must include mining or extraction and/or processing methods which reduce or mitigate adverse impacts to the natural and cultural attributes of the Greenway.

Affirmative findings of compatibility with the Willamette River Greenway "based on due consideration and the relative importance" of guidelines must also be made. These "Guidelines" under subsection (b) are as follows:

(i) Preservation and maintenance of land designated "agricultural" in the adopted Willamette River Greenway Plan for farm use and minimize interference with the long-term capacity of lands for farm use.
(ii) Protection, conservation or preservation of significant scenic areas, viewpoints and vistas.
(iii) Protection, preservation, rehabilitation, reconstruction or restoration of significant historic and archeological resouces.
(iv) Preserve areas of annual flooding, floodplains and wetlands.
(v) Protection, conservation or preservation of areas along the alluvial bottomlands and lands with severe soil limitations from intensive development.
(vi) Consideration of the impacts from consumptive uses of water (i.e., domestic, agriculture, industrial) and nonconsumptive uses (i.e., recreation and natural resources) in efforts of maintaining sufficient flows to support water users.
(vii) Sustenance and enhancement of water quality by managing or controlling sources of water pollution from uses such as: domestic and industrial wastes, agricultural and timber runoff, septic tank seepage, gravel operations and other intermittent sources.
(viii) Maintenance and sustenance of natural riparian vegetation found upon the lower alluvial bottomlands and upper terrances bordering the river for the following reasons: provide habitat, food and shade for wildlife; protect natural areas; anchor river bank soils and protect agricultural land from seasonal erosion; ensure scenic quality and screening of uses from the river; control trespass; and to control pollution sources to the river.

(ix) Harvesting of timber in a manner that wildlife habitat, riparian and other significant vegetation and the natural scenic qualities of the Greenway will be preserved, conserved or restored and otherwise result in only the partial harvest of timber beyond the vegetative fringe.
(x) Minimize vandalism and trespass.
(xi) Location of nonwater dependent and nonwater related development away from the river.
(xii) Compatibility with the site and surrounding area.
(xiv) Protection of significant fish, wildlife habitat and natural areas.
(xv) Protection and conservation of lands designated aggregate resources within the adopted Willamette Greenway Plan.

It must be noted that compliance with these "Guidelines" is to be judged based on their "relative importance." However, there is no clear guidance as to how "relative importance" will be determined. This is particularly a problem where Goal 15 requires certain types of resources to be protected, regardless of other completing values (e.g., significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints) (Goal 15, Sections C.3.d., a., and e.). To the extent that the County's "Guidelines" do not require protection of such areas, the County's Greenway ordinance does not comply with Goal 15.

Section 16.254(c) requires new intensifications, developments and changes of use to be set back 100 feet from ordinary high waterline of the river "except for those in conjunction with a water related or water dependent use" (emphasis added). Exceptions to this requirement shall be allowed when affirmative findings are made to satisfy two criteria:

(i) The proposal would provide better protection, maintenance, preservation and enhancement of the natural, scenic, historic and recreational qualities of the Willamette River Greenway than would occur by observance of the setback requirment; or
(ii) The protection, maintenance, preservation and enhancement of the natural, scenic, historic and recreational qualities of the Willamette River Greenway are not applicable to the proposal.

It should be noted that, according to the Goal, only water-dependent and water-related intensifications, developments, or changes of use themselves are exempt from Greenway setback requirements. However, Lane County also exempts uses in conjunction with water-related and water-dependent uses. As noted in a number of other reviews, this is inconsistent with the Goal, since it would allow a number of uses to be exempt from the setback which are not envisioned by the Goal. The County's ordinances also identify two ways in which exceptions to the 100-foot setback are permitted. One of these is if a proposal would provide better protection of Greenway values, and the other is if such protection is not applicable to the proposal. The Goal does not permit exceptions to the setback, except for water-dependent and water-related uses, even if a proposal might enhance Greenway values. This is because the intent of the Goal is to keep structures separated from the river and

to protect areas immediately adjacent to the river for water-dependent and water-related uses. For example, a restaurant, including landscaping and other amenities may, in the opinion of a Hearings Officer, enhance Greenway values. However, it is not, by definition, a water-related or water-dependent use and therefore is not permitted within the established Greenway setback.

The Commission amended its administrative rule on exceptions to set forth standards for taking exceptions to the Greenway setback. These standards apply to urban areas only. The Commission did not adopt standards for taking exceptions to the setback requirement in rural areas. It should be pointed out that juridictions may structure their Greenway ordinances to permit establishment of a setback on a case-by-case basis, as long as it meets the requirements of Section C.3.k. of the Goal. Alternatively, jurisdictions may adjust established setback standards through the plan amendment process.

Conditions may be imposed in conjunction with a Greenway Development Permit, as necessary (Section 16.254(4).

Section 16.254(5) sets forth the application and review procedure by a Hearings Officer for Greenway Development Permits.

Section 16.254(6) requires the County to notify the Department of Transportation when an application is made. The ordinance does not require the County to also notify that agency of actions taken on an application. This is required by Goal 15 (Section G).

As noted in the Goal 7 section of this report, Lane County has adopted adequate flood hazard provisions.

Objections

1. The Oregon Department of Transportation (ODOT), Parks and Recreation Division, has objected to an inconsistency between the inventoried aggregate sites within the Greenway, and those which are shown on plan maps and designated Sand/Gravel. ODOT states there are a number of aggregate sites in the ODOT Greenway Plan which are not included in the County's inventory. Further, the County's plan maps show a Sand/Gravel designation for some areas which are not in the County's aggregate sites inventory, according to objectors.

2. ODOT objects because of the lack of an inventory of sites for potential acquisition within the Greenway. ODOT points out that this is required by Section E.3. of the Goal, and that the ODOT Greenway Plan identifies such areas.

3. ODOT objects because Plan Policy 7 conflicts with Goal 15. Policy 7 states that acquisitions for Greenway purposes must be consistent with non-interference or interruption of farm uses. ODOT points out that Goal 15 is intended to protect farm uses, but does not prohibit farmland acquisition for public Greenway purposes. Objectors believe Policy 7 also conflicts with Policy 24 (which encourages development of a system of river access points).

4. ODOT objects because Policy 8 and Policy 32 are inconsistent with ORS 390.334, which allows condemnation of scenic easements on farmland. Objectors recommend that the policies be deleted or amended to be consistent with that statute.

5. ODOT objects to the County's inadequate compatibility review provisions for commercial timber harvest. Objectors indicate adequate provisions are a requirement of Goal 15. Further, ODOT believes the zoning ordinance fails to carry out Policy 12.

6. ODOT objects because Policy 13 is inconsistent with Policies 2, 4, 18, 20, 21, 23, 24, 27, 29 and 37. ODOT indicates that Policy 13 appears to give the highest use protection to sites designated and zoned for sand and gravel. However, objectors state that Policy 13 does not consider Greenway river processes and values.

7. ODOT objects to Policies 28, 30 and 35 because they conflict with Policy 24. Specifically, Policies 28, 30, and 35 call for a Greenway public access program aimed at serving urban residents in urban areas, and discouraging access to the river in the more attractive rural settings with greater recreational amenities. Policy 24 calls for a system of access points and trails, which is inconsistent with Policies 28, 30 and 35, according to ODOT.

8. ODOT objects to the lack of an inventory of "significant natural and scenic areas and vegetative cover," as required in Section B, Subsection 6 of the Goal. Without such an inventory, ODOT believes Policies 2, 4, 11, 12, 18 an 27 an the zoning ordinance "cannot be carried out with consistency.

9. ODOT objects to Section 16.254(2) (Exemptions from Permits) of the County's zoning ordinance. Objectors believe it should be deleted. Specifically, subsection (k) exempts certain timber harvest operations from Greenway Development Permit requirements. ODOT believes all commercial timber harvest activities must obtain such a permit. Objectors point out that the Forest Practices Act (FPA) notification does not cover scenic, recreational or historical impacts of harvesting. The Comprehensive Plan requires ODOT to make recommendations to the Department of Forestry (DOF). However, objectors point out that DOF is not required to act on ODOT's recommendations. Objectors feel this establishes a complex and misleading enforcement process.

10. ODOT objects to the County's Greenway setback provisions because it does not believe exceptions to the 100-foot requirement should be allowed unless criteria in LCDC's Exception Rule for the Greenway are met.

Response to Objections

1. Goal 15 (Section B.2) requires Greenway jurisdictions to inventory "all current aggregate excavation and processing sites, and all known extractable aggregate sources." The Goal also requires local

plans to be consistent with the ODOT Greenway Plan, which shows the location of such sites. ODOT has not specified which aggregate sites have been omitted from the County's inventory which are included in the ODOT Greenway Plan. In the 1981 review of Lane County's plan, the Commission found the County's inventory of Greenway sites to be adequate. The County has adopted this inventory by reference as part of its new Working Paper for the Greenway. ODOT is correct that a number of sites which are not included on the County's inventory of aggregate sites have been given a sand and gravel plan and zone designation, however. As indicated in the Goal 5 section of this report, the County has not justified such designations. This is more of a Goal 5 than a Goal 15 concern, however.

2. Aquisition sites were inventoried by Lane County in its 1981 Greenway Plan. In its 1981 review of that plan, the Commission found that inventory to be in compliance with Goal 15. The County has adopted its Greenway Plan by reference as part of its new Greenway Working Paper. Therefore, the objection is not sustained.

3. ODOT is correct that the Goal does not prohibit acquisition of farmland for public Greenway purposes. However, Section C.4.b. of the Goal indicates that areas to be acquired must "to the maximum extent practicable, be consistent with non-interference or non-interruption of farm uses as defined in ORS Chapter 215.203(2)." Policy 7 indicates such acquisitions must be consistent with non-interference or non-interruption of farm uses. While Policy 7 certainly carries out the intent of Section C.4.b. of the Goal, ODOT is apparently concerned that neither the County nor ODOT would be able to acquire farmland for Greenway purposes in the future unless Policy 7 is modified to use the term "should," rather than "shall." ODOT is also concerned that because Policy 7 is so restrictive, Policy 24 cannot be carried out, since it calls for providing public access to the river and public lands through access points, establishment of river lands, hiking and cycle paths, and public roads. There is no Goal violation in County Policy 7 being more restrictive and protective of farmland than the Goal, unless this restrictiveness prevents the County from meeting other Goal requirements or carrying out other policies. While Policy 7 certainly limits the County's options (as well as ODOT's options) in implementing Greenway programs, there are other means available, short of acquiring land which results in interfering with, or interrupting farm uses. The County is therefore urged, but not directed, to modify Policy 7 to use the term, "should," rather than "shall."

4. ODOT is incorrect in its interpretation of ORS 390.334. That provision (particularly subsection (2)) expressly prohibits the use of condemnation for acquiring scenic easements on farmland in the Greenway. Therefore, County Greenway Policy 32 is consistent with ORS 390.334. The objection is not sustained.

5. Lane County's Greenway Policy 12 states:

> The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or if not covered by the FPA, then with an approved plan under the Greenway compatibility review provisons. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

This above policy language repeats language in Goal 15, Section C.3.1. Section 16.254(3)(ix) of the Lane Code specifies that affirmative findings must be made, including "Harvesting of timber in a manner that wildlife habitat, riparian and other significant vegetation and the natural scenic qualities of the Greenway will be preserved, conserved, or restored and otherwise result in only the partial harvest of timber beyond the vegative fringe." This is consistent with Goal 15. However, Section 16.254(2)(k) of the ordinance specifically exempts certain harvest activities, not consistent with the Goal. These problems are addressed in the response to ODOT's objection 9.

6. Greenway Policy 13 states:

> Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resources.

Policies 2, 4, 18, 20, 21, 23, 24, 27, 29, and 37 are aimed at preserving other values in the Greenway (e.g., vegetation, fish and wildlife habitat, scenic qualities, recreational opportunities), and where appropriate, balancing such uses with the need for sand and gravel resources. Policy 13 in and of itself would not preclude protection of other Greenway values present. Presumably, the County's Greenway ordinance should ensure that extraction will not occur unless adequate safeguards for other resources are provided. Policy 13 simply indicates that uses that are incompatible with extraction activities will not be permitted on sites that are either active, zoned, or designated for aggregate extraction or processing. This policy presumes that the plan and zone designations for aggregate extraction and processing have been applied appropriately. However, even if the plan and zone designations are applied correctly, the policy does seem to ignore the fact that such operations can be allowed only if they are conducted in a manner consistent with the Goal's intent of protecting natural, scenic, historic, and recreational values. Other plan policies for the Greenway do express this, however (e.g., Policies 2, 3, 4, 15, 16, and 37). Therefore, the objection is not sustained. However, it is recommended that the policy be clarified to indicate that such operations are still subject to local Greenway Permit review or must be conducted in a manner consistent with the protection of other Greenway values.

7. Policy 24 states:

> Accommodate public access to the river and to public lands within the Greenway by:
> a. Controlled, clearly designated, access points;
> b. Establishment of an integrated system of safe river landings, hiking and cycle paths, and public roads leading in and out of the Greenway at strategic locations;
> c. Use of a limited number of access points, each with improved facilities, good roads and high-visibility connectors.

Policies 28, 30, and 35 are:

> Public recreation use areas shall be located in or near the more populated urban areas and shall emphasize access to the river.
>
> Recreation development shall include a variety of river-oriented opportunities in urban areas but shall be limited in rural areas to those river-oriented recreation uses that are compatible with the sensitive character of the river and other important resources.
>
> Emphasize public access to the river in the metropolitan area and other urban areas while discouraging upland access in rural areas.

Section C.3.b. of Goal 15 indicates that recreational needs must be provided for, but must be consistent with the carrying capacity of the land, must not substantially interfere with the long-term capacity of the land for farm use, and must minimize disturbance to adjacent property. Section C.3.c. of Goal 15 indicates that adequate public access to the river shall be provided for, with emphasis on urban and urbanizable uses. County Policies 24, 28, 30, and 35 are consistent with these Goal directives. The objection is not sustained.

8. As indicated earlier, the County's inventory of Greenway values and resources is the same as the one submitted and reviewed in 1981. The Commission found the inventory to be adequate.

9. ODOT is in error in requesting that the entirety of Section 16.254(2) be deleted from the Greenway ordinance. The Goal 15 definitions of "intensification," "change of use" and "development" specify certain uses and activities that may be exempt from local Greenway permit review. Most of Lane County's exemptions are consistent with the Goal and are similar to those exempted by other Greenway jurisdictions whose plans and ordinances have been acknowledged by the Commission.

ODOT is correct, however, that subsection (k), which exempts certain kinds of timber harvest activities, is inappropriate. That subsection is consistent with the Greenway Interim Order, but the Goal itself does not exempt such activities from local Greenway review. It has been the Commission's practice to allow propagation of timber or cutting of timber for public safety or personal non-commercial use to be exempt from local Greenway permit review. To that extent, the first part of subsection (k) is acceptable. However, the second part (which exempts harvest activities if consistent with an approved permit under the FPA, for a farm woodlot less than 20 acres, or if consistent with recommendations of ODOT to DOF), is not. Therefore the objection is only partly sustained.

10. ODOT is correct that the County's Greenway setback exceptions are not consistent with the Goal. However, ODOT is not correct in suggesting that the LCDC Exception Rule be followed to allow such exceptions. This is because the Commission's Exception Rule contains criteria for taking exceptions to the Greenway setback requirement in urban areas only. Therefore, they do not apply to most of the Lane County planning area.

PART II--EUGENE/SPRINGFIELD METROPOLITAN AREA OUTSIDE THE METRO UGB

In August 1982, the Commission reviewed and acknowledged the Eugene/Springfield Metro Area Plan for lands within the Metro UGB. However, the cities of Eugene and Springfield as well as Lane County were granted a continuance for lands within the UGB but within the Metro Planning Area Boundary in order to comply with Goal 15 (as well as several other Goals).

The following section of this report analyzes Lane County's responses to the Goal 15 'in-order-to-comply" requirements contained in the August 1982 staff report, adopted by the Commission.

Requirement

1. Ensure that the LCDC-approved Greenway Boundary is shown or referenced in the appropriate subarea plans.

Response

As noted in Part I of this report, the County is replacing subarea plans with two documents--one for the Coastal region and one for the Inland Region. The Greenway is within the Inland Region. The County indicates in its Greenway Working Paper (p. 8) that the LCDC-approved Greenway boundary will be referenced in that document and the Boundary will be shown on the Plan Diagram. Please refer to Part I of this Goal 15 report for a discussion of the County's plan and zone maps and the extent to which they correctly display the Greenway Boundary.

Mining and processing activities in the Greenway must comply with provisions in the County's Greenway ordinance, including the following:

> A development which is mining or mineral extraction and/or processing operation must include mining or extraction and/or processing methods which reduce or mitigate adverse impacts to the natural and cultural attributes of the Greenway (Section 16.254(3)(a)(iii)).

In addition, affirmative findings of compatibility must be made with regard to a number of "Guidelines," including those addressing the protection of scenic and historic resources, areas of flooding and wetlands, the protection and enhancement of water quality, maintenance of natural riparian vegetation, erosion, protection of significant fish and wildlife habitat and natural areas, and compatibility with the site and the surrounding area (Section 16.254(3)(b)).

At the same time, Guideline (xv) calls for protection and conservation of lands designated aggregate resources within the adopted Willamette Greenway Plan. However, Section 16.254(3)(b)(i) through (xv) are "Guidelines" and compliance with them is to be judged according to their "relative importance." To this intent, the County does not have a clear procedure for assuring protection of significant fish and wildlife habitat areas within the Greenway on sites that also have sand and gravel resources. This is most evident in two particular areas--the Confluence Heronry and the Pudding Creek Heronry. Both have unquestionably significant wildlife resources present, and both contain significant aggregate resources. Application of plan policies, the Greenway ordinance, and various other zones does not result in clear policy direction for these sites. In that respect, the conflicts between these various resource uses have not been resolved.

Conclusion

Requirement 8 has not been satisfied.

Lane County has not adopted satisfactory procedures for carrying out Requirements C.3.d. and C.3.i. of Goal 15.

Requirement

9. Amend the Metro Area General Plan or the Lane County Willamette Greenway Plan to assure that land use designations are consistent.

Response

A new Metro Area General Plan Map was submitted as part of the 1982 Metro Plan review. It corrects the inconsistencies identified in 1981.

Response

The County has adopted the following Greenway policies regarding sand and gravel extraction and significant fish and wildlife habitats (Plan, pp. 33-35):

4. Protect, conserve, and preserve important economic uses such as, but not limited to agriculture, sand and gravel, tourism and recreation, fish and wildlife, urban lands, and timber within the Greenway.

13. Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resource.

14. Where feasible, point bar removal shall be accommodated by temporary access points.

15. In assessing the impact which an extraction and/or processing operation has on the natural and cultural attributes of the Greenway, the County shall require (within its realm of authority) mining methods which reduce or mitigate adverse impacts, as well as considering the economic and other benefits which will accrue in both short and long terms.

16. Aggregate operations occurring within the Greenway shall comply with the provisions of applicable state statutes and local zoning ordinances in regard to safety, operational standards, public review, reclamation and protection of Greenway values.

17. The relationship between the demand for the resource and the amount and location of land available for aggregate extraction and/or processing shall be closely monitored, so as to ensure the future availability of aggregate material in close proximity to urban areas and other points of use. Such monitoring shall be conducted in conjunction with the industry and state and local efforts.

18. Protect vegetation resources which are identified as having unique recreational, aesthetic, scientific or wildlife habitat values. Encourage acquisition of these areas or obtain a protective scenic easement.

37. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with sections C.3.d. and C.d.i. of the Goal. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Conclusion

Requirement 4 has been satisfied.

Lane County has adopted "shall" policies regarding sand and gravel extraction and significant fish and wildlife habitats in the Greenway. However, as noted in Part I of the Goal 15 section of this report, as well as in several of the following sections, not all of them have been implemented consistent with Goal 15.

Requirement

5. Adopt policies that address Sections C.3.h., j., and k. of Goal 15 (regarding timber resources, development away from the river, and Greenway setback).

Response

The following Greenway policies have been adopted by Lane County (Plan, pp. 33-35):

10. Development shall be directed away from the river, to the greatest degree possible.

11. A setback line shall be established in order to protect, maintain, preserve and enhance the natural, scenic, historic and recreational qualities of the Greenway.

12. The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or, it not covered by the FPA, then with an approved plan under the Greenway compatibility review provisions. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

Conclusion

Requirement 5 has been satisfied.

Lane County has adopted Greenway policies that adequately address Sections C.3.h., j., and k. of the Goal.

Requirement

6. Amend Section 10.322 of the Lane Code to require either:

a. Greenway permits in areas designated "urban" beyond 150 feet of ordinary low water.

b. Some other mechanism which ensures protection of Greenway values in "urban" areas beyond 150 feet of ordinary low water.

This could also be accomplished by LCDC amendment of the DOT Greenway Plan to change the designation of the area south of the Cottage Grove UGB from "urban" to "rural."

Response

As indicated in the 1981 denial of the County's Greenway ordinance, any intensification, change of use or development in "urban" Greenway areas, as defined in Goal 15 and designated in the ODOT Greenway Plan, must either be reviewed locally according to Greenway Permit review procedurs or must comply with other measures designed to ensure protection of Greenway values. (Note: The term "urban" as used in the context of Goal 15 is not equivalent to "urban" as used in Goal 14, or to areas within UGB's. In this case, "urban" refers to designations in the ODOT Greenway Plan. In Lane County, there is land outside the Cottage Grove UGB which has an "urban" designation in the ODOT Greenway Plan.)

The County's Greenway Working Paper recommends requesting that the "urban"/"rural" boundary line be relocated to coincide with the adopted UGB of Cottage Grove (p. 10). However, neither the County nor ODOT have reguested LCDC change this designation.

As noted in the Metro Area Acknowledgment Report, approved by LCDC in August 1982, Section 10.322-15(1)(b) of the Lane Code was amended so that it no longer distinguishes between "rural" and "urban" areas.

Conclusion

Requirement 6 has been satisfied.

The Greenway Ordinance has been amended to require Greenway permits or other measures in "urban" areas beyond 150 feet of ordinary low water.

Requirement

7. Apply EFU zoning to all agricultural lands in the Greenway (see also the Goal 3 section of this report).

Response

The County has not applied EFU zoning to 85 acres of agricultural lands on the "Confluence Island." Instead, the majority of this land is zoned "sand and gravel." All other agricultural lands in the Greenway have been zoned EFU.

Conclusion

Requirement 7 has not been satisfied.

Requirement

8. Adopt a procedure for minimizing the impacts of sand and gravel extraction on significant fish and wildlife so that the Goal's requirements (Section C.3.d. and C.3.i.) are met.

Response

Section C.3.d. of Goal 15 states: "Significant fish and wildlife habitats shall be protected."

Section C.3.i. states that aggregate extraction:

> . . . may be permitted when compatible with the purposes of the Willamette River Greenway, and when economically feasible, subject to compliance with ORS 541.605 to 541.695; ORS 517.750 to 517.900 and subject to compliance with local regulations designed to minimize adverse effects on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise, safety, and to guarantee necessary reclamation.

Lane County has adopted several plan policies which address this issue. The first set of policies address Section C.3.d. They include the following:

> Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Sections C.3.d. and C.3.i. of the Goal. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose (Greenway Policy 37).

As noted earlier (in the Mineral and Aggregate portion of the Goal 5, and the previous section of the Goal 15 sections of this report), Mineral and Aggregate Policy 11 is similar, except that it refers only to Section C.3.i. of Goal 15 for the protection of significant fish and wildife habitat areas. Section C.3.d. is the appropriate section of this Goal regarding significant habitat areas, whereas Section C.3.i. covers other less significant habitat areas and is less protective than Section C.3.d. (i.e., it requires only that the impacts of mining are minimized). Section C.3.d., on the other hand, requires that all significant habitat areas to be protected. The County needs to amend Mineral and Aggregate Policy 11 to be consistent with Goal 15 as well as with Greenway Policy 37.

The second set of Greenway policies address Section C.3.i. of the Goal, since they are aimed at minimizing the impact of any intensification, change of use, or development on Greenway values (e.g., Policies 2, 5, 15, 16, 18, 19, 27, 29).

Mining and processing activities in the Greenway must comply with provisions in the County's Greenway ordinance, including the following:

> A development which is mining or mineral extraction and/or processing operation must include mining or extraction and/or processing methods which reduce or mitigate adverse impacts to the natural and cultural attributes of the Greenway (Section 16.254(3)(a)(iii)).

In addition, affirmative findings of compatibility must be made with regard to a number of "Guidelines," including those addressing the protection of scenic and historic resources, areas of flooding and wetlands, the protection and enhancement of water quality, maintenance of natural riparian vegetation, erosion, protection of significant fish and wildlife habitat and natural areas, and compatibility with the site and the surrounding area (Section 16.254(3)(b)).

At the same time, Guideline (xv) calls for protection and conservation of lands designated aggregate resources within the adopted Willamette Greenway Plan. However, Section 16.254(3)(b)(i) through (xv) are "Guidelines" and compliance with them is to be judged according to their "relative importance." To this intent, the County does not have a clear procedure for assuring protection of significant fish and wildlife habitat areas within the Greenway on sites that also have sand and gravel resources. This is most evident in two particular areas--the Confluence Heronry and the Pudding Creek Heronry. Both have unquestionably significant wildlife resources present, and both contain significant aggregate resources. Application of plan policies, the Greenway ordinance, and various other zones does not result in clear policy direction for these sites. In that respect, the conflicts between these various resource uses have not been resolved.

Conclusion

Requirement 8 has not been satisfied.

Lane County has not adopted satisfactory procedures for carrying out Requirements C.3.d. and C.3.i. of Goal 15.

Requirement

9. Amend the Metro Area General Plan or the Lane County Willamette Greenway Plan to assure that land use designations are consistent.

Response

A new Metro Area General Plan Map was submitted as part of the 1982 Metro Plan review. It corrects the inconsistencies identified in 1981.

Conclusion

Requirement 9 has been satisfied.

Requirement

10. Amend the Lane County Greenway ordinance to ensure that the only erosion control activities that are exempt from Greenway review are those for emergency situations, safety, and protection of property.

Response

Lane County's Greenway ordinance has been amended so that the only erosion control activities that are exempt from Greenway Permit review are those "erosion control operations required in emergency situations for the safety and protection of property" (Lane Code, Section 16.254(2)(f)).

Conclusion

Requirement 10 has been satisfied.

Objections

1. A number of objections have been received regarding the County's treatment of the 300-acre area known as "Big Island" or "Confluence Island" at the confluence of the McKenzie and Willamette Rivers. Specifically, 1000 Friends of Oregon, League of Women Voters of Central Lane County (LWV), Harold Chapman, and Lane County Audubon Society have objected because the County has failed to provide adequate protection for the great blue heron rookery on the island. The heronry is one of the largest in the Willamette River Basin (about 55 nests) and is identified in the State Natural Heritage Inventory. Objectors point out that the County has zoned the site for sand and gravel use except for the heronry itself and an unspecified buffer area. Objectors feel this is not only inadequate, but also fails to carry out specific in-order-to-comply requirements adopted by the Commission. Specifically:

    a. Objectors note that Goal 15 (Section C.3.a.) requires that agricultural land in the Greenway be protected. Further, the denial order of Lane County's plan issued in 1981 as well as the 1982 continuance order for the Eugene/Springfield Metro Area specified that EFU zoning had to be applied to all agricultural lands in the Greenway. Several objectors have provided information demonstrating that a large portion of the island contains soils which are SCS Class II and IV. The area has been farmed historically, and about 85 acres are currently farmed. The County has not applied EFU zoning to all these areas. Some areas with these soils are zoned Natural Resource, but the majority are not. Instead, they have been zoned for sand and gravel.

b. Objectors believe that the County has not demonstrated that a minimum 300-foot buffer around the rookery will be adequate to protect the rookery. Objectors point out that Section C.3.d. of Goal 15 requires protection of all significant habitats in the Greenway. Objectors state that the compromise reached and which was adopted by the County was based on incorrect information about the location of the rookery, and therefore a larger area is needed for protection of the site itself. Objectors further point out that, on many occasions, the Commission has indicated that fish and wildlife areas and habitats include nest sites as well as other areas important to the species, including impact areas. Evidence submitted by objectors suggests that buffers of even 450 feet are inadequate and would result in abandonment of the site. Herons react to disturbances up to about 700 feet, according to research submitted by objectors.

c. Objectors also indicate that the County has failed to recognize the importance of providing adequate future habitat (available nest trees) in the event that existing nest trees (which are older and more susceptible to windthrow) are lost. Objectors point out that such habitat is being lost at a rapid rate along the Willamette River system. Objectors note that it is "absolutely necessary to preserve as many of the inland big trees as possible "because the island is eroding on the east side and water is undercutting nest existing trees, and because there are few places for the herons to relocate. The north end of the island (which is to be protected) is subject to windthrow.

d. Objectors indicate that the County has not adopted any implementing measures to minimize the impacts of sand and gravel extraction on this significant habitat area, so that Sections C.3.d. and C.3.i. of Goal 15 are met as specified in the 1981 denial order for Lane County and the 1982 continuance order for the Metro plan. Specifically, objectors point out that Section C.3.i. requires measures designed to minimize adverse effects on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise safety, and to guarantee necessary reclamation. Policy 11 contains this language but the Greenway Development permit criteria requires only that extraction reduce or mitigate adverse impacts to the natural attributes of the Greenway. Objectors indicate that the County's Sand and Gravel Zone also does not contain criteria which address the specific concerns listed in Section C.3.i. of Goal 15.

e. In the 1982 continuance order for the Metro Plan, LCDC specified that the ESEE consequences of designating the island for sand and gravel had to be evaluated in the context of regional aggregate supply and demand. Objectors contend that this has not been done, and (based on data in the County's own plan), they provide information demonstrating that in the Metro Area, supply is 10 to 20 times the demand for aggregate to the

year 2000. In the island alone, there is about five to ten times the total Metro Area demand to the year 2000. Therefore, objectors contend that the County cannot demonstrate the need to zone Big Island for sand and gravel extraction.

f. Objectors indicate that the entire island is within the floodway as determined by FEMA. County adoption of the current zoning for the island was based on a misunderstanding that the island was in the floodway fringe. Objectors indicate that a sand and gravel operation on the island will require dikes and other protective construction projects. FEMA standards do not normally permit dikes or other above-grade type development to be constructed in a floodway. Objectors also point out that Goal 7, Guideline 2 indicates that uses that do not require protection through dams, dikes and levies should be given preference over uses requiring such protection.

g. Objectors contend that the noise from a sand and gravel operation on the island would not be compatible with the purpose of the Greenway relative to a County park on the opposite bank. This is the only site with public access to the river in a natural state in the River Road-Santa Clara area.

2. A number of objections have been received regarding the County's treatment of the Pudding Creek Heronry on the Middle Fork of the Willamette River, within the Willamette Greenway. Specifically, Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon, League of Women Voters of Central Lane County (LWV), and Lane County Audubon Society have objected to the Sand and Gravel Zone designation applied to the site.

Objectors point out that this great blue heron rookery is one of the largest in the Greenway and in Western Oregon (54 nests in 31 trees), and is on the State Natural Heritage Inventory. The site is within the Metro Planning area but outside the UGB. Objectors note that the heronry is recognized by the Lane Council of Governments (LCOG) as a significant wildlife resource. Objectors state that, during 1983, extensive negotiations occurred between Lane County, ODFW and the Wildish Land Company regarding the site, and that a land trade agreement was drafted in order to protect the heronry. Objectors point out that the Metro Plan Update Addendum indicates that a "Natural Resource" plan designation is to be applied to the site and buffer area and that land exchange is to be the means to resolve sand and gravel use conflicts. However, objectors indicate that Lane County has not zoned the rookery for natural resource protection and instead has applied Sand and Gravel zoning.

Several objectors note the similarity between the Pudding Creek Heronry and the Big Island Heronry (i.e., both are in the Greenway, and both have sand and gravel operation conflicts). Objectors note Goal 15 requirements regarding protection of significant fish and wildlife habitats and conditions which must be satisfied in order to allow mining activities.

Several objectors note that the County's failure to evaluate the Pudding Creek Heronry site in terms of the Goal 5 Administrative Rule process also violates Goal 5 as well as LC 10.205-05 and Ordinance 16.217 (Sand, Gravel and Rock Products Zone, SG-RCP). The Code states that the SG-RCP Zone shall only apply to sites which have been evaluated consistently with the Statewide Planning Goal 5 Administrative Rule conflict resolution process.

Response to Objections

1. Many of the objections regarding the Big Island Confluence Heronry are valid. Specifically,

   a. Objectors are correct that EFU zoning has not been applied to the 85 acres of agricultural lands on Big Island. Goal 15 (Section C.3.a.) requires this to be done.

   b. There is no evidence in the County's policies or implementing measures that a 300 foot buffer around the heron rookery was adopted, although such a buffer was proposed in the Metro Plan update document. Objectors are correct, however, that there is not sufficient information in that document as to why a 300 foot buffer--as opposed to a 400 foot or 700 foot buffer (for example) is adequate to protect the heronry. This is particularly true if, as objectors point out, such a proposed buffer was based upon incorrect information about the location of the rookery.

      On the other hand, objectors have indicated what buffer distances would not be acceptable, but have not recommnded a specific buffer in this case. In light of these facts, the objection is sustained in part. If sand and gravel extraction is to be permitted on the island, the County needs to reexamine what would constitute an adequate buffer for protection of the rookery, based on accurate locational information, and based on advice from objectors as well as ODFW biologists. Based on this re-examination, the County needs to adopt justification for an appropriate buffer, and must adopt such a buffer in plan policies and implementing measures for the site (see, however, response (e) below).

   c. Objectors are correct that the County has not discussed the importance of providing future habitat, such as trees in the inland portion of the island, although the County does recognize that the entire island has habitat value. The County needs to address this when developing a program to protect the site.

   d. Objectors are correct that neither the SG Zone nor the County's Greenway ordinance clearly require protection for significant wildlife habitats, such as the Confluence Heronry. Objectors are correct in saying that the Greenway ordinance does not contain provisions for carrying out Section C.3.i. of Goal 15, inasmuch as it is unclear that extraction will be allowed to occur only if certain conditions are met (these are spelled out

in Section C.3.i. of the Goal). The ordinance refers to most of the topics in Section C.3.i. in its "Guidelines" but does not relate these guidelines to aggregate extraction activities per se. It only requires that findings of compatibility be made based on the "relative importance" of individual Guidelines in any given case. This is not sufficient to ensure that Sections C.3.d. and C.3.i. of Goal 15 will be achieved. Objectors are not correct that Mineral and Aggregate Policy 11 contains adequate assurance, since it fails to reference Section C.3.d. of Goal 15.

e. Objectors are correct that the ESEE consequences analysis for designation of the island did not take into account the regional aggregate supply and demand, although the County's analysis does indicate that "from 3-7 times the amount of land needed for urban aggregate consumption during the planning period has been allocated for this use" (p. V-7). Objectors are correct that the County has not demonstrated a need to zone the island for sand and gravel extraction.

f. Objectors are correct that the entire island is within the floodway. However, this is not a Goal 15 compliance issue, per se, since Goal 15 simply requires floodplain zoning of all areas subject to flooding. As noted in the Goal 7 section of this report, this has been accomplished. Such zoning, plus FEMA regulations will limit activities that can take place on the island.

g. The County has not assessed the impact of noise from a sand and gravel operation in the County park on the opposite bank. However, this would be required according to Sections 16.254(3)(a)(iii) and (3)(b)(xiii) of the Greenway ordinance.

2. Goal 15 (Section C.3.d.) states: "Significant fish and wildlife habitats shall be protected" (emphasis added). Section C.3.i. of the Goal addresses aggregate extraction, and indicates that it "may be permitted when compatible with the purposes of the Willamette River Greenway, and when economically feasible, subject to compliance with ORS 541.605 to 541.695; ORS 517.750 to 517.900 and subject to compliance with local regulations designed to minimize adverse effects on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise, safety and to guarantee necessary reclamation."

Although the heronry is a significant Goal 5 resource as well as a significant Goal 15 resource, the requirements of Goal 15 are stricter than those for Goal 5 and the Goal 5 Administrative Rule. Goal 15 requires protection of significant fish and wildlife habitats; it does not allow the "balancing" that is permitted under Goal 5, based on specific circumstances and ESEE consequences of conflicting uses. Extraction in the Greenway may occur only when certain criteria are satisfied. In no instance can it occur if it results in non-protection of a significant habitat area.

There is apparently some confusion as to the actual zoning of the Pudding Creek Heronry, based on the comments and objections received, the various plan and zoning maps submitted for review, and information from the Planning Department itself. This is probably due to the fact that the zoning of the site has changed several times. The plot maps submitted indicate that part of the Pudding Creek Heronry site has been zoned for sand and gravel extraction, and part has been zoned NR. However, the Planning Department indicates that the entire site is zoned SG (Jim Mann, personal communication, July 17, 1984). Criteria in the County's Sand and Gravel Zone and Greenway ordinance do not ensure that the requirement of Section C.3.i. of Goal 15 will be satisfied for reasons discussed earlier. The adopted background materials which analyze the conflicts and ESEE consequences for the site call for protection of the heronry. There is no basis for SG zoning of the entire site, not is there any basis for the current configuration of NR zoning and SR zoning shown on the plot maps. There is no assurance that this configuration would be adequate to protect the heronry. The objections are sustained.

It should be noted that in 1983, extensive negotiations took place between the landowner, Lane County, ODOT, and ODFW for resolution of these conflicts. A proposal for a land exchange (involving land in a nearby state park being rezoned for sand and gravel, and the rookery to be zoned for protection) was drafted, but never executed. The draft proposal was not submitted as part of this current review, but a review of the proposal submitted informally to DLCD by LCOG indicates that, if adopted, it would satisfy Goal 5 and 15 concerns. Other implementing strategies and measures may also be available which would satisfy these Goals as well.

Comment

Wildish Land Company supports the County's plan and zone designations for the Pudding Creek Heronry, as submitted. Wildish (the property owner) indicates that, although the LCOG Working Paper, "Natural Resource Areas: Conflict Resolution for Significant Areas," recommends a land exchange or transfer of mining rights in order to resolve conflicts, redsignation and rezoning proposals were part of a preliminary draft and unadopted addendum to the Working Paper. To date, there has been no land exchange or rezoning. Wildish indicates that Policy 32 of the Environmental Resources Element of the Metro Plan simply requires further study of this issue. Wildish indicates that such a study has been completed and a decision made. The Mineral and Aggregate Resources Element of the County Plan specifies that the Goal 5 Rule will be followed (Policy 1, p. 13). Wildish indicates that LC10.205-10 of the Sand, Gravel and Rock Products Zone implements this policy.

Response

As noted earlier, while the Pudding Creek Heronry is a significant Goal 5 resource, it is also a significant Goal 15 habitat area. As such, the more restrictive standards of Goal 15 must be applied (i.e., the rookery

must be protected). Mining can occur only if the rookery is protected and other Goal 15 criteria are met. Contrary to the Wildish Land Company's statement in its letter, the County must be directed to amend its plan and implementing measures to protect the site.

Conclusion - Goal 15

Lane County does not comply with Goal 15.

Lane County has made many improvements to its Greenway element, in terms of both policies and implementing measures. However, there remain several deficiencies which must be corrected in both the rural plan element and in the Metro Planning Area outside the Metro UGB, in order to fully satisfy Goal 15. Summaries of these deficiencies have been presented in the previous subsections of this report.

In order to comply with Goal 15, Lane County and the Cities of Eugene and Springfield must:

1. Amend zoning maps 304, 304A, 305, 330, 332, 347, 396, 411, 417, 418, 425, 437, 440, 448, 471, 528, 1005, 1006, 1008, 1010, 1011, 1012, and 1013 to display the correct LCDC-approved Greenway Boundary.

2. Amend the Greenway ordinance to clearly require protection of significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints, per Sections C.3.d., a., and e. of the Goal.

3. Amend Section 16.254(2)(k) of the Greenway Ordinance to eliminate all language following the phrase, "or personal noncommercial use."

4. Amend Section 16.254(c) of the Lane Code to ensure that only water-dependent and water-related uses themselves are exempt from the 100-foot Greenway setback requirement.

5. Amend Section 16.254(6) of the Lane Code to require notification of ODOT of actions taken on applications for intensification, change of use or development in the Willamette Greenway.

6. Amend Section 16.254(2)(a) of the Greenway Ordinance to require either:

   a. Greenway permits in areas designated "urban" beyond 150 feet of the ordinary low water line, or

   b. Some other mechanism which ensures protection of Greenway values in these areas.

   (Note: This could also be accomplished by LCDC amendment of the ODOT Greenway Plan by changing the designation of the area south of the Cottage Grove UGB from "urban" to "rural.")

7. Adopt implementing measures that protect the Pudding Creek Heronry.

8. Adopt implementing measures that protect the Confluence Heronry.

In order to comply with Goal 15, Lane County must:

Modify Mineral and Aggregate Resources Policy 11 to also reference Section C.3.d. of Goal 15 to ensure protection of significant fish and wildlife habitats in the Willamette Greenway.

Suggestions for Plan and Implementing Measures Improvement

It is suggested that, by the first plan update, Lane County:

Amend Greenway Policy 13 to indicate that such operations are subject to local Greenway Permit review, or (alternatively) they must be conducted in a manner consistent with protection of other Greenway values.

Lane County's Nonresource Lands Process (Part II)

In the Lane County Acknowledgment Review of June 29, 1984, Lane County's Nonresource/Nonexception Lands designation process is reviewed. Information presented in the June 29 review includes (1) the County's plan policies for designating lands as nonresource/nonexception and applying residential densities to these lands (Policies 16(a) and 17, respectively, Plan, p. 4) and (2) the "general criteria" for determining nonresource lands contained in the County's marginal lands working paper (Marginal Lands Working Paper, pp. 7-9).

The County's process for determining that Goals 3 and 4 do not apply was found to be consistent with applicable Goal requirements. The information regarding Lane County's nonresource/nonexception lands contained on pages 47 through 50 of the June 29 review is considered Part I of a two part review of the issue. Part II of the review consists of an evaluation of six site specific areas for which information has been adopted indicating that these six areas qualify for the nonresource/nonexception designations.

The County's findings and record regarding these six areas were submitted for review in two parts. Part I was submitted with the rest of Lane County's plan on May 24, 1984. On June 25, 1984, Part II of the County's record regarding nonresource/nonexception lands was received by the Department. The information received on June 25, 1984, was adopted by the Lane County Commissioners without proper notification of objectors as required by OAR 660-03-032(1) (Expedited Review Requirements).

Therefore, Lane County must satisfy the requirements of OAR 660-03-032, before the Commission can formally accept relevant findings contained in materials submitted for review on June 25, 1984.

Evaluation of the Six Site Specific Areas Found to Qualify as Nonresource by the County

Lane County indicates that (1) Agate Creek Planned Unit Development (Wolf), (2) McKenzie Ridge (Thurmond), (3) Addition to Dillard and Highlands (Hemmenway), (4) Second Addition to Dillard Highlands (Hemmenway), (5) Meltebeke's on Van Duyn Road, and (6) Cerro Gordo (Canfield) qualify as nonresource lands. In assessing whether these six areas do qualify as lands for which Goals 3 and 4 do not apply, the Department found that in some cases, a determination could be made based on the information submitted in May of 1984. In other cases, the information submitted on June 25 was necessary to complete the record. The Department also found that adequate justification to support the County's "nonresource" claim for a couple of the areas in question was lacking despite the additional June 25 information. The following matrix will assist in clarifying this issue discussed above:

	Original Submittal (5-24-84)		Supplemental Findings (6-25-84)	
	Adequate	Deficient	Adequate	Deficient
1. Agate Creek PUD		X	X	
2. McKenzie Ridge	X			
3. Addition to Dillard Highlands		X	X	
4. Second addition to Dillard Highlands	No information submitted			X
5. Meltebeke's on Van Duyn Road	X			
6. Cerro Gordo	X			

Agate Creek Planned Unit Development (PUD)

This proposal is for 16 lots to be developed in two stages. Findings for this designated nonresource site consist of two pages of supplementary findings, the official public hearing notice and a memorandum to the Lane County Hearings Official from staff member George Currin regarding the PUD (5/5/83). Contained in the "original submittal" (5-24-84) is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. A statement that the "majority of soils on the subject property possess no woodland suitability." (NOTE: reference is made to an "Attachment A"--LCPC staff report PZC-82-190. This attachment was not furnished as part of the original submittal.)

2. Statements are provided indicating that 1) no site characteristics are present which make this site desirable for open space, 2) no mineral or energy resources are present, 3) no known ecological or scientifically significant natural areas are identified, 4) designation of this land for non-resource will not affect management of the land for wildlife habitat, 5) this site does not contain or impact scenic areas, 6) the site is not part of a water area, wilderness, wetland, groundwater resource area, or watershed, or 7) this site is not part of a known historical area or a potential or approved recreation trail or scenic waterway. (Supplementary Findings);

Contained in the "supplemental findings" of June 25, 1984, is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. Lane County Planning Commission Staff Report of November 9, 1982, which indicates the following:

   a. Lane County staff agrees that SCS Class I-IV Soils are not predominantly found on this property.

   b. This land is identified by the Lane County Wildlife Habitat Inventory as "sensitive" big game habitat.

   c. The applicant is in error that the suggested big game habitat density is one dwelling per 40 acres. It is one dwelling per 80 acres in sensitive big game areas.

2. LCDC Goal Requirement Report (Attachment A-November 9, 1982)

   a. The subject property is 53 percent nonagricultural soils. Attachment A to this LCDC Goal Compliance Report, which is referenced, indicates that of the 78 acres in question, 41 acres are SCS Class VI, 25 acres Class IV and 12 acres Class III (p. 1).

   b. A perched water table, poor soils, and steep slopes are given as reasons why this land is not "other land" suitable for farm use. SCS Soils OR-1 sheets are provided for each soil which generally support the County's position (p. 1).

   c. The County indicates that this land is not other lands necessary to permit farm practices to be undertaken on adjacent or nearby lands because none of the adjacent or nearby lands are engaged in farm use as defined by the ORS (p. 2).

   d. Regarding Goal 4, the County indicates that the land in question is composed of 59 percent (48 acres) of soils that have no woodland suitability for commercial forest uses. Only Dixonville Soil, which is cubic foot site Class 4, is capable of supporting commercial forest species.

   e. The County states that the parcel is not "other forested" lands needed for other resource uses listed in the Goal 4 definition. Specifically, the property has not been identified as needed for any of the other uses except big game habitat (p. 3). The issue of whether this land is forested land needed for big game habitat is addressed under a Goal 5 statement on page 4; the following statement is provided:

      > While the subject property is not shown on the Lane County Comprehensive Plan Inventory as significant fish or wildlife habitat or habitat for any endangered or threatened species, the Department of Fish and Wildlife has noted that this property is located in habitat for black-tail deer. The concerns of the Department of Fish and Wildlife can be addressed in

	Original Submittal (5-24-84)		Supplemental Findings (6-25-84)	
	Adequate	Deficient	Adequate	Deficient
1. Agate Creek PUD		X	X	
2. McKenzie Ridge	X			
3. Addition to Dillard Highlands		X	X	
4. Second addition to Dillard Highlands	No information submitted			X
5. Meltebeke's on Van Duyn Road	X			
6. Cerro Gordo	X			

Agate Creek Planned Unit Development (PUD)

This proposal is for 16 lots to be developed in two stages. Findings for this designated nonresource site consist of two pages of supplementary findings, the official public hearing notice and a memorandum to the Lane County Hearings Official from staff member George Currin regarding the PUD (5/5/83). Contained in the "original submittal" (5-24-84) is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. A statement that the "majority of soils on the subject property possess no woodland suitability." (NOTE: reference is made to an "Attachment A"--LCPC staff report PZC-82-190. This attachment was not furnished as part of the original submittal.)

2. Statements are provided indicating that 1) no site characteristics are present which make this site desirable for open space, 2) no mineral or energy resources are present, 3) no known ecological or scientifically significant natural areas are identified, 4) designation of this land for non-resource will not affect management of the land for wildlife habitat, 5) this site does not contain or impact scenic areas, 6) the site is not part of a water area, wilderness, wetland, groundwater resource area, or watershed, or 7) this site is not part of a known historical area or a potential or approved recreation trail or scenic waterway. (Supplementary Findings);

Contained in the "supplemental findings" of June 25, 1984, is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. Lane County Planning Commission Staff Report of November 9, 1982, which indicates the following:

   a. Lane County staff agrees that SCS Class I-IV Soils are not predominantly found on this property.

   b. This land is identified by the Lane County Wildlife Habitat Inventory as "sensitive" big game habitat.

   c. The applicant is in error that the suggested big game habitat density is one dwelling per 40 acres. It is one dwelling per 80 acres in sensitive big game areas.

2. LCDC Goal Requirement Report (Attachment A-November 9, 1982)

   a. The subject property is 53 percent nonagricultural soils. Attachment A to this LCDC Goal Compliance Report, which is referenced, indicates that of the 78 acres in question, 41 acres are SCS Class VI, 25 acres Class IV and 12 acres Class III (p. 1).

   b. A perched water table, poor soils, and steep slopes are given as reasons why this land is not "other land" suitable for farm use. SCS Soils OR-1 sheets are provided for each soil which generally support the County's position (p. 1).

   c. The County indicates that this land is not other lands necessary to permit farm practices to be undertaken on adjacent or nearby lands because none of the adjacent or nearby lands are engaged in farm use as defined by the ORS (p. 2).

   d. Regarding Goal 4, the County indicates that the land in question is composed of 59 percent (48 acres) of soils that have no woodland suitability for commercial forest uses. Only Dixonville Soil, which is cubic foot site Class 4, is capable of supporting commercial forest species.

   e. The County states that the parcel is not "other forested" lands needed for other resource uses listed in the Goal 4 definition. Specifically, the property has not been identified as needed for any of the other uses except big game habitat (p. 3). The issue of whether this land is forested land needed for big game habitat is addressed under a Goal 5 statement on page 4; the following statement is provided:

      > While the subject property is not shown on the Lane County Comprehensive Plan Inventory as significant fish or wildlife habitat or habitat for any endangered or threatened species, the Department of Fish and Wildlife has noted that this property is located in habitat for black-tail deer. The concerns of the Department of Fish and Wildlife can be addressed in

that a clustering of dwelling through a Planned Unit Development will significantly minimize the impact on black-tail deer habitat. Such a development will offer better protection to the habitat than scattering dwellings on the acreage which could occur under current land divisions. The dwelling density allowed under this proposal will not exceed the overall dwelling to acre ratio of 1-40 recommended by the State Fish and Wildlife Department for this type of black-tail deer habitat. The overall dwelling to acre ratio will not be exceeded in that the habitat in question is only a part of the total black-tail deer habitat in this area. Adjacent habitat areas will be maintained due to other prime forest land qualities. It is preferable to accommodate dwellings in this location given the poor resource soils and impact of surrounding development than on surrounding lands which are not impacted or of marginal capability.

With regard to the Fish and Wildlife Department's concern about deer damage to gardens and shrubs and the state's obligation to respond to complaints, the applicant will include deed provisions with all sales of property that black-tail deer inhabit the area and that the associated risks should be recognized.

Objection

1000 Friends of Oregon objects to the claim that Goals 3 and 4 do not apply to the Agate Creek PUD because the findings submitted on March 15, 1984, fail to address Goal 3. Regarding Goal 4, 1000 Friends objects to the conclusion that "the majority of soils on the subject property possess no woodland suitability" without specific soils and specific acreages as supportive evidence.

In addition, specific referenced attachments were not included in the County's original submittal of May 24, 1984.

Response to Objection

This objection is partially sustained. 1000 Friends' objection is generally correct with respect to the information contained in the original May 24, 1984, submittal. However, objectors will find that their specific objection is addressed by the Supplemental Findings submitted for review on June 25, 1984.

Conclusion for Agate Creek PUD

The claim that Goals 3 and 4 do not apply is not sustained.

Substantial evidence is provided in the record supporting the claim that Goals 3 and 4 do not apply to the property in question and that Goal 5 big game habitat value will be protected through clustering provisions.

McKenzie Ridge (also known as Camp Creek Ridge)

This PUD proposal would establish 79 dwellings on 385 acres of land north of Springfield.

Information in the record includes: (1) an affidavit by the applicant, Robert E. Thurmond, detailing the history of and expenses incurred for this development; and (2) a statement of findings, reasons and conditions. This latter statement includes findings addressing all applicable Statewide Planning Goals as well as applicable County requirement and conditions of approval.

This particular claim that Goals 3 and 4 do not apply to this property has been previously before LUBA and the Commission in Osborne v. Lane County [LUBA No. 81.107].

In their March 18, 1982 decision, LUBA found and the Commission affirmed, that the land in question is not subject to Goal 3 because it is not agricultural land be definition. Also, LUBA found that this land is not subject to Goal 4 primarily because the land is not predominantly forested nor suitable for commercial forest use.

Objection

1000 Friends objects to the McKenzie Ridge PUD because the assumptions regarding the interpretation of soils information are correct. The County has relied totally on SCS soils maps even though such maps can be incorrect.

Response to Objection

This objection is not sustained.

Objectors do not present any specific information regarding the property in question to justify invalidating the Commission's earlier decision in Osborne v. Lane County.

Conclusion for McKenzie Ridge

The County's decision indicating that Goals 3 and 4 do not apply to the 385 acres in question is sustained (see Osborne v. Lane County [LUBA No. 81.107]) and the County's finding contained in the May 24, 1984, submittal.

Dillard Highlands Addition

This subdivision is located approximately two miles south of the Eugene city limits. Phase 1 of Dillard Highlands consists of 14 parcels on 100 acres and is "committed" to non-resource use. The second phase of this development consists of 24 parcels.

Findings from the "original" May 24, 1984, submittal supporting this

nonresource/nonexception claim consist of a five-page statement (prepared by David Pedersen and Associates for applicant David Hemenway) titled "Application For Addition to Dillard Highlands Subdivision."

Information from the "original" submittal (5-24-84) relevant to the requirements for substantiating that Goals 3 and 4 do not apply are as follows:

1. A statement indicating "that the predominant soils on the property consist of:

   Dixonville-Philomath Hazelair complex (SCS Class VIe); Philomath SC (SCS Class VIs; Panther CL (SCS Class VIw) and Witzel CL (SCS Class VIs). These non-agricultural soils comprise approximately 92% of the subject property. A small patch (about 10 acres) of Hazelair soils is located on 20-30% slopes on the northern edge of the proposed division. These soils have SCS Classes IVe, subject to severe erosion (Pederson Statement, p. 3).

   Reference is made to an attached soils map which was not forwarded as part of the original submittal (May 24, 1984).

2. Regarding the "other land suitable for farm use" and "lands in other classes which are necessary to permit farm practices to be undertaken on adjacent or nearby lands," the following statement is provided:

   > This land does not meet the second definition of agricultural land. That is, it cannot be used for farm use (the current employment of land for the primary purpose of obtaining a profit) nor is it related to the continuation of agricultural activities on adjacent or nearby lands. Other lands in this area are either developed as rural residential or have physical characteristics similar to the subject proprty: gently rolling to steep terrain, a predominance of SCS Class VI soils and little if any potential "farm use". In addition, there is very little physical connection between the subject property and surrounding lands because of the variation in topography. Thus, even if farm use were possible on nearby lands, this proposal would not impact on or adversely affect such activities.
   >
   > In summary, the subject property is not agricultural land either in terms of its soil classification or its relationship to other surrounding lands. The surrounding lands are also not agricultural lands as defined by Goal 3 (Pedersen Statement, p. 4).

3. In response to Goal 4 requirements, statements are made that (1) the subject property has no timber site class ratings; (2) that it is predominantly open land; (3) that adjacent lands are similar in character and not used for commercial forest purposes; (4) that other forest uses (i.e., watershed protection, wildlife and fisheries

habitat, recreation, extreme conditions of climate, forested lands in urban and agricultural areas) are not applicable or present on the subject property.

In support of the above statement, the following is provided:

The general area slopes south and east towards Dillard Road and Camas Swale. It contains no rivers or creeks and only a small water natural drainage channel flows southeast towards Dillard Road and into Camas Swale. This drainage basin has no watershed value, nor would the proposed subdivision at the low densities proposed impact on any watershed if one were present. The subject property lies in a low, open area surrounded by steep hillsides. The Significant Vegetation and Wildlife Areas working paper indicates that the vegetation on the property is not unique and contains no elements which contribute to making it a signicant Wildlife Area.

4. Additional statements are provided indicating that (1) the subject property has not been considered for nor does it have recreational value; (2) no extreme climatic conditions exist; (3) this land is not needed for open space, wind breaks; and (4) no scenic values are present on the property.

Contained in the "supplementary findings" submittal of June 25, 1984, are (1) a chart titled "Soil Types on Dillard Highlands, 1st Addition," (2) a SCS Soils map for the subject property, and (3) a soils investigation report apparently prepared by Lane County including soils maps. The chart is relevant to the review of this proposed nonresource site summarized as follows:

1. The chart indicates that of the approximately 107 acres of the Dillard Highlands, 1st Addition, (a) 31.5 acres consists of the Dixonville-Philomath-Hazelaire Complex which has no woodland suitability and has SCS Class IVe agricultural soils; (b) 27 acres consists of Panther Silty Clay Loam which has no woodland suitability and has SCS Class VIw agricultural soils; and (c) 22.4 acres consists of Hazelaire Silty Clay Loam which has not woodland suitability and has SCS Class IVe agricultural soils.

   Of the approximate 107 acres, only 2.6 acres have a woodland suitability while only 22.4 acres are SCS agricultural suitability Class IV.

Objections

1000 Friends of Oregon objects because the findings presented are actually conclusionary statements for which supporting factual information is lacking.

Response to Objection

This objection is not sustained. Additional soils information contained in the supplementary findings submitted for review on June 25, 1984 supports the statements presented by the County in their original submittal indicating that Goals 3 and 4 do not apply. (Also see conclusion)

Conclusion for Dillard Highlands Addition

The claim that Goals 3 and 4 do not apply is sustained. Findings contained in the original submittal of May 24, 1984, are supported by information contained in the "supplemental findings" submitted for review on June 25, 1984, of particular significance is the information indicating that only 22.4 acres of the soils present on this property are SCS Class IV with no SCS Class I-III soils and that only 2.6 acres of the 107 acres in question have any woodland suitability rating at all.

Dillard Highlands, 2nd Addition

This proposal involves approximately 154 acres consisting of 29 five acre lots. It is located approximately one third of a mile southeast of the Eugene city limits and the UGB (application for the Second Addition to the Dillard Highlands Subdivision, p. 3).

Findings addressing this proposal were submitted for review on June 25, 1984 (supplementary findings). Included within the County's record for Dillard Highlands 2nd Addition review as lands for which Goals 3 and 4 do not apply is (1) a document titled "Application for the Second Addition to the Dillard Highlands Subdivision," (2) a list of soils with marginal woodland potential, and (3) a soils investigation report (apparently prepared by Lane County) which includes "forest" and "Ag" soils mapping.

Findings indicating why Goal 3 does not apply to the subject property are as follows:

1. Based on SCS soils mapping, the subject property is composed of 53 percent "nonagricultural soils"--Classes V-VIII--Exhibits A, B, and D are referenced.

2. Table 1 on page 11 indicates that 64% of the property is Class I-IV soils.

3. The soils investigation and accompanying "Ag" soils maps appear to indicate that the majority of the property in question is in fact composed of SCS Class I-IV soils. Also, handwritten statements on the "soils investigation report" indicate that "the application is general concerning soils if there are several more than mentioned" (Request for Soils Investigation, pp. 1 and 2).

4. The subject property is not "other lands" suitable for grazing "because of a combination of problems affecting the growth of pasture and the adverse effects of erosion which would accompany the grazing cattle." The County continues its assesssment of agricultural capabilities by stating the following:

The various limitations on grazing described upon the applicable SCS soil sheets include low fertility, strong acidity, seasonal high water table, clayey topsoil susceptible to compaction when wet, summer droughtiness, slow permeability, and susceptibility to erosion. Climatic conditions of winter rainfall and summer drought lead to the aforementioned soils problems and do not lead to favorable grazing conditions. The soils can become very dry in the summer, and given the high cost of drilling wells and the restricted grazing time, the prospect of irrigation for this purpose is rendered infeasible now and in the future. Existing rural residential land use patterns within the area and the subject property's proximity to the Metropolitan area make it most valuable for rural residential development. The technological and energy inputs required to farm the subject property due to the combination of soils and slope render it not farmable by a reasonable and prudent farmer for the primary purpose of obtaining a profit in money. Even if there were accepted farming practices which made grazing profitable on this site, the erosion potential of this activity makes this property unsuitable for grazing (Application for Dillard Highlands 2nd Addition, pp. 10 and 12--hereby referenced on Application).

5. The subject property is not lands in other classes necessary to permit farm practices to be undertaken on adjacent or nearby lands "as none of the adjacent lands are engaged in farming practices" (Application, p. 12).

Findings indicating why Goal 4 does not apply to the subject property are as follows:

1. In assessing whether this land is lands composed of existing and potential forest lands which are suitable for commercial forest uses the County indicates that of the 154 acrs, 57 acres is composed of Site Class III (site index 140), 31 acres is composed of Site Class IV (site index 110), 43 acres is composed of noncommercial forest lands, 18 acres is used for utility easements, and 5 acres is "deemed" as necessary lands for management (Application, p. 14). The County indicates that for this discussion, Site Class 125 (borrowed from Douglas County) was used to assess commercial forest land suitability (Application, p. 16).

   The County concludes that "only 57 acres, or 37 percent of the subject property has any commercial forest potential" (Application, p. 16).

2. The soils investigation and accompanying "Forest" soils maps indicate that additional soils not discussed by the County exist on the subject property (Request for Soils Investigation, pp. 1 and 2).

3. The County's "Exhibit F" presents from Forester Bob Hohenhaus an evaluation economic returns from commercial forest production. The County concludes that at the land's purchase price of $2,395,302, the net return from commercial forest production of the Site III and IV land is $217 per acre (Exhibit F, p. 2).

4. The County indicates that subject property is not "other lands" used for watershed protection, wildlife and fisheries habitat, and recreation because (a) no inventories identify it as needed for watershed protection; (b) the area is identified as the "impacted" and thus, not needed for big game habitat as well as not identified as significant habitat for fish or other wildlife species; (c) the subject property has not been identified as needed for recreation (Application, pp. 24-26).

5. In addressing the other aspects of the "Forest Lands" definition, the County indicates (a) that any soil conditions requiring maintenance of vegetative cover will be protected through conditions attached to development approvals, and (b) because the property is not within a UGB or in agricultural land, the "other forested "lands" definition does not apply (Application, pp. 26-27).

Conclusion for Dillard Highlands 2nd Addition

The claim that Goals 3 and 4 do not apply to the subject property is not sustained.

First, evidence is provided indicating that the subject property is predominantly SCS Class I-IV soils and thus subject to Goal 3. (Table 1-p.11, and soils investigation reports). Second, substantial evidence is not provided indicating that Goal 4 does not apply. The County's claim that forest site index 125 can be used to assess the commercial viability of this property is in consistent with its own definition for commercial forest lands. Also, the County's standards for determining income (under the F-2 Zone's woodland suitability test) seems to indicate that the land is potential commercial forest land. The basis for the County's position that this land is not capable of economic forest management (net return of $217 per acre) appears to be based entirely on the land cost (at residential values rather than at forest land value.)

Meltebeke's on Van Duyn Road

This proposal involves the rezoning of 258 acres from a forest zone to GR-10 based on the claim that Goals 3 and 4 do not apply. Buidling sites for 24 dwellings are proposed. This land is part of a larger 598-acre parcel owned by the applicant. Also, a portion of this 258-acre parcel is platted as County View Estates, lots 1 through 5.

Information contained in the original May 24, 1984, submittal includes:

1. A statement titled "Findings Supporting nonresource Designation for Certain Lands of Bob Meltebeke on Van Duyn Road" (with a map Exhibit A, attached).

2. Exhibit B is a copy of the Lane county Planning Commission's findings in support of this zone change.

3. Exhibit C is a map of the subject property depicting its soil types.

4. Exhibit D is a list of the soil types along with each soil's SCS classification and percentage of occurance on the subject property.

5. Lane County Planning Commission--Addendum to Staff Report (8/23/83).

6. Area map depicting the property to be rezoned.

7. Applicant's supplemental statement to the Lane County Planning Commission.

Contained in this "original" submittal is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. That the land is not SCS Class I-IV agricultural lands. Lane County Exhibit B--Lane County Planning Commission (LCPC), Findings of Fact--is referenced. Some of the findings addressing this issue are as follows:

> A detailed soils investigation of the subject property was undertaken for the applicant by Consulting Environmental Sanitarians, Ltd. (See June 21, 1983, transmittal letter from Terry M. Rahe of CES, Ltd. to Bob Meltebeke.) The results of the soils analysis are summarized in the Applicants' Statement at 5-7.)
>
> Only 5.9% of the 258 acres proposed for rezoning are SCS Class I-IV soils.
>
> When the entire Meltebeke ownership of 598 acres is considered together, ony 27.1% has an SCS Class of IV or better (LCPC, p. 2).

2. That the land is not other lands suitable for farm uses . . . suitable for grazing . . . some finding addressing this issue are as follows:

> Almost all of the Bashaw Clay and Conser Silty Clay Loam (Class III and IV soils) occupy the flat field in the northwest portion of the property that is not to be rezoned. These soils have drainage and overflow problems, based upon SCS data. They are subject to winter flooding and are very droughty in summer. (SCS soils tables.)
>
> The Dixonville/Philomath/Hazelaire complex and Panther Silty Clays (Class VI soils) are the predominate soil types. They occupy 33.7 percent of the entire ownership

and 42 percent of the area propoed to be rezoned. These soils have low permeability, low available water capacity, moderate erosion potential, high plasticity, thin and rocky soils, and droughty conditions. They are poorly suited for production of conifers, which tend to suffer from root rot and windthrow. (SCS soils tables.)

The present lessee of the Meltebeke property raises cattle on this and several other tracts in the vicinity. The property is suitable for grazing less than six months a year due to wetness in winter (which causes cattle to destroy the pasture) and dryness in summer (which inhibits growth of grass). (Letter from DuWayne Penfold, July 10, 1983).

The entire Meltebeke property is not a viable economic unit as a farm. It is incapable of producing a cash crop, including grazing of animals, that would be sufficient to cover operating expenses and retire indebtedness on the land. (See letter of Floyd W. Holbrook, Agricultural Management Specialist, August 4, 1983.) (LCPC, p. 3).

On page 9 of "Attachment 2," Meletebeke supplemental zoning App. Statement, the County provides the following assessment of this property's agricultural suitability:

In addition, Floyd Holbrook, Agricultural Management Specialist, has submitted a report stating that, while the property can be grazed, it would be necessary to do intensive clearing and planting, with a resulting production level that would not support an income adequate to retire the debt on the property, based on current farmland values in the area:

"The major problem with improving the property for grazing is that the acreage can not support enough animals in either beef or sheep in order to pay operating expenses and retire the land debt. The main reason for not being able t (sic) support adequate livestock is due to the moisture availability and the shallow soil depth. The soil types are such that fertilizers are restrictedby (sic) chemical bonds and do not allow for maximum pasture production."

"These figures [see letter] clearly show that the subject property will not support an economic unit." August 4 Holbrook letter.

3. That the land is not "lands in other classes . . . necessary to permit farm practices to be undertaken on adjacent or nearby lands. Some findings regarding this issue are as follows:

No adjacent or nearby farmer has voiced opposition to this rezoning proposal.

Dr. Penfold leases Meltebeke land to the northwest of the area to be rezoned. It is a hayfield on which he raises cattle. Dr. Penfold also raises cattle on several other tracts near the Coburg/I-5 interchange.

The Meltebeke property leased by Penfold has little value for grazing, and the proposed rezoning will have little impact on the productivity of the Penfold farm. (Letter of DuWayne Penfold, July 10, 1983.)

The area to the north of the subject property is scrub hillside and part of the Coglietti ranch. The immediately abutting area is not cultivated and receives limited grazing use.

All other agricultural lands are isolated from the subject property by the ridge to the east and south, and the residential land to the west.

A Wildlife Management Plan has been submitted by the Applicant and is a condition on zoning approval. Under this management plan there will be protective corridors running the length of the property which will buffer residential and farm uses. Under the plan animals will be restrained through fencing and deed restrictions.

Purchase of the subject property by adjacent farmers might increase their total income but reduce their return per acre. (Letter of Floyd W. Holbrook, Agricultural Management Specialist, August 4, 1983.)

4. That the land is not inventoried as forest land, not predominantly forested, and is not suitable for commercial forest production. County Exhibit B--Lane County Planning Commission (LCPC)--Findings of Fact--is referenced. Some of the findings addressing this issue are as follows:

   Neither the 258 acres to be rezoned nor the entire 598 acres is inventoried as forest land.

   Neither the 258 acres nor the 598 acres is presently "forested" in the meaning of the goal. A majority of neither acreage is covered with a commercial stand of conifers. Neither is a greater portion of either acreage covered with oak or similar noncommercial species.

   The vast majority of both the 258 acres and the 598 acres has no forest site class at all.

Only 54 acres or 21 percent of the 258 acres to be rezoned has soil with commercial forest potential, and this acreage is in four scattered locations. (Letter from Robert Hoenhaus, Consulting Forester, June 28, 1983.)

5. That the land is not forested land based on the following findings:

The upland areas between the subject property and the crest of the Coburg Hills, which contains the most densely wooded area, will be left in forest use, and will be managed under a management plan submitted by the applicnt's consulting forester.

Wildlife corridors provided in the wildlife management plan will provide protection for wildlife resources. (See Goal 3 findings above.)

The proposed 24 units will be clustered. Clustering will minimize impacts on wildlife and will permit protection of vegetative cover.

Development density will be more than 10 acres per unit on the property to be rezoned, about 30 acres per unit for all the Meltebeke property, and far more than 40 acres per unit in the surrounding area.

Grazing on the dry slopes of the subject property is a use that presently conflicts with goals of protecting vegetative cover and preventing soil erosion.

Conversion of the property to low density, clustered residential use with extensive wildlife corridors under the wildlife management plan will displace grazing, a use that conflicts with vegetation, soil, watershed and wildlife protection, with a use that will improve forest land, open space, wildlife values that the site does possess.

County General Plan Policy 5C13 requires application of Goal 5 conflict-resolution procedures and administrative (OAR 660-16-000) when, as here, the proposed development density is below that recommended by the Oregon Department of Fish and Wildlife for big game (LCPC, Exhibit B, pp. 5-6).

Some information contained in the record, contlicts with the findings adopted by the County. No specific discussion is contained in the "original submittal" clarifying the relationship of this information to that used by the County in making its decision is provided. (However, information contained in the supplemental findings--letter from Rober A. Holenhaus--indicates that the revised proposal of 258 acres excludes the majority forest soils discussed on page two of the "LCPC Addendum."

Relevant information regarding the "Nonresource" claim included in the "supplementary findings" submitted on June 25, 1984, are:

1. An area map showing the proposed 258 acres;

2. An aerial photo and a series of overlays which consists of a soils map, a colored overlay showing "Ag and forest soils" and the development area;

3. A sheet listing specific soils and acreages;

4. A large scale soils map prepared by Terrance Rahe;

5. Another aerial map containing soil lines;

6. A letter from R. Holenhaus, professional forester;

7. A letter from T. Rahe, soil scientist, describing the soils found on the property; and

8. A letter from J. Lockard, SCS District Conservationist, discussing the soil known as the Dixonville-Philomath-Hazelaire complex.

With the exception of a statement indicating that only 54 scattered acres are suitable for commercial forest use (Hoenhaus) specific findings or conclusions were contained in the supplemental findings. This information apparently was supplied to corroborate the statements contained in the "original submittal."

Objection:

1000 Friends of Oregon objects because information in the record contradicts findings that Goal 4 does not apply. Also, the County relies on soils mapping for this determination.

Response to Objection

This objection is partially sustained.

The objectors are correct that information in the record (page 2 of the "Lane County Planning Commission Addendum to Staff Report") indicates that Goal 4 does apply to this land or a portion of the property in question. However, information contained in the supplementary findings of June 25, 1984, addresses this issue (letter from R. Hohenhaus and also personal communication from J. Mann, Lane County Planning Department, 7/16/84).

Regarding the County's reliance on soils mapping, this objection is not sustained. In order to complete inventory requirements for both Goals 3 and 4, most counties have had to rely on such information to satisfy their land use planning obligations. The Commission has found acceptable

on numerous occasions, soils mapping prepared by the U.S. Soil Conservation Service (or other governmental agencies--e.g., BLM) provided it is the best information available at that time.

Conclusion for Meltebecke's on Van Duyn Road

When considering both the original submittal of "May 24, 1984" and the "supplementary findings" of June 25, 1984, substantial evidence is provided to sustain the claim that Goals 3 and 4 do not apply to the 258 acres in question.

Cerro Gordo

This proposal is for 60 residential lots and one common area lot on 604 acres on Dorena Reservoir in southern Lane County. Findings for this designated nonresource site were submitted with the County's original submittal of March 15, 1984, as well as with the supplemental findings submitted on June 25, 1984.

The "original" submittal for Cerro Gordo consists of a number of exhibits which are as follows:

1. A map of the property displaying (a) the nonforest soils, forest soils, and committed lands; (b) ridge lines, Row River Road, and Dorena Lake; and (c) adjacent ownerships and the area zoned RR-10 for which the nonresource claim is made.

2. Findings and conclusions in support of nonresource designation for Cerro Gordo Ranch--CPR Application No. 1102.

This statement consists of 173 pages including a 44 page wildlife management plan, a forest lands assessment by Woodland Management, Inc., an appraisal by Terrance Rahe (registered sanitarian) of the area's suitability for subsurface sewage disposal, and a detailed discussion addressing each Statewide Planning Goal as well as numerous letters generally in support of the proposed development.

The "supplemental findings" (June 25, 1984) for Cerro Gordo consists of (1) a five page document labeled "Incorporation of Applicant's Findings and Conclusions," (2) the "Cerro Gordo Preliminary Cluster Subdivision Plan," as well as (3) a number of letters addressing a range of issues, some of which not directly associated with the Goal 3 and 4 applicability question while others are duplicate information contained in the original submittal.

Contained in the "original" submittal (3-15-84) is the following information addressing the Commission's requirement for substantiating that Goals 3 and 4 do not apply:

1. In addressing Goal 3, the County indicates that 76 acres of the 604 acres consists of soils with SCS agricultural suitability Classes III-IV (12 percent). The dominant soil type (302.6 acres) is the Dixonville-Philomath-Hazelaire Complex (Findings and Conclusions . . ., p. 12).

2. Regarding the other aspects of the Goal 3 defintion, the County indicates:

   a. That there is no evidence of recent agricultural activity;

   b. Due to the lack of rainfall in the summer, the southern exposure of this site and no source for water for irrigation agricultural productivity is limited;

   c. The Dixonville-Philomath-Hazelaire Complex is rated three to six AUMs per acre for grazing and no suitability for crop production while the soils;

   d. Ninety percent of the property products less than ten AUMs of pasture per acre;

   e. Two hundred ten acres (35 percent) of the property is situated on Cerro Gordo Mountain which rises 1,200 feet above the lowest elevation point.

   Based on the preceding findings, the County concluded that the property as a whole would not be an economic farming unit (nor would be purchased for agricultural use) under Goal 3's "other lands suitable for agricultural use . . .definition (Findings and Conclusions . . ., pp. 12-14).

3. Regarding whether this site qualifies as "lands in other classes necessary to permit farm practice to be undertaken on adjacent or nearby lands," Lane County indicates that (a) there are no agricultural lands or agricultural uses in the imediate vicinity of the subject property, (b) Dorena Lake and the ridges of the mountain combine to surround the property, and (c) the nearest agricultural uses are approximately one mile from the property in question. Given the preceding facts, the County concludes that this site does not qualify as "lands in other classes necessary to permit farm practice on adjacent or nearby lands" (Findings and Conclusions . . ., p. 14).

4. Regarding whether the site is composed of existing and potential forest land suitable for commercial forest use, the County indicates that 507 acres of the 604 acres is composed of soils with no woodland suitability indicated by the U.S. Soil Conservation Service (Findings and Conclusions . . ., p. 16).

5. In addressing the other aspects of the Forest Lands definition, the County responds as follows:

   a. From aerial photographs, the forested and nonforested acreages were calculated. Douglas Fir is growing on 198 or 32.8 percent of this site. Oak is growing on 119 acres or 19.7 percent of this site while 287 acres or 47.5 percent remains nonforested. Fifty-two point five percent of the site is covered by trees. The County recites from LUBA's Osborne v. Lane County decision

(5 Or LUBA 172) that LUBA does "not view the fact that trees may be growing on the property in various places, as the record seems to indicate, to mean the land is forested within the meaning of Goal 4." The County indicates that the opinion implies that when considering species such as oak, not a simple majority, but rather " the far greater area" must be covered by trees to conclude that a property is forested (Findings and Conclusions . . ., p. 17). Thus, the County indicates that 52 percent forest cover alone does automatically qualify this land under the forest land definition. The County concludes by stating, "Considering the total extent of tree cover, the subject property is not forested within the meaning of Goal 4.

b. With regard to "lands where extreme conditions of climate, soil, and topography require vegetative cover irrespective of use," and "other forested lands in urban and agricultural areas which provide buffers, windbreaks, wildlife and fisheries habitat, livestock habitat, scenic corridors, and recreational use, the County indicates the following:

(1) The property is not (a) identified as an important watershed, (b) an agricultural or urban area, (c) needed for recreation, (d) necessary to be maintained in its present condition to provide buffers, scenic corridors, livestock habitat, or windbreaks (Findings and Conclusions . . ., pp. 18-21).

(2) The conditions imposed during this development's approval will resolve any potential problems presented by extreme soil and slope conditions as well as conflicts with big game (Findings and Conclusions . . ., pp. 18-20).

Also, findings addressing other relevant Statewide Planning Goals were included. Of particular significance to the "nonresource" designation issue are findings addressing wildlife habitat and the "Goal 5 process." The following are findings contained within the "Findings and Conclusions" document presented in the County's original submittal (5-24-84):

1. On pages 123 and 123, a detailed statement of potential consequences on big game habitat from residential development is presented.

2. A series of recommendations for mitigating asdverse impacts from residential development on big game habitat are presented on pages 125-127.

3. A discussion of residential densities and deer habitat is presented on page 217. As stated, the recommended density for big game is one unit per 80 acres preferred; one unit per 40 acres is acceptable with clustering. The County states that, "The Cerro Gordo property is requesting a subdivision of 100 lots with clustering, thus maintaining an average lot size of 10 acres" (p. 217).

4. The County indicates that "residential development in rural areas rarely acts to exclude or reduce deer populations," "the contrary usually occurs (Jim Greer, 1983)." The main impact of development is the loss of hunting lands. Cerro Gordo prohibits hunting (p. 128).

5. On page 125, the County concludes its discussion of density as follows:

> The Cerro Gordo project, which calls for a density of one lot for every 10 acres, can be thought of in the larger ecological context of the drainage basin (approximately 2000 acres) as resulting in a density approaching one lot for 20 acres. Again considering the clustered design of the development this leaves considerable land for natural processes to occur.

6. On pages 129-131, the County discusses the wildlive habitat and the Goal 5 Rule requirements. These are excerpts from this discussion:

   a. In identifying conflictihg uses there has previously been discussion as to whether residential development actually negatively impacts wildlife. Experts tend to feel that deer populations usually are minimally affected by rural residential development and tend to adapt to people's presence quite rapidly (Jim Greer, ODF&W; Lane County Extension Service, 1983) (p. 130).

   b. The ESEE consequences on both wildlfe and rural residents have been fully detailed in the previous section--"Potential Impacts of Development in Wildlife." The primary consequence on wildife is loss of habitat (environmental) while the primary consequence on rural residents is damage to landscaping and gardens (economic) and ultimately not being allowed to live in a rural setting (social). The section on "Mitigation of Impacts" gives recommendations for resolving these issues.

      Therefore, in section 660-16-010 of LCDC's interpretive rules the way to resolve the conflict of uses is seen as (3) limiting conflicting uses (pp. 130-131).

7. On pages 133 through 147, present a detailed "wildlife and development plan" which was designed to satisfy OAR 660-16-010(3), "Limit Conflicting Uses."

   As indicated, Lane County also submitted information regarding this developmental in their "supplemental findings" received by the Department on June 25, 1984. The information regarding Cerro Gordo contained within the supplemental findings was a reiteration of the conclusions and findings already present in the original submittal of May 24, 1984.

Objection

1000 Friends objects to the designation of Cerro Gordo as "nonresource" because of the County's reliance on SCS soils mapping information. Objectors claim that this information is inappropriate to judge the capability of this land for commercial forest use.

Response to Objection

This objectin is not sustained. In order to complete inventory requirements for both Goals 3 and 4, most counties have had to rely on such information to satisfy their land use planning obligations. The Commission has found acceptable on numerous occasions, soils mapping prepared by the U.S. Soil Conservation Service (or other governmental agencies--e.g., BLM) provided it is the best information available at that time.

Conclusion for Cerro Gordo

The claim that Goals 3 and 4 do no apply is sustained; however, one unresolved Goal 3 issue as well as a Goal 14 issue (see Goal 2) remains substantial evidence is contained within the "original submittal" to indicate that this land is not agricultural land under the Goal 3 definition. The approximately 604 acres in question is not predominantly SCS Class I-IV soils nor do findings indicate that it is reasonable to conclude that this property is "other lands" suitable for farm use or "lands in other classes" necessary to permit farm practices to be undertaken or adjacent or nearby lands.

Substantial evidence is provided also indicating that the property in question is not (1) "lands composed of existing and potential forest lands which are suitable for commercial forest uses and (2) other forested lands in urban and agricultural areas which provide urban buffers, wind breaks, wildlife and fisheries habitat, livestock, scenic corridors, and recreational use.

Also, the County has adequately addressed through open space requirements and developmental conditions the issue raised regarding extreme conditions of soil and topography where maintenance of vegetative cover qualifies as forest lands.

The question of whether this property qualifies as "other forested lands needed for wildlife habitat" has also been addressed. Substantial evidence has been provided showing that this two part definition, ((1) other forested land and needed for wildlife habitat) does not apply as the County's findings adequately address OAR 660-16-000 requirements; thus, indicating tht this land is not needed for wildlife habitat.

However, one unresolved Goal 5 issue remains. The County needs to address the issue of how the "acceptable" density of one unit per 40 acres with clustering is satisfied by authorizing one dwelling per ten acres as zoned or 60 lots under a cluster provision allowing duplexes (or 120 units per 600 acres or one unit per five acre overall density.

In order to comply, Lane County must:

1. Amend the plan (a) to include additional fundings justifying the claim that Goals 3 and 4 do not apply to property known as Dillard Highland's 2nd Addition, or (b) justify an exception to Goals 3 and 4, or (c) rezone the subject property with a suitable resource zone. If the county chooses option (a) or (b), Goal 5 wildlife habitat issues must also be addressed.

2. Amend the plan to justify the potential one dwelling unit per 5 acre density authorized for Cerro Gordo's 600 acres in view of ODFW's accepted wildlife habitat density standard for cluster developments of one dwelling unit per 40 acres. (see also Goal 2's cluster development issue)

M E M O R A N D U M

August 17, 1984

TO: Land Conservation and Development Commission

FROM: James F. Ross, Director

SUBJECT: ITEM 7.1: LANE COUNTY ACKNOWLEDGMENT REVIEW

TOPICS: Response to Exceptions to the Lane County Acknowledgment Review and Proposed Amendments to the Lane County Acknowledgment Review for Goals 5, 15, and Goal 2 Nonresource Areas.

This memorandum is divided into two parts. Part I includes by Goal topic responses to exceptions filed by objectors to the Lane County Acknowledgment Review. Part II contains by Goal Topic the Department's recommended changes to the Lane County Continuance Report along with the reasons to support those changes.

I. Response to Exceptions

A. Goal 2--"Nonresource" Lands

1. David Hemenway and Paul Mehnert regarding Dillard Highlands Second Addition

Mr. Hemenway indicates that some errors are contained within the Department's Report discussing Dillard Highlands' Second Addition. We concur with Mr. Hemenway regarding objections 1 (page 112 of the Department's report), 2 (page 113), and 4 (page 115). Corrections to the Department's report for the objections discussed above are contained in Part II of this memorandum. We disagree with Mr. Hemenway regarding objections 3 and 5.

Objection 3 claims that the Department's report is incorrect because the "County's" soils investigation report, quoted by the Department, is inaccurate. The Department is unable to reconcile the factual inconsistencies contained within the County's findings for Dillard Highlands' Second Addition.

The two sets of soils data, provided as findings, present different conclusions about the characteristics of the site. The County must review this material to determine which soils data are accurate. We recommend that Mr. Hemenway be afforded the opportunity to be involved in this determination.

Objection 5 claims that the Department's recommendation for Dillard Highlands' Second Addition is in error. The record lacks substantial evidence indicating that Goals 3 and 4 do not apply to this land. Until the County clearly indicates from revised soils information, that Goal 3 is not applicable to this site, the County lacks substantial evidence supporting its claim regarding Goal 3. Additionally, reliance on a forester's economic analysis to support the conclusion that Goal 4 does not apply to this site, when the record indicates it is composed predominantly of soils with commercial forest capabilities (Site Class III and IV, County's Findings, p. 14) is inconsistent with Goal 4's requirements (see amended conclusion for Dillard Highlands' Second Addition).

2. Canfield and Associates on behalf of Cerro Gordo

Mr. Canfield's exceptions to the Department's report are only partially sustained. The issues regarding the proposed density of this development as discussed in the report remain. However, the Department concurs with Mr. Canfield that amendments to clarify the Department's position are necessary (see amendments to the report).

B. Goal 5

1. Lane County

Lane County filed an exception to in-order-to-comply requirements 2c, d, e, f, and i. All pertain to fish and wildlife habitat issues.

Response: On August 8, DLCD staff met with Lane County planners to discuss these issues. All were resolved. IOTC 2c, d, e, and f remain, but 2i should be eliminated (see amendments to staff report in the Part II of this memo).

2. Wildish Sand and Gravel Company

Wildish believes that several statements in the July 19, 1984, report are inaccurate. Specifically:

a. Wildish is concerned that DLCD is recommending that sites in Appendix D of the Mineral and Aggregate Working Paper (which is the County's (1C) inventory for rural lands) need to be reevaluated and SG Zoning be rejustified per Steps 2 and 3 of the Goal 5 Rule. Wildish indicates that Appendix J represents Steps 2 and 3 of the Goal 5 Rule.

   Response: The July 19, 1984, report recognizes Appendix J (p. 8) and does not recommend these sites be reevaluated per the Goal 5 Rule. However, SG Zoning was applied to other sites that were not on the (1C) list (Appendix D) nor the County's (1B) list (Appendix F). These are the sites which need to be reevaluated. No changes to the report are necessary.

b. Wildish is concerned that Appendix E of the Mineral and Aggregate Working Paper was identified by the County as the (1B) list for the Metro Area. Wildish points out that this list is essentially the (1C) inventory in the Metro Plan which has been acknowledged, with some inconsistencies.

   Response: DLCD staff discussed this with Lane County planners on August 8. The County indicated it recognizes the Metro Plan (1C) inventory, and that Appendix E should be deleted from the Working Paper, since it is out-of-date and is inconsistent with the Metro Plan inventory. Page 7 of the July 19, 1984, report should be modified as indicated in Part II of this memo.

3. Richard Gold

   Mr. Gold has filed an exception with regard to the Big Creek Exception (Renaghan Amendment), specifically with regard to Goals 2 and 17.

   Response: Inasmuch as the record is closed for Goals 2 and 17, no response to this exception is warranted. No changes to the Goal 5 section of the July 19, 1984, report are necessary as a result of the exception.

4. James W. Spickerman

   Mr. Spickerman disagrees with the July 19, 1984, report's statement that County's Appendix D is a valid (1C) inventory of mineral and aggregate sites. Mr. Spickerman indicates that the inventory is inaccurate and that only one of the 30 sites contains existing extraction, contrary to statements in the County's Working Paper and the July 19, 1984, report. Mr. Spickerman asserts that all but one are

in agriculatural use. Mr. Spickerman points out that, because of the belief that all are active sites, DLCD staff has incorrectly concluded that the sites are no longer available for agricultural use and that no conflicts exist.

Response: The County has indicated (Mike Copely, County Planner, personal communication, August 8, 1984) that there are some minor inaccuracies in Appendix D and that they will be corrected in responding to Goal 5 IOTC No. 1 (see July 19, 1984, report, p. 75).

According to the County, Mr. Spickerman is not correct in stating that only one of the 30 sites has extraction activities. The County has re-checked the sites in Appendix D and indicates that all 30 sites have active permits or have been actively mined in the past. Therefore, no changes to the July 19, 1984, report are necessary.

C. Goal 15

1. Lane County

Lane County filed exceptions to Goal 15 in-order-to-comply requirements 7-9.

Response: On August 8, 1984, DLCD staff met with Lane County and representatives of Lane Council of Governments and the City of Eugene to discuss these IOTC requirements. It was agreed that IOTC 7 and 9 should remain, but that IOTC 8 (regarding the Big Island Confluence Heronry) should be amended to provide the jurisdiction with the option of justifying (through an amended ESEE consequences analysis and Working Paper) the current NR Zone designation as providing adequate protection for the heronry. The specific IOTC amendments are contained in Part II of this memo.

2. Robert E. Moulton

Robert Moulton has filed an exception relating to the Big Island Confluence Heronry. Specifically:

a. Mr. Moulton contends that the County should not have to designate all agricultural land in the Greenway as EFU. Mr. Moulton reasons that, since aggregate resources are also Goal 5 resources, the Goal 5 process gives the County the option of not applying EFU zoning. Mr. Moulton also provides information suggesting that the County's figure of 85 acres of agricultural land on the island is incorrect, and that there are only about 30 acres of SCS class II and IV land.

Response: The Greenway Goal clearly requires EFU zoning be applied to all agricultural lands in and adjacent to the Greenway. Sections C.3.a. and F.2.a. of Goal 15 state:

> "The agricultural lands identified in the inventory shall be preserved and maintained as provided in Goal 3 as an effective means to carry out the purposes of the Greenway including those agricultural lands near the Greenway."
>
> "Measures for managing uses within the Greenway shall include at least ... exclusive farm use zoning of all agricultural land withing and adjacent to the Greenway..."

Because Goal 15 contains more prescriptive requirements than does Goal 5, the requirements of Goal 15 supercede.

There appear to be conflicting data regarding the amount of agricultural land on Big Island. The County should look into this matter during the continuance and zone all agricultural land EFU, as appropriate, whether 30 or 85 acres. However, where Goal 15 resources that are required to be protected by Goal 15 are located on agricultural land (e.g., significant wildlife habitats such as heron rookeries), measures that are more protective than EFU zoning must be adopted. It was the intent of Goal 15 IOTC 2 and 8 (pages 104 and 105 of the July 19, 1984 report) to include EFU zoning of all agricultural land on Big Island, except where Goal 15 requires stronger protection measures for resources such as the heronry. However, if the Commission believes it will assist in the resolution of this issue, the following additional IOTC could be adopted (page 105 of the July 19, 1984 report):

> 9. Apply EFU zoning to all SCS Class I-IV soils on Big Island, except where Goal 15 requires stronger protection measures for Greenway resources (e.g., significant wildlife habitats)."

However, no changes to the July 19, 1984, report are recommended.

b. Mr. Moulton disagrees with the July 19, 1984, report's IOTC for the Big Island, indicating that current NR Zoning is adequate.

Response: The current NR Zone designation may be adequate for the protection of the rookery, as Mr. Moulton contends. However, the County's Working

Paper contained contradictory information which did not support the NR Zone designation as adopted. The July 19, 1984, report should be amended to provide the County the opportunity to better justify its NR Zone of the rookery. These report amendments are presented in Part II of this memo.

c. Mr. Moulton challenges the County's contention that aggregate supplies are three to seven times the amount needed to the year 2000. He maintains that there is only 25 percent more than the amount needed, and has submitted an analysis which supports this new figure.

Response: In re-evaluating the zoning for Big Island, the County should consider Mr. Moulton's figures. However, Goal 15 requires protection of the heron rookery and EFU zoning of all agricultural land on the island. Aggregate extraction may be allowed under a Greenway conditional use permit if certain conditions are met. Neither Goal 5 nor Goal 15 requires SG Zoning of all aggregate sites, nor do these Goals prevent SG Zoning from being applied to sites that contain aggregate supplies not necessarily needed within the planning period. However, this is one of many factors that needs to be considered when determining appropriate zone designations. The July 19, 1984, report should be amended to make this clear. Specific proposed amendments are presented in Part II of this memo.

II. Amendments to the Report

A. Goal 5

1. Page 7--The fourth line from the bottom of the page should be amended as follows:

> "Appendix E is [the (1B)] an inventory for lands inside the Metro Area. However, it is inconsistent with the (1C) inventory contained in the Metro Plan. The County has indicated it recognizes the Metro Plan inventory and will be deleting Appendix E (confirmed by Mike Copely, Lane County Planner, personal communication, August 8, 1984)."

Reason: This amendment is needed to clarify an error in the July 19, 1984, report.

2. Page 34--Add the following at the end of the paragraph immediately preceding the heading, "Objections:"

"However, this is because the County knows of no such sites at this time. The County has indicated that this is a policy which will be applied in the future, as appropriate" (Roy Burns, Planning Director, personal communication, August 8, 1984).

Reason: This statement is needed to clarify why the County has not carried out Policy 17.

3. Page 76--Eliminate "in-order-to-comply" requirement 2i.

Reason: In light of the explanation provided in the previous amendment, this in-order-to-comply is no longer valid.

4. Page 40--Amend the first paragraph as follows:

"4. Objectors are correct that Goal 5 has not been applied by the County in the process of designating marginal lands. ORS 197.247(8) requires that applications of a marginal lands zone must satisfy all requirements of other Goals, including Goal 5. The ML Zone itself also does not include language which assures compliance with Policy 11."

"Objectors are not correct that the Goal 5 process was not addressed in the process of designating nonresource lands. However, the Goal 5 conflicting uses/ESEE consequences analysis for one of the nonresource areas--Cerro Gordo--does not justify the residential densities proposed. Specifically, the site is located within major as well as peripheral big game habitat. Conflicts with big game habitat are recognized, but the applicant asserts that the RR-5 designation 'clearly and precisely limits the densities and uses allowed on the property to a level which will assure good deer habitat . . .' However, the ESEE consequences analysis does not support this statement. The applicant summarizes the negative environmental consequences of development in deer habitat as loss of habitat, disturbance of wildlife, interference with wildlife movement,

increased deer populations due to decreased hunting pressure, wildlife damage, imbalance of species diversity, pollution of water sources, wildlife injuries, and ODFW complaints. The only positive impact identified is improvement to the habitat due to possible native plantings and water impoundments and education of residents about the needs of wildlife. The economic consequences are identified as damage to landscaping and gardens. The social impacts are described as 'ultimately not being allowed to live in a rural setting.'

The applicant has proposed a wildlife management plan which calls for clustering buildings and maintaining wildlife corridors. Although the proposed clustering and wildlife corridor measures will help resolve some of the conflicts identified, the overall density of development (with clustering) is one unit per five acres. ODFW recommendations are one per 80 acres (or one per 40 acres with clustering) in major big game habitat, and one per 40 acres (or one per 20 acres with clustering in peripheral habitat. According to the County's own plan (Policy 11), such densities cannot be exceeded without being justified through an ESEE consequences analysis. As indicated above, the applicant's ESEE consequences analysis does not support development at densities which exceed ODFW's recommendations, nor does the analysis provide justification for that level of development, in light of the negative impacts such development would have on habitat values. The County's findings in support of nonresource designation for Cerro Gordo indicate that approval is conditioned upon the fact that residential development will be clustered, and that provisions of the wildlife management plan 'in substantially its present form subject to modifications' will be followed. However, it is unclear what the word "substantially" means, and

what modifications would be made. Also, the degree of clustering is unclear in the wildlife management plan. The plan proposes 10 to 20 clusters of 1 to 30 lots each. The ultimate number and configuration of these clusters is not specific. There is a significant difference between 10 clusters of 2 lots and 20 clusters of 30 lots each. It should be pointed out that the wildlife management plan was prepared for a 1,000 acre proposal. According to the applicants, this proposal has been reduced to 600 acres (Chris Canfield, personal communication, August 14, 1984). This adjustment has not been reflected in the submittal materials, however.

The mitigation measures proposed will help lessen the conflicts between deer and the development. However, even with the implementation of such measures, negative impacts will occur. The County has decided to allow such impacts to occur, but has not justified such a decision through an ESEE consequences analysis. This is not to say that no development would be possible at the Cerro Gordo site. However, the County must clearly specify what level of development and density and clustering provisions are anticipated, and must either justify (through an ESEE consequences analysis) allowing such impacts to occur, or modify the density and/or configuration of units so that the impacts are acceptable. Whatever decision is made must be supported by adequate reasons, according to the Goal 5 Rule." See the Goal 2 section of this report for further information.

Reason: These amendments are necessary since this issue was not addressed in the July 19, 1984, report, in response to objections received. It is also needed in response to exceptions to the July 19 report which were filed by Canfield and Associates on behalf of Cerro Gordo.

B. Goal 15

1. Page 102--Add the following at the end of paragraph "e:"

> "This is not to say, however, that lands that are not needed for sand and gravel cannot be designated and zoned SG. However, supply and demand data should be factored into any ESEE consequences analysis for Big Island, and be considered when deciding what implementing measures are appropriate. In this case, there is a greater burden placed on the County to protect the heronry and agricultural land because of Goal 15 requirements and no shortage of aggregate supplies."

Reason: This statement should be added to the report to address concerns expressed in several letters of exception. Specifically, parties were concerned that the staff report implied that only sites demonstrated to be needed in the future (based on a supply/demand study) could be zoned SG.

2. Page 105--Amend "in-order-to-comply" Requirement 8 as follows:

> "8. Either adopt findings which explain how the current zone designations for Big Island protect the Confluence Heronry, or adopt other implementing measures that protect the Confluence Heronry."

Reason: The in-order-comply statement needs to be broadened to provide the County with more flexibility in addressing issues for Big Island.

C. Goal 2

1. Page 109--Under "Conclusion for Agate Creek PUD," delete the word "not" from the first sentence. It should read as follows:

> "The claim that Goals 3 and 4 do not apply is [not] sustained."

2. Page 112--Under the "Supplemental Findings" discussion (located in the middle of the page) within the fourth sentence of quoted item No. "1," replace SCS Class "IVe" with Class "VIe."

3. Page 113--Under Dillard Highlands, 2nd Addition finding No. "2," replace "64 percent" with "47 percent."

4. Page 115--Amend the last line of the County's finding No. 3 (at the top of the page) to indicate that $217 figure for the net return is actually "-" (minus) 217 dollars.

5. Page 115--Replace the conclusion for Dillard Highlands 2nd Addition with the following:

> "First, evidence is provided indicating that the subject property is predominantly SCS Class I-IV soils and thus subject to Goal 3 (soils investigation reports). Second, substantial evidence is not provided indicating that Goal 4 does not apply. The County's claim that forest site index 125 can be used to assess the commercial viability of this property is inconsistent with the County's definition of commercial forest lands. Also, the County's standards for determining income (under the F-2 Zone's woodland suitability test) seems to indicate that the land is potential commercial forest land."
>
> "The County's conclusion that Goal 4's forest lands definition ('lands composed of existing and potential forest lands which are suitable for commercial forest uses') does not apply to Dillard Highlands' Second Addition, because the current rate of return is negative for managing this land as commercial forest land is invalid. As is the case under Goal 3 (Goal 3 must be applied to lands with SCS Classes I-IV soils), the Commission requires counties to apply Goal 4 to lands with cubic foot site classes suitable for commercial forest managment as reasonably defined and inventoried by the County or the County maust take an exception to Goal 4. The requirement to apply Goal 4 in the manner stated above is consistent with the 1983 Legislature's marginal lands requirements which indicate that lands capable of producing 50 cubic feet of merchantable timber per acre per year can not be considered as marginal lands unless extensive parcelization exists within the area (see ORS 197.247(1)(b))."

6. Page 125--Under the Conclusion for Cerro Gordo, amend the following:

   a. In the second line replace Goal ["3"] with Goal "5."

   b. Place a period after "remains" in the second sentence. Begin a new sentence with "Substantial" on line three.

   c. Replace paragraphs 4 and 5, beginning with the second sentence in paragraph 4 with the following:

> [Substantial evidence has been provided ... indicating that the land is not needed for wildlife habitat.]
>
> "With appropriate density limitations, Goal 5's requirements for big game habitat under OAR 660-16-010(3) (limit conflicting uses) could be met. Thus, the County has satisfactorily addressed the 'other forested lands needed for wildlife habitat' issue and justified their claim that Goal 4 does not apply."
>
> "However, one unresolved Goal 5 issue remains. [The County needs to ... or one unit per five acre overall density.] The Oregon Department of Fish and Wildlife (ODFW) indicates (within their objection regarding big game habitat--see Goal 5 section, p. 35) that provisions authorizing a doubling of densities in big game habitat areas is a measure satisfying OAR 660-16-010(3) when a clustering of dwellings occurs."
>
> "Because the density authorized by Lane County for Cerro Gordo exceeds ODFW's accepted densities mitigation strategy under the "3C" approach (OAR 660-16-010(3)), one of three options remains open to the County to resolve this issue. These options are as follows:
>
> 1. Provide additional ESEE consequences analysis justifying the decision to 'allow the conflicting uses fully' (OAR 660-16-010(2)) at a density exceeding a threshold acceptable to ODFW; or

2. Limit the density in the Cerro Gordo development to ODFW's recommended density with clustering consistent with (OAR 660-16-010(3)); or

3. Cooperate with ODFW to design a mitigation strategy which combines (a) the current wildlife management plan for Cerro Gordo; (b) additional ESEE consequence analysis supporting the decision to allow a density which exceeds ODFW's recommended density with clustering; and (c) other mitigation measures deemed necessary by ODFW. Also, the Department suggests that the Goal 2 density issue be considered and resolved in conjunction with the Goal 5 density question."

M E M O R A N D U M

July 16, 1984

TO: Land Conservation and Development Commission

FROM: Citizen Involvement Advisory Committee

SUBJECT: LANE COUNTY--GOAL 1 COMPLIANCE

At its June 29, 1984, meeting, the State Citizen Involvement Advisory Committee reviewed Lane County's compliance with Statewide Planning Goal 1 and its LCDC-approved citizen involvement program. This review was conducted under the authority invested in the Committee by ORS 197.160. The review was confined to the County's citizen involvement efforts since initial submittal of the comprehensive plan for acknowledgment review in January 1981. Due to the large number of objections to Goal 1 compliance and the recent controversy regarding the County's citizen involvement efforts, CIAC has devoted considerable time and effort to this analysis and to establishment of a record for our recommendation on Goal 1 compliance.

Previous Actions

CIAC has previously been involved in review of the County's citizen involvement program. In January 1981, the Committee recommended against Goal 1 compliance, primarily because planning information was neither readily available for public review nor available in a simplified, understandable format, and because the County's approved citizen involvement program was not adhered to throughout the planning process.

In January 1984, the Committee recommended that the County's submittal date be extended for the purpose of providing additional citizen involvement in the revision of the County's plan to bring it into compliance with the Statewide Planning Goals. That recommendation, which was approved by the Commission, also stated that (1) the County must comply with its approved citizen involvement program during all phases of plan development; (2) the County should provide the widest possible public notice of plan revision and adoption hearings and have materials available for public review prior to such hearings; and (3) the County must provide a timely response to public input received.

In May 1984, CIAC recommended denial of the County's request to designate its two planning commissions as the Committee for Citizen Involvement. The Commission subsequently approved that request.

Testimony Received

CIAC devoted two and one-half hours of its June 29 meeting to public testimony on the County's compliance with Goal 1. Fourteen persons testified and a voluminous amount of material was received. A listing of those persons testifying and a summary of their positions on Goal 1 compliance is attached as Attachment A. A listing of all written materials received and reviewed by CIAC is included in Attachment B.

Findings

CIAC is most impressed by the concern for citizen involvement in Lane County, both by those who believe that the County has not complied with Goal 1 and by those who believe that the County has made special efforts to involve its citizens. The concern of the governing body with Goal 1 compliance is exceptional and commendable. Those persons in western Lane County who have actively participated in the plan development process and who have raised substantive concerns about the County's citizen involvement efforts are also to be commended. The quality of the objections submitted to Goal 1 compliance is the highest seen by CIAC. Donna Shelton, Al Wysong, et al. have prepared a most comprehensive and well documented objection to Goal 1 compliance. Their sincerity and concern with citizen involvement should be acknowledged and their continued participation in the County's planning process encouraged.

CIAC finds little evidence of a lack of opportunity to participate in the County's planning process. Rather, the opportunity to participate is evidenced by the significant participation in the County's plan development hearings and in the compliance review process. There appears to be an exceptionally high level of awareness of both the County and state decision-making processes.

The County's CPR process should be acknowledged as a unique and commendable citizen involvement technique. The filing of over 1,800 CPR requests indicates a high level of awareness and participation in the County's planning process. The CPR process represents an exceptional effort to involve the County's citizenry in land use decision-making.

The comprehensive plan currently being reviewed is a very significant improvement over that submitted in 1981 in terms of readability and coordination of supporting documents. Whereas the 1981 plan was simply incomprehensible, the current plan is fairly well organized into a Policies/Legislative Findings document supported by a number of Working Papers.

The majority of objections to Goal 1 compliance relate to the County's citizen involvement efforts during amendment of the plan from October 1983 through June 1984. It is clear that the County's citizen

involvement efforts during this period were less than those provided during the development of subarea plans. Due to the time constraints of meeting a submittal deadline and to budget constraints reducing staff levels, the County has expedited its citizen involvement process, resulting in a large number of Goal 1 complaints. While the County's planning efforts have always been controversial, the conscious choice to develop an acknowledgeable comprehensive plan at the eleventh hour of the planning process has naturally created a high degree of tension and frustration among the County's citizenry. Quite simply, the County has created its own problems by waiting until the last minute to comply with state law. The current governing body should not be held wholly accountable for this situation, however, as the decisions to stall the development of an acknowledgeable plan were made some time in the past.

The dilemma for CIAC is whether, given the necessary time and budget constraints, the County's abbreviated citizen involvement program continues to meet the requirements of Goal 1. It is obvious that there has been a general problem of availability of materials for public review both at and prior to public hearings. The adequacy of notice of public hearings is also questionable. A public hearing process has been substituted for a citizen involvement program which establishes greater opportunities for involvement in plan development and for response to input received. Complaints have been raised over revisions made to the plan at the last minute, as a result of negotiations between DLCD and the County's planning staff. If these revisions are, in any part, substantive, there should be an opportunity for public review prior to adoption by the County. Significant deficiencies in the County's citizen involvement program have obviously arisen due to the eleventh-hour rush.

Many of the objections to Goal 1 compliance, however, are really criticisms of the County's decisions on particular zoning issues. Some persons are objecting to Goal 1 because the County did not give them what they wanted in terms of zoning. Much of the current dissatisfaction appears to stem from the rejection of the West Lane Subarea Plan, which was widely supported. Goal 4 is also at the center of much of the controversy. At the same time, CIAC finds fault with the County for its efforts to involve the citizenry of western Lane County in its decision-making process. There is an acknowledged communication gap with the western part of the County, which could be readily corrected through a renewed effort to conduct hearings and to make planning materials more available in western Lane County. The County submitted a detailed response to objections raised by some of the western Lane County citizens during CIAC's deliberations, without providing it to those persons ahead of time. The disillusionment and frustration of the western Lane County representatives could be reduced if the County communicated its concerns and needs in a more forthright fashion and if it made greater efforts to involve its citizenry throughout the decision-making process.

CIAC concludes that Lane County has made a good faith effort to meet the requirements of Statewide Goal 1 and its LCDC-approved citizen involvement program. Opportunities for participation in the planning process have been provided, although there have been deficiencies in

terms of notification of hearings, availability of materials, and response to input received. The quality and quantity of the County's citizen involvement efforts is adequate to meet the Goal, but not up to the level of efforts made during development of subarea plans. The County is challenged to improve its citizen involvement efforts during revision and updating of its comprehensive plan.

Recommendations

1. By unanimous motion, CIAC recommends that the Commission Chairman limit testimony regarding Goal 1 compliance during the July 19-20 acknowledgment review hearing to a maximum of five (5) minutes per person.

   CIAC has received and reviewed two and one-half hours of testimony and the largest volume of materials received to date regarding a jurisdiction's compliance with Goal 1. That testimony has been made a part of the record of the Commission's proceedings.

2. Also by unanimous motion, CIAC concurs with DLCD's analysis of Goal 1 compliance and recommends that the Commission find Lane County to be in compliance with Goal 1, subject to the following conditions for improvements to the County's citizen involvement efforts in the future:

   a. The County improve its efforts to involve the citizens of western Lane County in the planning process. Planning materials must be made readily available, and hearings should be more regularly conducted in western Lane County;

   b. The County improve its citizen involvement efforts generally during refinement and update of the comprehensive plan and during the development of implementing measures; and

   c. Should the County's request for acknowledgment be continued, the County must fully comply with its LCDC-approved citizen involvement program during the continuance period.

ATTACHMENT A

Lane County: Goal 1 Compliance Review
Oral Testimony Received by CIAC on June 29, 1984

1. Lane County Representatives: Jim Mann, Senior Planner; Peter DeFazio, Chairman, Board of Commissioners; Commissioner Scott Liuellen.

   - Detailed presentation on County's compliance with Goal 1.

2. Donna Shelton, Al Wysong, et al.

   - Detailed presentation on how County has not complied with Goal 1. Not provided opportunity to review County's response to their objections.

3. Oran Brown, representing the Small Rural Landowners.

   - Unintelligible attack on the legality of the County's planning process and the Statewide Planning Program.

4. Dorothy Anderson, representing the League of Women Voters.

   - County did the best it could under constraints of submittal deadline and budget. Current plan a vast improvement over previous plan.

5. John Radsliff.

   - CPR process fatally flawed. Work sessions were closed to the public. LCDC should be abolished.

6. Mike Evans.

   - County complied with Goal 1. The state process is not allowing for full citizen input.

7. Richard Miller.

   - County made above-normal efforts to inform its citizen. Supported compliance with Goal 1.

8. Gene James, Chairman, Lane County Planning Commission.

   - Supported compliance. Hopes that people objecting will get involved in updating of the plan. Time to get on with the planning process.

9. Bob Rindy, Glen Hale, DLCD.

   - County has adequately complied with Goal 1.

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE
Lane County
(Rural Portion, Excluding Eugene Metro Area)
Supplement to Staff Reports of June 29, 1984 and July 19, 1984 as Amended

DATE RECEIVED:
August 16, 1984 through September 13, 1984

DATE OF COMMISSION ACTION:
September 13, 1984

I. REQUEST

Acknowledgment of Compliance with the Statewide Planning Goals for the comprehensive plan and implementing measures.

II. SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission acknowledge the rural portion of Lane County's plan and land use regulations to be in compliance with Statewide Planning Goals 1-14, 17.

FIELD REPRESENTATIVES: Bob Rindy, Glen Hale
Phone: 378-4095

LEAD REVIEWER: Doug White, Mike Rupp, Claire Puchy
Phone: 378-4926

PLANNING DIRECTOR: Roy Burns
Phone: 687-3958

Date of Supplemental Report: September 12, 1984

III. BACKGROUND INFORMATION

On June 29, 1984, the Department issued a staff recommendation for Goals 1-4, 6-14, in response to Lane County's request for acknowledgment. The Commission took testimony but did not take final action on the request at the July 19, 1984 meeting. Also, on July 19, 1984, the Department issued a staff recommendation regarding Goals 5 and 15, and Goal 2 nonresource lands. At their August 17, 1984 meeting, the Commission again postponed final action on the June 29, 1984 report, and on the July 19, 1984 report, except for the portions pertaining to the rural areas in the Eugene/Springfield Metro Plan. These areas were granted a continuance to October 11, 1984.

In the period following the issuance of the Department recommendations, Lane County has made numerous revisions to their comprehensive plan and implementing ordinances in response to the Department's recommended in-order-to-comply requirements. These amendments were made under the provisions of the Expedited Notice Procedure for Acknowledgment (OAR 660-03-033). According to County Notices (July 19, 1984 and August 23, 1984), commentors and objectors were notified and provided opportunities for review and comment on these amendments prior to County adoption.

Section IV below summarizes the DLCD proposed requirements from the June 29 and July 19 reports and summarizes the County's response to each requirement. These are intended as supplemental findings, rather than as amendments to the previous DLCD recommendations.

Submitted Documents

Document	Ordinance	Adoption
Revisions to Development Code (Chapter 16)	9-84; 11-84	8-9-84; 9-12-84
Amendments to Plan Policies and Comprehensive Plan	889; 892	8-9-84; 9-12-84
Revisions to Development Code (Chapters 13 and 14)	10-84	8-9-84
Amendments to Comprehensive Plan	888	9-12-84
Supplemental Findings for Exceptions, Maringal Lands and Non-Resource Areas	84-9-11-22 (Order) 84-9-11-23 (Order)	9-12-84 9-12-84
Revised Comprehensive Plan Map and Zoning Map	891; PA 884	9-12-84

IV. FINDINGS

GOAL 2: LAND USE PLANNING

Requirement

1. Provide legible maps for all rural lands showing adopted plan categories.

Response

Lane County adopted a set of revised plan maps (ORD. No. 884). These plan maps replace previously submitted plan maps. The plan designations are site specific following legally identifed boundaries. Each plan designation is identified by a specific code symbol and defined in the County's plan.

Conclusion

The requirement has been met.

Requirement

2. Clearly define which zones are intended to implement each plan category.

Response

The County's plan was amended (ORD. 889) to include the following plan policy (Goal 2, Policy 26):

"Each of the land use designations applied to the Plan Diagram shall be implemented by one or more zoning districts as follows:

Plan Designation(s)*	Zone Classification
Forest land	Nonimpacted Forest Lands
Forest Land	Impacted Forest Lands
Agriculture Land	Exclusive Farm Use
Natural Resource	Natural Resource
Marginal Land	Marginal Lands
Park and Recreation	Park and Recreation
Natural Resource	Quarry and Mining Operations Combining
Natural Resource	Sand, Gravel and Rock Products
Natural Resource	Sand, Gravel and Rock Products Processing
Public Facility, Community	Public Facility
Commercial, Community	Limited Commercial
Comercial, Community	Neighborhood Commercial
Commercial, Community	Commercial
Rural Commercial	Rural Commercial
Industrial, Community	Limited Industrial

Industrial, Community	Light Industrial
Industrial, Community	Heavy Industrial
Rural, Community	Suburban Residential
Rural, Community	Garden Apartment Residential
Rural, Community	Rural Residential
Destination Resort	Destination Resort
Historical Structure/Site	Historic Structures or Sites Combining
Natural Estuary	Natural Estuary
Conservation Estuary	Conservation Estuary
Development Estuary	Development Estuary
Sign. Natural Shorelands	Significant Natural Shorelands Combining
Prime Wildlife	Prime Wildlife Shorelands Combining
Natural Resources Consv.	Natural Resources Conservation Combining
Residential Development	Residential Development Shorelands Combining
Shorelands Mixed Develop.	Shorelands Mixed Development Combining
Dredge Material/Mitigation	Dredge Material/Mitigation Site Combining
Beaches & Dunes	Beaches and Dunes Combining
	Floodplain Combining
Airport	Commercial Airport Safety District
Airport	Airport Safety District
Airport	Airport Operation
Nonresource	Rural Residential

* Note: The 'Community' Plan Designation is implemented by various zoning districts as indicated, zones which also implement specific Plan designations other than 'Community'."

Conclusion

The requirement has been met.

Requirement

3. Delete the provision in Sections 16.015 and 16.252 which permit legislative zone amendments to be adopted by order rather than by ordinance.

Response

Lane County's Development Code (Section 16.015) was amended (Ord. 9-84) to require that only quasi-judicial zone amendments be adopted by order. The section in the County Code which permits adoption by order applies to the County Board, Planning Commission and Hearings Official. An adoption by Ordinance is required for all legislative amendments.

Conclusion

The requirement has been met.

Requirement

4. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone these lands identified in the Goal 2 Exception with the appropriate resource zone.

Response

Early in the review of the County's built and committed exceptions areas, Department staff identified certain areas that were not justified. In response to these noted deficiencies, the County adopted the first set of supplemental findings prior to issuance of the DLCD June 29, 1984 report (Order No. 84-6-19-16). These findings were reviewed in that report and found to address most of the deficiencies identified by Department staff. However, the Commission did not accept and approve these findings at their July 19, 1984 meeting because the County had not complied with the Expedited Notice Procedures for Acknowledgment (OAR 660-04-033) (See Lane County Acknowledgment Report, June 29, 1984, p. 26). To correct the oversight, the County followed the Expedited Notice Procedures leading up to the adoption of the second set of supplemental findings and provided oportunities for commentors and objectors to review the first set of supplemental findings. As a result of compliance with OAR 660-03-033, the first set of supplemental findings (Order No. 84-6-19-16) along with the other revisions can be affirmed.

In response to IOTC (4), Lane County redesignated 870 acres to an appropriate resource desigation (ORD. No. 891). For the remaining areas, the County adopted the second set of supplemental findings (Order No. 84-9-11-23) to justify the areas as committed. These findings provide additional information on recent partitions and subdivision activities along with information on more recent development. This information was not provided in the earlier submittal because of outdated maps and ownership listings. Address maps showing location of dwellings, mobile homes and recent road development provide most of the information addressing the deficiencies noted earlier. In addition, specific findings provide reasons why it is impracticable to apply a resource goal to areas that are not built upon but are irrevocably committed to nonresource uses.

Conclusion

The requirement has been met.

Based on the information contained in the County's original exception document and supplemental findings (Order No. 84-6-19-16 and Order No. 84-9-11-23), the County has provided substantial evidence consistent with OAR 660-04-025 and OAR 660-04-028 to support the conclusion that all areas, for which the County has taken a Goal 2 exception are no longer available for resource use and are irrevocably committed in their entirety.

Requirement

5. Amend the plan to clearly identify areas zoned PR which are within built and committed exception areas. For those areas within an exception area, provide for information addressing OAR 660-04-025 requirements or exclude those lands from areas designated as a built and committed exception area.

Response

The plan was amended (Ord. No.889) to include a list of tax lots zoned PR that are within built and committed exception areas. This action satisfies the first part of the above requirement. Information addressing the exception criteria can be found in the County's original exception document (Ord. No. 884) and the two sets of supplemental findings (Order No. 84-6-19-16 and Order No. 84-8-11-23). The adequacy of these findings is discussed under Goal 2 requirement 4 of this report.

Conclusion

The requirement has been met.

Requirement

6. Amend the PR-RCP Zone to include standards for uses permitted outright (consistent with ORS 215.213(2)). Note: These should not include review of minor betterment activities as described in ODOT's State Agency Coordination Program.

Response

The PR-RCP Zone was amended (ORD. 9-84) to require that uses authorized under ORS 215.213(2)(G) be subject to Director approval consistent with ORS 215.213(2)(LC 16.215(3)). Minor betterments and general improvement of existing parks or recreational facilities are permitted outright (LC 16.215(2)(d)).

Conclusion

The requirement has been met.

Requirement

7. Amend the zoning code to exempt maintenance and improvments in Jennie B. Harris State Park and Squaw Creek State Wayside from conditional use procedures. This is most easily accomplished by zoning all of these parks to PR.

Response

The County plan and zoning maps were amended (Ord. No. 898) redesignating Jennie B. Harris State Park and Squaw Creek State Wayside as Park and Recreation (PR).

Conclusion

The requirement has been met.

Requirement

8. In conjunction with compliance requirements under Goal 11 of this report, the County must (1) clearly define uses, densities, unit quantity, and levels of service appropriate to rural "cluster" subdivisions, and (2) adopt appropriate ordinance amendments implementing these standards. Densities exceeding those appropriate for rural areas shall additionally require a Goal 14 exception.

Response

The County has amended the plan to contain a policy which insures that urban levels of development will not occur in rural areas under the Cluster Subdivision Standards. The policy contains language parallel to the Commission's administrative rule on establishing new urban uses in rural areas (OAR 660-14-040). Prior to approving a cluster subdivision, with more than 20 units and which includes any lots less than 5 acres, the County must make findings similar to those required for an exception under Goal 14. These amended requirements are as follows (Ordinance PA 889):

> "Cluster subdivisions shall be deemed appropriate to a rural area when the following criteria are satisfied:
> 1. Consistent with the intent and requirements of OAR 660-14-040(2) and (3), a showing must be made that the development will not represent an urban population or demand an urban level of facilities and services. For purposes of meeting this standard, affirmative findings must be made addressing the following:
> a. The level of development represented by the development cannot be reasonably accommodated through the expansion of an existing urban growth boundary or by intensification oif development at an existing rural center.
> b. The long-term environmental, economic, social and energy consequences resulting from the development, considering measures designed to mitigate negative impacts, are appropriate to the rural area. Factors to be considered include whether the size of the development is appropriate to the proposed rural area and whether the air, water, energy and land resources of the surrounding area are adequate to serve and not adversely affected by the development.
> c. The proposed development is compatible with or can be made compatible with adjacent uses considering:

(1) Whether the development detracts from the ability of existing cities and service districts to provide services, and
(2) Whether the potential for continued resource management of the land at present levels surrounding and nearby the development is assured.

d. An appropriate level of rural facilities and services are available or can be provided in a timely and efficient manner.
e. The approval of the development is coordinated with affected jurisdictions and is consistent with the comprehensive plans of the affected jurisdictions and the Lane County Rural Comprehensive Plan.

2. The development will not:
   a. Generate traffic which will exceed the carrying capacity, as defined by Lane Code Chapter 15, of adjacent public and private roads.
   b. necessitate a higher level of police service than presently provided to the surrounding area.
   c. Occur within one mile of an existing urban growth boundary and/or share any urban service provided within a neighboring urban growth boundary.
   d. On the whole require an urban level of service.
3. Reasonable assurances must be provided that the cluster shall not generate students in excess of the capacity of affected facilities within the appropriate school district.
4. The development represents a concentration of people who generally reside and work in the area.
5. Deed restrictions which ensure that commucnity water and sewer systems shall remain viable and under private ownership shall be required. Cluster subdivisions which propose to form or use a public water or sewer system shall not be allowed.
6. Cluster subdivsions shall be limited to residential use. No commercial or industrial uses will be allowed within existing or proposed cluster subdivisions.
7. All cluster subdiviions must be within an existing Rural Fire Protection District.
8. No other identifiablke substantial increase of a public service shall be necessitated by the approval of a cluster subdivision."

The cluster development standards also contain provisions to assure their application to a series of small cluster developments (i.e., less than 20 units and therefore, exempt from standards 1 through 8 above).

Conclusion

The requirement has been met.

The Lane County cluster development standards contain the same standards as OAR 660-014-040. These standards assure that urban development will not occur in rural areas except where OAR 660-14-040 criterion are met.

Requirement

9. Amend Lane Code Chapter 16 to correct inconsistencies in the cross-referencing system, where subsections are referred to within the same section of the ordinance.

Response

The County Rural Zoning Ordinance (Chapter 16) has been codified eliminating cross referencing from the older Zoning Ordinance (Chapter 10). As a result, all inconsistencies previously identified have been corrected.

Conclusion

The requirement has been met.

Requirement

10. Amend the plan (a) to include additional findings justifying the claim that Goals 3 and 4 do not apply to property known as Dillard Highland's 2nd Addition, or (b) justify an exception to Goals 3 and 4, or (c) rezone the subject property with a suitable resource zone. If the County chooses option (a) or (b), Goal 5 wildlife habitat issues must also be addressed.

Response

Lane County amended its nonresource findings for Dillard Highland's Second Addition to include additional findings supporting the claim that Goals 3 and 4 do not apply as well as information indicating that the Goal 5 wildlife habitat issue has been resolved. The contents of the County's supplementary findings includes the following information: (1) amended soils information, introduced by soil scientist Joel A Norgren, PHD, which concludes that (a) 99.5 acres (65 percent) of the 154-acre parcel consists of SCS agricultural capability classes VI, and (b) 85.5 acres (56 percent of the 154-acre parcel consist of soils with no woodland site class; and (2) findings indicating why it is impractical to apply Goals 3 and 4 to this property. Reasons supporting these findings include the following:

"a) The Dillard Highlands is located on the east side of Dillard Road and the south hills ridgeline approximately one-third of a mile southeast of the Eugene city limits and the urban growth boundary.

It is within an area of very poor soils as indicated by the Soil Conservation Service maps. It is surrounded by a sloping terrain and a 'Developed and committed' area to the west, a 'developed and committed' area and a major BPA powerline to the north, a 'developed and committed' 260 feet power line and natural gas easement to the east, and an approved 'Non-Resource' area to the south. Although man-created boiundaries, they make it impracticable to apply the resource goals to he subject property (Dillard Highland's 2nd Addition; Supplemental Findings, August 24, 1984, pp. 15, 16).

b) Dillard Highland's status as a significant wildlife habitat has already experienced significant impacts because of existing urban and rural residential development in the area. Areas with 'built and committed' exceptions and this level of existing conflict are defined as 'Impacted Big Game Range' by Lane County's Flora & Fauna working paper (March 1982). These are areas 'that have existing levels of land use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity...the subject property is already impacted as big game habtat..." (Dillard Highlands, 2nd Addition, Supplemental Findings, August 24, 1984, pp. 18-19).

Conclusion for Dillard Highland's Second Addition

The claim that Goals 3 and 4 do not apply to Dillard Highland's Second Addition is sustained.

Substantial evidence has been provided by the County indicating that the 154 acres of Dillard Highland's Second Addition is not composed of predominantly SCS Class I-IV agricultural soils or soils with a cubic foot site index capable of producing commercial forest species.

In addition, the County indicates that the property is considered "impacted" big game habitat because of surrounding development activities and that, issues regarding Goals 4 and 5's habitat requirements are therefore resolved.

The supplemental findings of August 24, 1984, when combined with the findings previously discussed in the Departments' July 19, 1984 (addressing the "other lands" tests contained in Goal 3's definition and the remaining aspects of Goal 4's definition) are adequate to support the position that Goals 3 and 4 do not apply.

Requirement

11. Amend the plan to justify the potential one dwelling unit per 5-acre density authorized for Cerro Gordo's 600 acres in view of ODFW's

accepted wildlife habitat density standard for cluster developments of one dwelling unit per 40 acres. (See also Goal 2's cluster development issue.)

Response

The County's policy is to abide by ODFW's density recommendations unless the entire Goal 5 process is applied and a decision to exceed these recommendations is justified. Lane County has adopted supplementary findings (Order No. 84-9-11-23) and has revised its ESEE consequences analysis and wildlife habitat management plan for Cerro Gordo to justify development in a recognized big game habitat area, in excess of ODFW's recommended density standards. A meeting was held on August 14, 1984, with ODFW, Cerro Gordo and DLCD representatives to discuss this issue. It was determined that, in this case, ODFW density recommendations do not have as much bearing on the acceptability of the development as do other factors. These factors include the overall number and location of dwellings and roads, as well as mitigating measures incorporated into the development. The following factors in the revised Cerro Gordo proposal are particularly relevant (Order No. 84-9-11-23):

1. There is an overall "cap" on the number of lots which could be developed (i.e., 60 lots).

2. No more than one-third of the residences will be located north of the BLM road (the habitat area considered more sensitive to human disturbances).

3. Wildlife corridors from 600 to 1800 feet in width shall be provided along streams.

4. Residential development will be confined to a band 2,400 feet in width along an existing BLM road.

5. Residences must be clustered.

6. Goal 2 cluster subdivision requirements shall apply (see the Goal 2 section of this report for details).

7. Cerro Gordo is either adjacent to or near large tracts of federal and private forest land.

8. Lane County will provide ODFW with the opportunity to review and comment on the preliminary subdivision application to assure mitigation measures are achieved through proper clustering.

9. Road development will be minimized and private roads within forested areas will be closed to vehicular use except for emergencies, maintenance, and forest management activities.

10. A Cerro Gordo Design Committee as well as the Cerro Gordo Cooperative itself shall review and monitor actions and changes in wildlife conditions on an ongoing basis.

11. Pets shall be limited.

Because of these and other factors addressed in the County's amended findings, the impacts on big game range are thought to be acceptable by ODFW. Allowing such conflicts to occur, but with restrictions outlined above, is a (3C) decision under the Goal 5 Administrative Rule. The County has justified this decision.

Conclusion

The requirement has been met.

Requirement

12. Remove the AO zoning from all privately owned parcels within the Mahlon Sweet Airport Exception Area consistent with Transportation Policy 11 and apply an appropriate resource zone to these lands.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Requirement

13. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone TL 1600 in the Royal Avenue Exception area with the appropriate resource zone.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Requirement

14. Amend the zoning code to exempt maintenance and improvements in Armitage State Park from conditional use procedures. This is most easily accomplished by zoning all of this park to PR.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 2

Lane County complies with Goal 2 for the rural portions of the County, excluding the Metro Plan area.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 2.

GOAL 3: AGRICULTURAL LANDS

Requirement

1. Amend the EFU Zone to require disqualification from farm tax deferral of parcels prior to final building permit approval for nonfarm dwellings pursuant to ORS 197.236.

Response

Lane County's Development Code was amended (ORD. 9-84) to include a provisions requiring compliance with ORS 215.236 regarding the establishment of nonfarm dwellings in the EFU Zone (LC 16.215(4)(j)(IV)).

Conclusion

The requirement has been met.

Requirement

2. Adopt a plan policy requiring a plan amendment to the County Plan when designating land as Marginal Lands.

Response

The County plan was amended (ORD 889) to include the following plan policy (Goal 2, Policy 25):

> "Outside of designated 'Community' areas, all changes to Plan Diagram designations shall be evaluated through the County's Plan Amendment procedure (LC 16.400) and approval based upon fulfillment of criteria therein."

Conclusion

The requirement has been met.

Although this policy might imply that plan amendments are not necessary to change designations in community aras, in fact there is only one category--"community"--that can be applied to community areas. The policy should be clarified in the future to indicate that it is zoning within community areas that maybe changed without a plan amendment.

Requirement

3. Amend the plan to include adequate findings and reasons for applying the marginal lands zone to the Merz/603, Harrison, Peters, Hledik, G.E. Credit Corp., and KVAL properties and provide the required information to determine compliance with ORS 197.247. If the information provided shows that the land does not qualify as marginal land under ORS 197.247, plan and rezone the properties with appropriate resource designations and implementing zones.

Response

The County's plan was amended (Order No. 84-9-11-23) to include additional findings and reasons for applying marginal lands to the Merz/602, Harrison, Mathers and G.E. Credit Corp. properties. The County has also amended the plan and adopted an additional marginal land area known as the Moshofsky property (Order No. 84-19-11-22). The Peters, Hledix, and KVAL properties have been redesignated an appropriate resource designation (Ord. No. 898).

Information regarding the five marginal land areas is described below (Source: Order No. 84-9-11-22 and 84-9-11-23 (Moshofsky)):

Merz/603 - 70 acres

57.3 acres - SCS Class VIII (Dune Land)
12.7 acres - SCS Class III/Forest Site Class 3

Harrison - 45 acres

13.5 acres - SCS Class III
7. acres - SCS Class IV
49.5 acres - SCS Class VI
No woodland suitability

Mathers - 111 acres

4.7 acres - SCS Class III/Forest Site Class 3
13.7 acres - SCS Class IV/Forest Site Class 3
92.6 acres - SCS Class VI

G.E. CREdit - 20 acres

20 acres - SCS Class VI
No woodland suitability

Moshofsky - 68 acres

14.5 acres - SCS Class III
8.7 acres - SCS Class IV
42.6 acres - SCS Class VI
2.1 acres - SCS Class VII

MOSHOFSKY SOIL CALCULATIONS
AS PER F-2 WOODLAND SITE CLASS STANDARDS

Woodland Site Class	Acreage Needed Disqualification	Acreage Found Moshofsky	Percentage Of Standard
2	17	8.7	51.1%
3	24	0	0%
4	34	14.5	42.6%
5	43	2.1	4.8%
None		42.65	

Percentage Total = 98.5%

Conclusion

The requirement has been met.

The previous findings found lacking for these properties have now been corrected as is required under ORS 197.247.

Based on the evidence submitted, and along with the findings in the previous staff recommendations, the following areas qualify as marginal lands under ORS 197.247:

Mertz/603
Harrison
Mathers
G.E. Credit Corp
Moshofsky

Requirement

4. Amend the Plan Map and Zoning Map for the Cuddeback and Rodman properties to an appropriate resource designation and implementing zone.

Response

The Cuddeback and the Rodman properties have been redesignated Impacted Forest Lands (Ord. No. 898).

Conclusion

The requirement has been met.

Conclusion - Goal 3

Lane County complies with Goal 3.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 3.

GOAL 4: FOREST LANDS

Requirement

1. Amend the Forest Working Paper and addendum to:

   a. Provide justification for the F-1 Zone's 40 acre minimum.

   b. (1) include information on the pattern of contiguous ownerships (either map or statistical) in support of a decision to retain current F-2 zoning. Such information must show that the minimum lot size is representative of the ownership pattern of the area

and that the zone actually limits further opportunity for development; or (2) include information justifying an alternative approach consistent with Goal 4 taken to resolve issues raised regarding the F-2 Zone.

c. Amend the Forest Working Paper Appendix 1--Lane County Forest Soils--to include "all commercial forest soils" in a manner consistent with an appropriate definition of commercial forest lands.

Response

1. a. Lane County has adopted additional information supporting its decision for assigning a 40-acre minimum lot size in the F-1 Zone. Specifically, the County has included as findings, two letters from Carl Ehlen (Lane County Landowners Assoc. and Rex Timber Co.) regarding the viability of a 40-acre parcel to be commercially managed as a forest parcel and Exhibit "D" from Ordinance No. PA 889 which cites the following findings:

"1) In support of the proposed Comprehensive Plan developed in 1982 the Lane County Landowners Association provided written testimony that the minimum land division size of 40 acres in the F-1 Zone represented an acreage that could be an operationally and economically manageable unit within the industry. At that time, the F-1 Zone proposal allowed dwellings on parcels down to the minimum size. (See attached letter dated November 23, 1982)

2) The Addendum to the Forest Lands Working Paper dated November 1983, justifies the 40 acre minimum land division from the data which show a significant number of parcels and amount of acreage that represent that size class within the industrial forest land ownership.

The following excerpt is from Suggestion Policy XI. 1) of the Addendum to the Forest Lands Working Paper:

'92% of the Industrial forest land acreage that lies on parcels less than 80 acres in size occurs on parcel sizes between the range of 40 to 80 acres, with approximately 25% of that area occuring at the 40 acre parcel size category.'

'75% of the number of parcels in the Industrial owned forest land that lies on parcels less than 80 acres in size occurs on parcel sizes between the range of 40 to

80 acres, with approximately 28% of the number of parcels occuring within that range at the 40 acre parcel size category.'

3) The letter received June 21, 1984, from the Lane County Landowners Association reiterates their former position in support of the 40 acre minimum land division standard noting that under the current proposal the F-1 Zone excludes residences. (See copy attached.)

4) In addition, preliminary data from the computerized zoning file of the current F-1 proposal indicates that of the parcels zoned F-1 that are between 40 and 80 acres in size, 27% of the acreage occurs on parcels of the 40 acre size class which represents 39% of the number of parcels between 40 and 80 acres in size."

The County has indicated further that the County's decision establishing the 40-acre minimum lot size in the F-1 Zone is supported because:

"Commercial forest representatives in Lane County requested 40 acres as a minimum lot size in the F-1 Zone based upon 40 acres being a commonly acquired, managed and exchanged unit of commercial forest land in Lane County."

Because Lane County's F-1 Zone does not allow dwellings, the price of forest land will reflect forest land values instead of rural residential values and conflicts with forest management activities will be minimal. Thus, a small minimum lot size conducive to commercial forest management, such as the F-1's 40-acre minimum is appropriate.

b. Lane County has rezoned approximately 56,080 acres of land from F-2 to F-1 and EFU in accordance with requirement "1.b(1)." Lands for which the F-2 zone was retained generally exhibit one or more of the characteristics for impacted forest lands presented in the response to requirement "2a." In addition, the County's revised Goal 4 Policy 12 provision (discussed under Goal 4 Response 3 of this report) presents additional limitations on divisions of resource land by establishing a 80-acre minimum lot size for all forest parcels which are (1) 160 acres in size, (2) zoned F-2, and (3) adjacent to F-1 zoned lands.

c. Lane County has amended, through Ordinance No. PA 889 (p. 6), their definition of commercial forest land to be 50 cubic feet per acre per year. By adopting a single commercial forest lands definition in its forest lands working paper rather than relying

on inconsistent references to 20 cubic feet, 50 cubic feet or the list of forest soils contained in Appendix 1, a consistent standard for inventorying forest lands and evaluating nonresource lands is established.

Conclusion

Lane County satisfies this requirement.

Requirement

2. Amend the comprehensive plan to:

   a. Include a Forest Policy which establishes precise criteria for applying the F-1 and F-2 Zones. (At a minimum, criteria for applying the F-1 Zone must include ownerships of a size capable of being managed as commercial forest lands.)

   b. Amend the four characteristics discussed under the Goal 4 conclusion for policies to establish criteria which apply only to lands appropriately zoned F-2 as per the examples discussed under "application;" or

   c. Include a policy which requires a plan amendment to rezone lands from F-1 to F-2.

   d. Delete the following from Forest Policy 11(a) "if adjacent to other nonimpacted forest lands.

Response

2a. In response to the above requirement, Lane County revised the criteria for applying the Non-Inpacted (F-1) and Impacted (F-2) Zone designations to eliminate the specific "vague" criteria discussed in the June 29, 1984 review. The revised criteria can be used to more specifically determine the proper zone designation. Ordinance No. P. 899 (p. 5, Item 10) adds Goal 4, Policy 19 which reads as follows:

"Lands designated within the Rural Comprehensive Plan as forest land shall be zoned Non-Impacted Forest Lands (F-1, RCP) or Impacted Forest Lands (F-2, RCP). A decision to apply one of the above zones or both of the above zones in a split zone fashion shall be based upon:

'a. A conclusion that characteristics of the land correspond more closely to the characteristics of the other forest zone. The zoning characteristics referred to are specified below in subsections b and c. This conclusion shall be supported by a statement of reasons explaining why the facts support the conclusion.

'b. Non-imoacted Forest Land Zone (F-1, RCP) Characteristics

'i. Predominantely ownerships not developed by residences or nonforest uses.
'ii. Predominantely contiguous ownerships of 80 acres or larger in size.
'iii. Predominantely ownerships contiguous, to other lands utilized for commercial forest or commercial farm uses.
'iv. Accessed by arterial roads or roads intended primarily under commercial forest management.

'c Impacted Forest Land Zone (F-1, RCP) Characteristics

'i. Predominantly ownerships developed by residences or nonforest uses.
'ii. Predominantely ownerships 80 acres or less in size.
'iii. Ownerships generally contiguous to tracts containing less than 80 acres and residences and/or adjacent to developed or committed areas for which an exception has been taken in the Rural Comprehensive Plan.
'iv. Provided with a level of public facilities and services, and roads, intended primarily for direct services to rural residences."

In addition, nonforest uses authorized under the F-1 Zone (LC 16.2104) can not be used as the basis for supporting a zone change from F-1 to F-2; the criteria established in LC 16.210(5) require as a condition of approval that findsigs be provided indicating such uses do not significantly impact forest uses. Thus, establishment of such nonforest uses in an F-1 Zone can not be the basis for a zone change to F-2 under the "impacted" criteria adopted by Lane County.

2b. or c.

Lane County revised its plan to delete the four vague characteristics used in applying the F-1 and F-2 zones. As indicated in the conclusion to "2a," the revised criteria successfully address the issue.

2d. On page 4 of Lane County Ordinance "No. PA 889, #8," the County states: "Goal No. 4, Policy No. 11a--delete if adjacent to other nonimpacted forest lands."

Conclusion

Lane County satisfies this requirement.

Requirement

3. Amend the County zoning map by rezoning private non-industrial ownerships capable of commercial forest management (including forested portions of commercial farm-forest operations) currently zoned F-2 with an appropriate resource zone. An acceptable forest zone is the F-1 Zone or forest zone containing a minimum lot size of

at least 80 acres as justified by the County's "Forest Working Paper Addendum."

Also, where the County can justify such a decision, the County may apply the marginal lands zone or rural residential zones to "committed" or nonresource lands.

Response

Lane County has rezoned 24,075 acres of land from F-2 to F-1 and rezoned 32,005 acres from F-2 to EFU. Generally, ownerships greater than 120 acres in size capable of being managed as a farm unit were rezoned to EFU. Ownerships of 160 acres or greater capable of being managed as commercial forest lands were rezoned to F-1. Some large ownerships were zoned with more than one zone depending on adjacent land uses and impacts. Also, the F-2 zone was retained on a few large ownerships, where soils information indicated that non-commercial forest soils predominate.

In order to reduce potential conflicts between authorized land uses in the F-2 Zone and commercial forest management activities occuring on F-1 lands, Lane County adopted a new version of Goal 4 Policy 12 (Ordinance No. PA 889, p. 4, Item 9) which contains the following provision:

> "(b) To substantially limit any adverse impacts upon commercial forest management which might result from land divisions and subsequent residential development (accessory and necessary to commercial forest management) a minimum area of 80 acres shall be required for the division of large forest tracts:
> '(i) zoned F-2
> '(ii) containing at least 160 acres
> '(iii) for the creation of lots or parcels adjacent to F-1, RCP zoned lands."

Conclusion

Lane County has satisfied this requirement.

The County has amended its zoning map, through the rezoning of some lands previously zoned F-2, in a manner consistent with this requirement. With the elimination of 56,080 acres from the F-2 Zone, the County's current application of the F-2 Zone is more representative of the ownership patterns within areas where non-commercial forest management and other non-resource activities occur.

Requirement

4. Amend LC 16.210(4)(i) of the F-1 Zone and LC 16.211(5)(ii) to require that "lodges" be evaluated against the "generally unsuitable test" in addition to the other review standards already applied to this specific use.

Response

Lane County through the adoption of Ordinance No. 9-84 amended LC 16.210(4)(i) and LC 16.211(5)(ii) to require under LC 16.210(4)(i) and LC 16.211(5)(r) that in addition to other review criteria, lodges will be required to locate on land generally unsuitable for forest uses in the F-1 and F-2 Zones or an exception to Goal 4 would be necessary.

The County also adopted Plan Policy No. 27 which requires an exception to resource Goals for transmission lines with right-of-way widths in excess of 50 feet (Ord. No. PA 889, p. 4). In addition, the County has limited farm equipment maintenance to that "incidental to a forest repair" (Ord. No. 9-84, p. 16-29).

Conclusion

Lane County satisfies this requirement.

Requirement

5. Amend the F-2 zoning provisions as follows:

   a. In 16.211(3)(b), adopt informational requirements for the "detailed forest management plan." At a minimum, such provisions must require sufficient information to establish adequate findings that a proposed "forest" dwelling is "necessary" and "incidental and subordinate to" the primary forest management activities described in the forest management plan.

   b. Include in LC 16.211(3)(b) a "floor" or minimum parcel size requiring parcels below 10 acres to be assessed against the nonforest dwelling or lot of record provisions.

   c. Amend 16.211(7)(b) to apply to all commercial forest grazing operations zoned F-2 the larger size (120 acres) for extensive animal grazing as required by LC 16.212(6)(d).

Response

5a. Lane County has amended LC 16.211(3)(b), through the adoption of Ordinance NO.9-84, to include specific requirements for preparing an acceptable forest management plan. Included within the revised LC 16.211(3)(b) is the following additional requirement:

> "(iii) The forest management plan shall specify how the following practices, when applicable, are to be addressed: road and fire trail construction and maintenance, site preparation, reforestation, stand conversion, planting of nonstocked openings, competition reduction/release, precommercial thinning, harvest scheduling/rotation and special site treatments for topography and other concerns."

Because active forest management is required to retain forest land taxation rates and failure to implement the forest management plan is a violation of LC 15.211(3)(b). The combination of the above requirements for forest related dwellings in the F-2 Zone assures that active forest management must occur on forest lands in order to establish a forest related dwelling; thus, satisfying the accessory and necessary test. These requirements for approving a forest related dwellings in Lane County's F-2 Zone are similar to the provisions contained in Benton County's acknowledged secondary forest zone.

5b. Through the adoption of Ordinance No. 9-84, Lane County amended LC 16.211(3)(b) of the F-2 Zone to include a "10 acre" floor which will be used for assessing "forest" dwelling applications. Applications for dwellings on parcels zoned F-2 which are less than 10 acres will be reviewed as nonforest dwellings.

5c. Upon further review of LC 16.211(7)(c) regarding the F-2 zone's minimum lot size requirements for farm unit size requirements for commercial grazing operations, it was determined that this provision's 40-acre minimum "farm unit size" requirement is identical to the County's EFU Zone minimum farm unit size requirement. For specific uses, such as dwellings, LC 16.212(2)(f) of the EFU Zone must be satisfied before approval can be granted.

Conclusion

The County satisfies this requirement.

Conclusion - Goal 4

Lane County complies with Goal 4.

Lane County's approach to conserving forest lands contains some plan policy and ordinance provisions unique to Lane County. The strength of their forest lands conservation program is the F-1 Zone which prohibits the siting of all dwellings (other than those required to be authorized by state statutes). This zone is applied to 2,449,775 acres of Lane County's forest lands.

The County's F-2 Zone is applied to 145,356 acres of privately owned lands which consist generally of large lot rural residential parcels, nonproductive or marginally productive resource lands, or underutilized resource lands. Lands zoned F-2 are generally located adjacent to or near developed urban or rural areas and well travelled transportation routes; all of which have an impact on the commercial management of forest lands.

In the F-2 Zone, the County requires that before a permanent dwelling is sited on forest land, assurances are obtained that forest production on the lot will be enhanced by active forest management. The requirements associated with the siting of dwellings in the F-2 Zone are similar to those provisions approved by the Commission in Benton County's acknowledgment with recent changes to the County's forest policies and

ordinance provisions. The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 4.

GOAL 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

Requirement

1. Mineral and Aggregate Resources: Apply the Goal 5 process to sites zoned SC which are not included on the County's (1C) inventory and, based on an analysis of the ESEE consequences of conflicting uses, either (1) add them to the (1C) inventory if justified, or (2) rezone the sites for other uses.

Response

In responding to this IOTC, Lane County discovered that not only were there sites zoned SG which were not on its (1C) inventory, but that there were other errors on its inventory. Therefore, the County revised its (1C) inventory as well as its (1B) inventory. Supplemental findings to Ord. No. PA 892 state:

> "The IOTC to correct the zoning citations was the stimulus for a complete review of sites listed in Appendix D vs. zoned sites. Several of those in the original Appendix D have been deleted--none of which carried SG or QM zoning. No "unzoning" will be necessary. Most of those deleted are also reflected in Appendix F of the Working Paper, which is the "pool" for later evaluation under the Goal 5 Rule "1B" option. Thus, any sites deleted in this effort are not lost from consideration, merely set aside for more detailed examination later on. All but one of the sites of Appendix D correspond with on-the-ground zoning of SG or QM."

The one site referred to in the last sentence of the previous quote (site #21) is an active site. The County completed all steps of the Goal 5 Administrative Rule for the site, and subsequently zoned it QM (Ord. No. PA 891). These findings are now part of the County's Mineral and Aggregate Resources Working Paper.

The County's three Mineral and Aggregate Resources inventories--Appendices D, E, and J--have been revised as follows: Appendix D has been reorganized to read more clearly, the Conflict Analysis (Appendix J) expanded to deal with new sites per the IOTC, and a third map (Appendix E) created to display the sites on new Appendix D. The original Appendix E--a listing of sites in the Metro Area--has been deleted since it was inconsistent with the list contained in the Metro Plan.

Conclusion

Requirement 1 has been met.

Requirement

2. Fish and Wildlife:

a. Amend the Natural Resource Zone to include riparian setback and vegetation maintenance standards.

Response

Lane County has amended its Natural Resource Zone to include riparian setback and vegetation maintenance standards similar to those in other resource zones (Ord. No. 11-84).

Conclusion

Requirement 2a has been met.

Requirement

2. Fish and Wildlife Habitats:

b. Amend the C-1, C-2, C-3, M-1, M-2, M-3, and RG zones to either (1) include riparian setback and vegetation and maintenance standards, or (2) incorporate by reference anothr section of the Lane Code which contains such standards.

Response

Lane County has amended the above zoning districts to include appropriate riparian setback and vegetation maintenance standards as required (Ord. No. 9-84).

Conclusion

Requirement 2b has been met.

Requirement

2. Fish and Wildlife Habitats:

c. Apply riparian setback and vegetation maintenance requirements along lakes and Class II streams, or otherwise justify not providing such protection, based on an ESEE consequences analysis of conflicting uses.

Response

Lane County has responded to this IOTC by amending the Flora and Fauna Working Paper Addendum (p. 7) to include the following justification for not applying riparian setback and vegetation maintenance requirements to lakes or Class II streams (Ord. No. PA 892):

> "For purposes of this analysis, only Class I riparian lands are considered. Class II streams (using ODF standards) are not fish-bearing streams, according to Oregon Fish and Wildlife Department staff, and often dry up in the summer months. Additionally, they are located in remote areas in public ownership or limited to resource uses by resource zones. Many of them have not been inventoried, and location maps are not easily available. Most lakes outside of the coast are impoundments, such as Fern Ridge Reservoir, and have COE easements plus County PR zoning to protect their shorelines. The remaining natural lakes are protected by coastal overlays or are in High Cascade wilderness areas such as Waldo. The Oregon Fish & Wildlife Department, which worked closely with the County in devising a method of protecting Class I riparian lands, did not indicate a need to similarly protect Class II riparian lands. In the nomenclature of the Goal 5 Rule, the County determines the Class II streams are to be considered '1A' resources--not to be included on the Plan inventory."

Conclusion

Requirement 2c has been met.

Requirement

2. Fish and Wildlife Habitats:

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy II. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.

Response

Lane County has added the following new language to both the F-2 and EFU Zones:

> "(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of

proposed residences consistent with the purposes the F-2 [EFU] Zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Conclusion

Requirement 2d has been met.

Requirement

2. Fish and Wildlife Habitats:

e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

Response

Lane County has adopted (Ord. No. PA 892) as part of its Flora and Fauna Working Paper, an inventory of known sensitive bird sites, including location, quality and quantity information. The County has identified conflicting uses and analyzed ESEE consequences. Based on this analysis, Lane County has decided to adopt a procedure for "flagging" areas in which such sites occur and requiring conflicting uses to be subject to conditional use approval. For all conflicting uses except timber management activities, the County has adopted "Sensitive Bird Habitat Protection Standards and Criteria" as part of the Lane Code (Ord. No. 11-84). Excerpts from that zone section are as follows (LC 16.005(4)(l)):

"(b) Development Plan Submittal. The person proposing the development shall submit plans to the

Department which sufficiently identify the location, nature and scope of the proposed use or activity.

(c) Referral. Upon receipt of the plan identified in LC 16.005(4)(b) above, the Department shall refer a copy of the plans to the Oregon Department of Fish and Wildlife (ODFW).

(d) ODFW Review. Upon receipt of the plans identified in LC 16.005(4)(b) above, the ODFW shall review the proposed use or activity and make a determination of whether or not the use or activity would affect a sensitive bird habitat. In making this review and determination, the ODFW shall consult with the affected landowner(s) and appropriate state agencies, and shall address the standards in LC 16.005(4)(d)(i) and (ii) below. The basis for the determination shall be stated in writing, completed within seven working days of receipt, and then submitted to the Department (Lane County).

(i) A sensitive bird habitat will be considered affected by a use or activity if the use or activity is located within 660 feet of an eagle or osprey site or within 300 feet of a heron rookery or pigeon mineral spring.

(ii) A sensitive bird habitat may also be considered affected by a use or activity if the use or activity is located a greater distance than specified in LC 16.005(4)(d)(i) above, considering unique conditions of topography to the individual habitats of the bird(s).

(e) No Affects Determined. If the ODFW determines that the senstive habitat area will not be affected, then the ODFW will give the Department written notice of its determination, and Lane County may proceed with authorization o the use or activity, or with the processing of any other required applications.

(f) Affects Determined and Protection Plan. If the ODFW determines that the sensitive habitat area will be affected, the ODFW shall work with the affected landowner(s) in the development of a site specific habitat protection plan. The plan shall consider the proposed use or activity and its interrelationship to and affects upon nesting trees, perch trees, critical nesting period roosting sites and/or buffers for wind, vision and noise. The plan must contain a statement of reasons, supported by facts, explaining why the sensitive bird habitat would not be adversely affected by the proposed use or activity. The plan shall then be submitted to the Department.

(g) Director Approval. The proposed uses or activities identified in the habitat protection plan shall be reviewed by the Director pursuant to LC 14.100 and shall be allowed if in conformance with the following approval criteria:

(i) The proposed use or activity would not adversely impact a sensitive wildlife habitat.

(ii) Conditions placed upon the approval of the habitat protection plan would avoid or eliminate any adverse impacts upon a sensitive wildlife habitat. Conditions may include setbacks, limitations upon the time period for the operation of the use or activity and/or prohibition of conflicting uses.

(h) LC 16.005(4)(a)-(g) do not apply to the protection of sensitive bird habitat from forest practices as regulated by the Forest Practices Act and as regulated by the COOPERATIVE AGREEMENT BETWEEN OREGON STATE BOARD OF FORESTRY AND OREGON STATE FISH AND WILDLIFE COMMISSION as adopted by Lane County in Rural Comprehensive Plan Goal 5 Flora and Fauna Policy 17."

The following new Policy 17 has been adopted to replace old Flora and Fauna Policy 15 (Ord. No. PA 892):

"The Cooperative Agreement between Oregon State Board of Forestry and Oregon State Fish and Wildlife Commission shall constitute Lane County's means of protecting sensitive bird habitat sites from conflicts which may result from forest practices as regulated by the Forest Pracices Act. Within two years of the date of acknowledgment of the Rural Comprehensive Plan, Lane County shall evaluate the effectiveness of the use of this agreement in providing actual protection to sensitive bird habitat sites, and if necessary, shall consider the adoption of more effective means of protecting sensitive bird habitat sites. This agreement is incorporated into the Lane County General Plan Policies as Flora and Fauna, Exhibit 'A'."

The following new Flora and Fauna policy has also been adopted (Ord. No. PA 892):

"18. Owners of property designated as a sensitive bird habitat and as identified in Lane Manual 11.400 shall be encouraged to develop a management plan in conjunction with the Oregon Department of Fish and Wildlife prior to beginning any development which may adversely affect the habitat. Such management plans shall consider nesting trees, perch trees, critical nesting period, roosting sites and buffer zones, and shall demonstrate how the proposed development will not adversely affect the sensitive bird habitat site. The policy shall not apply to forest practices covered by the above Flora and Fauna Policy 17."

Conclusion

Requirement 2e has been met.

Requirement

2. Fish and Wildlife Habitats:

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

Response

Lane County has replaced its definition of "wetland" with the following definition (Ord. No. PA 892):

> "For purposes of County management, wetlands should be defined as land areas where excess water is the dominant factor determining the nature of soil development and the types of plant and animal communities living at the soil surface. Wetland soils retain sufficient moisture to support aquatic or semi-aquatic plant life. In marine and estuarine areas, wetlands are bounded at the lower extreme by extreme low water; in freshwater areas, by a depth of six feet. The areas below wetlands are submerged lands."

This new definition is consistent with that contained in the Statewide Planning Goals.

The Working Paper has also been amended to contain the following explanation:

> "For purposes of County management, principal concern shall be given to wetlands of an acre or greater in size, to exclude small 'backyard' areas, unless the future County evaluation of the National Wetlands Inventory and/or information from ODFW indicate that specified wetlands smaller than one acre in size require the same level of protection as their larger counterparts."

Conclusion

Requirement 2f has been met.

Requirement

2. Fish and Wildlife Habitats:

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.

Response

The County examined this site ("Blueberry Acres") and documented its location, quality and quantity. Conflicting uses were identified, and an ESEE consequences analysis was performed by the County. Based on this analysis, the County determined that the wetland required additional protection. It, therefore, has applied its Natural Resource Zone to the site. The Addendum to the Flora and Fauna Working Paper has been amended to contain background information and findings regarding application of the Goal 5 process to "Blueberry Acres" (Ord. No. PA 892).

Conclusion

Requirement 2g has been met.

Requirement

2. Fish and Wildlife Habitats:

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

Response

Section 13.050(1) of the Lane Code requires conformity with the Comprehensive Plan (including all plan policies) when considering partition or subdivision plans.

Also, Policy 14 (Goal 3) has been amended so as to require compliance with Goal 5 policies 11 and 12 in the future application of the ML Zone. Policy 11 requires conformance to ODFW density recommendations, unless justified through a separate Goal 5 analysis. Policy 12 requires a Goal 5 analysis if conflicting uses are identified that were not contemplated in the Plan.

Findings have been added to the Flora and Fauna Working Paper Addendum (p. 14) which discuss application of current ML zoning in Goal 5 resource areas. Goal 5 conflicts with many of these sites are primarily with big game habitat. The County has analyzed the ESEE consequences of conflicting uses for these areas and has decided to apply the ML Zone in spite of the conflicts.

Conclusion

Requirement 2h has been met.

Requirement

3. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.

Response

Supplementary Findings to Ordinance No. PA 892 adopted by Lane County provide the following explanation:

> "This site is shown on the Coastal Resources Inventory maps as being located east of North Fork Road, near the Chief Drew historical site. It was field-checked by County and ODFW staff. Neigher effort could locate Darlingtonia, although a small bog existed in the approximate area of the site. A larger bog to the north (within the Florence UGB) may be the one referred to in the Inventory, but has been partially filled by structures and is not within the concern of the Rural Comprehensive Plan--the Florence plan having been acknowledged in 1983. It too was found to contain no Darlingtonia.
>
> Thus, it appears that no rezoning action will be necessary to preserve the reported bog."

Page 27 of the Flora and Fauna Working Paper has been amended to include the following new paragraph:

> "1A Category
>
> One site--identified on the Coastal Resources Inventory as a significant natural area--has been placed in the '1A' category because it was either erroneously identified in the Inventory or because conditions have changed since the Inventory was done which have destroyed the feature that first caused its inclusion. This area is noted as "unique Darlingtonia habitat" east of North Fork Road in 18-12-24. Because DLCD raised the issue of preservation of this resource under Goal 5 Rule requirements, field checks were conducted by both County staff and staff of the Oregon Fish & Wildlife Department. Neither effort could locate any Darlingtonia. A bog north of the one shown on the inventory map (excerpt attached) may have been the one referred to, but that particular bog has been partially filled and is also located within the UGB of Florence

which has an acknowledged Plan. Even assuming the Plan should be changed, that northern bog (at the intersection of Munsel Lake and North Fork Roads) is not significant enough Darlingtonia area to merit further action by the City/County. In sum, the area should be deleted from the Plan inventory as a '1A' site, with no further action required on it."

Conclusion

Requirement 3 has been met.

Requirement

4. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

Response

Lane County has adopted an Addendum to its Recreational Resources Working Paper (Ord. No. PA 892) which contains an inventory of scenic resources in the County, including the coastal strip, the Willamette River Greenway, Coburg Ridge, McKenzie River Valley, Willamette Highway/Salt Creek Valley Corridor, and ODOT-identified scenic areas. Each is described and location, quality and quantity documented. Each is evaluated in terms of conflicting uses and ESEE consequences. Based on these analyses, the County has determined that existing coastal zoning is sufficient protection for the coastal zone, and that the County Greenway Plan and Permit process should be the implementing measure in the Willamette Greenway. No conflicts were identified with ODOT scenic areas. Coburg Ridge is essentially undeveloped and partly in BLM ownership or in ranchland. Slopes exceed 100 percent in many places. Therefore, conflicts appear to be limited primarily to forestry activities, which are regulated by the FPA. Most of the McKenzie Valley and the Willamette Highway/Salt Creek Corridor is within the Willamette National Forest.

Conclusion

Requirement 4 has been met.

Requirement

5. Historic Sites:

   a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

Response

The County has ensured that all (1C) sites appear on zoning maps with the "/H" symbol, except for 20 covered bridge sites (Supplementary Findings to Ord. No. PA 892). The County indicates that these are not on maps because they are bridges and are not keyed to tax lot citations. This prevents the digitized Plan Diagram maps from properly displaying them. However, all are publicly-owned, and are covered by the /H Combining Zone (Ord. No. 892).

Lane County has added a definition of "Historic Structure or Site" to the definition section of its ordinance. This definition specifically includes property which had been identified by Lane County in its adopted Rural Comprehensive Plan findings as historically significant. (This list includes the 20 covered bridges as well as all other (1C) sites.)

Conclusion

Requirement 5a has been met.

Requirement

5. Historic Sites:

   b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

Response

Lane County has deleted sites 34 and 57 as well as sites 32, 39 and 42 from its historic sites inventory, and has amended the Addendum to its Historical Resources Working Paper as follows:

> "From the above list, five sites have been deleted by County action: sites 32, 34, 49, 42 & 57. Sites 34 and 57 are not within the purview of the Rural Comprehensive Plan and thus are the responsibility of other planning efforts. Site 32 (Keeney House) is no longer considered historically significant because the structure has been relocated on its site and has been remodeled both inside and outside. Site 39 (Paschelke House) is incorrectly represented in the State Inventory and has been extensively remodeled. Site 42 (Fall Creek Christian Church) has been remodeled several times from its original use as a school building, and is being expanded. These sites should be exempted from the Historical Combining District which is being applied to the other sites on the above list."

Conclusion

Requirement 5b has been met.

Requirement

6. Oregon Recreation Trails:

a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

Response

Lane County has amended the Recreational Resources Working Paper (p. 15) by inserting a new paragraph indicating that ODOT has supplied the County with detailed maps of trail segments. Such information is included as Appendix A to the Working Paper (Ord. No. PA 892).

Conclusion

Requirement 6a has been met.

Requirement

6. Oregon Recreation Trails:

b. Adopt policies to:

(1) Cooperate with ODOT in the protection of existing trails; and

(2) Coordinate with ODOT in applying the Goal 5 Rule during any future identification, or establishment of proposed trail segments.

Response

Goal 5 (Policy 4) has been replaced with the following new policy (Ord. No. PA 892):

"The County shall recognize and acknowledge existing and potential recreational trails designated by the Oregon Parks Outdoor Recreation Plan, shall cooperate with the Oregon Department of Transportation in the identification of specific routes for potential trails, and in the completion of applicable steps of OAR 660-160-000/025. Existing developed trails shall be displayed on the County's planning documents."

Conclusion

Requirement 6b has been met.

Requirement

7. Scenic Rivers and Waterways:

a. Amend the Recreational Resources Working Paper to recognize that:

(1) Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir are within the designated State Scenic Waterway system; and

(2) The portions of the Alsea River, and Steamboat Creek that are on the federal potential list are also on the state list of potential scenic waterways.

Response

The County has adopted an Addendum to its Recreational Resources Working Paper (Ord. No. PA 892). This addendum recognizes Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir as within the State Scenic Waterway system (p. 8). It also recognizes portions of the Alsea River and Steamboat Creek that are on the federal and state potential lists (p. 9).

Conclusion

Requirement 7a has been met.

Requirement

7. Scenic Rivers and Waterways:

b. Amend Open Space and Scenic Areas Policy 5 (p. 17) to also indicate that the County will coordinate with appropriate state and federal agencies in applying all applicable steps of the Goal 5 Administrative Rule in studying rivers for possible designation and in actually selecting wild and scenic rivers for designation.

Response

Policy 5 has been replaced with the following policy language:

"The County shall cooperate with appropriate state and federal agencies in the selection of wild and scenic rivers, and will cooperate with these agencies in the completion of applicable steps of OAR 660-16-00/025 in making such selections" (Ord. No. PA 892).

Conclusion

Requirement 7b has been met.

Requirement

8. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflicting-resolution recommendations contained in the Metro Plan Update Working Paper.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 5

Lane County complies with Goal 5.

GOAL 7: AREAS SUBJECT TO NATURAL DISASTERS AND HAZARDS

Requirement

1. Amend the Development Code to require review of any proposed development within known geologic hazard areas.

Response

Lane County Development Code was amended (ORD. 9-84) to include the following provision (LC 16.005):

> "(2) Grading, Excavation and Clearing. Grading and clearing by mechanical equipment for either road and/or development purposes may be restricted or regulated by the Approval Authority either at the time of approval of a development permit or of an application if there is a finding that such grading or clearing presents a real threat of pollution, contamination, silting of water bodies or water supplies, erosion and slide damage, or alteration of natural drainage patterns in the area. In all cases, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose."

Conclusion

The requirement has been met.

The County Development Code has been amended to require a review of any proposed development that is found to present a threat to life and property.

Requirement

2. Adopt standards which will be applied to development in known geologic hazardous areas.

Response

Lane County Development Code was amended (Ord. 9-84) to include the following standards pursuant to LC 16.005(2) cited previously under Goal 7, Requirement 1 (LC 16.005):

> "(3) Conditions. The following conditions may be imposed at the time of approval of a development for which a permit or application is required and for which a finding has been made as required in LC 16.005(2) above in order to ensure site and area stability:
>
> (a) Maintain vegetation and eliminate widespread destruction of vegetation.
>
> (b) Carefully design new roads and buildings with respect to:
>
> (i) Placement of roads and structures on the surface topography.
>
> (ii) Surface drainage on and around the site.
>
> (iii) Drainage from buildings and road surfaces.
>
> (iv) Placement of septic tank disposal fields.
>
> (c) Careful construction of roads and buildings:
>
> (i) Avoid cutting toeslopes of slump blocks.
>
> (ii) Careful grading around the site, especially avoiding oversteepened cut banks.

(iii) Revegetating distubed areas as soon as possible.

(d) Certification by a geologist or engineer that the above conditions have been complied with and/or that a hazard does not exist."

Conclusion

The requirement has been met.

Lane County has adopted appropriate standards which will be applied to development in geologic hazard areas.

Conclusion - Goal 7

Lane County complies with Goal 7.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 7.

GOAL 11: PUBLIC FACILITIES AND SERVICES

Requirement

1. Adopt a plan policy which specifies the appropriate levels of service for rural areas, including unincorporated minor development centers and rural service centers. Note: This IOTC can be satisfied by adopting a policy identifying land classifications and service levels similar to those contained in the Public Facilities and Service Working Paper--Appendix B. If Appendix B is used, the classification titles must be amended to correspond with "current" classification titles (Example: Forest Lands I is now called Non-Impacted).

Response

Through the adoption of Ordinance No. PA 889 (Item 13), Lane County deleted Goal 11 Policies 1 and 2 and replaced them with the following:

"Lane County shall provide an orderly and efficient arrangement for the provision of public facilities, services and utilities. Designation of land into any given use category, either initially or by subsequent plan amendment, shall be consistent with the minimum level of services established for that category."

The County also adopted Policy No. 6 which references descriptions of their plan designations and service levels which are as follows:

Forest Land

Nonimpacted (F-1):

> "Service Level: No minimum level of services is established for this category as it is intended primarily for resource management and not for habitation."

Impacted (F-2):

> "Service Level: No minimum level of services is established. The category is intended primarily for resource management and although some degree of habitation will occur space population patterns are expected."

Agricultural Land

Exclusive Farm Use:

> "Service Level: No minimum level of services is established. The category is intended primarily for resource management and although some degree of habitation will occur, sparce population patterns are expected."

Natural Resource

Mineral:

> "Service Level: No minimum level of services is established. Category is intended for resource management and not habitation."

Rural Residential:

> "Service Level: Schools, on-site sewage disposal, individual water supply systems, electrical service, telephone service, rural level fire and police protection, reasonable access to solid waste disposal facility."

Community:

> "Service Level: Schools, on-site or community sewage disposal, individual or community water supply, electrical service, telephone service, rural level of fire and police protection, reasonable access to solid waste disposal facility."

Rural Commercial:

"Service Level: The same as required for Rural Residential (outside Community Designations)" (Ord. No. PA 892, Goal 11, Appendix 4).

Industrial (outside community designation):

"Service Level: The same as required for Rural Residential (outside Community Designations)" (Ord. No. PA 892, Goal 11, Appendix 4).

Park or Recreation:

"Service Level: No minimum level of services is established for Park or Recreation areas outside committed areas. Service level for Park or Recreation areas inside committed areas shall be consistent with that level required for the Community or committed area outside of a Community."

Marginal Lands:

"Service Level: Consistent with service levels for Rural Residential outside a Community designation."

Nonresource:

"Service Level: Consistent with service levels for Rural Residential outside a Community designation. The service level for cluster subdivisions of nonresource shall be consistent with Goal 2 policy 24."

Conclusion

Lane County satisfies this requirement.

Requirement

2. a. By policy or zoning provisions, limit development (in a manner consistent with Goal 11 (and the County's decisions regarding rural sewage systems) within unincorporated rural communities with known or suspected sewerage problem (Chesire, Elmira, Heceta, Goshen, Mapleton, Marcola and Vaughn); or

   b. Provide additional information which justifies in a manner consistent with the discussion under Goal 11, the county's decisions regarding development in rural communities with known or suspected sewerage problems.

Response

With the adoption of Ordinance 9-84, Lane County amended Chapter 16.004(5) of their Development Code to address IOTC 2a by including the following:

> "Prior to the zoning or rezoning of land under this Chapter, for lands situated within the designated community areas listed below, an affirmative conclusion stating the reasoning and facts relied upon, must be made that densities allowed by the proposed rezoning are low enough to provide reasonable assurance that any existing sewage problems will not be further aggrevated by development of the subject property:
>
> (a) Cheshire
> (b) Elmira
> (c) Goshen
> (d) Heceta
> (e) Mapleton
> (f) Marcola
> (g) Vaughn"

In addition, LC 13.050(12)(b), which established the County's requirements for obtaining individual sewage disposal systems, requires "reasonable proof that each prosposed parcel or lot can accommodate an individual sewage disposal system and at least one acceptable replacement area which meets the criteria established by OAR Chs.340-71-005 to 45." The above requirement provides adequate assurance that additional development in the seven referenced communities with existing or potential sewage problems will not aggrevate the sewerage situation.

Conclusion

Lane County satisfies this requirement.

Requirement

3. Amend Sections 13.050(12) and 13.050(13) to indicate that the establishment of rural sewage or water systems must be consistent with the appropriate of levels of service policies required by Goal 11, IOTC 1.

Response

Ordinance 10-84 amends Chapter 13.010(12) and (13) of Lane County's Development Code to require that the establishment of rural sewerage facilities and water systems shall be consistent with RCP Goal 2 Policy 24 and RCP Goal 11 Policies, including level of service definitions. Lane County also indicates the following:

> "With this ordinance, Land County has amended Sections 13.050(12) and (13) to provide that the

establishment of rural sewerage and water facilities must be consistent with RCP Goal 2 Policy #24, provision of services to cluster subdivisions in the rural area, and RCP Goal 11 policies. By requiring consistency between the proviion of services in the rural areas and the above-mentioned policies, Lane County is ensuring the 'timely, orderly and efficient provision of services' to new development approved within the rural areas. Sections 13.050(12) and 13.050(13) now require community sewer or community water systems be established only in a manner consistent with public facility and service policies (including appropriate levels of service for rural areas)" (Ordinance 10-84, Exhibit A, p. 2).

Conclusion

Lane County satisfies this requirement.

Conclusion - Goal 11

Lane County complies with Goal 11. Lane County's Public Facilities Working Paper, Goal 11 Plan Policies and Development Code requirements as well as specific amendments which include: (1) level of service definitions for each plan designation, (2) a requirement to examine proposed zone changes in suspected rural "sewerage" problem areas to insure that any existing problems will not be aggrevated through an intensification of density, and (3) policy and ordinance requirments that rural development consistent with the specified rural level of service definitions, all contribute to the orderly provision of public facilities and services in rural Lane County.

GOAL 15: WILLAMETTE RIVER GREENWAY

Requirement

1. Amend zoning maps 304, 304A, 305, 330, 332, 347, 396, 411, 417, 418, 425, 437, 440, 448, 471, 528, 1005, 1006, 1008, 1010, 1011, 1012, and 1013 to display the correct LCDC-approved Greenway Boundary.

Response

The County has amended the zoning maps listed above that apply to areas outside the Eugene/Springfield Metro Area so as to display the correct LCDC-approved Greenway Boundary. Changes to maps 347, 396, 411, 437, 528, 1005, 1006, 1008 and 1012 will be corrected in conjunction with the Eugene/Springfield Metro Area continuance.

Conclusion

The requirement has been met.

Requirement

2. Amend the Greenway ordinance to clearly require protection of significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints, per Sections C.3.d., a., and c. of the Goal.

Response

Lane County has eliminated the term "guidelines" from the Greenway Development Permit Approval section of its Greenway Ordinance (Section 16.254(4)) and has added the following as criteria for permit approval:

> "(i) Preservation and maintenance of land inventoried as 'agriculture' in the adopted Willamette River Greenway Plan for farm use and minimize interference with the long-term capacity of lands for farm use.
>
> (ii) Protection, conservation or preservation of significant scenic areas, viewpoints and vistas...
>
> (xiv) Protection of significant fish, wildlife habitat and natural areas."

A decision to approve a Greenway Development Permit must require findings that the proposed intensification, change of use or development conforms to these (as well as other) criteria, according to Section 16.254(4) of the Greenway Ordinance.

Conclusion

The requirement has been met.

Requirement

3. Amend Section 16.254(2)(k) of the Greenway Ordinance to eliminate all language following the phrase, "or personal noncommercial use."

Response

Section 16.254(2)(k) of the Greenway Ordinance has been amended to eliminate all language following the phrase, "or personal noncommercial use." This was done so that only the propagation or cutting of timber for public safety or personal noncommercial use is exempt from local Greenway Permit review, consistent with Goal 15.

Conclusion

The requirement has been met.

Requirement

4. Amend Section 16.254(c) of the Lane Code to ensure that only water-dependent and water-related uses themselves are exempt from the 100-foot Greenway setback requirement.

Response

Section 16.254(b) has been amended (Ord. No. 11-84) so as to eliminate the phrase "those in conjunction with." Therefore, the Code exempts only water-dependent and water-related uses themselves from the Greenway setback requirement.

Conclusion

The requirement has been met.

Requirement

5. Amend Section 16.254(6) of the Lane Code to require notification of ODOT of actions taken on applications for intensification, change of use or development in the Willamette Greenway.

Response

Section 16.254(6) of the Code has been amended to require notification of ODOT of actions taken on applications for a Greenway Permit, as required.

Conclusion

The requirement has been met.

Requirement

6. Amend Section 16.254(2)(a) of the Greenway Ordinance to require either:

   a. Greenway permits in areas designated "urban" beyond 150 feet of the ordinary low water line, or

   b. Some other mechanism which ensures protection of Greenway values in these areas.

(Note: This could also be accomplished by LCDC amendment of the ODOT Greenway Plan by changing the designation of the area south of the Cottage Grove UGB from "urban" to "rural.")

Response

Section 16.254(2)(a) has been deleted from the Greenway Ordinance. This has the effect of requiring Greenway permits in areas designated "urban" beyond the 150-foot line.

Conclusion

The requirement has been met.

Requirement

7. Adopt implementing measures that protect the Pudding Creek Heronry.

Response

This requirement pertains to the Eugene/Springfield Metro Plan, which has been segmented and continued until October 11, 1984.

Requirement

8. Either adopt findings which explain how the current zone designations for Big Island protect the Confluence Heronry, or adopt other implementing measures that protect the Confluence Heronry.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Requirement

9. Modify Mineral and Aggregate Resources Policy 11 to also reference Section C.3.d. of Goal 15 to ensure protection and significant fish and wildlife habitats in the Willamette Greenway.

Response

Lane County has amended Mineral and Aggregate Policy 11 to also reference Section C.3.d. of Goal 15 (Ord. No. PA 892).

Conclusion

This requirement has been met.

Conclusion - Goal 15

Lane County complies with Goal 15.

The findings contained in this supplemental report and those contained in the Department's July 19, 1984 review support the decision that Lane County complies with Goal 15.

Re: King and EJK Inv.; Reissue Expired Director's Decision for Template Dwellings; PA 20-05066 and PA 20-05064, Map 21-35-07-30, TL 2800 and 2900

Ms. Davies:

As reflected in the Policy 11 of the RCP and its supporting working paper, the analysis must be based on an "overall density." I suspect we will be arguing about what that means.

The term "overall" must go beyond the subject property. Webster's Third defines, "overall" as, "all over," "including everything between," "taking all *** into account," and "viewed as a whole." Some guidance is potentially provided in the original Goal 5 working paper,

> *"The county will be divided into regions convenient for planning purposes. These have not yet been determined, but will probably result in 10-20 regions in the county."*

Working Paper, Exhibit J, page 25. This discussion of regions "convenient for planning purposes" supports an interpretation that "overall" must mean something more than the subject property. It also provides guidance as to how many regions might occur. It must be noted that the "regions" include all Big Game, meaning that there will be regions for Major, Peripheral and Impacted. A total number of all regions would be "10-20."

Ultimately, this language was not adopted. Thus, "overall" may still simply mean, "over the entire Major Big Game Range."

I. Major Big Game: One big region or two regions divided by a break in connectivity

In our hearing submission, the applicant provided two regions for Major Big Game, based on connectivity. LCOG Report dated March 2, 2021, Map 2 and Map 3. Exhibit D and Exhibit E show potential, logical regions for Peripheral Big Game and Impacted Big Game. All total, this results in roughly 15-18 Big Game regions, consistent with the RCP guideline of "10-20." This

supports our division of Major Big Game into two regions, with the total number of Big Game regions totaling 15 to 18.

II. Major Big Game: Five regions divided by major highway corridors

Even if the County is divided into regions based on major highway corridors, which makes sense from a planning perspective, the proposed template dwelling does not result in an overall density less than ODFW recommendations. The subject property is located north of Highway 58 near Oakridge, which places it in Region E (the east region). Based on the attached LCOG report dated March 17 ("Major Big Game Range in Lane County RCP by Highway Region"), the density for Region E is 1 dwelling per 1,979 acres. Exhibit F. The addition of two more dwellings does not change the overall density. Density is well below ODFW recommendations.

III. Major Big Game divided by watershed regions

Even if the County is divided into regions based on watershed, as was anticipated prior to LCDC acknowledgment[1], the proposed template dwellings do not result in an overall density less than ODFW recommendations. The subject property is located north of Highway 58 near Oakridge, placing it in Unit 5. Exhibit G and Exhibit H. Based on the attached LCOG report dated March 17 ("Major Big Game Range in Lane County RCP by Subarea"), the density for Unit 5 is 1 dwelling per 7,370 acres. Exhibit I. The addition of two more dwellings does not change the overall density. Density is well below ODFW recommendations.

IV. Summary

"Overall density" is not defined in the RCP. Webster's Third defines "overall" as "including everything" or "viewed as a whole." As such, one region for each type of Big Game is supported by the plain language. The applicant has provided data for overall Major Big Game density under this analysis as part of its hearing submission.

Another method is to divide Lane County into regions, with an overall density for each region. The applicant has provided three scenarios for this: 2 Major Big Game regions based on connectivity; 5 Major Big Game regions based on major corridors; and 12 Major Big Game regions based on watershed. All are convenient for planning purposes.

Under any of these methods, the subject template dwelling does not result in a Major Big Game density that exceeds 1 unit per 80 acres.

V. Focus on subject property under *Nimpkish*

It is true that the *Nimpkish* decision uses the word, "subject property" in places. However, the question before LUBA was whether Policy 11 applied directly. What Policy 11 meant, and how

[1] This was a preliminary attempt to comply with Goal 5. The attempt was ultimately rejected by LCDC because each region had its own criteria. LCDC did not consider that approach "comprehensive."

it should be applied, was not before LUBA. Flippant comments in the LUBA decision relating to "subject property" are mere dicta. Any reliance on them would be an attempt to skirt real legal analysis based on the language of Policy 11. Neither LUBA nor Landwatch can wish away the term "overall." It must be given weight. In fact, ODFW comments relating to "clustering" of dwellings further show that "overall" means something more than the subject property.

VI. Policy 11 does not apply directly because the required ESEE analysis was done as part of the County acknowledgment process.

In *Nimpkish*, the property owner was represented by Mike Farthing. For the reasons set for in Mr. Evans briefs, any required ESEE analysis has already been done. The County took a "zoning" approach. The arguments set forth in the attached briefs (Exhibit K1 and K2) are incorporated herein and adopted as my own, as are any of Mr. Farthings's arguments contained within the LUBA record. Exhibit K3.

Sincerely,
/s/ *Kimberly JR O'Dea*

March 17, 2021

Major Big Game Range in Lane County RCP by Highway Region

I. OBJECTIVES AND PROCESS

There were three objectives for the analysis:

1. Using the Highway Region Map provided by the client, identify Highway Region E using I-5, Highway 126 and Highway 58 as boundaries.
2. Determine the acreage of the Major Big Game Range within Lane County's Rural Comprehensive Plan outside of Metro Plan, UGB's and Developed and Committed Areas within Highway Region E.
3. Identify the number of dwellings that fall within that amount of acreage for Highway Region E.
4. Determine the overall density of dwellings per acre for Highway Region E.

ESRI GIS software and geoprocessing tools in combination with various data (see sources below) was used to perform the analysis, which included filtering specific data both spatially and tabularly.

The acreage within the study area was calculated from the digitized boundary layer of the Major Big Game Range. This acreage was then refined by subtracting acreage that was found to be within the Metro Plan, UGB's and Developed and Committed Areas. An analysis was performed for the area between Hwy 126 & Hwy 58, from I-5 to the County line, known as "Highway Region E".

Spatial and tabular filters were applied to the Lane County's Rural Plan Designation layer, specifically, those designated Residential, Commercial, or Industrial. All lands that have a plan designation of R, C or I that are outside of UGB's and the Metro Plan boundary by necessity must be within a Developed and Committed Lands Exception (D&C) Area to receive that Plan designation. All areas within a D&C Area are considered Impacted Big Game Range (per Lane County RCP Goal 5 Flora and Fauna Policy #10) and not Major Big Game Range. Therefore, any of the D&C areas that lie within the digitized boundary layer of the Major Big Game Range were excluded from the total acreage calculation. Since there is no specific digitized layer for D&C areas outside of the Metro Plan, the only way to identify and exclude these lands was to utilize the Rural Plan Designation layer.

Tabular filters were also applied to the regional address layer to determine residential dwellings outside of exclusion areas. Specifically, only addresses with a HUD/BPR residential use code (D,K,M,N,S,Q) were used. The official reference for the HUD/BPR codes (also commonly known as the SLUCM codes) is the Standard Land Use Code Manual from the Urban Renewal Administration, Bureau of Public Roads

EXHIBIT F

published in 1965. The coding scheme has been modified in its details to meet the local needs of Lane County. Address points are almost always located where the structure/dwelling exists, and there may be instances where a portion of a given parcel or property is within an exclusion area, while the dwelling is not.

II. ANALYSIS

The client has identified five Highway Regions: Region A, Region B, Region C, Region D and Region E, as mapped on Map 1. A detailed analysis has been done for Region E only.

Background Analysis Results (acreage values are as mapped):
Total Acres (land & water) in Lane County = 2,955,953
Major Big Game Range in Lane County (outside of exclusion areas) = 2,596,120 acres

Map 2:
Region E (Between Hwy 126 & Hwy 58, from I-5 to the County line)
Major Big Game Range in Lane County- (Region "E") outside of exclusion areas = 856,956 acres
Residential Addresses (dwellings) outside of exclusion areas and within Region "E" = 433
Overall Density = 1 dwelling / 1,979 acres

III. EXHIBITS

Map 1: Map of Highway Regions (provided by client)
Map 2: Map of Major Big Game Range within Region E

ORDINANCE NO. 741

) IN THE MATTER OF ADOPTING THE
) UPPER MIDDLE FORK SUBAREA PLAN
) AS A COMPONENT OF THE COUNTY
) GENERAL PLAN, AN ELEMENT OF THE
) COMPREHENSIVE PLAN FOR LANE COUNTY

WHEREAS the Board of County Commissioners has received from the Lane County Planning Commission a resolution dated April 17, 1979, of record herein, recommending approval of the plan known as the Upper Middle Fork Subarea Plan; and

WHEREAS the Board of County Commissioners has received and considered the Upper Middle Fork Subarea Plan, Second Draft, dated April 1979, public testimony and correspondence relating thereto; and

WHEREAS, the Board of County Commissioners has performed its public hearing and other duties in accordance with applicable law, now therefore

THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY ORDAINS AS FOLLOWS: That the Upper Middle Fork Subarea Plan, Part I, Second Draft, dated April 1979 (copy attached hereto and indicated as appendix A), as modified by changes indicated in the Staff Report to the Board of County Commissioners, dated August 22, 1979 (copy attached hereto and indicated as appendix B), and as modified by the Board of County Commissioners (copy attached hereto and indicated as appendix C), and including certain "Exceptions to Statewide Planning Goal #3: Agricultural Lands" (copy attached hereto and indicated as appendix D), be ADOPTED.

INTENDED that the "Upper Middle Fork Subarea Plan, Part II, Technical Report", be recognized as supportive information used in the preparation of the Plan;

ENACTED this day of , 1979.

8-22-79

Chairman,
Lane County Board of Commissioners

APPROVED AS TO FORM
DATE lane county
OFFICE OF LEGAL COUNSEL

Recording Secretary
for this Meeting of the Board

ORDINANCE NO. 741

In the matter of adopting the Upper Middle Fork Subarea Plan as a component of the County General Plan, an element of the Comprehensive Plan for Lane County.

Appendix ~~EXHIBIT~~ A

2nd Draft

COMPREHENSIVE LAND USE PLAN

for

THE UPPER MIDDLE FORK SUBAREA

As modified by action of
Lane County Planning Commission

I. FOREWORD: THE LANE COUNTY GENERAL PLAN

WHY A COUNTY PLAN?

The objective of planning is twofold--first, to identify and recommend solutions to problems relating to the physical, social and economic character of the County. Because of their complexity, problems such as the incompatible mixture of land uses, depletion and misuse of natural resources, transportation hazards and traffic congestion, inadequate public facilities and utilities, and limited housing and employment opportunities, require planning analyses and solutions.

Secondly, planning is intended to identify the nature and character of change and growth in the County and provide a basis for coordinated public and private action to plan for and guide this change and growth. Planning should insure that change and growth provides for the wise conservation and use of our natural resources, protects the natural environment, provides a balanced transportation system, strengthens the County's economy and, in general, improves housing and social opportunity for all County residents.

A plan serves as a guide and a basis for decision-making to public officials and private interests. As a public process, planning identifies problems, and points the way toward their resolution before social and economic costs are beyond local capability. In this way, planning "preempts" potential crisis situations.

POPULATION AND THE QUESTION OF GROWTH

By 1995, Lane County is expected to have a population of approximately 350,000, of which 102,000 people are expected to live outside the Eugene-Springfield metropolitan area. This "rural" population is expected to increase by nearly 35,000 additional people from the present 67,000. Almost 80,000 of the rural population is expected to be living within the central part of the County, within a half hour's commuting time from the Eugene-Springfield metropolitan area. Elsewhere, there are expected to be nearly 10,000 year-round residents in the coastal area (compared to some 6,000 today), almost 5,500 in the Oakridge

000335

area and some 7,000 people scattered in the more remote valleys (Upper McKenzie, Lake Creek, Row River and Coast Fork of the Willamette).

Increasingly many people are questioning the desirability of a continuation of present levels of growth. This plan does not attempt to establish what the absolute level of growth should be. Instead, it seeks to identify and deal with the growth which now seems likely.

WHAT IS THE COUNTY PLAN?

The County General Plan is comprised of four main parts:

1) The Goals and Policies Statement - This basic document sets general policies which serve as guidelines for specific recommendations of the other plan documents.

2) Community Plans - These 13 plans provide an analysis of several rural communities in Lane County with recommendations regarding land use, parks and recreation, transportation, and services and utilities.

3) Special Reports - Various technical reports, including the Water Quality Report and County Atlas.

4) Subarea Plans - The County has been divided into 12 subareas, based primarily on drainage patterns, in order to evaluate each area's natural and social characteristics in detail.

THE SUBAREA PLAN

Subarea Land Use Plans consist of two parts:

I. Plan Proposal - This portion of the plan contains a listing of major findings and recommendations about the subarea which are supported by the technical report.

II. Technical Report - This portion contains detailed information on the area's social and natural characteristics. It serves as the data base upon which the findings and recommendations of the Plan Proposal are based.

000336

The land use plan for the Upper Middle Fork Subarea follows. The information contained therein should be used as a guide for land use decisions in this Subarea.

000337

II. PLAN ADOPTION

THE REVIEW PROCESS

Initial Public Review

Based upon the data assembled in the Technical Report, a draft Plan Report is written. This proposal is then presented to the Subarea residents for their review and comment.

Besides informing residents of planned land use recommendations, the purpose of this review is to assure that the plan complies with local goals, verify the report's information with residents usually more familiar with the area than the planner and resolve any conflicting issues that may arise as a result of plan recommendations.

The plan may then be modified, if such action is warranted as a result of this public review, and passed on to the Planning Commission.

Planning Commission Action

The Planning Commission reviews the modified plan draft, hears public testimony regarding the plan, revises the document if they feel it necessary and makes a recommendation to the Board of County Commissioners with regard to plan adoption.

Board of County Commissioners Adoption

The final step to plan adoption is review by the Board of County Commissioners. Upon consideration of the Planning Commission recommendation and additional public testimony, the Board takes the final action, adoption of the Plan as an official ordinance, which brings legal status to the document.

ADOPTION ALTERNATIVES

As noted in the beginning, the Upper Middle Fork Subarea Plan is published in two reports: a Plan Report (Part I) and a Technical Report (Part II). The question can legitimately be

000338

raised as to which report, or what parts of either, should become the adopted plan for the Subarea.

Based on the experiences of many local governments in the United States, two alternatives become evident:

1. The entire planning study and plan proper (represented here by the Plan Diagram and associated findings and recommendations) can be adopted as a single unit. This accomplishes the task of making all background information a part of the Plan. It does not necessarily endorse that information, but a commitment is made to work with it and improve it as time goes by. Because the information is a part of the adopted plan, it can easily be used as the rationale for planning decisions, in case of a conflict or difficult decision.

2. The summary of the study, containing the "meat" of it, can be adopted. Generally, this consists of those findings, recommendations, and proposed land use designations (Plan Diagram and narrative) which emerge from the planning study. This was the procedure used in the metropolitan area's 1990 Plan. Background information is used to support the adopted statements, usually by reference, but is not actually adopted along with them. This accomplishes the end of permitting a relatively brief, succinct document to be adopted and used, without there having to be adoption of the more lengthy (and sometimes controversial) technical studies which back up the Plan. Of course, that information does not then have the status that adoption would otherwise have given it.

In the case of the Upper Middle Fork Subarea Plan, the first alternative would involve the adoption of both reports--Part I and Part II--after thorough public discussion and review. The second alternative would involve the adoption of the major portion (or all) of Part I only. Chapters V and VII of the report are the minimum that would have to be adopted, and the addition of Chapters IV and VI would be beneficial. Adoption of Part I in its entirety would allow the use of a complete, internally consistent report as the plan.

000339

The decision on what to adopt has to be made by the County's elected officials, advised by those whom they appoint to assist them in reviewing planning work. This cannot be done until public review and hearings have been completed; the review and hearing process may be helpful in making this decision.

THE ROLE OF ADOPTION

When a number of people, represented by their elected and appointed government officials, adopt a plan and/or planning study, they are in a very real sense making a commitment to attempt the achievement of what the plan proposes. This, of course, assumes that by the time of adoption (as will be the case in Lane County), thorough public review and hearings will have been carried out and the plan will be acceptable to the public. Adoption brings with it a legal status; the public has gone on record, before all citizens, that it intends to make use of the plan as a guide to decision-making.

In addition to this, when the plan is adopted, it is considered by other government units*--including the courts--to be a statement of policy by the adopting government. Therefore, decisions which are made by those other units (court decisions on land use questions, for example), often refer to the plan as their supporting reasons. The adopting government thus has the responsibility to use the plan as best it can, and improve on it through the planning process over the years.

Adoption also brings with it a distribution of planning information to the public. A plan report, available to any citizen, contains data, suggestions and recommendations that the public, through its government, has decided to make use of. The best way to make use of it is to enlist the support--through education--of all citizens. When the plan is adopted it becomes a part of the public's store of information, and the public is invited to support it, to use it, and to improve on it.

*The State of Oregon is among the governments which use the County Plan and, in fact, (through Senate Bill 100) requires that a plan be developed, adopted and used by local governments.

III. INTRODUCTION

The Upper Middle Fork Subarea comprises approximately 1170 square miles in the southeastern portion of Lane County. It forms the upper part of the Middle Fork Willamette River watershed. The subarea is primarily forest land, the majority of which is federally owned.

The main center of residential development is within, and adjacent to, the City of Oakridge, an incorporated community of approximately 4,000 people. Other residential activity occurs along the Fall Creek and Lookout Point Reservoirs.

Development pressures have not been strong in recent years, a situation that is not expected to change significantly within the planning period. However, because of a number of natural constraints, development potential in the subarea is limited. For this reason, and to insure protection of the timber and limited agricultural resource, even a relatively small amount of growth must be carefully guided.

Intensive development in the subarea should be strongly limited. Controlled infilling of the existing residential nodes can be allowed, although most of the subarea should remain undeveloped.

Because much of the subarea is National Forest land, its economy is strongly oriented to maintenance, harvesting and processing of the timber resources. Some diversification of the wood products industry may result in response to current local efforts toward economic self-sufficiency. The success of these efforts is not expected to have a significant growth-inducing impact on the area.

000341

IV. CITIZEN GOALS & INVOLVEMENT

Planning for People Program

During 1970 and 1971, several "Planning for People" meetings were held in the Subarea. Each meeting was conducted by a local citizen who was assisted by an agent of the Lane County Extension Service and a staff member of the County Planning Division. The purpose of these meetings was to establish local goals and concerns within the Upper Middle Fork Subarea. Some of the needs expressed during the meetings have been answered (e.g., family planning services and city-sponsored recreation programs). The issues that are still of concern to residents are as follows:

* Need for medical services, recreational facilities and jobs
* Improvement of educational system (vocational training, better course work and teachers)
* Funding for public services (fire protection, streets and curbs, public restrooms)
* Housing--particularly low-income
* Preservation of the area's natural, rural character

Although some of these concerns are beyond the scope of the Subarea Plan, they are included in order to better define the nature and desires of the community.

Plan Development Workbook

More recently, an attempt was made by the Planning Division Staff to directly involve Subarea residents in the development of the land-use plan for their area. A four-part "Plan Development Workbook" was distributed with the intent that, upon completion, a citizen-authored plan would result. A series of public meetings was held to assist in this effort. However, because of a lack of citizen time, interest and/or understanding, meeting attendance dwindled, workbook sections were not completed, and this approach to Plan development was abandoned in favor of the more traditional staff-prepared Plan

000342

Proposal. It should be noted that this action was by choice of the citizenry.

000343

V. FINDINGS AND RECOMMENDATIONS

Introduction

The Technical Report (Part II) discusses in detail the various physical or social components of the Subarea. This section of the Plan Report summarizes the findings and implications of the Technical Report and makes recommendations with regard to this information. The purpose of this method is to better facilitate decision-making and public understanding by allowing quick reference to the major areas of concern within the Subarea.

To obtain more detailed information about a particular topic, or to ascertain the basis for a particular recommendation, the Technical Report should be consulted.

Summary

The following is a compilation of recommendations that recur throughout the report. By listing them, a number of general concerns become apparent that will hopefully serve as an aid and guide to decision-makers.

1) The rural character of the Subarea should be maintained.

2) Forest resource lands should be protected for continued timber production.

3) The Subarea's economic base should be expanded and diversified to lessen its great dependency on the wood products industry and bolster local economic self-sufficiency.

4) Major developments within the Subarea should be limited and all proposals closely reviewed for impacts on the community.

5) Regulations with regard to construction on slopes over 15%, protection of riparian corridors, and erosion control should be instituted by the appropriate County agencies.

6) Further study of groundwater supply/safe yield, flood-plains, soils, and geology should be undertaken.

000344

A. SOCIAL AND ECONOMIC ENVIRONMENT+

Findings

1. The area's population is primarily centered in the Oakridge-High Prairie area. Other residential activity is found along Lookout Point Reservoir, Winberry Creek and scattered along the major roadways.

2. Many of the area's residents have chosen to live in the area because of its rural character and easy accessibility to natural recreation land.

3. Overall growth within the Subarea has been very slight over the past ten years, with the population actually declining in some portions.

4. Presently available projections indicate that the Subarea will experience minimal population growth over the next 25 years.* Consequently, demands for public services should not increase significantly during this time.

5. There has been an increase in the number of retirees locating within the Subarea.

6. Most of the Subarea's current population is working-age adults and their children. This trend is expected to continue in the future.

7. Two-thirds of the area's residents live in their own homes.

8. Approximately 10% of the housing units were considered overcrowded in the 1970 census.

+For this section only, findings & recommendations have been combined. Other sections more closely parallel the Technical Report.

*This projection is intended as an educated guess. Significant changes in such factors as employment opportunities or the timber industry could greatly alter this projection.

000345

9. Average annual family income is somewhat below that of the rest of Lane County and the Oakridge/Westfir area has been designated "economically lagging" by the State Department of Economic Development.

10. The majority of the area's work force is employed within the Subarea, primarily in timber harvest/wood products-related occupations. Thus, the area's economy is largely and probably overly dependent upon the future fortune of this industry.

11. The recently funded study of potential new businesses feasible for the Oakridge/Westfir area[1] identified three different industries for community consideration. These enterprises are (1) the manufacturing of hot tub components; (2) production of furniture, furnishings and cabinets and (3) design, production, and sale of quality handcrafted items. Although this study emphasized diversification in the wood products industry, diversification in other industries should also be encouraged, particularly those related to tourism and recreation.

12. Health care services in the subarea are minimal.

Recommendations

1. Further study should be undertaken to adequately assess the social, economic and housing conditions of the Subarea in order to more precisely predict and plan for future growth trends.

2. ~~The County should facilitate efforts to establish local economic self-sufficiency, such as the recently formed community development corporation, by providing available staff expertise and assistance with obtaining funding from the appropriate public and private sources.~~

2 ~~3~~. Small scale, "cottage" industry should be supported and encouraged in this area.

[1] The Potential for Alternative Business in Oakridge/Westfir, Economics Research Associates, February 17, 1978.

000346

4. New employment opportunities, particularly those not dependent upon the timber industry, should be sought for the area residents.

5. Future growth in the area should be guided in a manner that will preserve its natural, rural character.

6. Policies and programs to ensure an adequate and sustained timber supply on the region's public and private lands should be of high priority. The County must join with the state and federal governments as well as private industry in the long-range management of this essential resource.

000347

B. THE NATURAL ENVIRONMENT

Topography

1. The inaccessibility and expense of developing the Subarea's rough and mountainous terrain has focused most development into the narrow river and stream valleys.

2. Because of this concentration, careful planning is necessary to avoid inappropriate or conflicting use of land.

3. Erosion and the subsequent environmental degradation is a problem in the Subarea, particularly when the natural drainage patterns are altered.

Recommendations

1. Land use proposals should also be reviewed to insure that drainage and/or hydraulic flow patterns are not adversely affected and that proper erosion control measures are employed.

000348

Slope

Findings

1. With the exception of some valley terraces, plateaus, and ridgetops (including High Prairie), slopes in the Subarea generally exceed 15%.

2. It has been generally found that intensive development of slopes in excess of 15% are avoided in rural areas because of the significant cost and potential environmental and public safety problems involved.

Recommendations

1. ~~The County office of Environmental Management should adopt a slope density ordinance, or other appropriate measures for the Countywide regulation of hillside development (for adoption by the Board of County Commissioners).~~

1 X. Intensive development, such as large subdivisions, may be permitted on slopes over 15% after a slope stability analysis (performed by the appropriate professional under County guidelines) determines such development would not result in a negative environmental impact or significant public cost.

2 X. Isolated, single-family homes on large parcels should be permitted provided no obvious environmental problems would result.

000349

Geology

Findings

1. The presently available geologic data is not adequate for the detailed evaluation of specific sites.

2. Based upon available data, the rock formations in the western two-thirds of the Subarea are generally expected to yield considerably less groundwater than those in the eastern portion. Groundwater in this western portion is also expected to contain dangerous concentrations of naturally occurring arsenic.

Recommendations

1. Prior to approval of any major development, a detailed geologic report should be required and the project undertaken in accordance with its analysis. Guidelines and a procedure for review of reports by a qualified professional should be formulated by the Planning Division.

000350

Soils

Findings

1. Soils capability is a prime determinant of appropriate land use.

2. The Subarea is dominated by soils of development suitability ratings 3 and 4. One of the constraints of these soils is their lack of capability for adequate subsurface sewage disposal.

3. Soils within much of the Subarea are generally suited for the growing of timber.

4. Public concern has been expressed in favor of preserving agricultural land and state law has been written to reflect this desire.

5. The soils in the stream valley floors individually pose the fewest problems for development. However, these soils are not only often in areas subject to flooding, but are also the best suited for agriculture.

Recommendations

1. Soils information for the Subarea, particularly those portions presently lacking such data, should be continually gathered, refined and considered as fundamental criteria in land use decisions.

2. Most lands with soil suitable for agriculture should be so utilized in order to preserve this important resource.

3. State and local tax policies, zoning regulations and various financial incentives should be designed to promote agricultural land preservation while assuring an equitable fiscal impact on the individual farmer.

4. Most of the soils suitable for timber production should continue in that use.

5. Intensive development should be greatly restricted on soils of DSR 4 and considered on soils of DSR 3 only after a careful analysis of site specific conditions indicates suitability.

6. Erosion control regulations for commercial and residential development, as well as other land uses with erosion potential, should be developed by the Department of Environmental Management. Particular attention should be given to measures for control of erosion during construction activity.

7. Development may be allowed on soils which are unsuitable for traditional subsurface sewage disposal systems provided acceptable alternative systems are available.

Groundwater

Findings

1. There is not sufficient information on groundwater supplies throughout the Subarea; consequently, predictions of local supplies are speculative and highly variable.

2. Although groundwater data for the area is quite general, available groundwater appears limited in the western two-thirds of the Subarea except for the Oakridge vicinity. In the eastern one-third, subsurface water is generally plentiful. These predictions are based primarily on geologic factors.

3. The alluvial deposits associated with the Middle Fork of the Willamette and Salmon Creek show yields of 50-200 GPM.

4. Arsenic contamination of groundwater may occur in the western portion of the Subarea.

5. Adequate information does not exist on safe yield in the area; consequently, caution is necessary to avoid problems of groundwater overdraft.

6. As most residents of the unincorporated areas of the Subarea rely on subsurface water for domestic use, the availability of this resource will be a substantial constraint to development.

Recommendations

1. Further study of the area's groundwater supplies should be undertaken. Included in such a study should be the location and amount of potable groundwater, sources of contamination, and projected safe yields. From this information, appropriate residential densities (for homes dependent on subsurface water) can be designated.

2. Aquifer recharge areas should be identified and protected from detrimental land use.

3. All proposed development should be required to provide reasonable evidence of sufficient water availability prior to permit issuance.

4. Major development proposals in the western portion of the subarea should be required to demonstrate not only an adequate, continuing supply of potable water, ~~but that the use of which will not deplete the supply for existing users.~~

5. Groundwater supplies in the western portion of the Subarea should be monitored for possible arsenic contamination.

Surface Water

Findings

1. Surface water supplies for the Subarea are presently adequate.

2. Surface water resources provide essential fish and wildlife habitat and are committed to human use for recreational, domestic, industrial and agricultural purposes.

3. Because of the area's topography and geology, the surface water resource is particularly susceptible to degradation from land uses that disturb natural drainage patterns.

4. Because of withdrawal of water from the North Fork of the Middle Fork Willamette for domestic needs by Westfir residents, close regulations of upstream land uses is necessary to prevent contamination.

Recommendations

1. All proposals for surface water withdrawal should be reviewed and the approved projects continuously monitored to assure that the water supply within both the Subarea and downstream is not depleted or otherwise negatively impacted.

2. Promote watershed management practices which protect and enhance water quantity and quality.

3. ~~Countywide regulations for protection of riparian corridors should be promptly adopted and closely enforced.~~

000355

Water Quality

Findings

1. With the exception of Kitson and McCredie Springs, the known groundwater quality of the Subarea is generally satisfactory.

2. Further study and/or development may result in the detection of high arsenic concentrations in groundwater, particularly in the western portion of the Subarea.

3. Although not a serious problem at the present time, some of the septic systems located near water bodies are not functioning properly.

4. The major surface water quality problem is turbidity, with occasional high bacterial loads and enrichment in parts of the Subarea.

5. The County's Water Quality Report & Water Quality Management Plan provide the framework and tools for prevention and mitigation of water quality problems. Land use policies and decisions can and should both support and supplement the measures suggested in the above documents.

Recommendations

1. The water quality management recommendations outlined in the Water Quality Management Plan and Report, should be closely followed.

2. An ongoing well monitoring program should be instituted by the County in areas of known water quality problems to ensure that groundwater supplies are safe for human consumption.

3. Industrial and timber harvest practices should continue to be carefully regulated and monitored to prevent surface water degradation.

4. In addition to current regulations regarding subsurface sewage disposal, other measures for protection of waterways, such as setbacks for

000356

maintenance of riparian corridors and the control of streambank erosion, should be established.

5. Malfunctioning septic systems should be repaired or relocated if possible.

6. All development proposals should be reviewed to assure that projected water use and waste disposal will not negatively impact water quality.

000357

Flood Hazard

Findings

1. Detailed flood hazard information is presently unavailable for streams within the Subarea.

2. Estimates of the 100-year floodplain have been made for sections of the Willamette River. (See Map #9A).

3. A number of private residences lie within this designated inundation area.

4. Some portions of the Willamette River floodplain inundate agricultural soils, a further development constraint.

Recommendations

1. Studies to determine the precise location of floodplains in ~~both~~ the Subarea ~~and the rest of the flood-prone areas of the County~~ should be undertaken.

2. Floodplain zoning and development standards should be developed and applied to those hazard areas designated by the above study. In the interim, no further development, and especially no septic systems, should be permitted in documented flood hazard areas unless special "floodproofing" occurs.

Air Quality

Findings

1. Because air quality within the Subarea is primarily influenced by local events, the area is relatively free from pollution at the present time.

2. The Subarea is, however, part of a large airshed encompassing the entire Willamette Valley. Because of this airshed's high potential for air pollution, it is important that each area within it carefully control emission of even small amounts of contaminants.

Recommendations

1. Local land use regulations should recognize and support the Regional Air Pollution Authority policies.

2. Both the short term and cumulative air quality impacts of new development, particularly industrial, should be considered prior to project approval.

~~3.~~ Data necessary for the evaluation of air pollution potential (e.g., prevailing winds) should be assembled for the ~~entire~~ County.

3 ~~4.~~ Alternatives to burning of slash should be developed and implemented to eliminate this source of contamination.

000359

Plant and Animal Habitat

Findings

1. Although the two primary habitat types, the douglas fir-trailing blackberry and the fir-alpine, comprise most of the Subarea, several critical habitat types also exist here and are essential to the survival of a number of species.

2. Removal of natural vegetation and various other human land use activities often result in habitat degradation (e.g., destruction of protective ground cover, topsoil erosion, streambank instability, and reduction of water quality). These types of disturbances lower carrying capacity and, hence, reduce wildlife population.

3. While no official "endangered species" permanently inhabit the Subarea, it serves as a brief resting or feeding stop to such species during their seasonal migration. The spotted owl (classified as "unique"), the northern bald eagle (which is classified as "threatened" in Oregon and endangered in several states) and a variety of other species are permanent residents.

4. Construction of the dams at Dexter and Lookout Point created a block to salmon spawning in this section of the Willamette River.

Recommendations

1. ~~The monitoring of wildlife population~~ patterns and changes should be ~~encouraged~~ on a Countywide basis to more fully understand and prevent the negative effects of ~~human~~ activity upon this resource.

2. Major development must be closely regulated to reduce impact, both short term and cumulative, on the County's wildlife population. Any such intensive development should not be approved without prior analysis of habitats to be affected and a specific program for sensitive management.

2. Presently identified habitat types which are important for wildlife survival (e.g., winter range, nesting sites, mineral springs, etc.) should be conserved by appropriate measures (e.g., influence zones of uncut timber, a riparian corridor protection ordinance, a shoreline management plan, etc.).

000361

Resources

1) Forests

Findings

1. Most of the land within the Subarea is forest land, primarily in large holdings (both public and private).

2. The wood products industry is the primary industry of both the Subarea and the State.

3. Careful management of this resource is essential for both preservation of the raw materials supply and maximization of forest productivity. Diversification of the industry (with the subsequent increase in jobs and income) can occur without increasing the available resource, provided intensive management measures are instituted.

4. Forest lands, in addition to industrial raw materials, also provide recreational potential, valuable watershed and wildlife habitat and an aesthetic quality for both the Subarea and the County.

5. Measures must be instituted to prevent conflicts between preservation of the forest and other multiple land use activities.

6. Removal of the forest cover can have a highly detrimental environmental impact if proper harvest and reforestation techniques are not practiced. The most significant of these impacts is on water quality. Removal of riparian vegetation and excessive cutting close to major streams, without adequate erosion control measures, will eventually result in the loss of critical spawning and rearing areas for native fisheries and the adjacent wildlife habitat.

7. ~~Overcutting of private forest lands puts additional pressures for similar action on the publicly~~ owned lands.

000362

Recommendations

1. The County's Forest Management Zone should be applied to timber lands in order to preserve, protect, and ensure the sustained yield of this valuable resource.

~~2. Timber harvesting practices should be closely regulated to ensure the minimum environmental degradation (erosion, destruction of riparian, vegetation, etc.) and the best long-term use of the resource.~~

3 2. The most sound and effective reforestation technology should be applied to harvested areas.

3 4. The County should encourage private industry, the Department of Agriculture and the Bureau of Land Management to determine the appropriate combination of intensive management, roading, and rotation that will ensure maximum production, sustained yield and minimal environmental degradation for all forest lands in the County.

~~5. Tax programs should be sponsored in the state legislature that encourage sound long range management and immediate reforestation of privately owned forest lands.~~

4 6. Programs for diversification of the wood products industry should be encouraged. Particular attention should be given to the utilization of waste, which is often burned on the site due to lack of markets.

000363

Resources (continued)

2) Minerals

Findings

1. Although several mineral resources exist in the Subarea, current economic restraints (e.g., distance from major markets and difficulties in extraction) have preempted the development of this industry, except on a very limited scale.

2. Some minor extraction of sand and gravel occurs in the Subarea, but at a scale limited to use for local road building and maintenance.

3. Recently, concern has been expressed over the potentially usable copper resources in the area. At present, no possible sites have been identified, although exploration is underway statewide.

4. Should currently dormant mineral deposits be mined commercially in the future, the Subarea is likely to experience a number of environmental and economic effects.

Recommendations:

1. Mineral resources should be conserved for the future through the control of land uses that would be in conflict with mineral extraction.

2. Should commercially valuable mineral resources be discovered, careful analysis of all environmental impacts (both physical and social) must be carefully evaluated before extraction permits are considered.

~~3. If extraction is allowed, it should be performed under all federal, state and local regulations to minimize negative environmental effects.~~

000364

Resources (continued)

3) Energy

Findings

1. A long-range comprehensive plan for energy procurement, use and conservation does not presently exist for Lane County.

2. Several potential energy resources exist in the Subarea, including: wood and wood by-products, geothermal sources and hydroelectric capability. Solar and wind may also be viable energy sources in this area.

3. Further study is necessary to determine the capability of these resources (particularly geothermal) and the potential negative environmental impacts associated with their development.

4. Present energy sources in the area include electric power but not natural gas.

Recommendations

~~1.~~ Lane County should ~~develop and implement~~ long-range ~~goals and policies~~ for the management, ~~recycling~~ development and ~~conservation~~ of its ~~energy~~ resources.

~~2. Existing energy resources should be protected for future needs.~~

X. Low-head hydro projects and additional turbines on existing dams should be encouraged.

000365

C. LAND USE AND PUBLIC NEEDS

Land Use

Findings

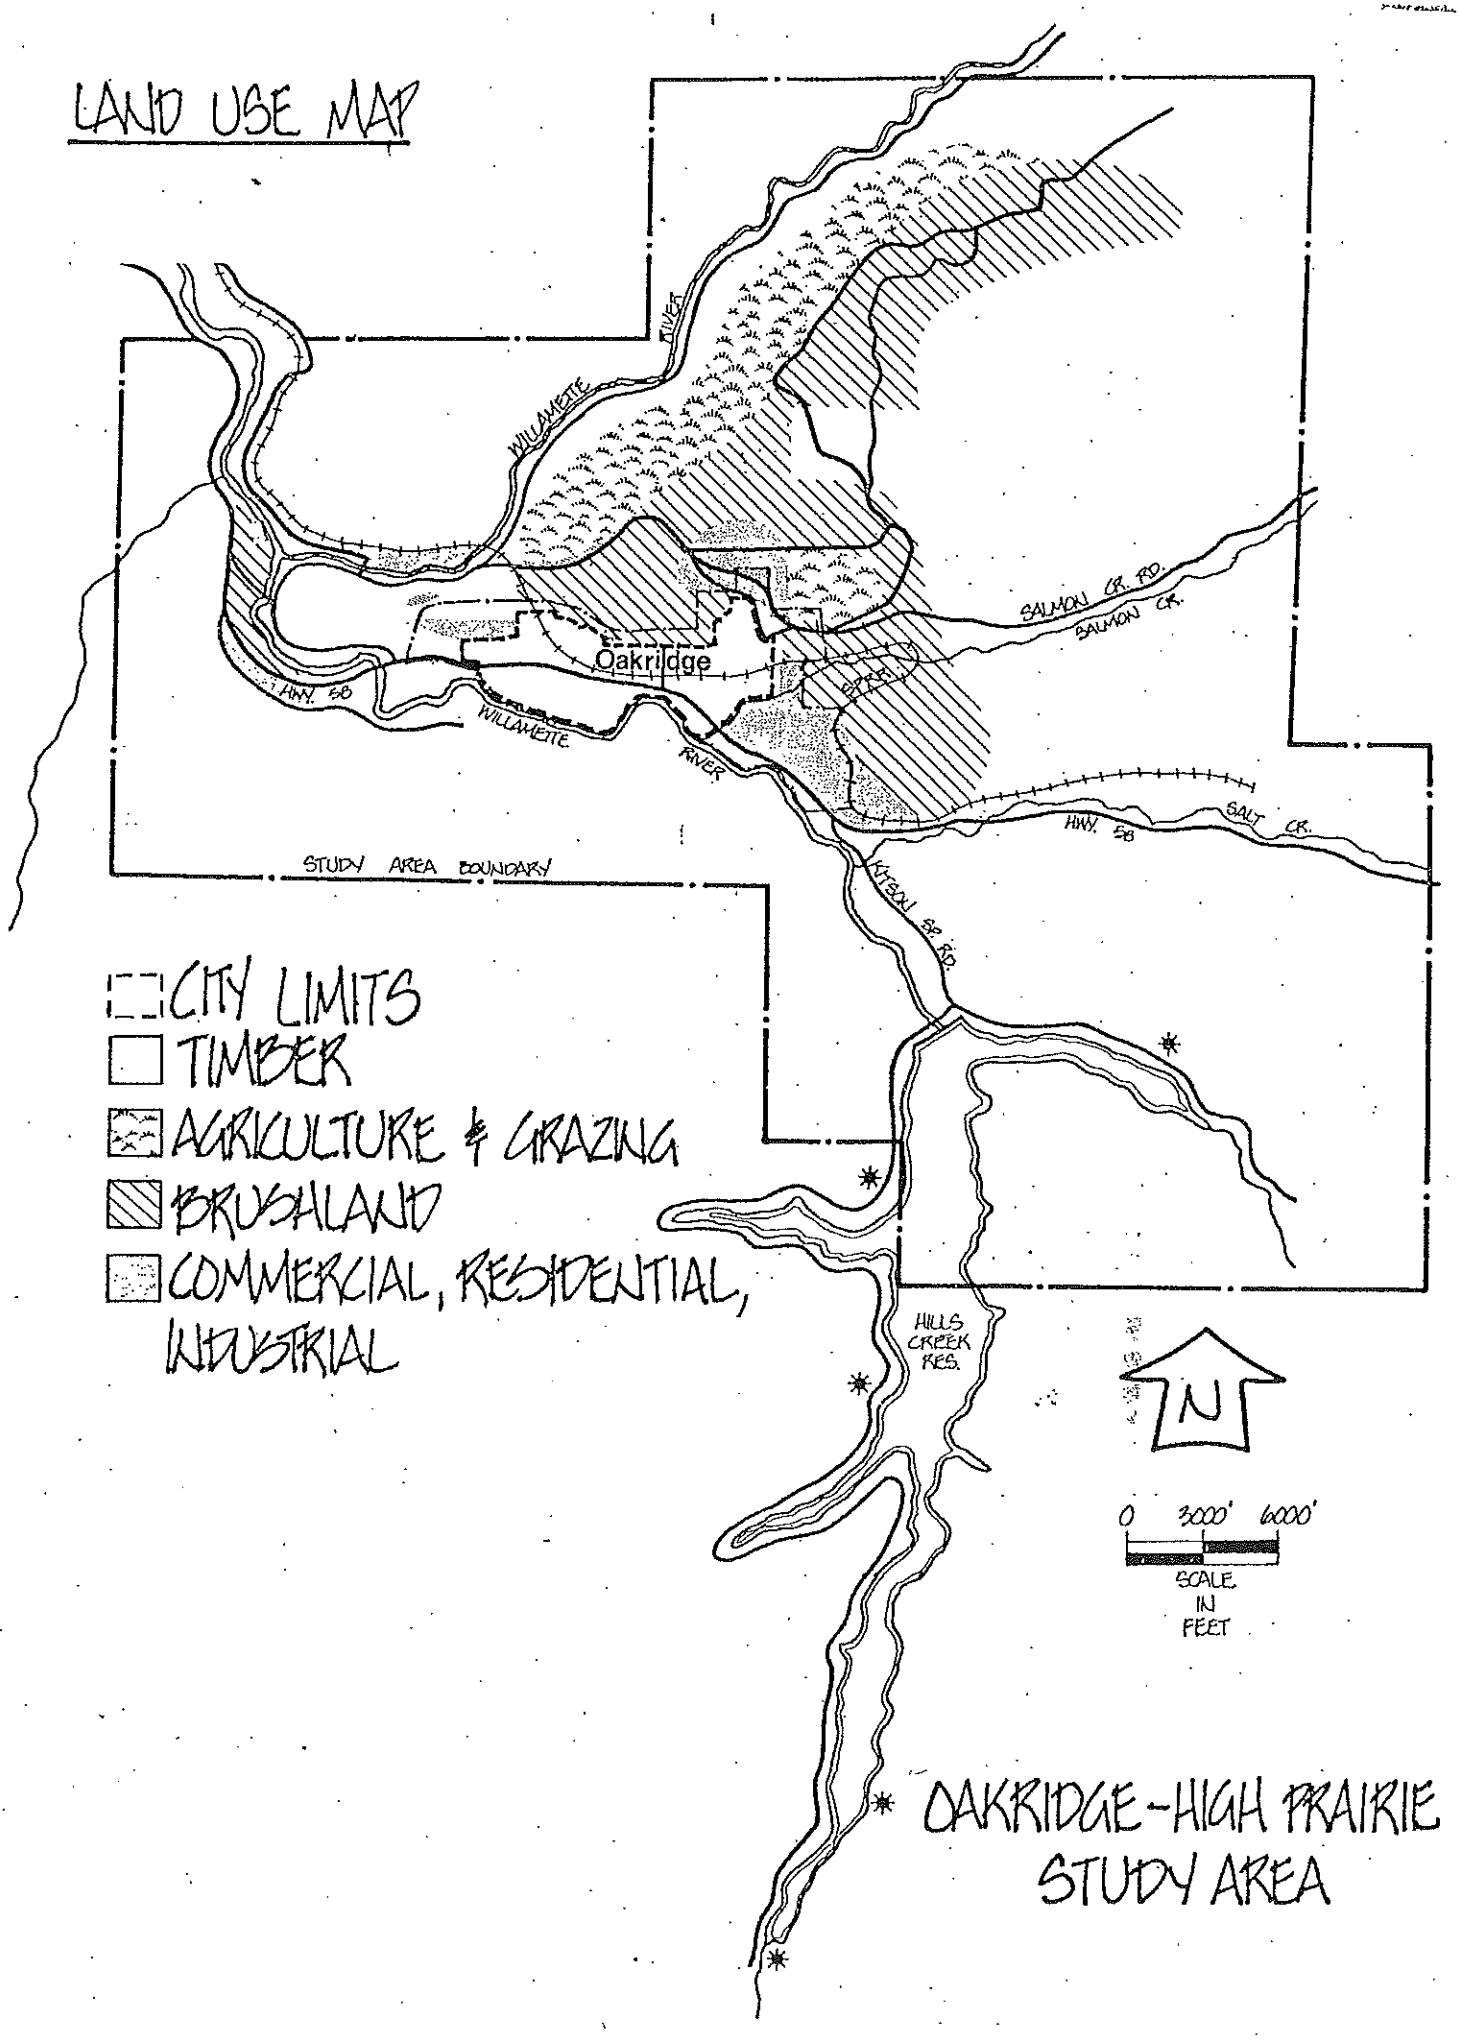
1. Ninety percent of the land in the Subarea is federally owned forest land at various levels of production. Another eight percent is large acreage owned by private timber companies.

2. This public ownership pattern, combined with topographic constraints, has directed most residential development into the river and stream valleys. The City of Oakridge will contain most of the Subarea's residential development, although residential development has also occurred in Westfir and along major roadways.

3. Residential densities are of an almost suburban nature in parts of the Subarea (particularly near Oakridge), although development activity has been slow in the past few years.

4. Some agricultural land use, mainly pasture and grazing, occurs in the High Prairie area and near Fall Creek Reservoir.

5. Unguided development, especially at higher densities, could threaten the remaining agricultural lands, cause a public safety problem from direct access onto main roads, and result in conflicts with timber harvest activities.



6. Commercial activity is currently confined to the City of Oakridge, where most of the area's residents orient for the provision of goods, services and cultural activity. A small grocery is located in Westfir.

7. Limited industrial development has occurred, mainly comprised of wood processing plants, mills and storage.

8. Generally, Subarea citizens desire to preserve the rural character and timber resource base of the area by guiding development.

000366

LAND USE MAP

OAKRIDGE-HIGH PRAIRIE STUDY AREA

Recommendations

1. Timber production should continue as the primary land use; however, other land uses (e.g., recreation, small-scale industry, agriculture, etc.) that will expand the local economic base, without adversely impacting the forest resource, should be actively pursued. Development should be guided to protect agricultural and timber resource lands and to prevent expansion into areas of natural environmental constraints.

2. Agricultural and timber uses should be further protected by respective zone designations of "exclusive farm use" and "forest management."

~~3. State and local tax policies and other financial incentives which enable a more equitable fiscal impact on the individual farmer should be studied and adopted by the County Commissioners and/or officially proposed to the legislature.~~

3 ~~4~~. Rural residential land use should be confined to areas of present development concentration.

4 ~~5~~. Further commercial and industrial activity should occur where such land use designations exist. Small-scale, rural industry should be encouraged.

5 ~~6~~. Small-scale "country store" commercial development should be permitted relative to needs of the population and recreational potential of the area.

000368

Transportation

Findings

1. The primary mode of transportation within the Subarea is the automobile.

2. Conditions and capacity of the roads are generally adequate and, with proper maintenance, should remain so if present growth trends continue.

3. Major road improvements could have a growth-inducing impact on the Subarea.

4. The City of Oakridge is served by the Greyhound bus, Southern Pacific Railroad (freight only) and a general aviation airport. No service by Lane Transit District is presently available or planned for the future within the Subarea.

5. Similarly, major new development, significant increase in recreational use and/or drastic changes in the price and supply of fuel could alter the transportation needs of the Subarea.

6. Highway 58 carries a lot of truck traffic as it serves as a primary truck route to Reno and northeastern California. The state has no current plans for improvement of this road.

Recommendations

1. Since planning decisions for the Willamette National Forest regarding recreational use and timber harvest activity will affect future use of the road system, close coordination with this agency and the County should be maintained.

2. Road capacities, improvement needs and potential access problems should be continuously assessed by both the state and County.

3. Emphasis should be on the maintenance and improvement of the existing road system as needed to ensure public safety rather than the construction of new routes.

000369

4. All major/intensive development should be evaluated for impacts on transportation facilities and required to subsidize necessary improvements related to the proposal.

5. All improvement plans should be evaluated for consistency with the County land use and environmental protection policies.

6. Land use proposals affecting the airport should be reviewed to ensure compatibility.

7. Efforts should be made to establish economically sound transportation alternatives to the individual automobile (e.g., bicycle paths, public transit buses, car pools, rail, etc.).

8. Provide cooperative assistance through the County's transportation planning function to work with the City of Oakridge to design an arterial road plan to serve the area north of the city limits and inside the potential urban service area.

000370

Recreation

Findings

1. The Subarea offers a variety of recreational settings, including: large holdings of publicly-owned forestlands, four large lakes, many smaller lakes and streams, the Upper Middle Fork itself and three mineral hot springs.

2. Recreational facilities are provided throughout the Subarea to support such activities as swimming, boating, camping, fishing, hiking, etc.

3. Present policies of the Willamette National Forest, the agency with the major impact on recreational use in the Subarea, emphasize an increase in dispersed recreation (i.e., activities outside of developed recreational areas, such as backpacking). These policies also encourage private investment and development.

4. The increase may result in conflicts with regard to timber harvest activities and alternate use of the reservoirs. Similarly, increased use will place an extra burden on the Subarea's roads and existing facilities, may affect local environmental quality and the quality of the recreational experience, and may add pressure for use of currently undeveloped areas.

5. The increase could provide needed economic opportunities for the local community, particularly in light of the National Forest policy in this regard.

Recommendations

1. Existing recreational facilities should be continually maintained and preserved. The establishment of new facilities should be encouraged.

2. Major new developments should be required to assist in the provision of recreational facilities necessary to serve the population they will draw to the area.

000371

3. The Willamette National Forest Administration should work closely with the County and the local citizens in the planning of future facilities in the area.

4. Recreational resources should be carefully managed so that other uses, such as timber harvesting and multiple use of reservoirs, will not be preempted. Accordingly, recreational development proposals should be reviewed for potential impacts on environmental quality, local character and community services.

5. Tourist activity in the Subarea should be promoted.

6. Modification of existing recreational facilities and government policies affecting those resources could help to increase their use. Specific improvements include:

   - increasing the amount of free parking along Highway 58;

   - construction of more boat docks on the reservoirs, and

   - consistent maintenance of reservoir water levels. Specifically, levels should be kept high for a greater length of time each year.

000372

Public Services and Facilities

Utilities

Findings

1. Except for the City of Oakridge and a portion of Westfir, the Subarea residents are dependent upon individual private wells and subsurface sewage disposal.

2. Soils and other natural features limit some of the area's suitability for subsurface sewage disposal, further indicating the appropriateness of low density development.

3. Expansion of water and sewer service could be growth-inducing.

4. Given the area's tax base and dispersed, rural character, a centralized sewer and water system for all residences is currently impractical. However, the existing sewage treatment facility in Westfir could service 350-400 households (almost twice its present capacity) provided the infiltration problem is corrected.[2]

5. Presently, Lane County has no official policy for the regulation of "private" utilities; consequently, it is difficult to ensure that such systems will be satisfactorily maintained over the years.

6. Water consumption for the Westfir area is very high. This is due to either leaks in the system or individual home use (or a combination of both).

Recommendations

1. Development in areas dependent upon private wells and subsurface sewage disposal should be low-density in nature. Higher density development

[2] Westfir Utility Study, Westfir, Oregon, CH2M Hill, March 1978.

should only be approved if soil and other natural features allow.

2. Any proposals for centralized water and/or sewer service should be carefully evaluated for all potential impacts on the Subarea and any affected areas.

3. Existing and future septic system failures should be promptly corrected.

4. Steps should be taken to identify the cause of the very high rate of water consumption in the area and corrective measures then instituted.

5. The County should develop criteria for the regulation of private utilities.

6. The County should continue to work with the community of Westfir in determining the best method for maintenance, and possible expansion, of services in that area, particularly with regard to the existing sewage treatment facility.

7. Research and development of alternative sewage disposal systems should be supported by the County.

8. Should the growth rate increase significantly, hook-up to such a system may be warranted in currently unserviced areas and should be instituted before the situation reaches a critical stage.

Schools

Findings

1. The majority of children in the Subarea attend school in Oakridge District 76, with some students enrolled in Lowell District 71.

2. Schools within District 76 presently have enrollments under capacity, although the recent closure of the Willamette City School has reduced the capacities stated in the technical report from approximately 1500 to 1250. As well as can be projected at this time,* school capacities should be adequate for the planning period.

3. Gymnasium and playground facilities in Lowell District 71 will be overextended if enrollment increases as projected.

Recommendations

1. All land use decisions should consider potential impacts on schools to ensure that appropriate measures are instituted to mitigate any negative impacts.

2. Local government and public school officials should coordinate their activities to ensure that local schools do not become overburdened.

*School enrollment projections are highly variable and dependent on the same external influences as population projections.

Fire Protection

Findings

1. The State Forestry Department and National Forest Service provide fire protection for both public forest lands and private timber within the National Forest.

2. Formal protection for structural fires is limited to the City of Oakridge, Westridge Jr. High School, Circle Bar Golf Course and those buildings owned by the Pope & Talbot, Mitchell & Blacketor Mills and the Forest Service.

3. Even though most of the unincorporated rural residential portions of the Subarea lack fire protection, a recent ballot measure to establish a rural fire district failed.

Recommendations

1. Major developments should not be approved unless fire protection is available. Accordingly, such developments must include provisions for assuming their share of the financial burden of extending existing facilities in proportion to their impact on those services.

2. Because of its increase to the forest fire risk, development unrelated to timber production and harvesting should be prohibited within forest resource areas. Recreational and other multiple use activities should also be controlled during periods of high fire risk.

Police Protection

Findings

1. The Sheriff's Department presently has one deputy assigned to the Oakridge area on a permanent basis. Two additional deputies reside in the Oakridge area and work for the US Forest Service on a contractual basis. These deputies are not normally available for general law enforcement service to the residents of the subarea.

2. The Sheriff's Department currently considers the Oakridge deputy to be working at maximum efficiency. Additional increase in population in the subarea will ultimately decrease this deputy's efficiency and ability to effectively respond to the public safety needs of subarea residents.

3. State police out of the Oakridge office routinely patrol Highway 58 and occasionally drive other roads in the area.

4. The size and physical character of the Subarea make law enforcement difficult.

Recommendations

1. ~~The Sheriff's Department would~~ recommend that staff in the ~~Oakridge area be increased one~~ deputy for every ~~additional~~ 500 residents of the subarea.

X. Possible coordination with the City of Oakridge for police services should be encouraged.

000377

Solid Waste

Findings

1. The County Solid Waste Management Plan has established the policies for future disposal.

2. As part of the Countywide plan, a modified sanitary landfill is located southeast of Oakridge, with approximately three years of use remaining.

3. Presently, garbage collection service is only available in the Oakridge vicinity.

Recommendations

1. The policies established by the County Solid Waste Management Plan should be supported and implemented.

2. Particular emphasis should be placed on development of an areawide system of solid waste transfer, source separation and resource recovery when economically and technically feasible.

VI. LAND USE CONSTRAINTS

Introduction

The following is a brief summary of the full Land Use Constraints chapter presented in the Technical Report. It provides additional background for the Plan Diagram, which is detailed in the following chapter.

Constraints in the Subarea

Land use or development constraints are those apsects of the natural environment that generally preclude or severely limit the land's potential to support development. They reflect the intrinsic ability of the landscape to withstand human alteration and indicate where development could be damaged or destroyed by natural processes. The Development Constraints Map graphically portrays these natural limitations and, hence, is a useful guide for the determination of land use.

It must be noted that the Constraints Map is very general. It provides some indication of land use limitations, particularly to large-scale developments; however, individual homesites may be less affected by specific constraints. Site-specific evaluations should be made for all proposed development.

The Upper Middle Fork Development Constraints Maps (#9, 9A, 9B) display the following:

1) Soils with a Development Suitability Rating of 4 (generally unsuitable for any development activity). Appendix B of the Technical Report is an explanation of the rating system.

2) Slopes of 15% or greater.

3) Areas subject to periodic flooding or ponding.

4) Areas of high groundwater supply potential.

This map should be continuously updated as additional and more detailed information becomes available. The Plan Diagram, for which this map serves as a general guide, should also be modified accordingly.

000379

VII. THE PLAN DIAGRAM

INTRODUCTION

The Plan Diagram is a graphic portrayal of how land use in the Subarea would appear if all of this Plan's recommendations were implemented by 1995. It represents what is felt to be the best pattern for the future, based upon land use considerations alone. For this reason, it is one of the most important components of the Subarea Plan and, in essence, a recommendation on its own.

The Plan Diagram represents only one--although it seeks to be the optimum--display of future land use. Should future planning efforts result in modification of the planning study itself, the Plan Diagram should be adjusted accordingly.

THE COMPREHENSIVE PLAN AND THE PLAN DIAGRAM

Once adopted, the combined Comprehensive Plan and Plan Diagram serve as the official public policy statement guiding decisions with regard to future land use in the Subarea. Although primarily concerned with physical development, the Plan and Plan Diagram also incorporate social and economic considerations in order to interrelate all functional and natural systems and activities affecting land use in the Subarea. Developed to promote public health, safety and welfare, both of these elements should be considered "general" in nature. They summarize policies and recommendations in broad categories, not indicating specific locations of land use or regulations which may govern them.

ZONING AND THE PLAN DIAGRAM

The Plan Diagram, while serving as a guide to zoning is not a zoning map. Zoning ordinances and maps are specific pieces of legislation which are intended to implement the proposals of the Comprehensive Plan and its Plan Diagram.

A zoning ordinance is basically a public law which, in detail, regulates and restricts the use of land in the public's interest. It deals with three major areas: (1) the use of land, water and structures; (2) the height, size, shape and placement of structures; and (3) the density of development in given areas. Requirements concerning these matters are written into law, and are enforced as law.

000380

The Comprehensive Plan, and Plan Diagram, serve as sources of information for the application of zoning. Zoning uses this information, along with other sources, in the form of a special study in which every property owner has full input. Zoning will be undertaken following the review of the Comprehensive Planning Study and Plan Diagram.

COMPONENTS OF THE PLAN DIAGRAM

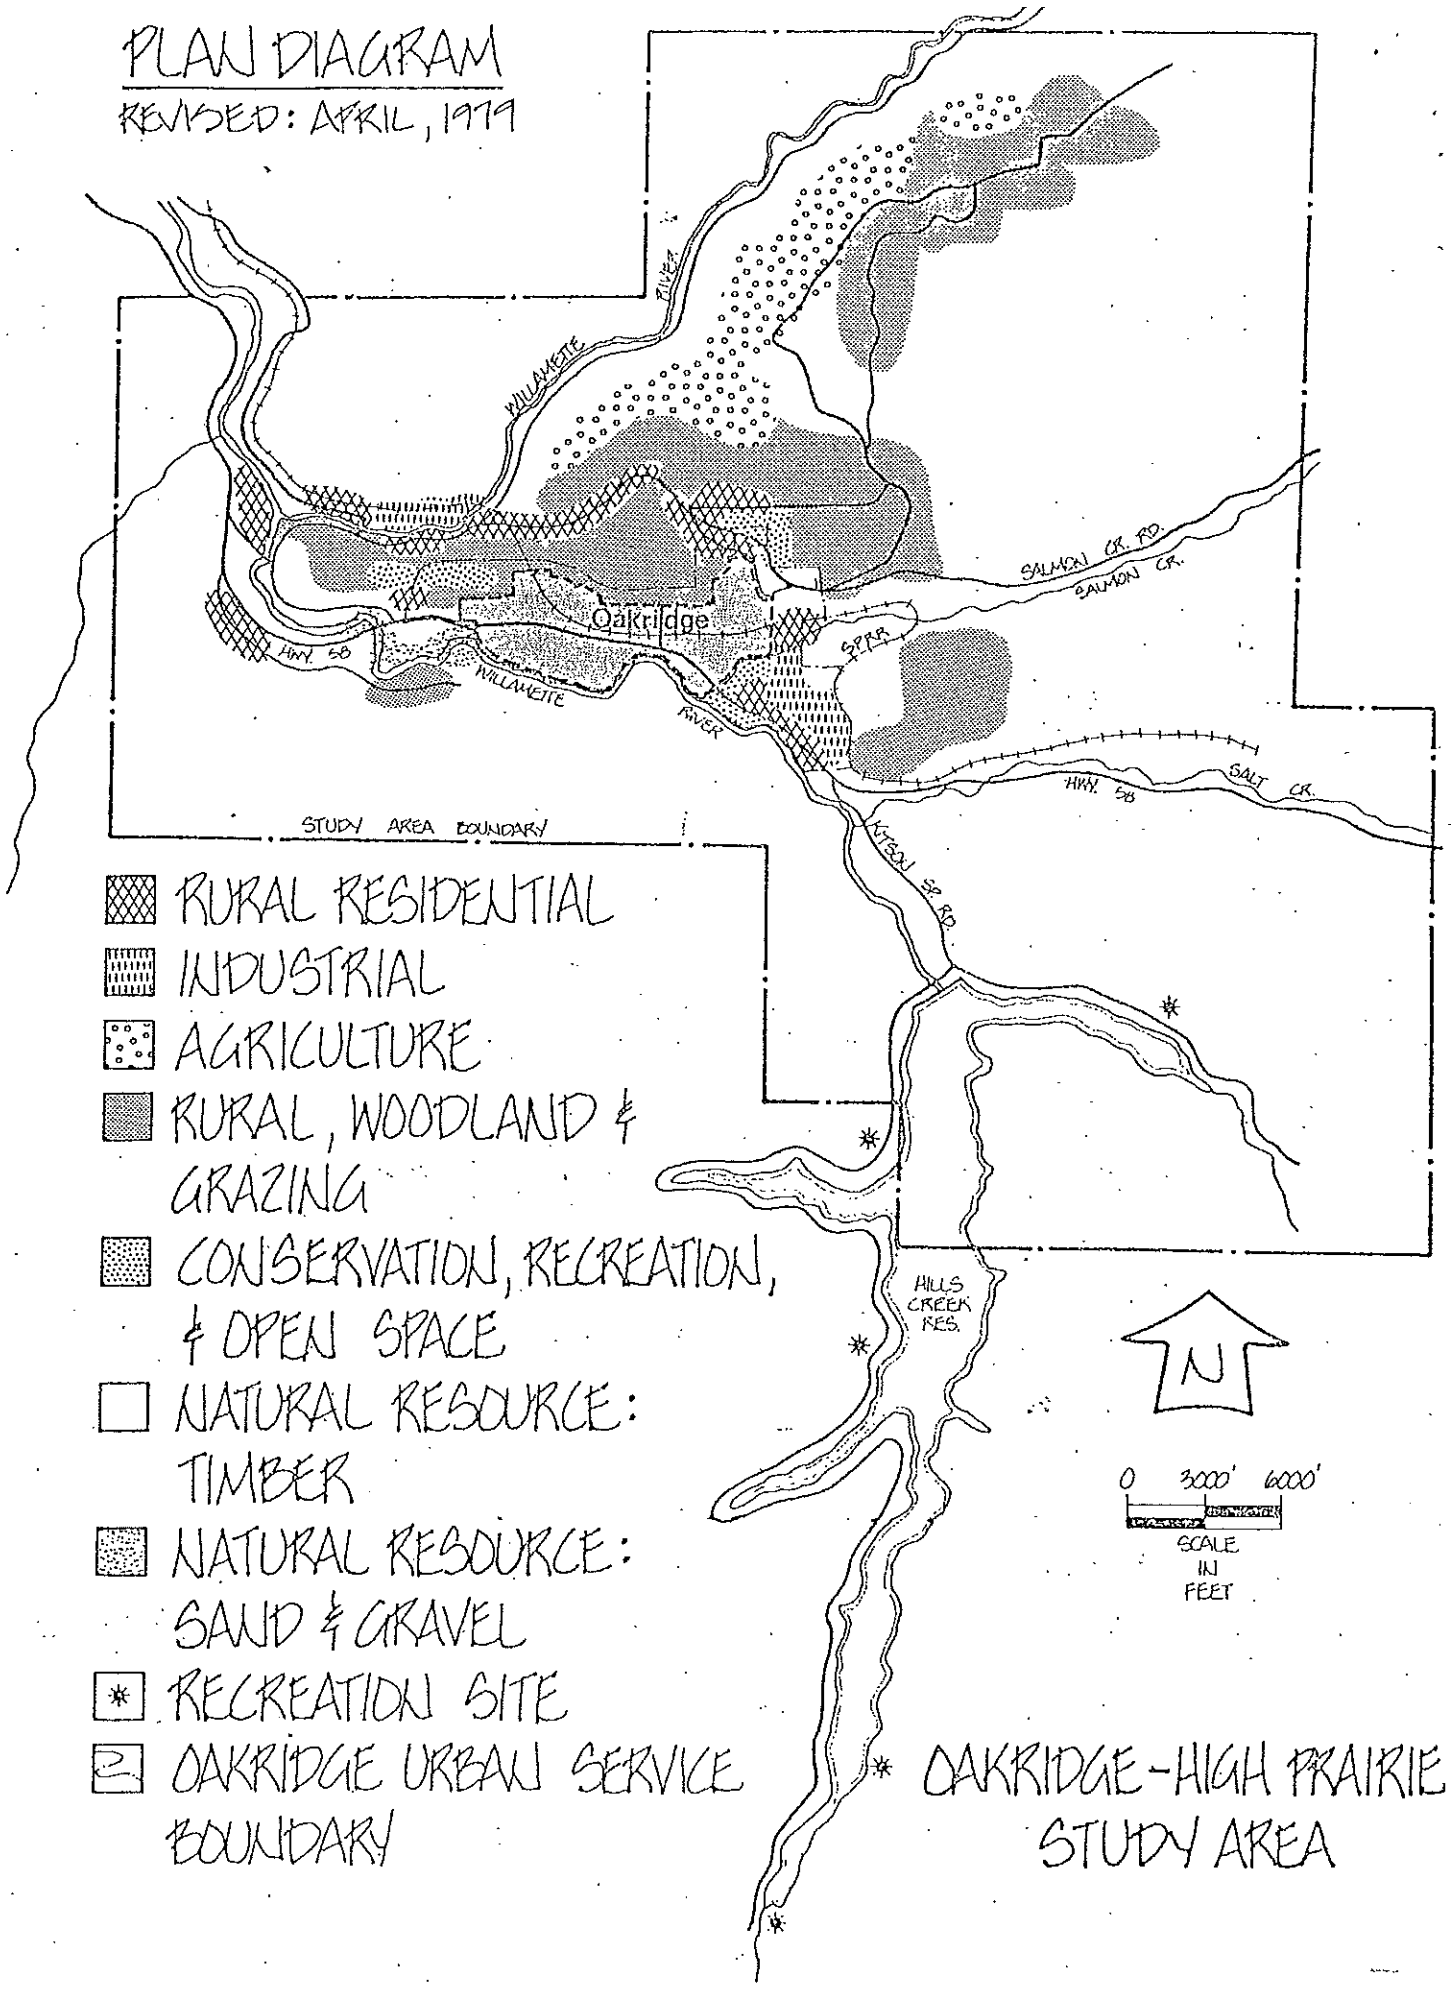
A. General Land Use Categories

Several land use categories have been assigned to the Upper Middle Fork Subarea. These categories are shown on the Plan Diagram as the primary land use designation, defined on Pages 52 through 54 of this report and further outlined in Table 1.

B. Table 1. - Summary of Land Use Designation Factors

This table outlines the intent and purpose of each land use category and lists physical features (e.g., slope, soil, water supply, etc.) characteristic of the category, which serve as criteria for future designations.

C. Table 2.- The Plan Conformity Chart (Matrix)



Although the categories shown on the Plan Diagram Map represent the "Primary" land uses recommended in the subarea, it is recognized that other uses may be appropriate and desirable on a particular site. Hence, a system has been devised to introduce a degree of flexibility into the application of land use categories by allowing for "secondary" land uses within designated "primary" categories.

The system allows for unique or unusual circumstances or conditions which could accommodate a secondary use, without violating the intent and purpose of the primary category or requiring a general plan amendment. The key to this flexibility lies in the establishment of specific criteria which enable the determination of proposed uses consistent with the spirit intent and purpose of the plan. There are four degrees of plan conformity which are described and graphically portrayed on the Matrix in Table 2. The following is a brief summary of these designations:

TABLE 1 - SUMMARY OF LAND USE DESIGNATION FACTORS[1]

LAND USE CATEGORY	INTENT & PURPOSE	KEY DESIGNATION FACTORS[1] SOILS	SLOPE	FLOOD HAZARD CONSIDERATION	WATER SUPPLY	MINIMUM PARCEL SIZE	OTHER DEVELOPMENT STDS.
AGRICULTURE	*Recognizes agricultural land as a valuable resource. *Prime consideration is to recognize the inherent capacity of the land for agricultural productivity and to protect this capability for present and future generations. *Intended to preserve, those lands for agricultural productivity whether or not being actively farmed. *Agricultural productivity also includes dairying and livestock raising.	Soil Conservation Service Agricultural Capability Classification I, II, III, or IV.	Generally less than 15%.	No flood hazard limit for farming. Dwellings and structures located out of flood hazard areas or where only a 1% probability of flooding exists should be floodproofed and not block drainage channels.	Amount sufficient to conduct farming activities and maintain an adequate domestic supply.	Generally 20 acres or greater.	
NATURAL RESOURCES	*Lands having an economically exploitable resource, particularly petroleum mineral, and other sand and gravel deposits, timber and other energy sources. *Purpose is to ensure the continued supply of raw resources for the economic well-being of the Subarea and the County.	--NO---- ----SPECIFIC-----REQUIREMENTS--				Generally 40 acres or greater for timber harvesting. Variable with other resources depending on particular extraction requirements.	Extraction and harvesting should be conducted so as to not cause environmental degradation. Land should be reclaimed for other purposes after removal of resources.
RURAL WOODLAND & GRAZING	*Applied to those areas exhibiting one or more of the following characteristics: (1) characterized by severe environmental constraints and thus is of marginal suitability for development and lacks a predominance of agricultural soils; (2) is relatively isolated from developed areas and/or from the services and facilities necessary to support more intensive development; and (3) is suitable for pasture, grazing and dairying which are significant to the County's economy and therefore, require preservation. *Such areas provide opportunities for living in rural and undeveloped areas and to conduct agricultural activities.	Generally of marginal suitability for development due to environmental constraints. Not a predominance of agricultural soils.	No limit. However, development should be located so as not to create any soil erosion hazards.	No flood hazard limit for woodland, pasture or grazing activities. Dwellings and structures located out of flood hazard areas or where only a 1% probability of flooding exists should be floodproofed and not block drainage channels.	Limited quantity & quality of groundwater and surface water available. Need amount sufficient to maintain an adequate domestic supply.	Relatively large parcels or a combination of large and small parcels which previously existed. Parcel sizes generally recommended to be 20 acres or more.[3]	Continued preservation of "Rural atmosphere" of area.
RURAL RESIDENTIAL	*Provide opportunities for living in rural residential or rural neighborhood settings; located within or adjacent to communities designated or with the character of rural service centers, minor or major development centers. * Accommodate some expansion due to close proximity to necessary public facilities and services if located in an area with moderate development constraints. Some infilling may be appropriate in existing areas not otherwise appropriate for expansion.	Development Suitability Rating of 1, 2, or 3.	Generally less than 15% Development on slopes in excess of 15% should be carefully analyzed to ensure that there is minimal environmental risk and/or public and private costs.	Completely out of flood hazard areas.	Generally good ground water supplies. Development proposal must demonstrate that additional development will not deplete the water supplies for existing uses; will not preempt establishing other primary designated land uses in the future, or exceed the capacity to provide adequate water to the proposed development	In or adjacent to a rural service, minor or major development center with moderate development constraints, parcel sizes must be a minimum of 2 acres. May be reduced to 1 acre with an acceptable community water supply system and if not detrimental to the natural environment or significant burden on other community facilities. In the more isolated portions of the County, parcel sizes must be a minimum of 5 acres.[2]	Development should preferably be located within a fire district.

[1] This Table, and Key Designation Factors, are based upon technical information contained in the Technical Report, which is separate from the Plan Report, and copies of which are on file at Planning Division offices and which are available for public reference.

[2] Policies and regulations may be revised to establish equivalent densities if the purpose, intent and character of the Rural Residential Designation is not changed.

[3] Minimum parcel sizes may be ~~10~~ 5 acres in those areas where:
~~a. The general area consists predominantly of parcels of comparable size or smaller, and the establishment of 10-acre parcels would not be incompatible with the character of the general area; and~~
a. ~~Ten~~ 5-acre minimum parcel sizes would not significantly deplete or otherwise prove incompatible with the protection, conservation, use and/or harvesting of important natural resources, particularly timber, sand and gravel, and important agricultural land; and
b. ~~Ten~~ 5-acre minimum parcel sizes would be commensurate with the environmental limitations of the area.

LAND USE CATEGORY	INTENT AND PURPOSE	KEY DESIGNATION FACTORS					
		SOILS	SLOPE	FLOOD HAZARD CONSIDERATION	WATER SUPPLY	MINIMUM PARCEL SIZE	OTHER DEVELOPMENT STDS.
NEIGHBORHOOD COMMERCIAL	*Provide convenience goods and services needed by neighborhood residents on a daily basis. *Located in areas easily accessible to the residents they serve. *Not specifically reflected on the Plan Diagram. *Should be provided as the local need arises.	Development Suitability Rating of 1, 2, or 3.	Generally less than 8%	Buildings should be completely out of flood hazard areas. Other structures which by their nature must be located within flood hazard areas should not adversely affect drainage or stream flow patterns.	Generally good groundwater supplies. Proposals must demonstrate that additional development will not deplete the water supplies for existing uses; will not preempt establishing other primary land uses in the future or exceed the capacity to provide adequate water to the proposed development.	No minimum parcel sizes --will vary depending on the nature and scope of the commercial service environmental constraints and other development standards.*	Activities should be located centrally within the trade area at intersection of major roads. Community and tourist commercial activities should be grouped not scattered. Will not cause unreasonable burden on existing or future community facilities or ability of local government to provide public services.
COMMUNITY COMMERCIAL	*Located in designated rural service, minor development, and major development centers. *Intended to provide convenience goods, personal services and commercial goods needed to support the local economy and provide tourist commercial services.						
TOURIST COMMERCIAL	*Provide accommodations, goods and services for tourists, the motoring public and other transient clientele. *Likely to occur adjacent to or nearby recreational facilities and/or major travel routes in "community commercial" areas. *Located, designed and screened to the degree necessary to maintain harmony and compatibility with the surrounding area. *Will not result in substantial adverse effect on existing land use activities.						
INDUSTRIAL	*Provide locations where processing, manufacturing, and assembling of products and supporting activities can occur. *Preferably in groups within or adjacent to minor or major development centers and existing industrial areas and some rural service centers. *Does not apply to extraction of mineral resources nor harvesting of timber resources.	Development Suitability Rating of 1, 2 or 3.	Generally less than 8%	Buildings should be completely out of flood hazard areas. Other structures which by their nature must be located within flood hazard areas should not adversely affect drainage or stream flow patterns.	Same as Commercial.	No minimum Parcel sizes will vary depending on the nature and scope of the industrial service, environmental constraints and other development standards.	Provide adequate space for employee parking and shipping needs. Located in or near main transportation routes and will not cause unreasonable road congestion or unsafe conditions. Will not place unreasonable burden on existing or future community facilities or ability of local government to provide public services.
CONSERVATION/RECREATION/OPEN SPACE	*Recognizes areas having a high value for public use or preservation in the natural state. *Includes public parks, greenways, recreational sites, scenic open space or corridors, and wildlife preserves and other areas of unique wildlife habitat. *Some extraction of natural resources may be appropriate although areas designated C/R/OS should be permanently maintained for the primary purpose. *Extractive activities should be related to reclamation and rehabilitation for C/R/OS purposes. *Use of many C/R/OS areas for agricultural, limited timber growing, and other open space uses is consistent with this purpose and intent.	No specific site factors are listed since the C/R/OS designation applies to a wide variety of activities. The principal common feature is a recognized value to the public whether for direct use or passive preservation.

Legend

⊠ Plan Conformity. The Land Use Category conforms to the Plan if consistent with the Key Designation factors of that Land Use Category. (Table 1).

○ Potential Plan Conformity. May conform to Plan. Requires following affirmative findings for any such Land Use Category:

1. Non-conflict with the Goals and Policies of the Countywide "Policies Document" and with the Findings and Recommendations of the Subarea Plan;
2. Non conflict with the intent and purpose of the Primary Land Use Category into which the Secondary Land Use Category is proposed to be introduced (Table 1);
3. Consistency with the Key Designation Factors of the proposed Secondary Land Use Category (Table 1);
4. Will be compatible with and will not adversely affect the livability or appropriate development of abutting properties and the surrounding vicinity, taking into consideration, among other things, the anticipated density, bulk and noise level of the use or activity;
5. Will not have an unduly adverse affect on the management of resources, especially as relates to the Agriculture, Natural Resource, and Rural, Woodland and Grazing Land Use Categories. In making this determination, consideration may be given to the following, among other considerations: potential damage to crops or livestock on surrounding lands, creation of properties too small for efficient resource management, depletion of the supply of the natural resource base, and property taxation.

◐ Low Potential Plan Conformity. May conform to Plan. Requires following affirmative findings for any such Land Use Category:

1-5. (Same as for "Potential Plan Conformity")

6. Will support and complement intent and purpose of Primary Land Use Category or provide an essential service to the development center, Subarea or County which would not otherwise be provided in as appropriate a manner; or
7. Unique circumstances are such that neither the Primary nor the allowable Potential Plan Conformity Secondary Land Use Categories are practical or reasonable.

◉ Plan Nonconformity. The Land Use Category does not conform to the Plan. Plan Amendment is needed if conformance is to be achieved.

NA Not Applicable. This primary land use category is not graphically portrayed on the Plan Diagram.

a) Plan Conformity: Some secondary land uses have automatic plan conformity. For example, Forestry is an acceptable secondary land use under the primary category, RURAL WOODLAND AND GRAZING.

b) Potential Plan Conformity: This includes land uses that could be in conformity, provided a list of criteria are met.

c) Low Potential Plan Conformity: Some secondary land uses would only be acceptable under very limited circumstances. A rather rigid list of criteria must be met before these secondary uses can be found in conformity.

d) Plan Nonconformity: Secondary categories so designated do not conform to the plan.

The permission of a secondary land use would depend upon the determination of its level of conformity, based on the criteria in Table 2. Ultimate responsibility for this determination belongs to the Board of County Commissioners, aided by recommendations from the Planning Commission.

HOW THE PLAN DIAGRAM SYSTEM IS USED

The Plan Diagram system will be used by the County in regulating land use. It is used in two ways:

1) Evaluating major land use applications for individual properties.

This primarily involves requests for changing or "rezoning" property. Other major applications include certain conditional use permits, unzoned area permits and any other major land use permits the County may require in the future.

Upon determining that a major permit is required, the owner (or other party with a legal interest in the property) follows this procedure:

000388

Step 1. Determine how the particular application conforms to the Plan. This is accomplished by:

1) Finding the property's "Primary Land Use Category" designation from the Plan Diagram.

2) Determine the proposal's plan conformity rating on the chart in Table 2.* For example, suppose the area is designated RURAL, WOODLAND AND GRAZING on the Plan Diagram. This is the site's primary land use category which should then be located on the left-hand side of the chart in Table 2. Reading across the chart, the ratings for a site's secondary land use category may be seen. The secondary land use ratings for the RURAL, WOODLAND AND GRAZING primary category are as follows:

   a. If the request is for a NATURAL RESOURCE (Timber) or CONSERVATION-OPEN SPACE-RECREATIONAL application, it is considered to have a "Plan Conformity" rating.

   b. If the request is for a NEIGHBORHOOD COMMERCIAL application, it is considered to have a "Potential Plan Conformity" rating.

   c. If the request is for an INDUSTRIAL application, it is considered to have a "Low Potential Plan Conformity" rating.

   d. If the request is for a COMMUNITY COMMERCIAL application (or for any other major land use category not provided in the Subarea Plan), it is considered to have a "Plan Nonconformity" rating.

*In most cases the determination of how the particular application would be rated will be obvious. Where there is uncertainty, the determination of the rating will be part of the public hearing process explained in Step 2. The County may need to establish by separate policy which zoning districts and major permits are included within the definition of each land use category used in the Plan.

Step 2. Should the owner decide to proceed with a formal application, the County's decision for approval or disapproval will be based upon the proposal's compliance with the requirements listed under the applicable plan conformity rating.

An application with a "Plan Nonconformity" rating could not be approved as being in conformance with the Plan.

At the present time, the County's decisions are made either by the Planning Commission or the Board of Commissioners, depending upon the type of application. If it is a Planning Commission decision, it is made after the holding of a public hearing. The Planning Commission's decision can be appealed to the Board of Commissioners. If the decision is by the Board of Commissioners, it is also after the holding of a public hearing. In this case, the Planning Commission will have earlier held a public hearing and made a recommendation to the Board of Commissioners.

Step 3. The owner proceeds according to the final decision on the application:

a. If the decision is approval, the owner may then receive approval of building and other necessary construction permits for the requested land use.

b. If the decision is disapproval, the owner must continue to use the property as allowed by the existing requirements or may choose to request approval of a different application.

2) Initial Zoning And The Rezoning Of Large Areas:

The zoning and rezoning of large areas will primarily be based upon (1) the Primary Land Use Designations as shown on the Plan Diagram, and (2) the predominant character of the use of the land. When the predominant character of a small area is different than the general designation for the larger area, as shown on the Plan Diagram, and when other modifications are considered for certain properties, the decision process for these smaller areas will be

000390

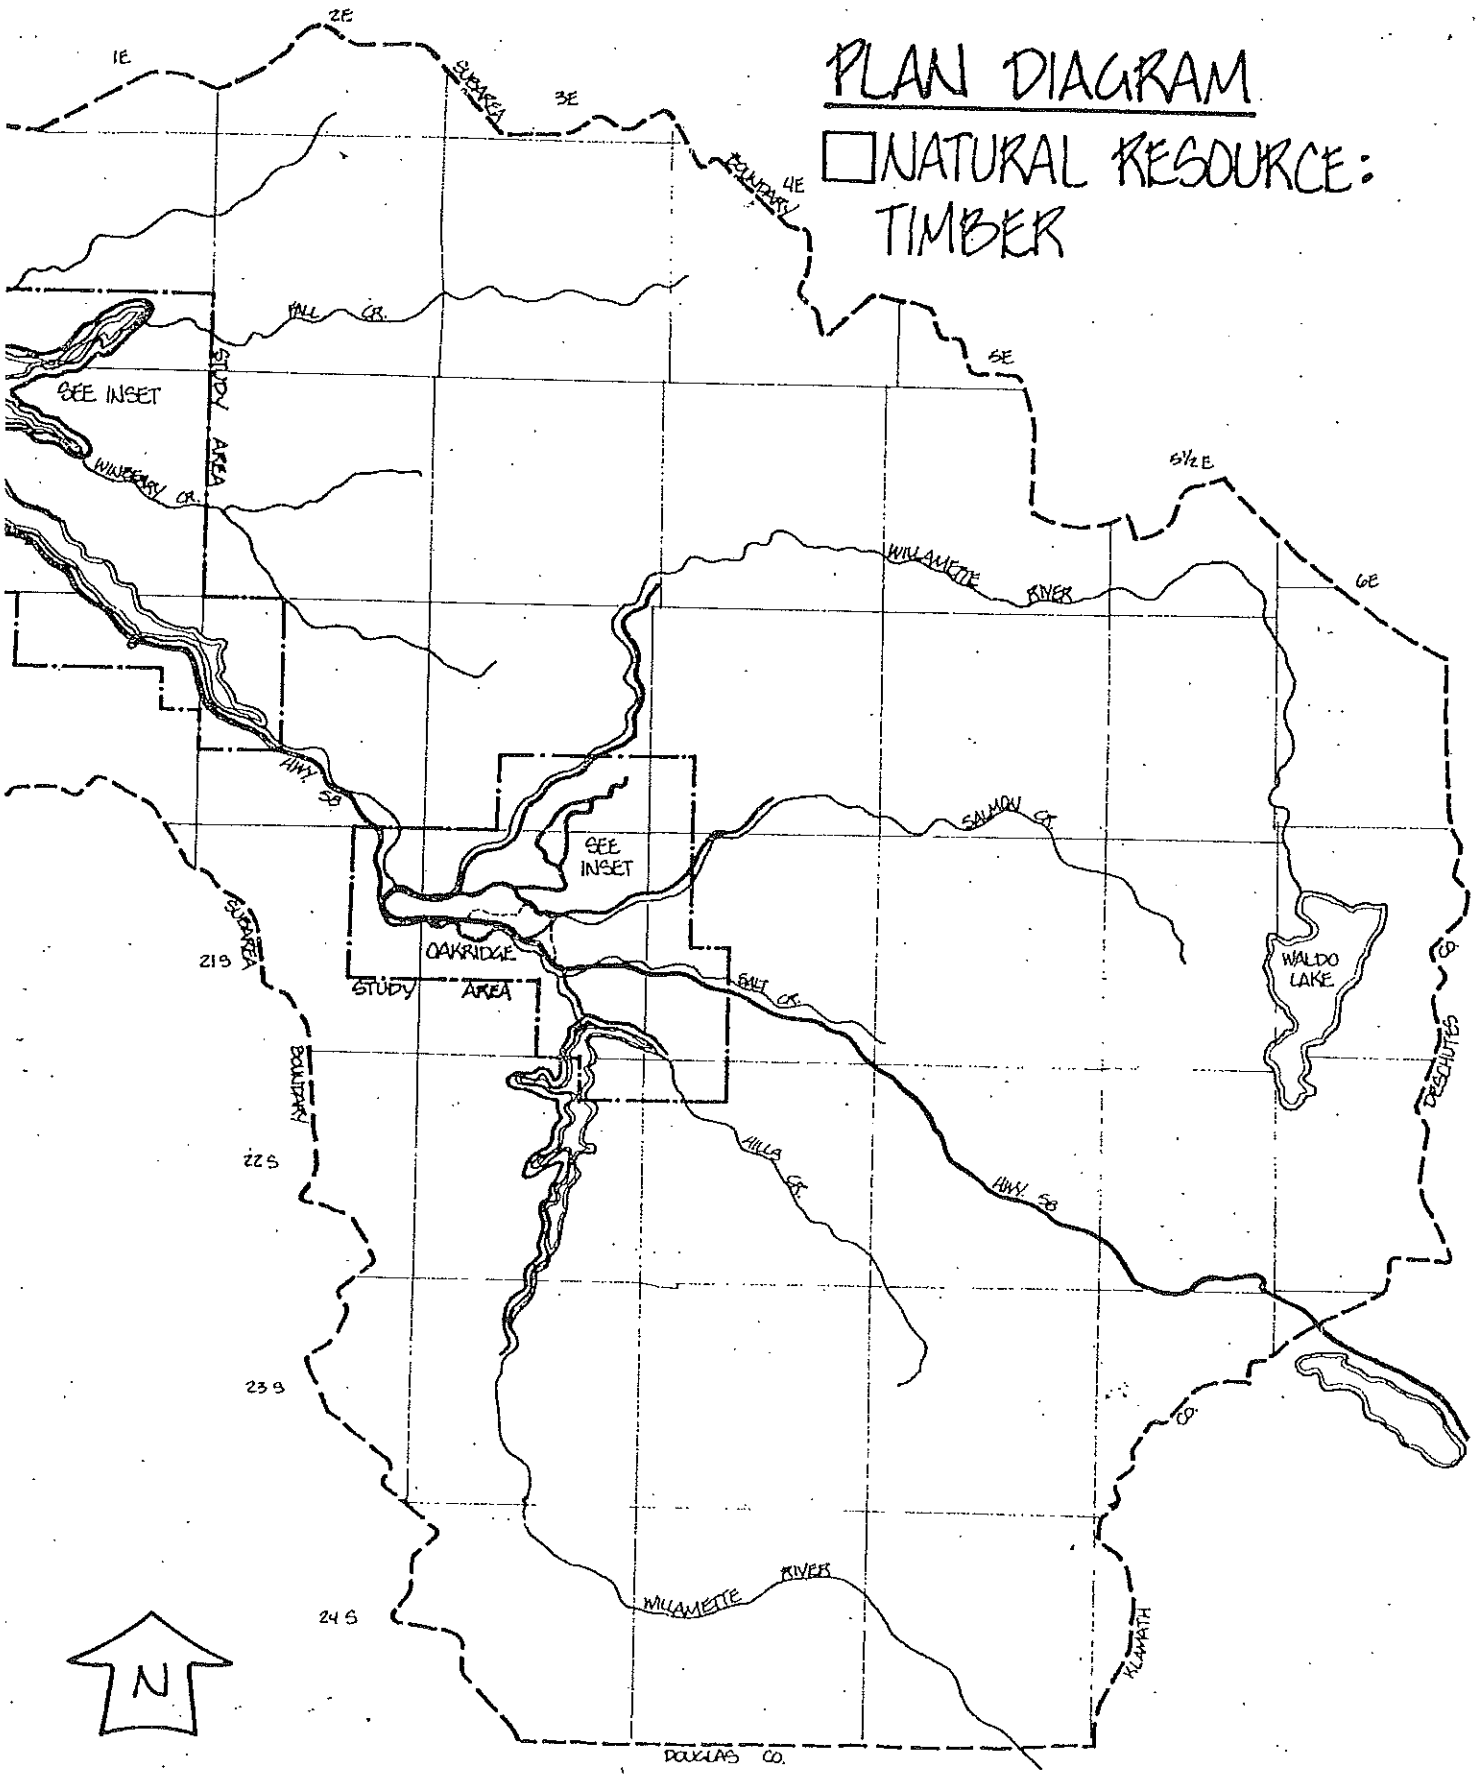
similar to the process for individual property requests as explained above.

The key to providing this flexibility in the Plan lies in establishing criteria to serve as a basis for determining whether or not a proposed secondary land use category is consistent with the spirit, intent and purpose of the Plan. There are four degrees of Plan conformity which are described and graphically illustrated in the Chart in Table 2.

The appropriateness of a secondary land use category would be established by comparing its plan conformity level, indicated on the Plan Conformity Chart, with the plan conformity criteria listed below the chart. Responsibility for determining whether or not a secondary land use category meets the Plan Conformity criteria lies with the Board of County Commissioners, with recommendations from the Planning Commission.

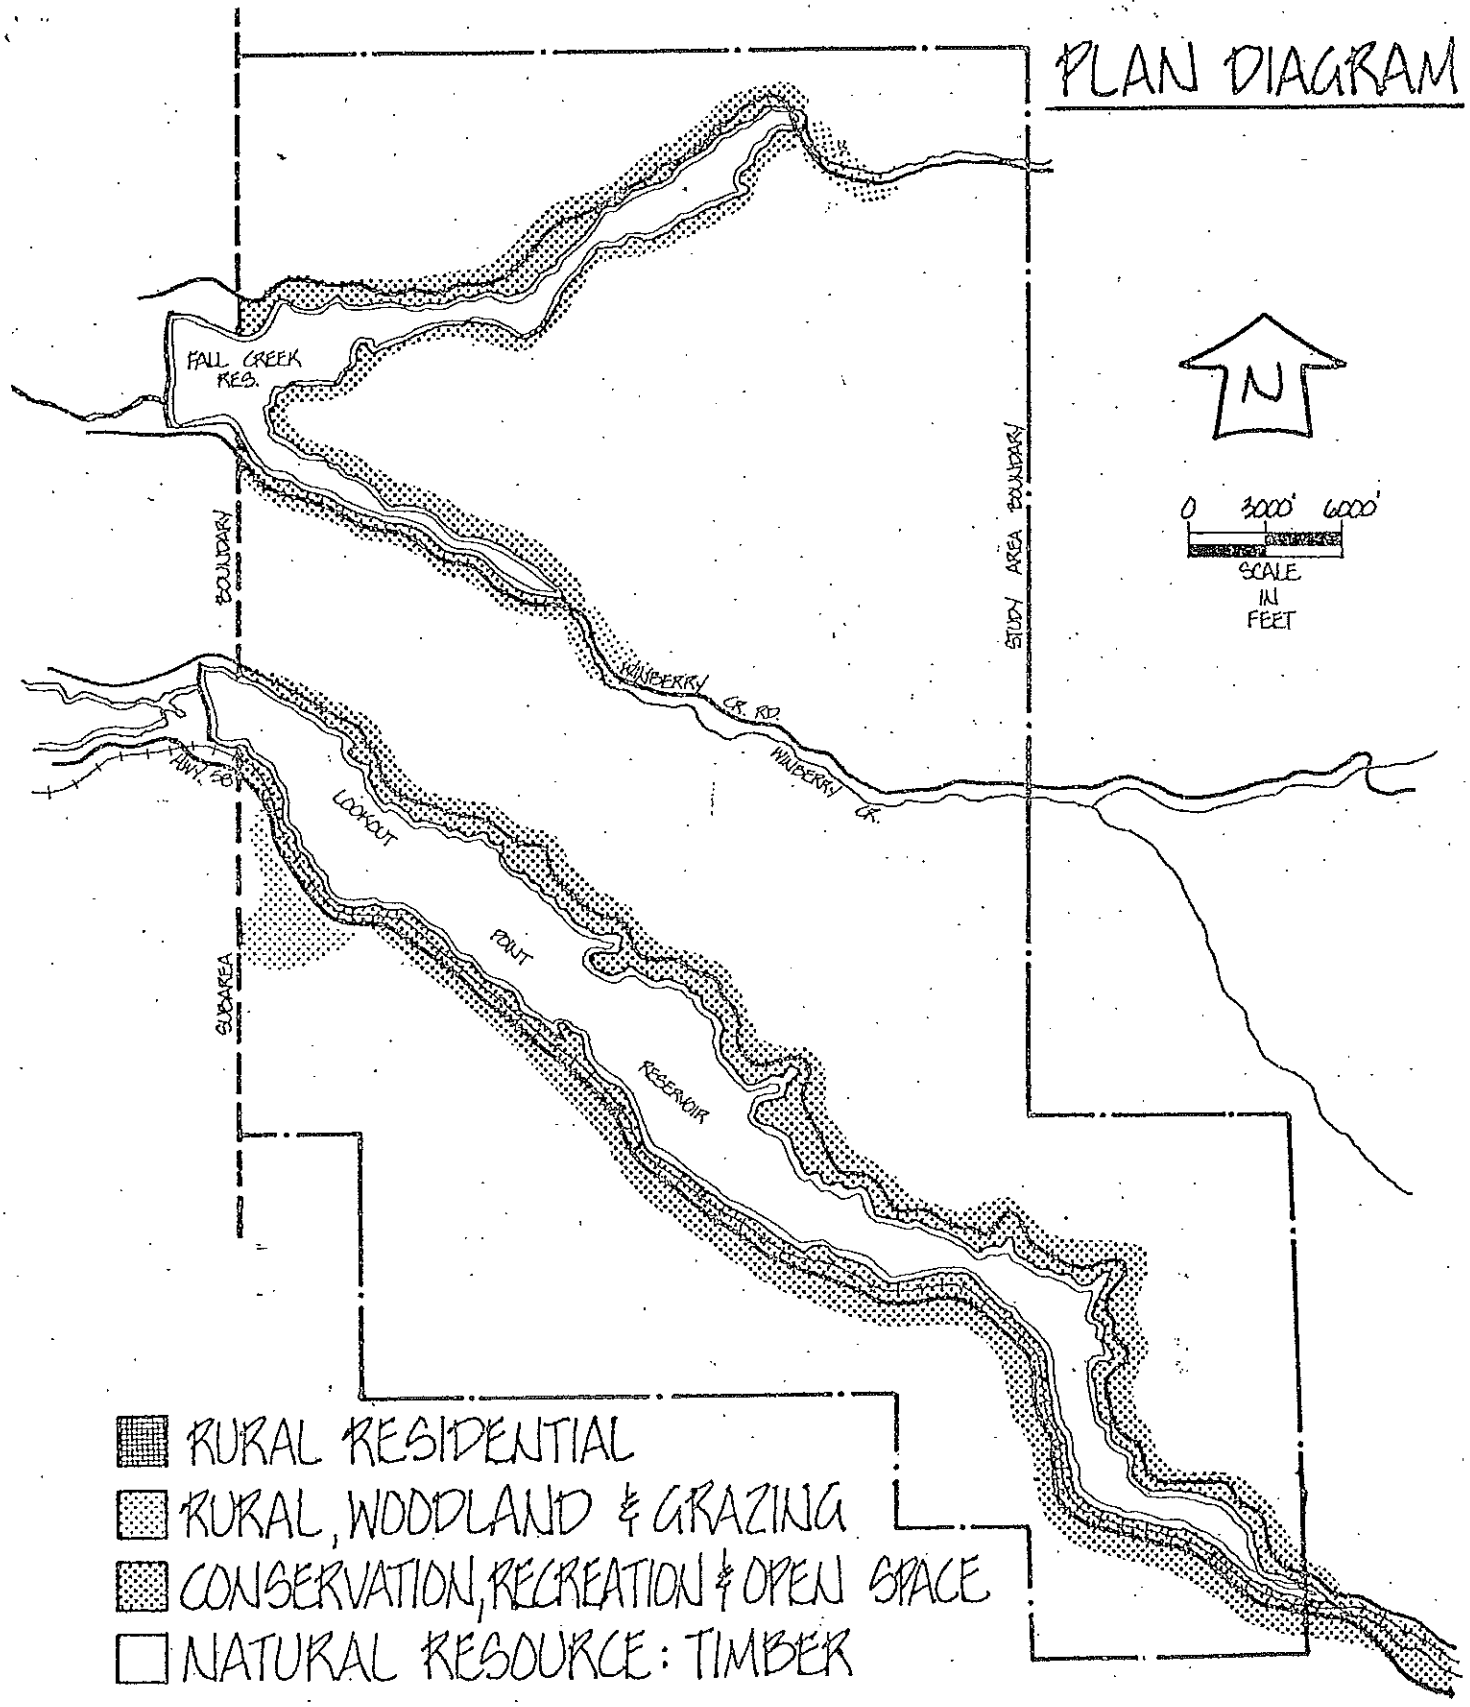
LAND USE CATEGORIES

AGRICULTURE



The intent of this designation is to recognize and preserve agriculturally capable land, whether or not it is currently being farmed.

The agricultural category is applied mainly in the High Prairie portion of the Subarea. Most of this land falls within the Soil Conservation Service agricultural capability rating, Classes II and III. Much of this land is currently in agricultural production (mostly grazing land) and the plan recommends maintenance of this use.



NATURAL RESOURCES (Timber or Sand & Gravel)

The intent of this category is to protect the forest resource, which is essential to both the local and state economy. Most of the forested uplands within the Subarea (approximately 95% of the land area) are within this category, as are the area's known geothermal resource areas.

000391

UPPER MIDDLE FORK SUBAREA

LOOKOUT POINT - FALL CREEK STUDY AREA

Sand and gravel is another, though minor, natural resource in the Subarea. The plan designation is intended only as an indicator of resource availability and should not be construed as a recommendation to proceed with extraction.

Detailed study of specific sites with evaluation of all potential impacts of extraction must be undertaken prior to permission of extraction activities.

RURAL RESIDENTIAL

The primary purpose of this designation is the recognition of existing residential development. Although the existing residential portions of Westfir are acknowledged, focusing of most residential development within the City of Oakridge Urban Services Boundary is encouraged. Because of environmental constraints (e.g., development suitability of soils, floodplain, etc.), residential expansion is somewhat restricted. It is not the intent of this plan designation to allow for conversion of large acreages, particularly that with timber or agricultural capability, into rural subdivisions but, rather, to recognize existing development and the normal infilling of small, vacant parcels.

Because of this area's historically slow rate of growth, most new residential development can occur as infilling of existing small parcels and within the Oakridge urban services boundary.

As the need for more residential development occurs, and services become available, expansion of the existing residential areas may be appropriate.

COMMERCIAL

The Neighborhood Commercial Category is in recognition of the need for businesses such as the existing small market in Westfir. Although the business is currently closed, this plan will allow for continued commercial use of the structure. The need for other small commercial enterprises may occur in the future.

Tourist Commercial use should be similarly accommodated as the need arises in areas central or adjacent to recreational facilities.

Community Commercial uses are not currently appropriate outside of the City of Oakridge. The city plan adequately provides for this use.

RURAL, WOODLAND, AND GRAZING

Because of environmental constraints, several areas are somewhat marginal for intensive development, but they are not prime timber or agricultural lands. This land use category recognizes the land's natural limitations by providing for a wider range of uses, while maintaining existing agricultural and woodland activities and the rural atmosphere.

INDUSTRIAL

This category is applied to the existing industrial activity center in Westfir. Furthermore, the Oakridge Plan provides for additional industrial expansion and future industry should be centered within this area.

CITY OF OAKRIDGE

Oakridge, the only incorporated city within the Upper Middle Fork Subarea, is designated a Major Development Center by the County General Plan. Unlike some of the other major development centers throughout the County which function somewhat as satellites to the Eugene-Springfield area, Oakridge was so designated largely because of its relative isolation. Oakridge will support most of the residential, commercial and industrial development within the Subarea. Accordingly, its assurance of a sound economic base and provision of adequate public and commercial services is of great importance.

The Oakridge area was recently classified as "economically lagging" by the Economic Development Commission. It is hoped that the various incentives associated with this designation will induce businesses to locate within the area, thus stimulating employment and the local economy.

The Oakridge Comprehensive Plan is currently under consideration by the City Council. The plan shows two urban services boundaries: (1) the "intermediate" boundary, based on the programmed capacity for wastewater treatment and (2) the "potential" boundary, which shows potential for urban growth and service beyond the planning period. The Upper Middle Fork Plan

Diagram recognizes both of these boundaries, and is in general conformance with the designations therein.

However, because of the uncertainty of the "Potential" Urban Services Boundary, it is felt best not to assume the provision of services to these areas. For this reason, there is a slight difference between the County and Oakridge plans. The NE 1/4 of the SW 1/4 of Section 9 (West Oak Road, adjacent to the Circle Bar Golf Course) is designated RESIDENTIAL-RURAL in the city's plan. The County Plan Diagram shows part of this area as RURAL, WOODLAND AND GRAZING. The intent of this designation is not to preclude future development but, rather, to guide its growth in conformance with the city's desire and ability to provide the necessary services. Because, at the present time, the city is unable to project a feasibility date for provision of services to this area, the RURAL, WOODLAND AND GRAZING classification will prevent random land division into parcels so small that future provision of services is uneconomical.

The City plan should be referred to for detailed information about lands within its jurisdiction.

COMMUNITY OF WESTFIR

Although not an official Major or Minor Development or Rural Service Center, Westfir is a distinct community in its own right.

Most of the Subarea plan's RURAL RESIDENTIAL designation, outside Oakridge, occurs in Westfir. This designation is in recognition of the existing residential use in Westfir.

Future growth and development in Westfir will be largely dependent upon local economic conditions and availability of public services and utilities.

000396

VIII. PLAN IMPLEMENTATION

The development and adoption of a land use plan is only the first step in the overall planning process. If a plan is to serve as a guide for accommodating growth and change, it must also (1) be implemented through the application of regulatory ordinances (such as zoning and subdivision ordinances, building and sanitation codes), (2) be reviewed and revised periodically, and (3) be used as a policy guide by public decision-makers.

THE PLAN AS A GUIDE

The development, adoption, implementation and revision of a land use plan constitutes the "planning process." The purpose of this process is to develop guidelines to be used by both the public and private interests in making decisions relative to land use. Land use plans can be used as guides in the following ways:

1. General guide for public decision-making

   Land use plans provide public governing bodies (city councils, Board of County Commissioners, and governmental agencies) with the basis for making decisions regarding the allocation of land uses, population densities, and development standards.

   Without such a guide, it is difficult, if not impossible, to make land use decisions which are economically and environmentally sound, provide compatibility among different activities and in general provide orderly change and growth.

2. General guide for private decision-making.

   Private individuals and businesses can effectively use a land use plan to determine the best locations for carrying out their activities. The individual seeking a single homesite, business seeking a new commercial market, and the developer seeking the most appropriate location for a housing tract can all use the plan as a basic reference document. Since the plan represents public policy, private decisions in accordance with it are encouraged by the public.

   Aside from being a locational guide for private decisions, the plan provides private decision-makers with a store of basic information about socioeconomic conditions, land use patterns, environmental concerns and public service requirements. Use

of this information will help private decision-makers to understand and support public actions based on the same information. It will also alert them to the problems and needs of the County, and will provide directions through which private decisions can assist in solving the problems and meeting the needs. In these ways, the "public sector" and the "private sector" can work together to achieve common ends.

3. Guide for providing public services.

   Being able to anticipate where, in what form (residential commercial, industrial) and at what intensities land will be developed and used, provides public bodies with the ability to anticipate and plan for demands on public services.

   By indicating the direction and nature of growth and change, public bodies can program for capital improvements such as schools, roads, sewers, water, parks and recreation facilities, etc., in order to obtain maximum efficiency and utilization of these services.

4. Guide for future studies.

   In the process of gathering data and information for a land use plan (i.e., information on population, natural resources, economics), it sometimes becomes apparent that detailed studies in specific areas are needed. In the Upper and Lower McKenzie Subareas, for example, recommendations are made for a detailed flood hazard study to supplement available information.

Additionally, a land use plan is the first step in the development of performance standards for future land use proposals. Having identified the nature and character of an area and established policies for land use, performance standards can be used to relate particular development proposals to the natural and environmental limitations of a particular site.

Land use planning, then, serves to identify where an area needs additional refined studies which, in turn, can strengthen future planning efforts.

PLAN IMPLEMENTATION

A land use plan has value only if it is implemented. Plan implementation occurs primarily through the application of regulatory ordinances. At the present time, Countywide regulations are in effect regarding subdivisions, building construction and sanitation facilities. Zoning divides land into districts or zones such as residential, commercial, industrial and agricultural. Each zone allows certain types of land uses while prohibiting others which would be incompatible with the permitted use. When areas are zoned, the districts should reflect the recommended land uses indicated in the land use plan. Therefore, upon completion of the land use plan for the Upper Middle Fork Subarea, a zoning program will be developed.

PLAN REVIEW AND REFINEMENT

This initial land use plan attempts to anticipate and guide change in a manner which reflects the goals of the area's citizens, County policies and environmental constraints. However, it is impossible to predict the nature and scope of all changes in an area, the types of pressures to which an area will be subjected, and the direction growth will always take.

New information on population growth, residential development trends, economic changes, etc., must be reviewed in light of the adopted plan, discrepancies and inconsistencies eliminated, and additional goals and guidelines adopted. The Upper Middle Fork Subarea plan, like all subarea plans in the County, will undergo periodic revisions in the future.

000399

APPENDIX A

DEFINITION OF PLANNING TERMS USED IN THIS STUDY

To aid the reader in understanding some of the terminology (especially those words which seem to have more than one meaning) used in this planning study, the following definitions have been prepared. It should be remembered that these terms are defined for this report only, and do not necessarily parallel those used in County ordinances, etc.

AGRICULTURAL LAND CAPABILITY CLASSIFICATION -- System used by the US Soil Conservation Service to categorize lands according to their ability to support various crops, vegetation, etc. Ratings go from I to VIII, with I referring to the best possible agricultural land.

DEVELOPMENT -- Any conversion of land from a less intensive use to a more intensive use, such as the building of a dwelling unit on land formerly used for pasture or crops.

DEVELOPMENT, MAJOR -- A conversion of land to a more intensive use which significantly alters the physical or social character of the site and/or surrounding area.

DEVELOPMENT SUITABILITY RATING -- Used in connection with the Soils analysis; based on a system of evaluating soils for development purposes (dwelling units, roads, etc.), which considers the ability of the soil to support septic tank drainfields, foundations, etc. Ratings go from 1 to 4, with 1 being most suitable for development and 4 least suitable.

FINDING -- Same as "implication," except it also refers to the conclusions drawn from evaluation of a set of data.

GOAL -- A statement of a desired condition or circumstance to be achieved at some point in the future.

IMPLICATION -- A projected impact of a condition or circumstance on other conditions; for example, a large number of dwelling units in an area has the implication of increased traffic loads on the street and highway system.

INTENSIVE -- As used in "less intensive"; refers to the magnitude of use of a given acre of land, or impact placed on that land. For example, open pastureland is being used less intensively than developed land upon which dwelling units are located. Land values generally reflect this factor in that more intensively used parcels are valued higher for property tax purposes.

POLICY -- A statement of method or approach used to achieve a goal, or move toward it; implies making decisions in line with the policy.

RECOMMENDATION -- A suggested course of action intended to carry out a policy, resolve problems, improve on good situations, etc.

URBAN DENSITY -- Refers to the proximity of several dwelling units, or the number of them within a given area. As used in this report, "urban density" generally refers to densities of one dwelling unit per acre or greater. "Rural," of course, would be lesser densities.

APPENDIX B

EXCEPTIONS TO THE LCDC AGRICULTURAL LANDS GOAL

INTRODUCTION

The Agricultural Lands Goal, Goal #3 of the Statewide Planning Goals and Guidelines, requires that land of predominantly Class I-IV soils shall be ~~designated with an AGRICULTURE land use category in comprehensive plans unless a governing body chooses to take an exception to the Goal.~~ preserved by adopting exclusive farm use zones pursuant to ORS Chapter 215."

Any governmental unit taking an exception to the Agricultural Lands Goal--in either the planning or zoning process--must address four criteria for goal exceptions outlined in the Land Use Planning Goal (Goal 2). Specifically, the exception language is as follows:

> When, during the application of the statewide goals to plans, it appears that it is not possible to apply the appropriate goal to specific properties or situations, then each proposed exception to a goal shall be set forth during the plan preparation phases and also specifically noted in the notices of public hearing. The notices of public hearing shall summarize the issues in an understandable and meaningful manner. If the exception to the goal is adopted, then the compelling reasons and the facts for that conclusion shall be completely set forth in the plan and shall include:
>
> a. Why these other uses should be provided for;
>
> b. What alternative locations within the area could be used for the proposed uses;
>
> c. What are the long-term environmental, economic, social and energy consequences to the locality, the region or the state from not applying the goal or permitting the alternative use;
>
> d. A finding that the proposed uses will be compatible with other adjacent uses.

In addition, ORS 215.215(2) permits non-EFU zoning of one or more lots or parcels in the interior of an exclusive farm use zone if the lots or parcels were physically developed for the nonfarm use prior to the establishment of the exclusive farm use zone."

EXCEPTIONS IN THE UPPER MIDDLE FORK SUBAREA

In some locations in the Upper Middle Fork Subarea there exist land uses or topographic/physiographic features on Class II-IV soils which effectively preclude the operation of viable agricultural activities. In these locations where the County is taking an exception to the Agricultural Lands Goal, land use categories other than AGRICULTURE are depicted on the Plan Diagram. A verbal description of areas where exceptions are taken, and the "compelling reasons and facts" for the exceptions are described on the following pages.

EXCEPTION #1

The following areas are designated NATURAL RESOURCE: TIMBER on the Plan Diagram, although the soils are identified as SCS Class II, III and IV

(1) Parts of the Fall Creek and Winberry Creek upper valleys.

(2) Several areas around Oakridge and Westfir.

(3) Many other isolated areas in the narrow valley floors throughout the subarea, not all of which have soil data available.

A. Because of the timber industry's importance to both the local and state economies, preservation of the timber resource is a major concern. The LCDC Goal #4, as well as Lane County's Goals and Policies, reflects this concern. Hence, although these areas include some soils that could be classed as Agricultural, it is felt that the land is best suited to continued timber production. We have, therefore, substituted the Forest Lands Goal for the Agricultural.

B. The subject areas are well suited for production of commercial timber. Other forest lands exist in the subarea and are so designated. Likewise, even though some of the nonforested land could be planted in timber, these lands are better suited to other types of use.

C. The continuation of this land use would be beneficial both socially and economically (as discussed in "A" above). Conversion of this land to traditional agricultural use could have significant environmental, energy and economic impacts related to clearing, fertilization, etc. The long-term energy and environmental impacts of continuing timber management will depend upon industry diversification and future state and federal policies. Projection of these impacts at this time would be difficult and generally speculative.

D. As these areas are adjacent to other forest, mixed woodland and grazing lands, their preservation in timber should not have a negative impact on neighborhoring uses.

EXCEPTION #2

The following areas are shown as RURAL RESIDENTIAL and INDUSTRIAL on the Plan Diagram:

(1) Westridge and Hemlock subdivisions
(2) Residential areas along West Oak, McFarland, LaDuke Rds, and Hwy. 58.
(3) The mill sites in Westfir and southeast of Oakridge.

A. The subject areas are sites of existing residential and industrial development. Although some Class II and III soils are involved, the area is fully committed to the aforementioned uses.

B. Because this exception covers only fully developed land, this question is not particularly applicable. The original location of homes and the industrial facility was probably due in part to soil conditions favorable to such development. Soil conditions and topography adjacent to the subject areas limit the vicinity's development suitability and will act as a constraint to further growth of the area.

C. Because this exception is "after the fact," there really are no avoidable long-term impacts. The loss of this land to agricultural production has already occurred. However, use of the land for housing and industry (jobs) has had a positive social and economic impact on the Oakridge-Westfir area.

D. Again, this question is no longer particularly applicable, since the uses already exist. Because of the area's expansive timber resource, development of a mill in the vicinity of the raw materials was inevitable. Residential development was a natural successor to the new industrial facility. Additionally, the subject areas are very close to the City of Oakridge and, to some extent, were a predictable result of that city's growth.

These areas would also appear to fall under the exception allowed by ORS 215.215(2).

000405

EXCEPTION #3

An area adjacent to McFarland Road, and the Circle Bar Golf Course, is shown as RURAL, WOODLAND AND GRAZING on the Plan Diagram.

A. Although a narrow strip of land along McFarland Road includes some ~~from~~ Class III soils, existing development and topographic features preclude its intensive agricultural use. The subject area has been divided and developed into a number of rural homesites (two to eight acres in size) where some small-scale farm activity occurs. Furthermore, a good portion of this area lies within the City of Oakridge Urban Services area. Designation of these properties as AGRICULTURAL (with the EFU zone designation which follows) would not be reflective of the present commitment of this land. The RURAL, WOODLAND AND GRAZING category will preserve these areas for small-scale agricultural activity as currently exists, but will allow greater flexibility in terms of permitted uses.

B. Other AGRICULTURAL areas are designated by this plan, as are other RURAL, WOODLAND AND GRAZING areas. Because we are dealing with land already committed to the use described above, the question of alternative locations is not applicable. The proposed designation will not provide for further land divisions in the subject area.

C. There will be no significant impacts involved in this proposed action. The RURAL, WOODLAND AND GRAZING designation (somewhat less restrictive than the AGRICULTURAL) is more reflective of the type of land use existing in the subject area.

D. The proposed designation is compatible both with existing land use (grazing, mixed woodland and the golf course) as well as the Plan's long-term land use designation of adjacent land; that is, RURAL, WOODLAND AND GRAZING, AGRICULTURE, and CONSERVATION, RECREATION, AND OPEN SPACE.

EXCEPTION #4

The Alpine Acreage Estates subdivision is shown as RURAL WOODLAND and GRAZING on the Plan Diagram.

A. This is an existing rural subdivision with lot size averaging about two acres. Because this land has already been committed to residential use, it is no longer appropriate to consider it an agricultural resource.

B. Because this exception is requested for a committed use, the question of alternate location does not apply.

C. No long-term impacts will result from this exception. Any impacts are already implicit due to the existence of the subdivision.

D. Again, this is not a "proposed" use, but rather one already in existence. There is some residential use in the vicinity as well as low-intensity agriculture.

EXCEPTION #5

Several areas around Oakridge, although identified as having SCS Class II, III or IV soils, are shown as RURAL, WOODLAND and GRAZING on the Plan Diagram. These are areas of mixed grazing, residential and forest uses, partially divided into lots as small as 1 acre and supporting diverse farm and non-farm uses.

A. These other uses should be provided for because they are already well-established and contributing to the economic and agricultural well-being of the Oakridge area.

B. There are only a few other locations in the Oakridge area where such mixed uses could be accomodated; by and large, these other locations are devoted to other pre-existing uses (small-lot residential, industrial, forestry).

C. The long-term environmental, economic and social consequences of permitting the present uses to continue would appear to be positive to the area and the region. The energy consequences are more speculative: by making present uses nonconforming to the Plan or subsequent zoning, present residential uses <u>may</u> in time be encouraged to relocate closer to town; allowing them to remain, therefore, may be energy-consumptive in terms of fuel use for commuting to Oakridge.

D. Present uses do not appear to be incompatible with other adjacent uses (forestry, grazing, industrial).

APPENDIX B

STAFF REPORT

August 22, 1979

BACKGROUND:

Work on this plan was begun in early 1977. Initially, the citizens were encouraged to draft their own plan using a series of plan formation workbooks. Unfortunately, public participation was minimal and the idea was abandoned. Residents of the subarea requested the Planning staff to draft a plan and submit it to them for detailed review. The draft was completed in July, 1978 and citizen review began in August.

At the same time, the decision was made to carry through with the zoning of the subarea, concurrent with the Plan, in order to streamline the process. This has been done and a separate staff report prepared for the proposed zoning.

THE REVIEW PROCESS:

The Upper Middle Fork Plan was reviewed by the area residents in a series of eight informal meetings at Oakridge between August and December, 1978. Each section of the text was gone over in detail and many revisions were made. After the first eight meetings, a second version of the Plan Diagram was drafted to represent more directly the wishes of the people. Proposed zoning maps were then prepared to reflect each of the Plan Diagrams and existing uses. The zoning maps and Plan Diagrams were hung in Oakridge City Hall just before Christmas, 1978, and the final draft of the Comprehensive Plan became available in early January, 1979.

During January and February, 1979, three drop-in meetings were held at Oakridge to enable area residents to discuss the final Plan Diagrams and zoning maps. As a result, several substantial changes were made to the proposed zoning to reflect new data, requests of landowners and existing development patterns.

The Lane County Planning Commission held two hearings during March and April, 1979, followed by three County Commissioner hearings during June, July and August. Throughout this process, a continuing dialogue was maintained with subarea residents and the cities of Oakridge and Westfir.

THE PLAN DIAGRAM:

The subarea Comprehensive Plan here presented includes the Plan Diagram recommended by the Planning Commission. Up to the Planning Commission's hearing on April 12, 1979, two versions of the Plan Diagram were published; one recommended by staff, the other proposed by area residents. At the hearing, both plans were explained, all areas of disagreement were discussed, and the Planning Commission accommodated many citizen requests. The Plan Diagram which resulted was felt to be a reasonable compromise between the wishes of the area residents, the Comprehensive Plan of the City of Oakridge and sound planning principles.

000409

After Planning Commission action on the plan, requests were received from the cities of Oakridge and Westfir to incorporate their input to the plan. Accordingly, final Board action was held up to permit the city councils to meet with staff and make recommendations regarding the areas around the cities. This has resulted in the presentation of three sequential plan diagrams:

1. The Planning Commission recommendation.
2. The staff recommendation, incorporating the Oakridge Comprehensive Plan for all areas within their "Intermediate Urban Services Boundary".
3. The Plan Diagram adopted by the Board of County Commissioners, incorporating all the above and responding to requests of area landowners and the cities of Westfir and Oakridge.

OAKRIDGE

The City of Oakridge Comprehensive Plan was completed and adopted prior to the review stage of the Upper Middle Fork Subarea Plan. The Oakridge Plan established two Urban Services Boundaries: an Intermediate one for the near future and a Potential one for the expected ultimate growth of the city. Although the plan designations outside the city limits are ultimately the responsibility of the County, many of these areas will eventually annex to the city. Accordingly, the city's plan designations have been used within the "Intermediate Urban Services Boundary". In addition, many of the Oakridge City Council's recommendations were incorporated in the final Land Use Plan.

WESTFIR

The new city of Westfir, incorporated earlier this year, does not yet have a Planning Commission, comprehensive plan or zoning. Until the city takes action to assume the planning and zoning function within the city, the County plan and zoning remain in effect (ORS 215.130(2)(a)). The Westfir City Council, however, were consulted and made a recommendation as to the plan designations and zoning within the city. Those recommendations are incorporated in the approved documents.

APPENDIX C

STAFF REPORT

August 22, 1979

THE ADOPTED COMPREHENSIVE LAND USE PLAN:

The plan adopted by the Lane County Board of Commissioners includes the following:

1. The "2nd Draft: Comprehensive Land Use Plan for the Upper Middle Fork Subarea, Part I: Plan Report", dated December, 1978, "as modified by action of the Lane County Planning Commission on April 17, 1979", plus the following alterations incorporated by the Board of County Commissioners, August 22, 1979.

2. The Plan Diagram for the Oakridge area has been altered to agree fully with the "Comprehensive Plan for Oakridge, Oregon" for all of the area between the city limits and the "Intermediate Urban Services Area Boundary".

3. The following statement has been inserted in place of the third paragraph on page 58 of the "2nd Draft, Comprehensive Land Use Plan for the Upper Middle Fork Subarea, Part I, Plan Report, December, 1978, as modified by action of Lane County Planning Commission on April 17, 1979".

   "Lane County will administer land use and other controls within the intermediate UGB*, in areas under County jurisdiction, until these areas are annexed to the City. Urban-level development within the Intermediate UGB will not be supported without annexation to the City of Oakridge. The City Plan will be used as the first but not necessarily the only, guide toward the administration of County regulations, development controls, public facilities, improvements, etc. The County recognizes the Oakridge City Plan as the principle decision guide for lands within the Intermediate UGB, although should conflicts arise between the City Plan and the County Plan (or related policies or regulations), the County reserves the right to apply measures which may not be contained in the City Plan until the conflict is resolved. Within the Potential UGB, but outside the Intermediate UGB, the provisions of the County Plan shall prevail, although the County will attempt to honor the City Plan's provisions to the extent practicable without conflict with the County Plan. At such a time as the City Plan or either of its UGB's is revised, or the County Plan is revised, the County will seek close cooperation with the City in jointly deriving new Plan provisions. Questions of interpretation of the City Plan should be first referred to City officials."

4. The following changes to the Plan Diagram:

   (a) Two areas west of Oakridge designated RURAL RESIDENTIAL have been somewhat enlarged.
   (b) An area south of Oakridge which is presently a gravel pit has been changed from NATURAL RESOURCE: TIMBER to NATURAL RESOURCE; SAND & GRAVEL.

*Urban Growth Boundary

(c) An area on the north side of Hills Creek Reservoir adjacent to existing development has been changed from NATURAL RESOURCE: TIMBER to RURAL, WOODLAND & GRAZING.

(d) An area above Fall Creek Reservoir has been changed from NATURAL RESOURCE: TIMBER to RURAL, WOODLAND & GRAZING.

BEFORE THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY, OREGON

ORDINANCE NO. 741

) IN THE MATTER OF ADOPTING THE
) UPPER MIDDLE FORK SUBAREA PLAN
) AS A COMPONENT OF THE COUNTY
) GENERAL PLAN, AN ELEMENT OF THE
) COMPREHENSIVE PLAN FOR LANE COUNTY

WHEREAS the Board of County Commissioners has received from the Lane County Planning Commission a resolution dated April 17, 1979, of record herein, recommending approval of the plan known as the Upper Middle Fork Subarea Plan; and

WHEREAS the Board of County Commissioners has received and considered the Upper Middle Fork Subarea Plan, Second Draft, dated April 1979, public testimony and correspondence relating thereto; and

WHEREAS, the Board of County Commissioners has performed its public hearing and other duties in accordance with applicable law, now therefore

THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY ORDAINS AS FOLLOWS: That the Upper Middle Fork Subarea Plan, Part I, Second Draft, dated April 1979 (copy attached hereto and indicated as appendix A), as modified by changes indicated in the Staff Report to the Board of County Commissioners, dated August 22, 1979 (copy attached hereto and indicated as appendix B), and as modified by the Board of County Commissioners (copy attached hereto and indicated as appendix C), and including certain "Exceptions to Statewide Planning Goal #3: Agricultural Lands" (copy attached hereto and indicated as appendix D), be ADOPTED.

INTENDED that the "Upper Middle Fork Subarea Plan, Part II, Technical Report", be recognized as supportive information used in the preparation of the Plan;

ENACTED this day of , 1979.

Chairman,
Lane County Board of Commissioners

APPROVED AS TO FORM
DATE lane county
OFFICE OF LEGAL COUNSEL

Recording Secretary
for this Meeting of the Board

ORDINANCE NO. 741

In the matter of adopting the Upper Middle Fork Subarea Plan as a component of the County General Plan, an element of the Comprehensive Plan for Lane County.

Pete Watson, Subarea Planner

Report prepared with assistance of: Lane Council of Governments

000416

PREFACE

The Upper Middle Fork Subarea planning study has been divided into two separate reports, for the convenience of the reader. The two reports each contain pertinent information to the Subarea, and together form a complete study. If need be, however, the Plan Report alone (Part I) can be consulted by the reader who desires to know the major goals, findings and recommendations of the study. Contents of the two reports are as follows:

A. PLAN REPORT (Part I)

1. Foreword
2. Plan Adoption
3. Introduction
4. Citizen Goals and Involvement
5. Findings and Recommendations
6. Land Use Constraints Summary
7. Plan Diagram
8. Plan Implementation

B. TECHNICAL REPORT (Part II)

1. Introduction
2. Social and Economic Environment
3. Natural Environment
4. Manmade Physical Environment
5. Public Services and Facilities
6. Land Use Constraints

The role of Part I is to present the findings and recommendations of the technical analysis without requiring the reader to go through the technical analysis itself. Part II presents that technical analysis for the reader who wishes to know how certain findings and recommendations came to be.

000419

I. FOREWORD: THE LANE COUNTY GENERAL PLAN

WHY A COUNTY PLAN?

The objective of planning is twofold--first, to identify and recommend solutions to problems relating to the physical, social and economic character of the County. Because of their complexity, problems such as the incompatible mixture of land uses, depletion and misuse of natural resources, transportation hazards and traffic congestion, inadequate public facilities and utilities, and limited housing and employment opportunities, require planning analyses and solutions.

Secondly, planning is intended to identify the nature and character of change and growth in the County and provide a basis for coordinated public and private action to plan for and guide this change and growth. Planning should insure that change and growth provides for the wise conservation and use of our natural resources, protects the natural environment, provides a balanced transportation system, strengthens the County's economy and, in general, improves housing and social opportunity for all County residents.

A plan serves as a guide and a basis for decision-making to public officials and private interests. As a public process, planning identifies problems, and points the way toward their resolution before social and economic costs are beyond local capability. In this way, planning "preempts" potential crisis situations.

POPULATION AND THE QUESTION OF GROWTH

By 1995, Lane County is expected to have a population of approximately 350,000, of which 102,000 people are expected to live outside the Eugene-Springfield metropolitan area. This "rural" population is expected to increase by nearly 35,000 additional people from the present 67,000. Almost 80,000 of the rural population is expected to be living within the central part of the County, within a half hour's commuting time from the Eugene-Springfield metropolitan area. Elsewhere, there are expected to be nearly 10,000 year-round residents in the coastal area (compared to some 6,000 today), almost 5,500 in the Oakridge

000420

area and some 7,000 people scattered in the more remote valleys (Upper McKenzie, Lake Creek, Row River and Coast Fork of the Willamette).

Increasingly many people are questioning the desirability of a continuation of present levels of growth. This plan does not attempt to establish what the absolute level of growth should be. Instead, it seeks to identify and deal with the growth which now seems likely.

WHAT IS THE COUNTY PLAN?

The County General Plan is comprised of four main parts:

1) The Goals and Policies Statement - This basic document sets general policies which serve as guidelines for specific recommendations of the other plan documents.

2) Community Plans - These 13 plans provide an analysis of several rural communities in Lane County with recommendations regarding land use, parks and recreation, transportation, and services and utilities.

3) Special Reports - Various technical reports, including the Water Quality Report and County Atlas.

4) Subarea Plans - The County has been divided into 12 subareas, based primarily on drainage patterns, in order to evaluate each area's natural and social characteristics in detail.

THE SUBAREA PLAN

Subarea Land Use Plans consist of two parts:

I. Plan Proposal - This portion of the plan contains a listing of major findings and recommendations about the subarea which are supported by the technical report.

II. Technical Report - This portion contains detailed information on the area's social and natural characteristics. It serves as the data base upon which the findings and recommendations of the Plan Proposal are based.

000421

The land use plan for the Upper Middle Fork Subarea follows. The information contained therein should be used as a guide for land use decisions in this Subarea.

000422

II. PLAN ADOPTION

THE REVIEW PROCESS

Initial Public Review

Based upon the data assembled in the Technical Report, a draft Plan Report is written. This proposal is then presented to the Subarea residents for their review and comment.

Besides informing residents of planned land use recommendations, the purpose of this review is to assure that the plan complies with local goals, verify the report's information with residents usually more familiar with the area than the planner and resolve any conflicting issues that may arise as a result of plan recommendations.

The plan may then be modified, if such action is warranted as a result of this public review, and passed on to the Planning Commission.

Planning Commission Action

The Planning Commission reviews the modified plan draft, hears public testimony regarding the plan, revises the document if they feel it necessary and makes a recommendation to the Board of County Commissioners with regard to plan adoption.

Board of County Commissioners Adoption

The final step to plan adoption is review by the Board of County Commissioners. Upon consideration of the Planning Commission recommendation and additional public testimony, the Board takes the final action, adoption of the Plan as an official ordinance, which brings legal status to the document.

ADOPTION ALTERNATIVES

As noted in the beginning, the Upper Middle Fork Subarea Plan is published in two reports: a Plan Report (Part I) and a Technical Report (Part II). The question can legitimately be

000423

raised as to which report, or what parts of either, should become the adopted plan for the Subarea.

Based on the experiences of many local governments in the United States, two alternatives become evident:

1. The entire planning study and plan proper (represented here by the Plan Diagram and associated findings and recommendations) can be adopted as a single unit. This accomplishes the task of making all background information a part of the Plan. It does not necessarily endorse that information, but a commitment is made to work with it and improve it as time goes by. Because the information is a part of the adopted plan, it can easily be used as the rationale for planning decisions, in case of a conflict or difficult decision.

2. The summary of the study, containing the "meat" of it, can be adopted. Generally, this consists of those findings, recommendations, and proposed land use designations (Plan Diagram and narrative) which emerge from the planning study. This was the procedure used in the metropolitan area's 1990 Plan. Background information is used to support the adopted statements, usually by reference, but is not actually adopted along with them. This accomplishes the end of permitting a relatively brief, succinct document to be adopted and used, without there having to be adoption of the more lengthy (and sometimes controversial) technical studies which back up the Plan. Of course, that information does not then have the status that adoption would otherwise have given it.

In the case of the Upper Middle Fork Subarea Plan, the first alternative would involve the adoption of both reports--Part I and Part II--after thorough public discussion and review. The second alternative would involve the adoption of the major portion (or all) of Part I only. Chapters V and VII of the report are the minimum that would have to be adopted, and the addition of Chapters IV and VI would be beneficial. Adoption of Part I in its entirety would allow the use of a complete, internally consistent report as the plan.

000424

The decision on what to adopt has to be made by the County's elected officials, advised by those whom they appoint to assist them in reviewing planning work. This cannot be done until public review and hearings have been completed; the review and hearing process may be helpful in making this decision.

THE ROLE OF ADOPTION

When a number of people, represented by their elected and appointed government officials, adopt a plan and/or planning study, they are in a very real sense making a commitment to attempt the achievement of what the plan proposes. This, of course, assumes that by the time of adoption (as will be the case in Lane County), thorough public review and hearings will have been carried out and the plan will be acceptable to the public. Adoption brings with it a legal status; the public has gone on record, before all citizens, that it intends to make use of the plan as a guide to decision-making.

In addition to this, when the plan is adopted, it is considered by other government units*--including the courts--to be a statement of policy by the adopting government. Therefore, decisions which are made by those other units (court decisions on land use questions, for example), often refer to the plan as their supporting reasons. The adopting government thus has the responsibility to use the plan as best it can, and improve on it through the planning process over the years.

Adoption also brings with it a distribution of planning information to the public. A plan report, available to any citizen, contains data, suggestions and recommendations that the public, through its government, has decided to make use of. The best way to make use of it is to enlist the support--through education--of all citizens. When the plan is adopted it becomes a part of the public's store of information, and the public is invited to support it, to use it, and to improve on it.

*The State of Oregon is among the governments which use the County Plan and, in fact, (through Senate Bill 100) requires that a plan be developed, adopted and used by local governments.

000425

III. INTRODUCTION

The Upper Middle Fork Subarea comprises approximately 1170 square miles in the southeastern portion of Lane County. It forms the upper part of the Middle Fork Willamette River watershed. The subarea is primarily forest land, the majority of which is federally owned.

The main center of residential development is within, and adjacent to, the City of Oakridge, an incorporated community of approximately 4,000 people. Other residential activity occurs along the Fall Creek and Lookout Point Reservoirs.

Development pressures have not been strong in recent years, a situation that is not expected to change significantly within the planning period. However, because of a number of natural constraints, development potential in the subarea is limited. For this reason, and to insure protection of the timber and limited agricultural resource, even a relatively small amount of growth must be carefully guided.

Intensive development in the subarea should be strongly limited. Controlled infilling of the existing residential nodes can be allowed, although most of the subarea should remain undeveloped.

Because much of the subarea is National Forest land, its economy is strongly oriented to maintenance, harvesting and processing of the timber resources. Some diversification of the wood products industry may result in response to current local efforts toward economic self-sufficiency. The success of these efforts is not expected to have a significant growth-inducing impact on the area.

000426

IV. CITIZEN GOALS & INVOLVEMENT

Planning for People Program

During 1970 and 1971, several "Planning for People" meetings were held in the Subarea. Each meeting was conducted by a local citizen who was assisted by an agent of the Lane County Extension Service and a staff member of the County Planning Division. The purpose of these meetings was to establish local goals and concerns within the Upper Middle Fork Subarea. Some of the needs expressed during the meetings have been answered (e.g., family planning services and city-sponsored recreation programs). The issues that are still of concern to residents are as follows:

* Need for medical services, recreational facilities and jobs
* Improvement of educational system (vocational training, better course work and teachers)
* Funding for public services (fire protection, streets and curbs, public restrooms)
* Housing--particularly low-income
* Preservation of the area's natural, rural character

Although some of these concerns are beyond the scope of the Subarea Plan, they are included in order to better define the nature and desires of the community.

Plan Development Workbook

More recently, an attempt was made by the Planning Division Staff to directly involve Subarea residents in the development of the land-use plan for their area. A four-part "Plan Development Workbook" was distributed with the intent that, upon completion, a citizen-authored plan would result. A series of public meetings was held to assist in this effort. However, because of a lack of citizen time, interest and/or understanding, meeting attendance dwindled, workbook sections were not completed, and this approach to Plan development was abandoned in favor of the more traditional staff-prepared Plan

000427

Proposal. It should be noted that this action was by choice of the citizenry.

V. FINDINGS AND RECOMMENDATIONS

Introduction

The Technical Report (Part II) discusses in detail the various physical or social components of the Subarea. This section of the Plan Report summarizes the findings and implications of the Technical Report and makes recommendations with regard to this information. The purpose of this method is to better facilitate decision-making and public understanding by allowing quick reference to the major areas of concern within the Subarea.

To obtain more detailed information about a particular topic, or to ascertain the basis for a particular recommendation, the Technical Report should be consulted.

Summary

The following is a compilation of recommendations that recur throughout the report. By listing them, a number of general concerns become apparent that will hopefully serve as an aid and guide to decision-makers.

1) The rural character of the Subarea should be maintained.

2) Forest resource lands should be protected for continued timber production.

3) The Subarea's economic base should be expanded and diversified to lessen its great dependency on the wood products industry and bolster local economic self-sufficiency.

4) Major developments within the Subarea should be limited and all proposals closely reviewed for impacts on the community.

5) Regulations with regard to construction on slopes over 15%, protection of riparian corridors, and erosion control should be instituted by the appropriate County agencies.

6) Further study of groundwater supply/safe yield, flood-plains, soils, and geology should be undertaken.

000429

A. SOCIAL AND ECONOMIC ENVIRONMENT+

Findings

1. The area's population is primarily centered in the Oakridge-High Prairie area. Other residential activity is found along Lookout Point Reservoir, Winberry Creek and scattered along the major roadways.

2. Many of the area's residents have chosen to live in the area because of its rural character and easy accessibility to natural recreation land.

3. Overall growth within the Subarea has been very slight over the past ten years, with the population actually declining in some portions.

4. Presently available projections indicate that the Subarea will experience minimal population growth over the next 25 years.* Consequently, demands for public services should not increase significantly during this time.

5. There has been an increase in the number of retirees locating within the Subarea.

6. Most of the Subarea's current population is working-age adults and their children. This trend is expected to continue in the future.

7. Two-thirds of the area's residents live in their own homes.

8. Approximately 10% of the housing units were considered overcrowded in the 1970 census.

+For this section only, findings & recommendations have been combined. Other sections more closely parallel the Technical Report.

*This projection is intended as an educated guess. Significant changes in such factors as employment opportunities or the timber industry could greatly alter this projection.

000430

9. Average annual family income is somewhat below that of the rest of Lane County and the Oakridge/Westfir area has been designated "economically lagging" by the State Department of Economic Development.

10. The majority of the area's work force is employed within the Subarea, primarily in timber harvest/wood products-related occupations. Thus, the area's economy is largely and probably overly dependent upon the future fortune of this industry.

11. The recently funded study of potential new businesses feasible for the Oakridge/Westfir area[1] identified three different industries for community consideration. These enterprises are (1) the manufacturing of hot tub components; (2) production of furniture, furnishings and cabinets and (3) design, production, and sale of quality handcrafted items. Although this study emphasized diversification in the wood products industry, diversification in other industries should also be encouraged, particularly those related to tourism and recreation.

12. Health care services in the subarea are minimal.

Recommendations

1. Further study should be undertaken to adequately assess the social, economic and housing conditions of the Subarea in order to more precisely predict and plan for future growth trends.

2. Small scale, "cottage" industry should be supported and encouraged in this area.

3. New employment opportunities, particularly those not dependent upon the timber industry, should be sought for the area residents.

4. Future growth in the area should be guided in a manner that will preserve its natural, rural character.

[1]The Potential for Alternative Business in Oakridge/Westfir, Economics Research Associates, February 17, 1978.

000431

5. Policies and programs to ensure an adequate and sustained timber supply on the region's public and private lands should be of high priority. The County must join with the state and federal governments as well as private industry in the long-range management of this essential resource.

000432

B. THE NATURAL ENVIRONMENT

Topography

1. The inaccessibility and expense of developing the Subarea's rough and mountainous terrain has focused most development into the narrow river and stream valleys.

2. Because of this concentration, careful planning is necessary to avoid inappropriate or conflicting use of land.

3. Erosion and the subsequent environmental degradation is a problem in the Subarea, particularly when the natural drainage patterns are altered.

Recommendations

1. Land use proposals should also be reviewed to insure that drainage and/or hydraulic flow patterns are not adversely affected and that proper erosion control measures are employed.

000433

Slope

Findings

1. With the exception of some valley terraces, plateaus, and ridgetops (including High Prairie), slopes in the Subarea generally exceed 15%.

2. It has been generally found that intensive development of slopes in excess of 15% are avoided in rural areas because of the significant cost and potential environmental and public safety problems involved.

Recommendations

1. Intensive development, such as large subdivisions, may be permitted on slopes over 15% after a slope stability analysis (performed by the appropriate professional under County guidelines) determines such development would not result in a negative environmental impact or significant public cost.

2. Isolated, single-family homes on large parcels should be permitted provided no obvious environmental problems would result.

000434

Geology

Findings

1. The presently available geologic data is not adequate for the detailed evaluation of specific sites.

2. Based upon available data, the rock formations in the western two-thirds of the Subarea are generally expected to yield considerably less groundwater than those in the eastern portion. Groundwater in this western portion is also expected to contain dangerous concentrations of naturally occurring arsenic.

000435

Soils

Findings

1. Soils capability is a prime determinant of appropriate land use.

2. The Subarea is dominated by soils of development suitability ratings 3 and 4. One of the constraints of these soils is their lack of capability for adequate subsurface sewage disposal.

3. Soils within much of the Subarea are generally suited for the growing of timber.

4. Public concern has been expressed in favor of preserving agricultural land and state law has been written to reflect this desire.

5. The soils in the stream valley floors individually pose the fewest problems for development. However, these soils are not only often in areas subject to flooding, but are also the best suited for agriculture.

Recommendations

1. Soils information for the Subarea, particularly those portions presently lacking such data, should be continually gathered, refined and considered as fundamental criteria in land use decisions.

2. Most lands with soil suitable for agriculture should be so utilized in order to preserve this important resource.

3. State and local tax policies, zoning regulations and various financial incentives should be designed to promote agricultural land preservation while assuring an equitable fiscal impact on the individual farmer.

4. Most of the soils suitable for timber production should continue in that use.

000436

5. Intensive development should be greatly restricted on soils of DSR 4 and considered on soils of DSR 3 only after a careful analysis of site specific conditions indicates suitability.

6. Erosion control regulations for commercial and residential development, as well as other land uses with erosion potential, should be developed by the Department of Environmental Management. Particular attention should be given to measures for control of erosion during construction activity.

7. Development may be allowed on soils which are unsuitable for traditional subsurface sewage disposal systems provided acceptable alternative systems are available.

000437

Groundwater

Findings

1. There is not sufficient information on groundwater supplies throughout the Subarea; consequently, predictions of local supplies are speculative and highly variable.

2. Although groundwater data for the area is quite general, available groundwater appears limited in the western two-thirds of the Subarea except for the Oakridge vicinity. In the eastern one-third, subsurface water is generally plentiful. These predictions are based primarily on geologic factors.

3. The alluvial deposits associated with the Middle Fork of the Willamette and Salmon Creek show yields of 50-200 GPM.

4. Arsenic contamination of groundwater may occur in the western portion of the Subarea.

5. Adequate information does not exist on safe yield in the area; consequently, caution is necessary to avoid problems of groundwater overdraft.

6. As most residents of the unincorporated areas of the Subarea rely on subsurface water for domestic use, the availability of this resource will be a substantial constraint to development.

Recommendations

1. Further study of the area's groundwater supplies should be undertaken. Included in such a study should be the location and amount of potable groundwater, sources of contamination, and projected safe yields. From this information, appropriate residential densities (for homes dependent on subsurface water) can be designated.

2. Aquifer recharge areas should be identified and protected from detrimental land use.

000438

3. All proposed development should be required to provide reasonable evidence of sufficient water availability prior to permit issuance.

4. Major development proposals in the western portion of the subarea should be required to demonstrate an adequate, continuing supply of potable water.

5. Groundwater supplies in the western portion of the Subarea should be monitored for possible arsenic contamination.

000439

Surface Water

Findings

1. Surface water supplies for the Subarea are presently adequate.

2. Surface water resources provide essential fish and wildlife habitat and are committed to human use for recreational, domestic, industrial and agricultural purposes.

3. Because of the area's topography and geology, the surface water resource is particularly susceptible to degradation from land uses that disturb natural drainage patterns.

4. Because of withdrawal of water from the North Fork of the Middle Fork Willamette for domestic needs by Westfir residents, close regulations of upstream land uses is necessary to prevent contamination.

Recommendations

1. All proposals for surface water withdrawal should be reviewed and the approved projects continuously monitored to assure that the water supply within both the Subarea and downstream is not depleted or otherwise negatively impacted.

2. Promote watershed management practices which protect and enhance water quantity and quality.

000440

Water Quality

Findings

1. With the exception of Kitson and McCredie Springs, the known groundwater quality of the Subarea is generally satisfactory.

2. Further study and/or development may result in the detection of high arsenic concentrations in groundwater, particularly in the western portion of the Subarea.

3. Although not a serious problem at the present time, some of the septic systems located near water bodies are not functioning properly.

4. The major surface water quality problem is turbidity, with occasional high bacterial loads and enrichment in parts of the Subarea.

5. The County's Water Quality Report & Water Quality Management Plan provide the framework and tools for prevention and mitigation of water quality problems. Land use policies and decisions can and should both support and supplement the measures suggested in the above documents.

Recommendations

1. The water quality management recommendations outlined in the Water Quality Management Plan and Report, should be closely followed.

2. An ongoing well monitoring program should be instituted by the County in areas of known water quality problems to ensure that groundwater supplies are safe for human consumption.

3. Industrial and timber harvest practices should continue to be carefully regulated and monitored to prevent surface water degradation.

4. In addition to current regulations regarding subsurface sewage disposal, other measures for protection of waterways, such as setbacks for

000441

maintenance of riparian corridors and the control of streambank erosion, should be established.

5. Malfunctioning septic systems should be repaired or relocated if possible.

6. All development proposals should be reviewed to assure that projected water use and waste disposal will not negatively impact water quality.

000442

Flood Hazard

Findings

1. Detailed flood hazard information is presently unavailable for streams within the Subarea.

2. Estimates of the 100-year floodplain have been made for sections of the Willamette River. (See Map #9A).

3. A number of private residences lie within this designated inundation area.

4. Some portions of the Willamette River floodplain inundate agricultural soils, a further development constraint.

Recommendations

1. Studies to determine the precise location of floodplains in the Subarea should be undertaken.

2. Floodplain zoning and development standards should be developed and applied to those hazard areas designated by the above study. In the interim, no further development, and especially no septic systems, should be permitted in documented flood hazard areas unless special "floodproofing" occurs.

000443

Air Quality

Findings

1. Because air quality within the Subarea is primarily influenced by local events, the area is relatively free from pollution at the present time.

2. The Subarea is, however, part of a large airshed encompassing the entire Willamette Valley. Because of this airshed's high potential for air pollution, it is important that each area within it carefully control emission of even small amounts of contaminants.

Recommendations

1. Local land use regulations should recognize and support the Regional Air Pollution Authority policies.

2. Both the short term and cumulative air quality impacts of new development, particularly industrial, should be considered prior to project approval.

3. Alternatives to burning of slash should be developed and implemented to eliminate this source of contamination.

000444

Plant and Animal Habitat

Findings

1. Although the two primary habitat types, the douglas fir-trailing blackberry and the fir-alpine, comprise most of the Subarea, several critical habitat types also exist here and are essential to the survival of a number of species.

2. Removal of natural vegetation and various other human land use activities often result in habitat degradation (e.g., destruction of protective ground cover, topsoil erosion, streambank instability, and reduction of water quality). These types of disturbances lower carrying capacity and, hence, reduce wildlife population.

3. While no official "endangered species" permanently inhabit the Subarea, it serves as a brief resting or feeding stop to such species during their seasonal migration. The spotted owl (classified as "unique"), the northern bald eagle (which is classified as "threatened" in Oregon and endangered in several states) and a variety of other species are permanent residents.

4. Construction of the dams at Dexter and Lookout Point created a block to salmon spawning in this section of the Willamette River.

Recommendations

1. Major development must be closely regulated to reduce impact, both short term and cumulative, on the County's wildlife population. Any such intensive development should not be approved without prior analysis of habitats to be affected and a specific program for sensitive management.

2. Presently identified habitat types which are important for wildlife survival (e.g., winter range, nesting sites, mineral springs, etc.) should be conserved by appropriate measures (e.g., influence zones of uncut timber, a riparian corridor protection ordinance, a shoreline management plan, etc.).

000445

Resources

1) Forests

Findings

1. Most of the land within the Subarea is forest land, primarily in large holdings (both public and private).

2. The wood products industry is the primary industry of both the Subarea and the State.

3. Careful management of this resource is essential for both preservation of the raw materials supply and maximization of forest productivity. Diversification of the industry (with the subsequent increase in jobs and income) can occur without increasing the available resource, provided intensive management measures are instituted.

4. Forest lands, in addition to industrial raw materials, also provide recreational potential, valuable watershed and wildlife habitat and an aesthetic quality for both the Subarea and the County.

5. Measures must be instituted to prevent conflicts between preservation of the forest and other multiple land use activities.

6. Removal of the forest cover can have a highly detrimental environmental impact if proper harvest and reforestation techniques are not practiced. The most significant of these impacts is on water quality. Removal of riparian vegetation and excessive cutting close to major streams, without adequate erosion control measures, will eventually result in the loss of critical spawning and rearing areas for native fisheries and the adjacent wildlife habitat.

000446

Recommendations

1. The County's Forest Management Zone should be applied to timber lands in order to preserve, protect, and ensure the sustained yield of this valuable resource.

2. The most sound and effective reforestation technology should be applied to harvested areas.

3. The County should encourage private industry, the Department of Agriculture and the Bureau of Land Management to determine the appropriate combination of intensive management, roading, and rotation that will ensure maximum production, sustained yield and minimal environmental degradation for all forest lands in the County.

4. Programs for diversification of the wood products industry should be encouraged. Particular attention should be given to the utilization of waste, which is often burned on the site due to lack of markets.

000447

Resources (continued)

2) Minerals

Findings

1. Although several mineral resources exist in the Subarea, current economic restraints (e.g., distance from major markets and difficulties in extraction) have preempted the development of this industry, except on a very limited scale.

2. Some minor extraction of sand and gravel occurs in the Subarea, but at a scale limited to use for local road building and maintenance.

3. Recently, concern has been expressed over the potentially usable copper resources in the area. At present, no possible sites have been identified, although exploration is underway statewide.

4. Should currently dormant mineral deposits be mined commercially in the future, the Subarea is likely to experience a number of environmental and economic effects.

Recommendations:

1. Mineral resources should be conserved for the future through the control of land uses that would be in conflict with mineral extraction.

2. Should commercially valuable mineral resources be discovered, careful analysis of all environmental impacts (both physical and social) must be carefully evaluated before extraction permits are considered.

000448

Resources (continued)

3) Energy

Findings

1. A long-range comprehensive plan for energy procurement, use and conservation does not presently exist for Lane County.

2. Several potential energy resources exist in the Subarea, including: wood and wood by-products, geothermal sources and hydroelectric capability. Solar and wind may also be viable energy sources in this area.

3. Further study is necessary to determine the capability of these resources (particularly geothermal) and the potential negative environmental impacts associated with their development.

4. Present energy sources in the area include electric power but not natural gas.

Recommendations

1. Low-head hydro projects and additional turbines on existing dams should be encouraged.

000449

C. LAND USE AND PUBLIC NEEDS

Land Use

Findings

1. Ninety percent of the land in the Subarea is federally owned forest land at various levels of production. Another eight percent is large acreage owned by private timber companies.

2. This public ownership pattern, combined with topographic constraints, has directed most residential development into the river and stream valleys. The City of Oakridge will contain most of the Subarea's residential development, although residential development has also occurred in Westfir and along major roadways.

3. Residential densities are of an almost suburban nature in parts of the Subarea (particularly near Oakridge), although development activity has been slow in the past few years.

4. Some agricultural land use, mainly pasture and grazing, occurs in the High Prairie area and near Fall Creek Reservoir.

5. Unguided development, especially at higher densities, could threaten the remaining agricultural lands, cause a public safety problem from direct access onto main roads, and result in conflicts with timber harvest activities.

6. Commercial activity is currently confined to the City of Oakridge, where most of the area's residents orient for the provision of goods, services and cultural activity. A small grocery is located in Westfir.

7. Limited industrial development has occurred, mainly comprised of wood processing plants, mills and storage.

8. Generally, Subarea citizens desire to preserve the rural character and timber resource base of the area by guiding development.

000450

Recommendations

1. Timber production should continue as the primary land use; however, other land uses (e.g., recreation, small-scale industry, agriculture, etc.) that will expand the local economic base, without adversely impacting the forest resource, should be actively pursued. Development should be guided to protect agricultural and timber resource lands and to prevent expansion into areas of natural environmental constraints.

2. Agricultural and timber uses should be further protected by respective zone designations of "exclusive farm use" and "forest management."

3. Rural residential land use should be confined to areas of present development concentration.

4. Further commercial and industrial activity should occur where such land use designations exist. Small-scale, rural industry should be encouraged.

5. Small-scale "country store" commercial development should be permitted relative to needs of the population and recreational potential of the area.

000451

Transportation

Findings

1. The primary mode of transportation within the Subarea is the automobile.

2. Conditions and capacity of the roads are generally adequate and, with proper maintenance, should remain so if present growth trends continue.

3. Major road improvements could have a growth-inducing impact on the Subarea.

4. The City of Oakridge is served by the Greyhound bus, Southern Pacific Railroad (freight only) and a general aviation airport. No service by Lane Transit District is presently available or planned for the future within the Subarea.

5. Similarly, major new development, significant increase in recreational use and/or drastic changes in the price and supply of fuel could alter the transportation needs of the Subarea.

6. Highway 58 carries a lot of truck traffic as it serves as a primary truck route to Reno and northeastern California. The state has no current plans for improvement of this road.

Recommendations

1. Since planning decisions for the Willamette National Forest regarding recreational use and timber harvest activity will affect future use of the road system, close coordination with this agency and the County should be maintained.

2. Road capacities, improvement needs and potential access problems should be continuously assessed by both the state and County.

3. Emphasis should be on the maintenance and improvement of the existing road system as needed to ensure public safety rather than the construction of new routes.

000452

4. All major/intensive development should be evaluated for impacts on transportation facilities and required to subsidize necessary improvements related to the proposal.

5. All improvement plans should be evaluated for consistency with the County land use and environmental protection policies.

6. Land use proposals affecting the airport should be reviewed to ensure compatibility.

7. Efforts should be made to establish economically sound transportation alternatives to the individual automobile (e.g., bicycle paths, public transit buses, car pools, rail, etc.).

8. Provide cooperative assistance through the County's transportation planning function to work with the City of Oakridge to design an arterial road plan to serve the area north of the city limits and inside the potential urban service area.

000453

Recreation

Findings

1. The Subarea offers a variety of recreational settings, including: large holdings of publicly-owned forestlands, four large lakes, many smaller lakes and streams, the Upper Middle Fork itself and three mineral hot springs.

2. Recreational facilities are provided throughout the Subarea to support such activities as swimming, boating, camping, fishing, hiking, etc.

3. Present policies of the Willamette National Forest, the agency with the major impact on recreational use in the Subarea, emphasize an increase in dispersed recreation (i.e., activities outside of developed recreational areas, such as backpacking). These policies also encourage private investment and development.

4. The increase may result in conflicts with regard to timber harvest activities and alternate use of the reservoirs. Similarly, increased use will place an extra burden on the Subarea's roads and existing facilities, may affect local environmental quality and the quality of the recreational experience, and may add pressure for use of currently undeveloped areas.

5. The increase could provide needed economic opportunities for the local community, particularly in light of the National Forest policy in this regard.

Recommendations

1. Existing recreational facilities should be continually maintained and preserved. The establishment of new facilities should be encouraged.

2. Major new developments should be required to assist in the provision of recreational facilities necessary to serve the population they will draw to the area.

000454

3. The Willamette National Forest Administration should work closely with the County and the local citizens in the planning of future facilities in the area.

4. Recreational resources should be carefully managed so that other uses, such as timber harvesting and multiple use of reservoirs, will not be preempted. Accordingly, recreational development proposals should be reviewed for potential impacts on environmental quality, local character and community services.

5. Tourist activity in the Subarea should be promoted.

6. Modification of existing recreational facilities and government policies affecting those resources could help to increase their use. Specific improvements include:

   - increasing the amount of free parking along Highway 58;

   - construction of more boat docks on the reservoirs, and

   - consistent maintenance of reservoir water levels. Specifically, levels should be kept high for a greater length of time each year.

000455

Public Services and Facilities

Utilities

Findings

1. Except for the City of Oakridge and a portion of Westfir, the Subarea residents are dependent upon individual private wells and subsurface sewage disposal.

2. Soils and other natural features limit some of the area's suitability for subsurface sewage disposal, further indicating the appropriateness of low density development.

3. Expansion of water and sewer service could be growth-inducing.

4. Given the area's tax base and dispersed, rural character, a centralized sewer and water system for all residences is currently impractical. However, the existing sewage treatment facility in Westfir could service 350-400 households (almost twice its present capacity) provided the infiltration problem is corrected.[2]

5. Presently, Lane County has no official policy for the regulation of "private" utilities; consequently, it is difficult to ensure that such systems will be satisfactorily maintained over the years.

6. Water consumption for the Westfir area is very high. This is due to either leaks in the system or individual home use (or a combination of both).

Recommendations

1. Development in areas dependent upon private wells and subsurface sewage disposal should be low-density in nature. Higher density development

[2]Westfir Utility Study, Westfir, Oregon, CH2M Hill, March 1978.

000456

should only be approved if soil and other natural features allow.

2. Any proposals for centralized water and/or sewer service should be carefully evaluated for all potential impacts on the Subarea and any affected areas.

3. Existing and future septic system failures should be promptly corrected.

4. Steps should be taken to identify the cause of the very high rate of water consumption in the area and corrective measures then instituted.

5. The County should develop criteria for the regulation of private utilities.

6. The County should continue to work with the community of Westfir in determining the best method for maintenance, and possible expansion, of services in that area, particularly with regard to the existing sewage treatment facility.

7. Research and development of alternative sewage disposal systems should be supported by the County.

8. Should the growth rate increase significantly, hook-up to such a system may be warranted in currently unserviced areas and should be instituted before the situation reaches a critical stage.

000457

Schools

Findings

1. The majority of children in the Subarea attend school in Oakridge District 76, with some students enrolled in Lowell District 71.

2. Schools within District 76 presently have enrollments under capacity, although the recent closure of the Willamette City School has reduced the capacities stated in the technical report from approximately 1500 to 1250. As well as can be projected at this time,* school capacities should be adequate for the planning period.

3. Gymnasium and playground facilities in Lowell District 71 will be overextended if enrollment increases as projected.

Recommendations

1. All land use decisions should consider potential impacts on schools to ensure that appropriate measures are instituted to mitigate any negative impacts.

2. Local government and public school officials should coordinate their activities to ensure that local schools do not become overburdened.

*School enrollment projections are highly variable and dependent on the same external influences as population projections.

000458

Fire Protection

Findings

1. The State Forestry Department and National Forest Service provide fire protection for both public forest lands and private timber within the National Forest.

2. Formal protection for structural fires is limited to the City of Oakridge, Westridge Jr. High School, Circle Bar Golf Course and those buildings owned by the Pope & Talbot, Mitchell & Blacketor Mills and the Forest Service.

3. Even though most of the unincorporated rural residential portions of the Subarea lack fire protection, a recent ballot measure to establish a rural fire district failed.

Recommendations

1. Major developments should not be approved unless fire protection is available. Accordingly, such developments must include provisions for assuming their share of the financial burden of extending existing facilities in proportion to their impact on those services.

2. Because of its increase to the forest fire risk, development unrelated to timber production and harvesting should be prohibited within forest resource areas. Recreational and other multiple use activities should also be controlled during periods of high fire risk.

000459

Police Protection

Findings

1. The Sheriff's Department presently has one deputy assigned to the Oakridge area on a permanent basis. Two additional deputies reside in the Oakridge area and work for the US Forest Service on a contractual basis. These deputies are not normally available for general law enforcement service to the residents of the subarea.

2. The Sheriff's Department currently considers the Oakridge deputy to be working at maximum efficiency. Additional increase in population in the subarea will ultimately decrease this deputy's efficiency and ability to effectively respond to the public safety needs of subarea residents.

3. State police out of the Oakridge office routinely patrol Highway 58 and occasionally drive other roads in the area.

4. The size and physical character of the Subarea make law enforcement difficult.

Recommendations

1. Possible coordination with the City of Oakridge for police services should be encouraged.

000460

Solid Waste

Findings

1. The County Solid Waste Management Plan has established the policies for future disposal.

2. As part of the Countywide plan, a modified sanitary landfill is located southeast of Oakridge, with approximately three years of use remaining.

3. Presently, garbage collection service is only available in the Oakridge vicinity.

Recommendations

1. The policies established by the County Solid Waste Management Plan should be supported and implemented.

2. Particular emphasis should be placed on development of an areawide system of solid waste transfer, source separation and resource recovery when economically and technically feasible.

VI. LAND USE CONSTRAINTS

Introduction

The following is a brief summary of the full Land Use Constraints chapter presented in the Technical Report. It provides additional background for the Plan Diagram, which is detailed in the following chapter.

Constraints in the Subarea

Land use or development constraints are those apsects of the natural environment that generally preclude or severely limit the land's potential to support development. They reflect the intrinsic ability of the landscape to withstand human alteration and indicate where development could be damaged or destroyed by natural processes. The Development Constraints Map graphically portrays these natural limitations and, hence, is a useful guide for the determination of land use.

It must be noted that the Constraints Map is very general. It provides some indication of land use limitations, particularly to large-scale developments; however, individual homesites may be less affected by specific constraints. Site-specific evaluations should be made for all proposed development.

The Upper Middle Fork Development Constraints Maps (#9, 9A, 9B) display the following:

1) Soils with a Development Suitability Rating of 4 (generally unsuitable for any development activity). Appendix B of the Technical Report is an explanation of the rating system.

2) Slopes of 15% or greater.

3) Areas subject to periodic flooding or ponding.

4) Areas of high groundwater supply potential.

This map should be continuously updated as additional and more detailed information becomes available. The Plan Diagram, for which this map serves as a general guide, should also be modified accordingly.

000462

VII. THE PLAN DIAGRAM

INTRODUCTION

The Plan Diagram is a graphic portrayal of how land use in the Subarea would appear if all of this Plan's recommendations were implemented by 1995. It represents what is felt to be the best pattern for the future, based upon land use considerations alone. For this reason, it is one of the most important components of the Subarea Plan and, in essence, a recommendation on its own.

The Plan Diagram represents only one--although it seeks to be the optimum--display of future land use. Should future planning efforts result in modification of the planning study itself, the Plan Diagram should be adjusted accordingly.

THE COMPREHENSIVE PLAN AND THE PLAN DIAGRAM

Once adopted, the combined Comprehensive Plan and Plan Diagram serve as the official public policy statement guiding decisions with regard to future land use in the Subarea. Although primarily concerned with physical development, the Plan and Plan Diagram also incorporate social and economic considerations in order to interrelate all functional and natural systems and activities affecting land use in the Subarea. Developed to promote public health, safety and welfare, both of these elements should be considered "general" in nature. They summarize policies and recommendations in broad categories, not indicating specific locations of land use or regulations which may govern them.

ZONING AND THE PLAN DIAGRAM

The Plan Diagram, while serving as a guide to zoning is <u>not</u> a zoning map. Zoning ordinances and maps are specific pieces of legislation which are intended to implement the proposals of the Comprehensive Plan and its Plan Diagram.

A zoning ordinance is basically a public law which, in detail, regulates and restricts the use of land in the public's interest. It deals with three major areas: (1) the use of land, water and structures; (2) the height, size, shape and placement of structures; and (3) the density of development in given areas. Requirements concerning these matters are written into law, and are enforced as law.

000463

The Comprehensive Plan, and Plan Diagram, serve as sources of information for the application of zoning. Zoning uses this information, along with other sources, in the form of a special study in which every property owner has full input. Zoning will be undertaken following the review of the Comprehensive Planning Study and Plan Diagram.

COMPONENTS OF THE PLAN DIAGRAM

A. General Land Use Categories

Several land use categories have been assigned to the Upper Middle Fork Subarea. These categories are shown on the Plan Diagram as the primary land use designation, defined on Pages 52 through 54 of this report and further outlined in Table 1.

B. Table 1. - Summary of Land Use Designation Factors

This table outlines the intent and purpose of each land use category and lists physical features (e.g., slope, soil, water supply, etc.) characteristic of the category, which serve as criteria for future designations.

C. Table 2.- The Plan Conformity Chart (Matrix)

Although the categories shown on the Plan Diagram Map represent the "Primary" land uses recommended in the subarea, it is recognized that other uses may be appropriate and desirable on a particular site. Hence, a system has been devised to introduce a degree of flexibility into the application of land use categories by allowing for "secondary" land uses within designated "primary" categories.

The system allows for unique or unusual circumstances or conditions which could accommodate a secondary use, without violating the intent and purpose of the primary category or requiring a general plan amendment. The key to this flexibility lies in the establishment of specific criteria which enable the determination of proposed uses consistent with the spirit intent and purpose of the plan. There are four degrees of plan conformity which are described and graphically portrayed on the Matrix in Table 2. The following is a brief summary of these designations:

000464

a) Plan Conformity: Some secondary land uses have automatic plan conformity. For example, Forestry is an acceptable secondary land use under the primary category, RURAL WOODLAND AND GRAZING.

b) Potential Plan Conformity: This includes land uses that could be in conformity, provided a list of criteria are met.

c) Low Potential Plan Conformity: Some secondary land uses would only be acceptable under very limited circumstances. A rather rigid list of criteria must be met before these secondary uses can be found in conformity.

d) Plan Nonconformity: Secondary categories so designated do not conform to the plan.

The permission of a secondary land use would depend upon the determination of its level of conformity, based on the criteria in Table 2. Ultimate responsibility for this determination belongs to the Board of County Commissioners, aided by recommendations from the Planning Commission.

HOW THE PLAN DIAGRAM SYSTEM IS USED

The Plan Diagram system will be used by the County in regulating land use. It is used in two ways:

1) Evaluating major land use applications for individual properties.

   This primarily involves requests for changing or "rezoning" property. Other major applications include certain conditional use permits, unzoned area permits and any other major land use permits the County may require in the future.

   Upon determining that a major permit is required, the owner (or other party with a legal interest in the property) follows this procedure:

000465

Step 1. Determine how the particular application conforms to the Plan. This is accomplished by:

1) Finding the property's "Primary Land Use Category" designation from the Plan Diagram.

2) Determine the proposal's plan conformity rating on the chart in Table 2.* For example, suppose the area is designated RURAL, WOODLAND AND GRAZING on the Plan Diagram. This is the site's primary land use category which should then be located on the left-hand side of the chart in Table 2. Reading across the chart, the ratings for a site's secondary land use category may be seen. The secondary land use ratings for the RURAL, WOODLAND AND GRAZING primary category are as follows:

   a. If the request is for a NATURAL RESOURCE (Timber) or CONSERVATION-OPEN SPACE-RECREATIONAL application, it is considered to have a "Plan Conformity" rating.

   b. If the request is for a NEIGHBORHOOD COMMERCIAL application, it is considered to have a "Potential Plan Conformity" rating.

   c. If the request is for an INDUSTRIAL application, it is considered to have a "Low Potential Plan Conformity" rating.

   d. If the request is for a COMMUNITY COMMERCIAL application (or for any other major land use category not provided in the Subarea Plan), it is considered to have a "Plan Nonconformity" rating.

*In most cases the determination of how the particular application would be rated will be obvious. Where there is uncertainty, the determination of the rating will be part of the public hearing process explained in Step 2. The County may need to establish by separate policy which zoning districts and major permits are included within the definition of each land use category used in the Plan.

000466

Step 2. Should the owner decide to proceed with a formal application, the County's decision for approval or disapproval will be based upon the proposal's compliance with the requirements listed under the applicable plan conformity rating.

An application with a "Plan Nonconformity" rating could not be approved as being in conformance with the Plan.

At the present time, the County's decisions are made either by the Planning Commission or the Board of Commissioners, depending upon the type of application. If it is a Planning Commission decision, it is made after the holding of a public hearing. The Planning Commission's decision can be appealed to the Board of Commissioners. If the decision is by the Board of Commissioners, it is also after the holding of a public hearing. In this case, the Planning Commission will have earlier held a public hearing and made a recommendation to the Board of Commissioners.

Step 3. The owner proceeds according to the final decision on the application:

a. If the decision is approval, the owner may then receive approval of building and other necessary construction permits for the requested land use.

b. If the decision is disapproval, the owner must continue to use the property as allowed by the existing requirements or may choose to request approval of a different application.

2) Initial Zoning And The Rezoning Of Large Areas:

The zoning and rezoning of large areas will primarily be based upon (1) the Primary Land Use Designations as shown on the Plan Diagram, and (2) the predominant character of the use of the land. When the predominant character of a small area is different than the general designation for the larger area, as shown on the Plan Diagram, and when other modifications are considered for certain properties, the decision process for these smaller areas will be

000467

similar to the process for individual property requests as explained above.

The key to providing this flexibility in the Plan lies in establishing criteria to serve as a basis for determining whether or not a proposed secondary land use category is consistent with the spirit, intent and purpose of the Plan. There are four degrees of Plan conformity which are described and graphically illustrated in the Chart in Table 2.

The appropriateness of a secondary land use category would be established by comparing its plan conformity level, indicated on the Plan Conformity Chart, with the plan conformity criteria listed below the chart. Responsibility for determining whether or not a secondary land use category meets the Plan Conformity criteria lies with the Board of County Commissioners, with recommendations from the Planning Commission.

LAND USE CATEGORIES

AGRICULTURE

The intent of this designation is to recognize and preserve agriculturally capable land, whether or not it is currently being farmed.

The agricultural category is applied mainly in the High Prairie portion of the Subarea. Most of this land falls within the Soil Conservation Service agricultural capability rating, Classes II and III. Much of this land is currently in agricultural production (mostly grazing land) and the plan recommends maintenance of this use.

NATURAL RESOURCES (Timber or Sand & Gravel)

The intent of this category is to protect the forest resource, which is essential to both the local and state economy. Most of the forested uplands within the Subarea (approximately 95% of the land area) are within this category, as are the area's known geothermal resource areas.

000468

Sand and gravel is another, though minor, natural resource in the Subarea. The plan designation is intended only as an indicator of resource availability and should not be construed as a recommendation to proceed with extraction.

Detailed study of specific sites with evaluation of all potential impacts of extraction must be undertaken prior to permission of extraction activities.

RURAL RESIDENTIAL

The primary purpose of this designation is the recognition of existing residential development. Although the existing residential portions of Westfir are acknowledged, focusing of most residential development within the City of Oakridge Urban Services Boundary is encouraged. Because of environmental constraints (e.g., development suitability of soils, floodplain, etc.), residential expansion is somewhat restricted. It is not the intent of this plan designation to allow for conversion of large acreages, particularly that with timber or agricultural capability, into rural subdivisions but, rather, to recognize existing development and the normal infilling of small, vacant parcels.

Because of this area's historically slow rate of growth, most new residential development can occur as infilling of existing small parcels and within the Oakridge urban services boundary.

As the need for more residential development occurs, and services become available, expansion of the existing residential areas may be appropriate.

COMMERCIAL

The Neighborhood Commercial Category is in recognition of the need for businesses such as the existing small market in Westfir. Although the business is currently closed, this plan will allow for continued commercial use of the structure. The need for other small commercial enterprises may occur in the future.

Tourist Commercial use should be similarly accommodated as the need arises in areas central or adjacent to recreational facilities.

000469

Community Commercial uses are not currently appropriate outside of the City of Oakridge. The city plan adequately provides for this use.

RURAL, WOODLAND, AND GRAZING

Because of environmental constraints, several areas are somewhat marginal for intensive development, but they are not prime timber or agricultural lands. This land use category recognizes the land's natural limitations by providing for a wider range of uses, while maintaining existing agricultural and woodland activities and the rural atmosphere.

INDUSTRIAL

This category is applied to the existing industrial activity center in Westfir. Furthermore, the Oakridge Plan provides for additional industrial expansion and future industry should be centered within this area.

CITY OF OAKRIDGE

Oakridge, the only incorporated city within the Upper Middle Fork Subarea, is designated a Major Development Center by the County General Plan. Unlike some of the other major development centers throughout the County which function somewhat as satellites to the Eugene-Springfield area, Oakridge was so designated largely because of its relative isolation. Oakridge will support most of the residential, commercial and industrial development within the Subarea. Accordingly, its assurance of a sound economic base and provision of adequate public and commercial services is of great importance.

The Oakridge area was recently classified as "economically lagging" by the Economic Development Commission. It is hoped that the various incentives associated with this designation will induce businesses to locate within the area, thus stimulating employment and the local economy.

The Oakridge Comprehensive Plan is currently under consideration by the City Council. The plan shows two urban services boundaries: (1) the "intermediate" boundary, based on the programmed capacity for wastewater treatment and (2) the "potential" boundary, which shows potential for urban growth and service beyond the planning period. The Upper Middle Fork Plan

000470

Diagram recognizes both of these boundaries, and is in general conformance with the designations therein.

However, because of the uncertainty of the "Potential" Urban Services Boundary, it is felt best not to assume the provision of services to these areas. For this reason, there is a slight difference between the County and Oakridge plans. The NE 1/4 of the SW 1/4 of Section 9 (West Oak Road, adjacent to the Circle Bar Golf Course) is designated RESIDENTIAL-RURAL in the city's plan. The County Plan Diagram shows part of this area as RURAL, WOODLAND AND GRAZING. The intent of this designation is not to preclude future development but, rather, to guide its growth in conformance with the city's desire and ability to provide the necessary services. Because, at the present time, the city is unable to project a feasibility date for provision of services to this area, the RURAL, WOODLAND AND GRAZING classification will prevent random land division into parcels so small that future provision of services is uneconomical.

The City plan should be referred to for detailed information about lands within its jurisdiction.

COMMUNITY OF WESTFIR

Although not an official Major or Minor Development or Rural Service Center, Westfir is a distinct community in its own right.

Most of the Subarea plan's RURAL RESIDENTIAL designation, outside Oakridge, occurs in Westfir. This designation is in recognition of the existing residential use in Westfir.

Future growth and development in Westfir will be largely dependent upon local economic conditions and availability of public services and utilities.

000471

VIII. PLAN IMPLEMENTATION

The development and adoption of a land use plan is only the first step in the overall planning process. If a plan is to serve as a guide for accommodating growth and change, it must also (1) be implemented through the application of regulatory ordinances (such as zoning and subdivision ordinances, building and sanitation codes), (2) be reviewed and revised periodically, and (3) be used as a policy guide by public decision-makers.

THE PLAN AS A GUIDE

The development, adoption, implementation and revision of a land use plan constitutes the "planning process." The purpose of this process is to develop guidelines to be used by both the public and private interests in making decisions relative to land use. Land use plans can be used as guides in the following ways:

1. General guide for public decision-making

   Land use plans provide public governing bodies (city councils, Board of County Commissioners, and governmental agencies) with the basis for making decisions regarding the allocation of land uses, population densities, and development standards.

   Without such a guide, it is difficult, if not impossible, to make land use decisions which are economically and environmentally sound, provide compatibility among different activities and in general provide orderly change and growth.

2. General guide for private decision-making.

   Private individuals and businesses can effectively use a land use plan to determine the best locations for carrying out their activities. The individual seeking a single homesite, business seeking a new commercial market, and the developer seeking the most appropriate location for a housing tract can all use the plan as a basic reference document. Since the plan represents public policy, private decisions in accordance with it are encouraged by the public.

   Aside from being a locational guide for private decisions, the plan provides private decision-makers with a store of basic information about socioeconomic conditions, land use patterns, environmental concerns and public service requirements. Use

000472

of this information will help private decision-makers to understand and support public actions based on the same information. It will also alert them to the problems and needs of the County, and will provide directions through which private decisions can assist in solving the problems and meeting the needs. In these ways, the "public sector" and the "private sector" can work together to achieve common ends.

3. Guide for providing public services.

   Being able to anticipate where, in what form (residential commercial, industrial) and at what intensities land will be developed and used, provides public bodies with the ability to anticipate and plan for demands on public services.

   By indicating the direction and nature of growth and change, public bodies can program for capital improvements such as schools, roads, sewers, water, parks and recreation facilities, etc., in order to obtain maximum efficiency and utilization of these services.

4. Guide for future studies.

   In the process of gathering data and information for a land use plan (i.e., information on population, natural resources, economics), it sometimes becomes apparent that detailed studies in specific areas are needed. In the Upper and Lower McKenzie Subareas, for example, recommendations are made for a detailed flood hazard study to supplement available information.

Additionally, a land use plan is the first step in the development of performance standards for future land use proposals. Having identified the nature and character of an area and established policies for land use, performance standards can be used to relate particular development proposals to the natural and environmental limitations of a particular site.

Land use planning, then, serves to identify where an area needs additional refined studies which, in turn, can strengthen future planning efforts.

000473

PLAN IMPLEMENTATION

A land use plan has value only if it is implemented. Plan implementation occurs primarily through the application of regulatory ordinances. At the present time, Countywide regulations are in effect regarding subdivisions, building construction and sanitation facilities. Zoning divides land into districts or zones such as residential, commercial, industrial and agricultural. Each zone allows certain types of land uses while prohibiting others which would be incompatible with the permitted use. When areas are zoned, the districts should reflect the recommended land uses indicated in the land use plan. Therefore, upon completion of the land use plan for the Upper Middle Fork Subarea, a zoning program will be developed.

PLAN REVIEW AND REFINEMENT

This initial land use plan attempts to anticipate and guide change in a manner which reflects the goals of the area's citizens, County policies and environmental constraints. However, it is impossible to predict the nature and scope of all changes in an area, the types of pressures to which an area will be subjected, and the direction growth will always take.

New information on population growth, residential development trends, economic changes, etc., must be reviewed in light of the adopted plan, discrepancies and inconsistencies eliminated, and additional goals and guidelines adopted. The Upper Middle Fork Subarea plan, like all subarea plans in the County, will undergo periodic revisions in the future.

000474

APPENDIX A

DEFINITION OF PLANNING TERMS USED IN THIS STUDY

To aid the reader in understanding some of the terminology (especially those words which seem to have more than one meaning) used in this planning study, the following definitions have been prepared. It should be remembered that these terms are defined for this report only, and do not necessarily parallel those used in County ordinances, etc.

AGRICULTURAL LAND CAPABILITY CLASSIFICATION -- System used by the US Soil Conservation Service to categorize lands according to their ability to support various crops, vegetation, etc. Ratings go from I to VIII, with I referring to the best possible agricultural land.

DEVELOPMENT -- Any conversion of land from a less intensive use to a more intensive use, such as the building of a dwelling unit on land formerly used for pasture or crops.

DEVELOPMENT, MAJOR -- A conversion of land to a more intensive use which significantly alters the physical or social character of the site and/or surrounding area.

DEVELOPMENT SUITABILITY RATING -- Used in connection with the Soils analysis; based on a system of evaluating soils for development purposes (dwelling units, roads, etc.), which considers the ability of the soil to support septic tank drainfields, foundations, etc. Ratings go from 1 to 4, with 1 being most suitable for development and 4 least suitable.

FINDING -- Same as "implication," except it also refers to the conclusions drawn from evaluation of a set of data.

GOAL -- A statement of a desired condition or circumstance to be achieved at some point in the future.

IMPLICATION -- A projected impact of a condition or circumstance on other conditions; for example, a large number of dwelling units in an area has the implication of increased traffic loads on the street and highway system.

000475

INTENSIVE -- As used in "less intensive", refers to the magnitude of use of a given acre of land, or impact placed on that land. For example, open pastureland is being used less intensively than developed land upon which dwelling units are located. Land values generally reflect this factor in that more intensively used parcels are valued higher for property tax purposes.

POLICY -- A statement of method or approach used to achieve a goal, or move toward it; implies making decisions in line with the policy.

RECOMMENDATION -- A suggested course of action intended to carry out a policy, resolve problems, improve on good situations, etc.

URBAN DENSITY -- Refers to the proximity of several dwelling units, or the number of them within a given area. As used in this report, "urban density" generally refers to densities of one dwelling unit per acre or greater. "Rural," of course, would be lesser densities.

000476

APPENDIX B

EXCEPTIONS TO THE LCDC AGRICULTURAL LANDS GOAL

INTRODUCTION

The Agricultural Lands Goal, Goal #3 of the Statewide Planning Goals and Guidelines, requires that land of predominantly Class I-IV soils shall be "preserved by adopting exclusive farm use zones pursuant to ORS Chapter 215."

Any governmental unit taking an exception to the Agricultural Lands Goal--in either the planning or zoning process--must address four criteria for goal exceptions outlined in the Land Use Planning Goal (Goal 2). Specifically, the exception language is as follows:

> When, during the application of the statewide goals to plans, it appears that it is not possible to apply the appropriate goal to specific properties or situations, then each proposed exception to a goal shall be set forth during the plan preparation phases and also specifically noted in the notices of public hearing. The notices of public hearing shall summarize the issues in an understandable and meaningful manner. If the exception to the goal is adopted, then the compelling reasons and the facts for that conclusion shall be completely set forth in the plan and shall include:
>
> a. Why these other uses should be provided for;
>
> b. What alternative locations within the area could be used for the proposed uses;
>
> c. What are the long-term environmental, economic, social and energy consequences to the locality, the region or the state from not applying the goal or permitting the alternative use;
>
> d. A finding that the proposed uses will be compatible with other adjacent uses.

000477

In addition, ORS 215.215(2) permits non-EFU zoning for one or more lots or parcels in the interior of an exclusive farm use zone if the lots or parcels were physically developed for the nonfarm use prior to the establishment of the exclusive farm use zone.

EXCEPTIONS IN THE UPPER MIDDLE FORK SUBAREA

In some locations in the Upper Middle Fork Subarea there exist land uses or topographic/physiographic features on Class I-IV soils which effectively preclude the operation of viable agricultural activities. In these locations where the County is taking an exception to the Agricultural Lands Goal, land use categories other than AGRICULTURE are depicted on the Plan Diagram. A verbal description of areas where exceptions are taken, and the "compelling reasons and facts" for the exceptions are described on the following pages.

000478

EXCEPTION #1

The following areas are designated NATURAL RESOURCE: TIMBER on the Plan Diagram, although the soils are identified as SCS Class II, III and IV:

(1) Parts of the Fall Creek and Winberry Creek upper valleys.

(2) Several areas around Oakridge and Westfir.

(3) Many other isolated areas in the narrow valley floors throughout the subarea, not all of which have soil data available.

A. Because of the timber industry's importance to both the local and state economies, preservation of the timber resource is a major concern. The LCDC Goal #4, as well as Lane County's Goals and Policies, reflects this concern. Hence, although these areas include some soils that could be classed as Agricultural, it is felt that the land is best suited to continued timber production. We have, therefore, substituted the Forest Lands Goal for the Agricultural.

B. The subject areas are well suited for production of commercial timber. Other forest lands exist in the subarea and are so designated. Likewise, even though some of the nonforested land could be planted in timber, these lands are better suited to other types of use.

C. The continuation of this land use would be beneficial both socially and economically (as discussed in "A" above). Conversion of this land to traditional agricultural use could have significant environmental, energy and economic impacts related to clearing, fertilization, etc. The long-term energy and environmental impacts of continuing timber management will depend upon industry diversification and future state and federal policies. Projection of these impacts at this time would be difficult and generally speculative.

D. As these areas are adjacent to other forest, mixed woodland and grazing lands, their preservation in timber should not have a negative impact on neighborhoring uses.

000479

EXCEPTION #2

The following areas are shown as RURAL RESIDENTIAL and INDUSTRIAL on the Plan Diagram:

(1) Westridge and Hemlock subdivisions.

(2) Residential areas along West Oak, McFarland, La Duke Roads and Highway 58.

(3) The mill sites in Westfir and southeast of Oakridge.

A. The subject areas are sites of existing residential and industrial development. Although some Class II and III soils are involved, the area is fully committed to the aforementioned uses.

B. Because this exception covers only fully developed land, this question is not particularly applicable. The original location of homes and the industrial facility was probably due in part to soil conditions favorable to such development. Soil conditions and topography adjacent to the subject areas limit the vicinity's development suitability and will act as a constraint to further growth of the area.

C. Because this exception is "after the fact," there really are no avoidable long-term impacts. The loss of this land to agricultural production has already occurred. However, use of the land for housing and industry (jobs) has had a positive social and economic impact on the Oakridge-Westfir area.

D. Again, this question is no longer particularly applicable, since the uses already exist. Because of the area's expansive timber resource, development of a mill in the vicinity of the raw materials was inevitable. Residential development was a natural successor to the new industrial facility. Additionally, the subject areas are very close to the City of Oakridge and, to some extent, were a predictable result of that city's growth.

These areas would also appear to fall under the exception allowed by ORS 215.215(2).

000480

EXCEPTION #3

An area adjacent to McFarland Road, and the Circle Bar Golf Course, is shown as RURAL, WOODLAND AND GRAZING on the Plan Diagram.

A. Although a narrow strip of land along McFarland Road includes some Class III soils, existing development and topographic features preclude its intensive agricultural use. The subject area has been divided and developed into a number of rural homesites (two to eight acres in size) where some small-scale farm activity occurs. Furthermore, a good portion of this area lies within the City of Oakridge Urban Services area. Designation of these properties as AGRICULTURAL (with the EFU zone designation which follows) would not be reflective of the present commitment of this land. The RURAL, WOODLAND AND GRAZING category will preserve these areas for small-scale agricultural activity as currently exists, but will allow greater flexibility in terms of permitted uses.

B. Other AGRICULTURAL areas are designated by this plan, as are other RURAL, WOODLAND AND GRAZING areas. Because we are dealing with land already committed to the use described above, the question of alternative locations is not applicable. The proposed designation will not provide for further land divisions in the subject area.

C. There will be no significant impacts involved in this proposed action. The RURAL, WOODLAND AND GRAZING designation (somewhat less restrictive than the AGRICULTURAL) is more reflective of the type of land use existing in the subject area.

D. The proposed designation is compatible both with existing land use (grazing, mixed woodland and the golf course) as well as the Plan's long-term land use designation of adjacent land; that is, RURAL, WOODLAND AND GRAZING, AGRICULTURE, and CONSERVATION, RECREATION, AND OPEN SPACE.

000481

EXCEPTION #4

The Alpine Acreage Estates subdivision is shown as RURAL WOODLAND and GRAZING on the Plan Diagram.

A. This is an existing rural subdivision with lot size averaging about two acres. Because this land has already been committed to residential use, it is no longer appropriate to consider it an agricultural resource.

B. Because this exception is requested for a committed use, the question of alternate location does not apply.

C. No long-term impacts will result from this exception. Any impacts are already implicit due to the existence of the subdivision.

D. Again, this is not a "proposed" use, but rather one already in existence. There is some residential use in the vicinity as well as low-intensity agriculture.

000482

EXCEPTION #5

Several areas around Oakridge, although identified as having SCS Class II, III or IV soils, are shown as RURAL, WOODLAND and GRAZING on the Plan Diagram. These are areas of mixed grazing, residential and forest uses, partially divided into lots as small as one acre and supporting diverse farm and nonfarm uses.

A. These other uses should be provided for because they are already well-established and contributing to the economic and agricultural well-being of the Oakridge area.

B. There are only a few other locations in the Oakridge area where such mixed uses could be accomodated; by and large, these other locations are devoted to other pre-existing uses (small-lot residential, industrial, forestry).

C. The long-term environmental, economic and social consequences of permitting the present uses to continue would appear to be positive to the area and the region. The energy consequences are more speculative: by making present uses nonconforming to the Plan or subsequent zoning, present residential uses may in time be encouraged to relocate closer to town; allowing them to remain, therefore, may be energy-consumptive in terms of fuel use for commuting to Oakridge.

D. Present uses to do not appear to be incompatible with other adjacent uses (forestry, grazing, industrial).

000483

APPENDIX B

STAFF REPORT

August 22, 1979

BACKGROUND:

Work on this plan was begun in early 1977. Initially, the citizens were encouraged to draft their own plan using a series of plan formation workbooks. Unfortunately, public participation was minimal and the idea was abandoned. Residents of the subarea requested the Planning staff to draft a plan and submit it to them for detailed review. The draft was completed in July, 1978 and citizen review began in August.

At the same time, the decision was made to carry through with the zoning of the subarea, concurrent with the Plan, in order to streamline the process. This has been done and a separate staff report prepared for the proposed zoning.

THE REVIEW PROCESS:

The Upper Middle Fork Plan was reviewed by the area residents in a series of eight informal meetings at Oakridge between August and December, 1978. Each section of the text was gone over in detail and many revisions were made. After the first eight meetings, a second version of the Plan Diagram was drafted to represent more directly the wishes of the people. Proposed zoning maps were then prepared to reflect each of the Plan Diagrams and existing uses. The zoning maps and Plan Diagrams were hung in Oakridge City Hall just before Christmas, 1978, and the final draft of the Comprehensive Plan became available in early January, 1979.

During January and February, 1979, three drop-in meetings were held at Oakridge to enable area residents to discuss the final Plan Diagrams and zoning maps. As a result, several substantial changes were made to the proposed zoning to reflect new data, requests of landowners and existing development patterns.

The Lane County Planning Commission held two hearings during March and April, 1979, followed by three County Commissioner hearings during June, July and August. Throughout this process, a continuing dialogue was maintained with subarea residents and the cities of Oakridge and Westfir.

THE PLAN DIAGRAM:

The subarea Comprehensive Plan here presented includes the Plan Diagram recommended by the Planning Commission. Up to the Planning Commission's hearing on April 12, 1979, two versions of the Plan Diagram were published; one recommended by staff, the other proposed by area residents. At the hearing, both plans were explained, all areas of disagreement were discussed, and the Planning Commission accommodated many citizen requests. The Plan Diagram which resulted was felt to be a reasonable compromise between the wishes of the area residents, the Comprehensive Plan of the City of Oakridge and sound planning principles.

After Planning Commission action on the plan, requests were received from the cities of Oakridge and Westfir to incorporate their input to the plan. Accordingly, final Board action was held up to permit the city councils to meet with staff and make recommendations regarding the areas around the cities. This has resulted in the presentation of three sequential plan diagrams:

1. The Planning Commission recommendation.
2. The staff recommendation, incorporating the Oakridge Comprehensive Plan for all areas within their "Intermediate Urban Services Boundary".
3. The Plan Diagram adopted by the Board of County Commissioners, incorporating all the above and responding to requests of area landowners and the cities of Westfir and Oakridge.

OAKRIDGE

The City of Oakridge Comprehensive Plan was completed and adopted prior to the review stage of the Upper Middle Fork Subarea Plan. The Oakridge Plan established two Urban Services Boundaries; an Intermediate one for the near future and a Potential one for the expected ultimate growth of the city. Although the plan designations outside the city limits are ultimately the responsibility of the County, many of these areas will eventually annex to the city. Accordingly, the city's plan designations have been used within the "Intermediate Urban Services Boundary". In addition, many of the Oakridge City Council's recommendations were incorporated in the final Land Use Plan.

WESTFIR

The new city of Westfir, incorporated earlier this year, does not yet have a Planning Commission, comprehensive plan or zoning. Until the city takes action to assume the planning and zoning function within the city, the County plan and zoning remain in effect (ORS 215.130(2)(a)). The Westfir City Council, however, were consulted and made a recommendation as to the plan designations and zoning within the city. Those recommendations are incorporated in the approved documents.

000485

APPENDIX C

STAFF REPORT

August 22, 1979

THE ADOPTED COMPREHENSIVE LAND USE PLAN:

The plan adopted by the Lane County Board of Commissioners includes the following:

1. The "2nd Draft: Comprehensive Land Use Plan for the Upper Middle Fork Subarea, Part I: Plan Report", dated December, 1978, "as modified by action of the Lane County Planning Commission on April 17, 1979", plus the following alterations incorporated by the Board of County Commissioners, August 22, 1979.

2. The Plan Diagram for the Oakridge area has been altered to agree fully with the "Comprehensive Plan for Oakridge, Oregon" for all of the area between the city limits and the "Intermediate Urban Services Area Boundary".

3. The following statement has been inserted in place of the third paragraph on page 58 of the "2nd Draft, Comprehensive Land Use Plan for the Upper Middle Fork Subarea, Part I, Plan Report, December, 1978, as modified by action of Lane County Planning Commission on April 17, 1979".

   "Lane County will administer land use and other controls within the intermediate UGB*, in areas under County jurisdiction, until these areas are annexed to the City. Urban-level development within the Intermediate UGB will not be supported without annexation to the City of Oakridge. The City Plan will be used as the first but not necessarily the only, guide toward the administration of County regulations, development controls, public facilities, improvements, etc. The County recognizes the Oakridge City Plan as the principle decision guide for lands within the Intermediate UGB, although should conflicts arise between the City Plan and the County Plan (or related policies or regulations), the County reserves the right to apply measures which may not be contained in the City Plan until the conflict is resolved. Within the Potential UGB, but outside the Intermediate UGB, the provisions of the County Plan shall prevail, although the County will attempt to honor the City Plan's provisions to the extent practicable without conflict with the County Plan. At such a time as the City Plan or either of its UGB's is revised, or the County Plan is revised, the County will seek close cooperation with the City in jointly deriving new Plan provisions. Questions of interpretation of the City Plan should be first referred to City officials."

4. The following changes to the Plan Diagram:

   (a) Two areas west of Oakridge designated RURAL RESIDENTIAL have been somewhat enlarged.
   (b) An area south of Oakridge which is presently a gravel pit has been changed from NATURAL RESOURCE: TIMBER to NATURAL RESOURCE: SAND & GRAVEL.

*Urban Growth Boundary

(c) An area on the north side of Hills Creek Reservoir adjacent to existing development has been changed from NATURAL RESOURCE: TIMBER to RURAL, WOODLAND & GRAZING.

(d) An area above Fall Creek Reservoir has been changed from NATURAL RESOURCE: TIMBER to RURAL, WOODLAND & GRAZING.

EXHIBIT D

STAFF REPORT

EXCEPTIONS TO STATEWIDE PLANNING GOAL 3: "AGRICULTURAL LANDS":

1. West Oak-McFarland-High Prairie Roads Area (Hines, Garris, Davis properties):

Soils: Nekia and Dupee silty clay loams, all SCS Capability Class III.

Present Uses; Pasture (100 acres), farming (52 acres).

Proposed Plan and Zoning: On the Plan Diagram: RURAL WOODLAND & GRAZING; AGT-5 zoning (permitted in the RWG designated area under footnote 3 of Table 1 of the Comprehensive Plan).

REASONS FOR LCDC GOAL EXCEPTIONS:

(a) Landowners have testified that the steep and rocky soils cannot support long term farm uses.

(b) The entire area is within the Potential Urban Services Boundary of the City of Oakridge.

(c) The area is logical for large lot residential development, located as it is between Oakridge and an area of existing 5 - 15 acre lots and adjacent to the City and existing 2 - 8 acre developments.

(d) Five-acre minimum parcel sizes will not significantly deplete or otherwise prove incompatible with the protection, conservation, use and/or harvesting of important natural resources, particularly timber, sand and gravel and important agricultural land.

(e) Five-acre minimum parcel sizes will be commensurate with the environmental limitations of the area.

(f) There is a need to provide areas around Oakridge which may be developed into 2 - 5 acre lots.

(g) Alternative locations for large lot subdivisions include the airport area, the Highway 58 area southeast of the city and areas adjacent to existing residential developments on LaDuke Road and at Westridge and Hemlock.

(h) The long-term environmental, economic, social and energy consequences will be either positive or minimally negative.

(i) Five acre developments will be compatible with other adjacent uses.

2. Airport-Hemlock Areas (Roberts and Mitchell-Blacketor properties):

Soils: Jory and Nekia silty clay loams, Sifton loam and Ritner cobbly silty clay loam, 2 - 50%, SCS Capability Class II, III, IV and VII.

Present Uses: Forest, pasture, vacant.

Proposed Plan and Zoning:

Roberts property:

(a) 40 acres south of airport; RURAL RESIDENTIAL on the Land Use Plan; RR-2 zoning.

(b) 20 acres east of airport - LIMITED INDUSTRIAL as per Oakridge Comprehensive Plan; AGT-5 zoning.

Mitchell-Blacketor property:

(a) 30 acres (approximately) along Westfir Rd. between the Hemlock bridge and the rock bluff about 3000 feet west: RURAL RESIDENTIAL on the Plan; RR-2 zoning.

(b) Remaining 170 acres (approximately): RURAL, WOODLAND & GRAZING on the Plan; AGT-5 zoning.

REASONS FOR LCDC GOAL EXCEPTIONS

(a) The soils and terrain north and east of the airport will not support farm or forestry uses; the area is best suited to large lot residential development (5 acres or larger).

(b) All of the areas of higher density zoning around the airport are within the Potential Urban Services Boundary of the City of Oakridge.

(c) Alternative locations for large lot subdivisions in the Oakridge area include the McFarland-West Oak Roads area, Highway 58 southeast of town and areas along LaDuke Rd. and near Westridge and Hemlock subdivisions.

(d) Five acre minimum parcel sizes will not significantly deplete or otherwise prove incompatible with the protection, conservation, use and/or harvesting of important natural resources, particularly timber, sand and gravel and important agricultural land.

(e) Five acre minimum parcel sizes will be commensurate with the environmental limitations of the area.

(f) The area south of the airport zoned RR-2 is boxed in by an existing development to the west, the airport to the north, the Willamette National Forest to the south and the City of Oakridge to the east; the terrain is part gently rolling open land and part steep and rocky hillside. It is unsuited to farm or forest uses and is best developed into 2-acre or larger residential lots.

(g) The area along Westfir Rd. between the bluff and the North Fork of the Middle Fork Willamette River is adjacent to the densely developed Hemlock subdivision; it is an isolated area unsuited to economic farm or forest uses and is best developed in 2-acre or larger homesites.

(h) The long term environmental, economic, social and energy consequences will be either positive or minimally negative.

(i) 2 - 5 acre development in these areas will be compatible with other adjacent uses.

3. Westridge-LaDuke Road areas (Hall/Surmac properties):

Soils: Unknown.

Present Uses: Forest, gravel extraction.

Proposed Plan and Zoning:

(a) NATURAL RESOURCE: TIMBER on the Land Use Plan; Farm Forestry-20/Recreation (FF-20/R) zoning.

(b) RURAL RESIDENTIAL on the Land Use Plan; RR-2 zoning.

REASONS FOR LCDC GOAL EXCEPTIONS

(a) None of the areas is large enough to support a long term economic forestry program.

(b) The area of RR-2 zoning is adjacent to an existing residential development.

(c) Alternative locations for 2-acre residential lots in the Oakridge area include the Hemlock area, the Westfir-West Oak Rd. area, the West Oak-McFarland Road area, the Highway 58 area southeast of the city and the Oakridge airport area.

(d) The isolated parcel between the Middle Fork Willamette River, the Old Willamette Highway and the Willamette National Forest is presently a gravel mining area; it is well suited to camping or outdoor recreation activities after reclamation because of its location, elevation and present use.

(e) 2-acre zoning is compatible with present adjacent uses.

(f) The long term environmental, economic, social and energy consequences will be either positive or minimally negative.

(g) The minimum parcel sizes do not significantly deplete or otherwise prove incompatible with the protection, conservation, use and/or harvesting of important natural resources, particularly timber, sand and gravel and important agricultural land.

(h) The minimum parcel sizes are commensurate with the environmental limitations of the area.

4. Brock and Dunning Road Areas (Aguilar, Holst, Kjornes properties):

Soils: Nekia and Hazelair silty clay loams, all SCS Capability Class III, except for a small patch of Class VII on Brock Rd.

Present Uses: Pasture, forestland.

Proposed Plan and Zoning: RURAL, WOODLAND & GRAZING on the Land Use Plan; AGT-5 zoning.

REASONS FOR LCDC GOAL EXCEPTIONS

(a) Landowners have testified that the clayey, shallow soils cannot support long term farm or forest uses.

(b) There is a need for 5-acre homesites in the Oakridge area,

(c) Alternate locations for 5-acre homesites in the Oakridge area include the airport vicinity, the Brock-High Prairie Roads area and the north end of Brock Road.

(d) Five-acre minimum parcel sizes will not significantly deplete or otherwise prove incompatible with the protection, conservation, use and/or harvesting of important natural resources, particularly timber, sand and gravel and important agricultural land.

(e) Five-acre minimum parcel sizes will be commensurate with the environmental limitations of the area.

(f) The long term environmental, economic, social and energy consequences will be either positive or minimally negative.

(g) 5-acre developments will be compatible with other adjacent uses.

5. North Brock Road, Upper High Prairie Areas (Tendick, Walker, others):

Soils: Mostly Nekia silty clay loam, SCS Capability Class III, with some Klickitat cobbly clay loam (SCS Class VI & VII) and a small patch of Jory silty clay loam (SCS Class II).

Present Uses: farming, forestry, grazing, residential.

Proposed Plan and Zoning: RURAL RESIDENTIAL and RURAL, WOODLAND & GRAZING on the Land Use Plan; zoning: AGT-5 for the two Tendick properties, for the poor soil areas on the Walker property, and for the existing small-lot areas along Brock Road; RR-2 for the northernmost 7.8 acres of the Davidson property; FF-20 for the good soil areas on the Walker property.

REASONS FOR LCDC GOAL EXCEPTIONS

(a) All of the proposed 2 and 5-acre areas are already developed into small lots or are adjacent to such areas.

(b) Alternate locations for 2 and 5-acre homesites in the Oakridge area include the airport vicinity, the Highway 58 corridor southeast of town, the Westridge and Westfir areas, along West Oak and McFarland Roads and along lower High Prairie Road.

(c) The long-term environmental, economic, social and energy consequences will be either positive or minimally negative.

(d) 2 - 5 acre developments will be compatible with other adjacent uses.

(e) Five-acre minimum parcel sizes will not significantly deplete or otherwise prove incompatible with the protection, conservation, use and/or harvesting of important natural resources, particularly timber, sand and gravel and important agricultural land.

(f) Five-acre minimum parcel sizes will be commensurate with the environmental limitations of the area.

6. Other Areas of 2 - 5 Acre Zoning (North, West and Southeast of Oakridge):

Soils: Mostly Nekia and Dupee silty clay loams, with some McAlpin and Jory silty clay loam and smaller areas of Camas gravelly sandy loam, Newberg sandy loam, Salem gravelly silt loam and Klickitat cobbly clay loam. SCS Soil Capability Classes range from Class II through VI, with most of the soils in Class III and IV.

Present Uses: Forest, pasture, residential.

Proposed Plan and Zoning: RURAL RESIDENTIAL and RURAL, WOODLAND & GRAZING on the Land Use Plan; RR-2 and AGT-5 zoning.

REASONS FOR LCDC GOAL EXCEPTIONS

(a) All of these areas are already cut up into lots of 2-10 acres with a few larger parcels interspersed; they are, thus, already committed to small-to-medium size rural residential homesites.

000491

(b) The long term environmental, economic, social and energy consequences will be either positive or minimally negative.

(c) 2 - 5 acre developments will be compatible with other adjacent uses.

(d) Two and five acre minimum parcel sizes will not significantly deplete or otherwise prove incompatible with the protection, conservation, use and/or harvesting of important natural resources, particularly timber, sand and gravel and important agricultural lands.

(e) Two and five acre minimum parcel sizes will be commensurate with the environmental limitations of the area.

March 17, 2021

Major Big Game Range in Lane County RCP by Subarea

I. OBJECTIVES AND PROCESS

There were three objectives for the analysis:

1. Using the Subarea Map provided by the client, identify the Upper Middle Fork Subarea.
2. Determine the acreage of the Major Big Game Range within Lane County's Rural Comprehensive Plan outside of Metro Plan, UGB's and Developed and Committed Areas within the Upper Middle Fork Subarea.
3. Identify the number of dwellings that fall within that amount of acreage for the Upper Middle Fork Subarea.
4. Determine the overall density of dwellings per acre for the Upper Middle Fork Subarea.

ESRI GIS software and geoprocessing tools in combination with various data (see sources below) was used to perform the analysis, which included filtering specific data both spatially and tabularly.

The acreage within the study area was calculated from the digitized boundary layer of the Major Big Game Range. This acreage was then refined by subtracting acreage that was found to be within the Metro Plan, UGB's and Developed and Committed Areas. An analysis was performed for the area within the boundaries of the Upper Middle Fork Subarea (UMFS).

Spatial and tabular filters were applied to the Lane County's Rural Plan Designation layer, specifically, those designated Residential, Commercial, or Industrial. All lands that have a plan designation of R, C or I that are outside of UGB's and the Metro Plan boundary by necessity must be within a Developed and Committed Lands Exception (D&C) Area to receive that Plan designation. All areas within a D&C Area are considered Impacted Big Game Range (per Lane County RCP Goal 5 Flora and Fauna Policy #10) and not Major Big Game Range. Therefore, any of the D&C areas that lie within the digitized boundary layer of the Major Big Game Range were excluded from the total acreage calculation. Since there is no specific digitized layer for D&C areas outside of the Metro Plan, the only way to identify and exclude these lands was to utilize the Rural Plan Designation layer.

Tabular filters were also applied to the regional address layer to determine residential dwellings outside of exclusion areas. Specifically, only addresses with a HUD/BPR residential use code (D,K,M,N,S,Q) were used. The official reference for the HUD/BPR codes (also commonly known as the SLUCM codes) is the

EXHIBIT I

Standard Land Use Code Manual from the Urban Renewal Administration, Bureau of Public Roads published in 1965. The coding scheme has been modified in its details to meet the local needs of Lane County. Address points are almost always located where the structure/dwelling exists, and there may be instances where a portion of a given parcel or property is within an exclusion area, while the dwelling is not.

II. ANALYSIS

The above analysis was performed for the area within the boundaries of the Upper Middle Fork Subarea, as mapped on Map 1.

Background Analysis Results (acreage values are as mapped):
Total Acres (land & water) in Lane County = 2,955,953
Major Big Game Range in Lane County (outside of exclusion areas) = 2,596,120 acres

Map 2:
Major Big Game Range in Lane County-
Upper Middle Fork Subarea (UMFS) outside of exclusion areas = 751,762 acres
Residential Addresses (dwellings) outside of exclusion areas and within UMFS = 102
Overall Density = 1 dwelling / 7,370 acres

WORKING PAPER:

Flora & Fauna

DRAFT

MAR ~ 1982

COMPREHENSIVE PLAN REVISION

LANE COUNTY, OREGON

EXHIBIT J

FLORA AND FAUNA WORKING PAPER

INTRODUCTION

Oregon's wildlife and fish resources are varied and abundant. Lane County alone with its large land area and highly diverse landscape from snow level to sea level provides numerous specialized habitat areas for more than 290 species of birds, 70 mammal, 13 reptile, 17 amphibian and over 50 fish species. This diversity also is apparent in the vegetation of the County from coastal salt spray meadows inland to the treeless crests of the Cascade range.

Inventories of fish and wildlife species were compiled from Oregon Department of Fish and Wildlife information, various environmental assessment or impact statements and the Eugene-Springfield Metropolitan Area Wildlife Study. These lists are presented in the appendix to this report.

Inventories of habitat types are presented on USGS maps at a scale of one inch equaling one mile (15-minute series). This shows unique, endangered or threatened sites such as eagle nests, snowy plover sites, heron rookeries, band-tailed pigeon mineral springs, osprey snags and northern spotted owl sites. Further, major and Peripheral Big Game Range and general riparian vegetation around Class I streams are shown on these maps. Noncoastal wetlands and Sensitive Fish and Waterfowl areas are depicted on other maps.

The USGS maps also show general locations of Nature Conservancy sites and sites inventoried by the Oregon Natural Area Preserves Advisory Committee (NAPAC) which are in Lane County's Inventory.

Statewide Planning Goal #5 - Open Spaces, Scenic and Historic Areas, and Natural Resources - requires consideration of numerous resources, among them fish and wildlife habitat, ecologically and scientifically significant natural areas and wetlands.

Wetlands are considered here as fish and wildlife habitat. Although they have many valuable functions, their habitat value is a primary one. The original list of ecologically and scientifically significant areas included 86 sites from the Nature Conservancy Inventory and 12 sites from the Natural Area Preserves Advisory Committee. These are further refined in this paper.

Several deficiencies in Lane County's treatment of fish and wildlife habitats and natural areas were noted by LCDC. These were:

1. Updated inventory information required for sensitive fish and waterfowl areas and noncoastal wetlands.

2. Provide more specific information on Nature Conservancy Inventory sites.

3. Adopt mandatory policies regarding the protection of natural areas and noncoastal wetlands and clarify this with existing policies that encourage drainage projects.

000499

4. Adopt implementing measures for the protection and/or resolution of conflicts with noncoastal wetlands, natural areas and the following types of fish and wildlife habitat: big game range, riparian areas and sensitive fish and waterfowl areas.

After these orders to comply were written, LCDC adopted administrative rule 660-16-00 which gives very specific procedures for evaluating Goal 5 resources. The administrative rule applied to Lane County due to the continuance status of the County. Therefore, this paper addresses the items set out in the orders to comply and does so in the format of OAR 660-16-00. Specifically, this rule requires that when conflicts to Goal 5 resources can be anticipated in the plan, the economic, social, environmental and energy (ESEE) consequences of the conflict are analyzed and resolution to the conflict proposed. In cases where a resource is considered significant but conflicts cannot be anticipated, procedures are established to analyze conflicts as they are identified.

The contents of this paper are as follows:

A. General Findings. Concise statements summarizing facts on Lane County's flora and fauna resource and potential impacts of certain land use activities.

B. Habitat Types. A description of the 12 habitat types found in Lane County.

C. Endangered or Threatened and Special Concern Species. A listing of the threatened or endangered species found in the County and special habitat requirements for some of them.

D. Habitats of Particular Concern. Location, quality and quantity information and conflict analysis for the following types of habitat:

Riparian vegetation
Noncoastal wetlands
Sensitive fish and waterfowl
Big game range

E. Natural Areas. Location, quality and quantity of the sites on the Nature Conservancy and NAPAC lists determined to be significant, including conflict analysis.

F. Policy Recommendations.

G. Appendices. Includes lists of species.

FINDINGS

1. Lane County's fish and wildlife resource is highly varied. Diverse habitats, ranging from coastal to alpine, support nearly 400 vertebrate species. Status of individual species extends from common to endangered.

2. Four physiographic provinces - coast, coast range, western interior valleys and western Cascades - are found in Lane County. Each province represents differences in climate, substrate, topography and other physical

000500

and chemical variables. Each is distinct and represents a unique diversity, supporting flora and fauna which are adapted to the region.

3. Twelve distinct wildlife habitats are found in Lane County: estuary and bay (includes subtypes coastal salt marsh, tidelands and eelgrass), inland marsh, lakes and reservoirs, wet meadows, annual and perennial grasslands, riparian vegetation, coastal shore pine/spruce, Douglas fir/trailing blackberry, true fir/alpine, deciduous hardwoods, agricultural lands and cities.

4. Lane County's fish and wildlife resource provides substantial social, economic and ecological values.

5. A diversity of habitats is required to maintain Lane County's fish and wildlife fauna. Distribution of many species is limited by specialized habitat requirements.

6. Coordination between Lane County and state and federal agencies is necessary to properly harmonize wildlife needs and other resource values.

7. There will be a continuing need to review and update fish and wildlife inventory information.

8. Numerous land use activities have the potential to diminish the quality and quantity of fish and wildlife habitat. Habitat losses for a broad spectrum of fish and wildlife continue to occur. Sound resource management is necessary to minimize this loss.

9. Lack of biological information for many species handicaps the development of management procedures such as habitat guidelines.

10. Species not presently endangered or threatened may become so if their habitats are not adequately protected.

11. Examples of habitats of special value to fish and wildlife include high quality riparian and wetlands areas, estuaries, Major and Peripheral Big Game Ranges and other sensitive, fragile or unique areas.

12. Protecting water quality and quantity is vital to fish and wildlife resources.

13. A majority of certain habitat types and major watersheds lie within federal ownerships in Lane County. Therefore, public land managers have prime responsibility for protection of these habitats and watersheds. Where private lands support certain habitats, County land use planning needs to take into consideration wildlife needs, Statewide Planning Goal objectives and the rights and management objectives of the private landowner.

14. Land use activities which could negatively impact fish and wildlife habitat if uncontrolled include:

    a. Conversion of agricultural and forest lands to other uses;

000501

b. Division of large tracts of farm and forest lands to small parcels;

c. Field burning, fencerow clearing, wetland drainage and certain other agricultural practices;

d. Careless or unplanned road construction;

e. Gravel extraction from streambeds.

f. Logging and road building activities which do not conform strictly to the Oregon Forest Practices Act.

15. Designated natural areas in Lane County provide examples of unique or outstanding habitat or species assemblages.

WILDLIFE HABITATS

The following descriptive information on Lane County habitat types is derived primarily from Oregon Department of Fish and Wildlife materials. This material is not considered an inventory and is not accompanied by maps. It is intended merely as background information.

1. Estuary and Bay (includes salt marsh, tidelands and eelgrass)

   a. Description

      That area from the mouth of a bay or river inland to the mean high tide line. Within this type will occur coastal salt marsh, tideland, eelgrass and open water. Includes all salt, brackish and freshwater area below the mean high tideline. Climate basically mild winters and cool summers. Precipitation is heavy, about 40 inches.

   b. Value to Wildlife

      A very important type to wildlife species. Estuaries and bays support thousands of waterfowl, waterbirds and shorebirds. The shallow tidal areas are critical feeding areas for many species because of the abundance of small food organisms. Eelgrass beds in certain coastal bays are the most important black brant feeding areas. Coastal salt marsh is valuable feeding and nesting area for waterfowl, snipe, yellowlegs, plover, godwits, rails, etc. Mud flats, in addition to being important for many shorebirds, waterfowl and water birds may also serve as haul-out grounds for seals. Raccoons are common foragers in this type. Band-tailed pigeons use the tide flats and salt marsh channels in specific areas for drinking and often concentrate in large numbers at these places.

   c. Location

      Siuslaw River and minor estuaries.

2. Inland Marsh

   a. Description

      This type is a shallow water area, not including coastal bay marsh, with water remaining year-around. Usually vegetated throughout or with patches of open water. Tules and cattails are common indicator plants of this type. Further discussion of this important habitat is found in the Riparian and Wetlands section of this report and under Sensitive Fish and Waterfowl Areas.

   b. Value to Wildlife

      Contains some of the most important waterfowl and waterbird nesting and wintering areas. This is critical habitat because of the limited acreage of this type in Lane County. Muskrats are common mammals found

000503

in this type. Redwing and yellow-headed blackbirds use this type for nesting. Amphibians and reptiles such as frogs, toads, salamanders, turtles and certain snakes are found in this type.

c. Location

Fern Ridge Reservoir and numerous smaller sites.

3. Wet Meadows

a. Description

Boggy or damp areas with many small springs or bisected by slow-moving streams. Contain sedges, monkey flower, skunk cabbage, false hellebore, aspen, cone flowers or similar species. May be found throughout the County from low foothill areas to high elevations in the Cascade Mountains. These are generally seasonal wetlands. Further discussion of wetlands is found in the Riparian and Wetlands section of this report.

b. Value to Wildlife

A very important vegetation type. Provides summer, fall and sometimes winter forage to big game. Utilized as wallows by bear and elk. Important to amphibians such as toads and frogs. This type is usually important for watering area. Can be excellent beaver habitat. Beaver ponds and slow-moving streams in this type can be excellent fish-producing area also because of the abundant food supply.

c. Location

Numerous sites Countywide from low foothills to high Cascades.

4. Lakes and Reservoirs

a. Description

All open fresh-water areas in the County. Borders sometimes vegetated with water-tolerant forbs, shurbs and trees. There are 11 major reservoirs in Lane County. Lowland and coastal lakes total 10 and 27 respectively. High lakes are abundant in the Cascade Mountains with approximately 250 located in Lane County.

b. Value to Wildlife

The value of these areas varies with type and location. Most offer resting, nesting and limited feeding areas to waterfowl. Many of the large, deep reservoirs are of low value because of continuous water level fluctuation. Some of the wildlife species present in these bodies of water are: furbearing animals--otter, beaver, muskrat, nutria; waterfowl--ducks, geese, swans, coots, rails, grebes and loons; amphibians and reptiles--frogs, toads, snakes, turtles and salamanders.

000504

c. Location

Countywide.

5. Riparian Vegetation

a. Description

This type occurs along streams, rivers and slough banks. Vegetation is usually in a dense, narrow band. Species of plants identifying this type are those dependent on water such as willow, cottonwood, alder and aspen. Further discussion is found in the Riparian and Wetlands section and the Sensitive Fish and Waterfowl section of this report.

b. Value to Wildlife

An important wildlife habitat type. The riparian vegetation is a concentration point for a great variety of game and nongame species, providing food and cover. This vegetation renders the more open grassland and agricultural areas suitable for wildlife feeding areas by providing the necessary cover. The riparian strip also acts as a food supply for beaver and muskrat and can provide nesting cover, including snags for cavity-nesting birds. Valuable for maintaining good water quality for aquatic organisms.

c. Location

Countywide.

6. Annual and Perennial Grasslands

a. Description

This type contains the annual and perennial grassland areas of the County. Species of forbs and grasses differ with the geophysical area.

In Western Oregon the type may typically be found in small acreages but may be in large tracts of several hundred acres which are commonly called prairies. Many species of native and domestic grasses may be found in this type. In the Cascades and Coast Range this type occurs on shallow soils. Bracken fern may be a common plant on these sites also.

b. Value to Wildlife

A very important type for elk, deer, grouse, turkey, mountain quail, moles, gophers, ground squirrels, hawks and owls and many smaller species of wildlife. This type is heavily used on winter range and summer range by deer and elk. Grouse and quail use the prairies for feeding on insects which are a vital part of the young birds' diet in the summer.

000505

c. Location

Countywide.

7. Coastal Shore Pine/Spruce

a. Description

A narrow belt along the coast from the beach inland to the coastal foothills. Shore Pine and spruce are the main trees with salmonberry, red elderberry, salal, alder and thimbleberry being other species present. The coastal sand dunes and beach grass areas are also included in this type.

b. Value to Wildlife

Mature, dense stands of spruce and shore pine are of limited food value to big game species, but are necessary for the protection, shelter, travel lanes, etc., that they provide. Areas that have been burned, logged or otherwise disturbed produce good black-tailed deer, Roosevelt elk, black bear, blue and ruffed grouse and band-tailed pigeon habitat. Numerous species of small birds, shore birds and mammals are associated with this habitat type.

The coastal sand dunes near Florence provide an important area for whistling swans during the winter months.

c. Location

Narrow coastal strip.

8. Douglas Fir/Trailing Blackberry

a. Description

Trees are Douglas fir, western hemlock, red and Port Orford cedar, big-leafed and vine maple, red alder, trailing blackberry, salmonberry, salal and other similar species. Douglas fir and hemlock are the most abundant. Brush species are present in wildfire burn, logged and other disturbed sites. This is the largest habitat type in Lane County.

b. Value to Wildlife

Mature dense stands of Douglas fir are of limited food value to most species of big game; however, they are necessary for the shelter, protection, etc., that they afford. Many species of birds and mammals, however, spend their entire life dependent upon these mature stands of vegetation (ex. northern spotted owl, pileated woodpecker, flying squirrels). With logging and fires these timbered areas are opened to produce abundant foods in the form of berries, forbs, browse and grasses.

Big game species associated with this habitat type are the black-tailed deer, Roosevelt elk, black bear and mountain lion. Upland game species

000506

include the blue and ruffed grouse, mountain quail and the band-tailed pigeon.

Numerous species of small birds and mammals are associated with this habitat type, including several important furbearers.

c. Location

Valley foothills, coast range and Cascade range.

9. True Fir/Alpine

a. Description

This type occurs primarily in the Cascades above the Douglas fir-trailing blackberry area. Noble fir, Engelmann spruce, white fir, grand fir, mountain hemlock and mountain alder are the most common species. High elevation areas are densely covered with huckleberry, a preferred browse plant for many species of animals.

This habitat type contains numerous small lakes and meadow areas that are extremely important to wildlife.

b. Value to Wildlife

This habitat type is important summer range for black-tailed deer and Roosevelt elk. Some mule deer also spend the summer months in this area. This area contains the pine martin, fisher, wolverine, coyote and pikas. The black bear is also found in this habitat type.

Game bird species present are the blue grouse and occasionally band-tailed pigeon.

Many small birds and mammals are associated with this type.

This type contains numerous meadow and prairie areas that are very important to wildlife species and every effort must be made to preserve them. These meadows are important for resting, feeding, calving areas for elk and during most winters a place for animal survival. Many wet meadows remain open during deep snows and thus provide an important wintering area for animals.

c. Location

High elevations of Cascades - primarily in federal ownership.

10. Deciduous Hardwoods

a. Description

This forest type consists of white oak and black oak, with undergrowth of poison oak, ceanothus sp. and grasses. May also contain scattered or small clumps of Douglas fir or pines. Found primarily in the Willamette Valley and along the foothills.

000507

b. Value to Wildlife

This area is the year-around habitat of the black-tailed deer, black bear, bobcat, coyote and silver gray squirrel. Upland game species include the ruffed grouse, valley and mountain quail and in many areas the ring-necked pheasant. The mourning dove and band-tailed pigeon also use this habitat. Other species include many types of song birds, small mammals, hawks and owls.

This habitat type value varies with its location, but most of it offers resting, feeding and nesting for many species of wildlife.

Its location along the valley foothills provide cover for species that utilize the agricultural areas for food. Some of the best black-tailed deer habitat in Lane County is found in this habitat type.

c. Location

Numerous sites primarily on valley foothills.

11. Agricultural Lands

a. Description

Includes the irrigated and nonirrigated agricultural forage and croplands and dry land seeded pastures.

b. Value to Wildlife

This land type provides important upland game and waterfowl habitat. The black-tailed deer is also found using these areas, but mainly for food, as long as adjacent land types are available for cover.

Many furbearing species such as the beaver, muskrat, mink, etc., are found in the waterways associated with this land type.

Several hundred species of song birds, small and large mammals, hawks and owls are dependent upon this habitat type. The availability of food provided by this habitat type also attracts many species of wildlife from the adjacent habitats.

c. Location

Willamette Valley and assorted small valley floors.

12. Cities

Not applicable to rural Lane County.

000508

ENDANGERED, THREATENED AND SPECIAL CONCERN SPECIES

Both plant and animal species which have been identified by the state or federal government as endangered or threatened are present in Lane County. Some species not presently threatened or endangered may become so if their habitat is further altered by man's influence and present practices.

It is important to note that many of these species are found on public lands. Those management agencies have prime responsibility for conservation and protection of the species on their lands.

No deficiencies were noted by LCDC during compliance review for threatened and endangered species. Two policies regarding threatened, endangered, and special interest species are presently part of the Lane County Plan. These policies are:

- Recognize and support existing federal and state programs protecting threatened or endangered fish and wildlife species.

- Provide special consideration to protection of sensitive species (those susceptible to significant population declines resulting from habitat modification).

The following definitions apply:

Endangered Species - Those likely to become extinct if present trends continue.

Threatened Species - Those whose population trends indicate that endangerment is forthcoming if present trends continue.

Special Interest Species - Those rare and uncommon species because of numbers or trends. Designations tend to be rather subjective and are therefore generally unofficial.

Endangered Animals and Plants

Columbian white-tailed deer
California brown pelican
American peregrine falcon
Gray wolf
Oregon chub

Bradshaw's desert parsley
Meadow sidalcea
Wayside aster (suggested as endangered)
Pacific fleabane (suggested as endangered)
Howellia (suggested as endangered)

Threatened Animals and Plants

Sea otter
Wolverine
Western spotted frog
Northern spotted owl
Western snowy plover

Silver spotted butterfly
Northern bald eagle
Wapato, broadleaf arrowhead
Darlingtonia, California pitcher plant

000509

Special Interest or Protected Animal and Plant Species

Mary's Peak salamander
Sharp-tailed snake
Western rattlesnake
American osprey
Northern purple martin
Red tree vole
Cony (pika)
Short horned lizard
Oregon slender salamander
Tailed frog
Marine mammals

Allium amplectons
Aster hallii (curtus)
Cypripedium californicum
Draba aureola
Erigeron cascadensis
Eriogonum umbellatum
Gentiana newberryi
Ledum groenlandicum
Montia diffusa
Pellaea andromedaefolia
Phacelia verna
Phlox peckil (Phlox diffusa)
Pleuricospora fimbriolata
Scoliopus hallii
Sidalcea nelseniana
Silene douglasii var. monantha
Sinelowskia calycina
Sullivantia oregona
Vaccinium oxycoccus var. intermedium
Viola adunca var. bellidifolia

Specific Species Requirements

1. Northern spotted owl. Recent recommendations to an Interagency Spotted Owl Task Force from research in Oregon suggests maintaining 1,000 acres of old growth timber within 1-1/2 miles of the nesting tree of a pair of spotted owls. An Oregon Interagency Spotted Owl Management Plan has been drafted. This plan recommends a minimum nesting pair quota in Oregon of 400 pairs. Of these 400, 290 pairs should be located on US Forest Service land, 90 pairs on BLM land and the remaining 20 pairs on "other lands." Other lands include, but are not limited to state, county, national park, and private lands. Protection is not required on private lands by any state or federal laws.

   The major economic loss to a private landowner which would result from maintaining 1,000 acres of old growth timber for the purpose of one pair of spotted owls does not seem justified when 98 percent of the quota of owls is proposed for federal lands. A restriction on harvesting 1,000 acres of old growth from private property would be excessive and would very possibly constitute a "taking" under the law.

   No known spotted owl nests occur on private property in Lane County at this time. Because of the unreasonable burden protection of this species would place on a private landowner, no special provisions are recommended for any nests which may be found or constructed on private property.

   Maintaining a viable population of this species is recognized as an important goal by the County. As part of their multiple purpose mandate, the Forest Service and the Bureau of Land Management are encouraged in their efforts to protect this species on public lands in Oregon.

000510

2. Northern Bald Eagle. This nationally threatened species requires buffer areas around nest sites with restricted activities during nesting seasons. Federal land management policies provide protection for this bird on federal lands. No nests on private land are presently known in Lane County. If nest sites are identified on private land, an ESEE analysis should be done on conflicts which would either destroy the nest site or inhibit fledgling viability. The County should then work with the Oregon Department of Forestry to make them aware of the location of these areas and implementation methods adopted by the County for conflict resolution.

3. Wolverine. This threatened species requires remote, high elevation areas of the Cascades free of logging and intensive human activities. These areas are in federal ownership and therefore not under County jurisdiction.

4. Silverspot butterfly. This species is on the National list of Threatened and Endangered species. It requires undisturbed salt spray meadows and adjacent upland brush and treeline areas. It is only found along a small section of the Oregon coast. The Coastal Resources Management Plan of Lane County recognizes this species and applies a Prime Wildlife Management Unit to its habitat.

5. Western snowy plover. This species, threatened in Oregon, requires undisturbed areas of dry sand along the beach between the highest tide line and the vegetation line. The Oregon Department of Transportation, State Parks Division, regulates activities including vehicular use of this area. The Oregon Department of Fish and Wildlife is currently preparing a state management plan for the snowy plover. This plan will probably include recommendations for areas closed to vehicles either year round or seasonally to protect the habitat of this bird and other important shorebirds.

   Since the habitat is within state jurisdiction, Lane County proposes no direct action, but does support state activities to protect this species.

6. American osprey. This bird is a special interest species because its very specific nesting requirements in timber areas make it susceptible to population losses from habitat modification. The bird is neither threatened nor endangered and is found throughout the County, although not in great numbers. Some protection is already provided around coastal lakes and in the Willamette River Greenway. No special zoning provisions will be adopted by the County for osprey nesting sites. Nest sites are shown on the Wildlife Inventory maps. If these sites are confirmed by ODFW, their maintenance will be a consideration in land divisions and special use permits.

RIPARIAN AND WETLAND AREAS

LCDC Orders to Comply mandate updated inventory information on the location, quality and quantity of noncoastal wetlands and implementation measures for the protection and/or resolution of conflicts with these wetlands and with riparian habitat areas. The discussion in this section does not distinguish between coastal and noncoastal wetlands. Although many coastal wetlands are protected by Goal 17, many are not and should be considered along with wetlands on a Countwide basis.

Several areas within the County presently have regulations dealing with riparian vegetation. These are the Willamette River Greenway, the Siuslaw River Estuary, and coastal lakes. Also, lands zoned for timber production are regulated by the Oregon Forest Practices Act which considers buffer strips around streams. The County is not attempting to preempt state authority in forestry zoned areas. The discussion on conflicts and conflict resolution, therefore, does not apply to those areas.

It is difficult to separate discussions of wetlands and riparian (streamside) vegetation. Conditions which give rise to both are very similar and habitat values are similar. Riparian vegetation is that vegetation alongside streams and lakes which is structurally and physiologically adapted to living in saturated conditions.

Defining a wetland is more difficult and must be considered as a continuum of conditions not in direct relation to a lake or stream. There are many different definitions of wetlands - open water may or may not be present, the area may be seasonally or permanently wet, different vegetation types may occur. For purposes of this paper, a wetland is an area in which open, standing water is present for at least six months out of the year and is a minimum size of one acre. Vegetation types can range from grasslands to areas with mature, water-loving trees (Oregon white ash, cottonwood, alder and willow). The wetland must be large enough to be important for wildlife feeding and watering. The one-acre minimum size is intended to exclude small, backyard wet areas, and to give an indication of the type of areas intended to be covered by this definition of wetland. In a case of dispute over whether an area is important for wildlife and should be considered a wetland, the ODFW's recommendations will be relied upon.

For areas of the County covered by the National Wetland Inventory, that Inventory shall be considered the maximum number of sites which may possibly be considered wetlands. If sites occur there, though, which are streams or do not have open water present, they will not be considered a wetland by this definition.

These wetlands correspond to the Inland Marshes discussed in the Habitat Types section of this paper, rather than the Wet Meadows.

Riparian and wetland ecosystems are characterized by the combination of high species diversity, high species densities and high productivity. Continuous interactions occur between riparian and wetland ecosystems and adjacent uplands by transfer of energy, food and species.

Riparian habitats have been recognized as one of the most important and valuable land types in Oregon for several reasons: (1) they play an essential role in determining the quality of fish habitat; (2) they provide a vegetative buffer for streambank stability; (3) they offer seasonal and year-long habitat to the greatest numbers and diversity of terrestrial wildlife populations than any other habitat type; (4) they accommodate and attract important recreational activities such as hunting, fishing, boating, camping and hiking; (5) their aesthetic value is high because of the pleasing combination of land and water, attractive and unique vegetation types, and abundant animal life; (6) their ability to control pollution by filtration; and (7) their ability to assist in flood control by water containment.

Fishery habitat is directly related to the conditions in the surrounding watershed, especially the adjacent riparian zone. Riparian vegetation provides a number of important features to aquatic habitat: (1) streambank stabilization and erosion control which reduces sedimentation and helps maintain an oxygen supply to eggs and juvenile fish; (2) a natural filter to settle out sediments and reduce downstream siltation; (3) shade to maintain suitable water temperatures for aquatic life; (4) organic debris to feed aquatic insects which are essential to the diets of many fish; (5) bank stability to minimize stream damage from torrential floods; (6) overhanging bank cover from the roots of trees, shrubs, and other vegetation to provide fish with protective cover and terrestrial insects; and (7) groundwater recharge by its ability to absorb water. When a riparian zone is adversely affected by human activities, the quality and quantity of fish production will be affected.

Riparian vegetation likewise plays a vital role for wildlife. The habitat is a gradation between aquatic habitat of the stream and surrounding terrestrial habitat. The riparian zone usually provides all four basic habitat components: water, food, cover and space. The habitat is generally more diverse than upland plant communities, and therefore supports greater wildlife diversity and higher numbers of individuals. Certain fish and wildlife species are totally dependent on the riparian ecosystem, other species use the area as a travel corridor, or for feeding, roosting, nesting or watering. The significance of riparian habitat to game and nongame wildlife, both within and in the vicinity of the area, surpasses that of any other habitat type (American Fisheries Society, 1980).

Very similar statements can be made for wetland ecosystem species diversity and habitat importance as for riparian areas. Their variety of habitats, and often their inaccessibility, make them very important for many species. Wetlands which occur in agricultural or developed areas take on an even greater degree of significance as they are often a refuge for animals which have been displaced and can provide some of the only available living space for many forms of wildlife.

Administrative Rule 66-16-000 requires examination of the location, quality and quantity of Goal 5 resources, including wetlands and fish and wildlife habitat. Riparian vegetation, being an important habitat type, was distinguished in the Orders to Comply as needing better implementing procedures for protection or resolution of conflicts.

After examination of location, quality and quantity, a decision must be made whether the resource sites are significant. If so, conflicting uses must be

000513

identified. An analysis of ESEE consequences must be done, then a program developed for resolution of conflicts. The resolution can take three courses: a) preserve the resource site; b) allow the conflicting use fully; or c) specifically limit conflicting use.

Location

Although the total amount of riparian and wetland vegetation is much reduced from the amount prior to human habitation of Lane County, these habitat types still exist all around us. Unless the water regime which supports the area changes, areas which have been cleared will revert to riparian or wetland vegetation without constant upkeep.

All lakes, reservoirs and Class I streams in Lane County have been mapped. These maps are not included here for budgetary purposes, but are available in the Planning Department offices. Class I is a designation used by the Oregon Forestry Department and the Oregon Department of Fish and Wildlife to indicate streams important for fish life. Class I streams are those valuable for domestic use, important for angling or other recreation, and/or used by significant numbers of fish for spawning, rearing or migration routes. Stream flows may be either perennial or intermittent during parts of the year. Unless in a disturbed state, riparian vegetation will exist around all of these. Certain areas of stream and lake banks have been designated as "sensitive fish and waterfowl habitat," and will be discussed and analyzed later in this report. This section, then, deals only with riparian areas outside of the "sensitive" areas.

In the northwest quarter of the County, wetlands have been mapped by the US Fish and Wildlife Service. The maps, called the National Wetland Inventory, are very detailed and use an intricate classification system to show types of wetland vegetation. Most of the mapping is done at a scale of 1" = one mile, with the area close to Eugene at a scale of 1" = 2000'. Neither of these scales work well for most site specific uses. They give general ideas about where within a section wetland vegetation occurs, but field examination would be necessary to determine exactly where the wetland occurs.

This mapping should eventually be completed for all of the County, but lack of federal funding may extend that effort. Mapping for the southwest quarter of the County should be released in draft form by summer, 1982. As mentioned earlier, where this Inventory exists, it will be considered the maximum number of sites which will be considered wetlands. Where this mapping is not yet completed, only the earlier definition of a wetland will be used to identify sites.

Quality

For the most part, quality of riparian and wetland areas is discussed as it relates to quality for fish and wildlife habitat, as this is considered one of their prime functions. The "sensitive fish and waterfowl" areas designated by the ODFW are a subunit of riparian and wetland areas. These areas, discussed in the next section, are the most important and highest quality riparian and wetland areas.

000514

The many other riparian and wetland areas in the County range from undisturbed, very diverse areas to fringe marshes and riparian zones in urban areas. Often the small marshes and riparian zones in agricultural and urban areas take on a greater degree of importance due to their scarcity. They may provide a refuge for species whose habitat has been destroyed elsewhere.

Quality can be degraded in different ways. Certainly, removal of vegetation most immediately destroys most habitat value of an area. This can be done either directly by tearing out plants or by draining away water so that wetland or riparian vegetation can no longer survive. Human presence can drive off some forms of wildlife, but if not in large numbers will not generally degrade habitat values too much. Intense activities, such as recreation sites, will have a greater effect on habitat values and should be closely examined in view of this prior to approval.

Another activity which can greatly damage riparian and wetland areas, but which is only a minor problem in Lane County, is livestock grazing. The continual disturbance of streambanks can retard vegetation and can cause severe erosion.

Quantity

No good inventory exists on the quantity of riparian habitat in Lane County. Mapping of riparian habitat around Class I streams gives only a general indication of its location, but no figures on depth of the zone from the waterbody or cleared areas. The Willamette River Greenway and coastal lakes and rivers have the best mapping of riparian vegetation, often by aerial photography on large-scale maps, but these areas already have mechanisms to protect riparian vegetation.

The National Wetland Inventory maps will shortly cover about one-half of the County. General location of wetlands is given but no quantification of acreage by wetland type (and no indication of wetland quality). This mapping system, prepared by US Fish and Wildlife Service, will eventually cover the entire County.

Conflicting Uses

Two major activities conflict with preservation of riparian and wetland habitat areas:

1. Destruction of vegetation for any purpose; forestry, agriculture, construction, recreation, aggregate extraction, etc.; and

2. Draining surface or subsurface water which then changes the vegetative structure and generally the habitat value.

The end result of both of these activities is reduction in habitat value, flood control, water pollution control, and stability along streambanks for riparian vegetation.

An ESEE analysis for loss of riparian and wetland areas from either direct destruction or drainage follows.

000515

ESEE Analysis

Economic Consequences

1. Since wetland and riparian vegetation decrease water velocity and damage from floods, removal of this vegetation could increase economic damage from flooding.

2. Merchantable timber removed from riparian and wetland areas is a source of employment, income and revenue in Lane County, although most species growing there have low economic value compared to some other species of timber.

3. Lands cleared for agricultural use could increase economic activity from that source.

4. Lands disturbed for aggregate extraction could increase economic activity from that source.

5. Removal of riparian and wetland vegetation could result in a loss of revenue from hunting which could result from a decrease in game species of fish and wildlife.

Social Consequences

1. Decline in wildlife diversity can be an important factor for many persons who enjoy living in proximity to watchable wildlife.

2. Regulations aimed at maintaining riparian and wetland vegetation, not just requiring building setbacks from those areas, would result in a much greater degree of governmental restrictions on most lands than presently exist. The sort of enforcement effort it would require to regulate vegetation removal in riparian and wetland areas Countywide would be truly massive. The payoff from this sort of effort must be particularly questioned since a majority of the County is timberland which is regulated by the State Forest Practices Act, not County regulations for riparian and wetland areas.

3. The question of aesthetics varies greatly with the viewer. Some persons prefer the look of natural vegetation along a water body, others find an artificial park-like setting preferable. A law requiring maintenance of riparian vegetation would force one perspective on a landowner.

4. The greater erosion potential when riparian and wetland vegetation is removed could result in more turbid water. This could have an effect on downstream recreational uses.

Environmental Consequences

1. Removal of riparian and wetland vegetation would result in decreased wildlife habitat, with a decrease in wildlife diversity.

2. Bank stability would be decreased with removal of vegetation. This causes more erosion, dirtier water and negative effects on aquatic life.

000516

3. Water holding capacity is decreased with removal of vegetation in wetlands and riparian areas.

4. Water purification through filtration is a function of riparian and wetland vegetation which would be missing if the vegetation were removed.

5. The values of floodwater retention and decrease in floodwater velocity would be missing with removal of riparian and wetland vegetation.

Energy Consequences

1. If riparian vegetation is removed, bank erosion can increase. This causes more turbid water which may be more expensive and require more energy to treat downstream.

Conflict Resolution

After examination of the conflicts to riparian and wetland vegetation, and the ESEE consequences of those conflicts, the decision must be made as to preserving the resource totally, allowing the conflicting use totally, or specifically limiting the conflicting use. The third option, specifically limiting the conflicting use, seems the only prudent course of action. To disregard the value of riparian and wetland vegetation and not even consider it in permit applications does not make sense, when the valuable functions of the areas are taken into account. On the opposite end of the spectrum, to have a program which requires the County to be involved in any activity, no matter how minor, in riparian and wetland areas, also does not make sense. A program which recognizes the value of wetlands and riparian areas by way of strong policy statements, requires reasonable setbacks from Class I streams and wetlands so construction will not occur in the wetland or riparian zone, requires a balancing of wetland and agricultural values before drainage projects are undertaken, and which carefully considers input from the Oregon Department of Fish and Wildlife prior to approval of Special Use Permits and land divisions will ensure that these important areas receive the evaluation and attention they deserve.

000517

SENSITIVE FISH AND WATERFOWL AREAS

LCDC Orders to Comply required implementation measures for the protection and/or resolution of conflicts for fish and wildlife habitats in general, and sensitive fish and waterfowl habitats in particular. Lane County's previous plan discussed riparian areas around all Class I streams. The Oregon Department of Fish and Wildlife (ODFW) objected to this being too broad brush. Correspondingly, LCDC required that the category of sensitive fish and waterfowl areas be called out.

This category is a subset of the riparian and wetland areas discussed above. Maps have been provided by ODFW showing important waterfowl nesting habitat and streams which receive high use by anglers and/or game fish. Streams which are consistently used by large numbers of anglers are considered to contain large numbers of game fish, even though creel censuses have not been done in each of the areas. These identified areas are considered the highest quality fish and waterfowl habitat in Lane County.

Location

Certain of the areas identified by ODFW already receive a high degree of protection for the surrounding riparian vegetation. These are the Willamette River within the Greenway and coastal lakes and marshes covered by management units under the Coastal Resources Management Plan.

Other of the areas fall under the jurisdiction of the Oregon Forest Practices Act. In areas zoned for the primary purpose of timber production, state rules take precedence over County regulations. Buffer strips and critical wildlife and aquatic habitat are considered by the Oregon Department of Forestry prior to approving harvest plans.

Still other of the areas identified by ODFW are within federal lands where the County has no jurisdiction.

Instead of providing a map in this text (at a scale which is difficult to interpret) a list of the areas involved will be provided. The map is available in the Planning Division office for review.

Portions of the following streams are sensitive fish habitats:

Tenmile Creek	McKenzie River
Big Creek	Gate Creek
Cape Creek	Blue River
Sutton Creek	South Fork McKenzie River
North Fork Siuslaw	Horse Creek
Siltcoos River	Lost Creek
Woahink Creek	Middle Fork Willamette
Maple Creek	Fall Creek
Fiddle Creek	Little Fall Creek
Sweet Creek	Winberry Creek
Siuslaw River above Mapleton	North Fork, Middle Fork Willamette
Lake Creek	Salmon Creek

000518

Indian Creek
Deadwood Creek
Whittaker Creek
Esmond Creek
Wildcat Creek
Wolf Creek
Long Tom River
Willamette River Main Stem
Mohawk River
Salt Creek
Hills Creek
Steamboat Creek
Coast Fork Willamette
Row River
Mosby Creek
Sharps Creek
Brice Creek
Layng Creek

All or portions of the following areas are considered sensitive waterfowl habitat:

Fern Ridge periphery exclusive of parks
Old Long-Tom channel below Fern Ridge
Main Long-Tom channel below Fern Ridge
Amazon Canal where not riprapped
North Fork Siuslaw Freshwater marsh
Maple Creek marsh
Siltcoos Lake/Westlake marsh

Quality

Since these are the areas identified as important, sensitive fish and waterfowl areas, they can all be considered high quality for that purpose.

Quantity

Most of the major rivers and creeks in the County are designated Sensitive Fish and Waterfowl areas, but not the many miles of smaller, less significant Class I streams.

Conflicts

Maintenance of natural vegetation in waterfowl nesting areas is of prime importance to those species. Maintaining riparian vegetation around sensitive fish areas is essential to water quality and aquatic life. Removal of riparian vegetation in these areas is considered a conflict, whatever the purpose.

ESEE Consequences

ESEE consequences for Sensitive Fish and Waterfowl areas is generally the same as for Riparian and Wetlands, with a few additions. Since the areas in this category are considered more valuable for fish and waterfowl habitat than others in the County, the effects of vegetation removal can be more significant.

Economic consequences

Same as for Riparian and Wetland areas.

Social consequences

Same as for Riparian and Wetland areas plus the following:

000519

1. Sensitive Fish and Waterfowl areas are important for recreational purposes, both private and public. They also influence nearby recreational values. For instance, severe erosion from one property can influence fishery values downstream.

Environmental consequences

Same as Riparian and Wetland areas plus the following:

1. Sensitive Waterfowl areas serve as important resting and feeding areas for migratory birds. Destruction of this habitat causes effects which reach far beyond Lane County.

Energy consequences

Same as Riparian and Wetland areas.

Conflict Resolution

To repeat the procedure, after examination of ESEE consequences of potential conflicts, a decision must be made to preserve the resource fully, allow the conflicting use fully, or to specifically limit the conflicting use. In this case, preserving the resource fully would be to completely protect riparian vegetation in the identified waterfowl nesting areas and adjacent to the identified streams. Allowing the conflicting use fully would mean that no implementation requirements would exist protecting that riparian vegetation. The third option is a compromise between the two.

The third option, limiting the conflicting use, is the most appropriate, with the limitation weighed in favor of maintenance of the vegetation. Since these areas are the most important fish and waterfowl areas in the County, the riparian vegetation should be maintained whenever possible. As with Riparian and Wetland areas, a 50-foot building setback from the high water mark of the waterway shall be required. But within these Sensitive areas a 30-foot strip of indigenous vegetation shall be left along the waterway. Exceptions to this requirement shall be very limited and will include areas necessary for water-dependent uses, and areas which are now unvegetated and developed.

Regulations for riparian vegetation maintenance will be similar to those currently existing in the coastal shoreland overlay zones. One example, from the Residential Development Combining District (LC 10.255-30(3)):

"Within the setback area . . . all indigenous vegetation except that removed to provide paths to the water body shall be retained within an area 30 feet in width measured at right angles from the mean high water line of the water body. For the remainder of the required setback area brush may be removed but trees shall be retained."

Policy statements pertaining to Riparian and Wetland areas are also applicable here.

000520

BIG GAME RANGE

LCDC Orders to Comply required implementing measures for the protection and/or resolution of conflicts with Big Game Range. The County must clarify the types of uses which conflict with big game habitat, and would therefore be reviewable by the County under any implementing measures developed. The primary conflicting use mentioned by LCDC is residential use at certain densities.

Location. The Oregon Department of Fish and Wildlife (ODFW) has divided big game range in Lane County into three categories as follows:

> Major Big Game Range - That portion of the County which supports the majority of big game. In general these lands are sparsely developed commercial forest lands. They also provide the majority of big game recreational opportunity.
>
> Peripheral Big Game Range - Foothill areas of the County generally located between commercial forest lands and valley floors. These lands support substantial big game populations and serve as a wintering area for animals in severe winters.
>
> Impacted Big Game Range - Those areas of the County that have existing levels of land use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity. These areas frequently contain populations of big game animals.

These areas are mapped on Lane County Wildlife Inventory maps. As a general depiction, Major Big Game Range occurs on federal lands, large timber company holdings, and some private lands which are sparsely developed. Peripheral Big Game Range encompasses primarily foothills and smaller valleys. Impacted Range includes cultivated fields and developed areas, often on valley floors.

Because of the large amount of undeveloped timberland in Lane County, the majority of the County is Major Big Game Range. But, due to scattered ownership patterns, many areas within the Major Range are small, private parcels. Peripheral Range often falls along small valley floors which are privately owned and often fairly extensively developed. For example, most of the Fall Creek, Mohawk and Lorane valleys are within Peripheral Range, as well as large tracts of land west of Elmira.

Wildlife Inventory maps have not been included in this Working Paper due to budget constraints, but are available for review in the Planning Department office.

Quality. The majority of big game use occurs on Major Range. This can be considered the highest quality habitat as man's intrusion with developments is the least. Peripheral Range is also important habitat, and can be particularly crucial in severe winters, but has enough development to limit big game use and management options. Impacted Range is the lowest quality habitat of the three categories. It is already developed to an extent that precludes viable management of the species, although populations may still exist there.

000521

One other category of lands should be mentioned here. Outside Urban Growth Boundaries, areas exist which are committed to nonresource use. Exceptions for these areas will be taken as "Built Upon and Committed Lands" and acknowledged by LCDC. These small pockets of development within Major or Peripheral Range are essentially Impacted areas due to their level of use by man. They were not large enough, generally to include on the Big Game maps as Impacted. These areas will be treated as Impacted areas for implementation purposes.

Quantity. Areas of of Major, Peripheral and Impacted Big Game Range have not been computed. Figures for acreage of some other categories of land may be useful, though, for illustrative purposes.

Total amount of land in Lane County	2,959,400 acres
Commercial forest land (primarily Major Range)	1,813,228 acres
Other public lands (primarily Major Range, some Peripheral Range)	735,112 acres
Farms (primarily Impacted Range)	255,712 acres

Over 61 percent of the County is considered commercial forest land, a category with essentially no residential development. Including other public lands, such as the Dunes National Recreation Area, Oregon State lands, Corps of Engineers lands and County parks, approximately 85 percent of the County is not available for residential use. A good portion of the remaining acreage is farmland, a category very difficult to justify as available for residential use, but also not prime big game habitat.

Conflict Identification

The clearing of natural vegetation for agricultural purposes decreases an area's habitat value for big game. But since important, existing agricultural lands are already considered Impacted Big Game Range, this is not an issue now. Impacted Range has essentially been "written off" for big game management.

Management of land for timber production does not conflict with big game habitat. With proper forest management techniques, big game habitat can be significantly enhanced. The forage provided to deer and elk in clear-cut areas is very important, but the combination of areas in various successional stages is probably the vital factor in enhancing numbers of deer and elk. Lands zoned for the primary purpose of timber production are subject to the requirements of the Oregon Forest Practices Act. For our purposes, timber harvesting activities do not constitute a conflict to Big Game Range.

The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 areas; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game.

The following paragraphs basically outline procedures to be used for implementation of the ODFW density recommendations in big game ranges. The premise is to work overall density figures into minimum lot size recommendations for regions of the County, rather than postponing the issue by referrals to ODFW for every land division application. The anticipated result is to base zoning

000522

by region on the overall residential densities or ODFW minimum parcel size recommendations, thereby creating no conflict with Goal 5.

The County will be divided into regions convenient for planning purposes. These have not yet been determined, but will probably result in 10-20 regions in the County.

Within these regions, determinations will be made of acreages, number of existing residences, and additional number of residences allowable to still fall within the overall density level. Built upon and committed areas are subtracted out, as they are treated as Impacted Range. From the figure of remaining residences and acreage, a residential carrying capacity will be determined. This figure, or the ODFW figure of 40 or 80 acres, whichever is lesser, will be recommended in the region for residential density for big game purposes. This, along with other resource land requirements will be used to determine appropriate zoning in an area.

If this figure is ever exceeded, it constitutes a conflict with Big Game Range. ESEE consequences must be determined and analyzed at that time. Prior to dividing the County into regions and making the above determinations, it is impossible to determine if conflicts will exist in any regions. The expectation, based on examining trial areas, is that the recommendations of ODFW can be incorporated without creating a conflict.

Special uses which may be allowed in resource zones have the potential of conflicting with Big Game Range. To preclude that conflict, criteria will be incorporated into the Special Use review considering the effect on big game. Recommendations will be requested from ODFW and considered as part of the review process.

As a final note regarding residences in Big Game Range, damage to landscaping and gardens is a common problem around these residences. For new residential building permits within Major and Peripheral Range, the applicant will be notified that compatibility problems with big game may exist.

Several recommendations in the Policies Section of this Working Paper relate to the method the County will use to protect Big Game Range.

000523

NATURAL AREAS

Lane County's original work on natural areas included just a listing of sites from the Oregon Natural Heritage Program (ONHP) and the Governor's Natural Area Preserves Advisory Committee (NAPAC). A very brief narrative was included with the NAPAC sites, but only site names for the 86 ONHP sites. LCDC's review mentions 12 NAPAC sites; in fact, there are only nine sites in this category.

In its review of Lane County's plan, LCDC noted that adequate quality, quantity and locational data existed for the NAPAC sites. The 86 sites from the Nature Conservancy Inventory, though, required more specific information on location, quality and quantity.

The Goal 5 Administrative Rule (66-16-000), adopted after LCDC's review of Lane County's plan, contains procedures for more detailed review of Goal 5 resources. Accordingly, both the ONHP and NAPAC sites are re-examined and divided into three categories as laid out in the rule:

1A: Available information on location, quality and quantity indicates resource site not important; not included on plan inventory.

1B: Some information available but inadequate to identify resource site; included on plan inventory with special status; plan statement to address resource site when information available.

1C: Information on location, quality and quantity indicate site is significant; conflicting uses, if any, identified; ESEE analysis of conflicting uses; conflict resolution proposed.

Criteria for Evaluation

For those sites with adequate information on location, quality and quantity, it was necessary to determine if the site was "significant." If so, it fell in an 1C category; if not, in a 1A category. This decision required criteria upon which to base that judgment. Six questions were answered for each site or group of similar sites. These were:

1. Uniqueness?
2. Number of examples limited?
3. Site unusual due to size?
4. Rare or endangered species present?
5. Site already protected by County zones?
6. Examples already protected on public lands?

In some cases final decisions were necessarily subjective and were judgment calls. In other cases, the decision was based on other plan policies. For instance, one of the sites determined not to be significant was the Noti Osprey nest. The portion of this Working Paper on Endangered, Threatened and Special Interest Species stated that no special zoning measures will be taken in Lane County for Osprey nests.

Sites placed in the 1B category had inadequate information on location, quality and quantity to allow use of these criteria. When information is available, the

000524

same method will be used to place them in either a 1A or 1C classification. Moving a site out of the 1B category will be considered a plan amendment.

1B Category

Six sites have been placed in this category. These are:

1. Booth Island/Siltcoos Lake
2. McKenzie River Island
3. South Fork Gate Creek
4. Swamp Creek
5. Marshall Island Heronry
6. Willamette Valley Quaking Aspen Grove

These sites are individually discussed below. No specific timetable is set for dealing with the first four sites. When information is presented to this department which will allow a determination of significance of the site, it will be analyzed and placed in either a 1A or 1C category, based on the criteria mentioned above. Site #5, Marshall Island Heronry, will be field inspected by ODFW later this year. Based on the results of their investigation, the site will be placed in a 1A or 1C category later this year. Site #6 will also be placed in a 1A or 1C category within 1982. Field inspection of the site by knowledgeable botanists is essential here.

a. Booth Island--Siltcoos Lake (ONHP #82). ODFW is unaware of a band-tailed pigeon mineral spring on this island.

b. McKenzie River Island (ONHP #52). ONHP Inventory states "Good riparian habitat and river island." No further data is available.

c. South Fork Gate Creek (NAPAC #12). No way to locate this site any more specifically. Defined only as "old Douglas fir, western hemlock and relatively steep slopes . . . patches of red alder and vine maple."

d. Swamp Creek (ONHP #49). This unsurveyed, unverified ONHP site is described in their Inventory only as "small stream, riparian vegetation."

e. Marshall Island Heronry (ONHP #113). This heronry is on a parcel divided by state and private ownership. Logging on large cottonwoods in the private ownership in 1980 may have destroyed the rookery. ODFW plans flights of the Willamette this spring to inspect heronrys, followed by field surveys later in the spring. If the heronry exists, this site will be placed in a 1C category; if not, in a 1A category. If in 1C, the nest trees and a buffer around them should be protected with a Natural Resource Zone. If the heronry turns out to exist on private property, the Parks Department or the Fish and Wildlife Department are urged to acquire this property.

f. Willamette Valley Quaking Aspen Grove (ONHP #2). This site is reported as a one-acre stand of Quaking Aspen located west of Elmira along Highway 126. The site is a remnant, native stand of trees. Conflicting directions to the site listed in the Nature Conservancy file have made it impossible to locate this site to date. Botanists from the Nature Conservancy and the University of Oregon are very interested in assisting the County to find this site, if it still exists.

000525

The ONHP report states: "Very rare, relict remnant stand of Quaking Aspen. Very rare in the WV [Willamette Valley] of extreme botanical interest due to long separation from the major Aspen gene pool and because of its novelty and rarity in the Willamette Valley."

If the trees still exist, the site will be placed in a 1C (significant) category. A full ESEE analysis will be done at that time, which will include information and recommendations from botanists. The following items should be considered when and if a full ESEE analysis is prepared:

Under economic consequences, the possibility of reduction of income to the private property owner if the land cannot be converted to another use. Also the fact that the property owner may gain tax advantages if an NR zone is applied and an open space tax deferral approved.

Under social consequences, the loss of a rare site such as this is inherently displeasing to many persons, even though the site is on private property and not open to the public.

Under environment consequences, the fact that the tree is very abundant in other parts of the US. Also that the long separation from the major Aspen gene pool could result in valuable research opportunities.

No energy consequences can be anticipated at this time.

1C Category

Fifty-six sites fall within this category. These sites have been divided into four groups and will be discussed in this order:

1. Sites owned by USFS and BLM
2. Sites which are State Parks
3. Sites covered by the Coastal Resources Management Plan or the Willamette River Greenway
4. Others

- -

1. Sites Owned by USFS or BLM

No additional research has been done on these 29 sites. Available information from the Nature Conservancy on location, quality and quantity indicates these resource sites are significant, and therefore are placed in a 1C category. Because they are in US Forest Service and BLM ownership, however, no conflicts exist based on uses allowed in zoning districts. Lane County does not have jurisdiction on federal lands. Although, as a matter of policy, zoning districts are applied to federal lands in the County, these zones have no effect unless the land is converted to nonfederal ownership. Besides the issue of lack of jurisdiction, the Forest Service

000526

and BLM are required by federal law to consider natural areas as part of their multiple-use mandate.

Inventory of Resource Sites Owned by the US Forest Service

1. Bob Creek (ONHP #55) 15-11, 15-12
2. Buck Creek (ONHP #99) 18-45-4,5
3. Cox Rock (ONHP #16) 17-12-10
4. Diamond Peak Wilderness Area (ONHP #124) 24-55,65
5. Fossil Beds (ONHP #137) 21-1E-30
6. French Pete Wilderness Area (ONHP #140) 17,18-5E,6E
7. Gold Lake Bog RNA (ONHP #95) 22-6E-20,29
8. Hagan-Block Proposed Research Natural Area (ONHP #148) 16-4E,11-15
9. H. J. Andrews Experimental Forest (ONHP #105) 16-5E,6E
10. Karnowsky Creek Bald Eagle Nest (ONHP #119) 18-11-22
11. Lamb Butte Scenic Area (ONHP #126) 17-6E22
12. Lily Lake (ONHP #4) 17-12-15
13. Lost Creek Headwaters (ONHP #54) 16-6E-19, 17-6E-24
14. Lowder Mountain Geological Area (ONHP #127) 17-6E-19
15. Mount Washington Wilderness (ONHP #123) 15-7E
16. Olallie Ridge Research Natural Area (ONHP #96) 17-65
17. Parrot Rock (ONHP #115) 17-12-4
18. Quaking Aspen Swamp (ONHP #129) 17-6E-28
19. Rebel Rock Geological Area (ONHP #128) 18-6E-30
20. Siuslaw South Jetty Area (ONHP #68) 18-12-21
21. Three Sisters Wilderness (ONHP #122) 15-19-6E-9E
22. Torry Charlton Forest (ONHP #149) 20,21-6E
23. Yankee Mountain Scenic Area (ONHP #125) 17-5E-26

Inventory of Resource Sites Owned by BLM

1. Dorena Heronry (ONHP #111) 20-2-31
2. Eagle Rock (ONHP #1) 17-3E-10
3. Hula Creek Headland Forest (ONHP #101) 17-8-N1/2 NW1/4 6
4. Long Tom River (ONHP #6) 16-5
5. Poodle Creek Heronry (ONHP #112) 17-7-13
6. Shaw Creek Heronry (ONHP #110) 20-5-6

2. Sites Within State Parks

These sites, owned by the State of Oregon, are within the State Parks and Highways System. There is no question as to the significance of these sites, that is why they have been set aside as State Parks and Waysides. The sites are placed in a 1C category. No conflicts exist based on uses allowed in zoning districts. The sites are all zoned in Public Reserve Zones and are presently being managed by the State Parks Division and the Oregon Department of Transportation.

000527

a. Ben and Kay Dorris State Park (NAPAC #11) 16-2E-36. Douglas fir-alder vegetation. Existing recreational use does not negatively impact this vegetation.

b. Darlingtonia State Wayside (ONHP #109) 17-12-35. Unique plant protected in this wayside.

c. Dexter Island and Dexter Dam State Park (ONHP #108) 19-1-5,8,9. Riparian vegetation and heron rookery. The approved Master Plan for this park (now called Elijah Bristow State Park) indicates that the rookery and riparian vegetation areas will not be negatively affected.

d. Washburne Memorial State Park (ONHP #58) 16-12-22. Unique vegetation complexes, including an unusual sphagnum moss bogs, are protected in this park.

e. Washburne Wayside (ONHP #40 and NAPAC #4) 15-5-12. Douglas fir and white oak vegetation. Minimal development in this wayside.

3. Sites Within the Coastal Resources Management Plan or Willamette River Greenway Plan

Information on the location, quality and quantity of these sites indicates that they are all significant and are being placed in a 1C category. Two special purpose plans, the Coastal Resources Management Plan (CRMP) and the Willamette River Greenway Plan, have been adopted by the County. Different parts of these plans cover the 21 sites listed here.

Because of the degree of protection already afforded these sites, and the amount of planning which has already gone into them, no conflicts are determined to exist with use of these sites as they are presently zoned.

During development of Management Units within the Coastal Resources Management Plan, natural values of the area were a major factor. Those same values are the basis of the Greenway Plan. Detailed information on these plans, and the Management Units, is available in the Planning Division office.

a. Big Creek (ONHP #45) CRMP--Management Unit (MU) 45, Prime Wildlife Area.

b. Big Creek, Rock Creek and Tenmile Creek. Silverspot Butterfly sites (ONHP #5,56,130). CRMP--MUs 38,45, Prime Wildlife Area for this nationally threatened species.

c. Butterfly, Grass, Reed and Jernigan Islands (ONHP #83). CRMP--Siltcoos Lake MU 1, Significant Natural Area. The riparian vegetation on these islands provides excellent wildlife, particularly bird, habitat.

d. Camp Baker (Boy Scout Camp) (ONHP #46) CRMP--Siltcoos Lake MUs 5 and 6. A Prime Wildlife Area MU extends 150 feet inland from the shore of the lake to cover riparian vegetation and marshy areas; the remainder of the site is in a Natural Resources Conservation MU.

000528

e. Coast Fork Willamette River (ONHP #93). Greenway Plan. Riparian vegetation, the important value listed at this site, is protected by Greenway Development permit requirements.

f. Cox Island (ONHP #65) CRMP-MUTI, Natural. This island is owned and managed by the Nature Conservancy.

g. Duncan Slough and Marsh (ONHP #61) CRMP--MU N, Natural. A unique marsh complex and a band-tailed pigeon mineral spring are protected by this MU.

h. Heceta Beach Dunes (ONHP #37) CRMP--Beaches and Dunes section and Beaches and Dunes Combining District of the zoning ordinance guide development in dunal areas.

i. Heceta Head/Conical Rock (ONHP #53,114) CRMP--MU 48, Significant Natural Area. Conical Rock is part of the Oregon Islands National Wildlife Refuge. Heceta Head is an important bird nesting area, as well as being an outstanding scenic site.

j. McCarty Marsh Heronry (ONHP #62) CRMP--MU 25, Prime Wildlife Area. The private property owner has an agreement with ODFW to protect this rookery.

k. Mercer Lake (ONHP #145) CRMP--Mercer Lake MUs. Several MUs are used to surround the shoreline of this lake, protecting its natural values.

l. Middle Fork Willamette River (ONHP #91) Greenway Plan. The valuable riparian vegetation here is protected by the Greenway Plan and Development Permit.

m. Miller Arm/Maple Creek Marsh (ONHP #81) CRMP--Siltcoos Lake MU 4, Prime Wildlife Area. This MU protects an uncommon canary grass/tule marsh.

n. North Fork Siuslaw River Marsh (ONHP #60) CRMP--MU H, Natural. The proximity of four marsh types and the extent of the marshes make this site unusual. The Natural designation provides protection for this area.

o. Siboco Slough and South Inlet Pigeon Springs (ONHP #63,132) CRMP--MU I, Natural. These marsh areas and the mineral springs are protected by the Natural designation.

p. Siltcoos Lake (ONHP #85) CRMP--Siltcoos Lake MUs. The Lane County portion of Siltcoos Lake's shoreline is surrounded by MUs which recognize the importance of the riparian vegetation and the marshlands.

q. Siltcoos Lake Dunes (ONHP #84) CRMP--Beaches and Dunes Section. This section of the Plan, as well as a Beaches and Dunes Zoning District guide development in dunal areas and preserve the important values of the dunes.

000529

r. Siuslaw River Estuary (ONHP #67) CRMP. The entire estuary portion of the CRMP is designed to recognize and preserve the various values of the estuary and its shoreline.

s. Sutton Lake Marsh (ONHP #20) CRMP--Sutton Lake MU 4, Significant Natural Area. This MU covers an important willow, sedge and bullrush marsh.

t. Woahink Lake Bog (ONHP #14) CRMP--Woahink Lake MU 2, Prime Wildlife Area. An uncommon plant is protected by this MU.

4. Others

1. Upper Yachats Elk Pasture (ONHP #146). A portion of this site, previously in private ownership, has been purchased by ODFW. The remainder is in the Siuslaw National Forest. SNF and ODFW have an agreement concerning use of the site as an elk wintering area. The site is zoned FM - no conflicts exist.

2. Fern Ridge (ONHP #8). The reservoir itself is owned by the Corps of Engineers and operated under a management plan done in 1980. This plan recognizes the vital role of Fern Ridge to wildlife, particularly waterfowl. The ODFW manages wildlife in the area, including plots south of the reservoir being farmed for wildlife utilization only. The reservoir is considered "sensitive fish and waterfowl habitat," discussed earlier in this report. As such, riparian vegetation around the reservoir is protected. No conflicts exist.

000530

POLICY DISCUSSION

Several existing policies relate to flora and fauna. These are:

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize and support existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Provide special consideration to protection of sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies shall be encouraged to work with landowners to conserve wildlife habitats.

5. Lane County shall be encouraged to investigate and utilize fee acquistions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to implement these policies.

While these policies are adequate as far as they go, there are other areas discussed in this Working Paper for which policies have not been developed. The general areas with policy gaps will be mentioned and examples of possible policies given.

- Policy gap: Riparian and wetland vegetation. Examples of policies are:

    1. Riparian and wetland vegetation is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Maintenance of this vegetation shall be encouraged with setbacks from Class I streams and wetlands, and consideration of the areas in other land use activities such as Special Use Permits and Zone Changes.

    2. Drainage of wetland areas will not be promoted by Lane County. Any drainage project over which Lane County has permit authority shall be approved only after analysis of the ESEE consequences of such an action.

- Policy gap: Sensitive Fish and Waterfowl areas. An example of a policy is:

    1. Sensitive Fish and Waterfowl areas are recognized as the most valuable habitat of their type in the County. Maintenance of riparian vegetation shall be a prime consideration in zoning districts in these areas.

- Policy gap: Big Game Ranges. Some policy examples are:

    1. Residential building permits issued within Major or Peripheral Big Game Range shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

    2. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range.

000531

3. ODFW recommendations on overall residential density with Peripheral and Major Big Game Range shall be a determinant in minimum parcel size for regions of the County.

- Policy gap: Conflicts not anticipated or identified in the plan. Example of policy:

1. If uses are identified (which were not previously identified in the plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-00 will be followed.

000532

APPENDIX A

WILDLIFE OF LANE COUNTY

1. Birds

Approximately 305 species are thought to occur in Lane County. Frequency of occurrence may range from common to rare or accidental; further, some occurrences are seasonal only. This inventory is as complete as current resources allow. Updating and further verification is anticipated, as populations are not static but dependent upon habitat, nesting occurrence, threatened or endangered species, etc.

Common Loon
Arctic Loon
Red-Throated Loon
Horned Grebe
Eared Grebe
Western Grebe
Pied-Billed Grebe
Red-Necked Grebe
Black-Footed Albatross
Fulmar
Pink-Footed Shearwater
Sooty Shearwater
Slender-Billed Shearwater
Leach's Storm Petrel
Fork-Tailed Petrel
White Pelican
Brown Pelican
Double-Crested Cormorant
Brandt's Cormorant
Pelagic Cormorant
Common Egret
Black-Crowned Night Heron
Great Blue Heron
Green Heron
Great Egret
Snowy Egret
American Bittern
Whistling Swan
Trumpeter Swan
Canada Goose
White-Fronted Goose
Snow Goose
Black Brandt
Mallard
Gadwall
Northern Pintail
Green-Winged Teal
Blue-Winged Teal
Cinnamon Teal
European Widgeon
Harlequin Duck
White-Winged Scoter
Red-Breasted Merganser
Surf Scoter
Ruddy Duck
Hooded Merganser
Turkey Vulture
White-Tailed Kite
Goshawk
Sharp-Shinned Hawk
Cooper's Hawk
Red-Tailed Hawk
Swainsen's Hawk
Rough-Legged Hawk
Ferruginous Hawk
Golden Eagle
Bald Eagle
Marsh Hawk
Osprey
Prairie Falcon
Peregrine Falcon
Pigeon Hawk
Merlin
American Kestrel (Sparrow Hawk)
Blue Grouse
Ruffed Grouse
California Quail
Mountain Quail
Ring-Necked Pheasant
Sandhill Crane
Virginia Rail
Sora
American Coot
Black Oystercatcher
Semipalmated Plover
Snowy Plover
Killdeer
American Golden Plover
Black-Bellied Plover
Surfbird

000533

American Widgeon
Northern Shoveler
Wood Duck
Redhead
Ring-Necked Duck
Canvasback
Greater Scaup
Lesser Scaup
Common Goldeneye
Bufflehead
Old Squaw
Knot
Pectoral Sandpiper
Baird's Sandpiper
Least Sandpiper
Dunlin
Short-Billed Dowitcher
Long-Billed Dowitcher
Stilt Sandpiper
Semipalmated Sandpiper
Western Sandpiper
Sanderling
American Avocet
Red Phalarope
Northern Phalarope
Pomarine Jaeger
Parasitic Jaeger
Long-Tailed Jaeger
Glaucous Gull
Western Gull
Herring Gull
Thayer's Gull
California Gull
Ring-Billed Gull
Mew Gull
Bonaparte's Gull
Heermann's Gull
Black-Legged Kittiwake
Sabine's Gull
Forster's Tern
Arctic Tern
Common Tern
Caspian Tern
Black Tern
Common Murre
Pigeon Guillemot
Marbled Murrelet
Ancient Murrelet
Cassin's Auklet
Parakeet Auklet
Rhinoceros Auklet
Horned Puffin
Tufted Puffin
Band-Tailed Pigeon
Ruddy Turnstone
Black Turnstone
Godwit
Spotted Sandpiper
Common Snipe
Long-Billed Curlew
Solitary Sandpiper
Wandering Tattler
Willet
Greater Yellowlegs
Lesser Yellowlegs
Long-Eared Owl
Short-Eared Owl
Saw-Whet Owl
Poor-Will
Common Nighthawk
Vaux's Swift
Anna's Hummingbird
Rufous Hummingbird
Calliope Hummingbird
Belted Kingfisher
Yellow-Shafted Flicker
Red-Shafted Flicker
Common Flicker
Pileated Woodpecker
Acorn Woodpecker
Lewis' Woodpecker
Yellow-Bellied Sapsucker
Hairy Woodpecker
Downy Woodpecker
Eastern Kingbird
Western Kingbird
Traill's Flycatcher
Hammond's Flycatcher
Ash-Throated Flycatcher
Say's Phoebe
Willow Flycatcher
Dusky Flycatcher
Western Flycatcher
Western Wood Pewee
Olive-Sided Flycatcher
Horned Lark
Violet Green Swallow
Tree Swallow
Bank Swallow
Rough-Winged Swallow
Barn Swallow
Cliff Swallow
Purple Martin
Steller's Jay
Gray Jay
Scrub Jay
Black-Billed Magpie
Common Raven

000534

Rock Dove
Mourning Dove
Barn Owl
Screech Owl
Great Horned Owl
Snowy Owl
Pygmy Owl
Burrowing Owl
Norther Spotted Owl
Great Gray Owl
House Wren
Winter Wren
Bewick's Wren
Long-Billed Marsh Wren
Rock Wren
Northern Mockingbird
Sage Thrasher
American Robin
Varied Thrush
Hermit Thrush
Swainsen's Thrush
Western Bluebird
Mountain Bluebird
Townsend's Solitaire
Golden-Crowned Kinglet
Ruby-Crowned Kinglet
Water Pipit
Bohemian Waxwing
Cedar Waxwing
Northern Shrike
Loggerhead Shrike
Common Starling
Hutton's Vireo
Solitary Vireo
Red-Eyed Vireo
Orange-Crowned Warbler
Yellow Warbler
Yellow-Rumped Warbler
Black-Throated Gray Warbler
Myrtle Warbler
Audubon's Warbler
Townsend's Warbler
Hermit Warbler
MacGillivray's Warbler
Yellow Throat
Yellow-Breasted Chat

Common Crow
Clark's Nutcracker
Black-Capped Chickadee
Mountain Chickadee
Common Bushtit
White-Breasted Nuthatch
Red-Breasted Nuthatch
Brown Creeper
Wrentit
Dipper
Wilsen's Warbler
House Sparrow
Western Meadowlark
Yellow-Headed Blackbird
Red-Winged Blackbird
Northern Oriole
Brewer's Blackbird
Brown-Headed Cowbird
Western Tanager
Black-Headed Grosbeak
Lazuli Bunting
Evening Grosbeak
Purple Finch
House Finch
Gray-Crowned Rosy Finch
Pine Siskin
American Goldfinch
Lesser Goldfinch
Red Crossbill
Rufous-Sided Towhee
Savannah Sparrow
Grasshopper Sparrow
Vesper Sparrow
Dark-Eyed Junco
Slate-Colored Junco
Oregon Junco
Chipping Sparrow
Harris' Sparrow
White-Crowned Sparrow
Golden-Crowned Sparrow
White-Throated Sparrow
Fox Sparrow
Lincoln's Sparrow
Swamp Sparrow
Song Sparrow
Chestnut-Collared Longspur

ADDENDUM TO WORKING PAPER:

FLORA & FAUNA

November, 1983

EXHIBIT J 2

MEMORANDUM

lane county

TO Interested Persons and Groups

FROM Land Management Division

SUBJECT Revision of General Plan Working Papers DATE November 1983

In order to fully comply with the requirements of Oregon statewide planning Goals as promulgated by the Oregon Land Conservation and development Commission, Lane County must revise certain elements of its rural General Plan. Following the revision action, the Plan must be submitted to LCDC for acknowledgement.

Part of the revision effort is directed toward improving the information base and Policy suggestions of the Working Papers. These documents were originally intended to serve as technical foundations (by pulling together information and in some cases indicating where it was already available) for Plan development. The actual Plan was to take the form of Policies and a Plan Diagram, both of which were completed and, in the case of the Policies, adopted. Working Papers were to serve as reference material.

To bring the Plan into better compliance with state Goals, all three elements -- Working Papers, Policies and Plan Diagram -- need some revision. Since the Policies are generated from information in the Working Papers, it follows that new Policy statements must be founded in the form of Working Paper revisions.

Attached for your review and comment are revisions to one of the existing Working Papers. It is the intention of the County to follow essentially the same process of public review that was followed when the Working Paper were originally published. Bear in mind that in some instances, revisions pre-empt or modify or add to material now in the Working Papers.

After action is completed on all Working Paper revisions, the Policy statements generated by this procedure will be compiled and brought before the public and County officials for adoption as amendments to the General Plan Policies document. When the Plan Diagram is made available for similiar action, it too will contain pertinent directives of this and the other Working Papers.

REVISIONS TO "FLORA AND FAUNA WORKING PAPER"

I. Introduction

The "Flora and Fauna Working Paper" was published by Lane County in March, 1982. It was brought before both County Planning Commissions in a public hearing format in March and April, with testimony taken and responses given. In May, 1982, both Planning Commissions issued formal reports to the Board of County Commissioners, recommending tentative Policies to be formulated from both the Working Paper and the testimony received about it. The tentative Policies were reviewed and adopted by the Board of County Commissioners in December 1982.

In early 1983, staff of the DLCD reviewed the Working Paper and identified some aspects of it that needed to be adjusted before it would comply with statewide planning Goal requirements. The purpose of this Revision report is to correct those deficiencies.

Changes to the "Flora and Fauna Working Paper" take the form of technical data additions, and of Policy statements. Only the Policy statements are intended to be formally adopted as part of the Plan.

II. Working Paper Revisions

A. ADD the following language to page 5 of the Working Paper, directly following the first (leading) paragraph of the section entitled, "Wildlife Habitats":

The description of a habitat type in the following section is intended to provide a setting for identification of more specific resource types and sites. Because several of the following habitat types are so prominent in the County (e.g., "Douglas Fir/Trailing Blackberry", "Deciduous Hardwoods"), mapping the information would be of little value. Likewise, it is not practical to make Plan designations of these types, thereby eliminating the need for the "Goal 5 Rule" application. It is assumed that existing land use regulations (such as forest land zoning) will properly protect these habitat types, allowing the County to focus its regulator efforts on specific types (such as riparian lands) discussed later in this Working Paper.

B. DELETE the list of "sensitive fish habitats" which appears on pages 20 and 21 of the Working Paper, and ADD the more detailed list below:

MIDDLE FORK WILLAMETTE BASIN	
Middle Fork Willamette	Dexter Reservoir to Confluence of Coast and Middle Forks Hills Creek Reservoir to Lookout Point Reservoir Staley Creek to Hills Creek
North Fork of Middle Fork Willamette	East Boundary of 19-65-26 to Middle Fork Willamette
Salmon Creek	Black Creek to Middle Fork Willamette
Salt Creek	East Boundary of 22-55-21 to Middle Fork Willamette
Hills Creek	Warfield Creek to Hills Creek Reservoir
Fall Creek	Fall Creek to Middle Fork Willamette Gold Creek to Fall Creek Reservoir
Little Fall Creek	West Boundary of 18-25-07 to Fall Creek
Winberry Creek	South Fork Winberry Creek to Fall Creek Reservoir
COAST FORK WILLAMETTE BASIN	
Coast Fork Willamette	Cottage Grove Reservoir to Confluence of Coast and Middle Fork Willamette
Big River	East Boundary of 23-25-17 to Cottage Grove Reservoir

SIUSLAW RIVER BASIN	
Siuslaw River	Confluence of North and South Forks Siuslaw to Coastal Resource Management Plan (CRMP) Management Units (MU's)
North Fork Siuslaw River	Hawley Creek to Siuslaw River
South Fork Siuslaw River	Tucker Creek to Siuslaw River
Esmond Creek	County Line to Siuslaw River
Wolf Creek	Panther Creek to Siuslaw River
Whitacker Creek	County Line to Siuslaw River
Wildcat Creek	South Line of 18-07-13 to Siuslaw River
Lake Creek	East Boundary of 15-07-15 to Triangle Lake Triangle Lake to Siuslaw River
Deadwood Creek	Panther Creek to Lake Creek
Indian Creek	North Fork Indian Creek to Lake Creek
Sweet Creek	South Boundary of 18-10-33 to CRMP MU's
North Fork Siuslaw	West Boundary of 16-10-30 to CRMP MU's
SILTCOOS BASIN	
Maple Creek	East Boundary of 19-11-12 to CRMP MU's
Fiddle Creek	East Line of 19-11-36 to County Line
Woahink Creek	Woahink Lake to Siltcoos Lake Exclusive of CRMP MU's
COASTAL DRAINAGES	
Tenmile Creek	Wildcat Creek to CRMP MU's
Big Creek	East Boundary of 16-11-21 to CRMP MU's
Cape Creek	East Boundary of 16-11-31 to Pacific Ocean
Sutton Creek	Sutton Lake to Pacific Ocean Exclusive of CRMP MU's Mercer Lake to Sutton Lake Exclusive of CRMP MU's

Row River	Dorena Reservoir to Coast Fork Willamette Layng Creek to Dorena Reservoir
Layng Creek	South Boundary of 21-15-24 to Row River
Brice Creek	South Boundary of 22-25-29 to Row River
Sharps Creek	Clark Creek to Row River
Mosby Creek	Tom Creek to Row River
MAIN STEM WILLAMETTE BASIN	
Springfield Mill Race	Middle Fork Willamette to Main Stem Willamette
Main Stem Willamette	Confluence of Coast and Middle Forks Willamette to County Line
MC KENZIE RIVER BASIN	
McKenzie River	County Line to Main Stem Willamette
Mohawk River	Drury Creek to McKenzie River
Gate Creek	Minney Creek to McKenzie River
Blue River	Blue River Reservoir to McKenzie River County Line to Blue River Reservoir
South Fork McKenzie River	Cougar Reservoir to McKenzie River Roaring River to Cougar Reservoir
West Fork Horse Creek	Horse Creek to McKenzie River
Horse Creek	Separation Creek to McKenzie River
Lost Creek	South Boundary of 16-65-13 to McKenzie River
UMPQUA BASIN	
Steamboat Creek	Horse Heaven Creek to County Line

C. DELETE the sixth paragraph on page 20 (concerning a map) and ADD the following:

A small-scale map of the streams identified below appears in this Working Paper. Streams listed have been called out by ODFW, and reaches noted by agency staff. A large-scale map is also available for review in County planning offices.

D. DELETE the text under "Quantity" (page 21), and ADD the following:

Several hundred miles of waterway are involved, all of it subject to the Riparian Lands setback requirements discussed in that section of the Working Paper. Since fish habitat is confined to the streams themselves, all such habitat is automatically included in riparian land designations. Waterfowl nesting areas extend beyond the water surface, normally in Wetland areas as identified in that section of the Working Paper.

Although occuring in all parts of the County, sensitive fish habitat has very similiar characteristics throughout -- it is highly dependant on the existence of riparian vegetation. Such vegetation is the subject of recommended protective measures (setback and vegetation management provisions) along Class I waterways.

Because of the vast quantity of waterway designated sensitive fish habitat, and the unifying requirement of riparian vegetation, it is not useful to attempt site-specific conflict analysis. Conflict analysis for waterfowl nesting areas coincides with that for wetlands.

E. DELETE the last three sentences in paragraph 2 of the section entitled "Conflict Resolution" on page 22 (beginning with, "As with Riparian...."). ADD the following language:

The Oregon Fish and Wildlife Department has recommended building setbacks of 50 to 100 feet (depending on zone, which in turn reflects location) along waterways designated as sensitive fish habitat, and the use of a NR zone for wetlands not falling into the riparian strip. These setbacks can be the same rules as have been proposed for Class I streams (see previous section of the Working Paper). Since sensitive fish habitat consists of specified portions of Class I waterways, the riparian land management program should effectively protect such habitat. The NR zone should be applied to wetlands not protected by Coastal zoning or federal ownership.

F. DELETE paragraph 5 on page 14 of the Working Paper (in section entitled, "Riparian and Wetland Areas"), and ADD the following:

For areas of the County covered by the National Wetland Inventory, wetlands shall be defined through a program of consultation with fish and wildlife experts of the Oregon Fish & Wildlife Department and its federal counterpart. For interim purposes of this section, streams and areas of open water shall not be considered wetlands.

G. DELETE the first two sentences of paragraph 1, page 16 of the Working Paper (under section entitled, "Location"), and ADD the following:

The Oregon Fish and Wildlife Department has assisted the County in providing maps of all Class I streams, as well as major significant wetland areas. Attached to this Working Paper is a summary map of those areas, and detailed maps are available for review in County offices.

H. DELETE last two paragraphs under section entitled "Location" on page 16 of the Working Paper, and ADD the following:

A vast array of wetland types has been identified from air photo analysis by the U.S. Fish and Wildlife Service. That agency's product, known as the National Wetland Inventory, includes wetland types from open water to small, seasonal marshes. The scale of the maps is at 1"=62,500 feet (scale of USGS quadrangles) and 1"=24,000 feet. Such a scale, although permitting total coverage of the County, requires much supplementary interpretation and field checking before specific Plan designations and regulations can be placed on the sites.

Presently, about half the County (from the Willamette Valley to the Coastal Zone) has been so mapped, and it is expected that the rest of the County will be completed within a year or two. Although it is not possible -- because of the interpretation requirements mentioned above and of incomplete County coverage -- to designate a large number of minor wetlands, the maps have been useful in identifying "major wetlands." These major wetlands are considered by ODFW staff as being sufficient in size and value to merit County identification. They are located in the following areas:

- Fern Ridge periphery exclusive of parkland;
- Old Long Tom River channel below Fern Ridge dam, including lands between it and new channel.
- North Fork Siuslaw freshwater marsh;
- Maple Creek marsh;
- Amazon Canal at its confluence with the waters of Fern Ridge Reservoir.

Staff of the ODFW indicate that protection of the above major wetlands will enable the County to meet basic Goal 5 requirements, and the later interpretation and application of NWI mapped data will completely fulfill such requirements.

The areas listed above are mapped in detail on the County's Plan Diagram maps. Additionally, a small-scale map showing their general location is attached to this Working Paper. They are discussed in more detail in the "ESEE Analysis" section.

The County should take the Goal 5 Rule "1B" option on interpreting and applying the NWI data, within a timetable of one or two years (or when complete County coverage finally occurs).

I. DELETE both paragraphs of the section entitled, "Quantity" on page 17 of the Working Paper, and ADD the following:

The quantity of riparian and wetland areas is difficult to estimate in terms of acres or square miles. For purposes of this analysis, "quantity" of riparian lands is defined as all lands along both banks of Class 1 streams in Lane County, to a setback line 100 feet from ordinary high water. This area may or may not contain riparian vegetation; uses of it vary depending on location.

Major wetlands as previously defined vary in size from a few to several hundred acres. Each wetland is discussed individually in the "conflict analysis." The quantity of wetlands on the National Wetlands Inventory probably measures in hundreds of square miles; until a full analysis is done per the Goal 5 rule "1B" option, there is no way of knowing.

J. DELETE the section entitled, "ESEE Analysis" on pages 18 and 19 of the Working Paper. ADD the following material to replace it:

Riparian Lands

For purposes of conflict analysis, riparian lands are divided into the following categories:

- Resource Areas (forested and agricultural);
- Rural Lands (partially/sparsely developed);
- Developed & Committed areas (including communities).

The analysis is carried out for each category.

1. Resource Areas

a) Economic Impacts:

1) Merchantable timber removed from riparian areas is a source of employment and revenue in the County.

2) Use of riparian areas for farming purposes increases available land for farming; usually, riparian lands consist of soils types suitable for agriculture.

3) Riparian lands used for aggregate production increase the economic benefits of that resource.

4) Loss of riparian vegetation destroys fish and waterfowl habitat, increases flood risks, and destroys the river-bank itself, all of which produce net costs to the area.

b) Social Impacts:

1) Loss of income from reduced forest and farming activities adversely affects Land County residents, and could require relocation, etc.

2) Regulations to restrict activities in the riparian strip may conflict with the Forest Practices Act, and in any case will increase the burden on the landowner. Enforcement of such regulations in Resource Areas would be difficult.

3) The social consequences of reduced water quality, flooding, and fish/wildlife quantity, stemming from loss of riparian lands could be significant, especially for those oriented toward outdoor recreation and those living in flood-prone areas.

c) Environmental Impacts:

1) Loss of riparian vegetation would have a significant adverse impact on the riverine environment, as already discussed, and on the wildlife species dependent on that environment.

2) Reduced bank stability, more turbid water, flooding, etc., has generally negative impacts on downstream environments. Flood control would be more difficult to achieve, water purification would be necessary for jurisdictions using surface water for municipal supply, and the risk of health hazards from poorer water quality and/or flooding would increase.

d) Energy Impacts:

1) Reduction of agricultural or forestry production would require a greater investment of energy to more intensively manage unaffected areas and/or obtain the resource products from other areas.

2) Loss of riparian vegetation and a reduction in environmental quality could result in increased downstream energy costs (water treatment, greater travel in search of suitable outdoor recreational sites, flood cleanup)

2. Rural Lands

a) Economic Impacts:

1) Riparian land development restrictions can decrease the availability/usability of Rural Lands, thus increasing land costs.

2) In much the same manner as with Resource Areas, loss of riparian areas for noncommercial forestry, farming, etc., can increase landowner costs and reduce income.

3) Reduced riparian land quality can reduce property values and increase costs to landowners through flood risk, higher insurance costs, less wildlife, and poorer water quality.

b) Social Impacts:

1) Rural residents who desire high-quality riparian environments would be adversely impacted by loss of riparian land and associated consequences.

2) Restrictions on building and land use in the riparian strip would adversely impact landowners through reduction of their options for building siting, etc.

c) Environmental Impacts:

1) In rural areas, riparian environments often contrast to open lands used for pasture, or once covered with timber, or cleared for homesites. Loss of such lands would damage those environments andthus the quality of the overall community or area.

2) The quality of surface and groundwater, upon which rural landowners depend, would be adversely impacted.

d) Energy Impacts:

1) Energy costs to landowners would be higher if riparian restrictions forced them to live elsewhere. Costs would be lower if riparian restrictions preserved water quality, provided natural flood control, and so forth.

3. Developed and Committed Areas

a) Economic Impacts:

1) Especially on small parcels, the preservation of riparian vegetation through County use restrictions could have serious impacts on the owner.

2) Siting of structures, riparian land use, and vegetation management would all be affected by riparian regulations, possibly increasing costs to landowners.

3) Loss of riparian vegetation through no management would decrease the desirability of the local environment and adversely impact property values. Physical damage to the riverbank through loss of riparian vegetation could cause bank erosion which in turn would increase costs to the landowner to combat it, or because of damages to structures and other improvements.

b) Social Impacts:

1) Within developed areas, riverbanks are often valued for both public and private recreational purposes. Usually, riparian land has a higher social value than equivalent nonriparian land. Loss of that resource would be detrimental to such qualities.

2) The burden of riparian use restrictions on the landowner would amount to another layer of regulation, and could be difficult to enforce.

c) Environmental Impacts:

1) The adverse impacts of flooding, bank erosion, loss of wildlife and fish habitat, reduced water quality and increased runoff would be significant if riparian vegetation was not protected in some manner.

2) Excessive restrictions on riparian lands within developed and committed areas could result in an aesthetic environment which would displease those who prefer manicured, park-like community settings to more wild, natural settings.

d) Energy Impacts:

1) Restrictions on riparian land use could increase energy costs to those forced to find other land upon which to build.

2) Public service costs in areas not subject to flooding or other adverse impacts of destroyed riparian areas, including the energy costs of those services, would be controlled.

Conflict Resolution

Following the analysis of conflicts, a decision must be made whether to 1) preserve the resource totally, 2) allow unlimited conflicting uses, or 3) limit the conflicting uses. Such limitation should be in the form of regulations and similiar implementing measures.

Considering the value of riparian vegetation to the County's ecosystem, and the impacts of its loss, option 2) above is not prudent. On the other hand, a complete limitation of all activities-- option 1)-- in the 100-foot riparian area is equally unfeasible. As with most resources, a compromise is the most practical -- the third option.

In Goal 5 Rule language, a "3C" decision should be made. This should take the form of Policies and land use regulations which accomplish the following:

1. Requires building setbacks* from all Class 1 streams. (The actual setback should be 50 feet in rural development zones and 100 feet in rural resource zones. According to ODFW officials, these setbacks are justifiable, and have been used in other Oregon counties. Specific language should be introduced to each zoning district to this end.)

2. Provides for vegetation management within the riparian setback strip. (ODFW officials have provided the County with suggested vegetation management regulations, based in part on the County's Coastal Resources Management Plan shoreland provisions, to be applied within the riparian strip. The actual area of application should be 30 feet for the 50-foot strip, and 50 feet for the 100-foot strip. See the County's "Natural Resources Conservation" shoreland overlay for fuller justification and explanation.)

3. Provides for flexibility. (It must be recognized that situations will occur where the above regulations are overly burdensome. A provision for landowner appeal for a relaxation of the standards needs to be written into each zoning district along with the other standards suggested above. Upon such appeal, the vegetative

*for non-water dependent uses.

management area -- as well as the wider riparian setback area itself -- could be modified upon consultation with, and approval by, officials of the ODFW.)

4. Does not conflict with the provisions of the Forest Practices Act. (Presently, it has not yet been resolved in Oregon whether or not Goal 5 concerns take precedence over activities regulated by the FPA -- an example being timber cutting along a Class 1 stream. Until and if that issue is resolved in favor of Goal 5 concerns, County action to limit conflicting uses should not be applied to lands subject to FPA regulation.)

5. Uses existing regulations wherever practical. (Both the Willamette Greenway Permit and the Coastal Resources Zoning regulate activites in the riparian zones of respective waterways. There is no need for an additional layer of regulation on lands already subject to such regulation. In fact, those standards should be used as a basis for management of riparian lands in areas beyond WGP or CRZ jurisdiction.)

Wetlands

The Major Wetlands listed earlier can each be evaluated seperately for Goal 5 Rule conflict analysis.

1. Fern Ridge Reservoir

   a) Location: Marshy areas on perimeter of the Reservoir, including lands to southeast of Reservoir (see map).

   b) Quality: High. The major fresh water wetland of the County. Contains freshwater marsh, warm water game fish, submerged & emergent vegetation, fur bearers, and many species of waterfowl, shorebirds, song birds and small mammals.

   c) Quantity: Several hundred acres of land, most of it owned by the U.S. Army Corps of Engineers, some of which is managed by ODFW under an interagency agreement.

   d) Conflicting Uses: Any use which would result in destruction of vegetation or drainage of surface/subsurface water.

   e) ESEE Analysis:

      1) Economic: The principal value of the area is for its present use. Alternative uses, such as development, would require expensive land alteration. As a focal point for outdoor, water-related recreation in central Lane County, Fern Ridge Reservoir and its wetlands provide a significant economic benefit. Maintenence of the Reservoir also provides valuable flood control benefits to downstream landowners.

      2) Social: Social consequences of protecting the resource parallel the economic ones -- generally beneficial.

      3) Environmental: The site provides a highly valuable area for a variety of life-forms. Destruction of the wetlands would destroy the habitat values, and would probably degrade the quality of the Reservoir and adjacent lands for flood control and recreational purposes.

4) Energy: Destruction of the wetland resource could result in greater energy expenditures for those wishing to locate a more distant, and similiar, area for recreational purposes. Since wetlands act as sponges, flood control costs (including energy outlay) could also increase (more riprapping, etc.).

2. Lower Long Tom

a) Location: Immediately below the dam and ponds on the north side of the Reservoir, between the old river channel and the new one, and on the east side of the old channel.

b) Quality: High. A large, natural wetland containing many of the same attributes as the area to the south. "Representative" habitat.

c) Quantity: about 300 acres, owned by the Corps and by private individuals.

d) Conflicting Uses: See above entry.

e) Conflict Analysis: See above entry.

3. North Fork Siuslaw

a) Location: On the North Fork about two miles north of the main channel (18-11-19). See map.

b) Quality: High. An old salt water marsh converted to freshwater marsh by existence of a tidegate. Contains sedges, emergent vegetation, various waterfowl and furbearers.

c) Quantity: About 50 acres, in private ownership.

d) Conflicting Uses: See first entry, above.

e) Conflict Analysis:

1) Economic: Similiar to Fern Ridge Reservoir, although because of smaller size and non-flood control function, less significant.

2) Social: Impacts of destruction would eliminate a distinct habitat type from being available to persons in the area for wildlife study, etc. Maintainence would appear to have little additional impact since area is presently subject to major restrictions under Coastal Zoning overlay of "Significant Natural Shorelands Combining".

3) Environmental: This, like any major wetland, provides valuable habitat for fish and wildlife, and serves as a natural flood control facility. Impacts of destruction would be significant; impacts of maintenence, negligible, since it is now a natural system.

4) Energy: Possible flooding impacts.

4. Maple Creek Marsh

a) Location: Maple Creek where it meets northeast extent of Siltcoos Lake (19-11-30). See map,

b) Quality: High. One of the largest freshwater marshes in the area. Major use by water birds, beaver, furbearers, salmonids, shorebirds, emergent grasses, canary grass, sedges.

c) Quantity: About 30 acres, in private ownership.

d) Conflicting Uses. Same as entry #3.

e) Conflict Analysis: Same as entry #3. Also in a similiar manner, this site is under the protection of Coastal Resources zoning. The area is presently zoned with an overlay district of "Prime Wildlife," which is intended to maintain its existing character. A base zone of Exclusive Farm Use additionally restricts potentially conflicting uses.

5. Amazon Canal

a) Location: Amazon Canal for about the first ½-mile from its confluence with the waters of Fern Ridge Reservoir.

b) Quality: High. Part of the Fern Ridge wetland system, although more open water than marsh. Water level varies. Provides habitat for various bird and acquatic animal species.

c) Quantity: About 200 yards of water and banks. Owned by Corps.

d) Conflicting Uses: Same as entry #1.

e) Conflict Analysis: Same as entry #1, although site plays less of a sponge function and more of a flood control function.

Conflict Resolution

Conflict resolution for wetlands should be much the same as for riparian lands: limit the conflicting uses (the "3C" option). Those areas which are owned by the Corps of Engineers can be considered to have sufficient protection from conflicting uses without the futile effort of County regulation of federally-controlled resources. Areas presently under the jurisdiction of Coastal Resource Zoning can also be assumed to have adequate protection, since the fundamental purpose of the County's Coastal Zoning was to restrict activities that posed a threat to Coastal resources -- shorelands, estuarine areas, and beaches and dunes. Areas not in either of the above categories should be designated with a "Natural Resource" land use category and appropriately zoned. As with most zones, it should contain language permitting flexibility when merited -- without the violation of Goal 5 purposes.

J. DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place:

Although this is a useful index, officials of the ODFW stress the fact that a mere "numbers game" is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.

A prime example is that of "clustering" dwelling units in Peripheral or Major Range areas -- siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.

The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirments of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.

Within Developed and Committed areas, ODFW officials are examining the utility of continuing to designate some of these lands as either Peripheral or Major Range. Developed and Committed areas should be considered as Impacted, and conflicting uses permitted.

The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner -- including the involvement of that agency in land use regulation development. If the zoning procedure described above does not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the ESEE process and determine new ways of dealing with conflicts. The process should follow the Goal 5 Rule format, and center on weighing the relative benefits of dwelling unit construction against those of Big Game Range maintenence.

Policies concerning this issue are proposed in the concluding section of this Working Paper.

K. DELETE the first full paragraph on page 27 (following the list of "1B" sites) in "Natural Areas" section, and ADD the following:

The six sites are individually discussed below. Since proper evaluation of each of them requires field inspection and reporting by knowledgable experts (biologists, botanists, etc.), and such staff capability is not presently available to the County, the County should commit itself to a timetable of developing the necessary information to satisfy the Goal 5 Rule, for each of of these sites. It is proposed that they be fully evaluated, and placed in "1A" or "1C" categories, within two years of the adoption of the Plan Policies, or equivalent statements, proposed in this Working Paper.

L. DELETE item "a" at the top of page 30 (Ben & Kay Dorris State Park), and re-letter the following four items "a" through "d"; ADD the following statement in a paragraph to conclude the listing:

The State of Oregon Parks and Recreation Division has, in a letter to Lane County, stated that the natural area values of these parks are being and will be protected, and that no conflicts with the resource are foreseen.

M. DELETE the third full sentence in item 6. on page 13 of the Working Paper ("American Osprey"), and ADD the following in place of it:

Through protection of the vegetative fringe along waterways, the habitat requirements of the osprey are protected by existing County regulations (e.g., Willamette Greenway Permit, Coastal Shoreland zoning overlays) and are expected to be further protected by new zoning restrictions intended to fulfill the County's responsibility for protection of riparian and wetland resources (see later sections of this Working Paper).

N. DELETE the material on pages 33 and 34 under "Policy Discussion." ADD the following in that location:

Following the publication of the first draft of this Working Paper, a number of Policies were adopted -- drawing in part on suggestions made in the Working Paper -- and placed in the General Plan Policies document (itself adopted December 1982). These Policies are duplicated at the conclusion of this section, for reader reference.

In order to comply with LCDC directives, and to implement proposed resource management programs discussed on the preceding pages, a few of the adopted Policies need to be revised, and some new ones added. These are proposed in the following paragraphs.

1. Revise existing Policy 3 as follows:

"3. Through the use of County regulations including zoning, seek to minimize the adverse impacts of land use changes on sensitive species (those susceptible to significant population declines resulting from habitat modification)."

2. Revise existing Policy 6 as follows:

"6. Riparian vegetation along all Class I streams in the County is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Riparian lands shall be defined as the lands within 100 feet of ordinary high water on Class I streams, and shall be considered "significant" "1C" areas (in the language of OAR 660-16-000/025); "3C" protection of the riparian resource shall be achieved through development setbacks and vegetation management regulations within the riparian strip. The setback distance will vary from 100 feet from ordinary high water in rural resource zones to 50 feet from ordinary high water in developed and committed areas; provided a means is made available for review and modification of these requirements where it can be demonstrated that an unduly restrictive burden would be placed on the property owner. Such review and modification shall be spelled out in the zoning districts affected, and shall involve consultation with officials of the Oregon Department of Fish and Wildlife."

3. Revise existing Policy 7 as follows:

"7. Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal/state ownership; where these do not occur, the "Natural Resources" zone shall be applied. Other wetlands from the National Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per Goal 5 requirements if it is clearly demonstrated that an unprotected significant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction."

4. Revise existing Policy 8 as follows:

"8. The County shall not establish restrictions, based on Goal 5 objectives, on timber management activities subject to the Forest Practices Act which are more severe than the requirements of the Act itself. Goal 5 resources which are not dealt with by the Act shall be protected by the County per Goal 5 and OAR 660-16-000/025 requirements."

5. Revise existing Policy 9 as follows:

"9. Sensitive Fish and Waterfowl Areas as identified in the 1983 Revision to the Flora and Fauna Working Paper, shall be considered "significant" "1C" resources per OAR 660-16-000/025, and protected per "3C" requirements through protection of riparian and wetland resources as described in the above Policy statements."

6. To existing Policies 10 and 11, add the following words (underlined):

   "...the 1982 Lane County Working Paper on Flora and Fauna, as revised and updated in 1983...."

7. Add to existing Policy 12 the following statement:

   "The County shall work with ODFW officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program."

8. Add a new Policy 14 as follows:

   "14. In its program of protecting "1C" resources, the County shall make maximum practical use of existing land use regulations (e.g., Willamette Greenway Permit, Coastal Resources Zoning overlays, rural forest and agricultural resource zones) to achieve such protection. Duplication of existing standards shall be avoided wherever practicable, provided County-determined Goal 5 and OAR 660-16-000/025 objectives are met."

Existing (December 1982) Policies are duplicated on the following two pages of this document. They do not include the changes proposed above.

III. Conclusion and Necessary Action

The preceding pages of material is intended to meet LCDC requirements and thereby assist the County in complying with statewide planning Goal 5 requirements. It is recommended that the Planning Commissions and the Board of County Commissioners

- Receive the material and review it as technical supportive data,

- Consider the proposed Policy revisions in light of the new data,

- Carry the proposed Policy revisions -- or modified versions thereof -- forward to public hearings and adoption as amendments to the General Plan Policies document.

Ordinance language intended to implement the Policy proposals is now being prepared and will be brought before the Planning Commissons and Board as a part of the Lane Code revision effort. Changes to the Policies will possibly require parallel changes to the proposed ordinance language.

###

EXISTING FLORA AND FAUNA POLICIES from GENERAL PLAN POLICIES Document....

Flora and Fauna

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Provide special consideration to protection of sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies are encouraged to work with landowners to conserve wildlife habitats.

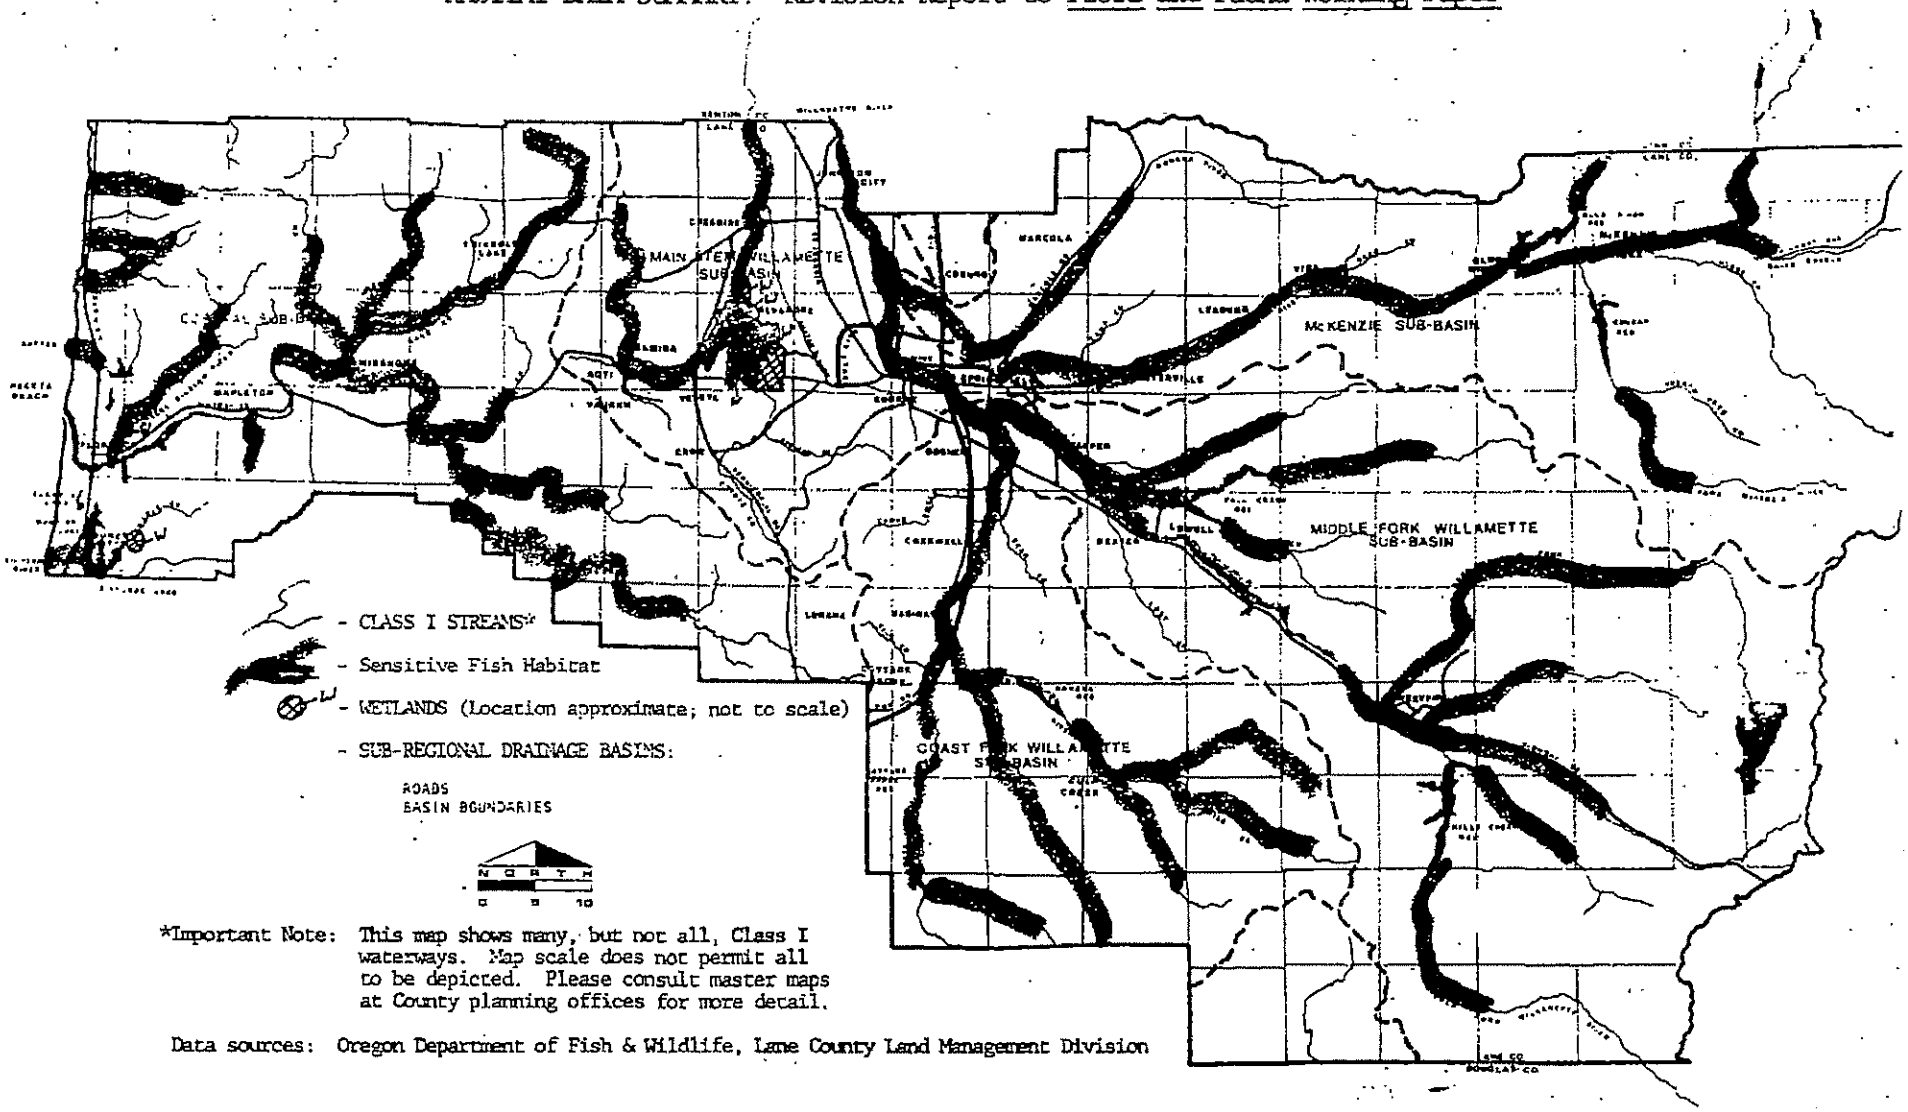
5. Lane County is encouraged to investigate fee acquisitions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to protect Goal 5 resources.

6. Riparian vegetation along all Class I streams is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Maintenance of this vegetation shall be encouraged with setbacks from Class I streams and shall be a consideration in Special Use Permits and Zone Changes.

7. Because of the inadequate inventory in Lane County, freshwater wetlands are being placed in a 1B category (insufficient data existing, per Goal 5 requirements, to decide on preserving the resource or not). When National Wetland Inventory (or equivalent) maps are available for all private lands in the County, these wetlands will be evaluated for quality and quantity as per the Goal 5 administrative rule (OAR 660-16-000). If the wetlands are determined to be significant, they will be evaluated against the rule's standardized set of ESEE (Environmental-Special-Economic-Energy) factors and conflict resolution proposed. This action will take place within one plan update period after the maps are available.

8. Lane County shall rely on the Oregon Forest Practices Act for protection of wildlife habitats and areas on lands zoned for the primary use of commercial growing and harvesting of forest tree species. Such habitats and areas shall include sensitive fish and waterfowl areas, riparian vegetation, wetlands areas, and big game ranges.

9. Sensitive Fish and Waterfowl Areas, as identified in the 1982 Lane County Working Paper on Flora and Fauna, are recognized as the most valuable habitat of their type in the County. Maintenance of riparian vegetation shall be a prime consideration in zoning districts in these areas.



10. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

11. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna.

12. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.

13. If uses are identified (which were not previously identified in the plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

HABITAT DATA SUMMARY: "Revision Report to Flora and Fauna Working Paper"

*Important Note: This map shows many, but not all, Class I waterways. Map scale does not permit all to be depicted. Please consult master maps at County planning offices for more detail.

CERTIFICATE OF FILING AND SERVICE

CERTIFICATE OF COMPLIANCE

I. RESPONSE TO STANDING

Intervenor-Respondent Nimpkish, LLC. ("Nimpkish") accepts Intervenor-Petitioner 1000 Friends' standing to appeal Respondent Lane County's approval of Nimpkish's application for a forest template dwelling.[1]

II. RESPONSE TO STATEMENT OF THE CASE

A. Response to Nature of the Land Use Decision and Relief Sought

1000 Friends and Petitioner seek to have an additional requirement added to the forest template dwelling criteria but only in Lane County.

B. RESPONSE TO SUMMARY OF ARGUMENTS

1. Response to First Assignment of Error

1000 Friends (and Petitioner) repeatedly make this argument without support of any kind in hopes that if they say it enough times, someone outside of Lane County might give it some attention. What is missing, however, is <u>any</u> evidence that what they claim to have happened thirty-six years ago actually occurred, rather than what really happened. In fact, the County adopted a grand bargain with LCDC at the last minute, that preserved more habitat than ODFW ever expected. Rec 764-765. In turn, ODFW readily embraced the clustering and

[1] As with Nimpkish's Response to Petitioner's Petition for Review, The Intervenors will be referred to hereafter by the real names, "Nimpkish" and "1000 Friends".

zoning method for preserving large areas of habitat. Rec 542-543, 573. Neither 1000 Friends or Petitioner have ever accepted that agreement and the reality of what Lane County accomplished with the acknowledgment of its comprehensive plan on September 13, 1984. Rec 625-669.

C. RESPONSE TO STATEMENT OF MATERIAL FACTS

1. Response to Subject Property and Application

Nimpkish accepts this statement.

2. Response to Local Proceedings and County Decision

Nimpkish accepts this statement.

III. RESPONSE TO JURISDICTION

Nimpkish accepts LUBA's jurisdiction for this appeal.

IV. RESPONSE TO ARGUMENT

A. RESPONSE TO FIRST ASSIGNMENT OF ERROR: The Hearings Official correctly concluded that approval of a forest template dwelling in Lane County does not require consideration of and a determination of consistency with Big Game residential density standards in the acknowledged comprehensive plan.

1. Response to Preservation of Assignment of Error

1000 Friends preserved its assignment of error.

2. Response to Standard of Review

Nimpkish incorporates its comments about standard of review that were

made in response to Petitioner's description of the standard of review. There are no State regulations or statutes that are substantively involved in this appeal. It is only Goal 5, Flora and Fauna, Policy 11 ("Policy 11") of the County's Rural Comprehensive Plan ("RCP") that is at issue. The Hearings Official concluded that Goal 5 does not apply to applications for forest template dwellings in the County's F-2 zone. Rec 10. That decision was based on thirty-six years of the County consistently and routinely not applying or ever considering applying Policy 11 as a criterion for individual dwelling applications of any kind. Policy 11 has never been a consideration when the County reviewed a dwelling application in Big Game Habitat.

This is the precedent that 1000 Friends and Petitioner have to address directly in order to sustain this assignment of error. The magnitude and length of the County's position should be given some weight. After all, it is the County's policy.

3. Response to Argument

At the outset, Nimpkish's entire argument set forth in its Response to Petitioner's First Assignment of Error is incorporated by this reference as part of its response to 1000 Friends' First Assignment of Error.

On pages 6-7 of its Petition, 1000 Friends methodically sets forth its

argument as to why the County's and Nimpkish's failure to address and comply with Policy 11 in its review of Nimpkish's forest template dwelling application, somehow violates the County's comprehensive plan, ESEE regulations and State statute all at the same time.

1000 Friends begins its argument with this statement:

> " The applicant's proposed dwelling exceeds the density standards for major big game habitat."

1000 Fr Br 6, Ins 14-15. This statement is not true beginning with the fact that there are no density standards for dwellings in Big Game Habitat. Policy 11 certainly did not establish "density standards" in 1984 when it was adopted as a Goal 5 policy by Lane County and acknowledged by LCDC to be fully in compliance with the Goals. As stated so eloquently in the Acknowledgment Order in assessing Lane County's response to DLCD's directive about implementing "the intent" of Policy 11:

> "Requirement 2d has been met."

Rec 29. That single act of acknowledgment by LCDC is never discussed or recognized by 1000 Friends. However, their entire argument is based on the continued vitality of Policy 11 after acknowledgment even though its "intent" had been found by DLCD to have "been met." Thereafter, Policy 11 has been inactive

for thirty-six years as a forest dwelling approval standard in the F-2 zone. 1000 Friends offer no explanation because there is none.

Hearings Official's Decision, Acknowledgment and *Cattoche*[2]

The next part of 1000 Friends's argument first discusses the Hearings Official's decision and particularly his conclusion that "density standards were integrated into the zoning classifications" (Rec 10) with a strong emphasis on "clustering" and only to be considered in rezoning and land division applications by which additional buildable lots might be created. Rec 10. Of course, we know the Hearings Official can provide a good recall of what happened when Policy 11 was acknowledged in 1984 because he was there, in the process, as "Coordinator" for Lane County. Rec 53.

Thus, while 1000 Friends goes on at length about its interpretation of what happened in 1984, the Hearings Official and two of his co-workers at the time (Rec 763-767) provide hands-on, eyewitnesses accounts of what really occurred. Even with all that, however, the Hearings Official could have been more explicit in pointing out the connection between Lane County's efforts to gain acknowledgment for its forest zones under Goal 4 and also address the Goal 5

---

[2] *Cattoche v Lane County*, __Or LUBA ___ (LUBA No. 2018-109, May 22, 2019)

objections from ODFW and DLCD staff.

The Final Acknowledgment Order contains extensive findings regarding Lane County's responses to address DLCD's requirements regarding Goal 4. Rec 639-647. The changes included clarifying "the precise criteria for applying the F-1 and F-2 zones" (Rec 642) which concurrently then rezoned 24,075 acres from F-2 to F-1. Rec 644. In concluding that the County "complies with Goal 4", DLCD relied on the following findings:

> "Conclusion - Goal 4
>
> Lane County complies with Goal 4.
>
> Lane County's approach to conserving forest lands contains some plan policy and ordinance provisions unique to Lane County. The strength of their forest lands conservation program is the F-1 Zone which prohibits the siting of all dwellings (other than those required to be authorized by state statutes). This zone is applied to 2,449,775 acres of Lane County's forest lands.
>
> The County's F-2 Zone is applied to 145, 356 acres of privately owned lands which consist generally of large lot rural residential parcels, nonproductive or marginally productive resource lands, or underutilized resource lands. Lands zoned F-2 are generally located adjacent to or near developed urban or rural areas and well traveled transportation routes; all of which have an impact on the commercial management of forest lands.
>
> In the F-2 Zone, the County requires that before a permanent dwelling is sited on forest land , assurances are obtained that forest production on the lot will be enhanced by active forest management. The requirements associated with the siting of dwellings in the F-2 Zone

> are similar to those provisions approved by the Commission in Benton County's acknowledgment with recent changes to the County's forest policies and ordinance provisions, The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 4."

(Emphasis supplied) In those findings DLCD first recognizes the "strength of their . . . program is the F-1 Zone which prohibits the siting of all dwellings . . ." and is "unique to Lane County.". 1000 Friends never discusses, addresses or even mentions Lane County's F-1 prohibition of residence even though DLCD says its "the strength of their program. . .".

Finally, 1000 Friends spends several pages (1000 Fr Br 13-15) identifying how LUBA's *Cattoche* decision (plan amendment triggers Goals review) somehow supports its theory about how Policy 11 is a forest template dwelling criterion in the County's F-2 zone. Again, Nimpkish has previously addressed the lack of relevance of the *Cattoche* case in its Response to Petitioner's similar assignment of error.

More Hearings Official misinterpretation and Legislative History

As if its previous discussion of the Hearings Official's alleged errors followed by Policy 11 "context" wasn't enough, 1000 Friends renews its discussion of these topics beginning at page 15. The next 4 pages (Rec 15-18)

contain restatements of the same mantra: a forest template dwelling proposed on a lot in the County's F-2 zone that is less than 40 or 80 (depends an habitat) acres in size is in conflict with minimum density standards in Policy 11 and therefore is in conflict with Goal 5 and therefore requires a successful ESEE analysis to proceed. 1000 Friends repeats this argument over and over again without ever addressing DLCD/LCDC's treatment of Policy 11 ("requirement has been met") during the 1984 Acknowledgment process. Without some kind of discussion of this foundational issue, 1000 Friends' "analysis" is superficial and void of support.

When 1000 Friends finally tries to address the real legislative history (Rec 18), it accuses the Hearings Official of "radically" rewriting Policy 11 in his reliance on his version of legislative history. Again, it bears repeating, the Hearings Official was present and participated in the 1984 Acknowledgment process as "Coordinator" for Lane County. Rec 53. The letters from Mr. Howe and Mr. Mann (Rec 763-767) provide further confirmation as to the accuracy and veracity of the Hearings Official's findings and conclusion on this matter because they were also there. Rec 9-10.

When 1000 Friends finally gets around to looking at what it calls legislative history, it points to a letter from Petitioner (Rec 50) and the June 29 and July 19, 1984 DLCD staff report (Rec 53-240). The letter refers to items in the same staff

report and 1000 Friends relies on these documents for their "legislative history". Such reliance is wrong and misleading. At best, these staff reports show the historical progression that resulted in LCDC's Final Order of Acknowledgment on September 13, 1984. Rec 625-669. The real legislative history is DLCD's Final Staff Report which contained Lane County's response to DLCD's requirement d which stated:

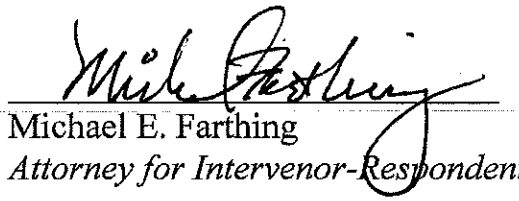
> "Requirement
>
> 2. Fish and Wildlife Habitats:
>
> d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas."

(Emphais supplied) Rec 28. Lane County responded (Rec 28-29) and the requirement was declared by DLCD to have "been met". Rec 29. The "intent of Flora and Fauna Policy 11" was the focus of the F-2 and EFU zone amendments. There was no parsing out of different sentences by this declaration. The amendments completely addressed the full "intent" of Policy 11 as determined by DLCD.

Again, 1000 Friends does not carefully examine or accept what actually

occurred. Instead, both it and Petitioner try to glean particular passages from a preliminary document to somehow demonstrate that the Hearings Official didn't properly analyze and apply the legislative history, in which he was an active participant. Such reliance on superceded documents clearly shows how inadequate 1000 Friends understanding of the legislative history really is.

The "intent" of Policy 11 has been met



1000 Friends falls into the "establish regions" trap which was replaced with new policies that favored "clustering" as a means of reducing conflict. Rec 573. From that argument 1000 Friends renews Petitioner's claim that the first two sentences of Policy 11 are still active somehow. 1000 Fr Br 24, Ins 7-8. Actually, all of Policy 11 can be ignored in this context and has been for thirty-six years.

At the end, 1000 Friends continues to restate its basic argument without ever dealing with the real facts regarding the birth and life of Policy 11. Policy 11 still applies to plan amendment, zone changes and land divisions. All of those concern the creation of additional buildable lots. The present application does not involve new lots and therefore Policy 11 does not apply.

V. CONCLUSION

There's nothing more to be said about Policy 11. Based on the

overwhelming evidence in the record, Nimpkish requests LUBA deny 1000 Friends First Assignment of Error and dismiss its appeal.

Michael E. Farthing

CERTIFICATE OF FILING AND SERVICE

CERTIFICATE OF COMPLIANCE

I. PETITIONER'S STANDING

Intervenor-Respondent ("Nimpkish")[1] accepts Petitioner LandWatch Lane County's ("Petitioner") standing to file this appeal.

II. PETITIONER'S STATEMENT OF THE CASE

A. Nature of the Land Use Decision and Relief Sought

Nimpkish accepts Petitioner's description of the land use decision that has been appealed.

B. Summary of Arguments

Petitioner summarizes the argument for the three assignments of error, none of which are supported by legal precedent, legislative history or local recognition.

C. Summary of Material Facts

Petitioner's summary of facts provides a minimalist description of the thoroughness that this application reflects in the record including road and driveway details, letters from the fire district regarding emergency access, location of fuel breaks, water availability and, most importantly for a template dwelling, the detailed list of legal lots and residences that is the foundation of the template dwelling criteria. Rec 2-6, Rec 31-46, Rec 936-1036.

---

[1] To avoid any confusion with the other intervenor in this appeal, Intervenor-Respondent, Nimpkish, LLC, will be referred to hereafter by its legal name.

The other "material facts" that Petitioner conveniently ignores is that in 1984, when Lane County's Rural Comprehensive Plan (the"RCP") was finally acknowledged by LCDC on September 13, 1984, Lane County applied F-1 zoning to 2,449,775 acres of identified forest lands which is 94.4% of all the forest lands in Lane County. Rec 646. Lane County prohibited all future residences in the F-1 zone. Rec 33, 646. Residences were allowed conditionally in the F-2 zone which applied to 145,356 acres which is 5.6% of the 2,595,131 acres of the County's forest land. That's the only place where residences are allowed and only then after addressing and satisfying the F-2 template dwelling clustering and siting requirements.

III. JURISDICTION

Nimpkish acknowledges LUBA's authority to review and decide this appeal.

IV. ARGUMENT

A. RESPONSE TO FIRST ASSIGNMENT OF ERROR: The Hearings Official correctly concluded that Goal 5, Flora and Fauna, Policy 11 regarding overall residential densities for protection of Big Game Habitat in the acknowledged comprehensive plan did not apply as criteria for a forest template dwelling.

1. Preservation of Assignment of Error and Standard of Review

Nimpkish acknowledges that Petitioner raised this issue repeatedly

before the Hearings Official. What is very much at issue for this assignment of error is the consideration to be given to the length and scope of the legislative history of Respondent Lane County's ("the County") treatment and consideration of Policy 11[2] since its adoption in 1984. Petitioner desparately clings to the vague text of that policy in order to construct its elaborate interpretation that requires future forest template applications in Lane County on properties that are less than 80 acres which, of course, most, if not all are in the F-2 zone, to conduct a Goal 5 ESEE analysis. These are parcels that could possibly satisfy the clustering criteria in the F-2 zone, for a template dwelling. An ESEE analysis of the impact of that residence on the surrounding Big Game Habitat is not authorized by Policy 11 even though that is what Petitioner says should now happen after 36 years of it not happening.

The policy that Petitioners are so desparately trying to breathe life into has been consistently and routinely ignored by land use decision makers in

---

[2] RCP, Goal 5, Flora & Fauna Policy 11 states:

"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

Lane County (staff, hearings officials, planning commissioners and county commissioners) involved in reviewing and processing dwelling applications on F-2, Impacted Forest Lands for the last 36 years. The Board of Commissioners oversaw this interpretation and even participated by adopting a complete overhaul of the F-2 zone, which included template dwellings, in 2002, and which included findings of "consistency" with the identical OAR provisions. Rec 435-462. All these changes had to be approved by the Lane County Board of Commissioners and Department of Land Conservation and Development before they were ultimately acknowledged by LCDC. There is no mention of Policy 11 anywhere as an approval criterion in any of these amended versions of the F-2 zone that was approved and adopted by the County Commissioners. Certainly, the Board of Commissioners' involvement in all of the versions of the F-2 zone is entitled to some consideration, if not deference.

There is nothing in Petitioner's lengthy and artifical construction that specifically shows how this thirty-six year old Goal 5 Big Game policy can suddenly spring to life as a forest template dwelling criterion and that, as circumstances would occur, only is applicable in Lane County. The absurdity of Petitioner's basic argument is carefully cloaked in a simple template that construction of a dwelling in forest zone on less than 80 acres creates a Goal 5 conflict that triggers an ESEE analysis but just in Lane County because that's

the only part of Oregon where Policy 11 applies and even though it has been acknowledged for the last thirty-six years without being a template dwelling criterion.

This discussion of the Board of Commissioner's involvement in the adoption, administration, and amendment and application of forest dwelling zones and of plan policies to individual properties is appropriately raised under the topic of the appropriate standard of review. This is a unique situation that involves a policy that was drafted in 1982 as part of Lane County's attempt to gain acknowledgment of its comprehensive plan. Petitioner's assignment of error is focused solely on the policy and not the Goals. The policy is a Lane County creation. It was acknowledged as part of the RCP in 1984. It obviously must be considered whenever a plan amendment proposes a change in the number of allowed dwellings on a particular property. *See Cattoche v Lane County*, __Or LUBA ___ (LUBA No. 2018-109, May 22, 2019).

The totality of the County's refusal to give Policy 11 any consideration for quasi-judicial dwelling applications on forest land for the last thirty-six years should be given some weight.

2. Response to Petitioner's Argument

Petitioner finally begins its argument on page 9 and proceeds to page 20 laying out an elaborate interpretational framework for declaring RCP, Goal 5,

Flora and Fauna, Policy 11 to be an applicable decision criterion for forest template dwelling applications in Lane County on legal lots that contain less than 80 acres. After quoting Policy 11 (Pet Br 11), Petitioner summarizes its basic argument:

> "The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 acres; for Major Big Game Range at one dwelling unit per 80 acres. * * * to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range * * * conflicts with habitat for big game."

Pet Br 11 A policy that uses "will" and "shall" is an obvious magnet for someone who is seeking to impose a more onerous requirement into a quasi-judicial process that is based on statute and rule. It does not matter that the policy was found to have been "met" in 1984 as part of the County's acknowledgment (Rec 29), nor does it matter that the policy was enacted thirty-six years ago and it has never been interpreted, applied, considered or even mentioned as a possible template dwelling criterion until Petitioner suggested doing it.

The fundamental and conclusively determinative reason that Policy 11 does not apply in these circumstances is because in 1984 LCDC acknowledged that it didn't apply. Policy 11 was acknowledged on September 13, 1984 based on the following finding and conclusion made by DLCD in the final staff

report, dated September 12, 1984, one day before LCDC's Acknowledgment Order:

> "Requirement
> 2. Fish and Wildlife Habitats:
> d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.
>
> Response
> Lane County has added the following new language to both the F-2 and EFU Zones:
>
> '(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of proposed residences consistent with the purposes the F-2 [EFU] Zone.
>
> (i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:
>
> (aa) Near residences on other tracts.
> (bb) With minimal intrusion into forest areas undeveloped by nonforest uses.
> (cc) Where possible, when considering LC 16.211(B)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zones F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU.'
>
> Conclusion
> Requirement 2d has been met."

(Emphasis supplied) rec 649-650. That's it for Policy 11 at that time and on

through to the present, except, of course, a plan amendment, rezoning or land division could trigger consideration of Policy 11. Rec 650.

Beyond that, Policy 11 has never been applied to individual template dwelling applications or its predecessor in the F-2 zone in the thirty-six years since LCDC said the Policy 11 "[R]equirement . . . has been met." Rec 650.

This fact together with the testimonials from former County planners who were working on the acknowledgment process, James Mann (Rec 764-767, App 2-5) and Kent Howe (Rec 763, App 1). They described what happened in the waning days of the summer of 1984, when Lane County was facing increased pressure to respond to the complaints being raised by various groups, like ODFW, and make clear why the County finally decided to make it easier for everyone. Rather than dividing the County into ten to twenty regions with their own residential densities, the County decided to forego all of this countywide analysis to determine when a residence might be constructed. Instead, the County decided that residences would not be allowed on 94.4% of all designated forest land, which was all of its F-1 zoned land. Rec 646. Also cancelled was the regional approach to forestland zoning that had been previously proposed. Rec 542-543, 573. Instead, it was replaced with the adoption of the following policy in the Addendum to the Flora and Fauna Working Paper:

"J. DELETE text: beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place:

Although this is a useful index, officials of the ODFW stress the fact that a mere 'numbers game' is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.

A prime example is that of 'clustering' dwelling units in Peripheral or Major Range areas – siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.

The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirements of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.

Within Developed and Committed areas. ODFW officials are examining the utility of continuing to designate some of these lands as either Peripheral or Major Range. Developed and Committed areas should be considered as Impacted, and conflicting uses permitted.

The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner – including the involvement of that agency in land use regulation development. If the zoning procedure described above does not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the ESEE process and determine new ways of dealing with conflicts. The process should follow the Goal 5 Rule format, and center on weighing the relative benefits of dwelling unit construction against those of Big Game Range maintenance.

> Policies concerning this issue are proposed in the concluding section of this Working Paper."

(Emphasis supplied) Rec 573 The first substituted paragraph refutes Petitioner's reliance on the so-called 80-acre minimum in the forest zone when ODFW says that "clustering" and "siting regulations" are the most appropriate way to protect Big Game Habitat. At that time ODFW was no doubt very supportive of the F-1 zone's ban on residences which automatically clusters all forest residences within the F-2 zone.

The "clustering" policy was further enhanced with the State's and then Lane County's subsequent adoption of the template dwelling provisions which have a basic tenent i.e. the template test, that requires a minimum number of residences and legal lots within the template. In fact, the template test assumes that those vacant lots within the template area could support a residence which again is part of the clustering policy that was adopted by Lane County in 1984. The template test assumes vacant lots in the template can and will support a residence.

Cattoche v. Lane County

Beginning on page 11 of its Petition, Petitioner begins a lengthy and carefully-edited quote from the previously-cited *Cattoche* case which ostensibly is to provide support for Petitioner's Policy 11 interpretation. While it is not clear what point Petitioner hopes to make by citing to the provision of

the Flora and Fauna Working Paper that states the "County will be divided into regions" (Rec 542-543) when we know those provisions of the Working Paper were replaced with the previously-quoted provision that said the "numbers game" is not the optimum way to deal with conflicts in the Big Game Range. Rec 573.

Overall, the *Cattoche* case has no relevance to this assignment of error other than to confirm that Policy 11, as well as all the other policies in the RCP, will be considered as part of any plan amendment application. That is what happened in the *Cattoche* case and LUBA remanded for more evidence and analysis of the ESEE analysis that was performed. It had nothing to do with Policy 11 and template dwelling criteria.

"Overall residential density"

So much of Petitioner's analysis requires ignoring plain language in Policy 11. Petitioner fails to recognize the policy refers to "overall" residential density as recommended by the Oregon Department of Fish and Wildlife (ODFW) and incorporated into the Flora and Fauna Working Paper of 40 acre parcels in Peripheral Big Game Habitat and 80 acre parcels in Major Big Game Habitat. Conspicuously, and precisely to its point of error, Petitioner has left out the word "overall" as it has been included in every discussion of density by ODFW.

The adoption of the F-1 zoning, and its prohibition of residences, applied to 94.4% of the forest zoned lands of Lane County. The F-2 zoning, where under strict limitations dwellings are allowed, is applied to 145,356 acres of the 2,595,131 acres of the county's forest zoned land, which is 5.6%. This describes exactly the concept of **Overall Density** as was being sought by ODFW and substantially exceeds the goals of the department.

It was LCDC's acknowledgment that the prohibition of dwellings in the F-1 zoning, unique in all of Oregon to Lane County, established conformance with the ODFW "overall residential density" standards for Big Game Habitat in the forest zoned lands of the County. Thus, the objectives of Policy 11 and the requirements of Goal 5 were satisfied, i.e. "met". Petitioner's refusal to acknowledge the definition of overall density is at the core of its failed argument.

Messrs. Howe, Mann and Darnielle

One major reason this assignment of error is so unique is because two of Lane County's planning staff in 1984 submitted current letters to the Hearings Official, Gary Darnielle, in which they described, specifically, how Policy 11 was developed and addressed during the 1984 Acknowledgment process for Lane County. Rec 763-767, App 1 -5. Mr. Howe, a planner with the County in 1984 but who later became Planning Director, describes the dual focus of the

County in trying to address Goal 4 forest policies and the Goal 5 residential limitations being advocated by ODFW and others. What ultimately resolved matters was the County's prohibition of residences in the F-1 zone. His final paragraph succinctly describes the grand bargain that was worked out by the County with DLCD staff, ODFW and even 1000 Friends:

> "Lane County limited residential development in Big Game Habitat areas by prohibiting new dwellings in 84% of Lane County (the F-1 zone). Lane County complied with the Goal 5 Rule and did not need to further restrict development in Big Game Habitat areas because so much land was preserved from development. Lane County's Big Game Habitat was not categorized as a significant Goal 5 resource. Based on this recognition, no analysis of residential densities is required in wildlife habitat areas in Lane County. Therefore, there are no development limitations on residential densities in Lane County's acknowledged comprehensive plan."

Rec 763, App 1. "So much land was preserved from development" is the reason Policy 11 does not provide any further limitation unless, of course, the Goals are directly in play because of a plan amendment.

Mr. Mann, also a planner for Lane County during the Acknowledgment process, provides more details about how and why the residential prohibition in the F-1 zone occurred "[A]t the 11th hour of the public hearings process" when the County drastically changed course and prohibited residences in the F-1 zone. Rec 764, App 2. Because of that unprecedented set aside of forest lands,

Mr. Mann noted the shift in emphasis to clustering:

> " The DLCD report expressly identified the clustering requirements in the F-2 zone. These requirements are substantially the same today. LCDC acknowledged these requirements as consistent with Flora and Policy 11 and as in compliance with Goal 5. It therefore appears that we are not required to do this again today."

Rec 765, App 3. DLCD's final staff report "expressly identified the clustering requirements in the F-2 zone" and that is what was acknowledged to be consistent with Goal 5 and Policy 11 in particular. Rec 765. Mr. Mann even includes copy of that report that concludes "[R]equirement 2d [Policy] has been met."

These are eyewitness accounts from two of Lane County's principal planners during the 1984 Acknowledgment process. They developed the F-1 residential prohibitions. They were in the middle of the negotiations with the DLCD and others, e.g. ODFW and 1000 Friends, and their conclusion is that the Policy 11 residential limits do not apply to individual dwelling applications in the F-2 zone. They did not apply in 1984 and they have not applied since.

Finally, as if the testimony of not one, but two eyewitnesses and participants in the 1984 County Acknowledgment process is not enough to establish the absurdity of Petitioner's argument, the Hearings Official for Lane County who authored the final decision that is the subject of this appeal, Gary

Darnielle, was the "Coordinator" for Lane County during the Acknowledgment process. Rec 53, App 6. He was there with Mr. Howe and Mr. Mann and he certainly knows what the final outcome for Policy 11 was as captured in the final order. Rec 53, App 6. Of course he knows what happened in those final months of acknowledgment and that the F-1 zone's prohibition of residences is what resulted in a final agreement. He was there and coordinated the settlement. He knows Mr. Howe and Mr.Mann and he knows they are accurate in their accounts of what happened.

Petitioner has nothing to dispute these statements. Petitioner has nothing to explain why Policy 11 was not applied to all forest dwelling applications for the last thirty-six years. The record is clear and uncontroverted as to the County's legislative history of Policy 11 ("Requirement 2d has been met") and how it has not been a criterion for forest dwelling applications since it was addressed and found to have "been met" in 1984.

Conclusion

Petitioner's interpretation of Policy 11 is completely and totally groundless based on the record at Lane County. It is a complete fabrication that seizes upon buzz words like "shall" and "will" and then joins them with a manufactured 80-acre minimum density standard to create instant blockage of template dwellings that would otherwise qualify, like the present application

would permit. It is a "gotcha" argument that Petitioners has been making in numerous local appeals. An earlier appeal based, in part, on Policy 11 was rejected by Mr. Darnielle for a nearby property. Rec 790-803. The same Policy 11 argument was also rejected by Anne Davies, Lane County's new Hearings Official (Rec 383-400, App 7-24). Ms. Davies reached a similar conclusion regarding Policy 11 and went even further into the legislative history in concluding that "Policy 11 is a general planning directive to County, not a mandatory approval criterion applicable to subject forest template dwelling application." Rec 392, App 16. Copy of her entire opinion is set forth in the Appendix and is corroboration of Mr. Darnielle's decision in the present appeal.

Finally, it should be noted that ODFW has not been present in any of these appeals where its own Policy 11 was being touted as a density gauge for residences in the F-2 zone. Where is ODFW? The simple answer is that agency got what it wanted and a whole lot more in 1984. An area somewhat smaller than the State of Connecticut was shut off from any future residential development in Lane County. That prohibition has been in effect for thirty-six years and, judging by ODFW's lack of endorsement of Petitioner's Policy 11 interpretation, ODFW appears to be satisfied with the way the County has been administering Policy 11 during that time. That should continue and this

assignment of error denied.

B. RESPONSE TO SECOND ASSIGNMENT OF ERROR: The Hearings Official correctly concluded that the RCP Goal 7 policies and related ordinance are not approval criteria for a forest template dwelling, but, in case they are later considered, the Hearings Official correctly concluded they could be addressed at the building permit stage.

1. Response to Preservation of Assignment of Error

Petitioner preserved the issue below.

2. Response to Standard of Review

Similar to the previous assignment of error, the three Goal 7 natural hazard policies and the ordinance alleged by Petitioner to be decision criteria for forest template dwellings have never been considered by anyone at Lane County or the general public to be something that must be addressed as part of a forest template dwelling application. In that regard, it should be noted at the outset of this response that the County staff's position has been that to the extent the Goal 7 policies are relevant, the land use decision and building permit processes fully address and satisfy these policies. Rec 613, 821, App 25-26.

3. Response to Petitioner's Argument

Petitioner alleges that three Goal 7 comprehensive plan natural hazard policies and a related zoning ordinance (Pet Br 21-22) apply as decision criteria

for forest template dwellings proposed to be located in identified high landslide areas. The Hearings Official concluded, like the Planning staff, that they did not apply but, to the extent they were determined to have some relevance, they would be appropriately addressed at the building permit stage. Rec 12.

Petitioner begins with a lengthy introduction that is primarily composed of selected quotes from the Hearings Official's discussion of this assignment of error and the three reports issued by Nimpkish's geotechnical engineer. Rec 283-290, App 27-34.

The final decision of the Hearings Official applies the holding in *Rhyne v. Multnomah County*, 23 Or LUBA 442 (1992) and finds that a Level II geotechnical report shall be performed on the proposed building site once a specific development plan is submittted with the building permit application. Condition 13c, quoted by the Petitioner (Pet Br 23-24), is the lynchpin for assuring the County staff, Petitioner and, most importantly, the person who applies for a building permit to place a residence in the identified homesite, will be protected.

This is the point in the development process where Petitioner believes they should be allowed a second opportunity to participate. After quoting the Hearings Official's conclusion of why the three Goal 7 policies and the ordinance (Lane Code 16.005(2)) are addressed at the building stage, Petitioner

alleges:

> " The rather conspicuous problem with the Hearings Official's decision and proposed condition is that it does not allow opponents to review and comment on that Level II geotechnical analysis, except if the building inspector finds issues with the Level II geotechnical analysis. In other words, not only will a county inspector make discretionary judgment calls about compliance with the policies and LC 16.005(2) after reviewing the Level II geotechnical analysis but opponents will not have the opportunity to review and comment on that Level II geotechnical analysis."

Pet Br 24. The "rather conspicuous problem" with Petitioner's claim that it is entitled to an "opportunity to review and comment on the Level II geotechnical analysis" is that, pursuant to the direction given in *Rhyne*, Petitioner is not entitled to those participatory rights at the building permit stage for this particular application. In making this claim, Petitioner identifies the proper law regarding use of conditions of approval which require that an application must demonstrate that compliance with all discretionary criteria is "feasible". *Meyer v. City of Portland*, 7 Or LUBA 184 1983), aff'd 67 Or App 274 (1984). This means that "substantial evidence supports findings that solutions to certain problems. . . are possible, likely and reasonably certain to succeed". *Meyer v. City of Portland*, 67 Or App 274, 280 n6, rev den 297 Or 82 (1984). This is precisely what occurred in these circumstances.

Nimpkish's "solutions" to the landslide hazard location issue involved

three separate reports from a licensed geotechnical engineer. Rec 283-290, App 27-34.

Nimpkish first provided a letter from Michael Remboldt, a licensed Professional Engineer and Geotechnical Engineer, and principal with K & A Engineering, dated October 31, 2019. Rec 289-290, App 33-34. Mr. Remboldt's letter followed his on-site evaluation of the property and other elements of review customarily entailed in what is referred to as a Level 1 geotechnical report. In that report Mr. Remboldt concludes:

> 'Therefore, it is my professional opinion that there is not a significant landslide hazard in the proposed homesite development area, and extensive or drastic safeguards are NOT needed to ensure safety on or off the property with respect to hazards associated with slope movement.'

Rec 33. In other words, it is "feasible" to construct a dwelling on the identified homesite. In response to questions raised by LandWatch and Intervenor-Petitioner ("1000 Friends") about Mr. Remboldt's October 31, 2019 letter, Mr. Remboldt provided a letter dated December 2, 2019, discussing the erroneous assertions made by Mr. Malone and Mr. Mulkey. Rec 286-288, App 30-32. As a result of questions that arose in a different appeal for an adjacent site, Mr. Remboldt provided a third letter dated December 11, 2019, with specific comments relating to the stability of R. R. Baker Road, the private access road to Tax Lot 507, the subject of this application and appeal. Rec 283-285,

App 283-285.

Petitioner has objected in other correspondence to the use of the report stating somehow we are deferring "discretionary decision-making to a point in the future in violation of *Rhyne v Multnomah County*." The "discretion" to be applied at some future time in this case is in the actual issuance of a building permit, not in meeting the standards of approval for a Template Dwelling or other land use application. Mr. Belknap, Nimpkish's land use consultant, licensed realtor, small woodlot owner and rural residential siting expert, describes what happens when someone wants to build a residence on a rural site like the subject property:

> "At some future time an applicant is going to request a building permit from Lane County for the subject property and be required to submit specific information with regards to the size and weight of the building, how ground water and precipitation will be dispersed or disposed of, what kind of foundation has been designed, how close will the structure be to breaks in the physical relief of the land, etc.
>
> At the risk of being overly simplistic, this application process and review will vary widely on whether one is seeking to place a single wide mobile home or construct a three story 8,000 square foot house with a daylight basement. The building department officials will engage to request additional information at such time relating to a geotechnical report that examines the specific proposal for construction. At such time, as Mr. Remboldt points out in his December 11, 2019 letter, the likely requirement will be a Level 2 geotechnical analysis, but that decision will be based on the proposed structure and

> will result in requirements of construction for excavation, soil compaction, foundation design, size and component, and finally the issuance of a building permit that will meet the Oregon Structural Specialty Code, or the denial of such a permit.
>
> If the applicant for the building permit cannot meet the requirements of the county building department with regards to a sufficient geotechnical analysis no building permit will be issued. The issuance of the building permit is not a foregone conclusion with the meeting of the Template Test requirements for a Special Use Permit. Mr. Malone has jumped to the conclusion that relying upon the building officials to approve the design of the structure in accordance with building code and sound engineering is 'not accountable to the general public .... (and is) potentially in conflict with siting criteria and even the approved site plan.'

Rec 261-262. New Condition 13c will require the applicant to have a Level II geotechnical report conducted by a licensed geotechnical engineer to affirm the preliminary assessment made by Mr. Remboldt. Rec 7.

Considering all three of Mr. Remboldt's reports which includes his conclusion that:

> *"Therefore, it is my professional opinion that there is not a significant landslide hazard in the proposed homesite development area, and extensive or drastic safeguards are NOT needed to ensure safety on or off the property with respect to hazards associated with slope movement."*

Rec 289, there is nothing left to do until there is a person who is ready to build.

Rhyne describes what can be adopted as conditions in the typical two-step conditional approval process:

> "Assuming a local government finds compliance, or feasibility of compliance, with all approval criteria during a first stage (where statutory notice and public hearing requirements are observed), it is entirely appropriate to impose conditions of approval to assure those criteria are met and defer responsibility for assuring compliance with those conditions to planning and engineering staff as part of a second stage. *See Meyer v. City of Portland, supra; Bartles v. City of Portland, supra.* In such circumstances neither notice to adjoining property owners nor additional public hearings are statutorily required during the second stage. These principles are relatively simple and straightforward in the abstract, but, as this case demonstrates, may prove more complex in the context of specific permit approval requests.
>
> Where the evidence presented during the first stage approval proceedings raises questions concerning whether a particular approval criterion is satisfied, a local government essentially has three options potentially available."

(Emphasis supplied) *Rhyne* at 447. Mr. Remboldt's Level I report establishes "feasibility" with a condition requiring a Level II geotechnical analysis once there is a specific design. Even then for this application a new Condition 13c has been imposed which states:

> "13c. Excessive grading, excavation and clearing shall be avoided when detrimental to soil stability an erosion control. The character of soils for fills and the characteristics of the subject property made usable by means of fill shall be suitable for

> the intended purpose. Prior to building approval, the Applicants shall submit a Level II geotechnical report to the County. If the building inspector finds problems that would require a restriction on mechanical grading and/or clearing, that issue shall be reviewed by the Hearings Official through a Type III Modification of Decision."

Rec 7. This is precisely what is described as acceptable in *Rhyne* because it is deferring to designated staff as well as a licensed geotechnical engineer the responsibility to determine if the proposed dwelling can be safely constructed. If the Level II investigation reveals potential problems that might require a modification, then notice and opportunity to comment directly to the Hearings Official shall be provided in a Type III process.

The initial call, however, is non-discretionary as to the Level II investigation and the staff review. This is what both of these individuals do for a profession and *Rhyne* approves. Here is where Petitioner missed a critical part of the *Rhyne* decision. *Rhyne* says when questions are raised about the feasibility of the action, then the three options to resolve those questions are available to the applicant and staff. However, that did not happen in this appeal because no questions were raised. Neither Petitioner or 1000 Friends had any questions about or objections to Mr. Remboldt's opinion regarding the lack of a landslide hazard at the site of the proposed homesite. That conclusion is undisputed and there is no need to consider the three options *Rhyne* offers

when questions do arise.

Beyond the basic distrust in Mr. Remboldt and the County's building staff that Petitioner's argument displays, especially when there is no question raised about the engineer's credentials or opinion, it is really unclear what Petitioner hopes to achieve, other than to slow down the process, if it was provided the opportunity to "review and comment" on the Level II report. What will Petitioner say at that time that it couldn't have said now? What information will it gain from "review and comment" opportunities? The Level II report will certainly be public and Petitioner can review it at any time.

Conclusion

Petitioner's allegations and reliance on the County's Goal 7 natural hazard policies is misplaced. There are well-defined procedures (App 25-26) in place that assure applicants and the public that landslide hazard areas are being addressed at both the tentative approval stage as well as the final stage of these forest template dwelling applications with carefully-crafted conditions. That is what the Hearings Official approved and this assignment should be denied.

C. RESPONSE TO THIRD ASSIGNMENT OF ERROR: The Hearings Official correctly concluded that the subject property was not adjacent to properties owned by Nimpkish and therefore was not part of a tract.

1. Response to Preservation of Assignment of Error.

Nimpkish acknowledges Petitioner preserved this assignment of error.

2. Response to Standard of Review.

Nimpkish accepts Petitioner's stated standard of review.

3. Response to Argument.

After quoting the Hearings Official's dismissal, Petitioner responds with a single paragraph:

> "Plainly, there has been an attempt to avoid the restrictions imposed by owning a "tract" by creating the perception of different entities while retaining all control (and essentially ownership) in the same individuals. Under the Hearings Official's theory, the requirement for a "tract" and the requirement contained in ORS 215.750(4)(c) has become entirely superfluous if it can be avoided, in order to increase the number of template dwellings. In other words, what the applicant has done here is contrary to the underlying policy of the template dwelling statute's prohibition on allowing more than one dwelling on a tract. *See* ORS 197.829(1)."

Petitioner does not make any legal analysis or assertion of error nor does it provide any evidence to support its "contrary to the underlying policy" argument. In fact, Petitioner does not disagree with the Hearings Official's legal conclusion that "Nimpkish, LLC" (Rec 721) is a different ownership from "Gray and Dorotea Goodman, Husband and Wife" (Rec 697).

Just to confirm the legal point, "Owner", for purposes of real property

law and without any additional qualifer, is the person or entity that received a deed for the dirt, i.e. fee simple title.[3] In this case, Nimpkish, LLC, was granted fee title to the subject property by a deed signed by Gray and Dorotea Goodman. In order for Nimpkish to convey fee title for the subject property, Nimpkish LLC would have to be the grantor, not Gray and Dorotea Goodman. The Goodmans, individually, cannot convey fee title to the subject property because they do not "own" the dirt. Instead, they "own" paper (articles of organization) that establishes they own a legal entity, Nimpkish, LLC, that does own fee title to the dirt in the subject property. ORS 63.239. It is personal property. Id.

Also, I want to reference the "Title Vesting" information sheet from a local title company that lists the methods for holding title to real property in Oregon. Rec 591, App 35. This is basic real property law and Petitioner simply wants a different result.

This assignment of error should be dismissed.

---

[3] Chapter 16 does not define 'owner' or 'ownership' and in the absence of such, relies on *Webster's Third International Dictionary of the English Language*, Unabridged, Copyright 1981, Principal Copyright 1961. That dictionary defines 'owner', in part, as: 'One that owns: one that has the legal or rightful title whether the possessor or not' . . . 'ownership' is the noun and is 'the fact of being the 'owner'."

V. CONCLUSION

These assignment of error are not based on legal analysis or precedent. They are hyper-technical interpretations that no one follows, recognizes or finds to be rational. They should be dismissed.

Michael E. Farthing
Attorney for Intervenor-Respondent

October 14, 2019

Gary Darnielle,
Lane County Hearings Official
Subject: Wildlife Habitat

This is written to document the development of the Rural Comprehensive Plan in 1984 when I was a Planner working on the acknowledgement effort.

RCP Goal 5, Flora and Fauna Policies 9, 10 and 11 were developed in 1983 and 1984 in an effort by Lane County to address the concerns of the Oregon Department of Fish and Wildlife (ODFW) about the impacts of residential development on Big Game Habitat areas. The discussions in the 1982 Flora and Fauna Working Paper and the requirements in Policies 9, 10 and 11 are about limiting residential densities with specific siting requirements (still applicable in the resource zones) in order to minimize the impacts of new residential development on Big Game Habitat areas.

At the same time, Lane County was trying to comply with Goal 4 requirements for Forest Lands and Lane County adopted Goal 4, Policy 5 that prohibited new dwellings on Non-Impacted Forest Lands zoned F-1. This prohibition applied to 84% of Lane County and substantially addressed the concerns of residential impacts on Big Game Habitat raised under Goal 5 by the ODFW. As a result, Policies 9,10 and 11 of the 1982 Flora and Fauna Working Paper do not designate any Big Game Habitat areas as significant "1 C".

Lane County limited residential development in Big Game Habitat areas by prohibiting new dwellings in 84% of Lane County (the F-1 zone). Lane County complied with the Goal 5 Rule and did not need to further restrict development in Big Game Habitat areas because so much land was preserved from development. Lane County's Big Game Habitat was not categorized as a significant Goal 5 resource. Based on this recognition, no analysis of residential densities is required in wildlife habitat areas in Lane County. Therefore, there are no development limitations on residential densities in Lane County's acknowledged comprehensive plan.

Kent Howe
Former Lane County Planning Director

Gary Darnielle
Lane County Hearings Official

Re: Wildlife Densities for the F-1 and F-2 Zones

Mr. Darnielle:

This is written in response to assertions that additional protections are required for the approval of template dwellings in the F-2 zone, for the protection of wildlife and big game habitat arreas.

In 1983 and 1984, Lane County developed and adopted the Lane County Rural Comprehensive Plan policies and implementing ordinances in order to comply with the Statewide Planning Goals and to obtain acknowledgement from LCDC for these requirements. I was employed by Lane County during this time as a Principle Planner with the primary responsibility of overseeing this effort, working with other involved County planners, and drafting Lane Code Chapter 16 including the requirements for the F-1 zone in LC 16.210 and the F-2 zone in LC 16.211.

In the early stages of developing these requirements, dwellings were allowed as special uses in the draft F-1 and F-2 zones and LC 16. Therefore, the need for dwelling densities to protect wildlife and big game habitat areas was especially important and was discussed in the Flora and Fauna Working Papers. At the 11th hour of the public hearings process, Lane County decided to significantly change the forest policies and LC 16.210 by prohibiting new dwellings on Nonimpacted, F-1 zoned lands. F-1 zoned lands included approximately 84% of the designed forest lands. After the prohibition on new dwellings on nonimpacted forest lands and F-1 zoned lands was adopted, the need for parcel sizes and dwelling densities on F-1 zoned lands evaporated.

On the remaining 16% of Lane County's forest lands, Impacted forest lands zoned F-2, an acceptable alternative to imposing dwelling and land division densities to protect wildlife and big game habitat areas was developed and adopted by Lane County. This alternative consisted of dwelling clustering requirements. During the hearings process when this alternative was reviewed, a representative from the Oregon Department of Fish and Wildlife was present. e

Attached to this letter is an excerpt from pages 25 and 26 of the September 12, 1984 DLCD report to LCDC for the acknowledgement of the Rural Comprehensive Plan that specifically stated,

> *"Amend the F-2 and EFU zones too carry out the intent of the Flora and Fauna Policy II. Specifically, the zones must either require larger minimum parcel sizes*

Attachment "B"

APPENDIX - Page 2 of 35

in the Big Game Habitat portions of these zones or containing clustering requirements in those areas."

The DLCD report expressly identified the clustering requirements in the F-2 zone. These requirements are substantially the same today. LCDC acknowledged these requirements as consistent with Flora and Policy II and as in compliance with Goal 5. It therefore appears that we are not required to do this again today.

Sincerely,

James A. Mann LLC

Response

Lane County has responded to this IOTC by amending the Flora and Fauna Working Paper Addendum (p. 7) to include the following justification for not applying riparian setback and vegetation maintenance requirements to lakes or Class II streams (Ord. No. PA 892):

> "For purposes of this analysis, only Class I riparian lands are considered. Class II streams (using ODF standards) are not fish-bearing streams, according to Oregon Fish and Wildlife Department staff, and often dry up in the summer months. Additionally, they are located in remote areas in public ownership or limited to resource uses by resource zones. Many of them have not been inventoried, and location maps are not easily available. Most lakes outside of the coast are impoundments, such as Fern Ridge Reservoir, and have COE easements plus County PR zoning to protect their shorelines. The remaining natural lakes are protected by coastal overlays or are in High Cascade wilderness areas such as Waldo. The Oregon Fish & Wildlife Department, which worked closely with the County in devising a method of protecting Class I riparian lands, did not indicate a need to similarly protect Class II riparian lands. In the nomenclature of the Goal 5 Rule, the County determines the Class II streams are to be considered '1A' resources--not to be included on the Plan inventory."

Conclusion

Requirement 2c has been met.

Requirement

2. Fish and Wildlife Habitats:

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy II. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.

Response

Lane County has added the following new language to both the F-2 and EFU Zones:

> "(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of

proposed residences consistent with the purposes the F-2 [EFU] Zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Conclusion

Requirement 2d has been met.

Requirement

2. Fish and Wildlife Habitats:

e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

Response

Lane County has adopted (Ord. No. PA 892) as part of its Flora and Fauna Working Paper, an inventory of known sensitive bird sites, including location, quality and quantity information. The County has identified conflicting uses and analyzed ESEE consequences. Based on this analysis, Lane County has decided to adopt a procedure for "flagging" areas in which such sites occur and requiring conflicting uses to be subject to conditional use approval. For all conflicting uses except timber management activities, the County has adopted "Sensitive Bird Habitat Protection Standards and Criteria" as part of the Lane Code (Ord. No. 11-84). Excerpts from that zone section are as follows (LC 16.005(4)(1)):

"(b) Development Plan Submittal. The person proposing the development shall submit plans to the

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE

Lane County
and
Rural Portion of Eugene/Springfield Metro Plan

Response from Denial Order of November 6, 1981
and from Continuance Order of November 6, 1981

DATE RECEIVED:
March 15, 1984

DATE OF COMMISSION ACTION:

I. REQUEST

The County has requested that its comprehensive plan and implementing measures be acknowledged as in compliance with the Statewide Planning Goals for areas outside adopted urban growth boundaries. Also, the County and the Cities of Eugene and Springfield request acknowledgment of compliance for the rural portions of the Eugene/Springfield Area General Plan.

II. SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission postpone Lane County's request until September 13-14, 1984 in order to allow the County time to amend its plan and ordinances to comply with Statewide Planning Goals. Provided the necessary amendments are made prior to the Commission's September meeting, the Department will revise its position to recommend acknowledgment under the expedited review procedures under OAR 660-03-033.

LANE COUNTY HEARINGS OFFICIAL
APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F-2 DISTRICT

Application Summary

On December 6, 2018, the applicant submitted a request to establish a dwelling in the Impacted Forest Lands (F-2) zone to Lane County Land Management Division. The application materials were reviewed by staff and the application was deemed incomplete on December 28, 2018. Additional information was received from the applicant on January 4, 2019, and on February 11, 2019, the application was deemed complete.

On March 29, 2019, referral responses were solicited from affected agencies, service providers and surrounding property owners. In order to allow time to obtain comments from the Oregon Department of Aviation, a Waiver of Statutory Timelines was provided on June 17, 2019. Referral comments from the Oregon Department of Aviation was received on July 3, 2019, and final processing this application commenced. On July 18, 2019, the Director issued a determination that the subject property complied with the applicable standards and criteria for the Forest Template Dwelling pursuant to LC 16.211(5) and (8). Notice of the determination was mailed to surrounding property owners, and on July 30, 2019, a timely appeal was submitted by LandWatch Lane County. The Director reviewed the appeal and elected to reconsider the decision, based mainly on the appellant's assertion that the wrong approval criteria had been applied.

A reconsidered decision approving the proposal was issued on August 2, 2019. On August 14, 2019, LandWatch Lane County again submitted a timely appeal of the Director's reconsidered decision.

Parties of Record

LandWatch Lane County	Connie and Charles Green
Don Nickell	Michael Farthing

Application History

Hearing Date: October 24, 2019

Decision Date: November 25, 2019

Appeal Deadline

An appeal must be filed within 12 days of the issuance of this decision, using the form provided by the Lane County Land Management Division. The appeal will be considered by the Lane County Board of Commissioners.

Statement of Criteria

Lane Code 16.211(5)&(8)

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 301, assessor's map 20-03-21, approximately one mile north of the City of Cottage Grove's Urban Growth Boundary and west of Highway 99 off of Abbott Lane.

   The subject property is approximately 10.28 acres in size and is currently vacant. Elevation of the property ranges from approximately 850 feet MSL in the southeast corner to 950 MSL in the northwest corner. County LiDAR resources show that slopes range from 5% to 30% with the most gentle slopes on the southern half of the subject property and steeper slopes on the northern half. Open pasture land makes up the southern one-third of the property with the northern two-thirds in timber.

   The subject property is designated Forest in the Lane County Rural Comprehensive Plan, and is zoned Impacted Forest Land (F-2, RCP), consistent with that plan designation.

2. The property abuts Impacted Forest Lands (F-2) zoned properties to the north, east and south. The property to the west is zoned Exclusive Farm Use (E-40). The surrounding area can generally be characterized as a mix of forest, farm, and rural residential uses. The property does not contain floodplain, a Class 1 stream, or mapped wetlands, but does contain the Airport Safety Combining Zone for the Cottage Grove Airport.

3. Other dwellings are located some distance to the northeast and the southwest of the property.

4. The subject property is made up primarily of soils that are productive for forestry.

5. The property is crossed by a road running east/west approximately one third of the distance of the length of the property from the southern property line.

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 18-05913) BY CONNIE GREEN FOR A TEMPLATE FOREST DWELLING ON TAX LOT 301, ASSESSOR'S MAP 20-03-21 IS AFFIRMED.

Justification for the Decision

The subject property is zoned F-2 Impacted Forest Land. The applicant is requesting approval to construct a single-family dwelling as provided by Lane Code 16.211(5)(c). Dwellings authorized by this provision are known as "forest template" dwellings because some of the applicable approval criteria of Lane Code 16.211(5) must be analyzed through the placement of a 160-acre square template centered on the center of the subject property (tract). Additionally, the placement of a dwelling on impacted forest land must meet the siting standards provided by Lane Code 16.211(8).

Under the template dwelling regulations, the standards differ depending upon the soil productivity of the property upon which the dwelling is to be placed. In the present case, the applicant has chosen to request approval under Lane Code 16.211(5)(c)(iii), which is the most rigorous of the three tests, applicable to lots or parcels that are predominantly composed of soils capable of producing 85 cubic feet per acre per year of wood fiber. That test requires a showing that all or part of at least 11 other lots or parcels that existed prior to January 1, 1993, lie within a 160-acre square centered on the subject property (tract). It also requires that at least three dwellings existed on January 1, 1993, and continues to exist, on those other lots or parcels.

The allegations of error raised by the Appellant in its appeal are as follows:

1. ***The Planning Director erred in applying the wrong version of LC 16.211.***

The appellant is correct that the wrong approval criteria were initially applied to the application. The application was submitted on December 6, 2018, prior to the adoption of Ordinance No. 18-08, which amended Lane Code Chapter 16 resource zones. Therefore, Lane Code Chapter 16.211(5) and (6) apply to the application instead of the newly adopted and now remanded Lane Code 16.211(3)(c), (q), and (r), and subsections (5) and (6). This wrong approval criteria were evaluated in the initial Director's decision and the reconsidered decision. Therefore, staff subsequently evaluated the correct approval criteria and provided those findings for the Hearing's Official.

This allegation of error is moot.

2. ***The Planning Director erred in relying on evidence from unrelated planning actions, for a different tax lot, that is not part of the record.***

In its initial appeal, appellant raised the issue of non-compliant access to the subject property. In response, staff introduced into the record two Verification of Condition applications for template dwelling approvals on adjacent lots. They are department file No. 509-PA02-05797 and 509-PA03-05055. Staff was aware of information that contradicted appellant's assertion, and it was not error for that information to be introduced to demonstrate to the decision maker that it is feasible that the access can meet the applicable road standards of Lane Code 16.211(8)(e), given that the same access has already been inspected twice for compliance with the same standard.

This allegation of error is denied.

3. *The applicant failed to provide evidence regarding slope, and the Planning Director erred in processing a reconsideration as a means of providing that evidence.*

Staff had access to contour and LiDAR information that was relevant to an issue raised in appellant's initial appeal. This information was provided as exhibits of the Planning Director's decision. It was the Planning Director's prerogative to reconsider the decision to bolster inadequate findings of the initial decision alleged in the initial appeal.

This allegation of error is denied.

4. *The applicant's site plan fails to indicate the boundaries of the subject property, setbacks from contiguous property boundaries, the development area in relation to the subject property, or the proposed turnouts and turnarounds.*

After the initial appeal was filed, it was determined that the application lacked certain evidence sufficient to satisfy all of the applicable approval criteria. The Planning Director reconsidered the decision following receipt of additional evidence, including a site plan that showed property boundaries and required setbacks. The Planning Director determined, based on past planning actions approving the same access for two template dwellings located south of the subject property, that it was feasible that the requirements regarding turnarounds and turnouts could be satisfied.

This allegation of error is denied.

5. *The dwelling site is not consistent with the requirements of LC 16.211(8) because it requires the applicant to unnecessarily intrude into forest lands.*

Dwelling Siting Requirements

LC 16.211(8) provides the siting standards for dwellings in the F-2 zone. Subsection (a) addresses setbacks, subsection (b) provides that forest lands used to site access roads, service corridors, and structures shall be minimized, subsection (c) provides fire siting standards for dwellings and structures, and subsection (e) provides fire siting standards for roads and driveways. The standards in subsections (a) and (b) are to be weighed together with the requirements in subsections (c) and (e) to identify the building site. Most of the requirements and standards or not absolutes, but the considerations must be weighed to arrive at a defensible siting location.

The appellant raises the following specific allegations of error related to the approval of the dwelling siting.

- *The proposed dwelling site requires the applicant to unnecessarily intrude into forest lands*

- *The proposed dwelling site is not sited near existing roads*
- *The proposed north/south driveway requires slopes greater than 20 percent*
- *It is unnecessary to extend the driveway through steep slopes and a forested area*

Appellant relies heavily on LC 16.211(8)(a)(i), which provides that dwellings *shall* be sited "[n]ear dwellings or manufactured dwellings on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet away from any ravine, ridge or slope greater than 40 percent." (emphasis added). As explained above, while subsection (8)(a)(i) uses the mandatory language "shall," the standards are not absolutes, and the siting of the dwelling must take into account all of the considerations, which are designed to make these non-forest uses "compatible with forest operations and agriculture" and to "conserve values found on forest lands."

Appellant asserts that the dwellings should be sited on the most level portion of the property south of the access road on the eastern portion of the property. The applicant explains that that portion of the property is planted pasture, is used for grazing cattle, and has been changed to farm deferral. LC 16.211(8) provides that the siting standards are to make proposed dwellings compatible with agriculture as well as forest operations, and to conserves values found on forest lands. The Hearings Official concludes that "values found on forest lands" are often farm values, not just forest values. Accordingly, the choice not to site the dwelling on land use for grazing is justified.

Appellants also assert that the dwelling should be sited adjacent to the existing access road, and should not be sited off of the roadway, thus requiring a driveway that necessitates removal of additional trees, and the use of higher rated soils. With regard to the quality of the soils, the applicant asserts that the site for the dwelling includes a bare section that has not historically been productive for the growth of trees. Appellant counters that assertion, relying on the soils mapping and eight aerial photographs of the property. All but one of those photographs depict, relatively clearly, a bare spot where the proposed dwelling site is to be located. While the soils map does not indicate any less productive soil at this location, the Hearings Official concludes that the aerial photographs support applicant's assertion that the proposed dwelling site is a less productive area than others on the property.

As to whether that spot is more or less level than others on the property, the record reflects that, if the spot is level, it is because the applicant played some role in leveling it. There is evidence in the record that a passage was recently cleared along the path of the proposed driveway in order to clear downed trees as a result of winter storms. The applicant then used that opportunity to clear and/or level the area. Whether such activity was permitted is not within the scope of this hearing. The Hearings Official's determination to approve this location is based largely on the photographic evidence supporting applicant's assertion that this location was determined based on the historic absence of growth of trees on this spot. The fact that the proposed location may not be

the most level spot on the property is outweighed by the fact that the proposed location will require a minimum amount of tree removal because it is already bare.

LC 16.211(8)(a)(i) favors locating dwelling near existing roads. Appellant asserts that, whether the proposed driveway is 100 feet or longer, siting the dwelling away from the existing road violates the siting standards. Appellant also asserts the dwelling should be located on the eastern side of the property, near existing dwellings. The Hearings Official determines that the obvious choice of this proposed location based on historic anemic growth patterns and preservation of farm uses to the south of the road is sufficient to outweigh the other factors, and is sufficient to support the proposed location.

Fuel Breaks

LC 16.211(8)(c)(i) requires primary and secondary fuel breaks for proposed dwellings. The primary fuel break must extend 30 feet in all directions around the dwelling. Where a dwelling is constructed on slopes, an additional primary fuel break downslope is required. The Planning Director determined that the downslope direction of the development site is from northwest to southeast at somewhere between 3% and 12% slope. The Planning Director thus determined that an additional 50 feet of primary fuel break was required in the downslope direction.

Appellant alleges that the Planning Director erred "in finding an additional 5' of primary fuel break [is] only required in the NE to SW direction." The Hearings Official disagrees that the Planning Director required an additional primary fuel break in the NE to SW direction. Rather, the Planning Director required an additional primary fuel break to the southeast of the development site, as depicted on the applicant's site plan. Condition of Approval #7 is consistent with this finding.

However, the site plan also shows the secondary fuel break (100 feet beyond the primary fuel break) beyond the western property boundary. LC 16.211(8)(c)(i) requires the secondary fuel break to be located on land owned or controlled by the owner. Accordingly, COA 7 is revised as follows:

"Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(8)(c). **These fuel breaks shall be maintained in perpetuity.** The minimum primary safety zone surrounding the proposed dwelling shall be at least 30 feet plus the additional 50 feet of Safety Zone Down Slope, as applicable. The minimum secondary fuel breaks surrounding the primary safety zone shall be at least 100 feet on lands owned or controlled by the owner. Where the secondary fuel break required extends beyond the boundaries of the subject property, the applicant shall provide recorded documentation that she is authorized to maintain the fuel break on the adjacent property."

This allegation of error is denied.

6. The challenged decision fails to address LC Chapter 15 driveway spacing requirements.

Lane County Transportation Planning referral comments are included in the record. Based on those comments, the Planning Director imposed conditions of approval 4 and 5. The comments provide findings for the relevant Chapter 15 requirements, and those findings are adopted by reference in support of this decision. As conditioned, compliance with LC Chapter 15 is satisfied.

Appellant also addresses the LC Chapter 16 requirements for roads and driveways, which are discussed below.

The subject property is traversed by an east/west access easement that has been determined adequate in two prior land use proceedings. At the appeal hearing, the parties discussed the distinction between a road and a driveway. For purposes of LC 16.211(8)(e), the term "road" means "a way of access used for more than one use and accessory uses dwelling or manufactured dwelling." The term "driveway" means "a way of access used for only one dwelling or manufactured dwelling."

Turnarounds

LC 16.211(8)(e)(ii) requires turnarounds spaced not more than 500 feet apart for dead end roads over 200 feet in length. The record is not clear whether the road is a dead end road. However, appellant asserts that it is, and the applicant proposes turnarounds that comply with this requirement. The proposal would require turnarounds be constructed on the property to the east, tax lot 300. Any easement created or modified to provide access to the subject property would require language that includes the ability to provide these proposed turnarounds. Condition of Approval #4 is modified as follows to accommodate that requirement:

"Private access easements serving the subject property must comply with Lane Code 15.055 and specifically provide for required turnarounds."

Turnouts

Turnouts are the driveway's counterpart to turnarounds for roads. LC 16.211(8)(e)(vi) requires turnouts (20-foot long by 8-foot wide passage space; six inches gravel) for any driveway that exceeds 200 feet. The proposed driveway measures approximately 228 feet, and will include a turnout. The driveway slope is estimated to be approximately 8% grade at its steepest. However, LC 16.211(8)(e)(iv) allows grades up to 16% and up to 20% for up to 100 feet in certain circumstances. Any grades in excess of 8% require documentation from the applicable fire protection district or a licensed engineer.

The record includes a letter dated October 23, 2019 from South Lane County Fire & Rescue. It acknowledges that a portion of the driveway exceeds 10% grade, but that "we have driven it and if *road* is maintained at current condition we can access it." (Emphasis

added). Opponent again attempts to make the distinction between a road and driveway, and that the letter's use of the term "road," where italicized above, means that the fire district had not acknowledged the safety of the driveway. The Hearings Official agrees that the letter's use of the two terms is confusing. However, it appears clear that the fire district letter intended to acknowledge the safety of both the road and the driveway. Condition of Approval #6 ensures compliance with these requirements.

This allegation of error is denied.

7. ***The challenged decision violates RCP Goal 5, Flora and Fauna Policy 11.***

Appellant argues that the County's Flora and Fauna Working Paper and RCP Goal 5, Flora and Fauna Policy 11 require a Goal 5 analysis of the conflicts between dwellings and Big Game Habitat in the context of this forest template dwelling application.

Initially, appellant relies on OAR 660-006-0025(6) for its position that RCP policies addressing Goal 5 protections are applicable to this application. OAR 660-006-0025 is the administrative rule that provides the uses that are required to be allowed (subsection (2)), uses that may be allowed outright (subsection (3)), and uses that may be allowed conditionally (subsection (4)). OAR 660-006-0027 provides the requirements for dwellings in forest zones. OAR 660-006-0025(6) provides: "Nothing in this rule relieves governing bodies from complying with other requirements contained in comprehensive plan or implementing ordinances such as the requirements addressing other resource values (e.g., Goal 5) that exist on forest lands."

The Hearings Official agrees with appellant that, under OAR 660-006-0025(6) and other applicable rulings, relevant Goal 5 comprehensive plan policies, and relevant implementing ordinances, can supplement the specific forest template dwelling approval criteria set forth in LC 16.211(5). However, the Hearings Official disagrees with appellant that OAR 660-006-0025(6) can be used to bootstrap a Goal 5 analysis where it would otherwise be precluded.

As a general rule, the Statewide Planning Goals do not apply directly to the processing of a land use application where the comprehensive plan and implementing regulations are acknowledged. Specifically, "The requirements of Goal 5 do not apply to land use decisions made pursuant to acknowledged comprehensive plans and land use regulations." OAR 660-023-0250(1). Of course, relevant and applicable comprehensive plan policies that are written and intended to apply as mandatory approval criteria (see discussion below) are applicable.

Appellant relies on RCP Goal 5 Flora and Fauna Policy 11 in support of its legal theory. Policy 11 provides:

> "Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that

limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

Relying on this language, and language from the Flora and Fauna Working Paper, appellants assert that the proposed residential density that would result from the approval of the subject forest template dwelling is a conflict with Big Game Habitat and either (1) requires the county to conduct an ESEE analysis or (2) requires denial of the application for failure to comply with Policy 11.

Appellants also rely on a recent LUBA case, *Cattoche v. Lane County*, ___ Or LUBA ___ (LUBA No. 2018-109, May 22, 2019), in support of its position. In that case, LUBA took a deep dive into Lane County's comprehensive plan policies and regulations regarding Big Game Habitat. Unlike the subject application in this case, which involves a request for approval of a forest template dwelling, the challenged decision in *Cattoche* was a request for a comprehensive plan designation amendment from Forest to Non-Resource and zone change Impacted Forest Land (F-2) to Rural Residential 5-acre Minimum (RR-5).

The *Cattoche* case correctly held that the Goal 5 analysis applied in that instance; i.e., a plan amendment / zone change application. It also correctly held that where the Goal 5 analysis applies, if a conflict with an inventoried Goal 5 resource is identified, the county must conduct a full blown Goal 5 ESEE analysis. LUBA held that a county errs in simply imposing a condition of approval limiting the number of dwellings allowed, without going through the Goal 5 ESEE analysis. It is at the point of determining mitigating factors to the conflicts in the context of the ESEE analysis that the county determines what condition is appropriate to mitigate the identified conflict.

The *Cattoche* case does not address the issue presented in this case; *i.e.*, whether RCP Goal 5 Flora and Fauna Policy 11 establishes a maximum residential density that applies in the context of a forest template dwelling application. Appellant's assertion that the RCP establishes residential density maximums that are applicable to this permit application is based on numerous flawed bases, as set forth below.

A. Working Papers not adopted

Appellant asserts that it is settled law that the RCP imposes a residential density standard borrowed from the ODFW recommendations of one dwelling unit per 80 acres for Major Big Game Habitat. *See* Malone letter dated October 31, 2019, page 5. The Hearings Official assumes this conclusion is taken from language in the *Cattoche* case.

It is the Flora and Fauna Working Paper that contains the alleged "Residential Density Standard" that is discussed at length in *Cattoche*. The Lane Rural Comprehensive Plan,

however, makes clear that the Working Papers are *not* adopted as policies: "The background information, including the Working Papers, is to be used to help interpret and understand General Plan approaches but is not itself designed to be adopted as legislative law."[1] It is only the adopted comprehensive plan policies themselves that are adopted "legislative law." Contrary to appellant's assertion, LUBA did not make a legal conclusion that the Working Papers, and thus the Residential Density Standard, was adopted approval criteria. Rather, LUBA relied on the parties' concession on that point. *See Cattoche*, slip op. 16 n.4 ("parties agree that the Flora and Fauna Working Paper policies provide applicable criteria in the designated Peripheral Big Game Range."). The concession was, quite simply, wrong, as it conflicts with the above quoted language in the comprehensive plan. The question, then, remains whether Goal 5 Flora and Fauna Policy 11 imposes a maximum residential density that applies directly to a forest template dwelling application.

B. Policy 11 is general planning directive to county, not mandatory approval criterion applicable to subject forest template dwelling application

Oregon's land use system is set up in such a way that local governments adopt local comprehensive plans and land use ordinances that implement the statewide planning Goals. Once those plans and regulations are acknowledged as in compliance with the statewide planning goals, the goals fall away and do not apply as relevant standards or approval criteria. Similarly, local ordinances are adopted to implement the acknowledged comprehensive plan. In many contexts, once the implementing ordinances are adopted to comply with the comprehensive plan and statewide planning goals, the comprehensive plan policies do not generally apply directly to a discrete land use application. See discussion above. The appellants in this case contend that Policy 11 applies as an approval criterion.

---

[1] Part I.C. (HISTORY OF THE POLICIES DOCUMENT) provides, in full:

"The Policies contained in this document were developed during a period of more than a year, beginning in early 1983. A process was devised at the beginning of the period to utilize existing working papers and to prepare a series of new working papers which, along with other sources, were to serve as the technical data based for the Policies. The Working Papers were written and published from mid-1981 to early 1984. Each Working Paper contained information on a given topic or topics, and a number of them contained preliminary Policies which were drawn from the information in the Papers and which were presented for initial discussion purposes.

Hearings were held on the Papers as they were published. Each Planning Commission reported to the Board of County Commissioners containing its reaction to the Paper and draft Policies. Often the Policy statements drew on sources other than the Working Papers-existing County Plan information (such as special-purpose plans or technical studies), comments or testimony of individuals or groups appearing at the hearings, the judgment and views of Planning Commission members and so on-and so represented a broad array of perspectives and attitudes. Each Planning Commission Report cited information used in Policy development, in order to provide a firm basis for Policy use. The background information, including the Working Papers, is to be used to help interpret and understand General Plan approaches but is not itself designed to be adopted as legislative law. The Board formally adopted the Policies in February of 1984."

LUBA has had the opportunity to address this issue countless times:

> "[L]ocal and statutory requirements that land use decisions be consistent with the comprehensive plan do not mean that all parts of the comprehensive plan necessarily are approval standards. *McGowan v. City of Eugene*, 24 Or LUBA 540, 546 (1993); *Neuenschwander v. City of Ashland*, 20 Or LUBA 144, 154 (1990); *Bennett v. City of Dallas*, 17 Or LUBA 450, 456, *aff'd* 96 Or App 645, 773 P2d 1340 (1989). Local governments and this Board have frequently considered the text and context of cited parts of comprehensive plans and concluded that the alleged comprehensive plan standard was not an applicable approval standard. *Stewart v. City of Brookings*, 31 Or LUBA 325, 328 (1996); *Friends of Indian Ford v. Deschutes County*, 31 Or LUBA 248, 258 (1996); *Wissusik v. Yamhill County*, 20 Or LUBA 246, 254-55 (1990). Even if the comprehensive plan includes provisions that can operate as approval standards, those standards are not necessarily relevant to all quasi-judicial land use permit applications. *Bennett v. City of Dallas*, 17 Or LUBA at 456." *Save our Skyline v. City of Bend*, 48 Or LUBA 192, 209-10 (2004) (footnote omitted).

RCP Goal 5 Flora and Fauna Policy 11 is not drafted as an approval criterion that would apply directly to the subject application. Rather, it directs the county how to determine "overall" residential densities in different regions of the County. It then directs the County to work with ODFW to prevent conflicts between residential development and Big Game Range Habitat "through land use regulation[s] in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program." Much like the policy reviewed in *Wissisik*, Policy 11 is a broad county goal which is intended, and indeed was, implemented through adoption of implementing land use regulations. *See Wissisuk, supra* (plan policies that contain aspirational language regarding goals to be implemented through adoption of land use regulations are not mandatory approval criteria for individual permit applications).

Lane County planning staff never did divide the County into regions, as anticipated by this policy. However, the Big Game Habitat was inventoried, and the County did eventually adopt that inventory, by adopting maps of the Major/Peripheral/and Impacted Big Game Habitat categories. *See Save TV Butte v. Lane County*, ___ Or LUBA ___ (LUBA No. 2017-031, January 8, 2018) slip op. 27 ("the county erroneously determined that its adopted inventory of big game habitat is not 'an acknowledged list of significant resources * * * for which the requirements of Goal 5 have been completed at the time the PAPA [in that case was] initiated,' within the meaning of OAR 660-023-0180(5)(b)(D)."). Lane County's regulations were subsequently acknowledged as in compliance with Goal 4 and Goal 5. As explained in LUBA's decision in *Save TV Butte, supra*, Lane County adopted an F-1 zone where dwellings were prohibited. LC 16.210. It also adopted a minimum parcel size of 80 acres in the F-2 zone. LC 16.211(10). Further, as discussed below, conditions to allowing additional dwellings included requirements to restrict future development. See LC 16.211(5)(e)[2]; OAR 660-006-0027(6)(c).[3]

[2] LC 16.211(5)(e) provides: "Prior to land use clearance of a building permit for the dwelling, when the lot or parcel on which the dwelling will be located is part of a tract, the remaining

For the reasons discussed above, Policy 11 does not apply directly as mandatory approval criteria to the subject forest template dwelling application.

C. OAR implementing Goal 4 supports interpretation

The Oregon Administrative Rules Implementing Goal 4 (OAR 660-006-000 et seq.) support the foregoing interpretation of RCP Policy 11 as well as the interpretation of the significance OAR 660-006-0025(6), set forth above. Goal 4 (Forest Lands) is designed to protect forest lands. However, the Goal recognizes the countering interests, and state statute, the Goal and implementing regulations provide for the allowance of dwellings on forest lands in some instances. OAR 660-006-0025 set forth uses authorized on forest lands generally. It begins with five general categories of uses that are allowed on forest lands. See OAR 660-006-0025(1)(a)-(e). Subsection (d) lists dwellings authorized by ORS 215.705 to 215.755 as authorized uses in the Forest zones. ORS 215.750 is the statute that authorizes counties to adopt regulations that allow for the approval of forest template dwellings on forest lands. OAR 660-006-0025, however, does not provide the criteria for approval of template dwellings. Those criteria are found in OAR 660-006-0027 (Dwellings in Forest Zones). Subsection (3) of that rule provides that a governing body or its designate "may" allow template dwellings under certain prescribed circumstances and subject to specific criteria set forth therein.

D. Legislative actions support interpretation of Policy 11

The 1993 legislature adopted HB 3661. That bill allowed several different types of dwellings on forest land, including lot of record dwellings, large tract dwellings, and template dwellings. The large tract dwellings, in western Oregon, could be allowed as

---

portions of the tract shall be consolidated into a single lot or parcel and a deed restriction using the form provided in OAR 660-06-027(7), 'Exhibit A,' shall be completed and recorded with Lane County Deeds and Records. The covenants, conditions and restrictions in the deed restriction:

(i) Shall be irrevocable, unless a statement of release is signed by the Director;
(ii) May be enforced by the Department of Land Conservation and Development or by Lane County;
(iii) Shall, together with a map or other record depicting any tract that does not qualify for a dwelling, be maintained in the Department records and be readily available to the public; and
(iv) The failure to follow the requirements of LC 16.211(5)(e) above shall not affect the validity of the transfer of property or the legal remedies available to the buyers of the property that is the subject of the covenants, conditions and restrictions required by LC 16.211(5)(e) above."

[3] OAR 660-006-0027(6)(c) provides: "A proposed 'template' dwelling under this rule is not allowed: (c) Unless no dwellings are allowed on other lots or parcels that make up the tract and deed restrictions established under section (7) of this rule for the other lots or parcels that make up the tract are met."

long as the subject "tract" was larger than 160 contiguous acres. ORS 215.740. The lot of record dwelling could be approved on a lot that had been in the same ownership since 1985. ORS 215.705. The template dwelling approval was based on the amount of development (dwellings and parcels) within a 160-acre square template. ORS 215.750. The minimum required amount of development for the template dwellings depended on the quality of the soils of the subject lot or parcel—the higher the quality of soils, the more parcels and dwellings were required to fall within the template.

Subsection (1)(f) of ORS 215.705 (lot of record dwelling) required the siting of a dwelling to consider the impact of the proposed dwelling on the density standards upon which the big game habitat acknowledged inventory was based.[4] The other newly authorized forest dwellings, including the template dwelling, did not require the same showing. If the legislature had intended to impost the same requirement for forest template dwellings, it would have done so. The Lane Code provisions allowing for template dwellings merely adopted virtually *ver batim*, the statute and OAR language. Those statutes and rules considered the impacts to Big Game and determined that Goal 4 was complied with.

The rationale of the template dwellings was to cluster dwellings in a way that would leave remaining lands vacant. To require that template dwellings comply with a 40 or 80 dwelling per acre standard is completely contradictory to that rationale.

This assignment of error is denied.

8. The challenged decision violates RCP Goal 7, Policy 2.

Appellant asserts that RCP Goal 7, Policies 1, 2, and 3.[5] Policy 2 requires that development be commensurate with the type and degree of any natural hazard present and that appropriate safeguards be assured. Appellant alleges that a portion of the property appears on a DOGAMI hazards map for high landslide susceptibility. The DOGAMI map shows only a small portion of the property in the northeast corner colored

[4] ORS 215.705(1)(f) requires the following demonstration: "When the lot or parcel on which the dwelling will be sited lies within an area designated in an acknowledged comprehensive plan as habitat of big game, the siting of the dwelling shall be consistent with the limitations on density upon which the acknowledged comprehensive plan and land use regulations intended to protect the habitat are based."

[5] RCP Goal 7, Policies 1, 2 and 3 provide:
"1. The Natural Hazards Inventory, as contained in the 1982 Natural Hazards Working Paper and associated materials, shall be used as a guide for general land use decisions. Specific land use decisions shall be based upon inventory and upon on-site or other evaluation as appropriate.
2. Development shall be commensurate with the type and degree of any natural hazards(s) present and appropriate safeguards against flooding, ponding, landslides, land slippage, erosion or other natural hazards applicable shall be assured. For purposes of evaluation and in the absence of any specific proposal, the provisions of the Oregon State Building Code shall be assumed to the sole means of safeguard against natural hazards.
3. When extensive or drastic safeguards must be employed in conjunction with development proposals, the immediate and ultimate impact, (including financial and economic considerations) of such safeguards on the environment and the public shall be considered."

orange, with the remainder of the property colored yellow. The DOGAMI map submitted in the record does not contain a legend, so it is not clear what hazards the map intends to identify. If the orange mapping indicates a higher risk of landslide, the Hearings Official does not see that such evidence triggers the application of Policy 2. The colored area is in the northeast corner of the property, and based on contour evidence in the record, the proposed dwelling site in the opposite direction of where any landslide would occur. Further, appellants do not assert that the DOGAMI map has in any way been adopted by the County as a means of identifying natural hazards for purposes of RCP Goal 7.

RCP Goal 7, Policy 1 adopts a natural hazard inventory, as contained in the 1982 Natural Hazards Working Paper. Although that Working Paper was not submitted into the record, it was adopted by Policy 1, and therefore, the Hearings Official determines that she may take official notice of it. The development suitability maps and development constraint maps in the subarea plans constitute the natural hazard inventory for purposes of RCP Goal 7. See Natural Hazards Working Paper at 3-4. The Hearings Official concludes that the record does not support a conclusion that any natural hazards on the property, if any, present a risk to the proposed development that require the imposition of safeguards, as required by Policy 2.

This assignment of error is denied.

Conclusion

The conditions of approval attached to the Planning Director's reconsidered decision referenced some of the inapplicable code provisions. Accordingly, attached as Exhibit A to this appeal decision is a list of the conditions of approval, as modified herein.

The application complies with the applicable approval criteria in LC 16.211(5) and the siting standards set forth in LC 16.211(8).

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

EXHIBIT A

CONDITIONS OF APPROVAL

509-PA18-05913

All of the following conditions are binding on the applicant or successive owner(s) of the parcel or successive applicant(s) who exercise this approval action.

1. Approval of **509-PA18-05913** is valid for a four-year period from the date of final approval unless an extension is granted in accordance with Lane Code Chapter 14 provisions.

   An extension may be granted if:

   a. An applicant makes a written request with the required fee and the request complies with LC 14.090(6) and (7);

   b. The request is submitted prior to the expiration of the approval period; and

   c. The request is submitted not sooner than six months before the expiration date.

Approval of an extension granted under this rule is an administrative decision, is not a land use decision as described in ORS 197.015 and is not subject to appeal as a land use decision.

The following conditions shall be met prior to the expiration date in condition #1 and prior to approval of a building or placement permit for a dwelling, septic system, or accessory structure. Failure to meet conditions of approval as specified prior to the expiration date, and if no extension has been granted prior to that date, shall invalidate this approval, and the development rights conditionally allowed by this planning action shall cease:

2. Complete, have notarized, and record the enclosed *Farm and Forest Management Agreement* (Exhibit I) with an attached "Exhibit A" depicting the legal description of the property (which must be recorded together with the Agreement at the Lane County Deeds and Records office).

3. Submit a stocking survey report for the subject parcel prepared by a qualified forester to the Lane County Assessor. The applicant shall provide a copy of the stocking survey to Land Management Division with evidence of receipt from the Assessor. Also see **Condition 19.**

4. Private access easements serving the subject property must comply with Lane Code 15.055 and specifically provide for required turnarounds.

5. Construct the access road and driveway to the minimum standards of Lane Code 16.211(8)(e) and the applicable standards of Lane Code Chapter 15. For roads greater than 8% slope, road and drainage plans shall be prepared by an engineer licensed by the State of Oregon or certified for compliance with the rural fire protection district providing fire protection to the subject property.

6. Submit written verification from South Lane County Fire & Rescue, or written certification from an Oregon Registered Professional Engineer, stating that the route of access for firefighting equipment from the fire station to the building site, across public roads, bridges, private roads, private access easements, and driveways comply with the construction standards in Lane Code 16.211(8)(e) and fire district standards.

7. Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(8)(c). These fuel breaks shall be maintained in perpetuity. The minimum primary safety zone surrounding the proposed dwelling shall be at least 30 feet plus the additional 50 feet of Safety Zone Down Slope, as applicable. The minimum secondary fuel breaks surrounding the primary safety zone shall be at least 100 feet on lands owned or controlled by the owner.

8. The dwelling must be located at least 30 feet away from any ravine, ridge or slope greater than 40 percent.

9. Provide evidence to the Planning Director that the domestic water supply is from a source authorized in accordance with the Water Resources Department's administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rule (OAR Chapter 629). This can be satisfied by providing a copy of the Well Log for the property. The well must comply with the groundwater appropriation standards of ORS 537.545(1)(d) and have a sustained yield of five gallons per minute for a duration of not less than five hours of continuous pumping as required by Lane Manual 9.160.

10. Upon completion of conditions #2 through #9, the applicant shall complete and submit a Land Use Application form to Verify Compliance with Conditions of Approval, with the required processing fee. Attach to this form a copy of:

    - Signed, notarized, and recorded *Farm Use and Forest Management Agreement* and description of property, along with all required exhibits;
    - Forest stocking survey with evidence of receipt from the County Assessor;
    - Recorded access easement demonstrating legal access to the property consistent with Lane Code 15.055;
    - Well log or well constructor's report;
    - Verification letter from South Lane County Fire & Rescue, or written certification from an Oregon Registered Professional Engineer, regarding adequacy of access route; and
    - Approved Site Development Plan, or a plot plan that conforms with the approved plans, drawn to scale, including the same information, and meeting other minimum standards of the Land Management Division. These final plans shall include the primary and secondary fuel breaks surrounding the proposed dwelling as required by Lane Code 16.211(6)(c) and this approval.

11. As part of the Verification of Conditions process, the access road, driveway and fuel breaks must be field inspected by Planning Office staff to verify that requirements stated in conditions #5 and #7 have been met. Failure to meet minimum fuel break and/or driveway and/or grade standards as in LC 16.211(8)(c) and (e) upon first inspection may require an additional application for fuel break and road inspection, with the applicable fee, at the discretion of the Planning Director.

12. Upon completion of Verification of Conditions, submit a building permit to verify that the construction of the dwelling meets current Oregon Structural Specialty Code application for the proposed dwelling, with the appropriate deposit fee. Contact the Building Program at 541-682-4651 and the On-Site Wastewater Program at 541-682-3754 with questions regarding building and sanitation requirements.

13. In the building or placement permit application submittal, the applicant shall submit a site plan demonstrating that the parcel configuration, and the proposed dwelling, driveway, and septic system, are located consistent with the approved site development plan, unless modification is authorized by the Planning Director. Modification to the approved site plan may require an application for Modification of Conditions with the required processing fee, at the discretion of the Planning Director.

14. As per Oregon Department of Aviation Findings: Within five days after the structure reaches its greatest height, the proponent is required to file an FAA form 7460-2, Actual Construction notification, at the OE/AAA website (http://oeaaa.faa.gov). This actual construction notification will be the source document detailing the site location, site elevation, structure height, and date structure was built for the FAA to map the structure on aeronautical charts and update the national obstruction database.

The following condition shall be met prior to approval for legal occupancy of the proposed dwelling.

15. The proposed dwelling shall meet the following requirements, to be verified by the Lane County Building Official:

    a. All buildings or structures with chimneys shall have a spark arrester on all chimneys.

    b. Wood shingles, wood shakes, or shingles made from wood products for use as roof covering materials for dwellings and accessory structures are prohibited. Such use is a violation of ORS 215.730(1)(b)(A) and subject to civil penalties as contained in Chapter 5, Lane Code. This provision applies to new roofs, reinstallation of roofs, and repair of roofs.

    (Please contact a Lane County plans examiner at 541-682-4651 with questions about building code requirements).

16. The applicant shall provide documentation of Oregon Department of Aviation (ODA) concurrence for the proposed dwelling that is current as of the date of building permit issuance and current as of the date of final occupancy approval. A new letter of concurrence will be required if the proposed dwelling is not located as shown in Exhibit C, is taller than 30 feet, or if building permits or a certificate of occupancy is issued after the January 3, 2021 expiration for the July 3, 2019, determination. Except as otherwise addressed in the determination letter, all development must comply with the Airport Safety Combining Zone (/AS) provisions of LC 16.246 as applicable.

The following conditions are provided for informational purposes and shall be fulfilled as they apply to the proposed development:

17. Areas of the subject property, according to DOGAMI, are designated as "High" landslide susceptibility. This designation may require a geotech report with submittal of a building permit. Please contact the Lane County Building Department at 541-682-4651 for more information.

18. Excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose.

19. The applicant is responsible for complying with any applicable local, state, and federal laws.

20. In accordance with Lane Manual 15.515, stormwater runoff from private property must not be directed to the Lane County road right-of-way or into any Lane County drainage facility, including roadside ditches. Ditches adjacent to County roads are designed solely to accommodate stormwater runoff generated by roadways themselves.

21. The approval is valid for four years as stated in condition one. An extension, if sought and granted in compliance with Lane Code Chapter 14, is limited to a single 2-year extension unless State law or Lane Code amendments allow otherwise.

22. The owner shall plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in Department of Forestry administrative rules. It is the owner's responsibility to document that the required tree planting was done in conformance with the criteria of Lane Code 16.211(5)(e). If the Department of Forestry determines that the tract does not meet those requirements and notifies the owner and the Assessor that the land is not being managed as forest land, the Assessor will remove the forest land designation pursuant to ORS 321.359 and impose the additional tax pursuant to ORS 321.372. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry at (541) 935-2283 (in western Lane County); (541) 726-2501 (in eastern Lane County).

23. The following is provided for informational purposes as an Advisory Notice: Section 93.040(1) of the Oregon Revised Statutes requires the following statement to be included in the body of any instrument transferring or contracting to transfer fee title to real property:

> "THIS INSTRUMENT WILL NOT ALLOW USE OF THE PROPERTY DESCRIBED IN THIS INSTRUMENT IN VIOLATION OF APPLICABLE LAND USE LAWS AND REGULATIONS. BEFORE SIGNING OR ACCEPTING THIS INSTRUMENT, THE PERSON ACQUIRING FEE TITLE TO THE PROPERTY SHOULD CHECK WITH THE APPROPRIATE CITY OR COUNTY PLANNING DEPARTMENT TO VERIFY APPROVED USES AND TO DETERMINE ANY LIMITS ON LAWSUITS AGAINST FARMING OR FOREST PRACTICES AS DEFINED IN ORS 30.930."

This Oregon Law disclosure requirement serves a constructive purpose. Approval of a residence for this property is contingent upon compliance with the conditions of the special use permit, and any future owners of the subject property need to understand and adhere to these conditions. This disclosure statement should alert the cautious and potential purchaser to inquire with the Lane County Land Management Division about the conditions of this special use permit.

MEMORANDUM

To: Gary Darnielle, Lane County Hearings Official

From : Rachel Sersiev, Planner

Date: November 7, 2019

Re: Appeal of Application File No. 509-PA19-05298

As staff expressed in their report to the Hearings Official (dated September 19, 2019), Rural Comprehensive Plan (RCP) Goal 7 does not apply directly to a template dwelling approval. Staff's understanding of the approval criteria is that Lane Code 16.211(5) and (8) apply to template dwelling approvals and these code sections do not explicitly require compliance with RCP Goal 7 policies.

According to the policies, a land use decision should use the Natural Hazards Working Paper as a *guide* and be based upon inventory and on-site or other evaluations of hazards. For the purpose of evaluation, the Oregon State Building Code can be the sole means of safeguard against natural hazards.[1]

To the extent that the RCP Goal 7 policies are relevant, it is staff's position that the land use decision process adequately addresses and satisfies these policies without them being explicit approval criteria of the land use decision. Staff did consult with County Counsel regarding this position and Counsel concurred that the Goal 7 policies should not be applied as approval criteria.

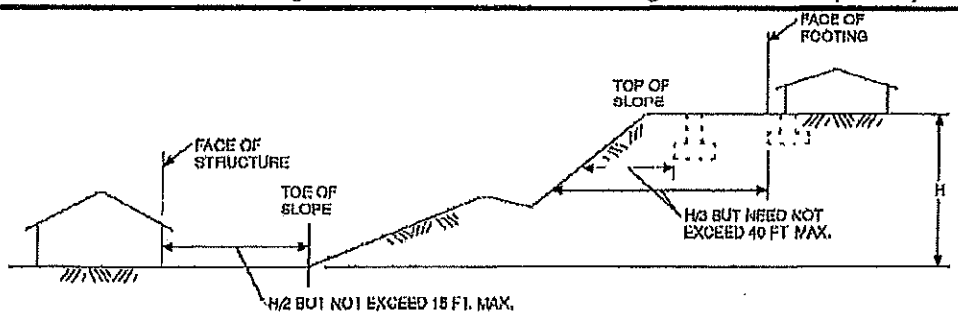
Specific to department file No. 509-PA19-05298, the land use decision considers Department of Oregon Geology and Mineral Industries (DOGAMI) inventory of landslide hazards. The applicant also provided a site specific survey completed by a Professional Registered Land Surveyor demonstrating the slopes of the subject property. Based on the inventory and the site specific survey, staff notified the applicant through an informational condition of approval that a geotechnical engineer's report may be necessary when a building permit for the structure is sought. At the time of building permit, the decision to require a geotechnical report is based on clear and objective standards regarding slopes that are located in the Oregon State Building Code.

The Oregon Structural Specialty Code (OSSC) provides the authority to assess the soils and slopes at the building site, and to require a geotechnical report if necessary. **Attachment 3** of staff's report to the Hearings Official provides guidance regarding when a geotechnical report is required in conjunction with building permit submittals.

---

[1]Excerpt from the Lane County Rural Comprehensive Plan:

GOAL SEVEN: AREAS SUBJECT TO NATURAL DIASTERS AND HAZARDS



1. The Natural Hazards Inventory, as contained in the 1982 Natural Hazards Working Paper and associated materials, shall be used as a guide for general land use decisions. Specific land use decisions shall be based upon inventory and upon on-site or other evaluation as appropriate.
2. Development shall be commensurate with the type and degree of any natural hazards(s) present and appropriate safeguards against flooding, ponding, landslides, land slippage, erosion or other natural hazards applicable shall be assured. For purposes of evaluation and in the absence of any specific proposal, the provisions of the Oregon State Building Code shall be assumed to the sole means of safeguard against natural hazards.

NOTICE TO APPLICANT
Residential (1 & 2 Family Dwellings and Accessory Structures)

The Lane County Building Division will be reviewing residential structural permit applications to more closely assess geotechnical hazards. This is important to better protect the homes we build, helping the community to be more resilient to earthquakes.

A geotechnical or soils report (OSSC Section 1803.6) from a qualified design professional licensed in Oregon will be required if the site for the proposed development:

1. Has ascending or descending slopes that do NOT meet the foundation clearance of Section R403.1.9 and Figure R403.1.9.1 of the 2017 Oregon Residential Specialty Code;

oot = 304.8 mm.

FIGURE R403.1.9.1
FOUNDATION CLEARANCE FROM SLOPES

2. *Is within a soils hazard area: site soils are susceptible to liquefaction; or site prone to landslides. Below is an internet link that will connect to the DOGAMI website where one can find information on the specific site conditions:
   www.oregongeology.org/hazvu
   Landslide: High and Very High will require a geotechnical report.
   Liquefaction: Moderate or High will require a geotechnical report
3. *Has a building site with a 20% (2:10 or 11.3 degrees) or greater slope prior to excavation.
4. Or, Is required by Lane County Land Use Planning to have a special foundation system.

All site plans submitted will be required to show any known fill sites or landslide hazards areas.

The soil report shall address: soil bearing capacity, liquefaction, soil classification, stability for lateral (seismic) loading, slope stability, and recommendations for excavation, structural fill and foundation design.

*Items 2 & 3 above will not be applicable to residential accessory structures less than 1000 square feet and one story in height.

R. R. Baker Road, Springfield, Oregon

Dear Mr. Belknap,
At your request, I am writing to expand on our recommendations for the subject project site dated November 13, 2019. The scope of these supplemental recommendations is limited to issues regarding questions of landslide hazard.

Landslide Hazard Evaluation Process

The recommendations that K & A Engineering, Inc. provided for the subject parcel (dated November 13, 2019) summarize what is termed a "Level I" evaluation of slope stability for the project site(s).[1] Level I evaluations typically include:

- **Literature Search:** a review of available reports and maps available in the literature for the site describing geology and geologic hazards. We consulted geologic maps of the area, DOGAMI hazard maps, and aerial photography of the site and surrounding areas.
- **Site Review:** Level I evaluations include a visual site inspection. We visited the site and spent time looking for visual indicators that are always present in areas of active slope movement including tension cracks, fresh scarps, sloughing, depositional areas, and ponding. We also inspected road cuts to determine the general nature and depth of subsurface conditions in the area.
- **Preliminary Stability Evaluation:** Based on our field observations and available topographic data we made an evaluation of the general nature of slope stability of the area. There are other parameters that affect slope stability in addition ground slope, such as soil shear strength, soil depth, groundwater, root strength, just to name a few. Basing decisions of stability on ground slope gradient alone is bad science.

Recommendations for further investigation and a more detailed evaluation of slope stability are made based on the findings of the Level I evaluation. In this case, we recommended a Level II geotechnical investigation for the subject project site because of their location within or near the DOGAMI high-hazard mapping. The Level II investigation is a detailed study requiring geotechnical borings, laboratory

[1] The Level I analysis is in the context of a three-level approach to geotechnical evaluation which is current standard of practice. As an example, the Eugene city code requires such a process which is detailed in section 9.6710 "Geological and Geotechnical Analysis."

testing, calculation of factors of safety, etc. and will incorporate the specific nature of the proposed structure, roadway grading, and general site grading plans.

This methodology is a logical approach to ensure that the hazard is carefully and thoroughly understood in an efficient and cost-effective manner.

K & A Engineering, Inc. provided a first step in the process of a rational methodology that is accepted as the standard of care by qualified geotechnical engineers for similar projects. In the long run, following this process will result in a complete, detailed, and rational evaluation of slope stability that meets the needs of all parties involved.

Our level I review is appropriate for undeveloped areas and its use in the determination of the likely nature of slope stability in the current condition and if further study is needed for ground disturbing development. The whole point of the Level review was to determine if the proposed action would significantly heighten landslide hazard and require extreme measures for mitigation.

Road Access

Our understanding is that a question has arisen as to landslide hazards attributed or related to road access to the project site, including the primary access road, R. R. Baker Road, and the proposed driveway extending from R. R. Baker Road to the proposed building site.

R. R. Baker Road

As noted in our letter to the owners regarding tax lot 507 dated October 31, 2019, we observed areas of localized soil creep on the south side of the R. R. Baker Road which are most likely the result of over-steepened road cut embankments. This is a common condition observed for many low volume roads traversing sloped terrain and, in this case, slope movement impact is typically limited to the area from the road ditch to the top of the cut embankment. Furthermore, we note that mapping indicates that the R. R. Baker Road had existed at least since the 1950's and has not been the source of or impacted by large-scale deep-seated landslides or debris flows. *The instability noted is limited to the roadway cut embankment and the hazard is limited to routine road maintenance. There is no evidence that this localized creep presents a hazard that would impact areas outside of the road prism.*

Driveway to Proposed Building Site

Survey sketches for project site development indicate include the location of a proposed access driveway starting at R. R. Baker Road and trending northwest to the proposed building pad. The proposed driveway essentially falls "normal" to the slope – in other words the road does not parallel contours and therefore requires a minimum number of cuts and fills. Cut and fill heights are furthermore limited by the narrow, single-lane width of the driveway. *Based on our experience with the design and construction of low volume roads[2] it is our opinion that the proposed driveway location does not inherently present a significant landslide hazard.*

We recommend that a qualified geotechnical engineer provide quality assurance inspection of driveway access road construction to provide on-site recommendations for road construction.

Thank you for the opportunity to be of service. Please call me if you have any questions.

Sincerely,

Nimpkish, LLC Template Test Dwelling Special Use Permit
Tax Lots 506 and 507, Tax Map 18-02-11; Lane County
R. R. Baker Road, Springfield, Oregon

Dear Mr. Belknap,
At your request, we have reviewed comments from appellants in the subject matter and are providing a written response. These comments include those made by Mr. Sean Malone (representing LandWatch Lane County) dated November 21, 2019 and Mr. Andrew Mulkey (representing 1000 Friends of Oregon).

The scope of our review and response is limited to landslide hazard.

Response to Mr. Andrew Mulkey Comments
The recommendations that K & A Engineering, Inc. provided for the subject parcels (dated October 31, 2019 for tax lot 507 and November 13, 2019 for tax lot 506) summarize what is termed a "Level I" evaluation of slope stability for the project site(s). Level I evaluations typically include:

- **Literature Search:** a review of available reports and maps available in the literature for the site describing geology and geologic hazards. We consulted geologic maps of the area, DOGAMI hazard maps, and aerial photography of the site and surrounding areas.
- **Site Review:** Level I evaluations include a visual site inspection. We visited the site and spent time looking for visual indicators that are always present in areas of active slope movement including tension cracks, fresh scarps, sloughing, depositional areas, and ponding. We also inspected road cuts to determine the general nature and depth of subsurface conditions in the area.
- **Preliminary Stability Evaluation:** Based on our field observations and available topographic data we made an evaluation of the general nature of slope stability of the area. There are other parameters that affect slope stability in addition ground slope, such as soil shear strength, soil depth, groundwater, root strength, just to name a few. Basing decisions of stability on ground slope gradient alone is bad science.

Recommendations for further investigation and a more detailed evaluation of slope stability are made based on the findings of the Level I evaluation. In this case, we recommended a Level II geotechnical investigation for these parcels because of their location within or near the DOGAMI high-hazard mapping. The Level II investigation is a detailed study requiring geotechnical borings, laboratory testing, calculation of factors of safety, etc. and will incorporate the specific nature of the proposed structure and grading plans.

This methodology is a logical approach to ensure that the hazard is carefully and thoroughly understood in an efficient and cost-effective manner.

Thus, it is untrue that K & A Engineering, Inc. failed in the evaluation of slope stability. What we did was provide a first step in the process of a rational methodology that is accepted as the standard of care by qualified geotechnical engineers for similar projects. In the long run, following this process will result in a complete, detailed, and rational evaluation of slope stability that meets the needs of all parties involved.

Response to Mr. Sean Malone Comments

- **Substantial Evidence:** Malone, like many others, seems to believe that "substantial evidence" consists of volumes of written documentation. Substantial evidence can be and most often should be very simple and brief in scope.
- **Landslide Scarps:** Scarp sizes, slope gradients, and shapes can vary widely depending on the nature of the slope movement and the age of the slope movement. Steep scarps erode and weather over time, resulting in less-steep slopes and more rounded features. Very old scarps can indeed be difficult to define unless they include zones of harder rock that weather and degrade more slowly than surrounding unconsolidated soil deposits. There is nothing "equivocal" about stating that a location is within or near to a scarp because, as is the case here for very old slope movements, weathering and natural transport of materials downhill eventually result in reduced slope angles.
- **Recent or Ancient:** By recent we mean active landslides or landslides that occurred whereby fresh evidence of movement is visible.
- **"Near the Road:"** The actual proposed length is less than 200-feet, not 300-feet. "Near" is a subjective opinion. This is a convoluted and irrational paragraph that morphs from "near the road" to turnout construction, the land use code, and the feared "chimney effect" – none of which have much, if anything, to do with landslide hazard.
- **"Extensive or Drastic Safeguards:"** Mr. Malone's conclusion is that "it is irrelevant whether any extensive or drastic safeguards may or may not be called for because the issue is whether or not a geotechnical report/evaluation is needed..." The fact is that we are moving forward with a *rational process* of geotechnical evaluation and investigation, with more detailed studies of the impact of development (such as grading, drainage, and foundation loads) required as a result of our Level I evaluation. Making detailed studies at this point makes no sense and does a disservice to the process because it forces limiting assumptions that may or may not exist when the serious details of actual development are determined which usually include things like an actual grading plans, actual foundations (location, depth, type, loads, etc.), real changes to drainage patterns, etc.

  Our level I review is appropriate for undeveloped areas and its use in the determination of the likely nature of slope stability in the current condition and if further study is needed for ground

disturbing development. The whole point of the Level I review was to determine of the proposed action would significantly heighten landslide hazard and require extreme measures for mitigation. Mr. Malone obfuscates the analysis process.

Thank you for the opportunity to be of service. Please call me if you have any questions.

Sincerely,

Nimpkish, LLC
Gray and Dorotea Goodman
86690 R. R. Baker Road
Springfield, OR 97478

Subject: Geotechnical Summary of the Nature of Landslide Hazard
Proposed Residential Development
Tax Lot 507 (a.k.a. Parcel 2), Tax Map 18-02-11; Lane County
R. R. Baker Road, Springfield, Oregon

Dear Mr. and Mrs. Goodman,
Our understanding is that a small portion of the project site, located at the southwest corner near the road, is proposed for development as a single-family residence. At your request, we have reviewed the subject project site for the purpose of making a preliminary determination of the nature of landslide hazard and to present practical recommendations for site development. Our services, to date, have included:

- A visual inspection of the subject 10-acre site,
- Review of landslide hazards mapped for the site by the Department of Geology and Minerals Industries and Geology,
- Review of mapped geology and faulting of the general area,
- Review of current and historic aerial photography of the area, and
- These recommendations.

To summarize our review:

- The project site is located within, or near, the south end of the upper scarp zone of a very large, ancient landslide that moved soils and rock to the west.
- There are no visible indications of recent slope movement on the subject project site or on undisturbed areas on adjacent properties. The DOGAMI mapping of landsliding in this area indicates the approximate extent of the ancient landslide but does not include mapping of any active landslide activity.
- Outside of the project site, we observed areas of localized soil creep on the south side of the R. R. Baker Road which are most likely the result of over-steepened road cut embankments.
- The ground surface gradient at the proposed area for homesite development is low, in the range of approximately 10 to 15-percent. Based on our extensive experience in geotechnical engineering for similar projects in similar areas, the existing or future hazard of landsliding is low and manageable for developments similar to what is being proposed in this geologic setting.

Therefore, it is my professional opinion that there is not a significant landslide hazard in the proposed homesite development area, and extensive or drastic safeguards are NOT needed to ensure safety on or off the property with respect to hazards associated with slope movement.

To verify subsurface ground conditions, confirm the low probability of any slope movement in the proposed development area, and to ensure that development will be designed and constructed in a manner that will not induce any geotechnical hazards, *we recommend that a qualified professional geotechnical engineer make a geotechnical investigation of the home site prior to foundation design and construction*. This investigation should include:

- Geotechnical probing and/or borings which adequately characterize subsurface conditions,
- A written Report that summarizes site conditions and makes recommendations for:
  - The current nature of slope stability,
  - Suitable foundation types and load capacity,
  - Drainage, and
  - General earthwork and site construction methods.

This geotechnical investigation should be a requirement for obtaining a building permit to construct the proposed residence.

Thank you for the opportunity to be of service. Please call me if you have any questions.

Sincerely,

EXPIRES: DECEMBER 31, 2020

CASCADE TITLE CO.

Title Vesting

Methods of Holding Title in Oregon

Tenancy by the Entirety

Tenancy by the entirety is a form of ownership recognized in Oregon that is available only to legally married husband and wife. The law sees the husband and wife as one person. Therefore, they do not own one-half interests in the property, but each own the entire property. When either spouse dies, the survivor doesn't inherit the decedent's interest, but continues to own the entire property. A tenant cannot will his interest in the property to someone else. If a married couple divorces, they would then automatically hold title as tenants in common, unless their divorce decree stated otherwise.

Tenancy in Common

A tenancy in common is created when two or more people each have an undivided interest in the same property. To have an undivided interest is to be a partial owner of the whole property, not the sole owner of a separate piece of the property. Co-owners have equal rights of possession, but might or might not have equal interests (percentages of ownership. Tenancy in common does not include rights of survivorship. Co-owners can sell or otherwise dispose of their share of the property without regard to the other co-owners.

Not as Tenants in Common, But With Rights of Survivorship

As the wording implies, this creates a survivorship between the vested owners. In the event of one owners death, the property vests in the surviving owner.

Trust*

A trust is an arrangement whereby legal title to the property is transferred by the grantor to a person called a trustee, to be held and managed by that person for the benefit of the people specified in the trust agreement, called beneficiaries.

Partnership*

A partnership is an association of two or more persons who can carry on business for profit as co-owners, as governed by the Uniform Partnership Act. A partnership may hold title to real property in the name of the partnership.

Corporation*

A corporation is a legal entity, created under state law, consisting of one or more shareholders but regarded under law as having an existence and personality separate from such shareholders.

Assumed Business Name*

The term "assumed business name" means one or more words or numerals (or a combination of words or numerals) that a person uses to identify a business or conducts a business under, where the person does not conspicuously disclose the "real and true name" (surname and initials) or each person who is carrying on or conducting the business. If property is held in this manner it must state both the party doing business and the entity, ie, John Q. Smith dba Smith and Sons Realty.

Limited Liability Company (LLC)*

This form of ownership is a legal entity and is similar to both the corporation and the partnership. The operating agreement will determine how the LLC functions and is taxed. Like the corporation its existence is separate from its owners.

Remember: How title is vested has important legal consequences. You may wish to consult an attorney to determine the most advantageous form of ownership for your particular situation.

*In cases of corporate, partnership, LLC or trust ownership, required documents may include corporate articles and bylaws, partnership agreements, LLC operating agreement and trust agreements and/or certificates.

CERTIFICATE OF FILING AND SERVICE

I hereby certify that on October 27, 2020, I filed the original INTERVENOR-RESPONDENT'S RESPONSE TO PETITIONER'S PETITION FOR REVIEW and 4 copies with the Land Use Board of Appeals at the address given below, by certified return receipt mail, deposited in the United States Post Office at Eugene, Oregon, to:

This is to certify that I, Amber Wolles, mailed Notification of

NOTICE OF H.O. DECISION

To the person(s) shown on the attached copy of mailing label &/or attached letter & delivered said information to the authorized for the US Post Office in Springfield, Oregon on

Date Mailed: FEB 06 2020

End of Comment Period:

Appeal Deadline: FEB 18 2020

Hearing Date:

AMBER WOLLES

NOTE: Surrounding property owners listed are "the owners of record of all property on the most recent property tax assessment rolls" on RLID as per Lane Code 14.060(4)(a)(iv). If a tax lot appears on the notice list & there are no corresponding addresses than the tax records have not been updated; therefore, these property owners were not notified.

LANE COUNTY HEARINGS OFFICIAL
APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On April 18, 2019, a request to establish a dwelling in the Impacted Forest Lands (F–2) zone was submitted to Lane County Land Management Division by James Belknap, an agent for Nimpkish, LLC. The application was deemed complete on May 17, 2017. On August 2, 2019, the Director issued a determination that the subject property complied with the applicable standards and criteria for a Forest Template Dwelling pursuant to LC 16.211(5) and (8). Notice of the determination was mailed to surrounding property owners. On August 14, 2019, a timely appeal was submitted by LandWatch Lane County.

Parties of Record

Nimpkish LLC	LandWatch Lane County	Lauri Segel–Vaccher
James Belknap	Michael Farthing	Sean Malone
1000 Friends of Oregon	Andrew Mulkey	

Application History

Hearing Date: September 26, 2019
(Record Held Open Until January 23, 2020)

Decision Date: February 4, 2020

Appeal Deadline

An appeal must be to the Oregon Land Use Board of Appeals within 21 days from the date that this decision becomes final. [ORS 197.830(9)] This decision becomes final after 12 days from the mailing of the decision if no request for reconsideration is made. [LC 14.080(1)(b)]

Statement of Criteria

Lane Code 16.211(5) & (8)

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 507, assessor's map 18–02–11, approximately one–half mile east of the City of Springfield's Urban Growth Boundary. The property is about 10 acres in size, is vacant, and does not have an address. The

subject property is not a part of a tract as the property owner does not own any adjacent property.

The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The property abuts F–2 zoned properties on all sides. The surrounding area can generally be characterized as a mix of forest and low-density, rural residential uses. The property does not contain floodplain, a Class 1 stream, or mapped wetlands but is located within a Major Big Game Range.

2. The property slopes from the north-west corner to the east property boundary, from a mean sea level (MSL) of approximately 1060 feet to 1200 feet MSL determined with Lane County contour data. The County LiDAR data show that slopes range from less than 10% to 40% or more with steep slopes located in the north-west and north-central portion of the subject property. More gentle slopes on the subject property are located in the south-west corner. The property is primarily open pasture with some scattered, low-lying brush and Douglas Fir.

3. Soils data show that the property is composed of two soil types, 107C Philomath silty clay and 113G Ritner cobbly clay loam, which have forestland capability of an estimated 45 and 149 cubic feet per acre per year, respectively. Soil type 107C composes approximately 53% of the subject property. The proposed development site is located on the Philomath soils.

4. The Applicant has is required to apply the 3–parcel template test required by Lane Code 16.211(5)(c)(i)(aa). The following table documents seven parcels relied upon by the Applicant to satisfy Lane Code 16.211(5)(c)(i)(aa).

Count	Assessor's Map	Tax Lot	Date of Creation	Documentation / Deed / LLV / Partition
1	18-02-11	600	1982	Parcel 1 of M43-81
2*	18-02-11	601	1982	Parcel 2 of M43-81
3*	18-02-12	201	1909	Final Legal Lot Verification 509-PA14-05513
4	18-02-12	303	1992	Parcel 1 of 92-P0221
5	18-02-12	302	1992	Parcel 2 of 92-P0221
6*	18-02-11	100	1953	460/235
7	18-02-10	100	1941	222/81

5. Lane Code 16.211(5)(c)(i)(bb) requires that at least three dwellings existed on January 1, 1993, and continue to exist on lots located within a 160 acre square centered on the subject property. The Applicant has relied upon the following dwellings/tax lots:

Count	Assessor's Map	Tax Lot	Date of Dwelling on Property
1	18-02-12	201	1910; RLID
2	18-02-11	601	1982/1999; Verification of Replacement Rights 509-PA98-5159
3	18-02-11	100	1958/2001; Verification of Replacement Rights 509-PA01-05596

6. The properties surrounding the subject property to the north and west do not contain any dwellings; although some of those properties have conditional approval for dwellings. Tax Lot 501, to the east of the subject property, and Tax Lot 600, across R.R. Baker Road to the south, contain the nearest existing dwellings. These dwellings are approximately 460 and 880 feet from the proposed home site.

7. The nearest public road is Wallace Creek Road, located to the south of the subject property. The subject property is proposed to take access from R.R. Baker Road, a private road adjacent to the subject property. The proposed homesite is approximately 189 feet from R.R. Baker Road and will be accessed by an existing spur road that will be improved to serve as the dwelling's driveway.

   R.R. Baker Road currently serves more than one dwelling and thus the portion of this road from Wallace Creek Road to the subject property must meet County standards. The Applicant's access site plan shows R.R. Baker Road as having a easement width of 40 feet. The application indicates that the road has a travel width that varies between 16 and 18 feet. Further, the Applicant's site plan shows the proposed driveway from R.R. Baker Road to the homesites as having a 12–foot width. The Applicant has access to the road via a March 21, 2019 easement (#2019-010337).

   The portion of R.R. Baker Road from Wallace Creek to the subject property must have nine turnarounds given the standard of LC 16.211(8)(e)(ii) and the road's length. Photographs of the turnaround points as they are located on the Applicant's site plan, given the topography and width of the road, indicate that it is feasible that the road can be improved to meet the above standards. These improvements will be accomplished by Hendrickson Well Drilling, a 25–year old company that does road excavation, site preparation, land clearing, general contracting and well drilling. The owner of the company has reviewed the plans for the widening of R.R. Baker Road, its improved road surface, and the construction of the turnarounds and has stated that his company if prepared to complete the reconstruction of the road. The record includes photographs of the road construction equipment used by the company.

Slopes for the proposed driveway vary between zero and 14 percent. The driveway slopes are indicated on the Applicant's site plan and are stamped by a registered professional land surveyor, David J. Collier. The Applicant also provides a letter from the Pleasant Hill Goshen Fire and Rescue that provides preliminary verification of compliance regarding access to the subject property.

There are several existing culverts that provide drainage for R.R. Baker Road as presently constructed. Two new culverts are proposed, one where R.R. Baker Road meets the proposed driveway and another along the proposed driveway. These culverts must be constructed to meet the Road Fire Safety Design requirements of LC 16.211(8)(e).

8. Based upon contour maps, the homesite is located at least 30 feet from a ravine ridge or slope greater than 40%. The proposed homesite is located on the Philomath soil, which is the soil type with a lowest capability of the soils on the subject property. The homesite is located in an area already clear of timber and developed with a roadway that will be improved to meet driveway standards.

9. The record contains an index of well logs for the township, range, and section within which the subject property lies. The well log for tax lot 506 shows a capacity of eight gallons per minute; the well logs for two wells on tax lot 501 show capacity of 3 and 5 gallons per minute, respectively; and well lots for two wells on tax lot 404 show a capacity of 1.5 and 2.6 gallons per minute. The well log for tax lot 600 shows a capacity of 5 gallons per minute. This data is relevant to LC 16.211(8)(d).

10. The subject property is located within the boundaries of the Pleasant Hill Rural Fire Protection District. The Applicant provides a letter (d. 5/14/2019) from the Fire Protection District that confirms service to the R.R. Baker Road area. Specifically, the review pertains to Map 18–02–11 Tax Lots 501 and 506, which were the tax lot numbers associated with the land that is now Tax Lot 507, the subject property.

A letter in the record from the Pleasant Hill Rural Fire Protection District confirms that the subject property will be serviced by the District and a list of the fire–fighting equipment that the District has access to and would use to fight a fire on the property.[1] The Applicant also provides information regarding the nearest fire station at 36745 Jasper–Lowell Road, approximately 2.5 miles from the subject property. The way of access from the fire station to the subject property involves paved County roads and R.R. Baker Road. Fire Chief Andrew Smith, Pleasant Hill Goshen Fire and Rescue Department took a site view of R.R. Baker Road and the driveway of the subject property on December 6, 2019. Chief Smith had previously taken a site view of the road in regard to an earlier forest template dwelling application regarding tax lot 506. The Chief reviewed updated proposals

[1] Three Type 1Structure Firefighting Engines, three Type 1 Water Tenders, and one rescue vehicle.

for R.R. Baker Road improvements, which included nine turnarounds, and noted that the grade for the road and the proposed driveway was sufficient for Fire Department access. The Chief stated that the proposed defensible space around the proposed homesite, as depicted on the Applicant's site plan, would greatly reduce or eliminate the risk factors of chimney draw effect.

11. The proposed development site accounts for the required primary and secondary safety zones surrounding the dwelling. The primary safety zone is proposed as 30 feet on the east side of the home site. West of the home site, there is a 17% down slope which requires an additional 75 feet of primary safety zone down slope. This requirement is depicted on the applicant's site plan with an 80–foot primary fire break on the west side of the homesite. The primary safety zone with the additional down slope fit entirely within the boundaries of the subject property. Surrounding the primary safety zone will be a secondary safety zone of 100 feet in all directions on property owned or controlled by the owner. The secondary fuel break extends into tax lot 506, to the west. The Goodmans, owners of tax lot 506, have indicated that they would approve an easement for the extension of the secondary fuel break

12. The subject property is bordered on the south by tax lot 600, on the east by tax lot 501, on the west by tax lot 506, and on the north by tax lot 201; all within assessor's map 18–02–11. Tax lot 501, adjacent on the east, has a dwelling. The development site (as amended 5/21/19) is located in the lower one–third portion of the subject property. Tax lots 506, 501 and 508 are owned by Gray and Dorotea Goodman. Tax lots 507 and 509 are owned by Nimpkish LLC, whose registered agents are Gray Goodman and Dorotea Goodman. Tax lot 201 is owned by Betz/Evans Associates. Tax lot 600 is not owned by neither the Applicant nor Gray and Dorotea Goodman

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 19–05298) BY NIMPKISH, LLC FOR A TEMPLATE FOREST DWELLING ON TAX LOT 508, ASSESSOR'S MAP 18–02–11 IS AFFIRMED, with modifications to Condition of Approvals #6 and #13:

6. Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(6)(c) and as depicted on the applicant's site plan. **These fuel breaks shall be maintained in perpetuity.** The minimum primary safety zone surrounding the proposed dwelling shall be at least 30 feet plus the Additional Safety Zone Down Slope, as identified on the Applicant's site plan. The minimum secondary fuel breaks surrounding the primary safety zone shall be at least 100 feet on lands owned or controlled by the owner. For purposes of this approval, the Applicant is deemed to have control over adjacent tax lot 506.

13.c. Excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of the subject property made usable by means of fill shall be suitable for the intended purpose. Prior to building approval, the Applicants shall submit a Level II geotechnical report to the County. If the building inspector finds problems that would require a restriction on mechanical grading and/or clearing, that issue shall be reviewed by the Hearings Official through a Type III Modification of Decision.

Justification for the Decision (Conclusion)

The subject property is zoned F–2 Impacted Forest Land. The Applicant is requesting approval to construct a single–family dwelling as provided by Lane Code 16.211(5)(c). Dwellings authorized by this provision are known as "forest template" dwellings because some of the applicable approval criteria of Lane Code 16.211(5) must be analyzed through the placement of a 160–acre square template centered on the center of the subject property. In the present case, the Applicant has correctly centered the 160–acre rectangle, that is one mile long and a quarter mile wide, on the subject property. The abutting road is R.R. Baker Road, which is described on a 1982 survey, indicating that the road existed prior to January 1, 1993. The template appears to be aligned with the R.R. Baker Road to the maximum extent possible. Additionally, the placement of a dwelling on non–impacted forest land must meet the siting standards provided by Lane Code 16.211(8).

The allegations of error raised by the Appellant in its appeal are as follows:

1. ***The dwelling on Tax Lot 601, Assessor's Map 18–02–11 did not exist in 1993 and cannot be used to find compliance with LC 16.211(c)(i)(aa)(B).***

The Appellant has argued that the Regional Land Information Database (RLID) does not show a dwelling on the subject property being on the tax rolls between 1993 and 1998.

County records include a mobile home placement permit BP 81–2367 that indicates the placement of a dwelling on the subject property in 1982. RLID actually shows an improvement value of zero from 1998 to 1999. This time frame aligns with the verification of a replacement rights planning action, which secured the replacement rights in 1998. A site–built structure was approved under PA 98–05159 and replaced the mobile home.

As a matter of policy, the Lane County Board of Commissioners has held that a replacement dwelling meets the standard of "continue to exist."[2] In addition, I would point to Multnomah County where this interpretation has been codified into the zoning ordinance.[3] Arguably, if either LUBA or the Oregon Court of

[2] Lane County Board of Commissioners Order No. 16–05–17–06, adopted May 17, 2016.
[3] *West v. Multnomah County*, 70 Or LUBA 235 (2014), 269 Or App 518 (2015)

Appeals would have taken exception to Multnomah County's explicit allowance of replacement dwellings they would have so stated.

Based upon adopted Lane County policy, I must conclude that a dwelling that lawfully replaced a dwelling that was lawfully established on January 1, 1993 meets the "*continues to exist*" standard of Lane Code 16.211(5)(c) and OAR 660–006–0027(3)(b).

This allegation of error is dismissed.

2. ***The Director's decision is not consistent with the protections afforded Major Big Game ranges in accordance with the Lane County Rural Comprehensive Plan.***

The subject property lies within an area designated as Major Big Game Habitat. The Appellant contends that the proposed template dwelling does not comply with the 80–acre minimum density requirement for Major Big Game Habitat mandated by OAR 660–006–0027(1)(d) and (f), and Goal 4, Policy 11 of the Rural Comprehensive Plan.

Lane County's Rural Comprehensive Plan and Chapter 16 of the Lane Code were acknowledged by LCDC in 1984. Big Game Habitat was recognized as a 1C significant Goal 5 resource[4] and the County incorporated some of the protections recommended in two Flora and Fauna Working Papers into the Rural Comprehensive Plan. Thus, Flora and Fauna Policy 11, of Goal 5 of the Rural Comprehensive Plan states that Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game were to be used to determine the allowable number of residential units within regions of the County. This policy stated that any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660–16–000.

The Appellant relies upon LUBA's decision in *Cattoche v. Lane County*[5] for the proposition that density in the Impacted Forest Lands District is determined by the Rural Comprehensive Plan's March 1992 Flora & Fauna Working Paper as it applies to Flora & Fauna Policy #11 of the Rural Comprehensive Plan. The Big Game Range section of the 1982 Flora & Fauna Working Paper[6] notes that the County was to be divided into regions convenient for planning purposes; probably between 10 to 20 regions. Within the regions, excluding the Impacted Big Game Ranges, a residential carrying capacity was to be determined. The ODFW

[4] *Save TV Butte v. Lane County*, LUBA No. 2017–031, Slip Op at 26 (1/18/2018)
[5] *Cattoche v. Lane County*, __LUBA __ (LUBA No. 2018–109, May 22, 2019).
[6] It should be noted that the working papers that support the Rural Comprehensive Plan were not "elements" of the plan and did not carry any authority in and by themselves. Not all of their recommendations were implemented by plan policies although they generally provided information and analysis that supported adopted policies.

recommended a density of one dwelling unit per 40 acres for peripheral big game range areas and one dwelling unit per 80 acres for major big game range areas. Lane County never divided the County into geographic Big Game Range regions and the Appellant has not alleged that its analysis encompasses one of those regions.

It is important to distinguish between the planning work Lane County did in preparation for acknowledgment of compliance and what was actually acknowledged by LCDC. As noted above, the Flora and Fauna Working Paper's strategy of dividing the County up into regions was never implemented.

The DLCD staff report of July 19, 1984 indicates a concern with the minimum lot sizes in the resource zones coupled with a lack of siting and clustering requirements. The minimum parcel size was the County's chosen method to comply with the ODFW recommended maximum densities. The recommended densities –one dwelling per 40 acres in the peripheral big game range –depended entirely on the size of the area being studied. When considering an 80–acre study area, the recommendation would only allow two dwellings. However, the recommendation was intended to apply at a much higher level; which is why the County originally anticipated dividing the County into regions. Ultimately, the County, with the blessing of DLCD and ODFW, decided to rely on minimum parcel sizes to implement the ODFW recommendations. This view is borne out in DLCD's staff report which stated: "*Without siting clustering requirements, the minimum lot sizes in the F–1, F–2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable.)*" At this time, Lane County's proposal was to have a minimum lot size of 40 acres for the F–1 Zone, minimum lot size of 20 acres in the F–2 Zone, minimum lot size of 40 acres in the EFU Zone, and no clustering or siting standards for dwellings.

DLCD staff issued a second acknowledge of compliance report regarding Lane County's Rural Comprehensive Plan and implementing ordinances on September 12, 1984. The recommendation in this report was:

"*Amend the F–2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum parcel sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.*"[7]

Kent Howe, former Lane County Planning Director, and Jim Mann, Former Principle Planner with Lane County, were working on the adoption of the Rural Comprehensive Plan in 1983 and 1984. Their recollection was that at the last hour, facing a negative DLCD staff review regarding compliance with Goal 5 issues dealing with wildlife and big game habitat, Lane County made significant

[7] Pages 24 and 25, September 12, 1984 DLCD supplemental staff report on the Acknowledgment of Compliance for Lane County and Rural Portion of Eugene/Springfield Metro Plan.

changes to how big game habitat was to be protected. Last minute changes included increasing the minimum lot size to 80 acres in the F–2 Zone and adopting siting and clustering requirements in that zone. Where Policy #11 states that "*any density above that limit shall be considered a conflict*" it was referring to when the density prescribed by the minimum parcel size was to be lessened through a land division or rezoning. At that point in time, an ESEE analysis, via a comprehensive plan amendment, would be required.

The template dwelling regulations were adopted by the Legislature in 1993 and subsequently incorporated into administrative rule. These regulations were adopted verbatim by Lane County through a post–acknowledgment plan amendment which was not challenged.

Ultimately, the acknowledged zoning ordinance did not apply the Big Game limitations except in certain circumstances, such as in the Exclusive Farm Use Zone.[8] And in that case only properties lying within a Major Big Game area were affected. No specific siting regulations for forest template dwellings located within a peripheral big game range were adopted by the acknowledged Chapter 16 zoning code. That is, the Big Game Range density standards were integrated into the zoning classifications and minimum lot size recommendations within the Impact Forest Lands Zone. The density recommendations were not applicable to existing parcels but were to be considered only in rezoning and land division applications. Therefore, the approval of dwellings under a template dwelling test does not involve a determination of consistency with Big Game Range density standards.

This allegation of error is dismissed.

3. The Director's decision does not address Goal 7 policies of the Rural Comprehensive Plan addressing areas subject to natural hazards.

The Appellant asserts that the Planning Director has not made any findings regarding compliance with natural hazards policies of the Rural Comprehensive Plan. This is correct as there are no criteria in Lane Code 16.211(5) regarding compliance with these policies.

It is an open argument as to whether the natural hazards policies apply directly to land use applications. My assumption is that they do not but this decision will nevertheless address whether the present application is consistent with those policies. These policies are discussed below:

Goal 7, Policy #1: "*The Natural Hazards Inventory, as contained in the 1982 Natural Hazards Working Paper and associated materials, shall be used as a*

[8] See, for instance, Lane Code 16.212(10)(a)(i).

guide for general land use decisions. Specific land use decisions shall be based upon inventory and upon on-site or other evaluation as appropriate."

In regard to Policy #1, the 1982 Natural Hazards Working paper does not contain any maps but it does indicate that "*...steep slopes -- specifically those greater than 15 percent -- present severe limitations for development and therefore should normally be left in a natural state.*" Other information in the record includes topographic mapping of the subject property that identify some steep slopes and DOGAMI's landslide map that shows a very high landslide potential for the subject property.

Also included in the record is documentation of a site view of the subject property and R.R. Baker Road by Michael Remboldt, geotechnical engineer and principal with K & A Engineering, Inc. On November 13, 2019, Mr. Remboldt performed a Level I evaluation of slope study of the proposed development site and the road. A Level I evaluation includes a literature search about the geology and geologic hazards of a site, a visual inspection of the site for indicators of active slope movement, and a preliminary stability evaluation. A more detailed description of a level I evaluation was presented by Mr. Remboldt in a December 2, 2019 letter to Mr. Jim Belknap. Mr. Remboldt discussed the findings of his site view in a December 11, 2019 letter to Mr. Jim Belknap, Mr. Remboldt noted that the "*...proposed driveway location does not inherently present a significant landslide hazard.*" He also noted that there was no evidence the R.R. Baker road was the source or was impacted by large-scale deep-seated landslides or debris flow. Mr. Remboldt recommended that a Level II geotechnical investigation occur prior to development. This study would be used by the Lane County Building Inspector at the time a building permit was requested.

Goal 7, Policy #2: "*Development shall be commensurate with the type and degree of any natural hazards(s) present and appropriate safeguards against flooding, ponding, landslides, land slippage, erosion or other natural hazards applicable shall be assured. For purposes of evaluation and in the absence of any specific proposal, the provisions of the Oregon State Building Code shall be assumed to the sole means of safeguard against natural hazards.*"

This policy is a little confusing since it states that the provisions of the building code were the sole means of safeguarding against natural hazards in the absence of any specific proposal. It is hard to imagine when the building code would be applied when there was no specific proposal against which to apply those standards. Further, it leaves open the door as to what other methods are required to safeguard against natural hazards when there is a specific proposal. Nevertheless, the policy makes it clear that development must be commensurate with the type of natural hazard present. Mr. Remboldt's recommendation that a Level II geotechnical evaluation occur prior to development is therefore significant and has been integrated into the conditions of approval.

Goal 7, Policy #3: "*When extensive or drastic safeguards must be employed in conjunction with development proposals, the immediate and ultimate impact, (including financial and economic considerations) of such safeguards on the environment and the public shall be considered.*"

Consistent with Policy #3 is LC 16.005(2) which states:

"*Local governments shall require site-specific soil surveys and geologic studies where potential problems exist. When problems are identified, local governments shall require special design considerations and construction measures be taken to offset the soil and geologic constraints present, to protect life and property, public investments, and environmentally-sensitive areas.*"

In regard to Policy #3, the Level I geotechnical evaluation did not identify extensive or drastic safeguards that had to be employed in conjunction with the Applicants' development proposal. However, the location of the development within a very high landslide hazard area is an indication that potential development problems may exist. Thus, Mr. Remboldt wisely recommends that this evaluation be a prelude to a more comprehensive evaluation (Level II) when the actual development is proposed through the building permit process.

In a prior appeal of a template dwelling in the general area of the subject property[9], this Hearings Official addressed the implications of the *Rhyne* case[10] in regard to LC16.005(2). In its decision in the *Rhyne* case, LUBA noted that local government had the option of deferring its determination of compliance of a standard to a subsequent proceeding. Lane County has a process where an applicant may be compelled to apply for a Type III Modification of Decision[11] when a substantial change in an approved application is necessary. This review would be before the Hearings Official and would require notice to the Appellant.

Thus, the building inspector will review the Level II geotechnical report provided by the Applicants' engineer. Section 1803 of the Oregon Structural Specialty code gives the Building Official the authority to require and review geotechnical information. If the Building Official finds problems that would require a restriction on mechanical grading and/or clearing, that issue would be reviewed by the Hearings Official. Condition of Approval #13 has been modified to reflect this change.

This allegation of error is dismissed.

[10] *Rhyne v. Multnomah County*, 23 Or LUBA 442, 447 (1992).
[11] As authorized by LC 60.851(3).

4. The County cannot approve multiple forest template dwellings on a tract.

Lane Code 16.211(5)(a) states that a template dwelling may not be approved if it is part of a tract that already contains a dwelling. ORS 215.010(2) defines "tract" as one or more contiguous lots or parcels under the same ownership. The Appellant argues that tax lots 501, 506, 507, 508 and 509 are a tract.

The subject property is owned by Nimkish, LLC. It is bordered on the west by tax lot 506 and on the east by tax lot 501. Both properties are owned by Gray & Dorotea Goodman. On the north the subject property is bordered by tax lot 201, owned by Betz/Evans Associates. On the south it is bordered by tax lot 600, which is not owned by either Gray & Dorotea Goodman or the Applicant.

As explained in Finding of Fact #12 above, Gray and Dorotea Goodman, are the registered agents of Nimpkish, LLC. The Goodman's have a membership interest in the limited liability company which is personal property but do not have "ownership" of the property.

The term "ownership" must be distinguished from the term "control." The former has a very precise legal meaning. For example, two contiguous parcels, one owned by Mr. and Mrs. Smith, tenants in entirety, and one owned by Smith, LLC, whose members are Mr. and Mrs. Smith, would not be under the same legal ownership. In the former, legal liability would attach to the collective assets of Mr. and Mrs. Smith, while in the latter example liability will be limited to the assets "owned" by the LLC. Thus, in the present case, if Nimpkish, LLC is sued then tax lots 507 and 509 might be in jeopardy but normally tax lots 501, 506 and 508 would not.

This allegation of error is dismissed.

5. The application does is not consistent with the minimum fuel break standards of LC 16.211(8)(c).

The proposed development area is located in the southwest corner of the subject property. The secondary fuel break is contained within the subject property except on the west, where is encroaches into tax lot 506. This issue concerns whether the Applicant has control over tax lot 506 and therefore must receive an easement for the fuel break from the owners of that parcel; Gray & Dorotea Goodman. As addressed above under Allegation of Error #5, the term "control" is different from the term "ownership." In the present case, Gray & Dorotea Goodman are the only registered agents of Nimpkish, LLC and are the owners of tax lot 506. It is therefore evident that the Applicant, as it is constituted, has control over tax lot 506. Accordingly, Condition of Approval #6 has been modified to explicitly require that the secondary fuel break extend into tax lot 506.

This allegation of error is affirmed.

Summary

Based upon evidence in the record, and minor modifications to the Director's conditions of approval, I believe that this application for a template dwelling complies with LC 16.211(5)(c)(i)(aa) and LC 16.211(5)(c)(i)(bb) and otherwise complies with the applicable approval standards of LC 16.211(5)(c)(iii) and (8). I further believe that the application, as conditioned, is consistent with applicable policies of the Rural Comprehensive Plan. The Director's decision, with modifications, is therefore affirmed.

This form is required for request for reconsideration of a Type III Hearings Official decision or a Hearings Official decision on an appeal of a Type II Director decision. Please note that your appeal application requesting reconsideration will be rejected if it does not meet all the requirements of Lane Code 14.080(1)(a) through (c). A notice of appeal must be filed with the Director prior to 4 p.m. Pacific Time 12 days after the date the notice of decision is mailed (see deadline specified on the decision).

1. A copy of the decision being appealed, with the Department file number: _____ and the date of the decision_____

2. The $1,216 appeal fee, payable to Lane County.

3. The appeal deadline, as stated in the Hearings Official's Decision: FEB 18 2020

4. Address each of the following:

   a. Check one of the items below demonstrating how the person filing the appeal is a party as that term is defined in LC 14.015(22) with the right to appeal the Hearings Official's decision:

      ☐ I am the applicant for the subject application;

      ☐ I am the owner or contract purchaser of the subject property;

Revised on 12/2019

☐ Prior to the decision, I provided testimony before the Hearings Official;

☐ I am not one of the persons mentioned above, but wish to appeal the Hearings Official's decision and my appeal submittal identifies how I qualify as a party (provide written description).

b. Please provide a written statement explaining the reason(s) why the decision of the Hearings Official was made in error or why the Hearings Official should reconsider the decision;

c. Please provide an explanation with detailed support specifying one or more of the following assignments of error, or request for reconsideration:

☐ The Hearings Official exceeded his or her authority;

☐ The Hearings Official failed to follow the procedure applicable to the matter;

☐ The Hearings Official rendered a decision that is unconstitutional;

☐ The Hearings Official misinterpreted the Lane Code, Lane Manual, State Law, or other applicable criteria; or

☐ Reconsideration of the decision is requested in order to submit additional evidence not available in the record at the hearing and addressing compliance with relevant standards and criteria.

d. Include any additional information in support of your appeal.

5. Per Lane Code 14.080(4)(a), if the applicant is requesting reconsideration, the applicant must first agree to extension of any statutory application timelines, and such extension must be in addition to any other extensions already given.

Notes:

- Lane County Ordinance No. 19-03, the adopting Ordinance for Lane Code Chapter 14 that regulates the Hearings Official decision and appeals process is under appeal to the Oregon Land Use Board of Appeals (LUBA). In the event that an appeal to LUBA results in a remand or reversal, the Ordinance will no longer be effective and the applicable version of Lane Code Chapter 14 will revert back to Lane County Ordinance No. 14-09 (December 2014).

- An appeal of a Hearings Official decision to the Lane County Board of County Commissioners is no longer allowed per the regulations of Lane Code Chapter 14 (Lane County Ordinance No. 19-03).

HAND DELIVERED

Gary Darnielle, Lane County Hearings Official
c/o Rachel Serslev, Planner
Lane County Land Management Division
3050 North Delta Highway
Eugene, OR 97408

Re: **509-PA-05298 (Nimpkish LLC)**
Appeal of Director Approval of Template Dwelling in F-2 zone
by Landwatch Lane County
Applicant's (Nimpkish LLC) Second Final Rebuttal

Mr. Darnielle,

Please enter this letter into the record of the above-referenced appeal that I am submitting on behalf of the Applicant, Nimpkish LLC., and in support of the Director's decision and findings. It is the Applicant's Second Final Rebuttal and by this reference I incorporate the Applicant's First Rebuttal, my letter dated December 2, 2019, into this final statement.

The appellant, LandWatch, through its attorney, Sean Malone submitted a letter dated January 16, 2020, that was supposed to respond to the evidence that Mr. Belknap and I submitted on December 18, 2019, during the extended open record period. Instead, Mr. Malone's response, with some minor additions, is the same letter that he and LandWatch submitted as their final response in their appeal of the Director's approval of a template dwelling application for the parcel located west of and adjacent to the subject property (PA 19-05299, Goodman, "#299").

Due to the overlapping similarities of the two propert6ies as well as the fact that LandWatch doesn't really care about siting or template criteria at this point in the appeal, it is both efficient and appropriate for me to include in this appeal record, pages 1-3, of my response to Mr. Malone in #299, copy of which is

attached as Exhibit "A" and by this reference incorporated herein. Everything I said in the earlier letter applies equally to the present Response. I will provide further comment later in this letter.

Belknap Final Rebuttal

As he did in his #299 final rebuttal, Mr. Belknap has prepared a detailed and thorough response to the arguments and allegations that primarily LandWatch has raised during the course of this appeal. The topics range from site specific matters like neighboring well logs and site and driveway slopes to trying to discern the relevance of a 1993 letter directed at then HB 3661. Much of Mr. Belknap's letter is directed at a specific criterion or siting standard, e.g. location and spacing of turnarounds in RR Baker Road, the private access road, together with an evidentiary response.

For the aforementioned RR Baker Road, there is both the site plan showing the specifications of the road as required by County road standards as well as the recorded easement document that clearly allows the existing the Applicant to make the changes to road that are required as a condition of approval. Due to the shared use of the road with existing dwellings, these road upgrades will benefit all users of the road as well as improve access for fire fighting access..

The point is that we, Mr. Belknap in particular, have submitted substantial and relevant evidence addressing all of the applicable template dwelling criteria and siting standards and especially those highlighted by LandWatch. Since the September 26 hearing, LandWatch and 1000 Friends have not presented any conflicting or contrary evidence that challenged any of the site specific evidence that has been submitted by the Applicant especially since the initial open record period that ended on November 7, 2019. At that time LandWatch and 1000 Friends submitted a variety of documents including a Big Game working map, slopes map and landslide susceptibility map from Mr. Malone and a potpourri of documents, business records and maps that Mr. Mulkey placed into the record. It is fair to say that little of this information has any direct relevance to the template dwelling criteria and standards and, almost all of it seems to have no purpose other than to be in the record. After that, neither Mr. Malone or Mr. Mulkey have provided any kind of clear and relevant explanation as to what these documents are attempting to prove, disprove or whatever.

After these initial submittals to which we, and again, in particular, Mr. Belknap, responded with more evidence that included additional responses from Mr. Remboldt and Chief Smith. At that point, 1000 Friends dropped out of the appeal process and the Second Open Record period allowed Mr. Belknap and I to present more evidence which included Ms. Davies' *Green* decision. Also included was Exhibit "F" to my Decmber 18, 2019, Supplemental Evidentiary Submission, which was copy of Ordinance 5-02, adopted by the Lane County Board of Commissioners on August 28, 2002, and entitled "IN THE MATTER OF AMENDING CHAPTER 16 OF LANE CODE TO MODIFY FARM AND FOREST ZONE CLASSIFICATIONS AND REGULATIONS (LC 16.080, LC 16.100, LC 16.211 AND LC 16.212) AND DECLARING AN EMERGENCY". As noted previously, this ordinance adopted the current F-2 zoning ordinance with the template provisions. Also, the reason why the County adopted these provisions was to make its F-2 zone "consistent" with State law and regulations. What other kind of acknowledgment is required when the County's zone is modified to be consistent with the Legislature's and LCDC's forest zoning provisions? LandWatch and Mr. Malone have no response.

With all that Mr. Belknap submitted that was directly responsive to initial allegations made by LandWatch and 1000 Friends regarding the actual criteria, it is important to note that neither Mr. Malone, Mr. Mulkey or Ms. Segal have submitted any response to that voluminous evidence regarding slopes, soils, road improvements and all the other items to which Mr. Belknap has summarized in his most recent final rebuttal. Together, Mr. Belknap's two final rebuttals highlight and summarize the evidence that has been submitted since the public hearing. LandWatch and 1000 Friends have not provided anything that refutes this evidence other than their continued pursuit of the Goal 5 windmill.

POLICY 11 AND LANE COUNTYS' ACKNOWLEDGMENT

Much has been written by all the parties in this appeal. Our position, as explained in Exhibit "A", is very simple. The Lane County Rural Comprehensive Plan was acknowledged by LCDC on September 13, 1984. *See* Exhibit "A", Belknap Letter (11-06-19). Goal 5, Policy 11 was acknowledged as part of that LCDC acknowledgment. As described in Mr. Mann's letter and more explicitly in the attached copy of LCDC's Acknowledgment Order, "the intent of Flora and Fauna Policy 11 was "met" by the County's adoption of new language for the F-2 and EFU zones that provided a balancing of "setback standards" . . . with the siting

requirements. Attached as Exhibit "B" is copy of LCDC's acknowledgment determination for Goal 5, Flora and Fauna Policy 11. The "requirement" has been met so declared the 1984 Acknowledgment Order. There was a direct link between Policy 11 and the F-2 zone that was created by LCDC's direction that the zone needed to be modified in order to "carry out the intent" of Policy 11.

Mr. Malone and LandWatch skip that part about the 1984 Acknowledgment and this simple conclusion by LCDC. Of course, to acknowledge (no pun intended) such, would mean that land use decisions made in accordance with the acknowledged plan does not have to address Policy 11 because its intent was carried out in LCDC's 1984 Acknowledgment Order. Policy 11 was acknowledged and so was the modified F-2 zone. ODFW density recommendations were addressed as part of this process.

Mr. Malone points to the March, 1984 staff report which preceded the final staff report and then the Acknowledgment Order.

Relying on something that was superceded in the process makes no sense. Further, what he quoted was irrelevant to the end result. However, based on those quotes from objectors, Mr. Malone creates the "explicit understanding" of how Policy 11, thirty-six years after it was acknowledged, should now be "implicated" in any template application that exceeds Policy 11's density requirements. You've got to be kidding! Mr. Malone, there is absolutely no evidence, law, ruling or anything that supports your claim that there was an "explicit understanding" in 1984 that the Commission had when it acknowledged Policy 11. The longer we go, the more absurd LandWatch becomes with its legal theories.

WHERE'S ODFW?

The elephant in the room for this appeal is really the obvious absence of ODFW from this and any other template dwelling application in Lane County over the last twenty-five years. LandWatch and Mr. Malone have placed Policy 11 at the center of their Goal 5 applicability argument and, of course, Policy 11 features ODFW "recommendations on overall residential density". These "recommendations" were made by ODFW in 1983-1984 leading to the September Acknowledgment Order. Mr. Malone's letter even quotes ODFW objections prior to the Final Acknowledgment in his letter. ODFW was an active participant in the public process before final acknowledgment.

With all that going on, including the "explicit understanding" of the Commission, the question now, thirty-six years later, is: Where is ODFW? If Policy 11 means that ODFW's density recommendations must be addressed for these and virtually all other F-2 template dwelling application in Lane County, then why isn't ODFW out-front with this argument? Why hasn't ODFW joined forces with LandWatch in what would be a major shift in County policy and consideration of future template dwelling applications? Where's ODFW?

The most obvious answer is that they have no standing or interest in this matter since their Policy 11 was addressed in 1984. Policy 11 possibly arises with a plan amendment application. Even then, specific circumstances will dictate the level of scrutiny that will be paid to Policy 11.

In this case, it is obvious that ODFW does not believe Policy 11 applies for all the reasons previously announced. That's why ODFW is not here in this appeal.

CONCLUSION

We urge you to affirm the Director's decision with conditions you deem appropriate. The record is complete and substantial and this template dwelling application should be approved together with its sidekick, PA 19-05298

Sincerely,

Michael E. Farthing

Re: **PA 19-05299 (Gray and Dorotea Goodman)**
Appeal of Director Approval of Template Dwelling in F-2 zone
by Landwatch Lane County
Applicants' Final Rebuttal

Mr. Darnielle,

Please enter this Final Rebuttal into the record of the above-referenced appeal that I am submitting on behalf of the Applicants, Gray and Dorotea Goodman, and in support of the Director's decision and findings.

Malone Letter (01-09-20)

In his final response, Mr. Malone focuses solely on Goal 5 and why he claims it is "specific and mandatory". As support for this conclusion, Mr. Malone begins with a claim that Ms. Davies, in her *Green* decision, failed to grasp the subtleties of the *Cattoche* decision that rendered it "at odds" with Ms. Davies' Goal 5 analysis in *Green*. Mr. Malone doesn't say how those two decisions are "at odds" but only because he claimed that to be the case. He also claims the County never adopted minimum acreages even though when Lane County's Rural Comprehensive Plan ("the RCP") was adopted and acknowledged in 1984, the F-2 zone had variable parcel sizes depending on soil types and the F-1 zone didn't then and still does not allow residences. 80 acres has been the minimum parcel size in the F-2 zone since the adoption of HB 3661 in 1993.

Exhibit "A" - Page 1

The fatal flaw of Mr. Malone's analysis is he is relying on documents (June and July, 1984 staff reports) that were subsequently absorbed into LCDC's ultimate requirement that the F-2 and EFU zones must be amended "to carry out the intent of Flora and Fauna Policy 11". See Belknap Letter (12-11-19) Exhibit 11, p 25-26. Lane County responded and LCDC found this requirement had been satisfied. LCDC concluded that the "intent of Flora and Fauna Policy 11" had been carried out by Lane County. The County had fully addressed the "intent" of Policy 11 to the satisfaction of LCDC. Big Game Habitat was acknowledged to be protected by the forest zoning that was adopted at the same time. Goal 5, Policy 11 had no more relevance then nor does it have any now with respect to the approval of forest residences. The parcel sizes that were established in 1984, together with the residential prohibition in the F-1 zone, is what fully confirmed LCDC's acknowledgment of the County's protection of Big Game Habitat.

Despite Mr. Malone's attempt to "bootstrap" Policy 11 into the template dwelling criteria, the County's final response in 1984 to LCDC requiring that "the intent of Flora and Fauna Policy11" be carried out was all that was required. Unless there is some type of post-acknowledgment plan amendment ("PAPA") which, as in *Catttoche*, triggers consideration of the Goals, including Goal 5 and Policy 11, there simply is no vitality remaining in Policy 11 for application to individual land use applications of any sort. Mr. Malone cites to objections made by 1000 Friends and ODFW regarding Policy 11 earlier in 1984 all of which were folded into LCDC's Requirement 2d that "the intent of Flora and Fauna Policy 11" be carried out. That intent was carried out, the objections were addressed and Goal 5 was acknowledged. Mr. Malone, Mr. Mulkey and the rest of LandWatch have never accepted or explained why the 1984 Goal 5, Policy 11 acknowledgment, is not conclusive as to Policy 11's lack of relevance to forest dwelling applications.

Fortunately, after four pages of opinions, conclusions and speculative conjecture about the applicability of Policy 11 to forest template dwelling applications, Mr. Malone finally reveals at the end of his letter the real legal justification for why he and LandWatch believe Policy 11 applies in these circumstances:

> " The simple conclusion culled from the staff

> reports is that the Commission approved the acknowledgment order under the explicit understanding that Policy 11 would be implicated where proposals exceed the residential density recommendation. This is one such proposal because the residential density far exceeds ODFW's recommendations."

(Emphasis Supplied). Wow! I was not familiar, until now, with the "explicit understanding" form of law or regulation or whatever it is.

Of course, Mr. Malone does not explain or provide the details of this "explicit understanding" legal theory nor does he have a single piece of physical evidence to support this "understanding". Neither Mr. Howe or Mr. Mann were aware of this "understanding" even though they were present when this all occurred. Mr. Darnielle, since you were also there at ground zero when all this was happening, perhaps you could comment on Mr. Malone's claim that "the Commission" acknowledged Lane County's RCP with its "explicit understanding" that Policy 11 would be applied to individual applications after acknowledgment?

What makes this assertion even more ridiculous, if such is possible, is that Mr. Malone expects you and me to believe that this previously unknown "explicit understanding" by the Commission (LCDC) and its staff (DLCD) has lain dormant for thirty plus years, only now to be uncovered by LandWatch and its followers. Where has it been for all these years — the "explicit understanding" theory of Policy 11 applicability? Is it written down anywhere other than in your letters to the County's Hearings Officials? Are you seriously making this allegation about a thirty-four year old "explicit understanding"?

Enough said about this most recent Malone letter. It has reached a new level.

Final Rebuttal

During the course of preparing for and participating in the November 14 public hearing, Mr. Belknap and I identified certain criteria and related issues that we wanted to address with evidence in various forms and enter those items into the

Response

Lane County has responded to this IOTC by amending the Flora and Fauna Working Paper Addendum (p. 7) to include the following justification for not applying riparian setback and vegetation maintenance requirements to lakes or Class II streams (Ord. No. PA 892):

> "For purposes of this analysis, only Class I riparian lands are considered. Class II streams (using ODF standards) are not fish-bearing streams, according to Oregon Fish and Wildlife Department staff, and often dry up in the summer months. Additionally, they are located in remote areas in public ownership or limited to resource uses by resource zones. Many of them have not been inventoried, and location maps are not easily available. Most lakes outside of the coast are impoundments, such as Fern Ridge Reservoir, and have COE easements plus County PR zoning to protect their shorelines. The remaining natural lakes are protected by coastal overlays or are in High Cascade wilderness areas such as Waldo. The Oregon Fish & Wildlife Department, which worked closely with the County in devising a method of protecting Class I riparian lands, did not indicate a need to similarly protect Class II riparian lands. In the nomenclature of the Goal 5 Rule, the County determines the Class II streams are to be considered '1A' resources--not to be included on the Plan inventory."

Conclusion

Requirement 2c has been met.

Requirement

2. Fish and Wildlife Habitats:

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.

Response

Lane County has added the following new language to both the F-2 and EFU Zones:

> "(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of

Exhibit "B" - Page 1

proposed residences consistent with the purposes the F-2 [EFU] Zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Conclusion

Requirement 2d has been met.

Requirement

2. Fish and Wildlife Habitats:

e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

Response

Lane County has adopted (Ord. No. PA 892) as part of its Flora and Fauna Working Paper, an inventory of known sensitive bird sites, including location, quality and quantity information. The County has identified conflicting uses and analyzed ESEE consequences. Based on this analysis, Lane County has decided to adopt a procedure for "flagging" areas in which such sites occur and requiring conflicting uses to be subject to conditional use approval. For all conflicting uses except timber management activities, the County has adopted "Sensitive Bird Habitat Protection Standards and Criteria" as part of the Lane Code (Ord. No. 11-84). Excerpts from that zone section are as follows (LC 16.005(4)(1)):

"(b) Development Plan Submittal. The person proposing the development shall submit plans to the

Re: PA19-05298, Final Rebuttal
Lane County Tax Lot 18-02-11-00-00507

Dear Mr. Darnielle:

Please enter these comments into the record in our final rebuttal of submissions having been tendered in the appeal of PA19-05298.

While I understand the appeal process allows virtually unfettered opportunity to offer comments on an application, the submissions by LandWatch Lane County and 1000 Friends of Oregon have created a vexatious process that strikes at the underpinnings of our county's land use system. It has been disheartening.

I would like to submit, in as brief a manner as possible, a summary of what has been presented to support the application of the owner of the subject property. The owner is a limited liability company registered as NIMPKISH, LLC. The application is for approval of a Special Use Permit allowing the placement of a dwelling under the Template Test provisions of the F2 zoning, Lane Code 16.211(5) and (8) on property known as Tax Lot 18-02-11-00-00507. In addition I will attempt to summarize the voluminous information we have presented to defend the decision of Lane County to approve that Special Use Permit and to request the dismissal of the appeal filed by LandWatch.

Gary Darnielle
PA19-05298
Final Rebuttal
January 20, 2020

The Appellants have presented a fallacious and error riddled argument that the application submitted by NIMPKISH, LLC fails to meet the standards of Lane County Code and Oregon Administrative Rules. The arguments of this appeal are the same as have been made in the appeals filed by LandWatch of other applications for a Template Dwelling Special Use Permit and dismissed. Notably, the August 8, 2018 dismissal of the appeal filed by LandWatch in PA17-05951, commonly referred to as the *Betz* decision, specifically went to the point: "...the approval of dwellings under a template dwelling test does not involve a determination of consistency with Big Game density standards." Continuing: "...residential development was limited in Big Game Habitat areas and further restriction of development was not necessary to comply with Statewide Planning Goal 5." We provided a copy of the Betz decision as Item No. 8 in our presentation at the November 14, 2019 hearing.

Most recently was the decision made in PA 18-05913, commonly referred to as the *Green* decision. A copy of the *Green* decision was submitted into the record by the attorney for the Applicants, Michael Farthing, and mirrors the elements of consideration to be made in this case.

Of note, Sean Malone, attorney for the Appellants, states the Hearings Official in *Green* is wrong but then fails to provide case or statutory law to support his claim.

Mr. Malone has repeatedly attempted to rely upon a Land Use Board of Appeals decision in the *Cattoche* case, which is picked up and echoed by Andrew Mulkey representing 1000 Friends of Oregon. The position of Mr. Malone and Mr. Mulkey appears to be that somehow Lane County is derelict in not addressing Goal 5 and the Flora and Fauna Working Paper of 1982 in its discussion of Big Game Habitat. As we presented at the hearing, and as was confirmed by the Hearings Official in the *Green* case, *Catooche* dealt with an application for a Comprehensive Plan Amendment and Zone Change to re-zone a parcel of land from F2 forestland to Rural Residential, 5 acre minimum parcel size. In an application for an amendment to the Comprehensive Plan, such as in *Catooche,* it may be totally relevant to review the evidence that was relied upon in 1984 in obtaining the acknowledgment by LCDC of the Comprehensive Plan, but the matter of dwellings in the F2 zoned lands of the county was settled in 1984. The application in 2019 for a Template Test Dwelling is not subject to a re-evaluation of matters that were addressed and accepted at the time the Comprehensive Plan was acknowledged. The comparison of a Comprehensive Plan Amendment/Zone Change to a F2 Template Test Dwelling is apples and oranges.

Gary Darnielle
PA19-05298
Final Rebuttal
January 20, 2020

Mr. Malone and Mr. Mulkey appear to be arguing that in any application for a Template Test Dwelling in the F2 zone if the parcel in question is smaller than 40 acres in Peripheral Big Game Habitat or 80 acres in Major Big Game Habitat then an Economic, Social, Environmental and Energy Analysis (ESEE analysis) is required. I would argue that the elimination of this need was precisely the point in the acknowledgment of the County's Comprehensive Plan in 1984.

The Appellants have repeatedly insisted that Lane County is in error in having failed to somehow obtain a "re-acknowledgment" of their Comprehensive Plan at the time the F2 zoning code was changed to provide for the Template Dwelling Test. What the Appellants have consistently refused to admit is the fact that the F2 zoning code, as it was re-written in 1993 under the mandates of House Bill 3661, and acknowledged by the Department of Land Conservation and Development, was fully in compliance with the Comprehensive Plan as it was acknowledged. No further action was needed on the part of Lane County or the State of Oregon, Goal 5 had been successfully addressed nine years earlier. This is at the heart of the *Green* decision.

Are we really to believe that Lane County has operated without an acknowledged Comprehensive Plan for 27 years?

The Appellants have stated the F2 Code fails to recognize the matter of "residential density" as recommended by the Oregon Department of Fish and Wildlife (ODFW) and incorporated into the Flora and Fauna Working Paper of 40 acre parcels in Peripheral Big Game Habitat and 80 acre parcels in Major Big Game Habitat. Conspicuously, and precisely to their point of error, the Appellants have left out the word "overall" as it has been included in every discussion of density by ODFW. Overall density.

The adoption of the F1 zoning, and its prohibition of residences, applied to 94.4% of the forest zoned lands of Lane County. The F2 zoning, where under strict limitations dwellings are allowed, is applied to 145,356 acres of the 2,595,131 acres of the county's forest zoned land, 5.6%. Contrary to Mr. Malone's claim that we have been unable to cite the source of this data, these numbers are taken directly from Page 22 of the September 13, 1984 Acknowledgment of Compliance from the Land Conservation and Development Commission of the Lane County Comprehensive Plan, a copy of which we provided as Exhibit 11 to my letter of December 11, 2019. This describes exactly the concept of **Overall Density** as was being sought by ODFW and substantially exceeds the goals of the department.

It was LCDC's acknowledgment that the prohibition of dwellings in the F1 zoning, unique in all of Oregon to Lane County, established the conformance with the ODFW overall residential density standards for Big Game Habitat in the forest zoned lands of the county. Thus the objectives of Policy 11 and the requirements of Goal 5 were met. The Appellant's refusal to acknowledge the definition of overall density is at the core of their failed argument.

Among the limitations placed on the approval of dwellings in the F2 zoned land are the siting standards specifically discussed in 1984 by LCDC in their acknowledgment of the County's Comprehensive Plan. See Pages 25 and 26 to Exhibit 11 of my December 11, 2019 letter. Those siting standards remain in effect today in the Template Test provisions of County Code and were adhered to in the application submitted by NIMPKISH, LLC.

The process of acknowledgment was described in its historical context in letters from James Mann, the retired Senior Planner for Lane County, and Kent Howe, the former Director of Land Management for Lane County, who were directly responsible for obtaining the acknowledgment of the County's Comprehensive Plan. Copies of Mr. Mann's and Mr. Howe's letters were included as Exhibits A and B, respectively, in Mr. Farthing's letter dated November 7, 2019.

Laurie Segel, writing on behalf of LandWatch, submitted an email dated December 29, 2019 attaching a copy of a letter from a Ms. Aileen Kaye submitted to the Oregon House Committee on Natural Resources regarding House Bill 3661 and placed into the Committee record on May 10, 1993. In her email Ms. Segel also bemoaned that the letters of Mr. Mann and Mr. Howe were not "signed in the presence of a notary." While Ms. Kaye's letter to the Oregon Legislature is a puzzlement to me as to how it possibly pertains to the issue of PA19-05298, regarding the question of Mr. Howe and Mr. Mann failing to have their letters signed before a notary I can only ask the question: So? Is it Ms. Segel's assertion that we have forged the signatures of Mr. Mann and Mr. Howe?

Ms. Segel offers a disingenuous claim of innocence in stating that LandWatch has not made a "personal jab at Mr. Howe..." She then goes on to state:

> "The fact is that Mr. Howe has never shied away from colluding with the developers and their agents, as the attached letter shows." (Apparently this is the letter from Aileen Kaye, referenced above.)

Gary Darnielle
PA19-05298
Final Rebuttal
January 20, 2020

For not having taken a personal jab at Kent Howe, this is a pretty good swipe and personally, I find it spurious. Ms. Segel's comments regarding these two public employees are beneath further discussion.

As I noted in my letter of January 14, 2020 Ms. Segel continues to confuse the difference between "legal lots" – lawfully established units of land, as defined in ORS 92.010(3) – and tax lots, an identifying account number for taxation purposes. The appellants have made the issue of "density" as part of their objection. Our point is since the adoption of the current F2 zoning in 1984 and the minimum lot size of 80 acres as mandated by House Bill 3661 in 1993, the creation of lots by partition or subdivision has become a virtually unknown event. The effect of this change has been to establish what is, by anyone's definition, a finite number of parcels within the F2 zone: those created "By deed or land sales contract, if there were no applicable planning, zoning or subdivision or partition ordinances or regulations." ORS 92.010(3)(a)(B)(ii).

The effect of this situation is the number of parcels that can be recognized as having been lawfully established, a Legal Lot, is what has existed for most of Lane County since March 26, 1975 (the date of adoption of planning, zoning and subdivision ordinances for the vast majority of the county and applicable to the subject property); that is a finite number. The number of lawfully created units of land taken in the context of the total land base, the definition of density, has remained unchanged by any measureable amount. We simply are not creating new parcels. The work of NIMPKISH, LLC, the owner of the subject property, has not resulted in the creation of a "new" parcel, as is asserted by Ms. Segel. There has been established a new tax lot for identification purposes of the Lane County Department of Assessment and Taxation, but not a new Legal Lot

As is discussed by the Lane County Land Management Division, tax lots are not necessarily Legal Lots, tax lots may have more than one Legal Lot within them. The Appellants simply do not get that and continue to file meritless appeals, as was previously filed, and dismissed, with the subject property.

Tax lots are assigned when a conveyance occurs. When a deed or other conveyance goes of public record the cartographer's office of the Department of Assessment and Taxation examines the instrument and if the legal description is different than that previously recorded for the tax lot in question a new tax lot is assigned. After all these years it is disappointing that the Appellants simply refuse to acknowledge this process.

Gary Darnielle
PA19-05298
Final Rebuttal
January 20, 2020

Contrary to Ms. Segel's assertion that this process was somehow "hatched by the developers and the agents in the mid-1980's, a practice that both Mr. Mann and Mr. Howe enabled" one can only say: they carried out the law that was passed by the Oregon Legislature. Period.

As to the letter authored by Aileen Kaye I am simply perplexed as to how this is relevant to the approval of a Template Dwelling in the F2 zone. Seriously? We are to expect that a copy of a letter submitted regarding House Bill 3661 in 1993 reporting on an eavesdropped conversation in a restaurant in Salem is to be considered as evidence in this appeal?

The Appellants have attempted to argue that the application submitted for Tax Lot 507 must be denied as the parcel is part of a "tract." The adjoining parcels are under completely different ownership from that of Tax Lot 507. Title to Tax Lots 501 and 506, the adjoining parcels, is vested in Gray and Dorotea Goodman as husband and wife. Mr. and Mrs. Goodman, as has been correctly noted by the Appellants, are the members of NIMPKISH, LLC. It is appropriate to note in discussing a limited liability company that ORS 68.239 sets forth:

> "Nature of membership interest. A membership interest is personal property. A member is not a co-owner and has no interest in specific limited liability company property."

This point was driven home by Michael Farthing, legal counsel for the Applicants, at the September 26, 2019 hearing of the appeal.

In Exhibit 14 of my December 11, 2019 letter I presented an informational handout from Cascade Title demonstrating the difference between individual ownership such as is held by NIMPKISH, LLC in Tax Lot 507 and that of the Mr. and Mrs. Goodman in the adjoining parcels.

I have previously commented, and stand by the comment, early on in their legal training Mr. Mulkey and Mr. Malone should have obtained an understanding of the differing vesting of title in the subject property and the adjoining properties.

In our application we presented an item by item discussion of the requirements of the Template Test standards set out in Lane Code.

1. The soils were reviewed and summarized, the 160 acre template test was applied to the subject property and the required minimum number of parcels and dwellings was identified.

At the appeal hearing on September 26, 2019 the Appellants filed a specious objection to the approval, asserting one of the dwellings included in our Template Test count, that located on Tax Lot 18-02-11-00-00601, was not established on or before the required date of January 1, 1993. This exact same challenge had been made in the *Betz* application and dismissed. We noted this at the hearing and also noted that the Staff Report showed a total of five dwellings as being located within the template, so the argument that the application failed to establish the requisite three dwellings was meritless. The Appellants remained undeterred.

2. We prepared maps depicting the proposed dwelling site with an overlay of contour lines on the site plan showing the outline of the footprint of the dwelling and the required primary and secondary fuel breaks as well as a map of the entire parcel showing the relative terrain of all of Tax Lot 507. The maps were prepared by Dave Collier, a Registered Surveyor in the State of Oregon, and showed the dwelling to be located on the most level portion of the property when the required minimum 100 foot setback from adjoining lots or parcels was considered. The adjoining property to the west is 111 feet away, to the south the adjoining property is approximately 180 feet. We also showed access provided by a driveway to be constructed that met the standards of Lane Code for grade, width and fire-fighting protection.

3. As was shown in the soils map with the application the parcel is split between higher value forestland soils and extremely low quality forestland soils; we showed the proposed building site to be located in the area of lowest quality forestland capability, Soil Type 107C, Philomath Silty Clay, at a 3-4% slope and having a forest capability estimated by the Oregon Department of Forestry at 45 cubic feet per acre per year. Notably, given the extremely low level of production, the NRCS chooses not to rate this as a forest soil type.

4. In our application we presented a letter from Chief Andrew Smith, fire chief for the Pleasant Hill-Goshen Fire and Rescue Department, summarizing his site review of the parcel and his opinion that the proposed access road, R. R. Baker Road, would meet the access requirements of his agency. We also had Chief Smith present another letter

summarizing the equipment available by his agency to respond to a fire. The reports from Chief Smith discussing his on-site review of the property were questioned at the hearing specifically to the point of his assessment of grade for R. R. Baker Road, the access road to the subject property, our proposal for turn-around points, the grade of the driveway proposed to the building site and the matter of "chimney draw effect."

Chief Smith conducted a second site inspection on December 6, 2019 and issued the letter dated December 9, 2019 which we attached as Exhibit 2 to my letter of December 18, 2019. In his letter Chief Smith reaffirmed that R. R. Baker Road and the proposed modifications in our application would meet their access requirements for fire-fighting equipment. Chief Smith also confirmed the proposed driveway would be acceptable and noted our proposed development would "greatly reduce or eliminate the risk factors of chimney draw effect."

In the conditional approval of the Special Use Permit it was noted by County Staff that the subject property is within an area of many hundreds of acres mapped by the Oregon Department of Geology and Mineral Industries, DOGAMI. In a broad stroke brush application, the subject property is shown as having a very high landslide susceptibility. The conditional approval then outlined the Lane County policy for such lands and the responsibility that would fall to an applicant for a building permit to address a geotechnical study satisfactory to the Building Department of Lane County for the actual dwelling to be constructed. This condition was identified among the elements of the appeal filed by LandWatch.

We retained the services of Michael Remboldt, a licensed Professional Engineer and Geotechnical Engineer in the State of Oregon and the principal of K&A Engineering, to complete an on-site review of the property and discuss the potential hazard of landslide as it might exist with the proposed dwelling site. Mr. Remboldt testified at the appeal hearing on September 26, 2019 and offered a very understandable discussion of the DOGAMI report concluding that he felt there was no significant landslide hazard at the building site. At the hearing it was recommended that Mr. Remboldt prepare a written summary of his comments for inclusion in the record.

Mr. Remboldt prepared a letter dated October 31, 2019 which we presented as Exhibit B to my letter of November 6, 2019. Mr. Remboldt's letter concludes:

> "Therefore, it is my professional opinion that there is not a significant landslide hazard in the proposed homesite development area, and extensive or drastic, safeguards are NOT needed to ensure safety on or off the property with respect to hazards associated with slope movement."

It must be noted that the Appellants objected to the conclusion offered by Mr. Remboldt stating:

> "The Natural Hazards Inventory, as contained in the 1983 Natural Hazards Working Paper and associated materials, shall be used as a guide for general land use decisions(s). Specific land use decisions shall be **based upon inventory and upon on-site or other evaluation as appropriate."**

Continuing-

> "Here, because this is a specific land use decision, **the application must include on site or other evaluation as appropriate."**

My emphasis added.

How possibly can the Appellants look at the on-site inspection of the subject property by a licensed Professional Engineer and Geotechnical Engineer and conclude the Application has failed in any way to comply with this standard?

With regards to the landslide hazard the Appellants presented a letter dated November 21, 2019 from Andrew Mulkey representing 1000 Friends of Oregon. Mr. Mulkey introduces statements from "SLIDO," which, while not defined, is the Statewide Landslide Information Database for Oregon. Mr. Mulkey throws out emotionally charged statements referring to a report of 10,335 "deep landslides" that are mapped in Oregon, tying absolutely no relevance to the application under appeal or the subject property. We pointed out that Oregon is comprised of approximately 63,018,000 acres and perhaps some context should be given to the number of landslides and over how many hundreds (thousands ?) of years those landslides have occurred in the 63 million acres under consideration. How many, if any, of those landslides are near the subject property? How near? Where? The statistic is of zero relevance to the issue at hand, but certainly is emotionally fueled to turn heads.

Mr. Mulkey continued in his letter with a discussion of landslide hazard quoting the SLIDO report that 95% of the deep slope landslides occur on 10-45 **degree** slopes. At Exhibit 4 to my letter of November 27, 2019 we submitted a chart showing a graph of angles from 10 degrees to 45 degrees, pointing out that a 45 degree slope corresponded to a 100 percent grade, a 10 degree slope corresponded to a 17.6 percent grade. We then noted the area around the proposed building site was virtually at level grade, as shown by our surveyor, though the area to the west of the site was estimated at an 18% downslope grade, basically the lowest end of Mr. Mulkey's area of concern.

We also suggested that perhaps for consistency and credibility it would be best if our discussion of the proposal, and the references of those in objection, used percent grade of slope as opposed to degree of slope as it is percent that is used in statutory and administrative rules as well as county code. The two terms are distinctly different. Notably, the proposed dwelling site is not within 30 feet of a slope greater than 40 percent, conforming to ORS 215.730(1)(b)(B) and Lane Code 16.211(5)(a). The excerpts from the SLIDO report are nothing short of a Gee-Whiz, attention grabbing, emotional piece of irrelevance to the application under consideration.

At the heart of all of this discussion is the on-site evaluation made by Mr. Remboldt. To that point Mr. Mulkey and Mr. Malone offered an ill-schooled critique of the Remboldt letter of October 31, 2019. Mr. Remboldt responded with a letter dated December 11, 2019 offering a defense of his evaluation of the subject property and a somewhat scathing criticism of Mr. Mulkey's and Mr. Malone's characterization of a geotechnical evaluation. Specifically to Mr. Malone's comments, Mr. Remboldt says:

> "Malone, like many others, seems to believe that 'substantial evidence' consists of volumes of written documentation. Substantial evidence can be and most often should be very simple and brief in scope."

Hear, hear!

Mr. Remboldt's December 11, 2019 letter was attached at Exhibit 3 to my letter dated December 18, 2019. In his December 11, 2019 letter Mr. Remboldt reaffirmed his earlier evaluation of the proposed building site and also provided a discussion of R. R. Baker Road. Responding to a specific request regarding the landslide susceptibility of the driveway Mr. Remboldt offered the following:

> "Based on our experience with the design and construction of low volume roads it is our opinion the proposed driveway location does not inherently present a significant landslide hazard."

Mr. Mulkey's November 7, 2019 letter representing 1000 Friends of Oregon in support of the Appellants is, frankly, bizarre. As I pointed out in my letter of November 20, 2019, Mr. Mulkey, apparently has not read his Exhibit 7 to his letter. Page 5 of Exhibit 7 to Mr. Mulkey's letter is a Conditional Approval of a Template Test Special Use Permit in Lane County, PA 02-5377. Condition No. 4 states:

> "Physically establish the primary and secondary fuel breaks as depicted on the approved site development plan, Exhibit 'B-1'. These fuel breaks shall be maintained in perpetuity..... Please contact Don Nickell, 541/692-3989 with questions about fuel break requirements."

Given the years that Mr. Mulkey practiced in Lane County and his extensive interaction with Lane County Land Management, Mr. Mulkey knows Don Nickell, now retired, was on the staff of Lane County Land Management in 2002

Page 2 to Exhibit 7 of Mr. Mulkey's letter is also a recitation of the Conditions of Approval for a Template Test Special Use Permit in Lane County, PA 02-5486. Condition 6 states:

> "Physically establish the primary and secondary fuel breaks as depicted on the approved Detail Development Plan, Exhibit C, and as necessary on the adjoining property in accordance with recorded instrument 2002-031079. These fuel breaks shall be maintained in perpetuity. The minimum primary safety zone surrounding the proposed dwelling shall be 30 feet. The minimum secondary fuel breaks surrounding the primary safety zone shall be 100 feet. Please contact Don Nickell, 541/682-3989 with questions about the fuel break requirements."

In the left margin of Condition 6 is a handwritten notation, "Done PA03-5055." At the bottom of the page is a signature: "Donald"

Mr. Mulkey is fully aware that the conditions of approval specified in his attached Exhibit 7 were inspected by a planner with the Lane County Land Management Division, Don Nickell.

Gary Darnielle
PA19-05298
Final Rebuttal
January 20, 2020

As we pointed out in our November 20, 2019 letter, the conditions of approval of PA19-05298 are virtually identical to those of Mr. Mulkey's Exhibit 7. Condition No. 6 of PA19-05298 states:

> "Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(6)(c) as depicted on the applicant's site plan....."

At Condition No. 9 is the requirement of:

> "Upon completion of conditions #2 through #8, the applicant shall complete and submit a Land Use Application form to Verify Compliance with Conditions of Approval, with the required processing fee."

Mr. Mulkey goes on in his November 7, 2019 letter to weave an imaginary process of how Lane County reviews the conditions of approval of a Template Test Dwelling in stating:

> "The conditions of approval paraphrase the code, and give the ultimate discretion of how to establish the fuel breaks in compliance with those provisions to the building department. Applying the fuel break standards requires a degree of judgment and discretion. The county cannot defer the task of determining the fuel break distances to a future, non-public decision making process. *Eng v Wallowa* County (LUBA No.2018-085). "

Clearly no such event is occurring. Either Mr. Mulkey is exhibiting gross negligence in failing to read his own submitted exhibits and the actual conditions of approval or he is fabricating this account of events in creating what can only be described as a far flung tale in his effort to support this flawed appeal. In either event, it is shameful for a member of the Bar to display such arrogance to the law.

In responding to comments expressed at the November 14, 2019 hearing of the appeal of PA19-05299, an approval of a Template Test Dwelling in F2 zoned lands, we became aware of a number of points of interest being expressed with regards to such approvals, though the elements of concern are not expressed in Lane Code. Among those points of interest, and our responses which were also provided for the record in PA19-05298, were the following:

1. **Well Logs.** We provided copies of the summary pages from the Oregon Water Resources Department identifying wells located in Section 11, Township 18 South, Range 3 West. Notably, 53 wells were recorded by the State in Section 11 with flows varying from 0 (zero) gallons per minute (GPM) to 360 GPM. On adjoining and immediately nearby properties seven wells were identified having flows from 1.5 GPM

to 60 GPM. The summary report from the Oregon Water Resources Department was attached at Exhibit 1 to my letter of December 18, 2019.

2. **Easement for the use of R. R. Baker Road.** A copy of the easement recorded at Lane County Recorder's Reception Number 2019-010337 over the 40 foot wide strip of land within which R. R. Baker Road is constructed was provided in the initial application and found by County Staff to meet the standards of access required for approval of a Template Test Dwelling. At the November 14, 2019 hearing the question was posed if the easement allowed for reconstruction to meet the standards of the proposal as set forth in the application. We reviewed the easement document and provided an additional copy at Exhibit 5 to my December 11, 2019 letter, pointing out the specific provisions of the easement that allowed for the proposal being made by the Applicants:

   "Section 5.2. Maintenance/Repair. Any party may cause the easement, or any portion thereof, to be maintained, repaired or reconstructed."

3. **Proposed Road Contractor, Hendrickson Well Drilling.** Some concern, perhaps with justification, was voiced at the November 14, 2019 hearing over the company name of "Hendrickson Well Drilling" as to their capability to carry out the proposed road reconstruction. Jeff Hendrickson, owner of Hendrickson Well Drilling, had previously provided a letter detailing his on-site review of the subject property and his company's ability to complete the road proposal. Mr. Hendrickson provided a second letter detailing his company's nearly 40 year business history, how the company came to have its current name, the type of work his company performs and provided photographs of some of the equipment they have available for road construction.
4. **Objection to lack of rezoning or subdivision.** Mr. Malone objected at the November 14, 2019 hearing and emphasized in his letter of that date that the application submitted has been prepared "without process of rezoning, subdividing or any other action that would have required consideration of the Goals..." We noted the subject property was, at one time, part of an approximate 60 acre parcel, identified as a single tax lot by the Lane County Department of Assessment and Taxation, within which were recognized five "lawfully created units of land" – Legal Lots in Lane County parlance. The Legal Lots were verified by land use action, fully noticed by Lane County Land Management, and property line adjustments were carried out, again completely in compliance with State Statute and County Code. No rezoning was attempted or required, no subdividing occurred. In acknowledgment of the one factual statement Mr. Malone offered, no "action that would have required consideration of the Goals" took place.
5. **Road/Driveway Spacing Standards.** Mr. Malone asserts that the application fails to meet the Roadway and Driveway/Goal 4 standards, Referencing Lane Code 15.138. He then completely fails to read the provisions of LC15.138, the first sentence of which reads:

   "Requirements in this section shall apply to new driveway and road approach intersections with a County Road."

As we have repeatedly noted, R. R. Baker Road is not a county road, it is a privately owned and maintained road. The provisions of LC15.138 simply do not apply to this application.

6. **Road Frontage Standards.** While not noted in the appeal under consideration in this action, Mr. Malone asserts in his letter of November 14, 2019 for the adjoining property that the County failed to address the frontage requirements of LC15.120 in reviewing R. R. Baker Road. We attached at Exhibit 13 to our letter of December 11, 2019 a copy of the Lane County Assessment and Taxation Section Map for Section 11. Even the most cursory review of that map clearly shows each parcel fronting on R. R. Baker Road has substantially in excess of 30 feet of frontage. Mr. Malone's reference to this section of code and attempting to apply it to the subject property was simply a continuing effort at sowing confusion to the application.

In his letter of January 16, 2020 Mr. Malone submits a copy of the March 14, 1984 staff report from the Land Conservation and Development Commission Acknowledgment of Compliance by Lane County. Mr. Malone bases virtually all of his discussion in the January 16, 2020 letter on excerpts taken from this report. What Mr. Malone fails to do is acknowledge that the LCDC process of reviewing the Comprehensive Plan for Lane County was a continuing work in progress. In no way can the March 14, 1984 report be taken as the conclusion of the acknowledgment of the Comprehensive Plan. To the contrary, the March 14, 1984 report makes specific reference to work to be accomplished and considered in August of that year.

In our submission of December 18, 2019 we attached at Exhibit 6 the August 17, 1984 report from the Land Conservation and Development Commission Acknowledgment of Compliance for Lane County, which was a continuing discussion of elements of concern as the Comprehensive Plan was being drafted.

In our letter of November 6, 2019 we attached at Exhibit A the October 3, 1984 staff report by LCDC establishing the completion of the Acknowledgment of Compliance for Lane County. Mr. Malone's cherry picking of what is essentially a working paper in the March 14, 1984 Report is a failure to pay attention to detail, at the least, and at worst is a conscious effort to misrepresent what occurred in the acknowledgment of the County's Comprehensive Plan.

Secondary Fuel Break. One note of objection offered by the Appellants has "stuck" with the Applicants and as such has been addressed in my letter of November 20, 2019. The issue remains to be resolved by the Hearings Official. That note is the question of the Secondary Fuel Break as depicted in the Site Plan at Exhibit 3 to the original application. In the Site Plan the Secondary Fuel Break is shown extending to the western boundary of the subject property and, as it runs off of the land owned by the Applicant, it does not extend to the distance of an

additional 100 feet beyond the Primary Fuel Break. The Primary Fuel Break of 80 feet falls entirely within the subject property, the "shortcoming" of the Secondary Fuel Break is approximately 70 feet.

As noted in this letter, and tediously discussed by Mr. Mulkey, the adjoining property to the west, Tax Lot 506, is owned by Gray and Dorotea Goodman, who are also the members of NIMPKISH, LLC. The question arises as to the requirement to obtain an easement for fuel break purposes on adjoining land that is "owned or controlled" by the applicants for the Template Dwelling permit.

Mr. Mulkey asserts that the owners of a parcel for which a Template Dwelling approval is being sought, where the Secondary Fuel Break falls outside the subject property, are "required by law" to obtain an easement from the adjoining land owner(s) to establish the fuel break. Mr. Mulkey fails to provide any statutory provision, administrative rule or code reference to support his claim, but the issue has been a point of contention in other applications and appeals, with the hinge point being the definition of "controlled." Mr. Mulkey points to an approved Template Test Dwelling Special Use Permit, PA 02-5486, in its requirement by Lane County for the applicant to obtain an easement for fuel break purposes on an adjoining parcel of land with which the applicants have no ownership interest. That may well have been the standard in 2002, but it has long since been abandoned by Lane County as it is simply legally unsupportable. Again, Mr. Mulkey fails to show statute, rule or code that makes such a requirement.

The Applicant in PA 19-05298, NIMPKISH, LLC, stridently maintains, and ORS 68.239 clearly establishes, it is not the owners of the adjoining Tax Lot 506. That said, there is simply a time when any applicant in a land use application may have to "cry uncle." At what point do the expenses of defending a position become so outrageous that concessions must be made to accomplish the objective?

Accordingly, the owners of Tax Lot 506 (Goodmans) have agreed to grant an easement in favor of the Applicants (NIMPKISH, LLC) for establishment of a Secondary Fuel Break, <u>if such a provision becomes a condition of approval required by the Hearings Official.</u> A diagram prepared by the surveyor, Dave Collier, was presented as Attachment B to my letter of November 20, 2019 depicting the geographic area that the easement would encumber to allow for the full 100 foot Secondary Fuel Break beneficial to the Applicants in PA19-05298.

Gary Darnielle
PA19-05298
Final Rebuttal
January 20, 2020

In this rebuttal we wish to reaffirm, if the Hearings Official orders as a condition of approval that such an easement is required for the dismissal of the appeal, we will prepare the easement and submit it along with the other requirements to be met in completing the conditions of approval established by Lane County.

Mr. Darnielle, once again I thank you for your time and attention to a lengthy and detailed letter. We ask that the appeal of PA19-05298 be dismissed.

Sincerely,

Jim Belknap

Re: LandWatch testimony in opposition to Request for Template Dwelling in the F-2 zone, 509-PA19-05298 (Nimpkish).

On behalf of LandWatch Lane County, please accept this testimony in support of the appeal and in opposition to the application described above.

The applicant relies upon the *Green* decision from Hearings Official Davies. In *Green*, the Hearings Official agreed that the "relevant Goal 5 comprehensive plan policies, and relevant implementing ordinances, can supplement the specific forest template dwelling approval criteria set forth in LC 16.211(5)." However, the Hearings Official disagreed with appellant that OAR 660-006-0025(6) can be used "to bootstrap a Goal 5 analysis where it would otherwise be precluded." For the following reasons, appellant believes the Hearings Official is mistaken.

As it pertains to the Hearings Official's decision in *Green*, Appellant readily concedes that *Cattoche* entailed a plan amendment and zone change, whereas this case is a site-specific request for a forest template dwelling. The reason Appellant points to the *Cattoche* case is that LUBA's analysis of the Flora and Fauna working paper and the big game range requirements was at odds with the Hearings Official's prior decision on the applicability of the comprehensive plan policies and ODFW's residential density recommendations. *Cattoche* is also instructive in that it demonstrates that the County never actually adopted specific minimum acreages for residential development. At the time, as the June 29 and July 19, 1984, working papers[1]

[1] Appellant submits the staff reports from the June 29 and July 19, 1984 (Exhibit A) staff reports that provide the rationale for the Acknowledgment Order submitted by the applicant.

demonstrate, the County believed that a minimum development acreage standard of 40-acres would be consistent with ODFW's recommendation, but no 40-acre residential development standard was ever adopted. *See* Exhibit A, Page 149. The built-in alternative was that the residential densities recommended by ODFW that would govern residential development by triggering an ESEE analysis, pursuant to Policy 11. The June 29 and July 19, 1984, staff reports conclude that "[i]mplementing measures which carry out ODFW's development density recommendations in Major and Peripheral Big Game Range areas have not been adopted, particularly in the F-2, ML, and EFU zones." *Id.*, Page 166.

The Hearings Official in *Green* misses the mark by focusing on the fact that the working papers were not adopted. The crux of the issue is that policy 11 uses makes ODFW's recommendations to trigger an ESEE analysis[2]: if ODFW's residential density recommendations are exceeded, then a Goal 5 ESEE analysis is required according to Policy 11. The issue is not whether the working papers were adopted. The ODFW recommendation triggers an ESEE analysis as a result of a specific comprehensive plan policy, policy 11. The policy uniquely uses an ESEE analysis for its own means to regulate residential densities in Lane County. The issue here is no more complicated than that: state law requires comprehensive plan provisions be addressed for template dwelling proposals and flora and fauna policy 11 requires an ESEE analysis when ODFW residential density recommendations have been exceeded.

The Hearings Official is also incorrect to find that policy 11 does not contain approval criteria. The policy is essentially composed of two parts. The first part is specific and couched in mandatory terms: "Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-016-000." The two sentences plainly require that an ESEE analysis be prepared if the ODFW recommendations are exceeded, short and simple. The next sentence, or the second part, contains general guidance that is not itself criteria: "The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program." The first two sentences are specific and mandatory, but the third sentence is generalized and not applicable to specific proposals.

---

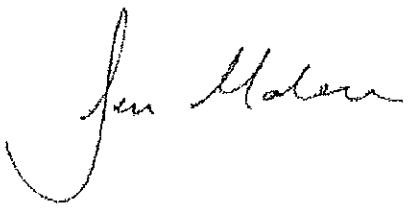
[2] There does not appear to be any restriction on a County's attempt to use the framework provided by the ESEE analysis rules to carry out its own specific comprehensive plan policy. Thus, the Hearings Official's statement Appellant is attempting "to bootstrap a Goal 5 analysis where it would otherwise be precluded" is misplaced because nothing precludes the County from utilizing the framework provided by Goal 5's rules to resolve conflicts for site-specific proposals.

While the County subsequently adopted siting standards governing development in the F-2 zone, which appear to be the same as the siting criteria for goal 4 contained in OAR 660-006-0029 and -0035, it is important to dispose of the notions that the siting criteria are the only means of implementing policy 11 or that they implement policy 11 at all. For example, there is nothing to demonstrate that an ESEE analysis under policy 11 can be avoided simply because there may exist siting criteria. The siting criteria apply regardless of a conflict and it is the ESEE analysis that must be prepared in light of a conflict. Moreover, the plain language of the first two sentences requires a specific process (an ESEE analysis) when ODFW's residential density recommendations are exceeded, and the siting criteria are one of two means by which the County purported to regulate residential development. The other means was a minimum acreage for residential development or ODFW's density limitation. When the minimum acreage standard was not adopted, the siting criteria were left in place, as was policy 11. In other words, the siting criteria *and* the density recommendations (along with the ESEE requirement if density is exceeded) work to protect big game.

The June 29 and July 19 staff reports provide the following objections related to big game:

> "2. ODFW and 1000 Friends have objected to Flora and Fauna Policy 11 since it regards densities above ODFW's recommendations in big game areas to constitute a conflict. ODFW regards its recommended densities as the approach to resolve conflicts between dwellings and game range. 1000 Friends states that Policy 11 allows residential densities to exceed ODFW recommendations 'if conflicts can be resolved in accordance with OAR 660-16-000.' Objectors believe this allows the County to justify density levels which exceed those recommended by ODFW through an analysis of ESEE consequences. Objectors do not believe this exclusion is consistent with the Goal 5 Rule.
>
> 3. ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones. Similar objections have been filed by 1000 Friends of Oregon. Objectors point out that the F-1 zones establishes a minimum lot size of 40 acres, but smaller divisions can be made without regard to big game impacts. The F-2 zone establishes minimum lot sizes of 20 and 40 acres for forest and farm uses, which also fail to meet ODFW's recommended densities for Peripheral Range, according to objectors. 1000 Friends points out that the Flora and Fauna Working Paper Addendum and Policy 11 prescribe clustering and siting standards, but these are not carried out in the F-2 zone. The Addendum (p. 14) also references forest land minimum lot sizes which are no longer current.

Exhibit A, Page 157. The staff reports also provide the Commission's response to the objections, which specifically find that an ESEE analysis is a component of the policy that is used to find that the plan is acknowledged:



> "2. Policy 11 states:
>
> > 'Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program.'
>
> Objectors are not correct that this policy violates Goal 5. *Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis.* However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU Zones which ensure that ODFW's density standards will be achieved.
>
> The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or prevent conflcits between dwellings and big game habitat. However, as discussed below, the County has not adopted such standards in its zoning ordinance.
>
> 3. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone."

Exhibit A, Page 161 (emphasis added). The Commission specifically understood the conflicts from residential development failing to satisfy ODFW's recommendation to be resolved by the ESEE process. Moreover, the Commission specifically understood that policy 11 was essentially split into two parts, one specific and the other general. The Commission also understood that

siting and clustering requirements were "half" of what was recommended by ODFW, and the other half was the minimum lot sizes. No acreage standard for residential development, however, was adopted, which makes policy 11's requirement all the more important, and there is no minimum acreage requirement for forest template dwellings, such as this case.

The simple conclusion culled from the staff reports is that the Commission approved the acknowledgement order under the explicit understanding that Policy 11 would be implicated where proposals exceed the residential density recommendation. In such an instance, an ESEE analysis would be used to determine whether to allow the use. It is for that reason that the staff reports concluded that "Objectors are not correct that this policy violates Goal 5." This is one such proposal because the residential density far exceeds ODFW's recommendation.

Sincerely,

Sean T. Malone
Attorney for LandWatch Lane County

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE

Lane County
and
Rural Portion of Eugene/Springfield Metro Plan

Response from Denial Order of November 6, 1981
and from Continuance Order of November 6, 1981

DATE RECEIVED:
March 15, 1984

DATE OF COMMISSION ACTION:

I. REQUEST

The County has requested that its comprehensive plan and implementing measures be acknowledged as in compliance with the Statewide Planning Goals for areas outside adopted urban growth boundaries. Also, the County and the Cities of Eugene and Springfield request acknowledgment of compliance for the rural portions of the Eugene/Springfield Area General Plan.

II. SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission postpone Lane County's request until September 13-14, 1984 in order to allow the County time to amend its plan and ordinances to comply with Statewide Planning Goals. Provided the necessary amendments are made prior to the Commission's September meeting, the Department will revise its position to recommend acknowledgment under the expedited review procedures under OAR 660-03-033.

III. BACKGROUND INFORMATION

Geography

Lane County is located at the southern end of the Willamette Valley and extends from the crest of the Cascades to the Pacific Ocean.

Governing Body

The County is governed by a five-member Commission elected from separate districts.

Population

2000 - 377,500 (projection)
1980 - 273,266 (102,200 unincorporated)
1976 - 240,792
1970 - 215,401
1960 - 162,890
1950 - 125,776
1940 - 69,096

Grants

Lane Count has received grant funds for the rural plan totaling 485,279 since 1975.

General Overview

Lane County has a long history of land use planning. A General Plan was adopted in 1972. Between 1974 and 1977, the County developed separate plans for each of 13 "sub-areas." These were incorporated into a revised General Plan adopted in 1980. The Commission denied the Lane County submittal in February 1981, stating:

> Goal deficiencies are in many cases major and widespread. Goal 2 failures touch nearly every requirement of the Land Use Planning Goals . . ." (Denial Report).

As this report demonstrates, planning in Lane County has made a quantum leap since 1981. The County has moved from 13 subarea plans into a consolidated policy document. This document is based on "Working Papers"--each containing detailed inventory and analysis information suporting the County's land use decisions and implementing ordinances.

The County has recently completed "digitizing" information on all land in the County. This will allow sophisticated computer generated maps and other data analyses. Since this process was not completed until very recently, the submital contained poor maps.

This report finds compliance with Goals 1, 6, 8-10, 12-14 and 16-18. Also, a major portion of the County's "exceptions" areas are recommended for approval, along with a significant portion of the County's forest lands (F-1 areas). It is staff's opinion that the work remaining for the County, under the recommendations of this report, could be acommplished in a very short time period.

This report also addresses the Eugene/Springfield Metro Area General Plan. The "urban" portion of that plan is acknowledged (i.e., that area inside the urban growth boundary). However, the Commission should note that Metro plan jurisdiction applies to rural areas outside the UGB and these areas are not under the Lane County Plan. Also the rural Metro Plan is under a continuance rather than a denial. Most of these continuance requirements have been met. However, some Goal 2 and 4 issues remain, necessitating an additional continuance for the rural Metro Plan as well.

Due to time constraints in completing this review for the July Commission meeting, Goals 5 and 15 reviews for both plans are not contained in this report. These reviews will be completed and distributed prior to July 19, 1984. However, the Commission will not be able to complete Goal 5 and 15 testimony on those Goals at that time due to notice requirements requiring distribution of this material three weeks prior to Commission action. Staff recommends that the Commission hear these Goal 5 and 15 issues at a subsequent hearing (August).

The Department recommends that the County's request be continued (but with postponement of final action until August) based on the following issues:

GOAL 2: Inadequate plan maps, plan/zone consistency problems and inadequate findings justifying built and committed exceptions.4

GOAL 3: Lack of plan amendment policy and inadequate findings and reasons for most areas designated Marginal Lands.

GOAL 4: Justification of minimum lot sizes is inadequate. Misapplication of the County's "Impacted Area" (F-2) Zone plan policy deficiencies for applying the F-1 and F-2 zones ordinance deficiencies in both the F-1 and F-2 Zones.

GOAL 7: Lack of implementing measures for developments in Geologic Hazard Areas.

GOAL 11: Lack of policy establishing appropriate levels of service in rural areas. Lack of assurances that authorized development in areas where subsurface sewage problems exist will not further aggrevate this problem.

Applicable Goals

GOAL 1: CITIZEN INVOLVEMENT

The February 13, 1981, Commission action on Lane County (Denial) found Goal 1 in compliance. However, since Goal 1 concerns an ongoing process, this report will again examine this issue. The County has a long and active history of citizen involvement and has utilized five types of citizen involvement organizations: official planning commissions; single function advisory committees; advisory groups of which the County is a member; community organizations; and widespread public referral/notice procedures (Working Paper 2, p. 1).

Goal 1 requires jurisdictions to develop a citizen involvement program that insures the opportunity for citizens to be involved in all phases of the planning process. Lane County's citizen involvement program (CIP) was initially approved by the Commission on April 23, 1976. The County has periodically amended this program, with the most recent amendment occurring in October, 1983. This amendment, which was approved by the Commission on May 31, 1984, changed the membership of the Citizen Involvement Program Committees (CIPC) to include only the East and West Lane Planning Commissions.

Lane County's CIP establishes a process for involving citizens in planning activities, technical information, feedback mechanisms, financial support, and selection of CIPC committee members. This approved process has not changed from that approved by the Commission in 1981, except as noted above.

The submittal shows that there were at least 61 public meetings and hearings conducted between October 1983 and the plan's adoption in February 1984 (Goal 1 Findings, Attachment "D"). Additional "ad hoc" meetings were held by the West Lane Planning Commission. The submittal also contains copies of newsletters, press releases (to 32 papers and broadcasters), letters, and a collection of the numerous newpaper articles covering the plan amendment process (Attachments "G"-"L"). The "Legislative Findings" show that Lane County undertook a "Comprehensive Plan Revision Public Assistance" program (CPR) from November 1983 through February 1984 (Attachment "E"). Under the CPR program, individual citizen comments and specific requests (concerning property, plan policies, zoning, etc.) were solicited and then tracked to insure responses from decision makers. The record shows 1109 "CPR" requests during the four month period ending in February 1984 (Working Paper 2 and Attachment "E"). This program was not required of the County in the approved CIP (i.e., it is an additional attempt by the County to assure adequate citizen participation).

Policies

The plan adopts six specific citizen involvement policies, including a policy for ongoing citizen involvement:

> Plan implementation shall include participation by the general public through a citizen involvement program in the development, adoption, and application of codes and ordinances needed to carry out the County general plan requirements (Lane County Policy Document, p. 1).

The plan also contains policies continuing communication with chartered community organizations, and designating the Planning Commissions as the primary advisory body on citizen involvement.

Objection

The Department has received numerous objections on Goal 1 from Lane County citizens. Responses to some of these objections are organized by issue rather than by author.

Issue: C. Robert Suess, et al., object that Goal 1 is violated because the County refused to take testimony on individual designations at an advertised February 8, 1984, meeting. Instead, the meeting was limited to testimony related to planning policies for the County.

Response: The objection is not valid. The objector has not shown that this County action violates Goal 1. The record shows that the County held 61 public meetings between October and adoption in March. It is not clear whether the agenda for this particular meeting was changed suddenly, or whether there was a misunderstanding of the public notice. In either case, this one incident would not bring about a recommendation of noncompliance under Goal 1, especially with 60 additional meetings available to permit testimony. Also, through the CPR process, the opportunity was available to the objector to submit written comments on particular properties. The objection states that such a CPR request was filed by the objector, and also that the objector submitted oral testimony at the February 8, 1984, hearing.

Issue: James and Jane Pittenger, E. B. Brassier, A. T. and S. E. Nordahl, J. Lavediere, D. A. Thomson, R. Jenning, E. J. Hale, Genevieve Brackebusch, Lester Nordahl, John Radsliff, and John Reaksecker have stated that Goal 1 is violated.

Response: These objections either do not state specific reasons for determining a Goal 1 violation, or else they report that the County Board did not ultimately accept individual property owner's requests for certain designations. These objections are not valid. Goal 1 requires that citizens have an opportunity to testify and participate in the planning process. Goal 1 does not require that such testimony be the only basis for land use decisions. Goal 1 is not automatically violated when a specific citizen, group, or the planning commission is overruled by the County Board. The Commission has no basis for evaluating those

objections which claim Goal 1 was violated, but which do not state reasons or evidence to support this claim. (Note: The John Radsliff objection contains hundreds of pages of computer generated lists, charts, graphs, and diagrams. Staff was unable to interpret this data and no information is included to show Goal 1 violations alleged. This objection will be available at the Commission hearing.)

Issue: The Lane County and the Oregon Small Rural Landowners associations (SRL) have submitted hundreds of pages of documents attached to a letter which claims, among other things, that Goal 1 is violated. However, the vast majority of this material consists of xeroxed newsclippings, editorials, letters, legal briefs, and other miscellaneous materials. There is no stated connection between these attachments and cover letters addressed to the Commission and Department, except the assertion that they are "self-explanatory." The SRL cover letters dated March 7, March 19, and March 31 request that the plan be returned to Lane County in violation of all Statewide Goals. No specific reasons for these violations are stated other than the accusation charging:

> . . . the OVERUSAGE OF THEIR PAID PLANNING STAFF, OF PERSONS WHO REPRESENTED THEMSELVES, in the PLANNING PROCESS, as experts on all phases of the PLANNING, and upon which MOST OF THE RULING OF THE PLANNING COMMISSIONS RELIED UPON IN THEIR DECISION MAKING (sic).

However, primary direction of these objections appears to be that the Commission should return the plan without review in order to allow more time for citizen involvement and other amendments, or else that Goal 1 compliance, "be ruled on immediately . . ." (i.e., as of the date of the letters).

Response: These objections are not valid. It is not clear that this request qualifies as an objection to be dealt with in the review process since the parties object to review rather than to acknowledgment. The Department responded to these requests when they were received showing why review was required to proceed.

If these are considered to be objections to acknowledgment, they are not valid. The assertion that the Lane County Board of Commissioners relied only on testimony of their staff has not been proven in the objection. The record indicates that the Board received an overwhelming amount of public testimony and structured the plan in response to that testimony (for example, the F-2 Zone land diviion and dwelling standards were for the most part, in response to citizens requests rather than staff proposals). The majority of the information in the SRL cover letters is either incomprehensible or is irrelevant to Goal 1. The SRL attachments are not "self-explanatory" and do not merit a response.

Issue: Donna Shelton, A. R. Wysong, et al. have submitted two detailed reports containing objections to Goal 1 compliance. The text of these reports total 19 pages, and numerous supporting documents have been referenced and attached. The objections attempt to show that "a policy

of limited public participation was begun" in April of 1981 and "has continued to date." Several pages of these objections concern Lane County's decisions affecting the role and duties of the West Lane Planning Commission (WLPC). The WLPC (objectors are members or former members) appears to raise four points in this regard:

1. The County Commissioner's actions--some proposed and some carried out--removed "most of the powers of the planning commissions",

2. Board backed "staff attempts to create more questionable plans without any consultation with the public and with very limited consultation with the planning commissions,"

3. The Board did not adopt the coastal plan recommended by the WLPC, and

4. The schedule for November through March, 1984, involved only joint meetings with the Board of Commissioners and the planning commissioners, depriving the planning commissioners of the opportunity to study matters, hear from constituants, or make recommendations ("They were pressured by the Board whose main emphasis was speed to make the deadline.")

Response: The first part of this issue, concerning planning commissioner authority, is not a concern of Goal 1. Under the Goal, Lane County is not required to give the County Planning Commissioners authority over day-to-day zoning requests. In Lane County, this authority is now carried by a hearings officer. The proposed actions eliminating the planning commission did not occur. The second part of this issue is unproven. The record indicates that a tremendous amount of citizen input occurred. The objection has not shown that staff advice was the only factor considered by the Lane County Board. The fact that a county staff recommendation prevails at the Board level, rather than a planning commission recommendation, does not indicate a Goal 1 violation. It is difficult to conclude that the Planning Commissioners were not consulted when many of the public hearings were joint hearings with both the Board and Planning Commissions. The objectors indicate that a high level of citizen involvement generated the coastal portion of the plan. It is inferred that Goal 1 was therefore violated when the Board rejected this plan. This is not the case. The Citizens Participation Goal does not strip decision makers of their authority to consider alternatives and their consequences. (Note: The Coastal Plan referred to here was one of 13 subarea plans denial by LCDC in 1981.) These objections are not valid.

Issue: The Shelton/Wysong et al., objection focuses on the period beginning late October 1983, and ending with intended plan adoption in February 1984. According to the objectors, this 90 day period was proposed for "a very ambitious program (of plan revision) that, to be properly done, would have required at least one year." According to objectors, during this process:

1. Material for the most part was not available to the public for study before or after some of these hearings.

2. No time was scheduled for discussion of citizen input or to make plan changes.

3. "The average property owner left each hearing totally confused and convinced his plea was in vain,"

4. One meeting place was changed at the last minute and the hearing room was too small.

5. On two occasions, "only one set of maps was available" at the hearing.

6. Two hearings and work sessions occurred (January 9 and 10, 1984) with no Board members attending.

7. Most hearings were held without any published legal notice and one with public notice given the same day.

8. Four work sessions were held with the staff where no public input was allowed.

9. The County did not take advantage of additional time for submittal granted by LCDC on February 4, 1984.

Response: Many of these assertions are contradicted by Lane County staff (see attached, June 1984, memo). These objections are not valid. The Lane County staff states that point 1 is only partially correct. According to Jim Mann, Senior Planner for the County, current materials were distributed at all meetings except where the most current versions were not yet printed. At some meetings, changes in the plan from a previous meeting were not yet printed. The plan was changing too fast for up-to-date printing of all current changes (these many changes occurring at each meeting were primarily in response to citizen input, and primarily concerned individual properties). Current materials were always available at the central Lane County offices through a self-service system, and were distributed at the 61 public hearings held since October, 1984, except where updated copies were not available.

The second point is also disputed by Lane County. Jim Mann states that discussion of citizen input and plan changes occurred at most of the scheduled meetings. In addition, the WLPC scheduled additional meetings for this purpose.

The third point above is an example of an allegation, without supporting evidence, found throughout the report. The Commission cannot evaluate the accuracy of this statement, and the objector has presented no evidence to show that it is a true statement.

The fourth and fifth points are examples of minor inconveniences to the public. This type of problem--the need to move a meeting or to use one large map rather than many distributed copies--does not bring the County out of compliance with Goal 1.

Point 6 raises the opposite position argued by the objector earlier, when it was stated that the presence of the Board stifled planning commission action. Here it is argued that the absence of Board members, (at 2 out of 61+ joint Planning Commission/Board hearings) also constitutes a Goal 1 violation.

Point number 7 is disputed by written records of published notice for each hearing, according to Lane County. These records will be available at the Commission hearing.

Regarding Point 8, the fact that at four work sessions (out of 61+ public hearings) public input was not invited is not a Goal 1 violation. The County has the authority to hold such work sessions, and these four sessions were "open", i.e., citizen spectators were permitted (personal communication, Jim Mann).

Point number 9 is not a Goal 1 violation. The County was not required to take the additional time granted by the Commission.

Issue: The Shelton/Wysong objection raises issues with respect to the CPR process:

1. The "change request form . . . used for public requests" would be impossible for anyone to fill out "without instructions and without prior knowledge of the proposed zoning,"

2. Instead of individual responses, the Board processed the 1845 seperate CPR requests in "batches."

Response: These objections are not valid. First, the CPR process was only one of several processes operating under which citizens comment was solicited in the plan amendment program taking place at this time. Secondly, this CPR process is innovative and exemplary in that it is an attempt to track and respond to all citizen input in writing. As it turned out, the volume of input and the time crunch necessitated short-cuts in the CPR process as originally proposed. Nevertheless, the information in the objection would indicate that the CPR process was successful: a number of requests were approved outright; a number of requests were recommended for denial by staff but were approved following review before the board; marginal land requests were denied but reasons were given (i.e., certain stated criterion were not met); a number of other requests were denied under stated reasons but with assurance of reconsideration at a later date. The County has a record of a written response to every CPR request (see submitted CPR summary sheet).

Issue: The Shelton/Wysong objection states that the County did not follow its approved Citizen Involvement Program (CIP). That program establishes procedures for citizen involvement in large-scale plan and zoning proposals. These procedures insure (1) distribution of materials and information, (2) informational meetings, (3) public hearing notices, (4) Planning Commission public hearings, and (5) Board of Commission public hearings with stated reasons for board action. The objectors state (1) distribution of material "was faulty," (2) no informational

meetings took place, (3) public hearing notice was "poorly done: ("the display ad was only six column inches"), (4) there were several months (in the summer of 1983) with no Planning Commission meetings, and (5) the Board action and stated reasons "have always been shaky."

Response: These objections are not valid. Each of these points has been addressed through response to other objections, above.

Conclusion: Lane County complies with Goal 1.

The County's amended Citizen Involvement Program, including changes in the membership of the CICP, continues to meet the requirements of Goal 1. The submittal demonstrates that the program, as amended, was adequately followed in amending the plan during the crucial October 1983 through March 1984 time period. It is clear that, due to necessary time constraints, the opportunities for citizen involvement were less than those provided during earlier planning phases. However, the County responded to this problem through increasing the number of meetings per month, through the CPR tracking process, and through the amended CICP membership. These amendments provided opportunities for citizen involvement consistent with Goal 1.

The objections for the most part reflect opposition to the substance of the most recent plan amendments (especially the F-2 zone and the nonresource land decision) rather than the CIP process. The Shelton/Wysong objection contains the most serious challenges to the citizen involvement process followed by the County. This objection greatly exaggerates the negative aspects of the County's process. On close examination, the events and facts forming the substance of this objection are either not sustained by the record, or are relatively minor infractions. Goal 1 compliance is not affected when citizen recommendations are not followed. Compliance is achieved when those comments are allowed and are given a response.

The CPR tracking process assured a written record of both citizen comments and responses by decision makers. That this process did not achieve all that was promised should not cloud the fact that this County went beyond the CIP requirements in establishing this procedure. It is normally not possible for a jurisdiction to answer specifically, with written findings, each concern raised by citizens during a plan adoption process of this magnitude. The Commission does not expect a concise statement in the form of written findings as to why a particular designation was chosen over another. Goal 1 requires a record which demonstrates that citizens concerns were heard and considered, and which shows why those concerns were or were not ultimately reflected in the comprehensive plan. Lane County's submittal has met this test.

GOAL 2: LAND USE PLANNING

Goal 2 requires a jurisdiction "to establish a land use planning process and policy framework as a basis for all decisions and actions related to land use." Plans must include inventories and other factual information and "ultimate policy choices." Implementing measures consistent with and adequate to carry out the plan must be adopted.

Plan Organization

The County plan applies to all areas outside City Urban Growth Boundaries and also outside the Eugene/Springfield Metropolitan Area jurisdictional boundary. The Metro area plan is discussed seperately, below. The revised Lane County plan consists of a technical information base, policy document, plan maps, and "functional plans" (housing, parks and open space, transportation, etc.).

The revised plan is designed around the Statewide Goals, i.e., working papers and policies are organized by Goal requirements and policies are stated in a goal-by-goal format.

The County has abandoned the "subarea" planning concept of the 1981 submittal and now divides the County into only two planning regions: Coastal and Inland. However, this regional distinction is made only with respect to the plan map and the jurisdiction of the two County Planning Commission. Plan policies have equal weight over the entire County.

The County has adopted the plans and the UGB's of all Lane County Cities. The "Planning Process" working paper states that:

> Land uses within UGB's are usually considered to be matters of City concern even though the territory outside the City limits is actually in County jurisdiction. By adopting the UGB's and the land uses within them the County indicates its agreement with City development intentions.

Where the previous subarea plans organized small communities into various levels of growth, the County now addresses these communities under the overall plan. The revised plan identifies small communities and indicates their boundaries. "Communities" are areas having "a mixture of uses," a "compact development pattern" and "an established community identity (including) places for community congregation" (Policy 10, Policy Document, p. 2.). The plan leaves open the possibility for further refinement of community plans (Policy document, policy 13, p. 3; see Goal 11).

Factual Base

There are 20 "working papers" forming the technical analysis and inventory basis for the plan. Each paper addresses a seperate topic (e.g., Agricultural lands, Forest Lands, Urbanization, Economy), and each contains written and mapped information, a list of issues suggested by the information, two or more lists of possible (not adopted) policies,

and a list of sources. Individual working papers are consistent with and support adopted policies, except as noted under Goal 4.

Population

The population working paper describes past growth rates in Lane County cities and rural areas. The working paper compares five different sets of population projections, and chooses the LCOG year 2000 projection of 377,500 persons. This projection "is presently used for all planning activities" (population, p. 8). The projection assumes that the growth rate for the County will decrease in the future, especially the rural areas. The working paper population projections for urban areas are based on the indivudual comprehensive plan projections.

Policies

Ordinance PA 883 adopts the Lane County Plan policies, revising the policy documents reviewed under the 1981 Denial. The policies are either described in the document as "advisory" "commitment," or "conformatory." Commitment policies primarily use mandatory wording, i.e., "shall", and are intended to guide future actions. Each Goal section in this report contains findings analyzing "commitment" policies against statewide goals. Advisory policies are primarily intended to advise or inform other agencies and are not discussed in this report. Plan conformity policies are "intended to guide designations" on plan maps and zoning maps. "Subsequent rezoning and/or plan diagram amendments must be in accord with these policies."

Planning/Zoning Consistency

The submitted "Plan Diagram Zoning Map" (reduced, two sections per page) is adopted by Ordinance PA 884. This document shows both the plan designation and zoning designation for each property in the County (outside UGB's and the Eugene/Springfield Metro Boundary). In many instances, the submitted maps are not able to be interpreted due to a variety of factors:

1. The original document was not copied in a manner that coastal overlay designations were readable.

2. The maps were not drawn so that important boundaries (i.e., community boundaries or exception area boundaries) could be clearly determined;

3. The maps do not reflect hundreds of last minute plan or zone changes.

These problems were noted during review and the County began correcting the maps. Larger scale, updated maps were made available midway through the comment period (this was indicated in the agency public notice to interested parties). However, the updated maps show zoning, but do not show plan designations. (Also, there is no indication that the revised maps are adopted.) Because readable plan maps are not available, plan/zone map consistency has not been evaluated.

The plan does not contain a list of plan catagories and a description of uses intended for each plan catagory. It appears that most plan catagories are implemented by more than one zoning district. However, the zoning ordinance does not contain detailed standards to guide decision makers in changing the zoning for specific areas. Thus, there is no set of standards to evaluate a proposed zone change (see Goal 4). Section 16.252(1) criteria for zone change only require that rezonings shall be consistent with "applicable comprehensive plan elements and components." Individual plan components do not generally contain information directing the speical application of many possible implementing zones. In addition, Section 16.252(1) of the Lane Code permits that, "Any zoning or rezoning may be effected by Ordinance or order . . ." ORS 215.503 states that counties must adopt by ordinance, all legislative acts relating to zoning. Any zone amendments adopted by order would not be binding on the County. There is a further question as to the County's ability to change an ordinance by an order.

Cluster Subdivisions

Lane County's Development Code provides for cluster subdivisions on lands zoned Rural Residential and Suburban Residential (LC 16.260(2)). The number of lots allowed in a cluster subdivision cannot exceed that computed under the minimum density established by the minimum lot size (LC 16.260(4)(a)(i)). The Suburban Residential Zone (which allows 10,000 square foot lots to be created when a community sewer and water system is provided (LC 16.229(6)(a)) is allowed only within designated communities (LC 16.229(1)(c)). However, the Rural Residential Zone is applied to rural areas and allows for the creation of cluster subdivisions to any density and size as long as the average density does not exceed one unit per acre (LC 16.231(6)(a)). A multifamily dwelling is allowed in each lot created within a cluster subdivision (LC 16.260(4)(b)(iii)(d)).

Park and Recreation Zone

Lane County has adopted a Park and Recreation Zone (PR-RCP) and has applied it to rural lands. Uses permitted outright are split into two categories: (1) uses permitted in all areas zoned PR; and (2) uses permitted only within an exception area.

Lane County has not taken an exception to Goal 3 or Goal 4 for any areas zoned PR (see discussion under built and committed exceptions). Therefore, Lane County is unable to approve any uses allowed within an exception area zoned PR until a valid exception has been taken and incorporated into the plan (LC 16.215(3) and (4)).

The following uses are permitted outright on resource lands zoned PR (LC 16.215(2)):

(a) General Recreation Parks including picnic areas, camping grounds, hiking trails, playfields, bathing beaches and other similar outdoor, manmade recreation facilities.

(b) Leisure and Ornamental Parks largely for scenic or ornamental purposes, including monuments, statutes, (sic) beaches and children's play facilities.
(c) Group or Organized Camps for children and adults which may include any of the above uses and activities and other uses and activities, such as swimming pools, meeting halls, sleeping shelters, cafeterias and shelters for indoor recreation.
(d) Recreation vehicle parking spaces in conjunction with any of the above three permitted uses.
(e) One residence on the subject property for a caretaker.
(f) Marine terminals and associated areas that are primarily for recreational marine craft, excluding sale or land storage of marine craft, but including any incidental sale of gas or minor repair.
(g) Forest Uses.
(h) Farm Uses.
(i) Nonresidential uses necessary and accessory to the uses listed above such as:
(i) Fire prevention, detection and suppression facilities.

(ii) Access roads and roads for management and safety.

(iii) Storage buildings.

(iv) A carport or garage in conjunction with #5 above.

(v) Restroom, washroom or shower facilities.

(vi) Offices.

Uses permitted outright on resource lands are generally the same type of uses allowed under ORS 215.213(2)(3), which are:

> Community centers owned and operated by a governmental agencies or a nonprofit community organization, hunting and fishing preserves, parks, playgrounds and campgrounds.

Uses allowed outright in resource areas zoned PR are consistent with ORS 215.213(2)(e). However, there are no reasonable standards as required under ORS 215.213(2).

Eugene/Springfield Metro Plan

The Eugene/Springfield Metro Area plan jurisdiction boundary extends into rural areas beyond the Metro UGB. (Portions within the jurisdiction boundary, but outside the UGB were not acknowledged with Eugene/ Springfield in 1982.) The Lane County plan does not apply to these areas: they are governed by the Eugene/Springfield Metro Plan (introduction to Rural Plan, p. 1). The Metro plan includes supporting inventories and plan policies different from those in the rural plan. However, Lane County's zoning ordinance does apply within this area. The Commission's 1982 continuance report for the rural portion of the

Eugene/Springfield Metro Plan contained four requirements. One of these is addressed later in this section under "exceptions." The other requirements were as follows:

Requirement

1. The Cities and Lane County must review, and amend as necessary, their respective procedures governing amendments to rural areas outside the UGB, to ensure that the amendment process is coordinated and consistent with other elements of the Metro Area Plan.

Response

The Metro Plan has been amended to contain a "Procedure for Amendment of the General Plan." Under this procedure, amendments must be by concensus of all three jurisdictions.

Requirement

2. Lane County must amend the Willamette Long Tom Subarea Plan to designate the area known as the Industrial Triangle "Agriculture," and zone it consistent with Goal 3 and ORS Ch. 215.

Response

This area has been planned and zoned as Exclusive Farm Use.

Requirement

4. Lane County must amend its zoning code to exempt maintenance and improvements in Armitage Park from conditioal use procedures. This is most easily accomplished by zoning all of Armitage Park as Public Use (PR).

Response

The County has not zoned all of Armitage Park as PR. The portion of the Park between I-5 and Coburg Road is zoned EFU. Parks are allowed outright within this zone.

Objections

Several objections have referenced Goal 2. Objections on exceptions areas, marginal lands, and nonresource lands are addressed later in this section under those headings. Goal 2 issues not related to these topics are addressed below.

Issue: The City of Eugene objects to the AO zoning of two privately owned tracts of land near the City's Mahlon Sweet Airport outside the UGB. According to the plan, the undeveloped portion of the airport exception area is located on 19 parcels, 12 of which are publicly owned.

The City points out that these tracts are under the jurisdiction of the Metro Plan, which requires:

> Airport-related commercial and industrial development shall be accommodated on airport-owned property or on privately owned industrial or commercial property designated within the urban growth boundary.

The seven parcels within the exception area that are privately owned are not within the Eugene-Springfield urban growth boundary.

Response: The objection is valid. The County has zoned these properties in a manner which directly violates the above policy, a policy adopted by Lane County and the other jurisdictions under the Metro plan.

Issue: Douglass Lagenor has objected that lands to the east of Oakridge are zoned FF-2. According to the objector, "This is the only available land for urban growth and should be zoned rural residential."

Response: Oakridge has an acknowledged comprehensive plan designation with sufficient land to accommodate projected urban growth through the year 2000. The objector is referring to land outside the urban growth boundary and is asking that this land be made available for future growth in addition to the 20 year supply inside the UGB. The objection is not valid. The County has proceded properly in accordance with Goals 4 and 14.

Issue: The Department of Transportation objects to Section 13.010 of the Lane County Code. According to ODOT, property owners must initiate a minor partition before the state is able to acquire property on any project for which right-of-way acquisition is necessary. The minor partition cannot be initiated by the County or by the state, according to ODOT. Therefore, property owners, by not agreeing to apply for mining partition, "could severely hamper or completely block a (transportation) project." The objection states that the eminent domain process would also be affected by a property owner's refusal to partition, since unnecessary parts of a parcel would need purchase by the state.

Response: The Lane Code states that a partition is not necessary for:

> Any adjustment of a property line where an additional parcel of land is not created and where the existing tract of land reduced in size by the adjustment is not reduced below the minimum area requirements of the applicable zoning" (Section 13.010).

Thus, only with the creation of a new route or in circumstances wherein the adjustment to existing right-of-way the remaining parcel would be substandard, would the partition process be required. The County states that:

> When a parcel remainder is brought below the minimum lot size, it becomes at that point a nonconforming parcel. Future development and expansion may be affected by that status. In

> addition, careful review to confirm that safety setbacks are met needs to occur. When a new route is proposed, all elements of the comprehensive plan should be considered. In this process, a plan amendment would probably be necessary . . . and (review through partition process) is again appropriate as the impact of the alignment on the Statewide Goals, including the resource Goals, should be very carefully considered (June 22 letter to L. W. Rulien from W. A. Van Vactor, Lane County Counsel).

The Lane County Code, Section 14.015 states that any person with a legal interest in a property may apply for a partition. A legal interest may be obtained by adoption by a public condemnor of a "resolution or ordinance of necessity to acquire or condemn." The objection is not valid. Lane County has shown that the circumstances described by the objector need not occur, since the state could initiate the partitioning process. Those circumstances where partitioning would be required are limited to situations where careful parcel-by-parcel review would be appropriate.

Issue: The Oregon Community Land Trust objects to the Lane County Plan "because of its inflexibility in allowing small groups to situate in a rural setting according to their needs... The County's use of minimum parcel size and siting requirements do not allow these groups to work toward economic independence." The objector proposes two policy amendments to correct this situation. These amendments would permit "in-house" Cottage Industry, including "limited, medium, and medium/heavy Cottage Industries."

Response: The objector has not demonstrated that the Goals require that individual jurisdictions permit cottage industries outright. The decision permitting such industry belongs to the County, not the state.

Issue: The Parks Division of the Oregon Department of Transportation has objected to the zoning of Armitage Park within the Rural Portion of the E/S Metro Plan area, stating that the County has not fulfilled the requirements of the 1982 continuance order. Parks Division raises similar issues regarding Jennie B. Harris State Park and Squaw Creek State Wayside. Both these are zoned RR-5, where parks are a conditional use.

Response: This objection is valid and has been addressed in the Conclusion.

Exceptions

ORS 197.732 and OAR 660, Division 4 provides standards for determining an exception to a Goal. To justify an exception, conclusions supported by substantial evidence must demonstrate that these standards for an exception have been met. ORS 197.732(1) is quoted in its entirety below:

> A local government may adopt an exception to a goal when:
>
> (a) The land subject to the exception is physically developed to the extent that it is no longer available for uses allowed by the applicable goal;

(b) The land subject to the exception is irrevocably committed to uses not allowed by the applicable goal because existing adjacent uses and other relevant factors make uses allowed by the applicable goal impracticable; or

(c) The following standards are met:

(A) Reasons justify why the state policy embodied in the applicable goals shall not apply;

(B) Areas which do not require a new exception cannot reasonably accommodate the use;

(C) The long term environmental, economic, social and energy consequences resulting from the use at the proposed site with measures designed to reduce adverse impacts are not significantly more adverse than would typically result from the same proposal being located in areas requiring a goal exception other than the proposed site; and

(D) The proposed uses are compatible with other adjacent uses or will be so rendered through measures designed to reduce adverse impacts.

To justify an exception under the committed lands process (Goal 2, Part II(a) and (b)), the exact nature and extent of the areas found to be physically developed or irrevocvably committed must be shown on a map or otherwise described and keyed to the appropriate finding of fact (OAR 660-04-025(2)). The findings of fact must include substantial evidence in the record addressing the following factors:

1. Existing adjacent uses;

2. Public facilities and services (water and sewer lines, etc.);

3. Parcel size and ownership patterns of the exception area and adjacent lands;

4. Neighborhhood and regional characterstics;

5. Natural boundaries or other buffers separating the exception area from adjacent resource land;

6. Physical development according to OAR 660-04-025; and

7. Other relevant factors.

OAR 660-04-028 further states that a conclusion that land is irrevocably committed to uses not allowed by the applicable goal shall be based on one or more of the factors listed above. The conclusion shall be supported by a statement of reasons explaining why the facts support the conclusion that it is impracticable to apply the Goal to the particular situation or area.

General Overview to Exceptions

Information pertaining to the exception areas is found in two separate acknowledgment request submittals. Findings for the exception areas outside the Eugene/Springfield General Plan Boundary are included in plan documents submitted for this review. Findings for the exception areas inside the Eugene/Springfield General Plan Boundary but outside the Metro UGB were submitted along with the Countywide submittal and at the time the Commission reviewed the Eugene/Springfield Metro Area Plan on August 19, 1982. At that time, the Commission only reviewed the plan and implementing measures for lands within the Metro UGB and readopted the "In order to comply" requirements adopted previously (June 26, 1981) for lands within the General Plan Boundary and outside the Metro UGB. Therefore, the exception statement submitted for the August 19, 1982, Eugene/Springlield Metro Area Acknowledgment request is being reviewed here along with the County's most recent resubmittal. Plan documents containing information on the County's exceptions are as follows:

Built/Committed Exceptions (outside Metro General Plan Boundary)

1. "Working Paper-Developed and Committed Lands"

2. "Exception to Goals--Built upon/Committed Lands," Vol. 1 & 2 (evaluation sheets)

3. "Plan Diagram Zoning Map"

Need Exception (outside Metro General Plan Boundary)

1. "Exhibit E Renaghen Amendment"

Built/Committed Exceptions (inside Metro General Plan Boundary)

*1. "Metropolitan Plan Update Exceptions"

2. "Plan Diagram Zoning Map and Metro Area of Influence"

Need Exception (inside Metro General Plan Boundary)

*1. "Metropolitan Plan Update Exception," Mahlon Sweet Airport Exception Area.

*Submitted August 1982 (circa) as part of acknowledgment request for Eugene/Springfield Metro Area Plan.

Committed Exception Criteria

To determine which lands were built upon or irrevocably committed to nonresource uses, Lane County used an initial cut-off criterion in the plan. According to the criterion, an area under consideration for commitment must consist of at least four tracts which are contiguous to one another with the majority of the tracts built upon. The plan states that in most cases, all tracts must be 10 acres or less in size, unless other factors render larger tracts unsuitable for resource use and/or committ them to development (Working Paper, Developed and Committed Lands, p. 2).

The plan defines "tract" as follows (Working Paper, Developed and Committed Lands, p. 2):

> "Tract" refers to a lot within an approved and recorded subdivision plat, or a parcel within an approved and recorded partition map, or a parcel within an approved minor subdivision, or unsubdivided/unpartitioned land under the same ownership. Contiguous units of the last type shall be considered a single tract.

The plan also states that individual isolated commercial and industrial activities, regardless of the number of tracts involved, were also considered committed along with public facilities such as schools (Working Paper, Developed and Committed Lands, p. 2).

Application of Criteria

In evaluating potential committed areas, the County conducted an examination of each section of land not within public ownership (outside UGB's outside the Eugene-Springfield General Plan Boundary; Working Paper, Developed and Committed Lands, p. 2).

For each committed exception area identified (unless otherwise specified in this report), a separate report or evaluation sheet has been provided containing information on the general character of the exception area:

The information provided on each of the evaluation sheets or reports was done by filling in blanks or checking off the appropriate category. In most cases, this general information along with the aerial photos and ownership listings is adequate justification for an exception. However, in certain cases, more detailed, site-specific findings are needed to justify the exception.

The Working Paper on Developed and Committed Lands states that a property list is attached to each report (evaluation sheet), containing map and tax lot numbers, a four-digit land use code indicating property and structure class, land area of each parcel and ownership (p. 3). However, this information was submitted in a different format than described in the plan. The property listing was provided separately for all tax lots by plot number. Only one set was available for review. Zoning and plan maps ("Plan Diagram Zoning Map") and the evaluation sheets or reports

("Exceptions to Goals Built Upon/Com'td Land, Vol. 1 & 2) were submitted in a separate document. Another document applicable to the County exception is the "Charge Request Summary" or CPR Changes. This document contains a listing of all plan and zone changes and addendums to the evaluation sheets as a result of plan refinement and public review. These changes either modified or enlarged previously identified exception areas or created new exception areas. The plan diagram zoning maps provided do not reflect these changes. Large scale zoning maps (1" = 600') were also provided in addition to the small scale maps and reflect all amendments as a result of the CPR changes. These maps are a reproduction of the small scale maps and are much more "readable" than the small scale maps. However, because of the number of maps (over 750) and the cost of reproduction, only three sets were submitted. One set was available for review at the Portland Field Office and two sets were available for review at the central office in Salem. One set of aerial photos (flown 1982) for most of the plot areas was also submitted and available for review in Salem. Copies were also available at Lane County offices.

As part of agency notice required by OAR 660-03-015, an explanation of the submittal material and suggestions for reviewing Lane County's built and committed exceptions was also provided (DLCD Memorandum, Notice of Lane County's request for acknowledgment of Compliance, April 10, 1984).

Park and Recreation Zone Exception

Lane County's Park and Recreation zone is written to allow certain uses requiring an exception (i.e., motels, stadiums) only within designated built and committed exception areas and designated nonresource areas (Section 16.215(3) and (4)). Uses and activities that do not require an exception (i.e., farm use, RV Parks) are allowed in any of the PR-RCP Zones. The PR-RCP zoned areas, which the County considers committed or nonresource, were not identified or specifically mapped. According to Lane County Planning Department, none of the PR-RCP zoned areas are designated Nonresource or Marginal Lands (personal communication, Jim Mann, May 17, 1984). As a result, staff was unable to review these areas against the built and committed exception criteria of OAR 660-04-025 and OAR 660-04-028.

Objection

1000 Friends of Oregon objects to all built and committed exception areas because of improper and inadequate criteria and data base used to identify and designate exception areas. 1000 Friends contends that the material submitted for review does not address all criteria in the Administrative Rule and therefore does not yield an adequate factual base justifying the exceptions.

Response

The objection is partially sustained.

The objectors are correct in pointing out that the factual base information submitted by the County does not adequately explain why resource use is precluded for some areas, or why certain areas which are not physically developed but are considered committed by other factors. The objection is sustained on this point (see: Conclusion--Built and Committed Exception:--areas requiring additional findings). However, for most built and committed exception areas, substantial evidence was provided by the County. The objectors contend that the County made profitable use of aerial photographs in designating exception areas and that no aerials were submitted for review. However, as was stated in the Agency Notice of April 10, 1984, (which was sent to the objectors) aerial photos were available for review at the Central Office in Salem. In addition, a listing of ownerships and assessor maps were also available for review in Salem. This information (especially the aerials), along with the evaluation sheets and maps form the substantial evidence to justify the majority of the exception areas. 1000 Friends' objection also contends that the County failed to provide information on location of dwellings and parcel sizes. However, the ownership listingm which provided a property classification (i.e., vacant, improved) and parcel size for most tracts within an exception area, was available for review at the Central Office in Salem. In addition, a complete set of Zone Diagram Maps (Zoning Maps-2 sections per map at 1" = 600') was available for review at the Portland and Salem field offices, and in Eugene. Therefore, the objection regarding lack of substantial evidence to justify any of the "physically" developed areas is not sustained.

Additional Findings for Built and Committed Exceptions

Early in this review of the County's built and committed exceptions, Department staff identified certain deficiencies in the findings supporting some of the built and committed exceptions. These deficiencies varied from incomplete mapping to lack of findings supporting certain exception areas. These noted deficiencies were forwarded to the County and on June 19, 1984, Lane County adopted supplemental findings for most of these areas (Lane County, Order No. 84-6-19-16). However, Lane County did not provide notice of the local hearing adopting these supplemental findings to commentors and objectors pursuant to the Expedited Notice Procedure under OAR 660-03-033 (personal communication, Jim Mann, June 25, 1984). The supplemental findings submitted June 21, 1984, provide additional infomation on recent partitions and subdivision activities along with information on more recent development. This information was not provided in the earlier submittal because of outdated maps and ownership listings. Address maps showing location of dwellings, mobile homes and recent road developments provided most of the information addressing the deficiencies noted earlier.

Conclusion - Built and Committed Exception Areas

Based on the information contained in the evaluation sheets on the number of tracts, number of residences or other uses, and land area distribution, along with the maps, aerial photos and ownership listings, the County demonstated that all developed and committed exception areas not specifically listed anywhere below are no longer available for resource use and are irrevocably committed in their entirety.

Areas planned and zoned Park and Recreation which the County claims are built and committed are not identified or mapped consistent with OAR 660-04-025(2). Additional findings may be needed to justify the Park and Recreation areas the County considers built and committed.

Based on a review of the supplemental findings document (Ordinance No. 84-6-19-16), the following areas appear no longer available for resource use and are irrevocably committed in their entirety. However, the Commission cannot accept these findings and approve these exception areas until the County complies with the notice requirements under OAR 660-03-033. Therefore, the following areas have not been adequately justified, but would be satisfactory upon compliance with the provisions of 660-03-033:

015, 021-1, 021-2, 023-1, 026, 028-1, 028-2, 028-3, 099A, 117, 121, 134-1, 141, 162, 165-2, 166-1, 173-2, 175-1, 175-2, 182, 185-2, 188-2, 199-1, 199-2, 200, 201-1, 203-1, 203-2, 222-2, 229, 230, 236-2, 237, 252-1, 254-3, 255-2, 255-3, 256-2, 260-1, 260-2, 260-3, 264-5, 265-1, 270-2, 271-1, 280, 281-1, 281-2, 281-4, 282-1- 282-2, 286-1, 287, 294-1, 297-1, 298-1, 298-2, 306-1, 309-2, 311, 320, 325, 335, 347-1, 347-2, 367, 379, 385-4, 390-2, 391, 392-1, 393, 398-1, 398-2, 400-1, 400-2, 402-1, 403-2, 412, 413-1, 413-2, 417-2, 419-1, 419-3, 419-4, 424, 428-2, 429-2, 433-1, 433-2, 436-1, 437-1, 442-3, 449-1, 449-2, 456-1, 460-1, 461, 469-1, 471, 473-1, 478-1, 478-2, 481-1, 484-5, 485-1, 486-1, 488-1, 489-1, 490-1, 491-3, 492-1, 494-3, 495-1, 498-1, 501-2, 501-3, 511-1, 516-3, 517-1, 518-2, 521-1, 525A, 530, 531-2, 536-1, 536, 539, 541, 542A, 548, 555-1, 556, 559-2, 568-2, 569, 572-2, 591-2, 593, 597-1, 609, 610, 614, 619, 627-1, 627-2, 628-2, 629, 630 and 631.

Based upon a review of all information provided, including supplemental findings, the following list identifies those areas which have not been justified in their entirety:

Plot-Exception	Deficiency
006-1	No findings provided justify this exception.
007-4	No findings provided for TLs 100 & 200 These two parcels (20-acres, 97-acre) are not physically developed. The County has not provided substantial evidence explaining why it is impractical to apply a resource goal to this area.
035-2	Inadequate findings provided for the entire site. Only six of the 29 tracts have single-family dwellings.

042	TL 700 and 800 are not developed and designated as a Prime Wildlife Area
056	Inadequate findings provided for vacant parcels SE of road. The area is isolated by a stream and bounded on 3 sides by large resource parcels.
065-1	Inadequate findings provided for parcel west of SPRR. The parcel is completely isolated from main body of exception area by SPRR and Suislaw River and surrounded by resource parcels.
066	Inadequate findings provided for parcels south of road. No information provided on development or ownership. Area is bounded on two sides by resource parcel and separated by road from developed area.
069	Inadequate findings for parcels west of SPRR and Northwest of Bridge. No information on development or ownership. Bounded on two sides by resource parcels and appears to be vacant land in forest management.
157-1	Inadequate findings provided for TLs 101, 200, 201, and 202. Information provided does not justify TL 101 (50 ac.), TL 200 (40 ac.) and TL's 201 and TL 202 (both 10 ac.) as committed.
157-2	Inadequate findings for TLs 601, 700, and 701. These parcels are under predominant forest management.
164-2	The County does not explain how a PUD's common open space (TL 701) in timber management justify commitment.
204-1	More information is needed on ownership and location of development to justify entire site as committed.
204-2	Inadequate findings for the entire site. Ownership and location of development has not been provided.
206	More information is needed on ownership and location of development to justify entire site as committed.
209	Additional findings needed to justify TL 2301 as committed.
223	TL 400 is vacant and in agricultural use.
251	Additional findings needed to justify TL's 1300, 1600, 1500, and 1900 as committed.
255-1	More information is needed to justify TL's 500, 501, 800, 801 as committed. Area consists of large undeveloped parcel (TL 500 - 60 acres, TL 800 - 80 acres).
264-2	TL 2901 is not committed.
270-1	Additional findings needed to justify TL's 100, 200, 110, 1200, 1300, 1401, and 1700 as committed.
281-3	No findings provided for this area.
300-1	Inadequate findings provided for TL's 600, 700, and 800.
300-2	Only 2 of the 6 tracts are developed and the County has not provided adequate findings to justify this area as committed.
301	Only 2 of the 6 tracts are developed.
334-1	The County has not justified TL 1500 as committed.
334-3	Entire site consists of one 62-acre vacant tract surrounded by resource parcels.

356	TL 100 south of SPRR consists of a 10-acre vacant parcel, isolated from the main body of the exception area by SPRR and Hwy 99.
358-3	More information is needed on ownership and development location to justify commitment for this area.
363	TL 1500 is isolated from the main body of the exception area by County Road, surrounded on two sides by resource parcels and is in farm use.
369-1	TL 100 is an isolated parcel bounded on three sides by resource parcels.
378	TL 401 is not developed. No information has been provided explaining why this large parcel (approximately 100 acres) is committed.
382-1	More information is needed to justify TL 1800, 2000, and 2001 as committed.
383	TL 100 is not developed. No information has been provided explaining why this 125-acre parcel is committed.
385-3	No findings provided for this exception area.
400-3	More information is needed to justify TL 1600 and 1601 as committed. Ownership list says TL 1600 (17 acres) has been partitioned into 3 tracts and TL 1601 (21 acres) has been partitioned into 2 tracts. Area is bounded on three sides by EFU Zoning. Ownership information and development location has not been provided.
419-5	More information is needed to justify TL 126 & 104 as committed. TL 126 (approx. 100 acres) is not developed, surrounded on three sides by resource parcels and the County has not explained why a resource goal cannot be applied to this area.
426-1	TL 300 & 600 are vacant parcels surrounded by EFU.
434-1	Additional findings needed to justify TL 500 & M-3 areas north of stream
434-3	Ownership information and location of development not provided.
439	More information is needed to justify entire site as committed. 50-acre exception area consisting of 3 tracts with only 2 having single-family dwellings.
441-2	More information is needed to justify entire site as committed. One of the four tracts is 85 acres in size (TL 501).
447	TL 600, 700 and 1701 are vacant parcels surrounded predominantly by resource parcels.
479-2	TL 1802, 1903, 1901, 1904, 1905, and 1902 are recent partitions. Information on ownership and location of development not provided.
483-2	TL 1800 consists of 100 acres zoned M-3 and only the northern portion is committed. Southern portion has stand of timber and is within Greenway Boundary.
484-3	Additional findings needed to justify TL 1400, 1500 & 1700 as committed.

522	Additional findings needed to justify TL 201, 500 and 503 as committed.
531-1	TL 1300 is surrounded on all sides by large resource parcels.
555-2	Additional findings needed to justify portion of golf course as needed.
596	TL 100, 200 and 501 each 30 acres in size are adjacent to large resource areas (F-1) zoning.
597-2	Additional findings needed to justify TL 2000 as committed.
603	Inadequate findings provided to justify TL 2300 as committed.
604	No findings provided for this exception area.
617	TL 1300, 1200 and 200 require additional justification.
627-2	More information is needed to justify entire site as committed. No assessor or aerial maps provided. Some large parcels (40+ acres) are included in exception(TL 700 and 701).
628-1	More information is needed to justify entire site as committed. No assessor or aerial maps provided. Many vacant parcels and large parcels within this exception area.
INDEX-1	No map provided (outside plot area).
INDEX-2	Exception area not defined.
INDEX-3	No map provided (outside plot area).
INDEX-4	No map provided (outside plot area).

Metro Area Exceptions

The August, 1982 Continuance Order for the Eugene/Springfield Metro Area Plan adopted the following Goal 2 compliance requirement for exceptions:

3. Lane County, Eugene, and Springfield must amend the plan to provide findings consistent with established Commission policy which justify exceptions for all resource lands designated for nonresource uses. If justification cannot be prepared, resource lands must be planned and zoned consistent with Goal requirements.

Response

Lane County has taken an exception to Goal 3 and Goal 4 for 1,856 acres in 18 different areas within the Eugene-Springfield General Plan Boundary that are claimed to be physically developed and irrevocably committed to nonresources uses. These areas will be reviewed here against the requirements of OAR 660, Division 4.

The following table contains information on each of the Metro Area built and committed exception areas (source: "Metropolitan plan Update Exception" and "Plan Diagram Zoning Map and Metro Area of Influence"):

Site	Zone	Acres	Number of parcels Developed/Vacant Parcels
Clearwater Lane	RR-5	21.91	17/2
East Thurston	RR-2	133.11	39/17
North 74th Street	RR-5	7.71	8/0
Chapman Drive	RR-2	27.52	12/6
River Loop No. 1	RR-5	165.89	30/7
Willamette Valley Dog Kennel	CR	5	---
Royal Avenue	RR-5	96.11	18/5
Bonnie Heights	RR-5	4.18	9/2
Oak Hill Drive	RR-5	68.81	15/3
Willow Creek Road	RR-2	107.85	22/17
Gimpl Hill Road	RR-5	71.13	14/8
Bailey Hill Road	RR-5	48.42	6/2
Bloomberg Road	RR-1/RR-5	128.26	46/20
Mahlon Sweet Airport	AO/EFU	790	---
Lane Community College Campus	PF	159.59	---
Knight Trucking	NC [1]	11	---
Starwood Nursery	NC [1]	5	---
Bond Kennel	NC [1]	5	---
TOTAL		1,856.49[2]	

[1]Not clear what zone was applied.

[2]Does not include vacant acreages within Mahlon Sweet Airport exception area.

Information for exceptions within the Eugene-Springfield General Plan Boundary can be found in the "Metropolitan Plan Update-Exceptions" (November 1981) and the "Plan Diagram Zoning Map and Metro Area of Influence" (February 1984). For each exception findings are provided describing the general character of the exception, soil properties, services available and ownership characterstics. Maps are also provided for each exception showing boundary and tax lot numbers. A list of ownership, property class or land use, value of improvements and parcel sizes is also included. For the Lane County Community College Exception Area, additional infomation on enrollment, employment and classes has been provided, including an additional map showing campus facilities and land uses.

Conclusion: Metro Area Built/Committed Exceptions

Based on the evidence submitted by the County regarding acreage, parcel size, number of parcels, ownership, land use and maps substantial evidence exists consistent with OAR 660, Division 4, to support the County decision to irrevocably commit all built and committed exception areas within the Metro Area General Plan Boundary except Tax Lot 1600 in the Royal Avenue Area.

That portion of the Mahlon Sweet Airport Exception area which is identified in the plan as undeveloped will be reviewed as a "need" exception under ORS 197.732(1)(C) and OAR 660-04-02 and OAR 660-04-022 (see: Metro Area Need Exception of this report).

The Following statements indicate why the information provided by the County does not satisfy the committed lands requirements of ORS 197.732(1)(a) and (c) and OAR 600-04-025 and OAR 600-04-028):

Royal Avenue Area, Tax Lot 1600: Tax Lot 1600 is completely isolated from the main body of the Exception Area and is completely surrounded by resource land. One single-family dwelling on a 5.14 acre isolated parcel does not justify commitment and the County has not provided substantial evidence explaining why it is impractical to apply a resource designation to this parcel.

Metro Area Need Exception

Lane County has taken an exception to Goal 3 for 904 acres of land within the 1,694 acre Mahlon Sweet Airport area that is neither built upon or irrevocably committed, but that are stated to be needed for future airport uses or protection (Metropolitan Plan Update-Exceptions, p. 11-1). These areas will be reviewed here against the standards set forth in ORS 197.732(1)(C) and OAR 660-04-020 and OAR 660-04-022. As noted above, the remaining 790 acres is irrevocably committed to a nonresource use (see: Metro Area Exceptions of this report).

Reasons Why the State Policy Embodied in Goal 3 should Not Apply

OAR 660-04-020(2)(a) requires that the exception shall set forth the facts and assumptions used as the basis for determining that the state

policy embodied in Goal 3 should not apply to the specific property or situation and why the use requires a location on resource land.

Included in the plan is the following excerpts from a resolution (3308) adopted by the Eugene City Council on February 25, 1980, that documents the need for airport expansion based upon projected demand (Metropolitan Plan Update - Exception, p. 11-3):

> The ever growing air transportation needs of the metropolitan community require that the airport's capacity be increased. The revised Plan forecasts: (1) an increase in boarding passengers from 186,632 in 1977 to 568,000 in the year 2000; (2) an increase in takeoffs and landings from 170,779 in 1977 to 395,000 in the year 2000; and (3) an increase in freight and mail tons from 821.7 tons in 1977 to 2,400 tons in the year 2000. At this rate of projected growth, existing runways will reach capacity in about 1983. The need for increased capacity is supported by the Regional Airport Systems Study prepared for Lane County in January of 1978 in which it was concluded that Mahlon Sweet Airport would continue to be the only air-carrier served airport in Lane County. To respond to demand, only limited public land is available in the area of existing facilities west of Greenhill Road. Recognition of the need for a new general aviation runway and airport related facilities was expressed by the Council in its adoption of the Mahlon Sweet Master Plan in January, 1973.

Included in the plan is a list of projects expected to occur between 1981 and 2000 in order to meet projected demand. These include: a third runway; extension of the main runway; modification and relocation of the traffic control tower; additional parking and storage; relocation of Lane Community College Training Center; and expansion of the taxiway system, terminal building, sewage treatment plant and auto parking areas (short, long-term and rental areas).

Areas which do not require a new exception cannot reasonably accommodate the use.

To show why this site is justified and why other areas which do not require a new exception cannot accommodate the use, the county's exception statement references an airport needs study conducted in 1971 (Metropolitan Plan Update--Exceptions, p. 11-4). The other airports examined were the Cottage Grove State Airport, Creswell Airport, Florence Municipal Airport, Oakridge State Airport, Springfield Airport, and the McKenzie Bridge State Airport. The study concluded that the Mahlon Sweet Airport would likely continue as the principal general aviation and commercial airport in Lane County (p. 11-4). The report also recommended that "the Mahlon Sweet Field Master Plan" (1972) be developed which the plan says also strengthens the need for expanding the airport and accommodating larger aircrafts, expansion of the runways and air traffic control systems.

The plan discusses the amount of investment that has gone into the airport facility and reasoning why relocating the facilities would be prohibitively costly (p. 11-4). The Eugene City Council in Resolution 3308 stated (p. 11-5):

> The land and improvement value at the airport amounted to approximately $30 million in January, 1980. Many of the existing facilities can be used to support the new general aviation runway (parking areas, sewage treatment, hangers, control tower and the like), but only if it is adjacent to the present facility. It would not be fiscally responsible to purchase additional land elsewhere adjacent to the present airport to replace present holdings which were acquired and have long been planned for airport development. Nor would such a purchase result in preservation of additional agricultural land because all lands adjacent to the airport share similar agricultural characteristics.

Long-Term Environmental, Economic, Social, and Energy Consequences

The plan briefly explains the social and economic impact stating that the effect of the airport upon the metropolitan area is not only limited to payroll, but that the airport also provides opportunities for tourist trade, business trips and conventions, all of which provide input into the local economy (pp. 11-5).

The plan states that the long-term environmental consequences of the proposed airport improvements are analyzed in the 1972 Master Plan and were conducted in a method required by the National Environmental Policy Act of 1969 (NEPA). The study concluded that the airport expansion could be encouraged from an environmental standpoint (p. 11-5). The plan discusses the following factors in their environmenal analysis: noise, drainage, vegetation, wildlife, water quality, air quality, safety, and energy (pp. 11-5 through 11-8).

Compatibility with other Adjacent Uses

The plan states that the proposed airport expansion is adjacent to agricultural and vacant land (p. 11-8). The Eugene City Council Resolution 3308 provides the following statement:

> The major adjacent nonagricultural use is the existing airport facility to the west across Greenhill Road. The other adjacent areas are not heavily developed and are characterized by agricultural uses with limited industrial uses close to Highway 99. Reflecting existing uses, the 1990 Plan, and the Mahlon Sweet Field Master Plan, the adjacent areas are not zoned for residential development. Experience indicates that airports generate minimal problems for agricultural and similar open space uses, particularly when compared to residential uses, or commercial or industrial uses that are not complimentary to and dependent on the airport.

The plan also discusses compatibility with adjacent uses referencing the Airport Hazard Ordinance which provides safeguards for land uses near the airport (see: Goal 12 of this report for further information).

Objection

The City of Eugene objects to the Airport Operation Zone (AO-RCP) applied to two tracts (Drake and Kokkler properties) located within the Mahlon Sweet Airport Exception Area, stating that such zoning does not conform to the Metro Area General Plan.

Response

This objection is valid, and is addressed above under Goal 2--Plan/Zone Consistency.

Conclusion: Metro Area Need Exception - Mahlon Sweet Airport

Based upon the existing development, need for future expansion to meet projected Metro Area air transportation demand and the evidence submitted, there exists substantial evidence consistent with ORS 197.732(1)(C) and OAR 660-04-020 and OAR 660-04-022 to support the County's decision to zone these areas for future airport development. However, this zoning does no comply with Goal 2 (see previous discussion).

Need Exception--Big Creek

Lane County has taken an exception to Goal 4 for 26 acres known as the Big Creek property that is not built upon or irrevocably committed, but that is said to be needed for a destination resort facility. The property owners plan to develop a 40-unit lodge facility with 30 additional detached cabin units, 2 owner's residences, restaurant, trading post, and ancillary facilities. The property is located approximately 14 miles north of Florence on the east side of Highway 101 and North of Big Creek. This area will be reviewed here against the standards set forth in ORS 197.732(1)(c) and OAR 660-04-020 and OAR 660-04-022.

Findings

Lane County's exception for 26 acres of forest lands can be found in the submitted document entitled: "Exhibit E Renaghan Amendment." Included in this plan document are findings addressing plan policies and applicable Statewide Planning Goals that the County claims justify the exception.

Reasons why the state policy embodied in Goal 4 should not apply:

The plan contains 14 findings regarding tourist demands, employment opportunities, and tax base expansion. Among these findings are the following (Exhibit E Renaghan Amendment, p. 39-42):

(1) Tourism is the second largest industry in coastal Lane County.

(4) Coastal Lane County does not currently have a destination resort which takes advantage of the unique scenic resources of coastal Lane County and the recreational opportunities provided by State and Federal agencies in the Coastal Corridor from Sea Lion Caves to Yachats. State and Federal parks and campgrounds in this area (Sea Lion Caves to Yachats) receive over 650,000 visitors annually.

(8) Camping opportunities are provided in the coastal corridor between Yachats and Sea Lion Caves by State and Federal agencies. However, not all tourists and visitors are able or inclined to enjoy the recreational and scenic opportunities in this area through use of camping facilities due to disability, age, health, personal preference or place in life cycle. Destination resort facilities permit these people to appreciate the recreational amenities in this area more conveniently.

(13) The owners of tourism-related businesses on the coast testified as to the need for additional facilities due to strong demand which has kept existing facilities filled to capacity.

Other findings applicable to the "reasons" test are as follows (Exhibit E Renaghan Amendment):

(Finding 24, p. 17):

The highest concentration of state parks is along the Oregon Coast. The recent designation of Federal lands adjacent to the Property for scenic, recreation, wildlife habitat and roadless area will attract more people to this area of the Coast. The public facilities in this area are limited to campgrounds, day use areas, hiking trails and other similar facilities. The public areas do not provide lodging and restaurant facilities which must be provided by the public sector. The need for such private facilities to supplement public facilities has been acknowledged by State and Federal agencies that do not provide destination resort facilities, restaurants, stores and other facilities similar to those proposed by this application. Over 650,000 people visit and stop at one of the public facilities located between Devils' Elbow and Rock Creek.

(Finding 32g, p. 20):

Governmental agencies cannot provide all of the recreational facilities in this or any other area as indicated by the responses of the Siuslaw National Forest and the State Parks Division. Statewide Planning Goal 8 recognizes there is a need to provide private lodging and recreational facilities in suitable locations that will supplement the public facilities. It is likely public funds will become more and more limited, and

it will be necessary for private development to expand its offerings to coastal tourists.

(Finding 34b, p. 22):

The TOURIST COMMERCIAL designating will provide a small-scale tourist facility catering predominantly to vacationeers visiting the coast for some period of time. The TOURIST COMMERCIAL designation is adjacent to Highway 101 and Big Creek. Direct and safe access to the beach is available from the Property. This is a popular portion of the Lane County coast with a variety of public recreational facilities adjacent to the beach (e.g., - Washburne State Park, Ponsler Wayside, Rock Creek Campground and Roadless Area, and Ocean Beach Park). This facility will provide goods and services to visitors to these public facilities as well as lodging, accommodations for those who do no or cannot use campgrounds.

Areas which do not require a new exception cannot reasonably accommodate the use.

In evaluating alternative areas, the County used the following criteria (Exhibit E, Renaghan Amendment, pp. 42 and 43):

(a) View of the ocean and interface between land and sea. The scenic beauty of the Oregon coast is internationally acclaimed and as Wilsey and Ham's Coastal Resource Inventory indicates, these views are most spectacular in the portion of the Lane County coastal corridor between Gwynn Knoll in the north and Washburne State Park in the south.

(b) Safe ocean/beach access. A walk along the beach is an important part of a visit to the coast for many people. Hence, with a destination resort where travel elsewhere is minimized, access to the beach in close proximity to the site is an important factor. Since children will be using the facility, safety of access is also critical. A requirement to walk on and across the Highway could not be construed safe access.

(c) Natural setting. Although not all destination resorts are located in natural settings, many prosper on a clientele that is looking for a unique natural setting devoid of the more urban trappings of man.

(d) Developable area. Any site must have sufficient developable area. This would require an area free of topographic, geological or soil constraints upon which the resort facilities can be developed. The coastal upland areas are typically quite steep with slopes in excess of 35% with few bench areas.

(e) Access to Highway 101. Any development must have legally established access to the main coastal transportation route and must be in close proximity if not adjacent to the Highway.

The plan states that lands south of Florence were not considered because the land west of Highway 101 is within the Dunes National Recreation Area and few views of the ocean are afforded (Exhibit E, Renaghan Amendment, p. 43). The plan also states that lands between Lily Lake and the City of Florence has several constraints such as dune soils, few ocean views, and virtually all land within close proximity to the beach is within the Siuslaw National Forest. According to the plan, the only exception is land within the Heceta Beach area which is already developed to urban densities, constrained by dune soils, removed from Highway 101, and does not have the visual amenities which have been well documented north of Lily Lake (Exhibit E, Renaghan Amendment, pp. 43 and 44).

As a result of the above findings, the plan provides a more detailed alternative analysis for a 27 square mile area along the coast between the Sea Lion Caves and north to Yachats. This area was found by the County to provide the natural amenities, spectacular views, potential beach access, and numerous state and federal park facilities considered viable for a destination resort of this type.

Within the 27 square mile area, the County divided their discussion of alternative areas by ownership (federal, state, and private lands). Private lands were separated into four categories: (1) private corporate timberlands; (2) nontimbered parcels less than ten acres in size; (3) nontimbered parcels from 10-37 acres in size; and (4) three larger-timbered or partially timbered parcels (which includes the Big Creek Property) (Exhibit E Renaghan Amendment, pp. 44 and 45).

The table below summarizes the ownership of lands within the 27 square mile study area evaluated (Exhibit E, Renaghan Amendment, p. 47):

Ownership	Acres	% of Total
Federal	13,500	78%
State	2,300	13%
Private		
Corporate Timberlands	700	4%
Small, nontimbered parcels (less than 10 acres-159 ownerships)	218	1.5%
Moderate sized nontimbered parcels (10-37 acres - 6 parcels)	155	1%

Three larger parcels	440	2.5%
Jaqua	106	
Merz	148	
Big Creek	186	
Total	17,313	100%

The plan provides findings which the County claims precludes the siting of a Destination Resort within each ownership category noted above (except Big Creek Property). These findings are summarized below (Exhibit E, Renaghan Amendment, pp. 45-47):

Corporate Timberlands: Land is located in uplands, outside of coastal corridor, no beach access and slopes generally exceed 35 percent.

Small Nontimbered Parcels: Average parcel size is two acres and are too small to accommodate a destination resort facility as proposed.

Moderate Sized Nontimbered Parcels: Three of the six parcels do not have frontage on Highway 101 and do not offer beach access without crossing Highway 101 and traversing private lands. The remaining three parcels have frontage on Highway 101 but do not have direct beach access. There are also topographic constraints. Several parcels are within an area having water availability problems.

Jaqua Property: Constrained by slopes in excess of 30 percent and hazardous access to beach.

Merz Property: Development the the west side of Highway 101 would be minimal because the knoll is classified as a headland and is in the main view orientation along the coastal corridor. Land east of Highway 101 is generally steep although it appears that developable land may exist in the interior parcel but the land does not appear to have developable acreage close to the Highway.

The plan provides the following finding which the County claims makes the Big Creek property suitable for a destination resort facility (Exhibit E, Renaghan Amendment, p. 46):

> The Big Creek property has access to and fronts on two public roads. The Big Creek site has safe access to the beach via established public access which is under Highway 101 and Big Creek Bridge. The proposed development would establish an open space buffer on its own land and is free from incompatible surrounding uses. The Big Creek site has adequate development area along the access routes yet is removed from the creek so that pollution danger is eliminated. The Property affords good views of the ocean. A detailed site analysis shows no geological constraints. The Renaghans are prepared to devote $3 million in capital to develop the site in an environmentally

sensitive manner. The Big Creek site is the most viable alternative on the Lane County coast for locating a destination resort of this type.

Long Term Environmental, Economic, Social, and Energy Consequences

As noted above, no other areas were found suitable for development of a destination resort facility than the one proposed at the Big Creek site. For that reason, the plan only discusses the environmental, economic, social, and energy consequences that would result from developing the site (with special conditions) opposed to leaving the site in its natural state.

The County claims that the benefits of developing this site for a destination resort are not only all positive in terms of their environmental, economic, social, and energy consequences but that they could all be enhanced. An explanation of these benefits and enhancements are described below (Exhibit E, Renaghan Amendment, pp. 47-50).

Environmental

Environmental consequences addressed in the plan relate to the effect of development on elk use of the property, effect of possible increased use on anadramous fish runs in Big Creek, and the impact on the Silverspot Butterfly.

The plan discusses the benefits of establishing a winter range forage area for the elk on the remainder of the 160 acre property stating that left in its natural state, the clear cut areas in five to ten years will return to mixed stands of deciduous, spruce, and other trees, thus eliminating the winter forage areas that now exist. The plan also states that the opportunity for establishing winter range forage areas elsewhere in this area is very limited because lands along the coast are to be left essentially undisturbed. The plan references a report prepared by Dr. Robert Vincent (February 1981) on the relationship between the elk and the development proposed.

The plan states that minimizing impacts on fish habitat can be accomplished through cooperative agreements between the ODFW and the owner. At the request of ODFW, the plan states that portions of the Big Creek under control of the owner will be closed, restricted, or open in accordance with the request of ODFW (p. 49). The plan also states that letters from the Lane County Water Pollution Division indicates that adequate soil for waste disposal exist on the site for removal from Big Creek (p. 49).

The plan states that testimony from Dr. David McCorkle, expert on the Silverspot Butterfly, indicates that with the imposition of conditions, the proposed development will enhance the viability of the Rock Creek/Big Creek Silverspot population. Dr. McCorkle determined that propagation of essential nector providing flowers would be a "boon to the recovery" of the butterfly (p. 65).

Economic

The plan states that the development will supply 36 person years in construction employment with a payroll in excess of $1 million and 25.5 full-time equivalent long term employment positions. The development will generate $41,805 annually in property tax revenue and 20,375 annually in room tax revenue. The plan also states that gross annual income is estimated at $957,500 of which approximately 50 percent will be export income to Lane County and virtually 100 percent will be export income to coastal Lane County. This will result, according to the plan, in new long term indirect income estimated at 861,750 for Lane County as a whole and $1,723,500 to coastal Lane County based on a multiplier of 1.8 (p. 47, 48).

Social

The plan states that the development provides expanded recreational opportunities in the coastal corridor between Yachats and Sea Lion Caves by providing privately developed facilities in an area with recreational amenities for those who are unable or prefer not to utilize campground facilities or as an alternative when campgrounds are not available. The development also provides short and long term employment opportunities in a Labor Surplus Area (p. 49).

Energy

The plan states that (p. 49, 50):

> Energy consequences are positive in that provision of destination resort facilities in Lane County may discourage Eugene-Springfield and other Willamette Valley residents from traveling to Lincoln County or other North Coast Counties for destination resort vacations. By locating accommodation facilities in close proximity to recreational opportunities and scenic amenities and by providing restaurant, store and ancillary facilities in a single confined area, the need for frequent trips from the accommodation facility is reduced.

Compatibilty with other Adjacent Uses

The plan provides the following reasons and facts explaining why the proposed development is compatible with adjacent uses (Exhibit E, Renaghan Amendment, p. 50):

(1) Surrounding State and Federal lands emphasize recreational use, wildlife values and scenic values over timber management. The CONSERVATION/RECREATION/OPEN SPACE plan designation is more compatible with this emphasis than the previous designation of NATURAL RESOURCES: FOREST.

(2) Conditions are to be imposed which minimize conflicts between the destination resort facilities and wildlife values existing on lands within the CONSERVATION/RECREATION/OPEN SPACE designation. Uses on State and Federal lands are buffered from the developed area by 160 acres of open space and by vegetation and topography.

(3) Site review requirements will be imposed to ensure that layout and design of destination resort facilities are compatible with the landscape.

(4) There is no existing development immediately adjacent to the Big Creek property and because of the predominance of public land and public land mangement policies none will occur. Therefore there is no incompatibility with existing development in the area.

(5) Provision of a destination resort in this area complements recreational opportunities on surrounding State and Federal park lands by supplying alternataive types of accommodation facilities. Such complementary private developments are encouraged by State and Federal policies as well as Goal 8.

The County attached conditions to the plan and zone change to assure that the proposed use will be situated in such a manner as to be compatible with the natural resources in the area. A copy of these conditions are attached for the Commission review.

Proposed Use

A major element in reviewing exceptions for destination resorts is also a close examination of the type of development that is proposed. It is important to clearly identify and describe the proposed use so that the need can be properly assessed and provided for.

This is particularly important when the proposed use involves a residential type use because the Commission has set a clear set of tests for approving acceptions for new residential development. As the Commission noted in the Lincoln County review, there are general factors which identify and distinguish destination resorts from other types of development. The provision of a high level of visitor-oriented accommodations and developed recreation facilities are key elements of destination resorts.

While this exception provides extensive data for Tourist Commercial, there is not a definition of a destination resort. However, information available to the Department indicates the proposed development would qualify as a destination resort (material presented to Oregon Economic

Development Commission on January 27, 1984). It includes the following statements describing the proposed development for Big Creek Resort.

> The main lobby, fine dining room, coffee shop, lounge, club room, banquet and meeting areas, and kitchen are to be parts of a tall timbered and glass structure on a hillside promontory. Guest rooms with fireplaces and decks will be in two lodges and in thirty cabins scattered away from the central part of the resort. Each cabin will incorporate three adjoining rooms, one with a kitchen. Altogether, when complete, there will be one-hundred-seventy guest rooms and a banquet and conference room for as many as three-hundred with the capability of seating a meeting of four-hundred-fifty people.
>
> Sewer, water, fire suppression, and security services will be provided on the site and at the expense of the resort.
>
> Recreation components of the proposed design include hiking trails, nature lookout, a glass enclosed swimming pool with jacuzzi, saunas, gym, three indoor tournament tennis courts, a pond for fishing, and an arts and crafts studio. Although Big Creek Resort is designed first and foremost for visitor use, all recreation facilities will be open to use by the general public.
>
> Estimated construction costs for the various elements of the resort are as follows (estimated by Bonadure & Associates, Portland):

Tourist Center	$ 183,000
Restaurant/Conference Center	900,400
Lodges 16 and 24 Units	1,557,600
Cottages 30 Units	2,031,000
Recreation Building	597,600
Maintenance & Crafts	136,000
Resident Management Residences	275,000
	$5,680,000

This information shows there will be a substantial investment in developed recreational facilities and visitor-oriented accommodations. Other than two "resident management residences," it appears there will be no residential development on the site. In addition, the remaining 160 acres of the 186-acre site are dedicated as permanent Open Space to buffer surrounding uses.

For these reasons, the Department concludes Big Creek as proposed is a destination resort.

Zoning of Big Creek Development

The Big Creek Development has been rezoned from CT to DR as indicated from Ordinance No. PA 994-Legislative Findings as follows:

> The Diagrams and Zones reflect only one "need" exception arising from a prior quasi-judicial application. We, therefore, readopt the need exception set forth on attached Exhibit "E". Note that pursuant to CPR summary, the new designation is Destination Resort, rather than Commercial Zones. However, the exception to the Goal remains valid. The site review conditions are also readopted.

The Destination Resort Zone (RC-RCP) from page 16-112 of the Lane Code limit living accommodations to 75 percent for other than year-round residents. Permitted used include all outdoor and indoor facilities, convention facilities meeting rooms, and other facilities listed. Through the permitted use, the zone limits and protects the uses as discussed in the exception.

Objections

The Department has received the following objections to the need-exception for Big Creek resort:

1. Lane County Audubon Society objects to inadequate public notice to coastal residents. LCAS has also relied on a letter to the editor to show why the economic information presented by Lane County is incorrect.

Response

The letter referred to is a letter to the editor in which Lane County Commissioner, Peter DeFazio makes statements about a tax subsidy for Big Creek Development. The letter does not give evidence to challenge economic tactics used by Lane County. The adequacy of Lane County public notice for its decision on this project is discussed in the beginning of this report.

2. Carl Reynolds states the development will conflict with Goals 2, 4, 5, 8, 9 and 17, and the development belongs within an urban growth boundary. Mr. Reynolds also states the facility does not qualify as a resort.

Response

There were no specific Goal issues raised, instead, all that is provided is just a statement that the development would conflict with the Goals. See the discussion above for Goal issues and definitions of destination resorts.

3. Richard Gold restates parts of Goals 2, 5 and 17 and objects to funding by revenue bonds.

Response

Goal issues raised by Mr. Gold are alternatives, reasons, and environmental consequences. See discussion of the exceptions requirements and findings above. Funding is not a Goal issue.

4. Hans Radtke and Friends of the Oregon Coast raise the same issues so they will be reviewed together. Both raise questions of need, alternatives, environmental and economic consequences.

   Both also rely a great deal on, "Trends in the Hotel Industry In the Pacific Northwest," by Pannell Kerr Forster to show why there is not a need and to question the economic impacts. Mr. Forster's report basically compares the years 1981 and 1982 of operating revenue and expenses, occupancy rates, trends by location and trends by type of property. A summary of the trends shows there was an 8.2 percent decline in occupancy rate experienced by their survey of hotels. The national recession had a major effect on the Northwest, with the year-end unemployment rate in Oregon at 11.8 percent, and in Washington, 13.0 percent. This had a strong effect on commercial travelers, with these travelers shortening their typical length of visit and cutting down on their number of visits. The recession also had a strong impact on tourist travel, with the wary public conserving their savings by cutting back on vacation travel. Mr. Forster also projects 1983 will be a much better year for the industry in te Pacific Northwest. Through June, our indications are that occupancy levels are generally up approximately three percent points over the same period in 1982. The long-awaited end to the recession is resulting in increased commercial and tourist travel.

Friends of the Oregon Coast also state the criteria by the applicant automatically elements other sites, and the applicant should have looked for alternative sites in other counties.

Environmental issues raised include, fishing pressure on Big Creek, archeological problems, Silver Spot Butterfly, flooding problems on the site, open space and impacts to the surrounding area.

Response

Mr. Forster's trends report used by Mr. Radtke and Friends of the Oregon Coast to show why there is not a need because of a decline in the hotel industry for the past two years, doe not contradict findins made by Lane County. In the planning process, trends set by one or two years during a national recession cannot be used alone to dispute findings made for a 20-year plan. It is proper for the County to plan based on long-term rather than short-term trends.

Lane County has adopted zone classifications such as Floodplain Combining, Shoreland Mixed Development Combining, Historic Structures or Sites Combining. These zones adequately respond to the environmental concerns raised by the objectors. During permit or site review, these zones overlay on sites identified in the comprehensive plan to protect

archeological sites or flooding problems, etc., as they may apply. A further exception will not be needed to implement these zones.

Friends of the Oregon Coast (FOC) have presented a multifaceted objection to the County's exception to site a destination resort at Big Creek. Each point of the objections is presented below followed by the Department's response.

Objection 1--The applicant did not meet the County plan amendment criteria.

The County adopted a plan amendment asserting an error was made in the original plan adoption because it did not adequately consider the needs for coastal tourist facilities. FOC contends the County's need findings are inadequate for the following reasons:

1. There was no new need not apparent to the County at the time the plan was adopted.

2. The need for destination resort facilities is distinct from demand for tourist facilities upon which the County relies to demonstrate need.

3. FOC provides findings showing demand for resort facilities in nearby resorts has declined in recent years.

4. Even if there were a need for more resorts, the location of existing resorts in built and committed areas shows that this need could be met without an amendment to the rural element of the County's comprehensive plan.

5. The plan's findings are not supported by substantial evidence of changed circumstances in the County's record on the plan amendment.

Response 1--The Department concurs with the County's response to this objection in their June 11 letter (Lane County Response to FOC Objection). The County notes that the County's plan amendment requirements are not relevant to the Commission's review of this particular exception. FOC's objection responds to the 1981 plan amendment regarding Big Creek which was quasi-judicial and was therefore subject to the standards in Chapter 12 of Lane County Code. The exception now subject to the Commission's was the exception adopted as part of a whole package of legislative plan amendments made in 1984 by the County in order to bring its plan into compliance with the Goals.

Objection 2--The FOC contends that the County failed to provide proper notice of amendments to the comprehensive plan.

Response 2--The objection is not valid. The Department concurs with the County's assessment of the adequacy of its public notice. The County's response to FOC notes that: the deficiencies alleged by FOC occurred as part of the 1981 quasi-judicial decision, not the 1984 Legislative decision presently before the Commission (paraphrase of County's response

to FOC objection, June 1984). Consequently, the adequacy of the County's notice in 1981 is not relevant to this acknowledgment review. Even so, the County's response also provide evidence which shows its 1981 decision was preceded by ample and adequate public notice to affected parties.

Objection 3--The County failed to provide substantial evidence to support its conclusion or adequate findings of fact. FOC notes that many of the supporting documents relied upon by the County in approving the exception were not adopted or included as part of the record in 1981 or the comprehensive plan in 1984.

Response 3--The objection is without merit. First, as before, the County decision before the Commission is 1984 Legislative plan decision, not the 1981 quasi-judicial action. Second, in either event, the County's Goal 2 obligation is met by referencing otherwise readily available studies, reports, and plans. It is not necessary for the County to adopt these documents as part of the plan for them to be adequate evidence for a plan decision in general or an exception approval in particular. The only case where such a burden might exist is where a particular study was done for the proposed development or source of information relied upon by the County was not otherwise available to the general public for review. Neither circumstance exists in this case.

Objection 4--FOC contends the County's decision is inadequate because it simply adopts the applicant's case as its findings of fact.

Response 4--The objection is invalid. The issue is the adequacy of the County's adopted findings of fact, not who prepared them. As noted elsewhere, the County's adopted findings are adequate to meet the Goal 2 standards.

Objection 5--FOC contends the County has not provided compelling reasons and facts which show why these other uses should be provided for. This objection is supported by several specific arguments including the following:

- The County has intermingled the "needs" and "alternatives" requirements by arbitrarily defining the uses requiring a particular site.

- Destination resorts do not require a rural location because existing resorts in Lincoln County have located in urban and built and committed areas.

- LCDC policy for rural housing and rural industrial exceptions does not allow equating demand with need as the County has done.

- Most of the County's need findings are based on increased accommodations and resultant taxes and employment that FOC argues could result at any urban location.

- The County's findings that accommodations must be provided in proximity to resources is not a compelling justification for a Goal 4 exception.

Response 5--The objection is not sustained. The applicable exceptions requirements are those adopted by the Legislature in 1983 and subsequently incorporated into Goal 2 and the exceptions rule by the Commission. The County's burden is no longer "compelling reasons and facts" which demonstrate "why these other uses should be provided for." It is now substantial evidence of reasons why the policy embodied in the Goal should not apply (see Goal 2 and the exceptions rule). While the same issues are relevant, the County's burden is slightly less.

The revised reasons needs test is closely linked to the alternatives test. Clearly defining the need to be met is necessary and appropriate way to limit the potential alternative which must be considered. As Lane County states in its response to this objection: "The need criteria serves to define the appropriate area for the alternatives location analysis . . ." (Lane County Response to FOC Objection, June 1984, p. 30). The County's burden is not to so arbitrarily limit the need to be met so that only the proposed site can meet the identified need. As the Department concludes in its response to Objection No. 6, the County has not gone too far in limiting alternatives.

The contention that resorts can be sited in built and committed urban areas is correct and is assessed further in No. 6 below.

While the Commission policy and rule have limited rural housing and industrial uses to those which need rural locations, it is important to note that neither use is proposed here. With the exception of two owner's residences (which are needed to manage the development) all units are overnight accommodations. Further, to some extent it is permissible for the County to equate demand for recreational facilities with "need" or "reasons" because Goal 8's definition of recreational need includes demand of both tourist and visitors to the state for recreational facilities. As FOC notes, this demand is not arbitrarily demand for rural areas: alternative sites in urban areas must be considered and are discussed in greater detail below.

It is permissible for the County to consider nonsite specific factors as part of its justification for this exception. The general needs for tourist accommodations, increased employment, and increased tax base are relevant in combination with other site specific factors. They would be inappropriate only if they were relied on exclusively, and the County used them to conclude that rural location was needed. As noted below, other reasons further narrow the County's "reasons analysis."

The County's findings on the importance of accommodations in proximity to tourist attractions is appropriate. While objector's question the County's conclusion on how near accommodations should be, they provide no clear reason why the County's conclusion of immediate access is unreasonable; especially in the face of the evidence provided by the County which shows existing resorts located with direct access to natural amenities.

Objection 6--FOC objects to each of the six factors selected by the County to limit its consideration of alternative sites. Each factor in FOC's objections is summarized as follows:

a. View of the Ocean. FOC contends the Big Creek site does not have the especially scenic or spectacular views which the County finds make a resort appropriate in this area.

b. Beach Access. FOC contends that beach access is available at sites within the UGB's of Florence and Yachats.

c. Natural Setting. FOC contends that a natural setting is not an essential element of a resort because similar settings can be provided by design in a more urban environment.

d. Developable Area. FOC objects to the arbitrary selection of 26 acres of land free of topographic geologic or soil constraints as a criteria for site selection.

e. Proximity to the Highway. FOC argues there is no basis for the County's decision to require that alternative sites be in close proximity to the highway.

Response 6--The objection is not well founded for the following reasons:

a. Ocean View. The County's criteria is simply ocean view; not access any especially scenic view provided in the area. Other sites are not ruled out because they do not have a particularly scenic view. Further, the County findings make it clear that this site does have an ocean view (see County Response to FOC Objection, June 1984, p. 39).

b. Beach Access. As the County notes in its response to FOC (June 1984, p. 40), "(e) each criteria is necessary, but no single one is sufficient in and of itself to justify a consideration as an alternative to the site . . ." Consequently, the fact that there are sites within the Florence UGB with beach access does not mean they are reasonable alternative sites.

c. Natural Setting. The Department concurs with the County's response to this objection. Adequate natural amenities may be available within the UGB for committed areas. The County was obligated to look. It did and found that Florence did not have the desired natural amenities (see Lane County Response to FOC Objection, June 1984, p. 41).

d. Developable Area. The County's decision to set a minimum of 26 acres for developable land appears to be reasonable in this case given the purpose of the destination resort: to provide a large number of overnight accommodations and supporting recreational facilities and services with settings with high natural amenities. While the choice of this specific figure--26 acres--is not supported in detail, it reflects the reasonable expression of the County's objective to site

a destination resort. It would be unreasonable only if the County had excluded alternative sites of the similar but lesser size or had not explained in any way why 26 acres was needed for the development (see County Response to FOC Objection, June 1984, p. 43).

e. Proximity to the Highway. The Department concurs with the County's response to this objection. The County's record provides ample findings of the need for close proximity of resort and tourist facilities to major highways.

Objection 7--FOC contends that the result of the County's alternative analysis, based on the five factors above, is to arbitrarily rule out appropriate alternatives, particularly sites within the Florence and Yachats urban growth boundaries and the Merz and Jaqua parcels.

Response 7--The response is not well founded. As noted in No. 6 above, the County's five factors are appropriate for identifying alternative sites. Consequently, reasonable application of these factors to include potential alternative sites is also reasonable. More importantly, recent amendments to the exceptions requirements have narrowed this task in an important way. The County no longer has open-ended obligation to identify alternative sites. Statute, Goal, and rule now only require that sites which do not require an exception must be considered. This rules out the Jaqua and Merz properties and other rural sites as alternatives because each would require a Goal exception. Application of the five factors above is appropriate and sufficient to rule out alternative sites within the Florence and Yachats urban growth boundaries.

For reasons as stated in the response to objections, the objections are not supported for the Big Creek Resort. There is substantial evidence in Lane County's findings to answer concerns raised.

Conclusion-Need Exception Big Creek

Based upon the information provided, as discussed above, there exists substantial evidence consistent with ORS 197.732(1)(c) and OAR 660-04-020 and OAR 660-04-022 to support the County's decision to take an exception to Goal 4 to allow the development of a destination resort facility at Big Creek.

Lands for Which Goals 3 and 4 do not Apply (Nonresource)

In order to justify the position that Goals 3 and 4 do not apply to specific lands, substantial evidence must be adopted into the record which indicates the following:

Goal 3

(a) That the land is not predominantly SCS Class I through IV soils (in western Oregon) or I through VI (in eastern Oregon).

(b) That the land is not:

Other lands which are suitable for farm use taking into consideration soil fertility, suitability for grazing, climatic conditions, existing and future availability of water for farm irrigation purposes, existing land use patterns, technological and energy inputs required, or accepted farming practices.

(c) That the land is not:

Lands in other classes which are necessary to permit farm practices to be undertaken on adjacent or nearby lands.

Goal 4

(a) That the land is not:

Land composed of existing and potential forest lands which are suitable for commercial forest uses.

(b) That the land is not:

Other forested lands needed for watershed protection, wildlife and fisheries habitat and recreation.

(c) That the land is not:

Land where extreme conditions of climate, soil and topography require the maintenance of vegetative cover irrespective of use.

(d) That the land is not:

Other forested land in urban and agricultural areas which provide urban buffers, wind breaks, wildlife, and fisheries habitat, livestock habitat, scenic corridors and recreational use.

If substantial evidence addressing each of the above requirements is not contained within an adopted comprehensive plan, a County must apply Goals 3 or 4, whichever is applicable. Also, a County is obligated to address and satisfy all other applicable Statewide Planning Goals or, where appropriate, take an "exception."

Lane County's Nonresource Lands Process

In November of 1983, Lane County prepared a Marginal Lands Working Paper which contains two processes for designating certain rural lands without applying zones designed to meet the stronger resource conservation requirements of Goals 3 and 4. One of these designation processes, "marginal lands" is addressed under the Goal 3 discussion, the other, "Nonresource/Nonexception Lands," is described by the County as follows:

Lands that do not meet the definition of agricultural land or forest lands as set forth in State Planning Goals 3 and 4. Use

of this land shall be for very low density rural residences, part time farming and other similar activities. Density patterns will be primarily a function of on-site conditions, however, shall not exceed one dwelling unit per five acres.

Land may be designated as NON-RESOURCE/NON-EXCEPTION LAND upon submission of satisfactory factual information to support the following findings:

1. The land is not composed of existing or potential forest lands which are suitable for the commercial production of wood fiber products.
2. The land is not needed for watershed protection.
3. Designation of the land as NON-RESOURCE/NON-EXCEPTION LAND will not adversely effect management of the land for big game range or other wildlife, fish or waterfowl habitat.
4. No extreme soil or climatic conditions exist to the extent to require maintenance of existing vegetative cover to a degree not provided by the NON-RESOURCE/NON-EXCEPTION designation.
5. The land is not located in an agricultural or urban area and providing needed urban buffers, wind breaks, wildlife and fisheries habitat, livestock habitat, scenic corridors or recreational uses.
6. The land is predominantly Class V-VII soils as identified as the Soil Capability Classification system of the U.S. Soil Conservation Service.
7. The land is not suitable for farm use or grazing taking into account soil fertility, climatic conditions, existing and future availability of water for farm irrigation, existing land use patterns, technological and energy inputs required, or accepted farming practices.
8. Designation of the land as AGRICULTURAL LAND is not necessary to permit farm practices to be undertaken on adjacent or nearby lands.

Land designated as NON-RESOURCE/NON-EXCEPTION LAND shall be zoned RR-5 or RR-10. The determination as to the appropriate density shall take into account the following factors:

a) Suitability for subsurface sewage disposal
b) Domestic water supply availability
c) Transportation system
d) Public services
e) Natural hazards (Marginal Lands Working Paper, pp. 7-9).

The actual plan policies governing the designation of lands as a resource/nonexception lands and the actual zoning of such land are plan policies 16 and 17, respectively. Policies 16 and 17 read as follows:

16. Where lands are not farm and forest lands, they may be designated on the plan diagram as rural residential or as parks and recreation, provided:
    a. Detailed and factual documentation has been presented indicating that the subject lands are not farm and forest lands as defined by Statewide Planning Goals #3 and #4.
    b. An exception to any of the Statewide Planning Goals is not required.
    c. Small isolated non-resource tracts surrounded by farm and forest lands shall be discouraged if such non-resource designation would create compatibility problems.
    d. The Rural Residential Designation would be consistent with other Comprehensive Plan Policies.

17. Residential densities for non-resource lands shall be one residence per five or ten acres and shall be determined through consistency with other plan policies and the following criteria:
    a. Existing development pattern and density of any adjacent committed areas;
    b. Subsurface sewage disposal suitability;
    c. Domestic water supply availability;
    d. Access;
    e. Public service;
    f. Lack of natural hazards;
    g. Effect on resource lands (Plan, p. 4).

In adopting the comprehensive plan, Lane County identified five areas within the County which it designated as "Nonresource" lands.

Conclusions Regarding Lane County's Nonresource Lands Process

Lane County's "Nonresource/Nonexception's Lands" process is consistent with the Commission's requirements for determining that "Goals 3 and 4 do not apply." By indicating that the process for determining and designating lands as Nonresource/Nonexception's Lands is acceptable, this process and addresses the requirements of Goals 3 and 4. All other applicable Goals still must be addressed for lands designated as Nonresource. However, the County still must, where applicable, reconsider under Goal 4 those soils deemed "marginal" for commercial forest management if they qualify under the County's "Commercial" forest definition. See Conclusion to Goal 4 regarding "marginal forest soils."

Also, the County is encouraged to amend its criteria addressing Goal 4 (criteria 2, 3, and 5) to employ language similar to that contained in Goal 4's definition of "Forest Lands." The following example is used to describe the issue.

Under Goal 4, the definition of "Forest Lands" includes the phrase "other forested lands needed for watershed protection, wildlife and fisheries habitat, and recreation." This phrase implies that "inventoried" lands which are (1) forested with commercial or noncommercial forest species, and (2) which are identified by the County's adopted inventories as needed for watershed protection, wildlife and fisheries habitat, and recreation are forest lands under Goal 4.

Technically, the County's standard criteria 2, 3, and 5 can be interpreted to go beyond that required by Goal 4. For instance, criterion 3 (that the NR designation will not adversely affect management of the land for big game range or other wildlife, fish, or waterfowl habitat) only requires a one-part test rather than the two part test contained in the goal. First, "nonforested" land where habitat will be adversely affected is included under criterion 3, but not under the Forest Lands definition. Second, if an area is identified as "needed" for wildlife habitat any developmental activity will adversely affect the habitat in some way and probably the management of that habitat as well. Third, if an area is forested and is still managed as habitat but through the inventory process was excluded from those areas identified as needed for habitat, criterion 3 may still apply where Goal 4 would not.

Similar logic would apply to criteria 2 and 5.

In addition, the fact that Goal 4 may apply to "noncommercial" forest lands does not mean that the same degree of conservation is required as that required for "commercial" forest lands. The County has the option of creating a forest zone with implementing measures designed to conserve a specific type or types of forest resources. (Recent examples where this has occurred are Klamath and Jackson Counties, see also the Goal 4 conclusion on application regarding this issue.)

The review of the 5 specific nonresource/nonexception areas adopted by Lane County shall be evaluated at the next meeting scheduled for Lane County's review.

The Department recently received from the County (received June 25, 1984) additional findings addressing the 5 sites in question as well as additional nonresource/nonexception areas.

Due to the lateness of this submittal, and the need for objecters to be notified of additional submitted findings under the Commission's expedited review procedures, postponment of this portion of the review was necessary.

Lane County's Nonresource Lands Process (Part II)

In the Lane County Acknowledgment Review of June 29, 1984, Lane County's Nonresource/Nonexception Lands designation process is reviewed. Information presented in the June 29 review includes (1) the County's plan policies for designating lands as nonresource/nonexception and applying residential densities to these lands (Policies 16(a) and 17, respectively, Plan, p. 4) and (2) the "general criteria" for determining

nonresource lands contained in the County's marginal lands working paper (Marginal Lands Working Paper, pp. 7-9).

The County's process for determining that Goals 3 and 4 do not apply was found to be consistent with applicable Goal requirements. The information regarding Lane County's nonresource/nonexception lands contained on pages 47 through 50 of the June 29 review is considered Part I of a two part review of the issue. Part II of the review consists of an evaluation of six site specific areas for which information has been adopted indicating that these six areas qualify for the nonresource/nonexception designations.

The County's findings and record regarding these six areas were submitted for review in two parts. Part I was submitted with the rest of Lane County's plan on May 24, 1984. On June 25, 1984, Part II of the County's record regarding nonresource/nonexception lands was received by the Department. The information received on June 25, 1984, was adopted by the Lane County Commissioners without proper notification of objectors as required by OAR 660-03-032(1) (Expedited Review Requirements).

Therefore, Lane County must satisfy the requirements of OAR 660-03-032, before the Commission can formally accept relevant findings contained in materials submitted for review on June 25, 1984.

Evaluation of the Six Site Specific Areas Found to Qualify as Nonresource by the County

Lane County indicates that (1) Agate Creek Planned Unit Development (Wolf), (2) McKenzie Ridge (Thurmond), (3) Addition to Dillard and Highlands (Hemmenway), (4) Second Addition to Dillard Highlands (Hemmenway), (5) Meltebeke's on Van Duyn Road, and (6) Cerro Gordo (Canfield) qualify as nonresource lands. In assessing whether these six areas do qualify as lands for which Goals 3 and 4 do not apply, the Department found that in some cases, a determination could be made based on the information submitted in May of 1984. In other cases, the information submitted on June 25 was necessary to complete the record. The Department also found that adequate justification to support the County's "nonresource" claim for a couple of the areas in question was

lacking despite the additional June 25 information. The following matrix will assist in clarifying this issue discussed above:

		Original Submittal (5-24-84)		Supplemental Findings (6-25-84)	
		Adequate	Deficient	Adequate	Deficient
1.	Agate Creek PUD		X	X	
2.	McKenzie Ridge	X			
3.	Addition to Dillard Highlands		X	X	
4.	Second addition to Dillard Highlands	No information submitted			X
5.	Meltebeke's on Van Duyn Road	X			
6.	Cerro Gordo	X			

Agate Creek Planned Unit Development (PUD)

This proposal is for 16 lots to be developed in two stages. Findings for this designated nonresource site consist of two pages of supplementary findings, the official public hearing notice and a memorandum to the Lane County Hearings Official from staff member George Currin regarding the PUD (5/5/83). Contained in the "original submittal" (5-24-84) is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. A statement that the "majority of soils on the subject property possess no woodland suitability." (NOTE: reference is made to an "Attachment A"--LCPC staff report PZC-82-190. This attachment was not furnished as part of the original submittal.)

2. Statements are provided indicating that 1) no site characteristics are present which make this site desirable for open space, 2) no mineral or energy resources are present, 3) no known ecological or scientifically significant natural areas are identified, 4) designation of this land for non-resource will not affect management of the land for wildlife habitat, 5) this site does not contain or impact scenic areas, 6) the site is not part of a water area, wilderness, wetland, groundwater resource area, or watershed, or 7) this site is not part of a known historical area or a potential or approved recreation trail or scenic waterway. (Supplementary Findings);

Contained in the "supplemental findings" of June 25, 1984, is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. Lane County Planning Commission Staff Report of November 9, 1982, which indicates the following:

   a. Lane County staff agrees that SCS Class I-IV Soils are not predominantly found on this property.

   b. This land is identified by the Lane County Wildlife Habitat Inventory as "sensitive" big game habitat.

   c. The applicant is in error that the suggested big game habitat density is one dwelling per 40 acres. It is one dwelling per 80 acres in sensitive big game areas.

2. LCDC Goal Requirement Report (Attachment A-November 9, 1982)

   a. The subject property is 53 percent nonagricultural soils. Attachment A to this LCDC Goal Compliance Report, which is referenced, indicates that of the 78 acres in question, 41 acres are SCS Class VI, 25 acres Class IV and 12 acres Class III (p. 1).

   b. A perched water table, poor soils, and steep slopes are given as reasons why this land is not "other land" suitable for farm use. SCS Soils OR-1 sheets are provided for each soil which generally support the County's position (p. 1).

   c. The County indicates that this land is not other lands necessary to permit farm practices to be undertaken on adjacent or nearby lands because none of the adjacent or nearby lands are engaged in farm use as defined by the ORS (p. 2).

   d. Regarding Goal 4, the County indicates that the land in question is composed of 59 percent (48 acres) of soils that have no woodland suitability for commercial forest uses. Only Dixonville Soil, which is cubic foot site Class 4, is capable of supporting commercial forest species.

   e. The County states that the parcel is not "other forested" lands needed for other resource uses listed in the Goal 4 definition. Specifically, the property has not been identified as needed for any of the other uses except big game habitat (p. 3). The issue of whether this land is forested land needed for big game habitat is addressed under a Goal 5 statement on page 4; the following statement is provided:

      > While the subject property is not shown on the Lane County Comprehensive Plan Inventory as significant fish or wildlife habitat or habitat for any endangered or threatened species, the Department of Fish and

Wildlife has noted that this property is located in habitat for black-tail deer. The concerns of the Department of Fish and Wildlife can be addressed in that a clustering of dwelling through a Planned Unit Development will significantly minimize the impact on black-tail deer habitat. Such a development will offer better protection to the habitat than scattering dwellings on the acreage which could occur under current land divisions. The dwelling density allowed under this proposal will not exceed the overall dwelling to acre ratio of 1-40 recommended by the State Fish and Wildlife Department for this type of black-tail deer habitat. The overall dwelling to acre ratio will not be exceeded in that the habitat in question is only a part of the total black-tail deer habitat in this area. Adjacent habitat areas will be maintained due to other prime forest land qualities. It is preferable to accommodate dwellings in this location given the poor resource soils and impact of surrounding development than on surrounding lands which are not impacted or of marginal capability.

With regard to the Fish and Wildlife Department's concern about deer damage to gardens and shrubs and the state's obligation to respond to complaints, the applicant will include deed provisions with all sales of property that black-tail deer inhabit the area and that the associated risks should be recognized.

Objection

1000 Friends of Oregon objects to the claim that Goals 3 and 4 do not apply to the Agate Creek PUD because the findings submitted on March 15, 1984, fail to address Goal 3. Regarding Goal 4, 1000 Friends objects to the conclusion that "the majority of soils on the subject property possess no woodland suitability" without specific soils and specific acreages as supportive evidence.

In addition, specific referenced attachments were not included in the County's original submittal of May 24, 1984.

Response to Objection

This objection is partially sustained. 1000 Friends' objection is generally correct with respect to the information contained in the original May 24, 1984, submittal. However, objectors will find that their specific objection is addressed by the Supplemental Findings submitted for review on June 25, 1984.

Conclusion for Agate Creek PUD

The claim that Goals 3 and 4 do not apply is sustained.

Substantial evidence is provided in the record supporting the claim that Goals 3 and 4 do not apply to the property in question and that Goal 5 big game habitat value will be protected through clustering provisions.

McKenzie Ridge (also known as Camp Creek Ridge)

This PUD proposal would establish 79 dwellings on 385 acres of land north of Springfield.

Information in the record includes: (1) an affidavit by the applicant, Robert E. Thurmond, detailing the history of and expenses incurred for this development; and (2) a statement of findings, reasons and conditions. This latter statement includes findings addressing all applicable Statewide Planning Goals as well as applicable County requirement and conditions of approval.

This particular claim that Goals 3 and 4 do not apply to this property has been previously before LUBA and the Commission in Osborne v. Lane County [LUBA No. 81.107].

In their March 18, 1982 decision, LUBA found and the Commission affirmed, that the land in question is not subject to Goal 3 because it is not agricultural land be definition. Also, LUBA found that this land is not subject to Goal 4 primarily because the land is not predominantly forested nor suitable for commercial forest use.

Objection

1000 Friends objects to the McKenzie Ridge PUD because the assumptions regarding the interpretation of soils information are correct. The County has relied totally on SCS soils maps even though such maps can be incorrect.

Response to Objection

This objection is not sustained.

Objectors do not present any specific information regarding the property in question to justify invalidating the Commission's earlier decision in Osborne v. Lane County.

Conclusion for McKenzie Ridge

The County's decision indicating that Goals 3 and 4 do not apply to the 385 acres in question is sustained (see Osborne v. Lane County [LUBA No. 81.107]) and the County's finding contained in the May 24, 1984, submittal.

Dillard Highlands Addition

This subdivision is located approximately two miles south of the Eugene city limits. Phase 1 of Dillard Highlands consists of 14 parcels on

100 acres and is "committed" to non-resource use. The second phase of this development consists of 24 parcels.

Findings from the "original" May 24, 1984, submittal supporting this nonresource/nonexception claim consist of a five-page statement (prepared by David Pedersen and Associates for applicant David Hemenway) titled "Application For Addition to Dillard Highlands Subdivision."

Information from the "original" submittal (5-24-84) relevant to the requirements for substantiating that Goals 3 and 4 do not apply are as follows:

1. A statement indicating "that the predominant soils on the property consist of:

   Dixonville-Philomath Hazelair complex (SCS Class VIe); Philomath SC (SCS Class VIs; Panther CL (SCS Class VIw) and Witzel CL (SCS Class VIs). These non-agricultural soils comprise approximately 92% of the subject property. A small patch (about 10 acres) of Hazelair soils is located on 20-30% slopes on the northern edge of the proposed division. These soils have SCS Classes IVe, subject to severe erosion (Pederson Statement, p. 3).

   Reference is made to an attached soils map which was not forwarded as part of the original submittal (May 24, 1984).

2. Regarding the "other land suitable for farm use" and "lands in other classes which are necessary to permit farm practices to be undertaken on adjacent or nearby lands," the following statement is provided:

   This land does not meet the second definition of agricultural land. That is, it cannot be used for farm use (the current employment of land for the primary purpose of obtaining a profit) nor is it related to the continuation of agricultural activities on adjacent or nearby lands. Other lands in this area are either developed as rural residential or have physical characteristics similar to the subject proprty: gently rolling to steep terrain, a predominance of SCS Class VI soils and little if any potential "farm use". In addition, there is very little physical connection between the subject property and surrounding lands because of the variation in topography. Thus, even if farm use were possible on nearby lands, this proposal would not impact on or adversely affect such activities.

   In summary, the subject property is not agricultural land either in terms of its soil classification or its relationship to other surrounding lands. The surrounding lands are also not agricultural lands as defined by Goal 3 (Pedersen Statement, p. 4).

3. In response to Goal 4 requirements, statements are made that (1) the subject property has no timber site class ratings; (2) that it is predominantly open land; (3) that adjacent lands are similar in character and not used for commercial forest purposes; (4) that other forest uses (i.e., watershed protection, wildlife and fisheries habitat, recreation, extreme conditions of climate, forested lands in urban and agricultural areas) are not applicable or present on the subject property.

   In support of the above statement, the following is provided:

   > The general area slopes south and east towards Dillard Road and Camas Swale. It contains no rivers or creeks and only a small water natural drainage channel flows southeast towards Dillard Road and into Camas Swale. This drainage basin has no watershed value, nor would the proposed subdivision at the low densities proposed impact on any watershed if one were present. The subject property lies in a low, open area surrounded by steep hillsides. The Significant Vegetation and Wildlife Areas working paper indicates that the vegetation on the property is not unique and contains no elements which contribute to making it a signicant Wildlife Area.

4. Additional statements are provided indicating that (1) the subject property has not been considered for nor does it have recreational value; (2) no extreme climatic conditions exist; (3) this land is not needed for open space, wind breaks; and (4) no scenic values are present on the property.

Contained in the "supplementary findings" submittal of June 25, 1984, are (1) a chart titled "Soil Types on Dillard Highlands, 1st Addition," (2) a SCS Soils map for the subject property, and (3) a soils investigation report apparently prepared by Lane County including soils maps. The chart is relevant to the review of this proposed nonresource site summarized as follows:

1. The chart indicates that of the approximately 107 acres of the Dillard Highlands, 1st Addition, (a) 31.5 acres consists of the Dixonville-Philomath-Hazelaire Complex which has no woodland suitability and has SCS Class VIe agricultural soils; (b) 27 acres consists of Panther Silty Clay Loam which has no woodland suitability and has SCS Class VIw agricultural soils; and (c) 22.4 acres consists of Hazelaire Silty Clay Loam which has not woodland suitability and has SCS Class IVe agricultural soils.

   Of the approximate 107 acres, only 2.6 acres have a woodland suitability while only 22.4 acres are SCS agricultural suitability Class IV.

Objections

1000 Friends of Oregon objects because the findings presented are actually conclusionary statements for which supporting factual information is lacking.

Response to Objection

This objection is not sustained. Additional soils information contained in the supplementary findings submitted for review on June 25, 1984 supports the statements presented by the County in their original submittal indicating that Goals 3 and 4 do not apply. (Also see conclusion)

Conclusion for Dillard Highlands Addition

The claim that Goals 3 and 4 do not apply is sustained. Findings contained in the original submittal of May 24, 1984, are supported by information contained in the "supplemental findings" submitted for review on June 25, 1984, of particular significance is the information indicating that only 22.4 acres of the soils present on this property are SCS Class IV with no SCS Class I-III soils and that only 2.6 acres of the 107 acres in question have any woodland suitability rating at all.

Dillard Highlands, 2nd Addition

This proposal involves approximately 154 acres consisting of 29 five acre lots. It is located approximately one third of a mile southeast of the Eugene city limits and the UGB (application for the Second Addition to the Dillard Highlands Subdivision, p. 3).

Findings addressing this proposal were submitted for review on June 25, 1984 (supplementary findings). Included within the County's record for Dillard Highlands 2nd Addition review as lands for which Goals 3 and 4 do not apply is (1) a document titled "Application for the Second Addition to the Dillard Highlands Subdivision," (2) a list of soils with marginal woodland potential, and (3) a soils investigation report (apparently prepared by Lane County) which includes "forest" and "Ag" soils mapping.

Findings indicating why Goal 3 does not apply to the subject property are as follows:

1. Based on SCS soils mapping, the subject property is composed of 53 percent "nonagricultural soils"--Classes V-VIII--Exhibits A, B, and D are referenced.

2. Table 1 on page 11 indicates that 47% of the property is Class I-IV soils.

3. The soils investigation and accompanying "Ag" soils maps appear to indicate that the majority of the property in question is in fact composed of SCS Class I-IV soils. Also, handwritten statements on the "soils investigation report" indicate that "the application is

general concerning soils if there are several more than mentioned" (Request for Soils Investigation, pp. 1 and 2).

4. The subject property is not "other lands" suitable for grazing "because of a combination of problems affecting the growth of pasture and the adverse effects of erosion which would accompany the grazing cattle." The County continues its assesssment of agricultural capabilities by stating the following:

> The various limitations on grazing described upon the applicable SCS soil sheets include low fertility, strong acidity, seasonal high water table, clayey topsoil susceptible to compaction when wet, summer droughtiness, slow permeability, and susceptibility to erosion. Climatic conditions of winter rainfall and summer drought lead to the aforementioned soils problems and do not lead to favorable grazing conditions. The soils can become very dry in the summer, and given the high cost of drilling wells and the restricted grazing time, the prospect of irrigation for this purpose is rendered infeasible now and in the future. Existing rural residential land use patterns within the area and the subject property's proximity to the Metropolitan area make it most valuable for rural residential development. The technological and energy inputs required to farm the subject property due to the combination of soils and slope render it not farmable by a reasonable and prudent farmer for the primary purpose of obtaining a profit in money. Even if there were accepted farming practices which made grazing profitable on this site, the erosion potential of this activity makes this property unsuitable for grazing (Application for Dillard Highlands 2nd Addition, pp. 10 and 12--hereby referenced on Application).

5. The subject property is not lands in other classes necessary to permit farm practices to be undertaken on adjacent or nearby lands "as none of the adjacent lands are engaged in farming practices" (Application, p. 12).

Findings indicating why Goal 4 does not apply to the subject property are as follows:

1. In assessing whether this land is lands composed of existing and potential forest lands which are suitable for commercial forest uses the County indicates that of the 154 acrs, 57 acres is composed of Site Class III (site index 140), 31 acres is composed of Site Class IV (site index 110), 43 acres is composed of noncommercial forest lands, 18 acres is used for utility easements, and 5 acres is "deemed" as necessary lands for management (Application, p. 14). The County indicates that for this discussion, Site Class 125 (borrowed from Douglas County) was used to assess commercial forest land suitability (Application, p. 16).

The County concludes that "only 57 acres, or 37 percent of the subject property has any commercial forest potential" (Application, p. 16).

2. The soils investigation and accompanying "Forest" soils maps indicate that additional soils not discussed by the County exist on the subject property (Request for Soils Investigation, pp. 1 and 2).

3. The County's "Exhibit F" presents from Forester Bob Hohenhaus an evaluation economic returns from commercial forest production. The County concludes that at the land's purchase price of $2,395,302, the net return from commercial forest production of the Site III and IV land is $-217 per acre (Exhibit F, p. 2).

4. The County indicates that subject property is not "other lands" used for watershed protection, wildlife and fisheries habitat, and recreation because (a) no inventories identify it as needed for watershed protection; (b) the area is identified as the "impacted" and thus, not needed for big game habitat as well as not identified as significant habitat for fish or other wildlife species; (c) the subject property has not been identified as needed for recreation (Application, pp. 24-26).

5. In addressing the other aspects of the "Forest Lands" definition, the County indicates (a) that any soil conditions requiring maintenance of vegetative cover will be protected through conditions attached to development approvals, and (b) because the property is not within a UGB or in agricultural land, the "other forested "lands" definition does not apply (Application, pp. 26-27).

Conclusion for Dillard Highlands 2nd Addition

The claim that Goals 3 and 4 do not apply to the subject property is not sustained.

First, evidence is provided indicating that the subject property is predominantly SCS Class I-IV soils and thus subject to Goal 3 (soils investigation reports). Second, substantial evidence is not provided indicating that Goal 4 does not apply. The County's claim that forest site index 125 can be used to assess the commercial viability of this property is inconsistent with the County's definition of commercial forest lands. Also, the County's standards for determining income (under the F-2 Zone's woodland suitability test) seems to indicate that the land is potential commercial forest land.

The County's conclusion that Goal 4's forest lands definition ("lands composed of existing and potential forest lands which are suitable for commercial forest uses") does not apply to Dillard Highlands' Second Addition, because the current rate of return is negative for managing this land as commercial forest land is invalid. As is the case under Goal 3 (Goal 3 must be applied to lands with SCS Classes I-IV soils), the Commission requires counties to apply Goal 4 to lands with cubic foot site classes suitable for commercial forest managment as reasonably

defined and inventoried by the County or the County maust take an exception to Goal 4. The requirement to apply Goal 4 in the manner stated above is consistent with the 1983 Legislature's marginal lands requirements which indicate that lands capable of producing 85 cubic feet of merchantable timber per acre per year can not be considered as marginal lands unless extensive parcelization exists within the area (see ORS 197.247(1)(b)).

Meltebeke's on Van Duyn Road

This proposal involves the rezoning of 258 acres from a forest zone to GR-10 based on the claim that Goals 3 and 4 do not apply. Buidling sites for 24 dwellings are proposed. This land is part of a larger 598-acre parcel owned by the applicant. Also, a portion of this 258-acre parcel is platted as County View Estates, lots 1 through 5.

Information contained in the original May 24, 1984, submittal includes:

1. A statement titled "Findings Supporting nonresource Designation for Certain Lands of Bob Meltebeke on Van Duyn Road" (with a map Exhibit A, attached).

2. Exhibit B is a copy of the Lane county Planning Commission's findings in support of this zone change.

3. Exhibit C is a map of the subject property depicting its soil types.

4. Exhibit D is a list of the soil types along with each soil's SCS classification and percentage of occurance on the subject property.

5. Lane County Planning Commission--Addendum to Staff Report (8/23/83).

6. Area map depicting the property to be rezoned.

7. Applicant's supplemental statement to the Lane County Planning Commission.

Contained in this "original" submittal is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. That the land is not SCS Class I-IV agricultural lands. Lane County Exhibit B--Lane County Planning Commission (LCPC), Findings of Fact--is referenced. Some of the findings addressing this issue are as follows:

> A detailed soils investigation of the subject property was undertaken for the applicant by Consulting Environmental Sanitarians, Ltd. (See June 21, 1983, transmittal letter from Terry M. Rahe of CES, Ltd. to Bob Meltebeke.) The results of the soils analysis are summarized in the Applicants' Statement at 5-7.)

Only 5.9% of the 258 acres proposed for rezoning are SCS Class I-IV soils.

When the entire Meltebeke ownership of 598 acres is considered together, ony 27.1% has an SCS Class of IV or better (LCPC, p. 2).

2. That the land is not other lands suitable for farm uses . . . suitable for grazing . . . some finding addressing this issue are as follows:

Almost all of the Bashaw Clay and Conser Silty Clay Loam (Class III and IV soils) occupy the flat field in the northwest portion of the property that is not to be rezoned. These soils have drainage and overflow problems, based upon SCS data. They are subject to winter flooding and are very droughty in summer. (SCS soils tables.)

The Dixonville/Philomath/Hazelaire complex and Panther Silty Clays (Class VI soils) are the predominate soil types. They occupy 33.7 percent of the entire ownership and 42 percent of the area propoed to be rezoned. These soils have low permeability, low available water capacity, moderate erosion potential, high plasticity, thin and rocky soils, and droughty conditions. They are poorly suited for production of conifers, which tend to suffer from root rot and windthrow. (SCS soils tables.)

The present lessee of the Meltebeke property raises cattle on this and several other tracts in the vicinity. The property is suitable for grazing less than six months a year due to wetness in winter (which causes cattle to destroy the pasture) and dryness in summer (which inhibits growth of grass). (Letter from DuWayne Penfold, July 10, 1983).

The entire Meltebeke property is not a viable economic unit as a farm. It is incapable of producing a cash crop, including grazing of animals, that would be sufficient to cover operating expenses and retire indebtedness on the land. (See letter of Floyd W. Holbrook, Agricultural Management Specialist, August 4, 1983.) (LCPC, p. 3).

On page 9 of "Attachment 2," Meletebeke supplemental zoning App. Statement, the County provides the following assessment of this property's agricultural suitability:

In addition, Floyd Holbrook, Agricultural Management Specialist, has submitted a report stating that, while the property can be grazed, it would be necessary to do intensive clearing and planting, with a resulting

production level that would not support an income adequate to retire the debt on the property, based on current farmland values in the area:

> "The major problem with improving the property for grazing is that the acreage can not support enough animals in either beef or sheep in order to pay operating expenses and retire the land debt. The main reason for not being able t (sic) support adequate livestock is due to the moisture availability and the shallow soil depth. The soil types are such that fertilizers are restrictedby (sic) chemical bonds and do not allow for maximum pasture production."
>
> "These figures [see letter] clearly show that the subject property will not support an economic unit." August 4 Holbrook letter.

3. That the land is not "lands in other classes . . . necessary to permit farm practices to be undertaken on adjacent or nearby lands. Some findings regarding this issue are as follows:

   No adjacent or nearby farmer has voiced opposition to this rezoning proposal.

   Dr. Penfold leases Meltebeke land to the northwest of the area to be rezoned. It is a hayfield on which he raises cattle. Dr. Penfold also raises cattle on several other tracts near the Coburg/I-5 interchange.

   The Meltebeke property leased by Penfold has little value for grazing, and the proposed rezoning will have little impact on the productivity of the Penfold farm. (Letter of DuWayne Penfold, July 10, 1983.)

   The area to the north of the subject property is scrub hillside and part of the Coglietti ranch. The immediately abutting area is not cultivated and receives limited grazing use.

   All other agricultural lands are isolated from the subject property by the ridge to the east and south, and the residential land to the west.

   A Wildlife Management Plan has been submitted by the Applicant and is a condition on zoning approval. Under this management plan there will be protective corridors running the length of the property which will buffer residential and farm uses. Under the plan animals will be restrained through fencing and deed restrictions.

Purchase of the subject property by adjacent farmers might increase their total income but reduce their return per acre. (Letter of Floyd W. Holbrook, Agricultural Management Specialist, August 4, 1983.)

4. That the land is not inventoried as forest land, not predominantly forested, and is not suitable for commercial forest production. County Exhibit B--Lane County Planning Commission (LCPC)--Findings of Fact--is referenced. Some of the findings addressing this issue are as follows:

   Neither the 258 acres to be rezoned nor the entire 598 acres is inventoried as forest land.

   Neither the 258 acres nor the 598 acres is presently "forested" in the meaning of the goal. A majority of neither acreage is covered with a commercial stand of conifers. Neither is a greater portion of either acreage covered with oak or similar noncommercial species.

   The vast majority of both the 258 acres and the 598 acres has no forest site class at all.

   Only 54 acres or 21 percent of the 258 acres to be rezoned has soil with commercial forest potential, and this acreage is in four scattered locations. (Letter from Robert Hoenhaus, Consulting Forester, June 28, 1983.)

5. That the land is not forested land based on the following findings:

   The upland areas between the subject property and the crest of the Coburg Hills, which contains the most densely wooded area, will be left in forest use, and will be managed under a management plan submitted by the applicnt's consulting forester.

   Wildlife corridors provided in the wildlife management plan will provide protection for wildlife resources. (See Goal 3 findings above.)

   The proposed 24 units will be clustered. Clustering will minimize impacts on wildlife and will permit protection of vegetative cover.

   Development density will be more than 10 acres per unit on the property to be rezoned, about 30 acres per unit for all the Meltebeke property, and far more than 40 acres per unit in the surrounding area.

   Grazing on the dry slopes of the subject property is a use that presently conflicts with goals of protecting vegetative cover and preventing soil erosion.

> Conversion of the property to low density, clustered residential use with extensive wildlife corridors under the wildlife management plan will displace grazing, a use that conflicts with vegetation, soil, watershed and wildlife protection, with a use that will improve forest land, open space, wildlife values that the site does possess.
>
> County General Plan Policy 5C13 requires application of Goal 5 conflict-resolution procedures and administrative (OAR 660-16-000) when, as here, the proposed development density is below that recommended by the Oregon Department of Fish and Wildlife for big game (LCPC, Exhibit B, pp. 5-6).

Some information contained in the record, contlicts with the findings adopted by the County. No specific discussion is contained in the "original submittal" clarifying the relationship of this information to that used by the County in making its decision is provided. (However, information contained in the supplemental findings--letter from Rober A. Holenhaus--indicates that the revised proposal of 258 acres excludes the majority forest soils discussed on page two of the "LCPC Addendum."

Relevant information regarding the "Nonresource" claim included in the "supplementary findings" submitted on June 25, 1984, are:

1. An area map showing the proposed 258 acres;

2. An aerial photo and a series of overlays which consists of a soils map, a colored overlay showing "Ag and forest soils" and the development area;

3. A sheet listing specific soils and acreages;

4. A large scale soils map prepared by Terrance Rahe;

5. Another aerial map containing soil lines;

6. A letter from R. Holenhaus, professional forester;

7. A letter from T. Rahe, soil scientist, describing the soils found on the property; and

8. A letter from J. Lockard, SCS District Conservationist, discussing the soil known as the Dixonville-Philomath-Hazelaire complex.

With the exception of a statement indicating that only 54 scattered acres are suitable for commercial forest use (Hoenhaus) specific findings or conclusions were contained in the supplemental findings. This information apparently was supplied to corroborate the statements contained in the "original submittal."

Objection:

1000 Friends of Oregon objects because information in the record contradicts findings that Goal 4 does not apply. Also, the County relies on soils mapping for this determination.

Response to Objection

This objection is partially sustained.

The objectors are correct that information in the record (page 2 of the "Lane County Planning Commission Addendum to Staff Report") indicates that Goal 4 does apply to this land or a portion of the property in question. However, information contained in the supplementary findings of June 25, 1984, addresses this issue (letter from R. Hohenhaus and also personal communication from J. Mann, Lane County Planning Department, 7/16/84).

Regarding the County's reliance on soils mapping, this objection is not sustained. In order to complete inventory requirements for both Goals 3 and 4, most counties have had to rely on such information to satisfy their land use planning obligations. The Commission has found acceptable on numerous occasions, soils mapping prepared by the U.S. Soil Conservation Service (or other governmental agencies--e.g., BLM) provided it is the best information available at that time.

Conclusion for Meltebecke's on Van Duyn Road

When considering both the original submittal of "May 24, 1984" and the "supplementary findings" of June 25, 1984, substantial evidence is provided to sustain the claim that Goals 3 and 4 do not apply to the 258 acres in question.

Cerro Gordo

This proposal is for 60 residential lots and one common area lot on 604 acres on Dorena Reservoir in southern Lane County. Findings for this designated nonresource site were submitted with the County's original submittal of March 15, 1984, as well as with the supplemental findings submitted on June 25, 1984.

The "original" submittal for Cerro Gordo consists of a number of exhibits which are as follows:

1. A map of the property displaying (a) the nonforest soils, forest soils, and committed lands; (b) ridge lines, Row River Road, and Dorena Lake; and (c) adjacent ownerships and the area zoned RR-10 for which the nonresource claim is made.

2. Findings and conclusions in support of nonresource designation for Cerro Gordo Ranch--CPR Application No. 1102.

This statement consists of 173 pages including a 44 page wildlife management plan, a forest lands assessment by Woodland Management, Inc., an appraisal by Terrance Rahe (registered sanitarian) of the area's suitability for subsurface sewage disposal, and a detailed discussion addressing each Statewide Planning Goal as well as numerous letters generally in support of the proposed development.

The "supplemental findings" (June 25, 1984) for Cerro Gordo consists of (1) a five page document labeled "Incorporation of Applicant's Findings and Conclusions," (2) the "Cerro Gordo Preliminary Cluster Subdivision Plan," as well as (3) a number of letters addressing a range of issues, some of which not directly associated with the Goal 3 and 4 applicability question while others are duplicate information contained in the original submittal.

Contained in the "original" submittal (3-15-84) is the following information addressing the Commission's requirement for substantiating that Goals 3 and 4 do not apply:

1. In addressing Goal 3, the County indicates that 76 acres of the 604 acres consists of soils with SCS agricultural suitability Classes III-IV (12 percent). The dominant soil type (302.6 acres) is the Dixonville-Philomath-Hazelaire Complex (Findings and Conclusions . . ., p. 12).

2. Regarding the other aspects of the Goal 3 defintion, the County indicates:

   a. That there is no evidence of recent agricultural activity;

   b. Due to the lack of rainfall in the summer, the southern exposure of this site and no source for water for irrigation agricultural productivity is limited;

   c. The Dixonville-Philomath-Hazelaire Complex is rated three to six AUMs per acre for grazing and no suitability for crop production while the soils;

   d. Ninety percent of the property products less than ten AUMs of pasture per acre;

   e. Two hundred ten acres (35 percent) of the property is situated on Cerro Gordo Mountain which rises 1,200 feet above the lowest elevation point.

   Based on the preceding findings, the County concluded that the property as a whole would not be an economic farming unit (nor would be purchased for agricultural use) under Goal 3's "other lands suitable for agricultural use . . .definition (Findings and Conclusions . . ., pp. 12-14).

3. Regarding whether this site qualifies as "lands in other classes necessary to permit farm practice to be undertaken on adjacent or

nearby lands," Lane County indicates that (a) there are no agricultural lands or agricultural uses in the imediate vicinity of the subject property, (b) Dorena Lake and the ridges of the mountain combine to surround the property, and (c) the nearest agricultural uses are approximately one mile from the property in question. Given the preceding facts, the County concludes that this site does not qualify as "lands in other classes necessary to permit farm practice on adjacent or nearby lands" (Findings and Conclusions . . ., p. 14).

4. Regarding whether the site is composed of existing and potential forest land suitable for commercial forest use, the County indicates that 507 acres of the 604 acres is composed of soils with no woodland suitability indicated by the U.S. Soil Conservation Service (Findings and Conclusions . . ., p. 16).

5. In addressing the other aspects of the Forest Lands definition, the County responds as follows:

   a. From aerial photographs, the forested and nonforested acreages were calculated. Douglas Fir is growing on 198 or 32.8 percent of this site. Oak is growing on 119 acres or 19.7 percent of this site while 287 acres or 47.5 percent remains nonforested. Fifty-two point five percent of the site is covered by trees. The County recites from LUBA's Osborne v. Lane County decision (5 Or LUBA 172) that LUBA does "not view the fact that trees may be growing on the property in various places, as the record seems to indicate, to mean the land is forested within the meaning of Goal 4." The County indicates that the opinion implies that when considering species such as oak, not a simple majority, but rather " the far greater area" must be covered by trees to conclude that a property is forested (Findings and Conclusions . . ., p. 17). Thus, the County indicates that 52 percent forest cover alone does automatically qualify this land under the forest land definition. The County concludes by stating, "Considering the total extent of tree cover, the subject property is not forested within the meaning of Goal 4.

   b. With regard to "lands where extreme conditions of climate, soil, and topography require vegetative cover irrespective of use," and "other forested lands in urban and agricultural areas which provide buffers, windbreaks, wildlife and fisheries habitat, livestock habitat, scenic corridors, and recreational use, the County indicates the following:

      (1) The property is not (a) identified as an important watershed, (b) an agricultural or urban area, (c) needed for recreation, (d) necessary to be maintained in its present condition to provide buffers, scenic corridors, livestock habitat, or windbreaks (Findings and Conclusions . . ., pp. 18-21).

(2) The conditions imposed during this development's approval will resolve any potential problems presented by extreme soil and slope conditions as well as conflicts with big game (Findings and Conclusions . . ., pp. 18-20).

Also, findings addressing other relevant Statewide Planning Goals were included. Of particular significance to the "nonresource" designation issue are findings addressing wildlife habitat and the "Goal 5 process." The following are findings contained within the "Findings and Conclusions" document presented in the County's original submittal (5-24-84):

1. On pages 123 and 123, a detailed statement of potential consequences on big game habitat from residential development is presented.

2. A series of recommendations for mitigating asdverse impacts from residential development on big game habitat are presented on pages 125-127.

3. A discussion of residential densities and deer habitat is presented on page 217. As stated, the recommended density for big game is one unit per 80 acres preferred; one unit per 40 acres is acceptable with clustering. The County states that, "The Cerro Gordo property is requesting a subdivision of 100 lots with clustering, thus maintaining an average lot size of 10 acres" (p. 217).

4. The County indicates that "residential development in rural areas rarely acts to exclude or reduce deer populations," "the contrary usually occurs (Jim Greer, 1983)." The main impact of development is the loss of hunting lands. Cerro Gordo prohibits hunting (p. 128).

5. On page 125, the County concludes its discussion of density as follows:

> The Cerro Gordo project, which calls for a density of one lot for every 10 acres, can be thought of in the larger ecological context of the drainage basin (approximately 2000 acres) as resulting in a density approaching one lot for 20 acres. Again considering the clustered design of the development this leaves considerable land for natural processes to occur.

6. On pages 129-131, the County discusses the wildlive habitat and the Goal 5 Rule requirements. These are excerpts from this discussion:

   a. In identifying conflictihg uses there has previously been discussion as to whether residential development actually negatively impacts wildlife. Experts tend to feel that deer populations usually are minimally affected by rural residential development and tend to adapt to people's presence quite rapidly (Jim Greer, ODF&W; Lane County Extension Service, 1983) (p. 130).

b. The ESEE consequences on both wildlfe and rural residents have been fully detailed in the previous section--"Potential Impacts of Development in Wildlife." The primary consequence on wildife is loss of habitat (environmental) while the primary consequence on rural residents is damage to landscaping and gardens (economic) and ultimately not being allowed to live in a rural setting (social). The section on "Mitigation of Impacts" gives recommendations for resolving these issues.

Therefore, in section 660-16-010 of LCDC's interpretive rules the way to resolve the conflict of uses is seen as (3) limiting conflicting uses (pp. 130-131).

7. On pages 133 through 147, present a detailed "wildlife and development plan" which was designed to satisfy OAR 660-16-010(3), "Limit Conflicting Uses."

As indicated, Lane County also submitted information regarding this developmental in their "supplemental findings" received by the Department on June 25, 1984. The information regarding Cerro Gordo contained within the supplemental findings was a reiteration of the conclusions and findings already present in the original submittal of May 24, 1984.

Objection

1000 Friends objects to the designation of Cerro Gordo as "nonresource" because of the County's reliance on SCS soils mapping information. Objectors claim that this information is inappropriate to judge the capability of this land for commercial forest use.

Response to Objection

This objectin is not sustained. In order to complete inventory requirements for both Goals 3 and 4, most counties have had to rely on such information to satisfy their land use planning obligations. The Commission has found acceptable on numerous occasions, soils mapping prepared by the U.S. Soil Conservation Service (or other governmental agencies--e.g., BLM) provided it is the best information available at that time.

Conclusion for Cerro Gordo

The claim that Goals 3 and 4 do no apply is sustained; however, one unresolved Goal 5 issue as well as a Goal 14 issue (see Goal 2) remains. Substantial evidence is contained within the "original submittal" to indicate that this land is not agricultural land under the Goal 3 definition. The approximately 604 acres in question is not predominantly SCS Class I-IV soils nor do findings indicate that it is reasonable to conclude that this property is "other lands" suitable for farm use or "lands in other classes" necessary to permit farm practices to be undertaken or adjacent or nearby lands.

Substantial evidence is provided also indicating that the property in question is not (1) "lands composed of existing and potential forest lands which are suitable for commercial forest uses and (2) other forested lands in urban and agricultural areas which provide urban buffers, wind breaks, wildlife and fisheries habitat, livestock, scenic corridors, and recreational use.

Also, the County has adequately addressed through open space requirements and developmental conditions the issue raised regarding extreme conditions of soil and topography where maintenance of vegetative cover qualifies as forest lands.

The question of whether this property qualifies as "other forested lands needed for wildlife habitat" has also been addressed. With appropriate density limitations, Goal 5's requirements for big game habitat under OAR 660-16-010(3) (limit conflicting uses) could be met. Thus, the County has satisfactorily addressed the 'other forested lands needed for wildlife habitat' issue and justified their claim that Goal 4 does not apply.

The Oregon Department of Fish and Wildlife (ODFW) indicates (within their objection regarding big game habitat--see Goal 5 section, p. 35) that using clustering to double its prefered densities is a measure satisfying OAR 660-16-010(3). Densities greater than those recommended would be a OAR 660-16-010(2) decision.

Because the density authorized by Lane County for Cerro Gordo exceeds ODFW's accepted densities mitigation strategy under the "3C" approach (OAR 660-16-010(3)), one of three options remains open to the County to resolve this issue. These options are as follows:

1. Provide additional ESEE consequences analysis justifying the decision to "allow the conflicting uses fully" (OAR 660-16-010(2)) at a density exceeding a threshold acceptable to ODFW; or

2. Limit the density in the Cerro Gordo development to ODFW's recommended density with clustering consistent with (OAR 660-16-010(3)); or

3. Cooperate with ODFW to design a mitigation strategy which combines (a) the current wildlife management plan for Cerro Gordo; (b) additional ESEE consequence analysis supporting the decision to allow a density which exceeds ODFW's recommended density with clustering; and (c) other mitigation measures deemed necessary by ODFW. Also, the Department suggests that the Goal 2 density issue be considered and resolved in conjunction with the Goal 5 density question.

Overall Goal 2 Conclusion

The Lane County Plan and the rural portion of the Eugene/Springfield Metropolitan plan do not comply with Goal 2.

The Lane County plan is exceedingly well documented, and is carefully organized around specific statewide Goal requirments. Problems with mapping and exceptions data (partially alleviated by the submission of updated maps during the review process) are primarily caused by last minute changes to the documents. According to Lane County staff, recently completed computerization of countywide zoning and plan data makes available a mapping capability far beyond that submitted to date (examples of this will be available at the public hearing). However, the lack of an up-to-date readable plan map at the time of this report's mailing constitutes a major Goal 2 compliance issue.

Problems with mapping and presentation aside, the structure of the plan is significantly improved over the 1980 submittal. In the previous denial of Lane County's plan, the Commission found major organizational problems associated with conflicting subarea plans, nonexistent inventories and nonbinding policies. The current submittal has surmounted these problems.

There are several Goal 2 problems associated with plan ordinance structure, or with plan/zone consistency. The plan does not define the various plan categories in a way which will clearly guide the zoning applied to each category. This will create confusion in future rezoning decisions, especially with the vague rezoning criteria in LC 16.252.

Lane County Cluster Subdivision provision allows for the creation of urban uses and urban levels of development in rural areas. Statewide Planning Goals define rural land as lands outside UGBs and are: "(a) Non-urban agricultural, forest or open space lands or (b) other lands suitable for sparse settlement, small farms or acreage homesites with no or hardly any public services, and which are not suitable, necessary or intended for urban use." The Cluster Subdivision Provision allows development at urban densities and with urban uses (i.e., multifamily dwellings) in rural areas, including exception areas and nonresource areas. Conceivably, a 500 acre parcel could accommodate 500 units on small lots, with the remainder of the parcel in "common open space." This would be an urban subdivision at this point. The County must amend the ordinance to define levels of development appropriatge to these rural areas (see Goal 11). The clustering provisions must be designed to not permit urban uses in rural areas.

Lane County's PR Zone allows uses outright in resource areas without reasonable standards required under ORS 215.213(2)(e). Minor betterments and general park improvements are uses the Commission has allowed outright in resource areas. Uses such as RV parks, recreational marinas, and large recreational development require, at a minimum, standards to assure that these types of uses are compatible with existing uses and minimize impacts to resource lands. Another problem with the PR Zone regards application: the County has not taken a valid exception to areas zoned PR (see discussion under built and committed exception).

The County has adopted a provision stating that all applications which have progressed through at least one public hearing would be completed under procedures applicable at the time of the hearing (Ordinance 1-84). This acknowledgement review only applies to submitted materials. All amendments not acted on by the Commission under this review must follow post acknowledgement requirements. Actions in the County which would fall under these (Ordinance 1-84) provisions must include findings which apply the Goals. (For example, applications under the existing F-2 Zone could not be approved by the County without Goal findings. These findings would necessarily note the deficiencies found in this report). They must also follow 45-day notice procedures and post acknowledgement requirements if they are amendments to the Plan or Zoning Ordinances. The County is strongly encouraged to delete this provision and process these applications through ordinances which are amended in response to this review.

In order to comply with Goal 2, Lane County must:

1. Provide legible maps for all rural lands showing adopted plan categories.

2. Clearly define which zones are intended to implement each plan category.

3. Delete the provision in Sections 16.015 and 16.252 which permit legislative zone amendments to be adopted by order rather than by ordinance.

4. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone these lands identified in the Goal 2 Exception with the appropriate resource zone.

5. Amend the plan to clearly identify areas zoned PR which are within built and committed exception areas. For those areas within an exception area, provide for information addressing OAR 660-04-025 requirements or exclude those lands from areas designated as a built and committed exception area,

6. Amend the PR-RCP Zone to include standards for uses permitted outright (consistent with ORS 215.213(2)). Note: These should not include review of minor betterment activities as described in ODOT's State Agency Coordination Program.

7. Amend the zoning code to exempt maintenance and improvements in Jennie B. Harris State Park and Squaw Creek State Wayside from conditional use procedures. This is most easily accomplished by zoning all of these parks to PR.

8. In conjunction with compliance requirements under Goal 11 of this report, the County must (1) clearly define uses, densities, unit quantity, and levels of service appropriate to rural "cluster" subdivisions, and (2) adopt appropriate ordinance amendments implementing these standards. Densities exceeding those appropriate for rural areas shall additionally require a Goal 14 exception.

9. Amend Lane Code Chapter 16 to correct inconsistencies in the cross-referencing system, where subsections are referred to within the same section of the ordinance.

10. Amend the plan (a) to include additional fundings justifying the claim that Goals 3 and 4 do not apply to property known as Dillard Highland's 2nd Addition, or (b) justify an exception to Goals 3 and 4, or (c) rezone the subject property with a suitable resource zone. If the county chooses option (a) or (b), Goal 5 wildlife habitat issues must also be addressed.

11. Amend the plan to justify the potential one dwelling unit per 5 acre density authorized for Cerro Gordo's 600 acres in view of ODFW's accepted wildlife habitat density standard for cluster developments of one dwelling unit per 40 acres. (See also Goal 2's cluster development issue.)

In order to comply with Goal 2 for the rural portion of the Eugene-Springfield Metropolitan plan, the County must amend the plan and zoning ordinances to:

12. Remove the AO zoning from all privately owned parcels within the Mahlon Sweet Airport Exception Area consistent with Transportation Policy 11 and apply an appropriate resource zone to these lands.

13. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone TL 1600 in the Royal Avenue Exception ares with the appropriate resource zone.

14. Amend the zoning code to exempt maintenance and improvements in Armitage State Park from conditional use procedures. This is most easily accomplished by zoning all of this park to PR.

GOAL 3: AGRICULTURAL LANDS

Goal 3 defines agricultural lands and requires that such lands be "inventoried and preserved by adopting exclusive farm use zones pursuant to ORS Chapter 215." Oregon Administrative Rule 660-05-000 provides further classification of Goal 3's requirements. If a local government finds that any of the inventoried agricultural land is built on or committed to nonfarm uses and thus no longer available for farm use, or that agriculatural land is needed for nonfarm uses, an exception to Goal 3 is required.

Inventory

Goal 3 defines agricultural land in western Oregon as:

1. Lands of predominantly Class I-IV Soils; and

2. Other lands suitable for farm use based on several factors; and

3. Lands in other classes necessary to permit farm practices to be undertaken on adjacent or nearby lands.

Information on Agriculture in Lane County is found in the Working Paper: Agricultural Lands and the addendum to the Working Paper entitled: "Commercial Agriculture and Farm Parcel Size in Lane County." The first working paper noted above provides a discussion under the following topics: the need to preserve agricultural lands (pp. 1 and 2); Statewide Planning Goal 3--what it says and what is required for compliance with the Goal (pp. 2-6); natural characteristics of agriculture in Lane County (pp. 6-13); economic and social characteristics of agriculture in Lane County (pp. 14-25); definition of commercial farm units (pp. 26-31); and the County's role creating an acceptable program for Goal compliance, including suggested policies as a starting point for policy development (pp. 31-35).

The second working paper noted above "addendum," is to supplement the material presented in the first Working Paper and seeks to address the answer to the following questions (Addendum, p. 1):

1. What is a commercial agricultural enterprise?

2. What parcel sizes are appropriate for the continuation of commercial agricultural enterprise within an area?

According to the Working Paper, Lane County does not yet have a completed SCS Soil Survey (p. 9). Instead, Lane County's Soil Scientist in close cooperation with the local SCS office, produced generalized soil maps at a scale of 1" = 3000', which represent the best Countywide information available until publication of the Lane County Soil Survey is completed by SCS (p. 9). These maps are available in the Lane County Department of Environmental Management Offices in Eugene.

Lane County's Farmland Inventory

This inventory groups all of the County's 210 SCS Class I-VII soil types into three categories: prime farmland; additional farmland of local importance; and other Class I through VII Soils. A listing of all SCS Soil Mapping Units is provided in the Appendix C of the Working Paper.

Prime Farmland

These areas are recognized by the County as land that is best suited for producting food, feed, forage, fiber and oil seed crops. It has the soil quality, growing season, and moisture supply needed to economically produce a substantially high yield of crops with minimal imputs of energy and economic resources, and farming it results in the least damage to the environment (Working Paper, Agricultural Lands, p. 10). The Working Paper states that according to an unpublished SCS report, about 160,000 acres or less than six percent of Lane County meets the soil requirements for prime farm land (p. 10). The Working Paper also states that of this prime farmland, 60,000 acres is used for crops, 40,000 acres are in forest nursery or Christmas tree production, and 15,200 acres are

in urban areas. Crops grown on this land (mainly corn, snapbeans, wheat, peppermint, and filberts) account for an estimated 50 percent of Lane County's agricultural income for 1980 (p. 10). A list of all SCS Soil Mapping Units that make up the prime farmland category is provided. The approximate acreage of each map unit is also provided except when the use is urban or built up land (pp. 10 and 11).

Additional Farmland of Local Importance

These areas include those lands that are near prime farmland and that economically produces high yields of crops when treated and managed according to acceptable farming methods. Some may produce as high a yield for selected crops as prime farmland, if conditions are favorable (p. 11). A list of all SCS Soil Mapping Units and approximate acreage of each unit is provided. The SCS Soil Map Units are also grouped under three categories: Willamette Valley Foothills; Coast Range Valleys, Terraces, and Gently Sloping Foothills; and Large Wet Terraces (Ryegrass Areas).

Other Class I through VII Soils

These areas include those Class I-IV soils not listed as prime farmland nor additional farmland of local importance and Class VI and VII soils if the USDA Soil Interpretive Guide forms (OR-1) indicate crops or pastureland potential (p. 12). According to the soil map units under this category, no Class V soils exist (pp. 12, 13). The Working Paper states that this category is not included in the SCS report but is included in the Working Paper for purposes of completing the agricultural land inventory (p. 10). A list of the SCS Soil Map Units under this category has been provided (pp. 12 and 13). Acreage figures of these SCS Soil Mapping Units are not provided.

The Working Paper discussion of "factors affecting agricultural lands in Lane County" goes on to discuss irrigation capabilities. The Working Paper states that according to a 1972 Upper Willamette Resource and Conservation and Development Project Report, there are approximately 243,200 acres of land suitable or having potential for irrigation in Lane County (p. 13). The Working Paper also states that the 1978 U.S. Agriculture Census reports 32,002 acres of irrigated land, 24,424 acres of which is cropland (p. 13).

The Working Paper discussion of "economic and social characteristics" provides a lengthy discussion of farm composition, crop values, production trends, food processing, farm employment, markets, and agricultural land rent zones. A number of tables from the 1974 and 1978 USDA Census of Agriculture are also included within this section of the Working Paper. These include the following:

1. Selected Agricultural Characteristics in Lane County.

2. All farms and all farms with sales of $2,500 or more, 1978-1969.

3. Farm by Value of Sales and Operations.

4. Farms with sales of $20,000 or more and farms with sales of less than $20,000.

5. Livestock and Poultry Inventory and Sales.

6. Selected Crops Inventory.

7. Market Value of Agricultural Products Sold.

8. Estimated Gross Agricultural Income ($1,000).

The Working Paper states that the 1978 U.S. Census of Agriculture reported 1,709 farms within Lane County, occupying 266,765 acres or 9.2 percent of land area. The Census reported that 983 farms with sales of $2,500 or more occupy 226,380 acres resulting in an average farm size of 230 acres. The Census also reported that the value of land and buildings of farms with sales of $2,500 or more averages $1,579 per acre; up from $716 per acre in 1974 (Working Paper, Agricultural Lands, p. 14).

Minimum Parcel Sizes

Goal 3 requires that minimum lot sizes "shall be appropriate for the continuation of the commercial agricultural enterprise within the area." Lane County has two different sets of minimum lot sizes. One is a set of minimum lot sizes for farm operations (LC 16.212(6)(d)). The other set is for minimum farm parcels or field sizes (LC 16.212(7)(a)). For approval of farm dwellings under ORS 215.213(1)(g) both sets of the minimum lot sizes must be adhered to (LC 16.212(2)(f)(ii), (2)(g)(i) and (2)(b)(sic), and (2)(h)(iii)). These two sets of minimum lot sizes area as follows:

Farm Operations (LC 16.212(6)(d))

Farm Group	Minimum Acres
Cash grains	120
Field crops (includes grass seed production)	160
Tree fruit and nuts	40
Horticultural specialties	20
General farm, primarily crop	320
Extensive animal grazing	120
Intensive animal husbandry	40
Dairy farm	240
General farm, primarily livestock	80
Berries and grapes	20
Vegetables and melons	120

Field Sizes LC 16.212(7)(a)

Zone	Minimum Acres
E-25	25
E-30	30
E-40	40
E-60	60

The addendum to the Working Paper provides an explanation of these lot sizes chosen. The discussion is based on an analysis of information gathered basically from 4 sources: (1) USDA Census of Agriculture; (2) OSU Extension Service, Special Report 696; (3) Lane County Georgraphic Data Systems; and (4) Lane County Extension Agents.

For farm operation parcel sizes (LC 16.212(6)(d)) the County provides two tables. Table II (p. 9) shows number of farms, smallest farm size for farms generating 80 percent, 70 percent, and 60 percent of sales volume and percent of group totals for each farm group. Table III (p. 10) shows the size distribution of farms having sales of $2,500 or more by farm group. The 30th percentile or point above which 70 percent of sales occur is also shown on Table III. The farm operation parcel size chosen is just above the median parcel size range for a particular crop. For example, 54 vegetables and melon farms have a median parcel size range of 80 to 119 acres, the minimum farm operation parcel size chosen for that type of crop is 120 acres. To support the conclusion that the median size range could be used to establish a point at which signficant contribution occurs, the County had to show that farm operations at the median size range contributed in a substantial way to the agricultural economy. The County did this by showing a correlation between median size range and a point at which farms generating 70 percent of sales volume occur.

For determining minimum farm parcels or field sizes (LC 16.212(7)(a)) the County provides two tables. Table VII shows existing farm parcels over ten acres in size for 19 regions of the County. These regions were established on the basis of soil series and location (p. 3). The number of farm parcels over 10 acres in each region is provided. The 20th, 30th, 40th, and 50th percentiles or the point at which a certain percent of parcel sizes are above and below a certain size is also shown on table VII(i.e., 20th percentile or 80 percent of the cases above a point and 20 percent of the cases below a certain point). Comparing Table VII with the farm size standard chosen shows five regions having a farm size standard between the 30th and 40th percentile, nine regions having a farm size standard between the 40th and 50th percentile and five regions having a farm size standards between the 50th percentile and the average parcel size. Table VIII shows the primary farm activities and preferred parcel acreages based on the County Extension Agents Opinion (p. 4). The primary farm activities selected by the Extension Agent for each of the 19 regions are similar in some ways with the primary crops based on soils series shown on Table V (p. 12).

The following table shows the comparison between the chosen farm size standard (LC 16.212(7)), the preferred parcel sizes chosen by the County Agricultural Extension Agent and the results of the farm parcel survey conducted by the County:

Region No.	No. of Cases	Percentiles Size (acres) 20th	30th	40th	50th	Preferred[1] Parcel Size Ext. Agent	Farm Size Standard LC 16.212(7)
1	106	24	32	39	46	80-40-60	40
2	75	24	36	44	60	80-40-60	40
3A	60	21	27	31	45	80-40-60	40
3B	34	18	20	23	29	80-40-60	30
3C	23	19	20	25	27	80-40-60	30
4	510	16	19	22	27	40-10-40	30
5	102	14	18	20	28	40-10-40	30
6	11	21	24	42	57	25	25
7	89	17	19	25	31	40-10-40	30
8A	17	14	56	69	82	25-40-40-80	40
8B	75	20	28	38	44	25-40-40-80	40
9A	15	17	20	20	31	25-40-40-80	40
9B	29	27	34	42	59	25-40-40-80	40
12	177	20	25	36	51	-40-80	40
13	12	15	17	47	50	25-40	40
16	260	21	31	39	47	80	40
17A	89	14	18	23	34	25	25
17B	38	22	27	40	59	40	40
18	197	17	20	23	27	40-10-40	25

[1]Note: The preferred parcel size established by the County Extension Agent is based on selected farm activities. For Regions No. 1, 2, 3A, 3B, and 3C, the primary activities are: grass seed (80); wheat (40); and peppermint (60). For Regions 4, 5, 7, and 18, the primary activities are: row crop (40); orchard (10); and wheat/peppermint (40). For Regions 6, 17A, and 17B, the primary activity is pasture (40). For Regions 8A, 8B, 9A, and 9B, the primary activities are: pasture (25); cereal grain (40); row crop (40); and grass seed (80). For Region 12, the primary activities are: pasture/timber; cereal grain (40); and grass seed (80). For Region 13, the primary activity is pasture/timber; and cereal grain (40). For Region 16, the primary activity is grass seed (80).

Objection

1000 Friends' objection to Lane County's minimum lot sizes is as follows:

1. Lane County's Inventory of Farms Used in Calculating Its Minimum Lot Size Improperly Includes A High Proportion Of "Farms" It Has Defined As Noncommercial.

Response

The objection is not sustained.

While it is possible that some noncommercial farms may have been included within the County's inventory, Lane County's selection of minimum lot sizes is based on an inventory of farms that contribute in a substantial way to the agricultural economy. In its section of farms, the County not only excluded farms with gross sales less than $2,500, but also showed that farms with lot sizes above the medium parcel size range are generally the same type of farms generating 70 percent of gross sales in the County (Table III). In the County's selection of minimum field sizes, only parcels over 10 acres were used in the inventory (Table VII). According to the County's survey, fields as small as 14, 17, and 18 acres contribute to the agricultural economy and using parcels as small as 10 acres is appropriate for justifying minimum field sizes.

Plan Policies

Lane County adopted 15 plan policies relating to agricultural lands. Among them are the following (Lane County Rural Comp. Plan, Policies, and Legislative Findings, pp. 6-7):

1. Encourage agricultural activities by preserving and maintaining agricultural lands through the use of an exclusive agricultural zone which is consistent with ORS 215.

4. To insure that zoning districts applied to agricultural lands encourage valid agricultural practices in a realistice manner; emphasis shall be placed on minimum parcel sizes which are based upon a countywide inventory and which are adequate for the continuation of commercial agriculture. As minimum parcel sizes decrease to accommodate more specialized commercial agricultural activities, the burden of proof upon the applicant shall increase in order to substantiate the proposed agricultural activity and restrictions shall increase in order to obtain a residence on the commercial farm unit. Deviation from minimum parcel sizes of the Exclusive Farm Use land for the creation of a parcel not smaller than 20 acres may be allowed when at least 19 acres of the parcel being created are currently managed or planned to be managed by a farm management plan for a farm operation consisting of one or more of the following: berrys, grapes or horticultural specialities. A temporary mobile home which is accessory to the farm management may be conditionally located upon the farm parcel for a reasonable length of time to allow for substantial implementation of the farm management plan. Upon evidence that the farm management plan has been substantially implemented, the mobile home may be allowed on a permanent basis or may be converted to a permanent dwelling.

7. Some agricultural land in the County is not suitable or available for agricultural use by nature of being built upon, committed to or needed for nonagricultural uses. The County shall plan and zone such lands for nonagricultural used by using applicable comprehensive plan policies and the exceptions process of LCDC Goal 2, Part II.

8. Provide maximum protection to agricultural activities by minimizing activities, particularly residential, that conflict with such use. Whenever possible planning goals, policies and regulations should be interpreted in favor of aricultural activities.

10. Such minimum lot sizes or land division criteria as are used in exclusive farm use zones shall be appropriate for the continuation of the existing commercial agricultural enterprize in the region. The commercial agricultural, minimum field or parcel sizes and corresponding farming regions identified in Addendum to Working Paper: Agricultural Lands shall be used to determine the appropriate division requirements for lands zoned Exclusive Farm Use (E).

11. Conversion of rural agricultural land to urbanizable land shall follow the process and criteria set forth in LCDC Goal 3.

14. Agricultural lands that satisfy the requirements of ORS 197.247 may be designed as Marginal Lands and such designation shall also be made in accordance with other plan policies. Uses and land divisions allowed on Marginal Lands shall be consistent with those allowed by ORS 197.247.

Plan and Zone Designations

Lane County's plan map employ one Agricultural Plan designation which is implemented by one EFU zone having 4 minimum parcel sizes or field sizes (25, 30, 40 and 60 acres). These 4 parcel sizes are applied to farmland in the County based on the parcel size inventory of the 19 regions previously discussed. Any change in the minimum parcel size would constitute a zone change and is therefore, subject to the criteria for a zone change pursuant to Section 16.252 (personal communication, Jim Mann, June 18, 1984). Section 16.252(1) requires compliance with the specific purpose of the EFU zone and conformity with the comprehensive plan.

Implementing Measures

Lane County has applied marginal lands and is therefore required to adopt the EFU zone provisions of ORS 215.213(1) through (3) only.

Lane County has nine separate provisions for dwellings in its EFU zone. One of these is for homes on "lots of record" under ORS 215.213(4). LC 16.212(3)(c). Another is for nonfarm dwellings authorized by

ORS 215.213(3) on generally unsuitable land. LC 16.212(4)(j). Two are for homes of the type authorized by ORS 215.213(2)(a) and (b). LC 16.212(3)(a); (b). Two more are for legislatively defined and allowed "hardship" mobile homes, ORS 215.213(1)(j) and "farm relative" dwellings, ORS 215.213(1)(e). LC 16.212(2)(j); (i). The three remaining provisions are for "dwellings customarily provided in conjunction with farm use" and apply to three different situations. They are:

- The first farm dwelling on any and all parcels used as part of a farm management unit already in farm production. LC 16.212(2)(f).

- The first farm dwelling on any and all parcels proposed for farm management, but not yet in production. LC 16.212(2)(g).

- The second farm dwelling on any or all parcels used as part of a farm management unit already in farm production. LC 16.212(2)(h).

Under each of these three farm dwelling provisions, the dwelling must be located on a parcel not smaller than the applicable parcel size in LC 16.212(7) and part of a farm operation equal to or greater in size than the farm group sizes specified in LC 16.212(6)(d). This is because LC 16.212(6)(c) "deems" operations of the specified size in (6)(d) "as contributing in a substantial way to the agricultural economy of the County." The ordinance requires the applicant to submit information showing satisfaction of these area requirements. Applicants for farm dwellings on land not currently managed as a farm operation must prepare a "farm management plan." LC 16.212(2)(g)(v)(e). This plan must be "substantially completed" prior to authorization of a permanent dwelling. LC 16.212(2)(g)(vi). Prior farming experience must also be documented by applicants for a dwelling proposed for a "contemplated" farm use. LC 16.212(2)(g)(v)(d). Under all three dwellings provisions the applicant must identify the "extent of involvement in the proposed farm use activity by the occupants of the proposed dwelling." LC 16.212(f)(iv)(d); (g)(v)(d); (h)(iv)(d). All other permitted uses and uses allowed conditionally are consistent with ORS Chapter 215.

Disqualification from Farm Tax Deferral: During the 1981 Legislative Session, ORS 215.236 was adopted, requiring the disqualification from farm tax deferral of parcels prior to final building permit approvals for nonfarm dwellings. This provision has not yet been included within the County's EFU Zone.

The standards for land divisions are found under LC 16.212(7) of the EFU Zone. A division of land may be allowed down to 20 acres for horticultural specialties, berries, and grapes provided a farm management plan establishes suitability of the land for the intended use (LC 16.212(7)(b)). Land divisions under LC 16.212(7)(a) and (b) require that a statement be placed on the partition map dislosing that a dwelling is not guaranteed unless the provision of this zone for obtaining a dwelling are met (LC 16.212(7)(e)).

A division of land may be allowed for nonfarm uses under ORS 215.213(2)(e), (f), and (g), provided the parcel is not larger than the minimum size necessary for the use (LC 16.212(7)(c)). A division of

land may be allowed for a dwelling not provided in conjunction with farm use if the dwelling has been approved pursuant to the provisions under ORS 215.213(3)(LC 16.212(4)(j)) on generally unsuitable lands and if the division would not conflict with the purpose of the EFU Zone (LC 16.212(7)(d)). All land divisions noted above including land divisions meeting the four minimum area requirements of LC 16.212(7)(a) are subject to the application and review procedures of Lane Code Chapters 13 and 14 (LC 16.212(7)(e)).

Lane County's Agricultural Plan designation and the four field size standards of the EFU Zone was applied consistent with the inventory analysis previously discussed. The areas zoned EFU are the same as the areas designated Agriculture (A) on the Plan Diagram Zoning Map.

Objection

1000 Friends object to the lack of standards for the siting of farm dwellings because they do not exclude nonfarm dwellings.

Response

The objection is not sustained.

The farm dwelling approval standards allowed under LC 16.212(2)(f), (2)(g), and (2)(h) use essentially the same language as those under ORS 215.213(1)(g). A farm dwelling customarily provided in conjunction with farm use (existing or contemplated) is allowed provided it complies with certain conditions. These conditions require that the farm dwelling must be located on a lot that is managed as part of a farm operation of a size equal to or greater than the minimum farm operation sizes under LC 16.212(6)(d) and will be located on a lot that is equal to or larger than the minimum field sizes under LC 16.212(7)(a). LC 16.212(2)(f)(ii); (2)(g)(i), (b)(sic); and (2)(h)(iii).

Objection

John W. Shonkwile representing C. Rober Suess, Helen Suess, Suess Brothers Company, and Scott & Suess Builders Company object to the County zoning certain properties EFU which they claim are not agrigultural land but rather have marginal land or nonresource characteristics.

Response

The objection is not sustained. The properties in question consist of a 125-acre parcel and a 121-acre parcel. The 125-acre parcel consists of all class IV soils. The 121-acre parcel has 89 acres of class V and VI soils. Lane County has defined these areas agricultrual lands based on the requirement of Goal 3 to include "other lands suitable for farm use." Both of these areas are within the definition of agricultural land defined by Goal 3 and Lane County. The County's decision to therefore zone property EFU, which is defined as agricultural land, instead of a zone requested by the property owners does not constitute a violation of Goal 3.

Metro Area

Information regarding agricultural lands within the Metro Area General Plan Boundary and outside the Eugene-Springfield UGB is found in two separate acknowledgment submittals: (1) Lane County Rural Comprehensive Plan submitted for this review; and (2) Eugene-Springfield Metro Area acknowledgment request (August 19, 1982). The inventory of soils is contained in the Agricultural Lands-Addendum to the Metro Area General Plan (October 1981). The inventory analysis used to justify minimum parcel sizes is contained in the County-wide Working Papers on Agriculture. Plan policies pertaining to agricultural lands are contained in the Metro Area General Plan. Where the County's EFU Zone requires compliance with certain plan policies, those particular policies apply to the metro areas as well (personal communication, Jim Mann, June 25, 1984). The County's EFU Zone (LC 16.212) applies to all agricultural lands in the metro area outside the UGB. These lot sizes are based on the County-wide inventory of parcels and primary farm crops (see discussion of minimum lot sizes). Chapter 16 of the Lane Code applies to the Metro Area outside the UGB.

Requirement

1. Inventory all agricultural lands as defined by Goal 3.

Response

Information on agricultural lands in the Metro Area is contained in the Metro plan update "Agricultural Lands-Addendum." The inventory was based on SCS soil mapping (p. 1).

A list of all SCS soil mapping units for the Metro Area is provided in the Appendix of the Addendum. The plan defines agricultural land as follows (p. 2):

1) Agricultural Soil Capability Class I-IV,

2) "Other" - Agricultural Soil Capability Classes V - VIII in current agricultural use, and

3) "Other" - Agricultural Soil Capability Classes V - VIII based on proximity to areas defined in 1) and 2) above.

A map is provided showing the three types of agricultural lands described above. The above definition is consistent with Goal 3 and is basicaly the same used in the County-wide inventory of agricultural lands.

Lane County's inventory included agricultural lands within the Metro Area when analyzing and determining the appropriate minimum lot sizes (see discussion on minimum lot sizes) (personal communication, Jim Mann, June 25, 1984).

Conclusion

Lane County, City of Eugene and City of Springfield satsify Requirement 1.

Requirement

2. Designate in the plan all agricultural lands for farm use. Where the Parks and Open Space designaton is applied to agricultural lands in private ownership, the definition of the designation must be amended to require preservation of agricultural lands.

Response

All lands defined as agricultural lands are designated EFU except for one built and committed exception area which has not been justified in its entirety (Royal Avenue area). Lane County has taken an exception for 1,856 acres in 18 different areas within the Metro Area outside the UGB (see Goal 2 discussion of Metro Area Exceptions). The Park and Recreation (PR) Zone is addressed under Goal 2 and the IOTC requirements apply to the Metro Area as well.

Conclusion

Lane County, City of Eugene and City of Springfield satisfies requirement 2. The inadequate findings justifying the Royal Avenue exception area and the Park and Recreation Zone issues are addressed under Goal 2.

Requirement

3. Adopt policies to preserve agricultural lands.

Response

The Metro Area General Plan adopts the following Agricultural lands policies (1982 amendment to the August 1980 Metro Area General Plan):

5. Where agricultural land is being considered for inclusion in future amendments to the urban growth boundary, (the) least productive agricultural land shall be considered first. Factors other than agricultural soil ratings shall be considered when determining the productivity of agricultural land. Relevant factors include suitability for grazing, climatic conditions, existing and future availability of water for farm irrigation, ownership patterns, land use patterns, proximity to agricultural soils or current farm uses, other adjacent land uses, agricultural history, technological and energy inputs required, accepted farming practices and farm market conditions.

28. Designated agricultural lands shall be protected for agricultural uses through zoning for exclusive farm use or equivalent acceptable zoning and through application of other protective measures.

29. Prior to the next update, a study should be initiated to examine ways of buffering and protecting agricultural lands on the urban ringe from the effects of urban development.

Depending on the specific provision of the EFU Zone, plan policies contained in the Lane County Rural Comprehensive Plan would also apply to agricultural land in the Metro Area outside the UGB.

Conclusion

Lane County, City of Eugene and City of Springfield satisfy Requirement 3.

Requirement

4. Zone agricultural lands in the Metro area for Exclusive Farm Use pursuant to ORS Chapter 215 and Goal 3 based on the requirements established in the Lane County Report (pp. 33-34). Where the PR Zone is applied to private land, it must be consistent with ORS Chapter 215 and Goal 3.

Response

Lane County has zoned agricultural lands in the Metro Area outside the UGB for Exclusive Farm use pursuant to ORS Chapter 215 and Goal 3 based on the justification provided for the County's minimum lot sizes. The deficiencies in the PR Zone are discussed under Goal 2 and will be addressed in the IOTC's of Goal 2.

Conclusion

Lane County, City of Eugene and City of Springfield satisfy Requirement 4.

Marginal Lands

Lane County has designated and allows for additional designations for marginal lands as authorized by Statewide Goals 3 and 4 if agricultural or forest lands satisfy the criteria in ORS 197.247 (Plan Policies Goal 3 and Goal 4). There is no plan policy requiring a plan amendment to the Lane County Plan for a marginal land designation (personal communication, Jim Mann, June 22, 1984). Plan amendments require a finding by the Board that the designation "meets all requirements of local and state law including Statewide Planning Goals" (Lane Code 16.400(6)(h)(iii)(a).

Lane County has adopted a "Marginal Lands" report which includes information about the lands designated as "marginal." Thirteen separate designations have been made. The County has not adopted findings and reasons in support of these designations which were written by itself or County staff. Rather, the County Board has adopted the written information submitted by the applicants for the thirteen designations. The format, type of information and level of detail varies widely for each of the designations.

Each of the designations is based on the County's determination that the proposed marginal land satisfies the "low productivity" test in ORS 197.247(1)(b)(C) and was not managed as part of a farm which earned the income required by ORS 197.247(1)(a). These criteria read as follows:

> (a) The proposed marginal land was not managed, during three of the five calendar years preceding January 1, 1983, as part of a farm operation that produced $20,000 or more in annual gross income or a forest operation capable of producing an average, over the growth cycle, of $10,000 in annual gross income; and
>
> (b) The proposed marginal land also meets at least one of the following tests:
>
> (c) The proposed marginal land is composed predominantly of soils in capability classes V through VIII in the Agricultural Capability Classification System in use by the United States Department of Agriculture Soil Conservatin Service on October 15, 1983, and is not capable of producing fifty cubic feet of merchantable timber per acre per year in those counties east of the summit of the Cascade Range and eight-five cubic feet of merchantable timber per acre per year in those counties west of the summit of the Cascade Range, as that term is defined in ORS 447.001(21).

Some of the County's submitted information specifically addresses the required criteria while others simply include relevant information which is not organized to directly address the relevant criteria. Only 5 areas provide findings which directly address the required criteria for the designation of marginal lands under ORS 197.247. The follwing table descibes the 13 areas zoned Marginal Lands, their approximate acreage, map index number, and soils information. (Source: Lane County Rural Comprehensive Plan, Marginal Lands, and Zoning Map.):

Lane County Marginal Lands

NAME/CPR	ACRES	PLOT	SOILS INFORMATION
Merz/603	70	28, 29	Incomplete
Merz/604	25	21	100% Sand Dune
Cuddeback/609	333	27, 28	Forest Site Class 2 & 3
Harrison/727	60	285	Conflicting data
Brackenbusch/728	60	285	36% Class I-IV/24% F.S.C 4
Mathers/779	111	398	17% Class IV/17% F.S.C. 4
Peters/794	125	269	Conflicting data
Hledik/863	205	21	Not provided
G.E. Credit Co/1086	20	401	Conflicting data
Rennie/110	63	503	Class VII & VIII/no woodland suitability
Rodman/1210	80	382	8 acres Class III/F.S.C. 4
KVAL/1376	100	334	Conflicting data
Lesch/1700	110	383	10% Class III & IV/10% F.S.C. 4

NOTE: F.S.C. = Forest Site Class

The above table indicates which areas satisfy the "low productivity" standard under ORS 197.247(1)(b)(c). Those areas are: Merz/604; Brackenbusch; Mathers; Rennie; and Lesch. Areas which satisfy the "low productivity" standard under ORS 197.247 (1)(b)(c) must also satisfy the "income" standard under ORS 197.247(1)(a). The County's adopted findings indicate that the 13 designated areas are viewed as marginal forest land with no appreciable farm uses being conducted. For lands not managed as part of a farm operation the income test is that the proposed marginal land is not "capable of producing an average, over the growth cycle, of $10,000 in annual gross income" (ORS 197.247(1)(a)). The marginal lands act also uses this $10,000 standard for the approval of forest related dwellings on existing lots in an EFU zone (ORS 215.213(2)(b)) and is being used by Lane County in its F-2 Zone (LC 16.211(3)(c)(iii)). Lane County has determined the minimum acreages necessary for various forest site classes to produce $10,000 in gross annual income. These are:

Cubic Foot Site Class	Potential Yield cu. ft/acre/yr	Acreage Minimum
6	20-49 cf/ac	64
5	50-84 cf/ac	43
4	85-119 cf/ac	34
3	120-164 cf/ac	24
2	165-224 cf/ac	17

Parcels with soils less than these minimum acreages for forest areas are therefore considered marginal. Parcels with soils over these minimum acreage for forest areas would be capable of producing an annual income greater than $10,000 and therefore would not qualify as marginal lands.

Marginal Land Zone

Lane County has adopted a Marginal Land Zone (ML-RCP) (LC 16.214). ORS 215.317 sets forth specific uses allowed on lands designated as Marginal Lands. The uses allowed outright and conditionally allowed in the ML Zone are consistent with the permitted use requirements of ORS 215.317(1) and (2). The ML Zone is also consistent with the land division requirements of ORS 215.237.

ORS 215.288(2) requires that if a County amends its comprehensive plan or land use regulations to allow for the designation of marginal land under ORS 197.247, or to allow the establishment of dwellings under ORS 215.213(4) to (8), the County is required to apply ORS 215.213(1) to (3) to land zoned for Exclusive farm uses. Lane County has both applied Maringal Lands under ORS 197.247 and the establishment of dwellings under ORS 215.213(4) (LC 16.212(3)(C)). The County's EFU Zone (LC 16.212) is consistent with ORS 215.288 (See: Goal 3 discussion of implementing measures.

Objection

1000 Friends objects to Lane County's Marginal Lands designations because the County has not adopted findings and reasons for each designation but only the property owner's descriptions of their land. This, they allege,

leaves conflicts in the evidence unresolved and does not adequately explain the basis of the designations.

Response

The objection is not sustained.

Lane County is required to adopt findings and a statement of reasons to support its plan amendments which designate areas as marginal land. However, the County is not required to adopt findings it has written, but can adopt those written and submitted by the applicant for the plan change. The real issue is whether the findings adopted, regardless of who wrote them, are adequate to justify the plan amendment. What is considered adequate findings was explained by the Oregon Supreme Court as follows:

> We wish to make it clear that by insisting on adequate findings of fact we are not simply imposing legalistic notions of proper form, or setting an empty exercise for local governments to follow. No particular form is required, and no magic words need be employed. What is needed for adequate judicial review is a clear statement of what, specifically, the decision-making body believes, after hearing and considering all the evidence, to be the relevant and important facts upon which its decision is based. Conclusions are not sufficient.
>
> We do not believe the requirement of adequate findings and reasons imposes an excessive burden on the governing body or its staff. In contested land-use proceedings involving significant changes and the presentation of large amounts of conflicting evidence, the major proponents and opponents of the change will frequently be represented by counsel. In such cases it would be quite proper for the governing body to request the parties to prepare and submit proposed findings which could be reviewed and used, as appropriate, in preparing its own final order.
>
> Sunnyside Neighborhood v. Clackamas County, 280 OR 3 (1977)

The adequacy of Lane County's findings and reasons supporting their decisions regarding marginal lands are discussed in the response to the rest of 1000 Friends' objection and the conclusion to the marginal lands Section of this report. Those parts of the report explain which marginal lands designations are adequately justified and which areas were not.

Objection:

1000 Friends also objects to the Cuddeback, Harrision, Brackebusch, Peters, Hledik, G.E. Credit Corp., Rodman, and KVAL properties.

Response

The objection is sustained with respect to all contested areas, except the Brackebusch property (see Marginal Land Conclusion). The 60 acre

Brackebusch property has only 22 acres of SCS Class III and Class IV Agricultrual Soils and only 14.5 acres of Forest Site Class 4. Findings provided show that the property qualifies as Marginal Lands. The predominate soils are SCS Class VI and soils having no woodland suitability. According to the information provided, the highest gross income that was ever produced on the property was $3,000 and the property has never been managed for farm purposes. The 14.5 acres of Forest Site Class 4 falls below the County's $10,000 annual income standard by more than one-half of the minimum acreage (34 acres). If there was an additional 20 acres of Forest Site Clas 4 soils, then the parcel would not qualify as marginal lands according to the County's own standard.

Marginal Lands Conclusion

Based on the evidence submitted by the County, not all areas designated as Marginal Land qualify under ORS 197.247. In addition, there is no plan policy which requires a plan amendment when designating land as Marginal Land. Upon examination of the information provided on soil capability, the Merz/603, Cuddeback, Harrision, Peters, G.E. Credit Corp., Hledik, Rodman, and KVAL properties do not satisfy the "low productivity" criterion under ORS 197.247. In a number of cases, information on soils was either not provided (Hledik and Merz/603), or conflicted with other soils data provided (Harrision, Peters, G.E. Credit Corp., and KVAL). Information provided for the Rodman property indicates that the entire parcel consists of Dixonville silty clay loam which has a Forest Site Class of 4. Soils on the 333 acre Cuddeback property consist of Forest Site Class 2 and 3. Findings include testimony from individual foresters stating that notwithstanding the soils data, this land is subject to constraints on management and harvesting (unsuitable soils, proximity to coastal lakes, and a water district) thus making it incapable of producing 85 cu.ft/ac./yr. However, these constraints on forest uses do not change the fact that the soils on these lands are capable of producing more than 85 cubic feet per acre per year of merchantable timber. Secondly, physical constraints on timber management are factors already built into the forest classification system. (personal communication, DOF-Dave Stere, June 19, 1984). The remaining areas, except Mathers, satisfy the "income" criterion under ORS 197.247 (1)(a). Only a conclusionary statement is provided for the Mathers' property stating that area meets the income requirement and is qualified as Marginal Lands under ORS 197.247(1)(a). The conclusion is not supported by findings based on objective data supporting the conclusion. The remaining areas provide findings in addition to the conclusion that the "income" criteria has been satisfied.

Based on the evidence submitted, the following areas qualify as Marginal Lands under ORS 197.247:

1. Merz (CPR 604 only)
2. Brackebusch
3. Rennie
4. Lesch

Overall Conclusion

Lane County does not comply with Goal 3.

Lane County has provided a thorough discussion of its agricultural land base and its importance to the County. Agricultural lands have been inventoried in accordance with Goal 3. The County's farm inventory and land use data provides the necessary justification for setting minimum lot size standards. Several effective policies have been adopted to assure the protection of agricultural land as defined by Goal 3 and implementing measures very nearly reflect the EFU statutory requirements. Lane County's approach towards its diverse agricultural land base is innovative and will prove an effective model for other counties having similar agricultural characteristics. The remaining issues which need to be corrected are regarding marginal lands (see Marginal Lands Conclusion) and the disqualification from farm tax deferral for non-farm dwellings.

In order to comply with Goal 3, Lane County must:

1. Amend the EFU Zone to require disqualification from farm tax deferral of parcels prior to final building permit approval for nonfarm dwellings pursuant to ORS 197.236.

2. Adopt a plan policy requiring a plan amendment to the County Plan when designating land as Marginal Lands.

3. Amend the plan to include adequate findings and reasons for applying the marginal lands zone to the Merz/603, Harrison, Peters, Hledik, G.E. Credit Corp., and KVAL properties and provide the required information to determine compliance with ORS 197.247. If the information provided shows that the land does not qualify as marginal land under ORS 197.247, plan and rezone the properties with appropriate resource designations and implementing zones.

4. Amend the Plan Map and Zoning Map for the Cuddeback and Rodman properties to an appropriate resource designation and implementing zone.

9329B/167A

GOAL 4: FOREST LANDS

Goal 4 requires the conservation of forest lands for forest uses. Also required is (1) an inventory of lands suitable for forest uses and a determination and mapping of the productivity of these lands for commercial use; (2) designation of inventoried lands on the comprehensive plan map as forest lands; and (3) retention of forest uses on designated forest lands (OAR 660-06-000(1)).

OAR 660-06-015(1) states that:

> . . . the inventory shall include land forested in commercial and noncommercial species and nonforested land suitable for forest uses, unless the nonforested land is inventoried as Goal 3 agricultural land or is planned for nonresource uses and an exception to Goal 4 is justified and taken. Outside urban growth boundaries, this inventory shall include a mapping of forest lands by cubic foot site class of the dominant commercial species in accordance with the U.S. Forest Service Manual "Field Instruction for Integrated Forest Survey and Timber Management Inventories--Oregon, Washington and California, 1974."

In designating forest lands within counties:

> . . . the most common plan designation is "Forest" or "Forest Land." In areas of intermingled agricultural and forest lands, an "Agricultural/Forest Lands" designation may also be appropriate. If some other designation is used for forest or agricultural/forest land, it must nonetheless carry equivalent protection for forest uses. The plan shall define the designation in order to explain its purpose and where it is applied (OAR 660-06-015(1)).

Goal 4 defines forest lands and forest uses as follows:

Forest Lands--are (1) lands composed of existing and potential forest lands which are suitable for commercial forest uses; (2) other forested lands needed for watershed protection, wildlife and fisheries habitat and recreation; (3) lands where extreme conditions of climate, soil and topography require the maintenance of vegetative cover irrespective of use; (4) other forested lands in urban and agricultural areas which provide urban buffers, wind breaks, wildlife, and fisheries habitat, livestock habitat, scenic corridors and recreational use.

Forest Uses--are (1) the production of trees and the processin of forest products; (2) open space, buffers from noise, and visual separation of conflicting uses; (3) watershed protection and wildlife and fisheries habitat; (4) soil protection from wind and water; (5) maintenance of clear air and water; (6) outdoor recreational activities and related support services and wildnerness values compatible with these uses; and (7) grazing land for livestock..

In reviewing Lane County's plan, the Commission can rely on 1) Goal 4 2) OAR 660-06-000 through 030 and 3) where applicable, other recent acknowledgment reviews (e.g., Coos County, Umatilla County, Clatsop County, Klamath County, and others).

Factual Base

Lane County's factual base consists of the "Forest Lands Working Paper" prepared in March 1982, and "Addendum to Working Paper" prepared in November 1983.

The "Forest Lands Working Paper" contains information addressing 1) Goal 4's requirements, 2) issues raised by the 1981 acknowledgment review of Lane County's Plan, 3) corrections to deficiencies, 4) economics of the forest resource, environmental and social, and energy programs affecting forest management and a forest resource summary.

In the January 22, 1981, review of Lane County's plan, the Commission adopted Goal 4, IOTC 1 requirement which reads as follows:

> Amend the forest land inventory to distinguish between forest land and nonforest land and show that all forested land and potential commercial forest land is inventoried within the coastal area; this inventory must consider cubic foot site classes other than Douglas fir (Lane County Acknowledgment Review, 1-22-81, p. 43).

In response to this IOTC, Lane County has adopted the following: (1) a definition of commercial forest land as lands capable of producting crops of industrial wood in excess of 20 cubic feet per acre per year (Forest Working Paper, p. 4 and p. 8); (2) a general countywide cubic foot site class map for Douglas fir classes II, III, and IV and V (Forest Working Paper, Map 4); and (3) a list of soils suitable for producing Douglas fir by cubic foot site class (Forest Working Paper, Appendix 1).

In responding further to IOTC 1, Lane County states the following regarding its forest lands inventory:

> Map 4 depicts the "general" productivity distribution by cubic foot site class for Douglas fir, and the significance distribution of other commercially important species in Lane County. The inventory for Lane County's forest lands identifies those forest lands which produce Douglas fir at cubic foot site classes 2 through 5. This highly generalized distribution map was determined from the more specific vegetation cover maps produced from the soils mapping as noted in the previous methodology section (Sect. III A.1. p. 4). These specific vegetation cover maps are available in the Lane County Planning Division for more detailed research.
>
> It is possible to convert a site index determined for one species to the appropriate site index for another species. This type of conversion is obtained by simply comparing the cubic

foot site classes shown at the bottom of each table (see Appendix III). For example, a site capable of growing a Douglas fir to a height of 190 feet in 100 years (Site Index 190) found at the top of the table is in the middle of cubic foot site class 2. To convert this to a Western Hemlock, found at the bottom of the table, equals a Site Index of 130. Therefore, the site that grows the average Douglas fir to a height of 190 feet in 100 years should grow the average Western Hemlock to a height of 130 feet in the same time. Due to this high inter-species cubic foot site class correlation, the appropriateness of using a Douglas fir standard in all areas of the County (within the geographic and species range limits) is considered justified.

Cubic foot site class mapping of several species has been compared with the Douglas fir cubic foot site class mapping and in general, matches well (Forest Working Paper, p. 13).

Also, contained in the Forest Working Paper is information discussing a number of issues from which the following County findings have been generated:

- The cubic foot site class mapping shows that Lane County forests generally contain Douglas fir cubic foot site classes 2, 3, 4 and 5 with cubic foot site class 3 being the most common (Forest Working Paper (FWP), p. 39).

- Lane County's economy is estimated to be 50 percent to 66 percent dependent on the forest industry (FWP, p. 40).

- The commercial forest land base is decreasing because of the removal of forest land for other forest uses and development activities (FWP, p. 40).

- Conflicts between the demands for timber and the scenic, wilderness, open-space, and recreation values of forest lands will continue to be a major issue in Lane County (FWP, p. 41).

- Increasing demands for residential development on forest lands are exerting pressure on potentially productive forest land to be converted into other competing and conflicting uses (FWP, p. 41).

- The future rural residential or second home owner may cause economic and social conflicts with forest land owners utilizing silvicultural techniques (such as logging activities, slash burning, and chemical applications of herbicides and insecticides) for intensified forest management (FWP, p. 41).

- Fragmenting the forest resource lands through development activities restricts economically feasible management practices (FWP, p. 41).

- The State of Oregon, through LCDC Goal 4, requires local governments to identify forest lands and to provide maximum protection for forest

uses. Forest lands are to be retained for forest uses by limiting nonforest uses. All forest uses are to be considered when apply Goal 4 (FWP, p. 41).

- Public agencies manage 62 percent of Lane County's commercial forest land which contains 78 percent of the standing commercial timber (FWP, p. 42).

- Although 78 percent of the County's standing commercial timber is found on publicly owned lands, only 72 percent of the harvest comes from these lands (FWP, p. 42).

- The forest industry manages 30 percent of Lane County's commercial forest land, which contains only 17 percent of the standing commercial timber (FWP, p. 42).

- Although only 17 percent of the volume of the County's commercial timber is found on industrially owned land, 21 percent of the harvest comes from these lands (FWP, p. 42).

- The nonindustrial forest land owner manages eight percent of Lane County's commercial forest land which contains only five percent of the County's standing commercial timber volume (FWP, p. 43).

- The small private forest lands are largely under-productive due to their small parcel size and fragmented distribution, their need for capital investment incentives, and their lack of knowledge and understanding of forest management practices (FWP, p. 43).

- Prime commercial forest land must be protected from the constant pressures of rural development creating conflicting, nonforest land uses (FWP, p. 43).

In the Addendum, the Forest Working Paper, the County indicates that 1,119,420 acres of commercial lands in Lane County is owned by the public. The forest industry owns 541,070 acres while private nonindustry commercial forest lands amount to 152,740 acres (Addendum, p. 5).

On pages 8-9 of the addendum, the County presents information regarding parcelization of forest lands. Part of that discussion is as follows:

> The presumption that parcel sizes 80 acres and greater are of a "commercial" size is a recommendation by the DLCD that is widely accepted. The question then, is what minimum parcel size will allow future residential development without adversely impacting forest resources land? To answer this involves an analysis of the current level of residential development on parcels less than 80 acres in size.

The following table shows the total number of tax lots by ownership category for parcels of all size classes and correspondingly, the number of taxlots that are developed:

Ownership	Total No.	Devlpd. No.	% of Devlpd.	% of Total
Non-industrial	4,142	1,205	97.6	13.6
Industrial	2,817	32	2.6	0.4
Public	1,895	9	0.7	0.1

These relationships emphasize the differences of the residential impact on the different types of ownerships. Clearly, the non-industrial ownership is the ownership category of most concern as approximately 98% of the residences on forest land in Lane County are on Non-industrial owned forest land.

In the addendum to the Forest Working Paper, Lane County provides extensive information in support of a minimum parcel size of 80 for "Impacted" Forest Lands. To justify this parcel size, the County attempts to ascertain the point at which the number of acres of bare forest land becomes valued more for its forest values than for its residential value. In order to make such a determination, the County assumed bare land residential values of $18,000 per acre for rural lands near Eugene-Springfield and $12,000 per acre for rural lands in the remainder of the County (Addendum, pp. 15-18). The following is an explanation of a graph contained in the Addendum's Figure XIII which depicts the County's findings for most of the cubic foot site class 3 rural lands of Lane County:

Figure XIII illustrates the relationship for the average of Forest Land Value Zones A-E within which most of the Non-industrial ownership is located. The average residential acre bare land value is set at $12,000 and intersects the bare forest land value at approximately 66 acres. This parcel size represents the size in which the value of the bare forest land is equal to the value of the bare land residential acre. Parcel sizes greater than 66 acres in these zones have a forest land value greater than the residential land value. One would presume that because of the greater value of the land for forest land, parcels greater than 66 acres in this ownership category would predominantly be purchased for their forest land resource attributes. Parcel sizes less than 66 acres in these zones have a residential land value that exceeds that of the bare forest land and therefore, would presumably be purchased for attributes that are valued greater than those of the forest lands resource (Addendum, p. 17).

For the area near Eugene-Springfield, the County determined that 77 acres was the point of intersection (for cubic foot site class III land) between residential value and forest value (Addendum, p. 15) while at 62 acres that point was established for tax assessment zone A which generally represents rural areas from the coast to the Eugene-Springfield area.

In concluding their parcel size analysis, Lane County provided the following summary statements:

1. 98% of the residential development on forest land in Lane County falls within the Non-industrial ownership category.

2. Parcel sizes less than 80 acres in size represent 83% of the residential development on Non-industrial forest land.

3. The frequency distribution and acreage distribution of the parcel sizes represents no discernable pattern for parcels less than 80 acres, other than that which is explained by the typical conveyance of property on the Township-Range-Section system.

4. Bare land values of forest and residential land represent "stable" quantifiable variables for measuring the relative value of alternative land uses that can be compared on a regional basis by parcel size.

5. Parcel sizes greater than 68 acres in the Non-industrial category have a higher bare land value for forest land uses than for other uses.

6. A parcel size of 68 acres for the Non-industrial category represents 77% of this ownership's residential development.

7. Parcel sizes greater than 38 acres in the Non-industrial category have a higher bare land value for resource land uses (combining agriculture and forest bare land values) than for other non-resource uses.

8. The total acreage of all parcels 80 acres and less in the Non-industrial ownership represent less than 5% of all the acres of Lane County's forest land (Addendum, p. 20).

Forest Policies

Lane County has adopted 18 forest policies. Included as forest policies are statements indicating that (1) the FPA is the only mechanism for regulating forest practices (unless a Goal 5 resource through use of the Goal 5 process requires special regulation); (2) consolidation of forest ownerships are encouraged; (3) reforestation of under-productive forest lands is encouraged; and (4) the County is concerned about the projected shortfall in its timber supply and it supports efforts to develop plans to address this problem.

A number of the County's adopted Forest policies are especially relevant to this Goal 4 review of the County's Forest Element.

These policies are as follows:

1. Conserve forest lands for the multiple forest uses of commercial timber management; watershed protection; wildlife, fisheries and livestock habitat; and recreation; as per Goal 4.

2. Forest lands will be segregated into two categories, Nonimpacted and impacted and these categories shall be defined and mapped by the general characteristics specified in the Nonimpacted and Impacted Forest Land Zones General Characteristics.

3. Forest lands that satisfy the requirements of ORS 197.247 may be designated as Marginal Lands and such designations shall also be made in accordance with other Plan policies. Uses and land divisions allowed on Marginal Lands shall be those allowed by ORS 197.247.

6. Prohibit residences on Nonimpacted Forest Lands except for the maintenance or replacement of existing residences or except for a residence on a lot of record. A lot of record shall be defined consistently with Sections 9 to 12, Chapter 884, Oregon Laws 1981 and as ammended (sic) by SB 237.

7. Residences shall be conditionally permitted on Impacted Forest Lands if they are necessary and accessory to farm or forest uses, or if they are in conjunction with the propagation or harvesting of a forest product on a tract managed as part of a wood lot meeting the acreage minimum standards of forest policy 12.a below, or if they are on a lot of record as defined in the above policy 6, and if impacts upon adjacent and/or nearby farm and forest lands are limited.

8. Regard nonforest uses within or adjacent to forest lands as being subject to the normal and accepted forest practices in the locality.

9. Require that nonforest uses other than a residence on Nonimpacted Forest Lands be compatible with forest uses, practices and operations or adjacent and nearby forest lands; and that there be provided valid reasons why the use should be sited on Nonimpacted Forest Land or evidence that the proposed site is on land generally unsuitable for forest uses.

10. Require that nonforest uses on Impacted Forest Lands be compatible with farm/forest uses, operations and practices on adjacent and nearby farm and/or forest lands (Plan, p. 8).

Forest Policies 11 describes the standards for land divisions in the "Nonimpacted" areas of the County. Forest Policy 11 reads as follows:

11. Parcel size for Nonimpacted Forest Land must conserve forest land for Nonimpacted forest uses and be consistent with the Nonimpacted Forest Land Zone General Characteristics.

    The following division standards are consistent with and will implement this policy:

    a. 40 acre (1/4 1/4 Section) minimum lot size for purpose of land division if adjacent to other Nonimpacted Forest Lands.
    b. Deviation from the 40 acre minimum lot size may be conditionally allowed if the land division is for the purpose of separating an existing residence from the adjoining forest land if the parcel containing the residence is limited to the least amount of area possible so as to maximize forest uses on the adjacent forest land.
    c. Lot line adjustments for purposes other than the creation of an additional lot are permitted.

Forest Policy 12 describes the standards for land divisions in the "Impacted" areas of the County. Forest Policy 12 reads as follows:

12. Parcel sizes for Impacted Forest Land must be adequate to conserve forest land for Impacted farm and forest uses and be consistent with the Impacted Forest Land Zone General Characteristics, III.C.

    The following division standards are consistent with and will implement this policy:

    a. For the creation of a woodlot for the purpose of the propagation or harvesting of a forest product, the minimum area shall be at least 20 acres and that which is consistent with the Douglas fir cubic foot site indexes and minimum area computations promulgated by the Oregon Department of Forestry and specified below and additional area to accommodate a homesite, access and fire breaks and a logical parcel layout and use of the parcel. There shall be presented for each application sufficient factual documentation to verify that each proposed tract meets the above requirements.

Cubic Foot Site Class	Potential Yield cu.ft./acre/yr	Acreage Minimum
6	20-49-cf/ac	64
5	40-84-cf/ac	43
4	85-119-cf/ac	34
3	120-164 cf/ac	24
2	165-224 cf/ac	17

b. Deviation from the standard specified in 12a above for a 40 acre parcel (1/4 1/4 section) on Impacted forest land to be used for farm use may be allowed. Proposed residences for such parcels shall be accessory to commercial farm use and shall be allowed only if consistent with accessory dwelling standards in the EFU Zone.

c. Deviation from the standard specified in 12a above of the impacted forest land for the creation of a parcel not smaller than 20 acres may be allowed when at least 19 acres of the parcel being created are currently managed or planned to be managed by a farm management plan for a farm operation consisting of one or more of the following: berries, grapes or horticultural specialties. A temporary mobile home which is accessory to the farm management may be conditionally located upon the farm parcel for a reasonable length of time to allow for substantial implementation of the farm managment plan. Upon evidence that the farm management plan has been substantially implemented, the mobile home may be allowed on a permanent basis or may be converted to a permanent dwelling.

d. Lot line adjustments for purposes other than the creation of an additional lot are permitted.

e. Land divisions for non-farm or non-forest dwelling as per EFU standards (Plan, pp. 8 and 9).

Forest Plan Designations

Lane County has two forest land designations, Nonimpacted and Impacted. The characteristics or criteria used to distinguish "Impacted" from "Nonimpacted" Forest Lands are as follows:

Nonimpacted Forest Land Zone General Characteristics

1. Managed for commercial forest uses.

2. Capable of commercial forest uses.

3. Used for other forest uses or lands where extreme conditions of climate, soil and topography require the maintenance of vegetative cover.

4. Contiguous to other parcels of similar use.

5. Composed of large parcels, generally 80 acres and greater in size.

6. Under public or industrial forest ownership.

7. Not developed with residences.

8. Accessed by arterial roads or roads intended primarily for forest management.

9. Not provided with levels of public utilities and services suitable for residential development.

10. Outside developed and committed areas and UGB's.

Impacted Forest Land Zone General Characteristics

1. Managed for forest and/or agricultural use or capable of being managed for forest and/or agricultural use.

2. Adjacent to or near committed or developed areas and UGB's and/or adjacent to Nonimpacted forest areas or agricultural areas.

3. Contiguous to other parcels of similar use.

4. Composed of parcels generally less than 80 acres in size.

5. Under non-industrial private ownership and/or developed with residences.

6. The road network in the vicinity provides access to forest and/or agricultural land and access to residences.

7. Provided with levels of public utilities and services suitable for residential development.

8. Outside development and committed areas and UGB's (Plan, pp. 10-11).

Lane County has used the above general characteristics in applying to the Nonimpacted Forest Lands the "F-1" Zone and to the Impacted Forest Lands the F-2 Zone.

Conclusion on Application of the F-1 and F-2 Zone

In order to assess whether the F-1 and F-2 Zones are appropriate to conserve forest lands for forest uses (or appropriate for the continuation of commercial agricultural enterprises within the area), a review of how the County applied these two zones to various forest lands is necessary. In conducting this review, the Department relied upon the County's Index Map, Zoning Maps, aerial photo maps, the computer printout of acres and ownership and assessors land use index, which were all part of the County's submittal. The following is a sampling of appropriate and inappropriate application of the F-2 Zone for maps number 272 through 443. These maps cover the areas generally southwest of Eugene (Lorraine-Fox Hollow Road Spencer Creek), north of Eugene and south of Eugene down to Cottage Grove.

The following are evaluation statements addressing specific examples of rural areas where the County has applied the F-1 and F-2 Zones:

Map

272 This map contains Sections (Sec) 6 and 7 of Township (T) 19--Range (R) 4.

The F-1 Zone has been applied to forest industry owned lands; one of approximately 198 acres owned by IP and two 80 acre parcels owned by Cove Lumber and Zip-O-Log.

The F-2 has been applied to all remaining noncommitted parcels including 590 acres of a much larger forest grazing operation owned by McNutt. In fact, this ownership consists of approximately 1,790 acres located in T19-R5 secions 1 and 2. The F-2 Zone as applied to this property is not justified based on the County's general characteristics.

275 Consists of Sections 6 and 7 of T20--R4. Lands zoned F-1 are all forest industry owned lands or public lands; even though the industry lands are adjacent to RR-5 zoned lands.

F-2 zoned lands are nonindustry owned lands. The one ownership consists of a 636 acre farm deferred parcel is not appropriately zoned.

287 Consists of Sections 5 and 8 of T 19--R 4.

F-1 zoned lands are industry owned lands. Lands zoned F-2 are generally smaller ownerships. This area is a good example of where the current F-2 is appropriately applied.

309 Consists of Sections 15 and 22 of T 18--R 4. Again, this area's F-2 zoning is appropriate.

311 Consists of Sections 3 and 10 of T 19--R 4. The application of F-2 zoning for the 179 acre, 158 acres, and 120 acre parcels is not justified.

430 Consists of Sections 25 and 36 of T 19--R 3. Again, only industry (80 acres) and public (120 acres) are zoned F-1 while a single nonindustry parcel of 878 acres is zoned F-2. Such zoning is not consistent with the County's characteristic for applying the F-1 and F-2 zones.

432 Consists of Sections 13 and 24 of T 20--R 3. Again, some very large parcels are zoned F-2 for reasons not consistent with the F-2 general characteristics.

Summary: The F-2 zoning of lands on maps 297 and 309 are consistent with the County's general characteristics for the F-2 Zone and consistent with past Commission decisions for secondary forest zones (see Conclusion for Goal 4).

Maps 272 and 275 contain large farm deferred parcels zoned F-2. The current F-2 Zone does not assure the continuation of the existing commercial agricultural enterprise within these areas nor is it consistent with the Commission's Goal 3 and 4 requirements (see 1000 Friends v. Douglas County, LUBA 79.006).

Maps 311, 430, and 432 represent examples where larger parcels were zoned F-2 in a manner inconsistent with the County's Nonimpacted and Impacted characteristics as well as with the Commission's Goal 4 requirements (see Conclusion to Goal 4). Also, it appears from these examples that F-2 zoning was applied to some tax lots without assuring that adjacent tax lots were not actually under the same ownership

Implementation Measures: F-1 and F-2 Zones

To implement the Nonimpacted and Impacted plan designations, Lane County adopted, as part of the Lane County Rural Comprehensive Plan--Development Code, the F-1 Zone for application to nonimpacated areas and the F-2 Zone for application to impacted areas.

F-1 Zone--The purpose of Lane County's F-1 Zone is as follows:

> (a) To conserve forest land for forest uses in accordance with Statewide Planning Goal #4.
> (b) To recognize that the preservation and protection of commercial forest lands within Lane County is necessary for the continuous production of forest crops, and that such are beneficial to the economy of the County and to the welfare of its people.
> (c) To encourage multiple use of forest land for commercial timber management, watershed protection, maintenance and protection of fish and wildlife resources, livestock habitat and recreation.
> (d) To protect commercial forest lands from intrusion of noncompatible uses by prohibiting or restricting nonforest uses that create potential impacts.
> (e) To implement the forest land policies of the Lane County Rural Comprehensive Land Use Plan (Code, p. 16-24).

Also, the County indicates further their intent to protect forest resources by the following statement:

> It is the County's policy to protect forest operations from conflicting land uses. Nothing in this section is intended to

> interfere with normal forestry practices that might result in conditions such as noise, dust, smoke, visual impacts or odors for temporary periods of time. Existing or proposed nonforest uses (i.e. dwellings) within the Forest Lands Zones must recognize the intent of the Zone is to protect resource management activities and that in the event of conflict between residential uses and forestry practices, this Chapter will be interpreted in favor of these resource management practices (Code, p. 16-24).

Section 16.210(2) authorizes as permitted uses forest uses, farm uses, aggregate mining in conjunction with farm or forest uses, other uses accessory and necessary uses (such as fire prevention facilities, log scaling, utility facilities, and transmission lines for permitted or accessory uses, solid waste disposal sites for industrial forest uses, etc.) water impoundments for forest or farm use, exploration of mineral and other resources, fish and wildlife habitats, and other uses consistent with Goal 4.

The County also permits outright public parks, campgrounds, boating facilities, camps, and such other recreational facilities, including "lodges" and accessory parking in conjunction with overnight lodging. (16.210(4)(11).

In addition, the County allows a dwelling consistent with the provisions for lots of record contained in ORS Chapter 215. (Note: The County permits a lot of record as defined by ORS Chapter "15" instead of "215." This typographical needs to be corrected.)

Section 16.210(3) authorizes a number of uses and activities subject to the Director's approval procedures contained in LC 14.100. Uses authorized under this subsection include the replacement of a legal residence and a home occupation as provided in ORS 215.448.

Section 16.210(4) authorizes uses and activities subject to the criteria listed in Section 16.210(5) as reviewed by the hearings official. Such uses include sorting yards and log storage, solid waste disposal sites ten acres in size or less, mining, power distributions, communication facilities, hydroelectric generation facilities (with a 100 acre foot size limittion), and privately owned parks and campgrounds.

Section 16.210(5) establishes the conditional use review criteria which are identical to those conditional use review standards accepted by the Commission in the Coos County Acknowledgment Review (November 1983) for predominantly forested areas.

F-1 Zone's Minimum Lot Size and Development Standards--Section 16.210(6) provides for divisions of land zoned f-1 to be a minimum of 40 acres except as provided for the following reasons:

> (a) A division of land to create a parcel less than 40 acres may be conditionally allowed . . . if it is for the purpose of separating an existing residence from the adjoining

forest land and the parcel containing the residence is limited to the least amount of area reasonably possible so as to maximize forest use on the other parcel.

(b) The adjustment of a common property boundary which results in no additional parcels. . . .(Code, p. 16-28).

Section 16.210(7) contains the F-1 Zone's development standards. The County's development standards contain Class I stream setback of 100 feet, riparian vegetation removal provisions and a property line setback provision.

Because the F-1 Zone only allows the replacement of existing structures and dwellings on legal lots of record as defined by ORS Chapter 215, no other dwelling siting standards were provided.

The F-2 Zone

The County states that the purpose of the F-2 is as follows:

(a) To implement the forest land policies of the Lane County Rural Comprehensive Plan which recognize that certain forest lands are impacted by nonforest uses and merit different treatment than Nonimpacted Forest Lands.
(b) To conserve forest land for forest uses consistent with Statewide Planning Goal #4, including commercial timber management, watershed protection, maintenance and protection of fish and wildlife resources, livestock habitat and recreation.
(c) In areas of mixed farm/forest uses where forest uses do not predominate, to conserve such land for uses consistent with Statewide Planning Goals #3 and #4.
(d) To protect lands mentioned in LC 16.211(1)(b) and (c) above from the intrusion of noncompatible uses by restricting nonforest uses or nonforest and nonfarm uses that create potential impacts.

Section 16.211(2) authorizes as permitted uses the same uses permitted outright in the F-1 Zone.

Section 16.211(3) authorizes the following uses subject to the Director's approval pursuant to LC 14.050 and LC 14.100:

(a) Replacement of a legal residence.
(b) A dwelling is deemed "accessory and necessary" to forest management (on a vacant legal lot) provided:

(i) A detailed forest management plan is submitted for the legal lot which demonstrates forest production will be enhanced by on site forest management from the residence, and
(ii) Evidence is submitted indicating that the legal lot is qualified for and has a forest deferral pursuant to State Law, or

(iii) If the legal lot does not have a forest deferral pursuant to State law, then upon substantial completion of the details represented in the forest management in LC 16.211(3)(b)(i) above, the dwelling or mobile home shall be allowed on the property. Substantial completion of the details represented in the forest management plan shall be verified by a qualified private forester and such verification shall be submitted in writing to the Department. During the interim, while the forest management plan is being implemented on the subject legal lot, a temporary mobile home in conjunction with the forest use shall be allowed for a period not to exceed five years. If the forest management plan is not implemented within the five-year period, the temporary mobile home shall be removed.

(c) A dwelling ". . . in conjunction with the propagation or harvesting of a forest product on a vacant legal lot that is managed as part of a woodlot meeting the Douglas fir cubic foot site index and acreage requirements below:"

Cubic Foot Site Class	Potential Yield cu.ft./acre/yr	Acreage Minimum
6	(20-49 cf/ac)	64
5	(50-84 cf/ac)	43
4	(85-119 cf/ac)	34
3	(120-164 cf/ac)	24
2	(165-224 cf/ac)	17

(d) Home occupations as provided by ORS Chapter 215.448.

(e) A dwelling when necessary and accessory to the use permitted in LC 16.211-10(8) above (Code, pp. 16-32 through 16-35).

Section 16.211(4) conditionally authorizes in areas where agricultural uses predominate within the F-2 Zone the following uses:

(c) Public or private schools, including all buildings essential to the operation of a school.
(d) Churches.
(e) Utility facilities necessary for public service, except commercial facilities for the purpose of generating power for use by public sale.
(f) A dwelling or mobile home customarily provided in conjunction with farm use existing on the subject property and which complies with the requirements for such a residence specified within the Exclusive Farm Use (E) zone, LC 16.212(2)(f).
(g) A dwelling or mobile home customarily provided in conjunction with a farm use not yet existing on the subject property and which complies with the requirements for such a

residence specified within the Exclusive Farm Use (E) Zone, LC 16.212(2)(g).

(h) A dwelling or mobile home customarily provided in conjunction with farm use existing on the subject property, where another residence already exists on the subject property, and which complies with the requirements for such a residence specified within the Exclusive Farm Use (E) Zone, LC 16.212(2)(h).

(i) A dwelling or mobile home to be occupied by a relative of the farm operator which complies with the requirements for such a residence specified within the Exclusive Farm Use (E) Zone, LC 16.212(2)(i).

(j) A mobile home used to satisfy a temporary hardship situation.

(k) A dwelling or mobile home in conjunction with farm use or the propagation or harvesting of a forest product on a legal lot that is managed as part of a farm operation or woodlot if the farm operation or woodlot:

(i) Consists of 20 or more acres.

(ii) Is not smaller than the average farm or woodlot in the County producing at least $2,500 in annual gross income from the crops, livestock or forest products to be raised on the farm operation or woodlot.

(iii) Does not already have a dwelling or mobile home on it.

(l) A dwelling or mobile home in conjunction with farm use or the propagation or harvesting of a forest product on a legal lot that is managed as part of a farm operation or woodlot smaller than required under LC 16./212(6) (Exclusive Farm Use Zone) if the legal lot:

(i) Has produced at least $10,000 in annual gross farm income in two consecutive calendar years out of the three calendar years before the year in which the application for the dwelling was made or is planted in perennials capable of producing upon harvest an average of at least $10,000 in annual gross farm income.

(ii) Is a woodlot capable of producing an average over the growth cycle of $10,000 in gross annual income.

(iii) Does not already have a dwelling or mobile home on it.

(m) A solid waste disposal site ordered by DEQ.

Section 16.211(5) authorizes the County's hearings officer to conditionally permit a number of nonfarm uses authorized by ORS 215.213 as well as log sorting yards and maintenance, repair, and storage for forest management equipment.

Section 16.211(6) establishes the review criteria for all uses listed under 16.211(5). The criteria contained in Section 16.211(6) are consistent with those approved by the Commission for mixed use areas in the Coos County Acknowledgment Review (November 1983).

F-2 Zone's Minimum Lot Size

Section 16.211(7) addresses minimum lot size requirements in areas zoned F-2.

For parcels created as "woodlots," the minimum parcel size shall be at least 20 acres and must meet the acreage minimum requirements specified in LC 16.211(3)(c) (Section 16.211(7)(a)). (For example, using the formula contained in LC 16.211(3)(c), a 160 acre parcel with consisting of 10 acres of cubic foot site class 2 capability, 90 acres of cu. ft. site class 3 capability, 20 acres of class 4, and 40 acres of class 5 could be divided into four parcels. Using the same standard, an 80 acre parcel with cubic foot site class 2 capability could be divided into four 20 acre parcels while an 80 acre parcel of cubic foot site class 3 land could be divided into three parcels.)

Section 16.211(7)(b) authorizes divisions for farm parcels. The minimum lot size is 40 acres. Also, a farm management plan is required as well as a statement that a dwelling is "not guaranteed unless the provisions of this zone for a residence in a mixed farm/forest area (LC 16.211(4)) are met." (Note: LC 16.211(4) references the requirements for siting a dwelling on lands zoned EFU--see Goal 3 discussion.)

Section 16.211(7)(c) authorizes divisions for growing grapes, berries, or horticultural specialties. The minimum lot size is 20 acres provided the provisions for dividing EFU lands and siting a farm dwelling as discussed in 16.211(7)(b), above, are met.

Section 16.211(7)(d) states the following:

> The remaining portion of the parent parcel being divided must also comply with either LC 16.211(a), (b) or (c) above.

Section 16.211(8), "siting and fire/safety standards for dwellings," the county requires a 500 foot setback for dwellings on property adjacent to F-1 zoned lands and 300 feet setback from F-2 zoned lands. The County encourages the dwelling to be sited on the least valuable farm or forest land or clustered with other residences to minimize impacts (in these instances, the larger setbacks could be reduced). Also, the County requires a fuel break of 50 feet and water supply for fire suppression.

Section 16.211(9) establishes stream and riparian vegetation setbacks for dwellings and structures as well as riparian vegetation removal standards.

Objections

1. The League of Women Voters of Central Lane County object to the F-2 zone's minimum lot size provisions for authorizing divisions of forest land and the provision for allowing forest dwellings on "newly" created parcels.

Response to Objection 1:

This objection is generally sustained. See conclusion.

Objection

2. Clifford Lamb raises the following objections:
   a. "The inventory of the forest land soils is incomplete and the basis for exclusion is inaccurate and inconsistent"
   b. "The F-2 ordinance provisions fail to assure that land divisions create parcels large enough for commercial use"
   c. The F-2 ordinance fails to assure that dwellings are necessary and accessory to forest management.

Response to Objection 2:

a. This objection is sustained. Mr. Lamb is correct that the County has not included in its listing of forest soils in "Appendix 1" of the Forest Working Paper. Some of the soils identified as "marginal" forest soils by the soil conservation service are not listed in "Appendix 1" (Jim Mann, Lane County Planning Dept., June 21, 1984). The County needs to indicate why such soils do not fall under the forest lands definition. The County has defined commercial forest land as lands capable of producing 20 cubic feet per acre per year of industrial wood. (Forest Working Paper p. 4). This issue is important to the County in its assessment of Nonresource/Nonexception lands as well as nonforest uses.

b. This objection is partially sustained. Mr. Lamb is correct that the F-2 zone is deficient with respect to Goal 4 requirements for creating new parcels. Particularly where the application of this zone is inappropriate (see conclusion to Goal 4). Mr. Lamb is not sustained on the point that all newly created parcels within a secondary or mixed use zone must be large enough for commercial use (also see the conclusion to Goal 4)

c. This objection is generally sustained (see conclusion to Goal 4).

Objection

3. 1000 Friends of Oregon raises the following objections to Lane County's Goal 4 provisions:
   a. The F-2 zone's provisions for minimum lot sizes are not justified.
   b. The County's F-1 40-acre minimum division standard is not adequately justified.
   c. LC 16.211-(10)(i) is improperly referenced in LC 211(3)(e).
   d. LC 16.211(3)(b) which allows a dewlling on a vacant legal lot which is "deemed" accessory and necessary for forest managment based on a detailed management plan showing "enhancement" of the site and forest tax deferral or substantial completion of the management plan. Also, this provision has no minimum parcel size at which an existing lot is ineligible for a forest dwelling.

e. LC 16.211(3)(c) which authorizes a dewlling in conjunction with a managed woodlot on a vacant legal lot that satisfies the County's cubic foot site class/acreage minimum requirements.
f. The County's findings in its Forest Working Paper do not support its standards for authorizing forest dwellings on legal vacant lots in the F-2 zone.
g. Certain uses authorized in the F-1 and F-2 zones violate Goal 4. These uses are as follows: home occupations, mining, power and telephone lines, communication facilities, hydroelectric generation facilities, private parks and lodges (overnight accommodations).
h. LC 16.211(6) allows nonforest uses if "evidence is provided supporting reasons why the proposed use should be sited on forest lands"
i. LC 16.210(6)(a) (F-1 zone) allows the separation of an existing residence from forest lands and thus allows the creation of a nonforest dwelling.
j. LC 16.201(a)(1) in the F-1 zone allows all farm uses defined in ORS 215.203 and does not limit farm uses to grazing only.

Response to Objection 3

a. This objection is generally sustained (see conclusion to Goal 4).
b. This objection is sustained. However, we disagree that such justification is difficult. Because the County's F-1 zone restricts dwellings under 16.201(2)(L) to "lots of record as defined by ORS Chapter 215 and under 16.210(3)(a) to replacement structures, a parcel size which can be shown to facilitate normal industrial forest managment (i.e., 40-acres) is adequate justification to satelfy Goal 4's requirement" (see conclusion to Goal 4).
c. This objection is sustained (see conclusion).
d. This objection is sustained (see conclusion).
e. This objection is not sustained.
f. This objection is partially sustained. Objectors are correct that the County's Forest Working Paper presents reasonable evidence supporting a much larger minimum lot size than 20 acres.

Objectors are not sustained with respect to the woodlot provisions, as discussed above in response to objection 3, because such provisions are allowed by statute.
g. This objection is partially sustained. The home occupation provisions authorized by Lane County are identified provisions to those authorized by ORS 215.448. For the other uses except lodges (overnight accommodations) the Commission indicated in the Coos County Acknowledgement Review (November 1983) that these uses may be allowed subject to standards which assure that forest uses are adequately conserved. The standards used by Lane County were contained in the Coos County Acknowledgement Review. The only exception to the listed uses authorized by the County are: (1) lodges in both the F-1 and F-2 zones; (2) farm equipment repair in the F-1 Zone, LC 16.2104(b); and (3) power distribution lines (requiring a clearing width greater than 50 feet) as authorized by LC 16.210(4)(e) of the F-1 Zone.

Objectors are correct that lodges, (which are not defined by Lane County) and their accessory parking areas can not be evaluated against the standards contained in 16.210(5)(a)(i). At a minimum, a standard of general unsuitability for forest uses (and the other standards in 16.210(5)) must be used or an exception to Goal 4 must be taken. (This use was not part of the Coos County submittal.)

h. This objection is sustained for lodges only (see the response to 3 g). It is not sustained for the other uses based on the discussion contained in the Commission's Coos County Acknowledgement Review (November 1983).

i. This objection is not sustained. Lane County's provision for allowing the separation of an existing dwelling form remaining forest lands in the F-1 to facilitate forest management is an acceptable practice. This issue was addressed by the Commission in the Coos County Acknowledgement Review (November 1983).

j. This objection is not sustained. Allowing farm uses as defined by ORS 215.203 in all forest zones has been found consistent with Goal 4 requirements on numerous occaisions by the Commission. (See Coos County Review, pp. 106-107, November, 1983).

Objection

4. Douglass Lagenor objects to the application of the F-2 zone on lands adjacent to Oakridge.

Response to Objection 4:

This objection is not sustained. Oakridge is acknowledged and thus, has provided for anticipated growth within their urban growth boundary. Also, this UGB was mutually adopted by the City and the County to address the very issue of future urban development.

Objection

5. William and Marjory Potter, Mr. Knight, David Montgomery, Ken Faulk, Tom Nevins, and others object to the Forestry zoning imposed by Lane County because of the severe constraints contained in the zone.

Response to Objection 5:

This objection is not sustained. Under the Statewide Planning Goals, Lane County is required to limit certain types of development on resource lands with the intent of conserving Oregon's resources. As discussed in the conclusion, the County's F-2 zone is appropriate of certain lands in Lane County.

METRO AREA GENERAL PLAN

Factual Base

For that rural area outside the Eugene-Springfield urban growth boundary best addressed by the metro area general plan, the forest working paper, titled "metropolitan plan update, Forest Lands", (Revised. Oct, 1981), is part of the County's submitted.

Theis document provides an inventory of forest lands by cubic foot site class for Douglas Fir. (site classes range from 2 to 5 in this inventory). Also, inventoried is "other forested lands" as described in another working paper. "vegetation/wildlife/wildlife habitat" workng paper (L-COG, April, 1978). No information is provided which supports the decisions to zone these rural forest lands with the County's F-2 Zone.

Policies

Contained in the Metro Area general plan are three forest policies. One forest policy recognizes the Forest Practices Act for commercial forest uses while another policy supports small woodlot management in rural areas. Forest Policy 17 addresses issues relating to the zoning of these forest lands and protection of forest land values. Forest policy 17 reads as follows:

> In rural lands outside the urban growth boundary, forest lands designated in the Metropolitan Plan shall be protected for forest uses through zoning for forest use and through application of other protective measures. The values of forest lands shall not be destroyed or deteriorated by nonforest uses (Metro Area General Plan, p. III-C-9).

No plan policy exists addressing the application of the F-2 Zone to forest lands under the jurisdiction of this plan.

Application and Implementing Measures

Lane County has applied the F-2 Zone to the rural forest lands under the jurisdiction of the Metro Area General Plan.

Conclusion for the Lane County Rural Comprehensive Plan

Lane County does not comply with Goal 4.

The County has successfully completed a number of Goal 4 requirements and presented for review a unique approach to conserving forest lands for forest uses.

Lane County has inventoried and generally designated as forest land those lands suitable for forest uses. Also, the County has mapped by cubic foot, site class forest lands at a County-wide scale. Lane County has adopted, under ORS 215.203 and 215.213, the "new" provisions for

Exclusive Farm zones and under ORS 197.247 and ORS 215.317--the "Marginal Lands" provisions. By adopting these statutory provisions, Lane County is afforded some additional flexibility with respect to certain activities in particular, and the authorization of dwellings in conjunction with those authorized activities in both their exclusive farm use and mixed use (F-2) zone.

Despite the innovative approach used by Lane County, there remains some fundamental goal deficiencies which must be resolved before the County's approach can be found in compliance with Goal 4.

As presented before the Commission at their Goal 4 workshop, there are four basic components on which a County's forest element must be evaluated: (1) inventory information, (2) policies, (3) application of plan designations and zoning, and (4) implementing measures. This conclusion is divided into four parts addressing each of these components.

Inventory Information

Lane County has done some exceptional work in preparing a basis on which to make policy decisions regarding forest lands. However, some deficiencies remain.

First, the County needs to amend its Forest Working Paper to provide justification for the F-1's 40-acre minimum lot size. Because Lane County precludes the siting of dwellings (both forest and nonforest) in this zone except as authorized by ORS Chapter 215 land value due to residential speculation will not inflate the forest land values within the F-1 zone. Also, potential residential forest management conflicts will be reduced. Thus, a justification of the 40-acre minimum based on local commercial forest management practices would suffice.

Second, the County's Forest Working Paper Addendum provides excellent justification for a larger minimum lot size in the County's impacted areas. Presuming the County wishes to maintain its present minimum lot size for land zoned F-2, then additional evidence is necessary to show that this zone has been applied primarily to "areas consisting of predominatly single ownerships of that (minimum) size." See the Goal 4 Conclusion for Application of Zones.

Third, the County needs to add to its list of soils (Forest Working Paper, Appendix A) any soils capable of producing 20 to 49 cf/acre/year (or cubic foot site class 6). (Note: the definition of commercial forest lands as defined by Lane County is 20 cu.ft./acre/per year. However, this definition is not required by Goal4. The Commission has found cubic foot site class 5 an acceptable definition of commercial forest land in previous acknowledgement reviews. The recognition by the County of these soils as suitable for commercial forest production is important in the assessment of the income tests for marginal lands and woodlots under the EFU and F-2 zones and in determining Nonresource/ Nonexception lands as well.

For general inventory use, Lane County must rely on SCS soils information except in circumstances where more reliable site-specific information demonstrates that this information does not accurately portray a site's suitability for commercial forest uses. In such situations, findings must address the feasibility of successfully managing a range of commercial forest species (not just Douglas Fir) and explain, in detail, the deficiencies with the SCS soils information.

Policies

The deficiencies with respect to Lane County's forest policies are (1) the lack of a policy describing precisely the standards for authorizing a change from "Nonimpacted" (F-1) to "Impacted" (F-2); (2) a flaw in forest policy 11 regarding the minimum lot size in the F-1 zone if adjacent to "Impacted" Forest Lands; and (3) ambiguous characteristics for determining Impacted Forest Lands.

First, Lane County's Nonimpacted and Impacted Forest Land categories have vastly different purposes and criteria. The County must provide precise standards to govern their application. (Note: in Clatsop County's review, the Commission required the County to provide a policy establishing precise criteria for applying its three forest zones. Also, the Commission required a plan policy indicating that to change from its commercial forest zone to one of the secondary forest zones requires a plan amendment.) Because of the differences in characteristics (or criteria) and implementing measures for Nonimpacted (F-1)and Impacted (F-2), lands similar policies to those required of Clatsop County (and also Klamath County) are needed in Lane County's Plan to assure that forest lands will be conserved. Lane County needs to adopt, by policy, specific criteria for Nonimpacted and Impacted Forest Lands consistent with the conclusion under "application" to follow. Also, another plan policy requiring a plan amendment to change from Nonimpacted to Impacted is necessary.

Second, Forest Policy 11 indicates that the minimum lot size for nonimpacted Forest Lands is 40 acres for the purpose of a land division "if adjacent to other Nonimpacted Forest Lands." Policy 11 does not indicate which minimum lot size or divison standard applies where a nonimpacted forest (F-1) parcel is not adjacent to other nonimpacted lands. The County needs to delete the following to clarify Policy 11: "if adjacent to other Nonimpacted Forest Land." However, it must clarify this statement in a manner consistent with Goal 4.

Third, generally the characteristics for both nonimpacted and impacted lands are appropriate and provide the basis for establishing criteria to appropriately distinguish between these types of resource areas. However, a few of the "impacted characteristics" are too general to conform to the Commission's standards for accepting the F-2 zone as the only secondary forest or mixed use zone. The following "Impacted" lands characteristics are at issue:

1. "Managed for forest and/or agricultural use or capable of being managed for forest and/or agricultural use.
   Issue: This characteristic applies to all forest and agricultural lands in the County.
2. "Contiguous to other parcels of similar use."
   Issue: Again, this characteristic applies to all resource areas of a homogenous nature.

3. "Under nonindustrial private ownership and/or developed with residences."
   Issue: This characteristic has been over used to apply the F-2 zone to some extremely large parcels (see examples under application conclusion).

4. "Outside developed and committed areas and UGBs."
   Issue: Again, all resource parcels satisfy this characteristic.

Additional precision is necessary to establish a policy containing appropriate criteria for "Nonimpacted" and Impacted lands.

Application of Plan Designations and Zones

Of all issues raised under this review of Goal 4, the question of misapplication of the County's F-2 zone to lands which are currently managed commercially or of a size to be managed commercially as a forest operations presents a significant violation of Goal 4 as interpreted by the Commission in a number of Acknowledgment Reviews. In addition, a number of very large "farm operations" and "farm-forest operations" were zoned F-2. Where this misapplication has occurred, the County needs to reevaluate to see if implementing measures under the F-1 and EFU-zones better provide the type of protection for these commercial operations envisioned by Goals 3 and 4.

The F-2 zone was established to apply to the very broad category known as "Impacted lands." As previously discussed, the general characteristics for Impacted lands allow for the inclusion of all types of land and land uses. In developing the F-2 as a means of implementing statutory and Statewide Planning Goal requirements, the F-2 zone tries to be a qualified exclusive farm-use zone, mixed use or secondary forest zone and a type of "marginal lands" zone. By applying the F-2 zone to the several thousand acres (approximately betwen 100 and 150 thousand acres) of nonpublic, nonforest industry-owned forest lands as well as numerous very large farm forest operations, it is safe to presume that included within the F-2 zone are lands which could also be designated as follows:

Land Use Activity	Appropriate Zone
Commercially Managed Forest Land	F-1
Commercially Managed Agricultural Land	EFU
Committed Lands	PR
Marginal Lands	ML
Nonresource/Nonexception	RR
Small Sized Ownerships	F-2

The F-2 Zone is not rejected in its entirety. However, in order to establish farm-forest, secondary forest, or mixed use zones consistent with past Commission decisions, the zone must be applied to areas where the ownership pattern and management practices are similar. Also, the implementing measures must be designed to conserve that particular resource area and facilitate the type of resource management practices occuring in the area.

In past reviews, the Commission has found acceptable three different types of mixed use or secondary forest zones. These zones are discussed below in order to further describe possible amendments available to the County.

1. In the Clatsop County Acknowledgement Review, the Commission described one type of secondary forest zone as follows:

> A secondary forest or mixed resource use zone with a 20 acre or 40 acre minimum was appropriate if such a zone is applied to areas consisting of predominatly single ownerships of that size and if the zone actually limits further the opportunity for parcelization and development which conflicts with the Goal to conserve forest lands for forest uses. Numerous secondary zones have been approved on this basis; examples include Douglas County's AW-20 zone, Clackamas County's Transitional 20 acre Zone, Tillamook County's SFW-20 zone (also see Coos County Review, November 16, 1983, p. 104). The Commission's acceptance of secondary forest zones is based on the recognition of prevailing ownership patterns with the understanding that further parcelizaton of forest lands will be limited. To satisfy Goal 4, such zones must be: (1) representative of an area's existing ownership size and resource management activities, (2) limited in application to specific areas by plan policy, and (3) must be designed to limit further parcelization. In order to successfully meet these three requirements, the criteria used in applying such secondary zones must be precise and carefully applied. (Clatsop County Review, P. 50, April 13, 1984).

2. Another type of second forest zone is based on the concept of conserving large commercial resource operations engaging in both agriculture and forestry. This zone naturally requires a large minimum lot size with criteria for applying the zone and for authorizing future land divisions based on the continuation of "commercial" agriculture/forest operations (1000 Friends v. Douglas Co., LUBA 79-006).

3. Also, there is another approach found acceptable to the Commission. Justification of a forest zone's minimum parcel size designed to conserve forest resources other than the commercial forest resource. For example, Jackson County's Open Space Resource Zone (a 20-acre minimum lot size zone with density provisions consistent with Goal 5

was applied to forest lands with no commercial forest values. Because the land was forested and found to be needed for "other" forest uses as defined by Goal 4, a secondary forest zone conserving forest resource values "other" than "commercial" forest values was applied (see also Klamath County's Forest/Range zone).

Based on the County's application of the "current" F-2 zoning provisions, it appears that many areas in Lane County are zoned appropriately in a manner consistent with previous Commission decision (see Clatsop County discussion in "1" above). Areas appropriately zoned are those as represented by Maps 287 and 309 as discussed on page 81 of this report.

For commercial farm-forest lands zoned F-2 (e.g., Maps 272 and 275 on pages 81 and 82 of this report), the County needs to rezone these lands with an appropriate forest resource zone. Options available to the County include (a) rezoning commercial farm forest operations with a zone similar to the zone found acceptable to the Commission as described in Example 2 above; (b) rezone the "forested" portion of these commercial farm forest operations to F-1 or another appropriate forest zone with a justified minimum lot size. The remaining "agricultural" portion of these commercial farm forest operations can be re-zoned under the County's EFU Zone provided an appropriate lot size for grazing operations is applied; or (c) rezone the "forested" portion of the commercial farm-forest operations, as discussed in (b) above, and amend the F-2 Zone to include an appropriate minimum lot size for commercial grazing operations under LC 16.211(4).

With respect to other forested areas similar to those represented by Maps 311, 430, and 432 on page 81 of this report, the County needs to rezone these lands either F-1 or establish a suitable forest zone which will conserve these forest lands for "commercial" forest uses.

Implementing Measures

As previously discussed, the F-1 zone (LC 16.210) and the F-2 zone (LC 16.211) are the implementing measures applied to land designated under Goal 4.

F-1 Zone

The F-1 zone, as applied to Lane County's commercial forest lands, has two deficiencies.

First, under LC 16.210(4)(i), the County needs to specify that private lodges (currently undefined) and accessory uses to lodges must be assessed under the generally unsuitable test (LC 16.210)(5)(a)(ii) or take an exception to Goal 4. (Note: when the Commission provided suggested conditional use criteria for a number of uses in the Coos County Acknowledgement Review (pp. 108-109, November 1983), that review failed to indicate under what circumstances option "a" or option "b" of ciriterion one should be used.) Option "a"--"evidence is provided supporting reasons why the proposed use should be sited in forest lands"--was suggested for assessing low-level power lines or other such

uses for which siting only on generally unsuitable lands is an impractical requirement for a needed use. Option "b"--"that the proposed site is on land generally unsuitable for forest use"--has been a required review standard for such uses as lodges or nonforest dwellings where the use is "desired" but not a necessary use. By applying LC 16.210(5)(a)(ii) to lodges and its accessory uses, along with the other LC 16.2120 (5)(b)-(f), this issue will be resolved.

Also, the County needs to delete from LC 16.210(4)(b) farm equipment repair and amend LC 16.210(4)(e) to indicate that power distribution lines needing a clearing width of greater than 50 feet require an exception to Goal 4 to be sited on lands zoned F-1. The County shold add the 50 foot clearing with limitation to LC 16.210(4)(e) to be consistent with Commission requirements.

Second, as discussed under the "inventory information" conclusion, some additional findings justifying the 40-acre minimum lot size provision (LC 16.210(6)) is needed.

F-2 Zone

The F-2 zone, as it is applied, does not adequately conserve forest lands for forest uses. Some of the deficiencies discussed in the following paragaraphs, such as the 20-acre minimum lot size, may be resolved through reapplication of the F-2 zone. However, the concerns raised regarding implementing measures address the F-2 zone as it is currently applied. LC 16.211(3)(b), which allows a residence on a vacant legal lot and "deems" it accessory and necessary. . . ., contains a number of flaws. First, the accessory and necessary standard is an approval standard which requires supporting findings indicating (1) that the dwelling is incidental and subordinate to the main forest use and (2) that the dwelling is needed.

Lane County "deems" this test satisfactory without making these proper findings.

Also, the County relies on submission of a detailed forest management plan. However, informational requirements needed to complete such a plan are lacking in the ordinance. The County needs to adopt provisions specifying the contents of this plan and standards which require findings that the dwelling is accessory (incidental and subordinate to a primary forest use) and necessary.

Second, this provision, LC 16.211(3)(b), also authorizes dwellings that (i) comply with the management plan (ii), have a tax deferral and (iii) have substantial completion of the management plan on all "existing" legal lots regardless of size. In reality, this practice circumvents the statutory requirements for "lots of record," the nonforest dwelling provisions, and the accessory and necessary requirments for a legitimate forest dwelling. A reasonable minimum lot size is needed at which "existing" lots below that size must be assessed against either the lot of record or nonforest dwelling standard.

LC 16.211(5)(i), lodges (with overnight accommodations) and accessory facilities, must be assessed either under the generally unsuitable standard (LC 16.211(6)(f)(ix)) or as a Goal 2 "exception" (see discussion under Conclusion for Implementing Measures - F-1).

LC 16.211(7) establishes a 20 acre minimum lot size that increases up to 64 acres depending on a properties capability of producing $10,000 annually (as assessed by cubic foot site class). This lot size standard (particularly extracted from the new statutory requirements for establishing a dwelling on a "woodlots" under the exclusive farm use provisions ORS 215.213(2)) is not appropriate for conserving all of the forest lands zoned F-2. This minimum lot size is not appropriate, particularly where the F-2 Zone has been applied to parcels of a size currently managed or capable of being managed for commercial forest uses (see the preceding discussion on Application of the F-2 Zone). Some adjustments are necessary to the F-2 Zone's minimum lot size or the County may rezone areas zoned F-2 to more appropriate resource zones as previously discussed.

Conclusion for the Metro Area General Plan

Lane County and the Cities of Eugene and Springfield do not comply with Goal 4. Justification for applying the F-2 Zone to forest lands addressed by the Metro Area General Plan has not been provided. It appears such zoning may be reasonable provided information showing the F-2 Zone's minimum lot size is representative of the pattern of contiguously owned forest lands and provided changes are made to the F-2 consistent with the Commission's requirements as previously discussed.

In order to comply with Goal 4, Lane County must:

1. Amend the Forest Working Paper and addendum to:

    a. Provide justification for the F-1 Zone's 40 acre minimum.

    b. (1) Include information on the pattern of contiguous ownerships (either map or statistical) in support of a decision to retain current F-2 zoning. Such information must show that the minimum lot size is representative of the ownership pattern of the area and that the zone actually limits further opportunity for development; or (2) include information justifying an alternative approach consistent with Goal 4 taken to resolve issues raised regarding the F-2 Zone.

    c. Amend the Forest Working Paper (Appendix 1 - Lane County Forest Soils) to include "all commercial forest soils" in a manner consistent with an appropriate definition of commercial forest lands.

2. Amend the comprehensive plan to:

   a. Include a Forest Policy which establishes precise criteria for applying the F-1 and F-2 Zones. (At a minimum, criteria for applying the F-1 Zone must include ownerships of a size capable of being managed as commercial forest lands.)

   b. Amend the four characteristics discussed under the Goal 4 conclusion for policies to establish criteria which apply only to lands appropriately zoned F-2 as per the examples discussed under "application."

   c. Include a policy which requires a plan amendment to rezone lands from F-1 to F-2.

   d. Delete the following from Forest Policy 11(a) "if adjacent to other nonimpacted forest lands.

3. Amend the County zoning map by rezoning private non-industrial ownerships capable of commercial forest management (including forested portions of commercial farm-forest operations) currently zoned F-2 with an appropriate resource zone. An acceptable forest zone is the F-1 Zone or forest zone containing a minimum lot size of at least 80 acres as justified by the County's "Forest Working Paper Addendum."

   Also, where the County can justify such a decision, the County may apply the marginal lands zone or rural residential zones to "committed" or nonresource lands.

4. Amend LC 16.210(4)(i) of the F-1 Zone and LC 16.211(5)(ii) to require that "lodges" be evaluated against the "generally unsuitable test" in addition to the other review standards already applied to this specific use.

5. Amend the F-2 zoning provisions as follows:

   a. In 16.211(3)(b), adopt informational requirements for the "detailed forest management plan." At a minimum, such provisions must require sufficient information to establish adequate findings that a proposed "forest" dwelling is "necessary" and "incidental and subordinate to" the primary forest management activities described in the forest management plan.

   b. Include in LC 16.211(3)(b) a "floor" or minimum parcel size requiring parcels below 10 acres to be assessed against the nonforest dwelling or lot of record provisions.

   c. Amend 16.211(7)(b) to apply to all commercial forest grazing operations zoned F-2 the larger minimum lot size (120 acres) for extensive animal grazing as required by LC 16.212(6)(d).

In order to comply with Goal 4, Lane County and the Cities of Eugene and Springfield must:

1. Amend the Metropolitan Plan Update, Forest Lands Paper, to include justification for applying a "revised" F-2 Zone to forest lands addressed by this plan.

Suggestion for Plan Improvement

Amend the F-1 Zoning provisions as follows:

a. Delete from LC 16.210(4)(b) provisions authorizing farm equipment repair, and

b. Add to LC 16.210(4)(e) the power distribution line size limitation "of a clearing width 50 feet or less. Power distribution lines needing a clearing width greater than 50 feet require an exception to Goal 4.

GOAL 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

This Goal 5 report is divided into two major parts. The first part is the review for all areas of Lane County outside the Metro Plan Boundary. The second part is for those areas inside the Metro Plan Boundary, but outside the Metro Area UGB.

PART I--AREAS OUTSIDE
THE METRO PLAN BOUNDARY

Introduction

All Goal 5 resource categories are applicable to Lane County, and are addressed in separate subsections of this report.

According to Section 660-16-025 of the Goal 5 Administrative Rule (OAR 660-6-000 through 660-16-025), the Goal 5 Rule requirements apply to jurisdictions under denial orders as of the date the adoption of the Rule (June 1981). Lane County was issued a denial order in March of 1981. Therefore, the Goal 5 Rule has been used during this review for purposes of judging compliance.

In the following discussion, the numbers and letters in parentheses refer to sections of the Goal 5 Administrative Rule (e.g., (1A), (1B), (1C), (2A), (3A), (3B), (3C)). It should be noted, however, that these are the citations used by the Commission in its June 1981 adoption of the Rule. Since that time, the Secretary of State's office has recodified the Rule and has assigned different numbers and letters to its various subsections. The references in this report are to the Commission's 1981 version, since it is the one with which most readers are familiar. A copy of this Rule is attached to this report for reference.

Goals 16 and 17 establish more specific inventory and protection requirements for some Goal 5 resources that are located in estuarine or coastal shorelands areas.

Lane County's plan and implementing measures were acknowledged as being in compliance with the Coastal Goals in July, 1983. Therefore, this Goal 5 review does not address the following Goal 5 resources in those areas:

Goal 5 Resource	Addressed Under Goal 16	Addressed Under Goal 17
Open Space	X	
Mineral and Aggregate Resources		
Energy Sources		
Fish and Wildlife	X	X (only "riparian," "major marshes and significant wildlife habitats")
Ecologically Significant Natural Areas	X	X
Scientifically Significant Natural Areas	X	
Outstanding Scenic Views and Sites		X (where the quality is primarily derived from or related to the association with coastal water areas)
Watersheds		
Groundwater Resources		
Wetlands	X	X (only "major marshes," "significant wildlife habitat," and wetlands with "exceptional aesthetic quality")
Historic/Archaeological Sites		X
Wilderness	X	X
Oregon Recreation Trails		
Wild and Scenic Rivers and Waterways		

Land Needed or Desirable for Open Space

Inventory

Lane County's Recreational Resources Working Paper contains a section addressing open space (pp. 4-5). The County discusses the various kinds of open space, and the benefits of preserving open space. The County indicates that it considers "all lands designated for agricultural or forest use, or for other clearly similar resource-production use" to be open space (p. 5). Additionally, the County concedes that recreational areas, including parks, and significant or scientific natural areas also contain open space qualities. Because of "its broad nature, open space is not mapped as a site-specific, separate resource item. Instead...other designations with open space qualities are mapped..." (p. 5). Please refer to the Goal 3, 4, 9, 15 and other Goal 5 portions of this report for more detailed information about Lane County's inventories of lands possessing open space values. See also the July 1983 staff report adopted by the Commission for a discussion of compliance with inventory requirements of Goals 16-18.

Policies

Lane County has adopted one policy which addresses open space resources, per se (Open Space and Scenic Areas Policy 1, Plan, p. 16):

> Lane County has determined that all resource lands in the County are also open space lands. Resource related activities shall predominate on these lands. Where proposals are developed land uses are made consistent with the Comprehensive Plan and Statewide Goals, development standards shall be applied which minimize loss of open space.

In addition, the County has adopted numerous policies regarding agricultural and forest lands, a variety of Goal 5 resources which possess open space values, the Willamette Greenway recreation areas, and coastal resources. Please refer to the Goal 3, 4, 8, 15 and remaining Goal 5 sections of this report for details. See also the July, 1983 Commission action for a discussion of policies addressing Goals 16-18.

Implementing Measures

As noted in the Goal 3 and 4 sections of this report, Lane County has several resource zones which it has applied throughout the County. It has also adopted and applied a Greenway Permit ordinance to lands within the Willamette Greenway (see the Goal 15 section of this report for details). However, these Goals have not yet been fully satisfied, nor have some Goal 2 exceptions been justified. Several coastal zones have been developed and applied in coastal shorelands, estuarine, and beaches and dunes areas (see the July, 1983 staff report adopted by the Commission regarding compliance with Goals 16-18).

Finally, as noted in the remaining subsections of the Goal 5 section of this report, the County has adopted several implementing measures for the protection and/or resolution of conflicts with Goal 5 resource sites containing open space values.

In particular, the County has adopted a Natural Resource Zone (NR-RCP) (Lane Code, Section 16.213), which is intended to protect areas having unique and irreplaceable natural resources which are vital elements for a safe, healthful and pleasant environment for human life. The Natural Resource Zone states that it may be applied to public and private lands where the Rural Comprehensive Plan requires natural resource site protection, but that the zone is not intended to be applied to other types of resource land, such as agricultural land and forest land. This is not to say, however, that the Natural Resource Zone cannot be applied to agricultural and forest lands. If a Goal 5 resource site is located on agricultural or forest land, Natural Resource zoning will be applied after an analysis of the ESEE consequences of conflicting uses has been completed demonstrating the appropriateness of Natural Resource zoning (confirmed by Jim Mann, Senior Planner, personal communication, June 20, 1984).

Emphasis of the Natural Resource Zone will be placed on limiting and regulating human activity in areas where:

(a) The acceptable water quality of streams, lakes, estuaries of the ocean may be endangered;
(b) Watersheds and their streams or lakes are used for domestic water supplies;
(c) Vegetative cover is essential to maintain soil stability and prevent erosion;
(d) Natural conditions are vital for either unique vegetative ecosystems, aquatic or wildlife habitat; and
(e) Scenic quality or vistas or open space is unique and/or irreplaceable.

In the NR Zone, the following uses are allowed outright (Section 16.213(2):

(a) The following recreational facilities and uses owned by a governmental agency of a nonprofit community organization limited to day use.

(i) Exhibitions of the natural conditions of shorelands, dunelands, forested areas, streams and lakes, marshlands, or similar areas of unique and irreplaceable value, and the vegetation and wildlife supported by such lands and waters provided that in no event shall such activity destroy, or endanger the relationships between the natural conditions being exhibited.

(ii) Picnicking areas, day parks and playgrounds.

(iii) Accessory facilities for outdoor recreation activity such as fishing, clam digging and hunting (provided such activity is conducted only in those areas allowed pursuant to Federal, State and Local fish and game regulations) and hiking and horseback riding.

(b) Fish and wildlife habitat management and the propagation of fish and wildlife.

Single family dwellings or mobile homes for residential purposes for a watchman, caretaker or operator in conjunction with a permitted use, in the NR Zone above, are considered "Special Uses" subject to approval by the Planning Director (Section 16.213(3)). The following "Special Uses" are subject to approval by a Hearings Officer (Section 16.213(4)):

(a) Piers and boat houses.
(b) Single-family dwelling or mobile home and accessory structures.
(c) Farm uses as defined by ORS 215.203(2), and any accessory uses.
(d) Forest uses and any accessory uses.

Uses in Section 16.213(4) above are subject to compliance with the following conditional use criteria (Section 16.213(5)):

(a) (i) Evidence is provided supporting reasons why the proposed use should be sited in a natural resource area.
(ii) That the proposed site is on land generally unsuitable for natural resource uses.
(b) That the proposed use will not significantly impact natural resource uses on adjacent and nearby natural resource lands, and will not significantly impact natural resources on the site of the proposed uses;
(c) That the proposed use will not significantly increase the costs of natural resource management on adjacent and nearby resource lands;
(d) That the site is limited in size to that area suitable and appropriate only for the needs of the proposed use;
(e) That, where necessary, measures are taken to minimize potential negative impacts on adjacent and nearby NR zoned lands, and these measures may be established as conditions of approval; and
(f) That the proposed use is consistent with the policies contained in the Rural Comprehensive Plan and the purpose of the NR zone.

Property development standards for all uses allowed in the NR Zone are set forth in Section 16.213(6) and include setbacks from front, side and rear yards.

Specific application of the Natural Resource Zone is discussed in the other Goal 5 sections of this report. A review of the County's zoning maps indicates that the NR Zone has been applied to a number of Goal 5 areas in the County.

Section 16.215 of the Zone Code is the County's Park and Recreation (PR-RCP) zone which has been applied to a number of sites in the County. The zone permits a number of recreational uses outright and conditionally. However, as noted in the Goal 2 Section of this report, the PR Zone allows a number of uses which could conflict with the purpose of the zone. Some of these uses could also conflict with a number of Goal 5 resources including open space. This issue is dealt with in the Goal 2 portion of this report.

Conclusion--Open Space

Lane County has not inventoried any specific open space areas, per se. However, it considers farm and forest lands, recreation areas as well as natural areas to possess open space values. These have been inventoried as part of other Goal requirements. The County has a policy recognizing all resource lands as open space lands and indicating that resource-related activities shall predominate in these areas. Open space loss will be minimized where development is proposed, according to the County's policy. Resource zoning has been applied to most of the County, along with special zoning districts which help protect open space (e.g., Willamette Greenway, Natural Resource Zones).

Mineral and Aggregate Resources

Inventory

Lane County's inventory of mineral and aggregate resources is contained in its Mineral and Aggregate Working Paper.

Mineral Resources: The Working Paper addresses the following minerals: clay, copper, lead, gold, zinc, silver, mercury, antimony, arsenic, tourmaline, molybdenum, and pumice (pp. 3-5). The general locations of these mineral deposits are shown on a map (Appendix A), and are concentrated in four main areas: Hobart Butte, Bohemia, Fall Creek, and Blue River. The locations of these four areas are shown on the map as well. Information about the general quality, and quantity of these resources is provided. The County has not provided information on the location, quality, and quantity of specific sites, however.

Aggregate Resources: Lane County inventoried its aggregate supplies by examining permit lists from the Department of Geology and Mineral Industries and the Division of State Lands, by conducting telephone searches, taking on-site tours of aggregate-producing areas; and by talking with industry representatives (p. 6). The locations of 30 identified sites appear on a map in Appendix C and are listed by legal descriptions and tax lot numbers in Appendix D. A more extensive list of all tax parcels having any record of previous aggregate extraction is included in Appendices E and F. Appendix D is considered the County's (IC) inventory for lands outside the Metro Planning Area. Appendix E is an inventory for lands inside the Metro Area. However, it is inconsistent with the (IC) inventory contained in the Metro Plan. The County has indicated it recognizes the Metro Plan inventory and will be

deleting Appendix E (confirmed by Mike Copely, Lane County Planner, personal communication, August 8, 1984)." Appendix F is the (1B) inventory for lands outside the Metro Area (confirmed by Mike Copely, Lane County Planner, personal communication, July 16, 1984).

Information on quantity of (1C) sites is presented in cubic yards, but the County cautions that the accuracy of this information is limited. In many cases, individual suppliers had only a cursory knowledge of the extent of their resources (p. 7). Quality of the supplies was not evaluated, due to time and budget constraints as well as the variability of resource materials.

Supply estimates were compiled by region (there are four regions in the County) and then coupled with demand estimates for each region in order to assess localized needs and supply/demand situations (p. 7). Demand forecasts were based on population projections and a per capita consumption figure of 22 tons annually (p. 7). Based on these estimates, cumulative demands for each region were projected. This analysis shows that existing supplies will be sufficient to satisfy demand to the year 2000. This will be particularly true if actual population growth rates are on the low side of the estimates. The available supply for the non-metropolitan area of the County is about three times the figure for projected consumption even when assuming the high population projections (p. 8). However, in terms of the supply/demand situation for each region, the margin of supply over demand for the southern section is relatively small. This is true also (but less so) for the western region. Also, the Metro Area will use some of the County supplies. Similarly, 5 to 10 percent of the U.S. Forest Service and BLM needs are supplied by the private market (p. 9).

Conflicting Uses/ESEE Consequences Analyses

Mineral Resources: Lane County reports that most of the mineral areas are on public lands (either the BLM or U.S. Forest Service). As such, federal laws govern prospecting, claims, and mining activities. Current forest resource designation and zoning for these areas "do not appear to preclude their development potential. Forest management and mining activities are considered to be compatible activites by most authorities" (p. 5).

Aggregate Resources: Each of the 30 inventoried sites was evaluated in terms of the following potential conflicts:

1. Areas of significant natural value contained in the Oregon Natural Heritage Program inventory;
2. Historical resources contained in the Working Paper on Historical Resources;
3. Willamette Greenway;
4. Park and recreation sites contained in the Lane County Parks and Open Space Master Plan;
5. Sensitive fish and waterfowl habitat identified in the Working Paper on Flora and Fauna; and
6. Existing or planned residential development.

Appendix J summarizes the results of the County's analysis. No conflicts were noted for any of the sites. Sites were not evaluated in terms of conflicts with agricultural or forest lands, since all of the sites are existing sites and therefore no longer available for these uses (p. 10).

Policies

A number of mineral and aggregate resources policies have been adopted (Plan, pp. 13-14). These include:

1. Known mineral resource sites within the County, which include those identified in Appendix "D" of the "Mineral and Aggregate Resources Working Paper," shall be conserved for both present and future uses through the application of Plan designations and compatible land use regulation measures. Such designation and regulation is to follow the requirements of the Goal 5 rule (OAR 660-16-000 through 660-16-025), which is addressed in Appendix "J" of the "Mineral and Aggregate Resources Working Paper."

2. Exploration for mineral resources (in contrast to actual mining) shall be a permitted activity in the rural portions of the County. Areas designated primarily for residential purposes are to be excluded from this policy as are areas that, having undergone analysis in accordance with OAR 660-16-000, are designated as having some unique natural, historical or cultural value. Exploratory drilling for gas, oil or other hydrocarbons is not within the scope of this policy.

3. Mining operations are regulated by state and federal government agencies. County regulations shall supplement these actions only as necessary to ensure compatibility in the area, or to protect other resources.

4. Conserve and manage land, soil and mineral resources by respecting their physical limitations and environmental assets.

5. Update, in cooperation with local aggregate operations, federal, state and local agencies, past sand and gravel inventories to ensure supply/demand information is current.

6. Protect aggregate deposits from encroachment of incompatible uses and ensure that aggregate material in close proximity to its point of use will be available when needed.

7. Present and future land use controls shall be implemented to allow for the discovery of new mineral and aggregate resources when it is demonstrated that the projected demand for those resources in a given area will exceed available supply and conflict with adjacent uses can be minimized.

Conflict analysis and resolution shall follow the methodology set forth in Appendix "J" of the Working Paper: Mineral and Aggregate Resources; however possible impact on agricultural lands, forest lands and residential development (existing or planned) must also be considered. For sites within the Willamette Greenway or near Goal 5 inventoried resources, notification of the potential conflict shall be sent to the appropriate body (e.g., Pioneer Museum, Oregon Department of Transportation, Oregon Department of Fish and Wildlife, etc.).

8. Encourage farm and forestry use of aggregate land prior to extraction; minimize negative environmental impacts during extraction; require reclamation after extraction which is compatible with adjacent uses.

9. Lane County shall apply the appropriate district (SG, SG/CP, /QM) to the sites listed in Appendix "J" of the Mineral and Aggregate Working Paper. Those sites with potential conflicts shall be placed in the SG/CP or QM/SR Districts.

10. Sites for which not enough information is presently available to determine quality, quantity and conflicts with other uses which include those sites listed in Appendix "F" of the "Mineral and Aggregate Working Paper," shall be considered "Significant" in terms of OAR 660-16-000 through 660-16-025, but requiring that the Goal 5 evaluation process be delayed (the "1B" option). At such a time as it is clear that these sites will be needed within the County's advance framework, they shall be evaluated per the Goal 5 rule including conflict analysis and implementation of protective measures. Such evaluation will take the form of Plan amendment or revision studies. Notwithstanding the above schedule, all "1B" sites will be evaluated within five years of the date of this Policy adoption. These sites are included herein as Goal #5 Mineral and Aggregate Exhibit A.

11. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with section C.3.i. of the Goal. Major adverse effects of extraction on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, scenic quality, noise and safety are to be minimized, and such values reclaimed where possible. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Policy 11 above indicates that significant fish and wildlife habitat areas in the Greenway shall be protected in accordance with

Section C.3.i. of Goal 15. Section C.3.i. requires that aggregate extraction be allowed only when "subject to compliance with local regulations designated to minimize adverse effects on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise, safety and to guarantee necessary reclamation" (emphasis added). The Goal standard for significant fish and wildlife habitat areas, however, is stronger. It is spelled out in Section C.3.d. of Goal 15, rather than simply Section C.3.i. (This is also addressed in the Goal 15 section of this report).

Implementing Measures

Lane County has adopted a Quarry and Mine Operations Combining (/QM-RCP) Zone to protect major deposits of minerals, rock, and related material resources, and to resolve conflicts with surrounding uses (Lane Code, Section 16.216).

The Quarry and Mine Operations Combining Zone shall be available for use by the County for new or existing operations when requests are received as part of an areawide or legislative rezoning, or a specific property or quasi-judicial rezoning. When property under consideration of /QM zoning is in close proximity to existing and planned uses potentially incompatible with /QM uses, the application of the zone may be limited to a specific portion of a property in order to encourage the compatibility and proper management of land uses.

The Quarry and Mine Operations Combining Zone is intended to be applied only to those operations which have been evaluated through the Goal 5 Administrative Rule process. Other quarry and mining operations of short-term or intermittent duration should be provided pursuant to the special use provisions of the various zones.

In the Quarry and Mine Operations Combining Zone, the following types of buildings and uses are permitted, subject to the provisions of the Quarry and Mining Operation Reclamation Permit and exceptions set forth in the code (Section 16.216(4)).

(a) Uses permitted in the parent zone with which the /QM zone is combined.
(b) Extracting and storing of minerals, including equipment and materials necessary to carry out these functions.
(c) Plants for the processing of minerals from quarry and mine extraction operations.
(d) Sale of products generated from the quarrying and mining operation.
(e) Activities pemitted as part of the reclamation process provided for in the Reclamation Plan.
(f) Structures an buildings used in conjunction with the extracting and storing of minerals.

The zone requires that a surface mining permit first be obtained from the Department of Geology and Mineral Industries

(Section 16.216(5). Section 16.216(6) sets forth blasting notice and records requirements.

Section 16.217 of the Lane Code is the County's Sand, Gravel, and Rock Products (SG-RCP) Zone. The SG Zone "shall only be applied to those sites which have been evaluated consistently with the Statewide Planning Goal No. 5 Administrative Rule conflict resolution process (Sec. 16.217(4)). In the SG-RCP Zone, sand and gravel operations are permitted subsequent to the following restrictions: For any property designated in the Eugene-Springfield Metropolitan Plan as significant in terms of OAR 660-16-000/025 and designated as '1B', a Goal 5 ESEE consequences analysis per the Goal No. 5 Administrative Rule must first be completed. If the landowner and County do not agree on the method to achieve the Goal, the matter shall be forwarded to the Hearings Official for processing consistent with LC 16.100.

A number of uses are allowed in the SG-RCP Zone when conducted in conjunction with a sand and gravel operation (Sec. 16.217), including asphalt paving-mix plant and accessory buildings; cement concrete batching plant; aggregate products fabrication and sale; sand and gravel resource-related equipment storage yard, maintenance and storage buildings, offices and warehouses "appropriate to the uses permitted in this District"; retail or wholesale sales of products related to the use of sand, gravel and related products; agriculture, grazing or timber raising; dwellings for owners, operators or help required; and signs. The zone contains site improvement standards, as well as setback standards, cover, planting, drainage and topsoil standards, and operating standards.

The SG-RCP Zone establishes a Sand and Gravel Review Committee to determine if operating plans or revised plans comply with the requirements of the zone or with "a river plan which may be adopted by the Board." The committee is made up of the Planning Director, the Public Works Director, the Parks and Recreation Director, the Chief Sanitarian, the County Hydrologist, and the County Floodplain Specialist. The Review Committee is notified of all operating plans and revised plans, and has seven days to approve the plan or require modification of the plan.

It appears, from an examination of zoning maps, that the SG Zone has been applied to a number of sites that are not included on any plan inventory of (1C) sites. Yet, contrary to the zone's purpose statements, the County has not applied the Goal 5 process to these sites to justify SG zoning.

Section 16.218 of the Lane Code is the County's Sand, Gravel and Rock Products-Controlled Process (SG-CP-RCP) Zone. The zone is intended to provide more restrictive control of processing activities than the SG-RCP Zone (described above) for the protection of surrounding properties or for greater control over the location and operation of processing activities. The SG-CP-RCP Zone shall apply only to sites which have been evaluated via the Goal 5 Rule process (Sec. 16.216(3)).

The requirements of the SG-CP-RCP Zone are the same as in the SG-RCP Zone except that the Sand and Gravel Review Committee, in its evaluation of operational plans, must evaluate "the location for the erection or enlargement of all processing equipment and activities, including, but not limited to asphalt paving mix and cement concrete batching plants" according to the following "Operational Plan Approval Criteria":

(1) Conformity with the Rural Comprehensive Plan for Lane County.

(2) The location, size, design and operating characteristics of the proposed use:

(a) Will be compatible with and will not adversely affect the livability or appropriate development of abutting properties and the surrounding vicinity; and

(b) Will not be adversely affected by the development of abutting properties and the surrounding vicinity. (Consideration may be given to harmony in scale, bulk, coverge and density; to the availability of public facilities and utilities; to the harmful effect, if any, upon desirable neighborhood character, to the generation of traffic and the capacity of surrounding streets and roads; and to any other relevant impact of the use.)

(c) Will not be adversely affected by known natural hazards, such as floods, slides, erosion.

(d) Will not create a hazardous natural condition such as erosion, landslide, flooding.

Among the permitted uses in the F-1 Zone are (1) mining and quarrying and processing of rock permitted in accordance with the FPA for forest road construction or other forest related uses, or when used solely in conjunction with a farm use on which the mining or quarrying occurs, and (2) operations conducted for the exploration of aggregate or other mineral and subsurface resources (Lane Code, Section 16.210(2)(c) and (g)). Mining, quarry, and processing of mineral, geothermal and other subsurface resources; and rock mining, quarrying and processing which exceeds the standards in 16.210(2)(c), above, are allowed conditionally subject to a Hearings Official approval. Conditional use criteria in the F-1 Zone have been discussed in the Goal 4 section of this report.

In the F-2 Zone, mining, quarrying, and processing of rock for forest or farm road construction is permitted outright on the same tract as the mining or quarrying occurs (Sec. 16.211(2)(c)), as are operations for the exploration for aggregate or other mineral or subsurface resources (Sec. 16.211(2)(e)). The mining, quarrying, and processing of mineral and other subsurface resources; and rock mining and quarrying and processing that exceeds the standards in Section 16.211(2)(c), above are considered Special Uses, subject to Hearings Official approval

(Sec. 16.211(5)(d)). This is also the case for operations conducted for the exploration, mining and processing of aggregate or other mineral resources or other subsurface resources (Sec. 16.211(5)(k)). Criteria for permitting these uses are found in Section 16.211(6).

In the Exclusive Farm Use Zone, operations for the exploration, mining and processing of aggregate and other mineral resources or other subsurface resources are Special Uses, subject to Hearings Official Approval (Sec. 16.212(4)(b)).

Please refer to the Goal 15 section of this report for a discussion of the County's approach to mineral and aggregate sites located within the Willamette Greenway.

Objections

1. Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the sand and gravel plan and zone designations given to a site known as the Pudding Creek Heronry. Since this site is within the Willamette River Greenway, please refer to the Goal 15 section of this report for details about these objections.

2. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Inasmuch as this site is within the Willamette Greenway Boundary, the objections are presented in greater detail in the Goal 15 section of this report.

3. James Spickerman (on behalf of Leon Funke and Michael Horton) has objected to the zoning of farm lands for sand and gravel extraction and processing uses.

   a. Objectors are specifically concerned about the following parcels:

      17-03-06 TL 400, 500, 300, 201
      17-03-05 TL 300, 1500, 1300, 1900
      16-03-31 TL 901, 500 and 101

      The 455 acres in these parcels are primarily agricultural land and have been zoned SG-RCP according to objectors. Allowed uses include sand and gravel extraction as well as asphalt paving mix plant, concrete batching plant, aggregate products fabrication and sale, and retail or wholesale sales of products. The land was previously designated EFU. Objectors point out that in Westerburg v. Linn County, LUBA held that a Goal 2 exception to Goal 3 was required when a zone change was made from EFU to aggregate extraction and processing where the new zone permitted manufacturing processes and activities. Objectors believe, therefore, that Lane County should have taken an exception prior to rezoning these parcels.

b. Objectors claim that the County applied SG zoning to parcel 16-03-31 Tax Lot 601 and 602 without the necessary ESEE consequences analysis of conflicts with Goal 3 uses and other Goal 5 uses. Objectors point out that the site has a "long history of documented conflict between the sand and gravel extraction use and adjacent agricultural and residential uses. Objectors further point out that in Olsen et al. vs. Scappoose Sand and Gravel Co., LUBA indicated that the Goal 5 Rule requires that, where conflicting uses have been identified, the Goal 5 resource site (e.g., mining) may itself have an impact on other uses and these impacts must be considered in analyzing the ESEE consequences.

c. Objectors believe that plan policies do not address the Goals adequately because there is no method set forth in the plan for Goal 5 conflict resolution analysis. The plan states that such analysis and resolution of conflicts shall follow the methodology in Appendix J of the Mineral and Aggregate Working Paper. Objectors, however, state that Appendix J contains no such methodology, but only a statement of conclusions regarding particular sites.

d. Objectors point out that the plan policies set forth no method to reconcile Goal 5 and Goal 3 conflicts (specifically, where agricultural soils are underlaid with aggregate resources).

e. Objectors claim that plan policies make no provision for ESEE analysis of conflicting Goal 5 uses.

f. Objectors claim that the plan does not comply with Goal 5 Guideline B9 which states:

> Areas identified as having non-renewable mineral and aggregate resources should be planned for interim, transitional and "second use" utilization, as well as for the primary use.

g. Objectors claim that, although a number of sites are to be considered under the (1B) process at a later date, the sites are not included on the plan inventory as a "special category," as required by the Goal 5 Rule.

h. Objectors believe the plan is not internally consistent. Specifically, objectors point out that EFU lands are zoned SG-RCP, but there is no basis for this in policies or in working papers. A number of parcels are zoned for sand and gravel extraction, but not all have been designated for such uses.

Objectors also point out that SG-RCP zoning is contrary to agricultural lands policies (to provide maximum protection for agricultural activities by minimizing activities that could conflict with such uses.

i. Objectors point out that no consideration is given to the effects of SG-RCP zoning on the groundwater resources of agricultural lands adjacent to the land designated SG-RCP.

Response to Objections

1. The response to the objections regarding the Pudding Creek heronry is presented in the Goal 15 section of this report.

2. The response to the objections regarding the Confluence Heronry is presented in the Goal 15 section of this report.

3. a. Objectors contend that sites 17-03-06, TL 400, 500, 300, 201; 17-03-05 TL 300, 1500, 1300, 1900; 16-03-31 TL 901, 500, and 1001 were all rezoned from EFU to S-G-RCP without an exception. Objectors cite Westerberg vs. Linn County as requiring this be done where the new zone permits processing activities. This was based on the fact that ORS 215.213 allows processing conditionally, but at the time of Westerberg vs. Linn County, "processing" did not include the batching and blending of aggregate. However, the 1983 Legislature changed the statutory definition of "processing" (ORS 517.750(9)) to include "crushing, washing, milling, screening as well as the batching and blending of mineral aggregate into asphaltic and portland cement concrete product . . .". Therefore, objectors are not correct in suggesting that a Goal 2 exception be taken for such sites. However, this is not to say that the Goal 5 Rule process does not apply. In the case of the parcels cited by objectors, this process has been completed for only 17-03-06 TL 400, 17-03-05 TL 300, 16-03-31 TL 901, and 16-03-31 TL 1001. The Mineral and Aggregate Working Paper (p. 10) indicates that, because these are existing operating sites, these sites are no longer available for agricultural use. No conflicts were found to exist for any of these four sites.

b. Objectors are correct that parcel 16-03-31 TL 601 has not been analyzed according to the Goal 5 process. Site 16-03-31 TL 602, however, is included as Site No. 21 in Appendix D of the County's Mineral and Aggregate Working Paper. No conflicts were found to exist with Site No. 21. Conflicts with agricultural uses for the site were not analyzed because the site is an operating site and it is assumed it is no longer available for agricultural use (Working Paper, p. 10). Objectors are correct, however, that the County did not address conflicts with adjacent agricultural and residential uses. This has not been required except when a new site or expansion of an existing site is proposed. Policies 7 and 10 require Goal 5 analysis in such circumstances, including analyzing and resolving conflicts with surrounding uses.

c. Objectors are not correct that the County lacks a method for analyzing and resolving conflicts pertaining to (1C) mineral and aggregate resources in Appendix D. The County indicates that

there are no conflicting uses for these sites, and therefore either the SG ,/QM or SG/CP zone will apply. It also indicates that sites with potential conflicts shall be placed in the SG/CP or QM/SR Districts (Mineral and Aggregate Policy 9). All (1B) sites require a full Goal 5 evaluation, including conflict resolution and plan amendments or revision studies before extraction activities are allowed, according to Mineral and Aggregate Policy 10.

Objectors are correct that Appendix J is a statement of conclusions about the conflicts with the 30 (1C) sites, and not a methodology for analyzing and resolving conflicts per se. However, the policy should be interpreted as requiring that the same methodology used in producing Appendix J will be used in future conflict/resolution situations (i.e., determining whether there are conflicts with other Goal 5, 8, and 15 resources, or with planned or existing development). The policy would also require consideration of possible impact or agricultural and forest lands in approval of any new site or expansion of an existing site.

d. Objectors are not correct that there is no plan policy method to reconcile conflicts on agricultural lands that contain aggregate resources for those (1B) sites in Appendix F. Specifically, Mineral and Aggregate Policy 10 requires a full Goal 5 Rule evaluation of (1B) sites. This will require a site-by-site analysis of conflicts (including those with agricultural lands), an ESEE consequences determination of those conflicts, and application of measures to resolve conflicts.

e. There is no specific Goal 5 requirement to adopt plan policies which require analysis of ESEE consequences of identified conflicting uses. Rather, such conflicts are to be resolved during the planning process, based on such an analysis which is to be incorporated into the plan. (The exception to this is for (1B) sites. Jurisdictions must adopt policies to apply all applicable steps of the Goal 5 Rule to such sites. Lane County has such a policy for its (1B) mineral and aggregate resources--Mineral and Aggregate Policy 10).

f. Guidelines do not carry the same weight as the Goals, and therefore, this objector's concern is not a Goal requirement. However, objectors do raise an important concern, and the County is urged to plan such sites for interim, transitional and "second" use.

g. Contrary to objector's statements, the County has placed its (1B) sites on a special category inventory--Appendix E and F of the Mineral and Aggregate Resources Working Paper. It also has expressed this in Mineral and Aggregate Policy 10.

h. Objectors are correct that some lands are zoned SG that are not on the (1C) inventory, nor has the Goal 5 process been applied to them to justify SG zoning rather than EFU, or some other zoning.

SG zoning for a particular site may be counter to the County's policy of providing maximum protection for agricultural activities by minimizing activities that could conflict with such uses. However, Goal 5 requires protection of mineral and aggregate resources. These Goal requirements must be balanced. This is done through the Goal 5 process. When analyzing the ESEE consequences of conflicting uses for a particular site, the requirements of other Statewide Goals must be considered and balanced against Goal 5 requirements.

i. Objectors have not provided information demonstrating how SG zoning will have an effect on groundwater resources of adjacent agricultural lands. Other state statutes require that this concern be addressed.

Conclusion--Mineral and Aggregate Resources

Lane County has inventoried its mineral and aggregate resources and has identified 30 specific aggregate sites which are considered (1C) sites. The amount of aggregate contained in these 30 sites is sufficient to satisfy the demand to the year 2000. The County indicates there are no conflicting uses with any of these sites, and has applied QM-RCP, SG-RCP, or SG-CP-RCP zoning to those sites. These zones assure that extraction can occur, subject to appropriate conditions regarding such things as setbacks, drainage, traffic and operation.

The County has identified a number of (18) sites which will be evaluated according to the Goal 5 process (including plan amendments, where necessary), within the next five years.

A number of sites not in any plan inventory have been zoned for sand and gravel extraction, but have not been justified as such, based on an analysis of ESEE consequences of conflicting uses.

Energy Sources

Inventory

Lane County has adopted an Energy Working Paper which describes energy consumption and both conventional and alternative energy sources. Conventional sources includes electrical energy from seven utility companies and natural gas and petroleum from out-of-state sources (pp. 7-15). Alternative sources include solar, hydroelectric, biomass, cogeneration, wind, and geothermal energy (pp. 15-29). Of these, the County considers only hydro power and geothermal sites to be site-specific (p. 39).

The Working Paper identifies eight dams currently generating power or having the potential to do so (p. 18), as well as eight existing nonpower dams with hydroelectric generation potentials exceeding 200kW (p. 18). Maps showing the general locations of these sites are on page 19 of the Working Paper. Information about the dam height, hydraulic head and capacity for each site is presented on page 18. Proposed dams with generation potentials exceeding 25MW and those with potentials between 200kW and 25MW are identified on page 21 of the Working Paper and mapped on page 22. Information about dam height (where known), hydraulic head, system head, and capacity is presented (p. 21).

Wind potential in Lane County is through to be highest along the Coast and Coast Range. Eugene Water and Electric Board (EWEB) and 19 public utilities operate an experimental windmill in the Coast Range north of Lane County, and PP&L operates a wind turbine near Coos Bay. Average wind speeds in Lane County, however are too low to power such windmills (p. 26).

There are two known Geothermal Resource Areas (KGRA's), both of which are in the eastern portion of the County on federal land. Both are under study by the Oregon Department of Geology and Mineral Industries (p. 29). The locations of the two KGRA's--Belknap-Foley KGRA and McCredie KGRA--are shown on Map 7 (p. 30). Information regarding their reservoir temperatures, mean reservoir volume, wellhead thermal energy and thermal power, and resource to land distance is presented in Table 11 (p. 31). The Energy Working Paper also describes the stages of geothermal energy development and discusses the constraints upon geothermal power generation (pp. 28-29). Although the potential for geothermal energy development in Lane County is "significant," further information is needed regarding its potential in the two KGRA's and the environmental impacts associated with such development (p. 29).

A cogeneration facility capable of producing 28,000 kilowatts of power exists at the Weyerhaeuser plant in Springfield, and another facility capable of producing 800 kilowatts is being installed in the Lane Plywood Company of Eugene (pp. 25-26).

The Working Paper disucsses the potential for biomass as an energy source in Lane County (pp. 23-25). There are two major sources--forest lands and farm lands. The potential for energy generation from these sources is great, but economic feasibility and environmental impacts are primary constraints to development of these sources at this time (p. 25).

Conflicting Uses/ESEE Consequences Analyses

General, non-site-specific conflicts are discussed for each of the major energy source categories identified (i.e., hydroelectric, biomass, solar, cogeneration, wind).

Regarding hydro sites, the County states:

> Maps have been presented illustrating a number of alternative hydro sites on various rivers in the County. Since these sites

> are, at present, in the proposal stage, it is premature to evaluate conflicting uses for each one, but the sites need to be acknowledged by designation on Plan Diagrams, and some effort made to ensure their availability when needed. Conflicting uses will be examined and resolved at such a time as the sites are actually being proposed for development; this could probably be done most efficiently as part of the elaborate permitting process hydro power must undergo before approved. In most cases, conflict resolution is a major factor in hydro development even through many of the sites are located on public land, or lands presently set aside for resource uses--especially timber lands. Existing resource-based zoning can do much to prevent them from being subjected to development if energy considerations are incorporated into the zoning requirements. In Goal 5 language, the "1B" option should be taken at this time (p. 39).

Regarding geothermal sites, the County indicates that because they are located on federal lands, they will have to go through a series of state and federal permit approvals. Zoning "only reflects the County's desire that the sites be protected from conflicting uses." Therefore, the County has not conducted an analysis of conflicting uses (p. 39).

Solar access does not appear to be endangered at this time in the rural areas. However, this is not the case in newly developing residential and commercial areas (p. 39).

Policies

Five Energy Resource policies have been adopted by Lane County (Plan, p. 17):

1. Lane County shall identify energy resource areas within the County and protect such areas through the use of existing ordinances and regulations. Such regulations shall address hydroelectirc, geothermal, and wind power sites.

2. Lane County shall encourage the exploration and development by other agencies of renewable energy resources such as geothermal, wind, biomass, hydroelectric and solar, and shall monitor such development to ensure that the development does not cause adverse effects within the County.

3. Lane County will use the work of the L-COG Committee on Energy, and its report, "Lane County Electic Energy Planning Program, Final Report (1983)" as a source of resource identification and site protection measures. This will supplement the County's own measure expressed in Policy and Zoning Statements.

4. The County shall protect the sites of hydroelectric resources through conditional or special use provisions of its resource zones. Sites for which a license has been

applied for with federal and state authorities, or for which water impoundments of more than 100 acre-feet are proposed, or which will generate power in excess of 75KW, shall be shown on the Plan as a special designation, an Exception to applicable LCDC Goals taken if necessary, and a special zoning district applied. At that time, the Goal 5 rule conflict analysis shall also be carried out.

5. For additional energy policies see Goal 3.

Implementing Measures

Hydroelecric generating facilities with water impoundments of less than 100 acre-feet are allowed conditionally subject to Hearing Official approval in the F-1 and F-2 Zones (Lane Code, Sections 16.210(4)(g), 16.211(5)(g)).

A hydroelectric generating facility not exceeding 10 acres in size and located at an existing water impoundment which will not be increased in size because of the generating facility is also permitted conditionally (subject to Hearings Official approval) in the F-1 and F-2 zones (Section 16.210(4)(h), 16.211(5)(h)).

The conditional use criteria for approving or denying these hydroelectric facilities are those for other nonforest uses (Sec. 16.210(5)(a) through (f); 16.211(5)(f)(i) through (vi)).

Hydroelectric facilities having impoundments over 100 acre-feet are not permitted outright or conditionally in the Lane Code. Instead, the County shall analyze the conflicts per the Goal 5 Rule, take an Exception to the applicable Goal if necessary, and apply a special zone to those sites, as specified in Energy Policy 4.

As noted in the Working Paper, resource zoning will help prevent possible sites from being developed for other uses.

Conclusion - Energy Sources

Lane County has identified a number of potential energy sources, many of which are on federal land, and all of which are (1B) sites at this time. There is potential for hydroelectric developments on nonfederal land, but the County contends that it is premature to evaluate conflicting uses. Nevertheless, the County has decided to allow small sites in its F-1 and F-2 Zones conditionally. Larger sites will require plan amendments, along with application of the Goal 5 Rule, exceptions to appropriate goals and possible development and application of a special zone. The County has adopted a policy commitment to this effect. In the meantime, resource zoning will help prevent potential sites from being lost to other uses. (See, however, the Goal 4 section of this report for a discussion of problems with the F-2 Zone.)

Fish and Wildlife Areas and Habitats

Inventory

Information about Lane County's fish and wildlife resources is contained in its Flora and Fauna Working Paper and the addendum to that working paper. Pages 5-10 describe in general each of the 11 major habitat types in the County, along with a discussion of the value of the habitat type to wildlife, and general location of each habitat type. These include:

1. Estuary and Bay
2. Inland Marsh
3. Wet Meadows
4. Lakes and Reservoirs
5. Riparian Vegetation
6. Annual and Perennial Grasslands
7. Coastal Shore Pine/Spruce
8. Douglas Fir/Trailing Blackberry
9. True Fir/Alpine
10. Deciduous Hardwoods
11. Agricultural Lands.

The County prefaces this material by stating that this information "is not considered an inventory and is not accompanied by maps. It is intended merely as background information."

The Working Paper and its addendum contain special sections addressing endangered, threatened, and special concern species, riparian and wetland areas, sensitive fish and waterfowl areas, and big game range. These are discussed separately below.

Endangered, Threatened and Special Concern Species: The Working Paper lists plants and animals which are threatened, endangered, or of special interest (pp. 11-12). Further information is provided for six of these species--northern spotted owl, northern bald eagle, wolverine, silverspot butterfly, western snowy plover, and American osprey (pp. 12-13). This information does not provide location, quality, or quantity information on any specific habitat areas or sites. However, the County indicates that:

1. No spotted owl or bald eagle nests are known to occur on private property;

2. Wolverine habitat is in high elevation, remote areas and therefore in federal ownership;

3. Snowy plover habitat is within state jurisdiction.

4. Osprey nests are found throughout the County, although not in great numbers. The County indicates the ODFW maps show their locations, but these maps have not been adopted or submitted for review.

5. Silverspot butterfly habitat is found only "along a small section of the Oregon Coast." It is recognized in the Coastal Resource Management Plan of Lane County.

Lane County has indicated that Silverspot butterfly habitat occurs on federal land adjacent to the Big Creek (Reneghan) Exception Area as well as on the Renaghan property itself (Exhibit E--Renaghan Amendment, pp. 27, 31). It should be noted that the Exception document contains one statement (Finding 37e) on page 27 which appears to contradict this. Specifically, finding 37e states there are no sensitive species on the property, and that the Silverspot butterfly habitat is located on adjacent federal land only. The Exception document contains several other statements indicating that such habitat occurs in the northwest corner of the property.

The County provides no information at all regarding great blue heron rookeries or pigeon mineral springs, which are considered sensitive bird habitat areas by the Department of Fish and Wildlife. (The exception to this is for two rookeries in the Willamette Greenway. They are addressed in the Goal 15 section of this report.) The inventory of sensitive bird sites developed by ODFW and provided to the Department of Forestry (DOF) as part of a recent management agreement between those agencies, identifies 15 great blue heron rookeries, 21 osprey nest sites, three pigeon mineral springs, and at least one bald eagle nest site in Lane County, most of which are on nonfederal land. According to Flora and Fauna Policy 15, "currently known pigeon springs, heron and raptor (hawk, osprey, and eagle) nest sites. . . shall be placed in a '1B' category."

Riparian and Wetland Areas: Riparian lands are defined by the County as all lands along both banks of Class I streams in Lane County, to a setback line of 100 feet from ordinary high water (Addendum, p. 7).

The County indicates in its Flora and Fauna Working Paper (p. 16) that all lakes, reservoirs, and Class I streams in Lane County have been mapped, but were not included because of budgetary limitations. They are available in the Planning Department offices. The Addendum to the Working Paper (p. 6) states that ODFW has provided maps of all Class I streams, as well as major significant wetland areas. Detailed maps are available for review in County offices, and a generalized summary map is included in the Addendum (p. 20).

The Flora and Fauna Working Paper discusses the values associated with wetlands and riparian areas for both fish and other wildlife types (pp. 14-15). The County notes that the U.S. Fish and Wildlife Service has identified a number of wetland types in its National Wetland Inventory. Currently, about half of the County has been mapped, enabling identification of major wetlands. These include:

1. Fern Ridge periphery, exclusive of parkland;

2. Old Long Tom River channel below Fern Ridge dam, including lands between it and new channel;

3. North Fork Siuslaw fresh-water marsh;

4. Maple Creek marsh;

5. Amazon Canal at its confluence with the waters of Fern Ridge Reservoir.

The County indicates that these areas are mapped in detail on the Plan Diagram maps. More specific location, quality, and quantity information for each of these five wetland areas is contained in the Working Paper Addendum (pp. 11-13).

The County has not inventoried a wetland south of Sutton Lake and east of Highway 101, or a Darlingtonia bog east of Florence. As noted in the 1983 Coastal Goals review of Lane County (p. 8), these wetland were to be addressed under Goal 5:

> The County notes there are only two Goal 18 resource areas east of Highway 101 which do not fall within the coastal shorelands boundary. They are two wetland habitat areas identified in the coastal resource inventory maps. The County should note that it will have to adequately address these two areas later under Goal 5 when it brings the remainder of the County plan into compliance.

The Darlingtonia bog is addressed in more detail in the Natural Areas section of this report.

Sensitive Fish and Waterfowl Areas: The County notes that this is a subcategory of the previous section, Riparian and Wetland Areas (p. 20). Maps have been provided the County by ODFW showing important waterfowl nesting habitat and streams that receive high use by anglers and/or game fish (p. 20), but were not submitted for review. A large-scale map is available in the County Planning offices (Addendum, p. 5). A generalized, small-scale map is included on page 20 of the Addendum which shows the locations of important streams and stream reaches. A list of these specific reaches, by basin, is included in the Addendum (pp. 2-4). All identified areas are of high quality and are considered important (Working Paper, p. 21). The extent of riparian vegetation is described in the previous subsection of this report. The County notes that there are native anadramous fish runs in Big Creek within the Big Creek Exception Area (Exhibit E--Renaghan Amendment, p. 44). These include coho salmon, cutthroat trout and steelhead.

Big Game Range: The County notes that ODFW divides big game range in Lane County into three categories--Major, Peripherial, and Impacted. The Major Range supports the majority of big game and, in general, consists of sparcely developed commercial forest lands. Peripheral Range is generally located on foothill areas between commercial forest lands and valley floors. Peripheral Range supports substantial big game populations and serves as wintering areas for animals in severe winters. Impacted Range consists of those areas that have existing levels of development which preclude future wildlife management options for

maintaining viable wildlife populations and recreational opportunity, although they frequently contain big game populations.

All three big game range areas are depicted on Lane County Wildlife Inventory Maps, according to the Flora and Fauna Working Paper (p. 23). However, these maps were not submitted for review because of budget constraints. They are available in the Planning Department Office (p. 23). The Working Paper notes that the highest quality big game range is in the Major Range because development is limited. Peripheral Range is important, but has enough development to limit big game use and managment options. Impacted Range is of the lowest quality because of existing development (p. 23). The County provides acreages for these three categories (p. 24).

The County recognizes major elk habitat on a portion of the Big Creek Exception site (Exhibit E-Renaghan Amendment, p. 52).

Conflicting Uses/ESEE Consequences Analyses

Endangered, Threatened and Special Concern Species: As indicated earlier, Lane County knows of no spotted owl or bald eagle nest sites on private land. Similarly, wolverine habitat is on federal land. The County notes that the State Parks Division of ODOT regulates vehicular uses in snowy plover habitat (Working Paper pp. 12-13). Specific conflicts with osprey nest areas are not identified, but the County notes that protective measures in riparian areas (e.g., Willamette Greenway permit requirements, coastal shorelands overlays, riparian and wetland area provisions) will resolve conflicts (Addendum, p. 15).

The Working Paper indicates that the Coastal Resources Management Plan of Lane County recognizes the Silverspot butterfly and applies a prime wildlife managment unit to its habitat (p. 13). Specific conflicts and ESEE consequences are not discussed in the Working Paper, however.

It should be noted that a portion of the critical habitat for the Silverspot butterfly is included in the Rock Creek Federal Wilderness Area, recently approved by Congress. Another portion of the habitat is located within the County's Big Creek Exception Area. That exception indicates that the applicant "will enter into contractual arrangements with the Siuslaw National Forest or Western Oregon State College to take whatever measures are necessary to mitigate any potential conflicts or adverse impacts associated with the development" (Exhibit E--Renaghan Amendment, p. 27). According to the Exception (p. 28), the U.S. Fish and Wildlife Service's Endangered Species Office indicates that this project will have not significant adverse impact on the Silverspot's habitat.

Conflicting uses and ESEE consequences analysis have not been conducted for sensitive bird habitat areas, since these resource sites have been placed in a (1B) category.

Inasmuch as the County failed to inventory a number of nonfederal sites as (1C) resource sites (e.g., great blue heron rookeries, pigeon mineral springs, bald eagle nest, osprey nests), the County has not identified

conflicting uses or ESEE consequences of those conflicting uses with these sites. Information does exist for these sites, however, as indicated earlier, enabling the County to conduct such analyses.

Riparian and Wetland Areas: Two major activities conflict with riparian and wetland habitat areas, according to the County's Working Paper (p. 17)--destruction of vegetation for any purpose (e.g., forestry, agriculture, construction, recreation, aggregate extraction), and draining surface or subsurface water which then changes the vegetative structure and generally the habitat value. The County has developed separate ESEE consequence analyses for riparian lands and wetlands.

The riparian lands ESEE consequence analysis is further divided into three categories--(1) resource areas (forest and agricultural lands), (2) rural lands (partially or sparsely developed), and (3) developed and committed lands, including communities (Addendum, pp. 7-10). Based on these analyses, the County decided to develop a (3C) approach in order to limit conflicting uses. ODFW has recommended a 50 foot setback along all class I streams in rural development zones and a 100 foot setback in rural resource zones (Addendum, p. 10).

Separate conflicting uses/ESEE consequences analyses have been conducted for each of the five major wetlands identified (Addendum, pp. 11-13). Based on these analyses, the County has determined that areas owned by the Corps of Engineers (Fern Ridge Reservoir, part of Lower Long Tom, Amazon Canal) have sufficient protection, and furthermore, cannot be regulated by the County since they are in federal ownership. Areas under Coastal Resources Zoning (North Fork Siuslaw, Maple Creek Marsh) are also assumed to be adequately protected. A (3C) approach (e.g., Natural Resource Zoning) is appropriate for all other privately-owned areas (part of Lower Long Tom) (p. 13).

Sensitive Fish and Waterfowl Areas: Removal of riparian vegetation in identified sensitive areas is considered the major conflicting use with these resources (Working Paper, p. 21). The County notes that the ESEE consequences analysis is generally the same as that for riparian areas and wetlands, summarized in the previous section of this report (Working Paper, p. 21). However, the County indicates that since the sensitive fish and waterfowl areas are considered more valuable than others in the County, the effects of vegetation removal can be more significant (p. 21). Based on these analyses, Lane County has chosen a (3C) approach to protect riparian vegetation in such areas "whenever possible" (p. 22). The County notes that ODFW has recommended setbacks of 50 to 100 feet along waterways designated as sensitive fish habitat, plus natural resource zoning for wetlands not within that riparian strip (Addendum, p. 5).

Conflicting uses and ESEE consequences of conflicting uses with fish habitat in the Big Creek Exception Area are addressed on pages 54-56 of the Exception. Based on this analysis, the applicant will be required to protect the anadromous fish through development of a management plan and protection or riparian vegetation (pp. 27, 55).

Big Game Range: The primary conflict with big game range is identified as residential use at densities over one dwelling unit per 40 acres in Peripheral Range, and one unit per 80 acres in Major Range (Working Paper, p. 24). The County indicates that its 80-acre commercial timber zoning is very restrictive in terms of dwelling unit placement, and therefore, "it is unlikely that conflicts will occur" in Major Range areas (Addendum, p. 14). Similarly, the County believes its 40-acre zone will satisfy ODFW's recommended density in Peripheral Range (p. 14). Developed and committed exception areas are considered impacted, and the County has decided that conflicting uses should be permitted in those areas (p. 14).

The conflicts and ESEE consequences of conflicts with major elk habitat in the Big Creek Exception area are discussed on pages 53-54, and 56 of the Exception document. Based on this analysis, the applicant will be required to protect elk winter forage areas (p. 27) and to develop an elk managment plan (p. 32).

Policies

Lane County has adopted numerous policies regarding its fish and wildlife resources (Flora and Fauna Policies, Plan, pp. 14-16). These policies include the following:

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Through the use of County regulations including zoning, seek to minimize the adverse impacts of land use changes on sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies are encouraged to work with landowners to conserve wildlife habitats.

5. Lane County shall investigate fee acquisitions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to protect Goal 5 resources.

6. Riparian vegetation along all Class I streams in the County is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Riparian lands shall be defined as the lands within 100 feet of ordinary high water on Class I streams, and shall be considered "Significant" "1C" areas (in the language of OAR 660-16-000/025); "3C" protection of the riparian resource shall be achieved through development

setbacks and vegetation management regulations within the riparian strip. The setback distance will vary from 100 feet from ordinary high water in rural resource zones to 50 feet from ordinary high water in developed and committed areas; provided a means is made available for review and modification of these requirements where it can be demonstrated that an unduly restrictive burden would be placed on the property owner or, that riparian vegetation does actually extend all the way into the 500 foot or 100 foot setback to the location of the proposed improvements.

Such review and modification shall be spelled out in the zoning districts affected, and shall involve consultation with officials of the Oregon Department of Fish and Wildlife.

7. Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal state ownership; where these do not occur, an appropriate wetlands zoning district shall be developed and applied. Other wetlands from the National Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per Goal 5 requirements if it is clearly demonstrated that an unprotected signficiant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction. (Modification in process.)

8. Sensitive Fish and Waterfowl Areas as identified in the 1983 Revision the Flora and Fauna Working Paper, shall be considered "significant" "1C" resources per OAR 660-16-000/025, and protected per "3C" requirements through protection of riparian and wetland resources as described in the above Policy statement.

9. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, and as revised and updated in 1983, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

10. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna and as revised and updated in 1983.

11. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program.

12. If uses are identified (which were not previously identified in the Plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

13. In its program of protecting "1C" resources, the County shall make maximum practical use of existing land use regulations (e.g., Willamette Greenway Permit, Coastal Resources Zoning overlays, rural forest and agricultural resource zones) to achieve such protection. Duplication of existing standards shall be avoided wherever practicable, provided County-determined Goal 5 and OAR 660-16-000/025 objectives are met.

14. A group known as the "Lane County Flora and Fauna Committee" is to be established and given permanent status by the Board of County Commissioners. The committee shall represent a wide array of environmental interests and the interests of property owners. Its tasks shall include: evaluation of LCDC Goal 5 concerns and resources, development of information to help the County comply with OAT [sic] 660-16-000/025 ("Goal 5 Rule"), research and provision of resource site data to the County, and response to work in progress. Outputs of the Committee shall be presented to the Planning Commissions and subsequently to the Board of County Commissioners.

15. Currently known pigeon springs, heron and raptor (hawk, osprey and eagle) nest sites shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluation per "1B" requirements within two years of the date of plan adoption. Lane County shall consider enlarging the list of significant nest sites whenever information about additional sites becomes available. The significant nest sites shall be those identified by Jim Greer and Jim Hutchison (Department of Fish and Wildlife biologists) in a

12/20/83 letter to Jim Mann (Senior Planner, Lane County Land Management Division), and these sites shall be incorporated into the Lane County General Plan Policies document as Flora and Fauna Exhibit A.

16. Rare and endangered vascular plants, identified in the 1/8/84 list prepared by the Native Plant Society of Oregon shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluated per "1B" requirements within two years of the date of plan adoption. This list of rare and endangered vascular plants is included into the Lane County General Plan Policies document as Flora and Fauna Exhibit B.

17. Lane County recognizes that Douglas fir old growth stands provide valuable and unique wildlife habitat and will encourage the Forest Service and Bureau of Land Management to maintain acreage in this age class sufficient to ensure viable populations of dependent wildlife species.

Policy 22 (Plan. p. 5) states:

> Sites considered 'significant' in terms of OAR 660-16-000 through 660-16-025 but requiring that the Goal 5 ESEE consequences analysis process be delayed (the '1B' option) shall be protected by Lane County through the application of interim protection measures. Such interim protective measures shall be considered and applied at the beginning of the plan refinement process for the "significant" sites and after sufficient information is available regarding the location, quality and quantity of the "significant" sites.

Lane County's Forest Lands Policy 17 (Plan, p. 10) states:

> Lane County recognizes that the Oregon Forest Practices Act shall be the only mechanism regulating the growing and harvesting of forest tree species on commercial forest lands unless Goal 5 resource sites have been recognized and identified as being more important through an analysis of ESEE consequences and conflict resolution as per Goal 5. No other findings, assumption, goal policy, or other planning regulation shall be construed as additional regulation of forest management activities.

Implementing Measures

Lane County has adopted the following riparian setback standards and riparian vegetation maintenance standards in its F-1, F-2, E-RCP, ML-RCP,

PR-RCP, and DR-RCP Zones (Lane Code, Sections 16.210(7)(a) and (b), 16.211 (9)(b) and (c), 16.212 (8)(b) and (c), 16.214(7)(b) and (c), 16.215(6)(a) and (b), and 16.232(5)(b) and (c), respectively):

(b) Class I Stream Setbacks. No structure other than a fence or sign shall be located closer than 100 feet from the ordinary high water of a Class I stream designated for riparian vegetation protection by the Comprehensive Plan. A lesser setback may be allowed if:

(i) The Department of Fish and Wildlife is consulted by the Department at least 10 days prior to issuing a permit for a structure; and

(ii) The riparian vegetation does not actually extend all the way into the 100-foot setback to the location of the proposed structure, and the riparian vegetation has not been removed in violation of the below riparian vegetation maintenance standards; or

(iii) An application for a variance to the above setback standard has been approved pursuant to LC 16.256 with findings of compliance to the Comprehensive Plan policies for the protection of Class I streams and riparian vegetation.

(c) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Comprehensive Plan:

(i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.212(8)(c)(i) above. Where vegetation removal beyond that allowed in LC 16.212(8)(c)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(a) Commercial forest practices regulated by the Oregon Forest Practices Act.

(b) Vegetation removal necessary to provide water access for a water dependent use.

(c) Removal of dead or diseased vegetation that poses a safety or health hazard.

(d) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

In the PF/RCP C-R, RCP, RA-RCP, and RR-RCP Zones (Sections 16.219(4)(b) and (c); 16.223(5)(b) and (c); 16.229(7)(b) and (c); and 16.231(7)(b) and (c), respectively), the setback is 50 feet, rather than 100 feet.

The following zones indicate the Class I Stream and Riparian Vegetation requirements of LC 16.229-35(2) and (3) shall apply: C-1, RCP (Section 16.220); C-2, RCP (Section 16.221); C-3,RCP (Section 16.222); M-1, RCP (Section 16.224); M-2, RCP (Section 16.225); and M-3, RCP (Section 16.226). The RG-RCP Zone (Section 16.230) indicates that Section 16.299(2) and (3) shall apply. However, the Lane Code does not contain any section with the numbers 16.299-35(2) and (3) or 16.229 (2) and (3).

As discussed in the open space section of this report, Lane County has adopted a Natural Resource Zone (NR-RCP) (Lane Code, Section 16.213) which is, in part, intended to protect aquatic and other wildlife habitat areas. Please refer to that section of this report for details. It should be pointed out that the NR zone does not contain riparian setback and vegetative maintenance standards. Although major development in the NR zone is not anticipated, the NR zone permits a variety of structures. These structures should be required to be set back in order to protect riparian vegetation, just as they are in other zoning districts. In fact, since the purpose of the NR zone is to protect wildlife and aquatic habitats, there is even more reason why such setbacks should be required.

A review of the County's zoning maps indicates that the NR Zone has been applied to a number of habitat areas in the County. One of the sites zoned NR is the Big Creek Exception Area, which contains fish and big game habitat, and habitat for the endangered Silverspot butterfly. According to the Exception (p. 27), no alteration of the riparian vegetation will occur, and the owner has agreed to enter into contractual arrangements to protect elk winter forage areas. The applicant will also take measures that may be necessary to protect the habitat of the Silverspot butterfly.

Contrary to statements contained in the Flora and Fauna Working Paper, Lane County's F-1 (Nonimpacted Forest Lands) Zone establishes a 40-acre (rather than an 80-acre) minimum lot size (Lane Code, Section 16.210(6)), except that (a) a land division to create a parcel of less than 40 acres may be allowed conditionally if it is for separating an existing residence from adjoining forest land, and (b) a common property boundary may be adjusted so long as no additional parcels are created. As noted in the Flora and Fauna Working Paper (p. 24), and as discussed earlier in this report, ODFW's recommended density in Major Big Game Range (which, according to the County, is mostly zoned F-1) is one unit per 80 acres. Inasmuch as the F-1 zone does not allow dwellings, this density standard has less meaning in Lane County's F-1 Zone.

The F-2 (Impacted Forest Lands) Zone (Lane Code, Section 16.211) requires a minimum of 20 acres for creation of a woodlot or farm parcel for growing grapes, berries, or horticultural specialties, and 40 acres for creation of a farm parcel. However, there is no requirement that, in the Big Game Range portions of that zone, densities will not exceed those

recommended by ODFW (i.e., one unit per 40 acres in the Peripheral Range, or one unit per 20 acres with clustering and siting standards; one unit per 80 acres in the Major Range, or one unit per 40 acres with clustering and siting standards).

In the Exclusive Farm Use Zone (Lane Code, Section 16.212), a dwelling or mobile home not in conjunction with farm use may be approved if it meets certain criteria; similarly, a division of land may be allowed for a dwelling not in conjunction with farm use if it meets those criteria and does not conflict with the purpose of the zone. However, none of the criteria address ODFW's dwelling density recommendations, and the purpose statement of the zone does not refer to maintaining wildlife habitat values. As noted in the Goal 3 section of this report, minimum lot size is from 20 to 60 acres, depending upon location. As noted in the Flora and Fauna Working Paper (p. 24) and as discussed earlier in this report, ODFW's recommended density in Peripheral Big Game Range (which, according to the County, is mostly zoned Exclusive Farm Use) is one unit per 40 acres. There are no standards in the zone which require lot sizes to be 40 acres or greater in the Peripheral Big Game Range portions of the zone, or alternatively, that require clustering of dwellings (to allow densities as great as one unit per 20 acres.

Lane County has adopted a Marginal Lands (ML-RCP) Zone (Lane Code, Section 16.214) which appears to have been applied to wildlife habitat areas, and could be applied to other areas in the future. (The County did not submit maps showing the locations of its big game habitat areas, so it cannot be determined with certainty whether it has been applied in big game habitat areas). ORS 197.247(8) requires that application of such a zone satisfy all requirements of other Goals, in this case, Goal 5. The County has not adopted findings demonstrating how the specific applications of the ML zone comply with the Goal 5 Rule. Criteria for approval of future ML zoning (Section 16.214(4)) do not include compliance with Goal 5.

Section 16.215 of the Lane Code is the County's Park and Recreation (PR-RCP) zone which has been applied to a number of sites in the County. The zone permits a number of recreational uses and activities outright, and a number of others if within a built and committed exception area that is designated as nonresource land. The zone also lists uses that are subject to hearings official approval. Section 16.215(5)(e) of the zone contains the following conditional use approval critera:

> When a use is proposed in an area designated as Major Peripheral Big Game Range or as Sensitive Fish and Waterfowl areas as shown on the Lane County Wildlife inventory, the Oregon Department of Fish and Wildlife shall be notified and their comments shall be considered in evaluating the proposed use.

The PR zone allows a number of uses that could conflict with wildlife habitat and other Goal 5 values, and with the purpose of the zone, as noted in the Goal 2 section of this report.

The County has not adopted any implementing measures to protect and/or resolve conflicts with sensitive bird habitat sites.

As noted in previous acknowledgment reviews (e.g., Tillamook County), the Commission has allowed counties to adopt plan policies and ordinance language which clearly expresses the intent to rely on the FPA, Rules, and the March 1984 agreement between the Board of Forestry (BOF) and the Fish and Wildlife Commission (F&WC) to resolve conflicts between timber management activities and sensitive bird sites. Lane County has no such policy commitment, and it has not inventoried all sites on the BOF/F&WC list of sites covered by this agreement. However, even if such a policy is adopted by counties, they are still required to adopt implementing measures to resolve conflicts between other uses (e.g., development) and sensitive bird sites. Lane County has not adopted such measures.

Lane County has not identified sites that are considered to be more important than commercial forest operations based on a Goal 5 ESEE consequences analysis, per Forest Lands Policy 17 (Plan, p. 10), nor has it adopted and applied any implementing mesures to such sites which regulate timber management activities. "However, this is because the County knows of no such sites at this time. The County has indicated that this is a policy which will be applied in the future, as appropriate" (Roy Burns, Planning Director, personal communication, August 8, 1984).

Objections

1. The Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon and the Legue of Women Voters of Central Lane County (LWV) have objected to the County's approach to sensitive bird nesting and use sites. Specifically objectors point out that the Flora and Fauna Working Paper discusses only some of the species considered sensitive. Missing are designations of heron rookeries and pigeon mineral springs. Policy 15 addresses all sensitive species (bald eagle nests, heron rookeries, snowy plover habitat, spotted owl nests, osprey nests and pigeon mineral springs). Further, objectors point out that Policy 15 places these species in a (1B) category. Both ODFW and 1000 Friends indicate that the County possesses inventory information (including recent ODFW updated information) which is sufficient to complete the Goal 5 process for this resource category. ODFW indicates that the location, quality, and quantity information provided the County is similar to that provided to other counties which have completed the Goal 5 process and which have been acknowledged. The League of Women Voters is concerned that two years is too long for these resource sites to be without protection. Most are not in the Greenway, and therefore do not even receive minimal protection.

   1000 Friends also objects to the fact that neither Flora and Fauna Policy 2 or 3 provides adequate protection for these sensitive species. Policy 2 simply indicates the County will recognize existing programs that protect species; it does not bind the County to any particular course of action. 1000 Friends believes the County

must make an affirmative commitment to protect threatened and endangered fish and wildlife species. Policy 3 also fails to guarantee protection of sensitive species since it requires the County to seek to minimize adverse impacts through County regulations (including zoning). 1000 Friends suggests that present zoning may be construed to "minimize adverse impacts" but this may not necessarily provide adequate protection for particular sites.

1000 Friends also objects to the use of the definition of "sensitive species" used in Policy 3. Objectors believe it is overly general and could be construed by decision-makers to exclude certain species. Objectors believe that County Policy 3 should reference the list of "species of special concern" that appears in the Working Paper, rather than use a vague term in the policy. Similar comments have been filed by Oregon Forest Industries Council.

2. ODFW and 1000 Friends have objected to Flora and Fauna Policy 11 since it regards densities above ODFW's recommendations in big game areas to constitute a conflict. ODFW regards its recommended densities as the approach to resolve conflicts between dwellings and game range. 1000 Friends states that Policy 11 allows residential densities to exceed ODFW recommendations "if conflicts can be resolved in accordance with OAR 660-16-000." Objectors believe this allows the County to justify density levels which exceed those recommended by ODFW through an analysis of ESEE consequences. Objectors do not believe this exclusion is consistent with the Goal 5 Rule.

3. ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones. Similar objections have been filed by 1000 Friends of Oregon. Objectors point out the the F-1 zone establishes a minimum lot size of 40 acres, but smaller divisions can be made without regard to big game impacts. The F-2 zone establishes minimum lot sizes of 20 and 40 acres for forest and farm uses, which also fail to meet ODFW's recommended densities for Peripheral Range, according to objectors. 1000 Friends points out that the Flora and Fauna Working Paper Addendum and Policy 11 prescribe clustering and siting of standards, but these are not carried out in the F-2 zone. The Addendum (p. 14) also references forest land minimum lot sizes which are no longer current.

4. ODFW and 1000 Friends object because Goal 5 has apparently not been applied in the process of designating marginal and nonresource lands. Objectors are particularly concerned how this affects big game range areas. ODFW contends that the County's plan provisions for lots of record, resource and nonresource-related dwellings, marginal lands, and nonresource lands could allow considerable development in game range. The County's F-1 and F-2 zones do not adequately assure that recommended densities will be maintained. This is further complicated by the fact that it is unclear where

marginal and nonresource lands are located, and therefore the extent to which they are in game range areas, since the zone map format and resource inventory map formats are not easily comparable. 1000 Friends points out the Goal 5 must be applied whereever Goal 5 resources occur, even in areas designated marginal or nonresource land.

5. ODFW, 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's treatment of the Pudding Creek Heronry. Objectors point out that the County conducted a Goal 5 ESEE consequences analysis, but that inasmuch as the sand and gravel plan and zone designations have been retained on the site, conflicts have not been resolved. Please refer to the Goal 15 section of this report for further details concerning objections to the zoning of this site.

6. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Objectors indicate that the County has not adopted a program that is adequate to protect and/or resolve conflicts with the site under Section (3C) of the Goal 5 Rule. Objectors point out that the 1981 LCDC order for the Eugene/Springfield Metro area include a requirement that the ESEE consequences of designating the island for sand and gravel use must be evaluated in the context of regional aggregate supply and demand. The IOTC further required that if the island were to retain a partial sand and gravel designation, the Metro Area Plan and the Lane Code (Section 10.210) must be amended to require that limited aggregate extraction will minimize the impact on scenic and wildlife values. The IOTC also referenced Goal 15 requirements and IOTCs. Objectors contend that neither the Goal 5 nor Goal 15 IOTCs have been adequately addressed. These objections are also contained in the Goal 15 section of this report.

7. 1000 Friends of Oregon has objected to the fact that Lane County has placed only five noncoastal wetlands in its (1C) inventory, and has placed all others in a (1B) category. 1000 Friends believes the County has sufficient information to be able to classify the others as either (1A) or (1C), since such information was given to the County by ODFW, interested citizens, and the Lane County Flora and Fauna Committee. Objectors indicate that Goal 2 Policy 22 is inadequate for these (1B) sites since it requires only that interim protection be applied at the beginning of the plan refinement process --no sooner. Objectors point out that Goal 15 requires protective measures be applied as soon as their significance has been determined.

   Finally, 1000 Friends indicates that the U.S. Fish and Wildlife Service's National Wetland Inventory is the basis for Lane County's wetland inventory. Flora and Fauna Policy 7 states that this inventory, although incomplete in Lane County, will be used to evaluate (1B) wetlands within two years of the date of plan adoption

or when the national inventory is completed. 1000 Friends points out, however, that such an inventory is not scheduled for completion for another 5-10 years, and Lane County is not within a priority inventory area. Objectors believe the County should amend Policy 7 and the Addendum to the Flora and Fauna Working Paper (p. 6) to recognize alternative sources of data shall be used to assess the significance of wetlands and to identify their boundaries.

8. 1000 Friends has objected because the County definition of wetlands in its Working Paper is much narrower than that contained in the Statewide Planning Goals or the U.S. Fish and Wildlife Service, but the County has not justified how such a definition is consistent with Goal 5. The Working Paper states that a wetland is "an area in which open, standing water is present for at least six months out of the year and is a minimum size of one acre." Objectors indicate the County has no definition of wetlands in either its plan policy document or in its zoning ordinance.

9. 1000 Friends objects to the fact that Lane County is relying on the FPA to maintain riparian corridors along Class I streams and wetlands, and will take no actions to limit conflicting uses in areas subject to the FPA. Objectors state that there is no analysis in the submittal materials which demonstrates how the FPA and Rules provide protection for riparian resources consistent with Goal 5. Therefore, 1000 Friends objects to LC 16.210(7) and 16.211(9).

10. 1000 Friends objects to the County's failure to apply riparian protection measures around lakes and along Class II streams. Objectors point out that Class II streams regulate water temperature, quality, and quantity of downstream Class I streams.

11. Friends of the Oregon Coast has objected to the County's Renaghan Amendment (Big Creek Exception) for a number of reasons, some of which relate to fish and wildlife concerns. These are as follows:

    a. Objectors believe that many of the findings are "contractory and irrelevant." Objectors cite two examples. The first is that finding 37d (p. 27) conflicts within finding 37e (p. 27). One calls for establishing permanent elk forage areas; the other calls for maintaining the property in forest. Objectors also indicate that the County's claim that there are no sensitive species on the property contradicts findings 40a (5) and 44b(6) which state that the northwest corner of the property contains Silverspot butterfly habitat.

    b. Objectors claim that because the applicant retained a consulting wildlife biologist, his statements in the record should be expected to support the establishment of a destination resort. Objectors believe that his statements are treated by the County as findings of fact although they sometimes "are argumentative of the County's Coastal Sub-Area Plan and of the Oregon Department of Fish and Wildlife's Management plans."

c. Objectors believe that, although the applicant and ODFW will be required to work together to mitigate adverse impacts on fish and wildlife, these efforts will be "experimental" and therefore cannot justify the resort complex in the the middle of prime and sensitive habitats.

d. Objectors point out that the Exception recognizes ODFW's concerns about increased fishing pressure on Big Creek as a result of the development, and that potential harm can only be mitigated by regulating sport fishing (through reductions) on the creek. Objectors feel that long-time anglers will therefore be penalized by the development.

Response to Objections

1. Objectors are correct in pointing out deficiencies in the County's inventory of sensitive bird nesting and use sites. Information on location, quality, and quantity is available, yet the County has taken a (1B) approach to several of the species identified. Sufficient information exists for the County to be able to complete the Goal 5 process for this resource category.

   Objectors are also correct that Flora and Fauna Policies 2 an 3, themselves, do not guarantee protection for sensitive species, particularly in light of the absence of implementing measures to provide such protection. The adequacy of these policies can be judged only after the County completes the Goal 5 process for the habitat areas of these species. Lane County has erroneously placed such species in a (1B) category, and has not yet completed the Goal 5 process. Depending upon this analysis, the policies may have to be modified, and implementing measures will have to be adopted. The concern that Policy 3 is unclear as to which species or habitat areas are covered by the policy is valid.

2. Policy 11 states:

   > Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program.

   Objectors are not correct that this policy violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this

policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU Zones which ensure that ODFW's density standards will be achieved.

The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or prevent conflicts between dwellings and big game habitat. However, as discussed below, the County has not adopted such standards in its zoning ordinance.

3. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone.

4. Objectors are correct that Goal 5 has not been applied by the County in the process of designating marginal lands. ORS 197.247(8) requires that applications of a marginal lands zone must satisfy all requirements of other Goals, including Goal 5. The ML Zone itself also does not include language which assures compliance with Policy 11."

"Objectors are not correct that the Goal 5 process was not addressed in the process of designating nonresource lands. However, the Goal 5 conflicting uses/ESEE consequences analysis for one of the nonresource areas--Cerro Gordo--does not justify the residential densities proposed. Specifically, the site is located within major as well as peripheral big game habitat. Conflicts with big game habitat are recognized, but the applicant asserts that the RR-5 designation 'clearly and precisely limits the densities and uses allowed on the property to a level which will assure good deer habitat . . .' However, the ESEE consequences analysis does not support this statement. The applicant summarizes the potential negative environmental consequences of development in deer habitat as loss of habitat, disturbance of wildlife, interference with wildlife movement, increased deer populations due to decreased hunting pressure, wildlife damage, imbalance of species diversity, pollution of water sources, wildlife injuries, and ODFW complaints. The only positive impact identified is improvement to the habitat due to possible native plantings and water impoundments and education of residents about the needs of wildlife. The economic

consequences are identified as damage to landscaping and gardens. The social impacts are described as 'ultimately not being allowed to live in a rural setting.'

The applicant has proposed a wildlife management plan which calls for clustering buildings and maintaining wildlife corridors. Although the proposed clustering and wildlife corridor measures will help resolve some of the conflicts identified, the overall density of development (with clustering) is one unit per five acres. ODFW recommendations are one per 80 acres (or one per 40 acres with clustering) in major big game habitat, and one per 40 acres (or one per 20 acres with clustering in peripheral habitat. According to the County's own plan (Policy 11), such densities cannot be exceeded without being justified through an ESEE consequences analysis. As indicated above, the applicant's ESEE consequences analysis does not support development at densities which exceed ODFW's recommendations, nor does the analysis provide justification for that level of development, in light of the negative impacts such development would have on habitat values. The County's findings in support of nonresource designation for Cerro Gordo indicate that approval is conditioned upon the fact that residential development will be clustered, and that provisions of the wildlife management plan 'in substantially its present form subject to modifications' will be followed. However, it is unclear what the word "substantially" means, and what modifications would be made. Also, the degree of clustering is unclear in the wildlife management plan. The plan proposes 10 to 20 clusters of 1 to 30 lots each. The ultimate number and configuration of these clusters is not specific. There is a significant difference between 10 clusters of 2 lots and 20 clusters of 30 lots each. It should be pointed out that the wildlife management plan was prepared for a 1,000 acre proposal. According to the applicants, this proposal has been reduced to 600 acres (Chris Canfield, personal communication, August 14, 1984). This adjustment has not been reflected in the submittal materials, however.

The mitigation measures proposed will help lessen the conflicts between deer and the development. However, even with the implementation of such measures, negative impacts will occur. The County has decided to allow such impacts to occur, but has not justified such a decision through an ESEE consequences analysis. This is not to say that no development would be possible at the Cerro Gordo site. However, the County must clearly specify what level of development and density and clustering provisions are anticipated, and must either justify (through an ESEE consequences analysis) allowing such impacts to occur, or modify the density and/or configuration of units so that the impacts are acceptable. Whatever decision is made must be supported by adequate reasons, according to the Goal 5 Rule." See the Goal 2 section of this report for further information.

5. The response to the objections regarding Pudding Creek Heronry is presented in the Goal 15 section of this report.

6. The response to the objections regarding Big Island is presented in the Goal 15 section of this report.

7. The County has indicated it has sufficient inventory information on only five noncoastal wetlands at this time. 1000 Friends has not provided location, quality, or quantity information on specific wetlands it believes should be (1C) sites, rather than (1B) sites.

   ODFW has not objected to the County's determination that only five wetlands are (1C) and the remainder are (1B) sites. 1000 Friends is correct that Policy 22 calls for protection of (1B) sites only at the beginning of the plan refinement process. However, the Goal 5 Rule does not require any interim protection for (1B) sites.
