* Note: The 'Community' Plan Designation is implemented by various zoning districts as indicated, zones which also implement specific Plan designations other than 'Community'."

Conclusion

The requirement has been met.

Requirement

3. Delete the provision in Sections 16.015 and 16.252 which permit legislative zone amendments to be adopted by order rather than by ordinance.

Response

Lane County's Development Code (Section 16.015) was amended (Ord. 9-84) to require that only quasi-judicial zone amendments be adopted by order. The section in the County Code which permits adoption by order applies to the County Board, Planning Commission and Hearings Official. An adoption by Ordinance is required for all legislative amendments.

Conclusion

The requirement has been met.

Requirement

4. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone these lands identified in the Goal 2 Exception with the appropriate resource zone.

Response

Early in the review of the County's built and committed exceptions areas, Department staff identified certain areas that were not justified. In response to these noted deficiencies, the County adopted the first set of supplemental findings prior to issuance of the DLCD June 29, 1984 report (Order No. 84-6-19-16). These findings were reviewed in that report and found to address most of the deficiencies identified by Department staff. However, the Commission did not accept and approve these findings at their July 19, 1984 meeting because the County had not complied with the Expedited Notice Procedures for Acknowledgment (OAR 660-04-033) (See Lane County Acknowledgment Report, June 29, 1984, p. 26). To correct the oversight, the County followed the Expedited Notice Procedures leading up to the adoption of the second set of supplemental findings and provided oportunities for commentors and objectors to review the first set of supplemental findings. As a result of compliance with OAR 660-03-033, the first set of supplemental findings (Order No. 84-6-19-16) along with the other revisions can be affirmed.

In response to IOTC (4), Lane County redesignated 870 acres to an appropriate resource desigation (ORD. No. 891). For the remaining areas, the County adopted the second set of supplemental findings (Order No. 84-9-11-23) to justify the areas as committed. These findings provide additional information on recent partitions and subdivision activities along with information on more recent development. This information was not provided in the earlier submittal because of outdated maps and ownership listings. Address maps showing location of dwellings, mobile homes and recent road development provide most of the information addressing the deficiencies noted earlier. In addition, specific findings provide reasons why it is impracticable to apply a resource goal to areas that are not built upon but are irrevocably committed to nonresource uses.

Conclusion

The requirement has been met.

Based on the information contained in the County's original exception document and supplemental findings (Order No. 84-6-19-16 and Order No. 84-9-11-23), the County has provided substantial evidence consistent with OAR 660-04-025 and OAR 660-04-028 to support the conclusion that all areas, for which the County has taken a Goal 2 exception are no longer available for resource use and are irrevocably committed in their entirety.

Requirement

5. Amend the plan to clearly identify areas zoned PR which are within built and committed exception areas. For those areas within an exception area, provide for information addressing OAR 660-04-025 requirements or exclude those lands from areas designated as a built and committed exception area.

Response

The plan was amended (Ord. No.889) to include a list of tax lots zoned PR that are within built and committed exception areas. This action satisfies the first part of the above requirement. Information addressing the exception criteria can be found in the County's original exception document (Ord. No. 884) and the two sets of supplemental findings (Order No. 84-6-19-16 and Order No. 84-8-11-23). The adequacy of these findings is discussed under Goal 2 requirement 4 of this report.

Conclusion

The requirement has been met.

Requirement

6. Amend the PR-RCP Zone to include standards for uses permitted outright (consistent with ORS 215.213(2)). Note: These should not include review of minor betterment activities as described in ODOT's State Agency Coordination Program.

Response

The PR-RCP Zone was amended (ORD. 9-84) to require that uses authorized under ORS 215.213(2)(G) be subject to Director approval consistent with ORS 215.213(2)(LC 16.215(3)). Minor betterments and general improvement of existing parks or recreational facilities are permitted outright (LC 16.215(2)(d)).

Conclusion

The requirement has been met.

Requirement

7. Amend the zoning code to exempt maintenance and improvments in Jennie B. Harris State Park and Squaw Creek State Wayside from conditional use procedures. This is most easily accomplished by zoning all of these parks to PR.

Response

The County plan and zoning maps were amended (Ord. No. 898) redesignating Jennie B. Harris State Park and Squaw Creek State Wayside as Park and Recreation (PR).

Conclusion

The requirement has been met.

Requirement

8. In conjunction with compliance requirements under Goal 11 of this report, the County must (1) clearly define uses, densities, unit quantity, and levels of service appropriate to rural "cluster" subdivisions, and (2) adopt appropriate ordinance amendments implementing these standards. Densities exceeding those appropriate for rural areas shall additionally require a Goal 14 exception.

Response

The County has amended the plan to contain a policy which insures that urban levels of development will not occur in rural areas under the Cluster Subdivision Standards. The policy contains language parallel to the Commission's administrative rule on establishing new urban uses in rural areas (OAR 660-14-040). Prior to approving a cluster subdivision, with more than 20 units and which includes any lots less than 5 acres, the County must make findings similar to those required for an exception under Goal 14. These amended requirements are as follows (Ordinance PA 889):

> "Cluster subdivisions shall be deemed appropriate to a rural area when the following criteria are satisfied:
> 1. Consistent with the intent and requirements of OAR 660-14-040(2) and (3), a showing must be made that the development will not represent an urban population or demand an urban level of facilities and services. For purposes of meeting this standard, affirmative findings must be made addressing the following:
> a. The level of development represented by the development cannot be reasonably accommodated through the expansion of an existing urban growth boundary or by intensification oif development at an existing rural center.
> b. The long-term environmental, economic, social and energy consequences resulting from the development, considering measures designed to mitigate negative impacts, are appropriate to the rural area. Factors to be considered include whether the size of the development is appropriate to the proposed rural area and whether the air, water, energy and land resources of the surrounding area are adequate to serve and not adversely affected by the development.
> c. The proposed development is compatible with or can be made compatible with adjacent uses considering:

(1) Whether the development detracts from the ability of existing cities and service districts to provide services, and
(2) Whether the potential for continued resource management of the land at present levels surrounding and nearby the development is assured.

d. An appropriate level of rural facilities and services are available or can be provided in a timely and efficient manner.
e. The approval of the development is coordinated with affected jurisdictions and is consistent with the comprehensive plans of the affected jurisdictions and the Lane County Rural Comprehensive Plan.

2. The development will not:
   a. Generate traffic which will exceed the carrying capacity, as defined by Lane Code Chapter 15, of adjacent public and private roads.
   b. necessitate a higher level of police service than presently provided to the surrounding area.
   c. Occur within one mile of an existing urban growth boundary and/or share any urban service provided within a neighboring urban growth boundary.
   d. On the whole require an urban level of service.
3. Reasonable assurances must be provided that the cluster shall not generate students in excess of the capacity of affected facilities within the appropriate school district.
4. The development represents a concentration of people who generally reside and work in the area.
5. Deed restrictions which ensure that commucnity water and sewer systems shall remain viable and under private ownership shall be required. Cluster subdivisions which propose to form or use a public water or sewer system shall not be allowed.
6. Cluster subdivsions shall be limited to residential use. No commercial or industrial uses will be allowed within existing or proposed cluster subdivisions.
7. All cluster subdiviions must be within an existing Rural Fire Protection District.
8. No other identifiablke substantial increase of a public service shall be necessitated by the approval of a cluster subdivision."

The cluster development standards also contain provisions to assure their application to a series of small cluster developments (i.e., less than 20 units and therefore, exempt from standards 1 through 8 above).

Conclusion

The requirement has been met.

The Lane County cluster development standards contain the same standards as OAR 660-014-040. These standards assure that urban development will not occur in rural areas except where OAR 660-14-040 criterion are met.

Requirement

9. Amend Lane Code Chapter 16 to correct inconsistencies in the cross-referencing system, where subsections are referred to within the same section of the ordinance.

Response

The County Rural Zoning Ordinance (Chapter 16) has been codified eliminating cross referencing from the older Zoning Ordinance (Chapter 10). As a result, all inconsistencies previously identified have been corrected.

Conclusion

The requirement has been met.

Requirement

10. Amend the plan (a) to include additional findings justifying the claim that Goals 3 and 4 do not apply to property known as Dillard Highland's 2nd Addition, or (b) justify an exception to Goals 3 and 4, or (c) rezone the subject property with a suitable resource zone. If the County chooses option (a) or (b), Goal 5 wildlife habitat issues must also be addressed.

Response

Lane County amended its nonresource findings for Dillard Highland's Second Addition to include additional findings supporting the claim that Goals 3 and 4 do not apply as well as information indicating that the Goal 5 wildlife habitat issue has been resolved. The contents of the County's supplementary findings includes the following information: (1) amended soils information, introduced by soil scientist Joel A Norgren, PHD, which concludes that (a) 99.5 acres (65 percent) of the 154-acre parcel consists of SCS agricultural capability classes VI, and (b) 85.5 acres (56 percent of the 154-acre parcel consist of soils with no woodland site class; and (2) findings indicating why it is impractical to apply Goals 3 and 4 to this property. Reasons supporting these findings include the following:

"a) The Dillard Highlands is located on the east side of Dillard Road and the south hills ridgeline approximately one-third of a mile southeast of the Eugene city limits and the urban growth boundary.

It is within an area of very poor soils as indicated by the Soil Conservation Service maps. It is surrounded by a sloping terrain and a 'Developed and committed' area to the west, a 'developed and committed' area and a major BPA powerline to the north, a 'developed and committed' 260 feet power line and natural gas easement to the east, and an approved 'Non-Resource' area to the south. Although man-created boiundaries, they make it impracticable to apply the resource goals to he subject property (Dillard Highland's 2nd Addition; Supplemental Findings, August 24, 1984, pp. 15, 16).

b) Dillard Highland's status as a significant wildlife habitat has already experienced significant impacts because of existing urban and rural residential development in the area. Areas with 'built and committed' exceptions and this level of existing conflict are defined as 'Impacted Big Game Range' by Lane County's Flora & Fauna working paper (March 1982). These are areas 'that have existing levels of land use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity...the subject property is already impacted as big game habtat..." (Dillard Highlands, 2nd Addition, Supplemental Findings, August 24, 1984, pp. 18-19).

Conclusion for Dillard Highland's Second Addition

The claim that Goals 3 and 4 do not apply to Dillard Highland's Second Addition is sustained.

Substantial evidence has been provided by the County indicating that the 154 acres of Dillard Highland's Second Addition is not composed of predominantly SCS Class I-IV agricultural soils or soils with a cubic foot site index capable of producing commercial forest species.

In addition, the County indicates that the property is considered "impacted" big game habitat because of surrounding development activities and that, issues regarding Goals 4 and 5's habitat requirements are therefore resolved.

The supplemental findings of August 24, 1984, when combined with the findings previously discussed in the Departments' July 19, 1984 (addressing the "other lands" tests contained in Goal 3's definition and the remaining aspects of Goal 4's definition) are adequate to support the position that Goals 3 and 4 do not apply.

Requirement

11. Amend the plan to justify the potential one dwelling unit per 5-acre density authorized for Cerro Gordo's 600 acres in view of ODFW's

accepted wildlife habitat density standard for cluster developments of one dwelling unit per 40 acres. (See also Goal 2's cluster development issue.)

Response

The County's policy is to abide by ODFW's density recommendations unless the entire Goal 5 process is applied and a decision to exceed these recommendations is justified. Lane County has adopted supplementary findings (Order No. 84-9-11-23) and has revised its ESEE consequences analysis and wildlife habitat management plan for Cerro Gordo to justify development in a recognized big game habitat area, in excess of ODFW's recommended density standards. A meeting was held on August 14, 1984, with ODFW, Cerro Gordo and DLCD representatives to discuss this issue. It was determined that, in this case, ODFW density recommendations do not have as much bearing on the acceptability of the development as do other factors. These factors include the overall number and location of dwellings and roads, as well as mitigating measures incorporated into the development. The following factors in the revised Cerro Gordo proposal are particularly relevant (Order No. 84-9-11-23):

1. There is an overall "cap" on the number of lots which could be developed (i.e., 60 lots).

2. No more than one-third of the residences will be located north of the BLM road (the habitat area considered more sensitive to human disturbances).

3. Wildlife corridors from 600 to 1800 feet in width shall be provided along streams.

4. Residential development will be confined to a band 2,400 feet in width along an existing BLM road.

5. Residences must be clustered.

6. Goal 2 cluster subdivision requirements shall apply (see the Goal 2 section of this report for details).

7. Cerro Gordo is either adjacent to or near large tracts of federal and private forest land.

8. Lane County will provide ODFW with the opportunity to review and comment on the preliminary subdivision application to assure mitigation measures are achieved through proper clustering.

9. Road development will be minimized and private roads within forested areas will be closed to vehicular use except for emergencies, maintenance, and forest management activities.

10. A Cerro Gordo Design Committee as well as the Cerro Gordo Cooperative itself shall review and monitor actions and changes in wildlife conditions on an ongoing basis.

11. Pets shall be limited.

Because of these and other factors addressed in the County's amended findings, the impacts on big game range are thought to be acceptable by ODFW. Allowing such conflicts to occur, but with restrictions outlined above, is a (3C) decision under the Goal 5 Administrative Rule. The County has justified this decision.

Conclusion

The requirement has been met.

Requirement

12. Remove the AO zoning from all privately owned parcels within the Mahlon Sweet Airport Exception Area consistent with Transportation Policy 11 and apply an appropriate resource zone to these lands.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Requirement

13. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone TL 1600 in the Royal Avenue Exception area with the appropriate resource zone.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Requirement

14. Amend the zoning code to exempt maintenance and improvements in Armitage State Park from conditional use procedures. This is most easily accomplished by zoning all of this park to PR.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 2

Lane County complies with Goal 2 for the rural portions of the County, excluding the Metro Plan area.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 2.

GOAL 3: AGRICULTURAL LANDS

Requirement

1. Amend the EFU Zone to require disqualification from farm tax deferral of parcels prior to final building permit approval for nonfarm dwellings pursuant to ORS 197.236.

Response

Lane County's Development Code was amended (ORD. 9-84) to include a provisions requiring compliance with ORS 215.236 regarding the establishment of nonfarm dwellings in the EFU Zone (LC 16.215(4)(j)(IV)).

Conclusion

The requirement has been met.

Requirement

2. Adopt a plan policy requiring a plan amendment to the County Plan when designating land as Marginal Lands.

Response

The County plan was amended (ORD 889) to include the following plan policy (Goal 2, Policy 25):

> "Outside of designated 'Community' areas, all changes to Plan Diagram designations shall be evaluated through the County's Plan Amendment procedure (LC 16.400) and approval based upon fulfillment of criteria therein."

Conclusion

The requirement has been met.

Although this policy might imply that plan amendments are not necessary to change designations in community aras, in fact there is only one category--"community"--that can be applied to community areas. The policy should be clarified in the future to indicate that it is zoning within community areas that maybe changed without a plan amendment.

Requirement

3. Amend the plan to include adequate findings and reasons for applying the marginal lands zone to the Merz/603, Harrison, Peters, Hledik, G.E. Credit Corp., and KVAL properties and provide the required information to determine compliance with ORS 197.247. If the information provided shows that the land does not qualify as marginal land under ORS 197.247, plan and rezone the properties with appropriate resource designations and implementing zones.

Response

The County's plan was amended (Order No. 84-9-11-23) to include additional findings and reasons for applying marginal lands to the Merz/602, Harrison, Mathers and G.E. Credit Corp. properties. The County has also amended the plan and adopted an additional marginal land area known as the Moshofsky property (Order No. 84-19-11-22). The Peters, Hledix, and KVAL properties have been redesignated an appropriate resource designation (Ord. No. 898).

Information regarding the five marginal land areas is described below (Source: Order No. 84-9-11-22 and 84-9-11-23 (Moshofsky)):

Merz/603 - 70 acres

57.3 acres - SCS Class VIII (Dune Land)
12.7 acres - SCS Class III/Forest Site Class 3

Harrison - 45 acres

13.5 acres - SCS Class III
7. acres - SCS Class IV
49.5 acres - SCS Class VI
No woodland suitability

Mathers - 111 acres

4.7 acres - SCS Class III/Forest Site Class 3
13.7 acres - SCS Class IV/Forest Site Class 3
92.6 acres - SCS Class VI

G.E. CREdit - 20 acres

20 acres - SCS Class VI
No woodland suitability

Moshofsky - 68 acres

14.5 acres - SCS Class III
8.7 acres - SCS Class IV
42.6 acres - SCS Class VI
2.1 acres - SCS Class VII

MOSHOFSKY SOIL CALCULATIONS
AS PER F-2 WOODLAND SITE CLASS STANDARDS

Woodland Site Class	Acreage Needed Disqualification	Acreage Found Moshofsky	Percentage Of Standard
2	17	8.7	51.1%
3	24	0	0%
4	34	14.5	42.6%
5	43	2.1	4.8%
None		42.65	

Percentage Total = 98.5%

Conclusion

The requirement has been met.

The previous findings found lacking for these properties have now been corrected as is required under ORS 197.247.

Based on the evidence submitted, and along with the findings in the previous staff recommendations, the following areas qualify as marginal lands under ORS 197.247:

Mertz/603
Harrison
Mathers
G.E. Credit Corp
Moshofsky

Requirement

4. Amend the Plan Map and Zoning Map for the Cuddeback and Rodman properties to an appropriate resource designation and implementing zone.

Response

The Cuddeback and the Rodman properties have been redesignated Impacted Forest Lands (Ord. No. 898).

Conclusion

The requirement has been met.

Conclusion - Goal 3

Lane County complies with Goal 3.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 3.

GOAL 4: FOREST LANDS

Requirement

1. Amend the Forest Working Paper and addendum to:

   a. Provide justification for the F-1 Zone's 40 acre minimum.

   b. (1) include information on the pattern of contiguous ownerships (either map or statistical) in support of a decision to retain current F-2 zoning. Such information must show that the minimum lot size is representative of the ownership pattern of the area

and that the zone actually limits further opportunity for development; or (2) include information justifying an alternative approach consistent with Goal 4 taken to resolve issues raised regarding the F-2 Zone.

c. Amend the Forest Working Paper Appendix 1--Lane County Forest Soils--to include "all commercial forest soils" in a manner consistent with an appropriate definition of commercial forest lands.

Response

1. a. Lane County has adopted additional information supporting its decision for assigning a 40-acre minimum lot size in the F-1 Zone. Specifically, the County has included as findings, two letters from Carl Ehlen (Lane County Landowners Assoc. and Rex Timber Co.) regarding the viability of a 40-acre parcel to be commercially managed as a forest parcel and Exhibit "D" from Ordinance No. PA 889 which cites the following findings:

"1) In support of the proposed Comprehensive Plan developed in 1982 the Lane County Landowners Association provided written testimony that the minimum land division size of 40 acres in the F-1 Zone represented an acreage that could be an operationally and economically manageable unit within the industry. At that time, the F-1 Zone proposal allowed dwellings on parcels down to the minimum size. (See attached letter dated November 23, 1982)

2) The Addendum to the Forest Lands Working Paper dated November 1983, justifies the 40 acre minimum land division from the data which show a significant number of parcels and amount of acreage that represent that size class within the industrial forest land ownership.

The following excerpt is from Suggestion Policy XI. 1) of the Addendum to the Forest Lands Working Paper:

'92% of the Industrial forest land acreage that lies on parcels less than 80 acres in size occurs on parcel sizes between the range of 40 to 80 acres, with approximately 25% of that area occuring at the 40 acre parcel size category.'

'75% of the number of parcels in the Industrial owned forest land that lies on parcels less than 80 acres in size occurs on parcel sizes between the range of 40 to

80 acres, with approximately 28% of the number of parcels occuring within that range at the 40 acre parcel size category.'

3) The letter received June 21, 1984, from the Lane County Landowners Association reiterates their former position in support of the 40 acre minimum land division standard noting that under the current proposal the F-1 Zone excludes residences. (See copy attached.)

4) In addition, preliminary data from the computerized zoning file of the current F-1 proposal indicates that of the parcels zoned F-1 that are between 40 and 80 acres in size, 27% of the acreage occurs on parcels of the 40 acre size class which represents 39% of the number of parcels between 40 and 80 acres in size."

The County has indicated further that the County's decision establishing the 40-acre minimum lot size in the F-1 Zone is supported because:

"Commercial forest representatives in Lane County requested 40 acres as a minimum lot size in the F-1 Zone based upon 40 acres being a commonly acquired, managed and exchanged unit of commercial forest land in Lane County."

Because Lane County's F-1 Zone does not allow dwellings, the price of forest land will reflect forest land values instead of rural residential values and conflicts with forest management activities will be minimal. Thus, a small minimum lot size conducive to commercial forest management, such as the F-1's 40-acre minimum is appropriate.

b. Lane County has rezoned approximately 56,080 acres of land from F-2 to F-1 and EFU in accordance with requirement "1.b(1)." Lands for which the F-2 zone was retained generally exhibit one or more of the characteristics for impacted forest lands presented in the response to requirement "2a." In addition, the County's revised Goal 4 Policy 12 provision (discussed under Goal 4 Response 3 of this report) presents additional limitations on divisions of resource land by establishing a 80-acre minimum lot size for all forest parcels which are (1) 160 acres in size, (2) zoned F-2, and (3) adjacent to F-1 zoned lands.

c. Lane County has amended, through Ordinance No. PA 889 (p. 6), their definition of commercial forest land to be 50 cubic feet per acre per year. By adopting a single commercial forest lands definition in its forest lands working paper rather than relying

on inconsistent references to 20 cubic feet, 50 cubic feet or the list of forest soils contained in Appendix 1, a consistent standard for inventorying forest lands and evaluating nonresource lands is established.

Conclusion

Lane County satisfies this requirement.

Requirement

2. Amend the comprehensive plan to:

   a. Include a Forest Policy which establishes precise criteria for applying the F-1 and F-2 Zones. (At a minimum, criteria for applying the F-1 Zone must include ownerships of a size capable of being managed as commercial forest lands.)

   b. Amend the four characteristics discussed under the Goal 4 conclusion for policies to establish criteria which apply only to lands appropriately zoned F-2 as per the examples discussed under "application;" or

   c. Include a policy which requires a plan amendment to rezone lands from F-1 to F-2.

   d. Delete the following from Forest Policy 11(a) "if adjacent to other nonimpacted forest lands.

Response

2a. In response to the above requirement, Lane County revised the criteria for applying the Non-Inpacted (F-1) and Impacted (F-2) Zone designations to eliminate the specific "vague" criteria discussed in the June 29, 1984 review. The revised criteria can be used to more specifically determine the proper zone designation. Ordinance No. P. 899 (p. 5, Item 10) adds Goal 4, Policy 19 which reads as follows:

"Lands designated within the Rural Comprehensive Plan as forest land shall be zoned Non-Impacted Forest Lands (F-1, RCP) or Impacted Forest Lands (F-2, RCP). A decision to apply one of the above zones or both of the above zones in a split zone fashion shall be based upon:

'a. A conclusion that characteristics of the land correspond more closely to the characteristics of the other forest zone. The zoning characteristics referred to are specified below in subsections b and c. This conclusion shall be supported by a statement of reasons explaining why the facts support the conclusion.

'b. Non-impacted Forest Land Zone (F-1, RCP) Characteristics

'i. Predominantely ownerships not developed by residences or nonforest uses.
'ii. Predominantely contiguous ownerships of 80 acres or larger in size.
'iii. Predominantely ownerships contiguous, to other lands utilized for commercial forest or commercial farm uses.
'iv. Accessed by arterial roads or roads intended primarily under commercial forest management.

'c Impacted Forest Land Zone (F-1, RCP) Characteristics

'i. Predominantly ownerships developed by residences or nonforest uses.
'ii. Predominantely ownerships 80 acres or less in size.
'iii. Ownerships generally contiguous to tracts containing less than 80 acres and residences and/or adjacent to developed or committed areas for which an exception has been taken in the Rural Comprehensive Plan.
'iv. Provided with a level of public facilities and services, and roads, intended primarily for direct services to rural residences."

In addition, nonforest uses authorized under the F-1 Zone (LC 16.2104) can not be used as the basis for supporting a zone change from F-1 to F-2; the criteria established in LC 16.210(5) require as a condition of approval that findsigs be provided indicating such uses do not significantly impact forest uses. Thus, establishment of such nonforest uses in an F-1 Zone can not be the basis for a zone change to F-2 under the "impacted" criteria adopted by Lane County.

2b. or c.

Lane County revised its plan to delete the four vague characteristics used in applying the F-1 and F-2 zones. As indicated in the conclusion to "2a," the revised criteria successfully address the issue.

2d. On page 4 of Lane County Ordinance "No. PA 889, #8," the County states: "Goal No. 4, Policy No. 11a--delete if adjacent to other nonimpacted forest lands."

Conclusion

Lane County satisfies this requirement.

Requirement

3. Amend the County zoning map by rezoning private non-industrial ownerships capable of commercial forest management (including forested portions of commercial farm-forest operations) currently zoned F-2 with an appropriate resource zone. An acceptable forest zone is the F-1 Zone or forest zone containing a minimum lot size of

at least 80 acres as justified by the County's "Forest Working Paper Addendum."

Also, where the County can justify such a decision, the County may apply the marginal lands zone or rural residential zones to "committed" or nonresource lands.

Response

Lane County has rezoned 24,075 acres of land from F-2 to F-1 and rezoned 32,005 acres from F-2 to EFU. Generally, ownerships greater than 120 acres in size capable of being managed as a farm unit were rezoned to EFU. Ownerships of 160 acres or greater capable of being managed as commercial forest lands were rezoned to F-1. Some large ownerships were zoned with more than one zone depending on adjacent land uses and impacts. Also, the F-2 zone was retained on a few large ownerships, where soils information indicated that non-commercial forest soils predominate.

In order to reduce potential conflicts between authorized land uses in the F-2 Zone and commercial forest management activities occuring on F-1 lands, Lane County adopted a new version of Goal 4 Policy 12 (Ordinance No. PA 889, p. 4, Item 9) which contains the following provision:

> "(b) To substantially limit any adverse impacts upon commercial forest management which might result from land divisions and subsequent residential development (accessory and necessary to commercial forest management) a minimum area of 80 acres shall be required for the division of large forest tracts:
> '(i) zoned F-2
> '(ii) containing at least 160 acres
> '(iii) for the creation of lots or parcels adjacent to F-1, RCP zoned lands."

Conclusion

Lane County has satisfied this requirement.

The County has amended its zoning map, through the rezoning of some lands previously zoned F-2, in a manner consistent with this requirement. With the elimination of 56,080 acres from the F-2 Zone, the County's current application of the F-2 Zone is more representative of the ownership patterns within areas where non-commercial forest management and other non-resource activities occur.

Requirement

4. Amend LC 16.210(4)(i) of the F-1 Zone and LC 16.211(5)(ii) to require that "lodges" be evaluated against the "generally unsuitable test" in addition to the other review standards already applied to this specific use.

Response

Lane County through the adoption of Ordinance No. 9-84 amended LC 16.210(4)(i) and LC 16.211(5)(ii) to require under LC 16.210(4)(i) and LC 16.211(5)(r) that in addition to other review criteria, lodges will be required to locate on land generally unsuitable for forest uses in the F-1 and F-2 Zones or an exception to Goal 4 would be necessary.

The County also adopted Plan Policy No. 27 which requires an exception to resource Goals for transmission lines with right-of-way widths in excess of 50 feet (Ord. No. PA 889, p. 4). In addition, the County has limited farm equipment maintenance to that "incidental to a forest repair" (Ord. No. 9-84, p. 16-29).

Conclusion

Lane County satisfies this requirement.

Requirement

5. Amend the F-2 zoning provisions as follows:

   a. In 16.211(3)(b), adopt informational requirements for the "detailed forest management plan." At a minimum, such provisions must require sufficient information to establish adequate findings that a proposed "forest" dwelling is "necessary" and "incidental and subordinate to" the primary forest management activities described in the forest management plan.

   b. Include in LC 16.211(3)(b) a "floor" or minimum parcel size requiring parcels below 10 acres to be assessed against the nonforest dwelling or lot of record provisions.

   c. Amend 16.211(7)(b) to apply to all commercial forest grazing operations zoned F-2 the larger size (120 acres) for extensive animal grazing as required by LC 16.212(6)(d).

Response

5a. Lane County has amended LC 16.211(3)(b), through the adoption of Ordinance NO.9-84, to include specific requirements for preparing an acceptable forest management plan. Included within the revised LC 16.211(3)(b) is the following additional requirement:

"(iii) The forest management plan shall specify how the following practices, when applicable, are to be addressed: road and fire trail construction and maintenance, site preparation, reforestation, stand conversion, planting of nonstocked openings, competition reduction/release, precommercial thinning, harvest scheduling/rotation and special site treatments for topography and other concerns."

Because active forest management is required to retain forest land taxation rates and failure to implement the forest management plan is a violation of LC 15.211(3)(b). The combination of the above requirements for forest related dwellings in the F-2 Zone assures that active forest management must occur on forest lands in order to establish a forest related dwelling; thus, satisfying the accessory and necessary test. These requirements for approving a forest related dwellings in Lane County's F-2 Zone are similar to the provisions contained in Benton County's acknowledged secondary forest zone.

5b. Through the adoption of Ordinance No. 9-84, Lane County amended LC 16.211(3)(b) of the F-2 Zone to include a "10 acre" floor which will be used for assessing "forest" dwelling applications. Applications for dwellings on parcels zoned F-2 which are less than 10 acres will be reviewed as nonforest dwellings.

5c. Upon further review of LC 16.211(7)(c) regarding the F-2 zone's minimum lot size requirements for farm unit size requirements for commercial grazing operations, it was determined that this provision's 40-acre minimum "farm unit size" requirement is identical to the County's EFU Zone minimum farm unit size requirement. For specific uses, such as dwellings, LC 16.212(2)(f) of the EFU Zone must be satisfied before approval can be granted.

Conclusion

The County satisfies this requirement.

Conclusion - Goal 4

Lane County complies with Goal 4.

Lane County's approach to conserving forest lands contains some plan policy and ordinance provisions unique to Lane County. The strength of their forest lands conservation program is the F-1 Zone which prohibits the siting of all dwellings (other than those required to be authorized by state statutes). This zone is applied to 2,449,775 acres of Lane County's forest lands.

The County's F-2 Zone is applied to 145,356 acres of privately owned lands which consist generally of large lot rural residential parcels, nonproductive or marginally productive resource lands, or underutilized resource lands. Lands zoned F-2 are generally located adjacent to or near developed urban or rural areas and well travelled transportation routes; all of which have an impact on the commercial management of forest lands.

In the F-2 Zone, the County requires that before a permanent dwelling is sited on forest land, assurances are obtained that forest production on the lot will be enhanced by active forest management. The requirements associated with the siting of dwellings in the F-2 Zone are similar to those provisions approved by the Commission in Benton County's acknowledgment with recent changes to the County's forest policies and

ordinance provisions. The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 4.

GOAL 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

Requirement

1. Mineral and Aggregate Resources: Apply the Goal 5 process to sites zoned SC which are not included on the County's (1C) inventory and, based on an analysis of the ESEE consequences of conflicting uses, either (1) add them to the (1C) inventory if justified, or (2) rezone the sites for other uses.

Response

In responding to this IOTC, Lane County discovered that not only were there sites zoned SG which were not on its (1C) inventory, but that there were other errors on its inventory. Therefore, the County revised its (1C) inventory as well as its (1B) inventory. Supplemental findings to Ord. No. PA 892 state:

> "The IOTC to correct the zoning citations was the stimulus for a complete review of sites listed in Appendix D vs. zoned sites. Several of those in the original Appendix D have been deleted--none of which carried SG or QM zoning. No "unzoning" will be necessary. Most of those deleted are also reflected in Appendix F of the Working Paper, which is the "pool" for later evaluation under the Goal 5 Rule "1B" option. Thus, any sites deleted in this effort are not lost from consideration, merely set aside for more detailed examination later on. All but one of the sites of Appendix D correspond with on-the-ground zoning of SG or QM."

The one site referred to in the last sentence of the previous quote (site #21) is an active site. The County completed all steps of the Goal 5 Administrative Rule for the site, and subsequently zoned it QM (Ord. No. PA 891). These findings are now part of the County's Mineral and Aggregate Resources Working Paper.

The County's three Mineral and Aggregate Resources inventories--Appendices D, E, and J--have been revised as follows: Appendix D has been reorganized to read more clearly, the Conflict Analysis (Appendix J) expanded to deal with new sites per the IOTC, and a third map (Appendix E) created to display the sites on new Appendix D. The original Appendix E--a listing of sites in the Metro Area--has been deleted since it was inconsistent with the list contained in the Metro Plan.

Conclusion

Requirement 1 has been met.

Requirement

2. Fish and Wildlife:

a. Amend the Natural Resource Zone to include riparian setback and vegetation maintenance standards.

Response

Lane County has amended its Natural Resource Zone to include riparian setback and vegetation maintenance standards similar to those in other resource zones (Ord. No. 11-84).

Conclusion

Requirement 2a has been met.

Requirement

2. Fish and Wildlife Habitats:

b. Amend the C-1, C-2, C-3, M-1, M-2, M-3, and RG zones to either (1) include riparian setback and vegetation and maintenance standards, or (2) incorporate by reference anothr section of the Lane Code which contains such standards.

Response

Lane County has amended the above zoning districts to include appropriate riparian setback and vegetation maintenance standards as required (Ord. No. 9-84).

Conclusion

Requirement 2b has been met.

Requirement

2. Fish and Wildlife Habitats:

c. Apply riparian setback and vegetation maintenance requirements along lakes and Class II streams, or otherwise justify not providing such protection, based on an ESEE consequences analysis of conflicting uses.

Response

Lane County has responded to this IOTC by amending the Flora and Fauna Working Paper Addendum (p. 7) to include the following justification for not applying riparian setback and vegetation maintenance requirements to lakes or Class II streams (Ord. No. PA 892):

> "For purposes of this analysis, only Class I riparian lands are considered. Class II streams (using ODF standards) are not fish-bearing streams, according to Oregon Fish and Wildlife Department staff, and often dry up in the summer months. Additionally, they are located in remote areas in public ownership or limited to resource uses by resource zones. Many of them have not been inventoried, and location maps are not easily available. Most lakes outside of the coast are impoundments, such as Fern Ridge Reservoir, and have COE easements plus County PR zoning to protect their shorelines. The remaining natural lakes are protected by coastal overlays or are in High Cascade wilderness areas such as Waldo. The Oregon Fish & Wildlife Department, which worked closely with the County in devising a method of protecting Class I riparian lands, did not indicate a need to similarly protect Class II riparian lands. In the nomenclature of the Goal 5 Rule, the County determines the Class II streams are to be considered '1A' resources--not to be included on the Plan inventory."

Conclusion

Requirement 2c has been met.

Requirement

2. Fish and Wildlife Habitats:

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy II. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.

Response

Lane County has added the following new language to both the F-2 and EFU Zones:

> "(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of

proposed residences consistent with the purposes the F-2 [EFU] Zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Conclusion

Requirement 2d has been met.

Requirement

2. Fish and Wildlife Habitats:

e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

Response

Lane County has adopted (Ord. No. PA 892) as part of its Flora and Fauna Working Paper, an inventory of known sensitive bird sites, including location, quality and quantity information. The County has identified conflicting uses and analyzed ESEE consequences. Based on this analysis, Lane County has decided to adopt a procedure for "flagging" areas in which such sites occur and requiring conflicting uses to be subject to conditional use approval. For all conflicting uses except timber management activities, the County has adopted "Sensitive Bird Habitat Protection Standards and Criteria" as part of the Lane Code (Ord. No. 11-84). Excerpts from that zone section are as follows (LC 16.005(4)(1)):

"(b) Development Plan Submittal. The person proposing the development shall submit plans to the

Department which sufficiently identify the location, nature and scope of the proposed use or activity.

(c) Referral. Upon receipt of the plan identified in LC 16.005(4)(b) above, the Department shall refer a copy of the plans to the Oregon Department of Fish and Wildlife (ODFW).

(d) ODFW Review. Upon receipt of the plans identified in LC 16.005(4)(b) above, the ODFW shall review the proposed use or activity and make a determination of whether or not the use or activity would affect a sensitive bird habitat. In making this review and determination, the ODFW shall consult with the affected landowner(s) and appropriate state agencies, and shall address the standards in LC 16.005(4)(d)(i) and (ii) below. The basis for the determination shall be stated in writing, completed within seven working days of receipt, and then submitted to the Department (Lane County).

(i) A sensitive bird habitat will be considered affected by a use or activity if the use or activity is located within 660 feet of an eagle or osprey site or within 300 feet of a heron rookery or pigeon mineral spring.

(ii) A sensitive bird habitat may also be considered affected by a use or activity if the use or activity is located a greater distance than specified in LC 16.005(4)(d)(i) above, considering unique conditions of topography to the individual habitats of the bird(s).

(e) No Affects Determined. If the ODFW determines that the senstive habitat area will not be affected, then the ODFW will give the Department written notice of its determination, and Lane County may proceed with authorization o the use or activity, or with the processing of any other required applications.

(f) Affects Determined and Protection Plan. If the ODFW determines that the sensitive habitat area will be affected, the ODFW shall work with the affected landowner(s) in the development of a site specific habitat protection plan. The plan shall consider the proposed use or activity and its interrelationship to and affects upon nesting trees, perch trees, critical nesting period roosting sites and/or buffers for wind, vision and noise. The plan must contain a statement of reasons, supported by facts, explaining why the sensitive bird habitat would not be adversely affected by the proposed use or activity. The plan shall then be submitted to the Department.

(g) Director Approval. The proposed uses or activities identified in the habitat protection plan shall be reviewed by the Director pursuant to LC 14.100 and shall be allowed if in conformance with the following approval criteria:

(i) The proposed use or activity would not adversely impact a sensitive wildlife habitat.

(ii) Conditions placed upon the approval of the habitat protection plan would avoid or eliminate any adverse impacts upon a sensitive wildlife habitat. Conditions may include setbacks, limitations upon the time period for the operation of the use or activity and/or prohibition of conflicting uses.

(h) LC 16.005(4)(a)-(g) do not apply to the protection of sensitive bird habitat from forest practices as regulated by the Forest Practices Act and as regulated by the COOPERATIVE AGREEMENT BETWEEN OREGON STATE BOARD OF FORESTRY AND OREGON STATE FISH AND WILDLIFE COMMISSION as adopted by Lane County in Rural Comprehensive Plan Goal 5 Flora and Fauna Policy 17."

The following new Policy 17 has been adopted to replace old Flora and Fauna Policy 15 (Ord. No. PA 892):

"The Cooperative Agreement between Oregon State Board of Forestry and Oregon State Fish and Wildlife Commission shall constitute Lane County's means of protecting sensitive bird habitat sites from conflicts which may result from forest practices as regulated by the Forest Pracices Act. Within two years of the date of acknowledgment of the Rural Comprehensive Plan, Lane County shall evaluate the effectiveness of the use of this agreement in providing actual protection to sensitive bird habitat sites, and if necessary, shall consider the adoption of more effective means of protecting sensitive bird habitat sites. This agreement is incorporated into the Lane County General Plan Policies as Flora and Fauna, Exhibit 'A'."

The following new Flora and Fauna policy has also been adopted (Ord. No. PA 892):

"18. Owners of property designated as a sensitive bird habitat and as identified in Lane Manual 11.400 shall be encouraged to develop a management plan in conjunction with the Oregon Department of Fish and Wildlife prior to beginning any development which may adversely affect the habitat. Such management plans shall consider nesting trees, perch trees, critical nesting period, roosting sites and buffer zones, and shall demonstrate how the proposed development will not adversely affect the sensitive bird habitat site. The policy shall not apply to forest practices covered by the above Flora and Fauna Policy 17."

Conclusion

Requirement 2e has been met.

Requirement

2. Fish and Wildlife Habitats:

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

Response

Lane County has replaced its definition of "wetland" with the following definition (Ord. No. PA 892):

> "For purposes of County management, wetlands should be defined as land areas where excess water is the dominant factor determining the nature of soil development and the types of plant and animal communities living at the soil surface. Wetland soils retain sufficient moisture to support aquatic or semi-aquatic plant life. In marine and estuarine areas, wetlands are bounded at the lower extreme by extreme low water; in freshwater areas, by a depth of six feet. The areas below wetlands are submerged lands."

This new definition is consistent with that contained in the Statewide Planning Goals.

The Working Paper has also been amended to contain the following explanation:

> "For purposes of County management, principal concern shall be given to wetlands of an acre or greater in size, to exclude small 'backyard' areas, unless the future County evaluation of the National Wetlands Inventory and/or information from ODFW indicate that specified wetlands smaller than one acre in size require the same level of protection as their larger counterparts."

Conclusion

Requirement 2f has been met.

Requirement

2. Fish and Wildlife Habitats:

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.

Response

The County examined this site ("Blueberry Acres") and documented its location, quality and quantity. Conflicting uses were identified, and an ESEE consequences analysis was performed by the County. Based on this analysis, the County determined that the wetland required additional protection. It, therefore, has applied its Natural Resource Zone to the site. The Addendum to the Flora and Fauna Working Paper has been amended to contain background information and findings regarding application of the Goal 5 process to "Blueberry Acres" (Ord. No. PA 892).

Conclusion

Requirement 2g has been met.

Requirement

2. Fish and Wildlife Habitats:

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

Response

Section 13.050(1) of the Lane Code requires conformity with the Comprehensive Plan (including all plan policies) when considering partition or subdivision plans.

Also, Policy 14 (Goal 3) has been amended so as to require compliance with Goal 5 policies 11 and 12 in the future application of the ML Zone. Policy 11 requires conformance to ODFW density recommendations, unless justified through a separate Goal 5 analysis. Policy 12 requires a Goal 5 analysis if conflicting uses are identified that were not contemplated in the Plan.

Findings have been added to the Flora and Fauna Working Paper Addendum (p. 14) which discuss application of current ML zoning in Goal 5 resource areas. Goal 5 conflicts with many of these sites are primarily with big game habitat. The County has analyzed the ESEE consequences of conflicting uses for these areas and has decided to apply the ML Zone in spite of the conflicts.

Conclusion

Requirement 2h has been met.

Requirement

3. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.

Response

Supplementary Findings to Ordinance No. PA 892 adopted by Lane County provide the following explanation:

> "This site is shown on the Coastal Resources Inventory maps as being located east of North Fork Road, near the Chief Drew historical site. It was field-checked by County and ODFW staff. Neigher effort could locate Darlingtonia, although a small bog existed in the approximate area of the site. A larger bog to the north (within the Florence UGB) may be the one referred to in the Inventory, but has been partially filled by structures and is not within the concern of the Rural Comprehensive Plan--the Florence plan having been acknowledged in 1983. It too was found to contain no Darlingtonia.
>
> Thus, it appears that no rezoning action will be necessary to preserve the reported bog."

Page 27 of the Flora and Fauna Working Paper has been amended to include the following new paragraph:

> "1A Category
>
> One site--identified on the Coastal Resources Inventory as a significant natural area--has been placed in the '1A' category because it was either erroneously identified in the Inventory or because conditions have changed since the Inventory was done which have destroyed the feature that first caused its inclusion. This area is noted as "unique Darlingtonia habitat" east of North Fork Road in 18-12-24. Because DLCD raised the issue of preservation of this resource under Goal 5 Rule requirements, field checks were conducted by both County staff and staff of the Oregon Fish & Wildlife Department. Neither effort could locate any Darlingtonia. A bog north of the one shown on the inventory map (excerpt attached) may have been the one referred to, but that particular bog has been partially filled and is also located within the UGB of Florence.

which has an acknowledged Plan. Even assuming the Plan should be changed, that northern bog (at the intersection of Munsel Lake and North Fork Roads) is not significant enough Darlingtonia area to merit further action by the City/County. In sum, the area should be deleted from the Plan inventory as a '1A' site, with no further action required on it."

Conclusion

Requirement 3 has been met.

Requirement

4. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

Response

Lane County has adopted an Addendum to its Recreational Resources Working Paper (Ord. No. PA 892) which contains an inventory of scenic resources in the County, including the coastal strip, the Willamette River Greenway, Coburg Ridge, McKenzie River Valley, Willamette Highway/Salt Creek Valley Corridor, and ODOT-identified scenic areas. Each is described and location, quality and quantity documented. Each is evaluated in terms of conflicting uses and ESEE consequences. Based on these analyses, the County has determined that existing coastal zoning is sufficient protection for the coastal zone, and that the County Greenway Plan and Permit process should be the implementing measure in the Willamette Greenway. No conflicts were identified with ODOT scenic areas. Coburg Ridge is essentially undeveloped and partly in BLM ownership or in ranchland. Slopes exceed 100 percent in many places. Therefore, conflicts appear to be limited primarily to forestry activities, which are regulated by the FPA. Most of the McKenzie Valley and the Willamette Highway/Salt Creek Corridor is within the Willamette National Forest.

Conclusion

Requirement 4 has been met.

Requirement

5. Historic Sites:

   a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

Response

The County has ensured that all (1C) sites appear on zoning maps with the "/H" symbol, except for 20 covered bridge sites (Supplementary Findings to Ord. No. PA 892). The County indicates that these are not on maps because they are bridges and are not keyed to tax lot citations. This prevents the digitized Plan Diagram maps from properly displaying them. However, all are publicly-owned, and are covered by the /H Combining Zone (Ord. No. 892).

Lane County has added a definition of "Historic Structure or Site" to the definition section of its ordinance. This definition specifically includes property which had been identified by Lane County in its adopted Rural Comprehensive Plan findings as historically significant. (This list includes the 20 covered bridges as well as all other (1C) sites.)

Conclusion

Requirement 5a has been met.

Requirement

5. Historic Sites:

   b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

Response

Lane County has deleted sites 34 and 57 as well as sites 32, 39 and 42 from its historic sites inventory, and has amended the Addendum to its Historical Resources Working Paper as follows:

> "From the above list, five sites have been deleted by County action: sites 32, 34, 49, 42 & 57. Sites 34 and 57 are not within the purview of the Rural Comprehensive Plan and thus are the responsibility of other planning efforts. Site 32 (Keeney House) is no longer considered historically significant because the structure has been relocated on its site and has been remodeled both inside and outside. Site 39 (Paschelke House) is incorrectly represented in the State Inventory and has been extensively remodeled. Site 42 (Fall Creek Christian Church) has been remodeled several times from its original use as a school building, and is being expanded. These sites should be exempted from the Historical Combining District which is being applied to the other sites on the above list."

Conclusion

Requirement 5b has been met.

Requirement

6. Oregon Recreation Trails:

a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

Response

Lane County has amended the Recreational Resources Working Paper (p. 15) by inserting a new paragraph indicating that ODOT has supplied the County with detailed maps of trail segments. Such information is included as Appendix A to the Working Paper (Ord. No. PA 892).

Conclusion

Requirement 6a has been met.

Requirement

6. Oregon Recreation Trails:

b. Adopt policies to:

(1) Cooperate with ODOT in the protection of existing trails; and

(2) Coordinate with ODOT in applying the Goal 5 Rule during any future identification, or establishment of proposed trail segments.

Response

Goal 5 (Policy 4) has been replaced with the following new policy (Ord. No. PA 892):

"The County shall recognize and acknowledge existing and potential recreational trails designated by the Oregon Parks Outdoor Recreation Plan, shall cooperate with the Oregon Department of Transportation in the identification of specific routes for potential trails, and in the completion of applicable steps of OAR 660-160-000/025. Existing developed trails shall be displayed on the County's planning documents."

Conclusion

Requirement 6b has been met.

Requirement

7. Scenic Rivers and Waterways:

a. Amend the Recreational Resources Working Paper to recognize that:

(1) Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir are within the designated State Scenic Waterway system; and

(2) The portions of the Alsea River, and Steamboat Creek that are on the federal potential list are also on the state list of potential scenic waterways.

Response

The County has adopted an Addendum to its Recreational Resources Working Paper (Ord. No. PA 892). This addendum recognizes Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir as within the State Scenic Waterway system (p. 8). It also recognizes portions of the Alsea River and Steamboat Creek that are on the federal and state potential lists (p. 9).

Conclusion

Requirement 7a has been met.

Requirement

7. Scenic Rivers and Waterways:

b. Amend Open Space and Scenic Areas Policy 5 (p. 17) to also indicate that the County will coordinate with appropriate state and federal agencies in applying all applicable steps of the Goal 5 Administrative Rule in studying rivers for possible designation and in actually selecting wild and scenic rivers for designation.

Response

Policy 5 has been replaced with the following policy language:

"The County shall cooperate with appropriate state and federal agencies in the selection of wild and scenic rivers, and will cooperate with these agencies in the completion of applicable steps of OAR 660-16-00/025 in making such selections" (Ord. No. PA 892).

Conclusion

Requirement 7b has been met.

Requirement

8. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflicting-resolution recommendations contained in the Metro Plan Update Working Paper.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 5

Lane County complies with Goal 5.

GOAL 7: AREAS SUBJECT TO NATURAL DISASTERS AND HAZARDS

Requirement

1. Amend the Development Code to require review of any proposed development within known geologic hazard areas.

Response

Lane County Development Code was amended (ORD. 9-84) to include the following provision (LC 16.005):

> "(2) Grading, Excavation and Clearing. Grading and clearing by mechanical equipment for either road and/or development purposes may be restricted or regulated by the Approval Authority either at the time of approval of a development permit or of an application if there is a finding that such grading or clearing presents a real threat of pollution, contamination, silting of water bodies or water supplies, erosion and slide damage, or alteration of natural drainage patterns in the area. In all cases, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose."

Conclusion

The requirement has been met.

The County Development Code has been amended to require a review of any proposed development that is found to present a threat to life and property.

Requirement

2. Adopt standards which will be applied to development in known geologic hazardous areas.

Response

Lane County Development Code was amended (Ord. 9-84) to include the following standards pursuant to LC 16.005(2) cited previously under Goal 7, Requirement 1 (LC 16.005):

"(3) Conditions. The following conditions may be imposed at the time of approval of a development for which a permit or application is required and for which a finding has been made as required in LC 16.005(2) above in order to ensure site and area stability:

(a) Maintain vegetation and eliminate widespread destruction of vegetation.

(b) Carefully design new roads and buildings with respect to:

(i) Placement of roads and structures on the surface topography.

(ii) Surface drainage on and around the site.

(iii) Drainage from buildings and road surfaces.

(iv) Placement of septic tank disposal fields.

(c) Careful construction of roads and buildings:

(i) Avoid cutting toeslopes of slump blocks.

(ii) Careful grading around the site, especially avoiding oversteepened cut banks.

(iii) Revegetating distubed areas as soon as possible.

(d) Certification by a geologist or engineer that the above conditions have been complied with and/or that a hazard does not exist."

Conclusion

The requirement has been met.

Lane County has adopted appropriate standards which will be applied to development in geologic hazard areas.

Conclusion - Goal 7

Lane County complies with Goal 7.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 7.

GOAL 11: PUBLIC FACILITIES AND SERVICES

Requirement

1. Adopt a plan policy which specifies the appropriate levels of service for rural areas, including unincorporated minor development centers and rural service centers. Note: This IOTC can be satisfied by adopting a policy identifying land classifications and service levels similar to those contained in the Public Facilities and Service Working Paper--Appendix B. If Appendix B is used, the classification titles must be amended to correspond with "current" classification titles (Example: Forest Lands I is now called Non-Impacted).

Response

Through the adoption of Ordinance No. PA 889 (Item 13), Lane County deleted Goal 11 Policies 1 and 2 and replaced them with the following:

"Lane County shall provide an orderly and efficient arrangement for the provision of public facilities, services and utilities. Designation of land into any given use category, either initially or by subsequent plan amendment, shall be consistent with the minimum level of services established for that category."

The County also adopted Policy No. 6 which references descriptions of their plan designations and service levels which are as follows:

Forest Land

Nonimpacted (F-1):

"Service Level: No minimum level of services is established for this category as it is intended primarily for resource management and not for habitation."

Impacted (F-2):

"Service Level: No minimum level of services is established. The category is intended primarily for resource management and although some degree of habitation will occur space population patterns are expected."

Agricultural Land

Exclusive Farm Use:

"Service Level: No minimum level of services is established. The category is intended primarily for resource management and although some degree of habitation will occur, sparce population patterns are expected."

Natural Resource

Mineral:

"Service Level: No minimum level of services is established. Category is intended for resource management and not habitation."

Rural Residential:

"Service Level: Schools, on-site sewage disposal, individual water supply systems, electrical service, telephone service, rural level fire and police protection, reasonable access to solid waste disposal facility."

Community:

"Service Level: Schools, on-site or community sewage disposal, individual or community water supply, electrical service, telephone service, rural level of fire and police protection, reasonable access to solid waste disposal facility."

Rural Commercial:

"Service Level: The same as required for Rural Residential (outside Community Designations)" (Ord. No. PA 892, Goal 11, Appendix 4).

Industrial (outside community designation):

"Service Level: The same as required for Rural Residential (outside Community Designations)" (Ord. No. PA 892, Goal 11, Appendix 4).

Park or Recreation:

"Service Level: No minimum level of services is established for Park or Recreation areas outside committed areas. Service level for Park or Recreation areas inside committed areas shall be consistent with that level required for the Community or committed area outside of a Community."

Marginal Lands:

"Service Level: Consistent with service levels for Rural Residential outside a Community designation."

Nonresource:

"Service Level: Consistent with service levels for Rural Residential outside a Community designation. The service level for cluster subdivisions of nonresource shall be consistent with Goal 2 policy 24."

Conclusion

Lane County satisfies this requirement.

Requirement

2. a. By policy or zoning provisions, limit development (in a manner consistent with Goal 11 (and the County's decisions regarding rural sewage systems) within unincorporated rural communities with known or suspected sewerage problem (Chesire, Elmira, Heceta, Goshen, Mapleton, Marcola and Vaughn); or

   b. Provide additional information which justifies in a manner consistent with the discussion under Goal 11, the county's decisions regarding development in rural communities with known or suspected sewerage problems.

Response

With the adoption of Ordinance 9-84, Lane County amended Chapter 16.004(5) of their Development Code to address IOTC 2a by including the following:

> "Prior to the zoning or rezoning of land under this Chapter, for lands situated within the designated community areas listed below, an affirmative conclusion stating the reasoning and facts relied upon, must be made that densities allowed by the proposed rezoning are low enough to provide reasonable assurance that any existing sewage problems will not be further aggrevated by development of the subject property:
>
> (a) Cheshire
> (b) Elmira
> (c) Goshen
> (d) Heceta
> (e) Mapleton
> (f) Marcola
> (g) Vaughn"

In addition, LC 13.050(12)(b), which established the County's requirements for obtaining individual sewage disposal systems, requires "reasonable proof that each prosposed parcel or lot can accommodate an individual sewage disposal system and at least one acceptable replacement area which meets the criteria established by OAR Chs.340-71-005 to 45." The above requirement provides adequate assurance that additional development in the seven referenced communities with existing or potential sewage problems will not aggrevate the sewerage situation.

Conclusion

Lane County satisfies this requirement.

Requirement

3. Amend Sections 13.050(12) and 13.050(13) to indicate that the establishment of rural sewage or water systems must be consistent with the appropriate of levels of service policies required by Goal 11, IOTC 1.

Response

Ordinance 10-84 amends Chapter 13.010(12) and (13) of Lane County's Development Code to require that the establishment of rural sewerage facilities and water systems shall be consistent with RCP Goal 2 Policy 24 and RCP Goal 11 Policies, including level of service definitions. Lane County also indicates the following:

> "With this ordinance, Land County has amended Sections 13.050(12) and (13) to provide that the

establishment of rural sewerage and water facilities must be consistent with RCP Goal 2 Policy #24, provision of services to cluster subdivisions in the rural area, and RCP Goal 11 policies. By requiring consistency between the proviion of services in the rural areas and the above-mentioned policies, Lane County is ensuring the 'timely, orderly and efficient provision of services' to new development approved within the rural areas. Sections 13.050(12) and 13.050(13) now require community sewer or community water systems be established only in a manner consistent with public facility and service policies (including appropriate levels of service for rural areas)" (Ordinance 10-84, Exhibit A, p. 2).

Conclusion

Lane County satisfies this requirement.

Conclusion - Goal 11

Lane County complies with Goal 11. Lane County's Public Facilities Working Paper, Goal 11 Plan Policies and Development Code requirements as well as specific amendments which include: (1) level of service definitions for each plan designation, (2) a requirement to examine proposed zone changes in suspected rural "sewerage" problem areas to insure that any existing problems will not be aggrevated through an intensification of density, and (3) policy and ordinance requirments that rural development consistent with the specified rural level of service definitions, all contribute to the orderly provision of public facilities and services in rural Lane County.

GOAL 15: WILLAMETTE RIVER GREENWAY

Requirement

1. Amend zoning maps 304, 304A, 305, 330, 332, 347, 396, 411, 417, 418, 425, 437, 440, 448, 471, 528, 1005, 1006, 1008, 1010, 1011, 1012, and 1013 to display the correct LCDC-approved Greenway Boundary.

Response

The County has amended the zoning maps listed above that apply to areas outside the Eugene/Springfield Metro Area so as to display the correct LCDC-approved Greenway Boundary. Changes to maps 347, 396, 411, 437, 528, 1005, 1006, 1008 and 1012 will be corrected in conjunction with the Eugene/Springfield Metro Area continuance.

Conclusion

The requirement has been met.

Requirement

2. Amend the Greenway ordinance to clearly require protection of significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints, per Sections C.3.d., a., and c. of the Goal.

Response

Lane County has eliminated the term "guidelines" from the Greenway Development Permit Approval section of its Greenway Ordinance (Section 16.254(4)) and has added the following as criteria for permit approval:

> "(i) Preservation and maintenance of land inventoried as 'agriculture' in the adopted Willamette River Greenway Plan for farm use and minimize interference with the long-term capacity of lands for farm use.
>
> (ii) Protection, conservation or preservation of significant scenic areas, viewpoints and vistas...
>
> (xiv) Protection of significant fish, wildlife habitat and natural areas."

A decision to approve a Greenway Development Permit must require findings that the proposed intensification, change of use or development conforms to these (as well as other) criteria, according to Section 16.254(4) of the Greenway Ordinance.

Conclusion

The requirement has been met.

Requirement

3. Amend Section 16.254(2)(k) of the Greenway Ordinance to eliminate all language following the phrase, "or personal noncommercial use."

Response

Section 16.254(2)(k) of the Greenway Ordinance has been amended to eliminate all language following the phrase, "or personal noncommercial use." This was done so that only the propagation or cutting of timber for public safety or personal noncommercial use is exempt from local Greenway Permit review, consistent with Goal 15.

Conclusion

The requirement has been met.

Requirement

4. Amend Section 16.254(c) of the Lane Code to ensure that only water-dependent and water-related uses themselves are exempt from the 100-foot Greenway setback requirement.

Response

Section 16.254(b) has been amended (Ord. No. 11-84) so as to eliminate the phrase "those in conjunction with." Therefore, the Code exempts only water-dependent and water-related uses themselves from the Greenway setback requirement.

Conclusion

The requirement has been met.

Requirement

5. Amend Section 16.254(6) of the Lane Code to require notification of ODOT of actions taken on applications for intensification, change of use or development in the Willamette Greenway.

Response

Section 16.254(6) of the Code has been amended to require notification of ODOT of actions taken on applications for a Greenway Permit, as required.

Conclusion

The requirement has been met.

Requirement

6. Amend Section 16.254(2)(a) of the Greenway Ordinance to require either:

   a. Greenway permits in areas designated "urban" beyond 150 feet of the ordinary low water line, or

   b. Some other mechanism which ensures protection of Greenway values in these areas.

(Note: This could also be accomplished by LCDC amendment of the ODOT Greenway Plan by changing the designation of the area south of the Cottage Grove UGB from "urban" to "rural.")

Response

Section 16.254(2)(a) has been deleted from the Greenway Ordinance. This has the effect of requiring Greenway permits in areas designated "urban" beyond the 150-foot line.

Conclusion

The requirement has been met.

Requirement

7. Adopt implementing measures that protect the Pudding Creek Heronry.

Response

This requirement pertains to the Eugene/Springfield Metro Plan, which has been segmented and continued until October 11, 1984.

Requirement

8. Either adopt findings which explain how the current zone designations for Big Island protect the Confluence Heronry, or adopt other implementing measures that protect the Confluence Heronry.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Requirement

9. Modify Mineral and Aggregate Resources Policy 11 to also reference Section C.3.d. of Goal 15 to ensure protection and significant fish and wildlife habitats in the Willamette Greenway.

Response

Lane County has amended Mineral and Aggregate Policy 11 to also reference Section C.3.d. of Goal 15 (Ord. No. PA 892).

Conclusion

This requirement has been met.

Conclusion - Goal 15

Lane County complies with Goal 15.

The findings contained in this supplemental report and those contained in the Department's July 19, 1984 review support the decision that Lane County complies with Goal 15.

DW/MJR/CP:mg
0559D/517A

BEFORE THE
LAND CONSERVATION AND DEVELOPMENT COMMISSION
OF THE STATE OF OREGON

IN THE MATTER OF LANE COUNTY'S RURAL COMPREHENSIVE PLAN AND LAND USE REGULATIONS	))))	COMPLIANCE ACKNOWLEDGMENT ORDER 84-ACK-201

This matter came before the Commission on September 13, 1984, as a request for acknowledgment of compliance pursuant to ORS 197.251 and the Commission Acknowledgment Rule, OAR 660-03-000 to 660-03-033. The Commission, having fully considered Lane County's comprehensive plan and land use regulations, comments and objections of interested parties and the report of the Department of Land Conservation and Development, now enters its:

Findings of Fact and Conclusions

1. Lane County's request for Acknowledgment of Compliance was reviewed by the Commission previously on February 13, 1981, pursuant to ORS 197.251 and the Commission Acknowledgment Rule, OAR 660-03-000 to 660-03-033. For this review, the Commission found Lane County's Rural comprehensive plan and land use regulations did not comply with certain specified Statewide Planning Goals and denied the request for acknowledgment (Denial Order of February 26, 1981 as amended, (Exhibit A)).

2. The Commission reviewed the attached written report of the Director of the Department of Land Conservation and Development on September 13, 1984 regarding the compliance of the plan and regulations with the Statewide Planning Goals.

3. Based on its review, the Commission finds that Lane County's comprehensive plan and land use regulations comply with the Statewide Planning Goals for the reasons set forth in Section IV of the Department's report adopted by the Commission on September 13, 1984, and made a part of this Order (Exhibit B).

THEREFORE, IT IS HEREBY ORDERED THAT:

The Land Conservation and Development Commission acknowledges that the comprehensive plan and land use regulations of Lane County are in Compliance with the Statewide Planning Goals for the rural portion.

Severability

If, upon judicial review, this order is reversed or remanded solely with respect to an identifiable geographic area, the remainder of the order shall remain valid and shall be treated as a limited acknowledgment order under ORS 197.251(6). If requested by the affected local government or if otherwise necessary, the Director may issue, without further review by the Commission, an amended acknowledgment order describing the geographic area that remains acknowledged.

DATED THIS 3RD DAY OF OCTOBER 1984.

FOR THE COMMISSION:

James F. Ross, Director,
Department of Land
Conservation and Development

NOTICE: You are entitled to Judicial Review of the Order. Judicial Review may be obtained by filing a petition for review within 60 days from the service of this final Order. Judicial Review is pursuant to the provisions of ORS 183.482 and 197.650.

** Copies of all Exhibits are available for review at the Department's office in Salem.

Lane County

Gary Darnielle
Lane County Heanings Official
North Plaza Level PSB
125 E. 8th Ave.
Eugene, OR 97401

September 11, 1986

RE: PA2131-86

Dear Mr. Darnielle:

In your September 9, 1986 memorandum to Roy Burns, you requested staff to prepare responses to 2 questions in regards to the above referenced application. This memorandum is in response to your request.

Question 1). Which Rural Comprehensive Plan policies and implementation regulations determine allowable residential densities within areas designated as Big Game Range? Specifically, how does County staff reconcile the clear language of Rural Comprehensive Plan Flora and Fauna Policy #11 with the residential density analysis suggested by the "Flora & Fauna Working Paper" (March 1982) and the revised language to the working paper in the "Addendum to Working Paper: Flora & Fauna" (November 1983)?

Response: Goal 5 Flora and Fauna Policy #11 together with the clustering requirements of the F-2/RCP zone (LC16.211(8)) and of the EFU/RCP zone (LC16.212(8)) determine allowable residential densities within Big Game Range Habitat areas.

A better understanding of how Policy #11 and the implementing measures for clustering in the F-2/RCP and EFU/RCP zones can be obtained by reviewing the DLCD review comments for Lane County's Rural Comprehensive Plan.

In the DLCD Report, July 19, 1984, page 75, 2.e., DLCD indicated that the F-2/RCP and EFU/RCP zones must either be amended to contain larger minimum lot sizes or to contain clustering requirements for residences in Big Game Range Habitat areas. The reasoning for this recommendation was discussed in pages 33, 34, 35, 36 and 39 of the July 19, 1984 DLCD Staff Report.

In response to the DLCD recommendations in their July 19, 1984 report, Lane County amended it's F-2/RCP and EFU/RCP zones to contain clustering provisions for the siting of residences. In the Sept. 12, 1984 DLCD report, pp 25-26, DLCD noted their recommendations from their July 19th report and the amendments Lane County enacted to its F-2/RCP and EFU/RCP zones and concluded that the intent of Flora & Fauna Policy #11 had been carried out and met the Goal 5 requirements.

EXHIBIT T
Attch 12 - Page 1

Question 2) To what extent has County staff been pursuing the development of a Goal #2 "developed and committed" exception to the Baxter's Acres Subdivision? What specific factors have the staff examined or will the staff be examining which they believe will determine whether the subdivision is committed to nonresource use?

Response: County Staff have discussed a "developed" exception with Dave Pedersen who has represented Weyerhaeuser and a number of lot owners in Baxter's Acres. Our last discussion with Dave Pedersen occurred on September 9, 1986 during which we agreed that it would not be appropriate to proceed with initiating a Plan Amendment at this time due to the multiple applications for the same property being contested with the Hearings Official. Staff had intended to bring to the Lane County Planning Commission facts relating to the developed nature of Baxter's Acres and to let the LCPC decide if there appears to be a basis for taking a developed exception. The LCPC could then initiate a Plan Amendment/ Zone Change to more formally consider the matter.

Another impetus for initiating an amendment is the fact that if, through an arduous hearing process, dwellings could be allowed in the F-2/RCP zone, then a much simpler process would be to amend the Plan and change the zoning. The factors to be considered for a developed exception would be those required by the OAR for a developed exception (i.e., roads, utilities, sewage disposal systems, etc.).

AGENDA COVER MEMO

DATE: February 11, 1997 (Date of Memo)
February 26, 1997 (Date of Meeting)

TO: Lane County Board of Commissioners

DEPT.: Public Works Department, Land Management Division

PRESENTED BY: Bill Sage, Planner, Land Management Division

AGENDA ITEM TITLE: Order No._____ In the Matter of Electing Whether or Not to Hear an Appeal of a Hearings Official's Decision and Affirming the Planning Director's Approval For Dwelling Within the Impacted Forest Land Zone F2/RCP (Bartlett/PA 1841-96).

I. MOTION

MOVE TO ADOPT AN ORDER ESTABLISHING THE BOARD'S ELECTION TO NOT HEAR ARGUMENT IN AN APPEAL OF THE HEARINGS OFFICIAL'S DECISION AND TO AFFIRM THE HEARINGS OFFICIAL'S INTERPRETATION OF LANE CODE 16.211(7)(e) ON THE RECORD.

II. ISSUE OR PROBLEM

An appeal to the Board, contesting a Hearings Official denial of an appeal and affirmation of the Planning Director's approval of a special use permit to allow a dwelling within the Impacted Forest Land Zone F2, has been accepted by the Director. The Hearings Official has reviewed the appeal and reaffirmed his decision. Pursuant to Lane Code 14.600, the Board must now decide whether or not to hear the appeal.

III. DISCUSSION

A. Background

1. June 6, 1996: The applicant (Frank Bartlett) requested a Planning Director approval of a special use permit, PA 1841-96, for a dwelling in the Impacted Forest Land Zone (F-2) pursuant to ORS 215.730, .750; OAR 660-06-027(1)(d), 029, 035, 040, and LC 16.211(7) and (8) criteria and standards.

2. July 29, 1996: Special use permit PA 1841-96 was conditionally approved by the Planning Director. Pursuant to Lane Code 14.100(4), notice of the decision was provided on August 7, 1996.

3. August 19, 1996: Heru Tarjoto submitted a timely application for an appeal of the Planning Director's approval on the grounds that the Director had failed to follow the procedures applicable to the matter and misinterpreted the Lane Code or Manual, State Law (statutory or case law) or other applicable criteria. The appeal was set for public hearing on October 3, 1996. A request for continuance from the applicant was granted and the hearing was rescheduled to November 7, 1996.

4. November 7, 1996: The Lane County Hearings Official conducted a de novo hearing of the appeal.

5. November 26, 1996: Hearings Official issued a decision allowing an appeal, reversing the Planning Director's decision, and denying the request for a special use permit to allow a dwelling in the Impacted Forest Land Zone on the basis that the applicant omitted proof of one of the criteria necessary to establish a dwelling in the zone.

6. December 6, 1996: The applicant (Bartlett) filed a timely application for an appeal requesting reconsideration of the Hearings Official's decision. The appeal was received and accepted by the Planning Director and referred to the Hearings Official for reconsideration.

7. December 12, 1996: The Hearings Official agreed to reconsider his November 26, 1996 decision and to allow an opportunity for submission of additional evidence related to the number and date of creation for parcels and residences within the applicable template test area. An opportunity for rebuttal of the new evidence by the appellant (Tarjoto) was also granted.

8. January 8, 1997: The Hearings Official issued a decision on reconsideration affirming the Planning Director's approval of the request for a special use permit, PA 1841-96, to allow a dwelling in the Impacted Forest Land Zone.

9. January 21, 1997: The appellant (Tarjoto) submitted an application for an appeal of the Hearings Official's January 8, 1997 reconsidered decision.

10. January 23, 1997: The Hearings Official reviewed the reconsidered decision and the Tarjoto appeal and determined that he did not concur with the appellant's allegations that the Hearings Official failed to follow procedure applicable to the matter or misinterpreted the Lane Code or Manual, State Law or other applicable criteria, and reaffirmed his January 8, 1997.

B. <u>Elective Board Review Procedure</u>

The *<u>Elective Board Review Procedure</u>* in Lane Code 14.600(2)(c) and (d) provides the Board with three options:

- To hear the appeal on-the-record,

- To not hear the appeal and to remain silent on the Hearings Official's decision, or
- To not hear argument in the appeal but to expressly agree with any interpretations of the comprehensive plan policies or implementing ordinances made by the Hearings Official in the decision being appealed and affirm the Hearings Official's decision.

The applicable subsections are:

(c) The Board shall specify whether or not the decision of the Board is to have a hearing on the record for the appeal and shall include findings addressing the decision criteria in LC 14.600(3) below. If the Board's decision is to have a hearing on the record for the appeal, the Board order shall also specify the tentative date for the hearing on the record for the appeal and shall specify the parties who qualify to participate in the hearing on the record for the appeal.

(d) If the decision of the Board is to not have a hearing, the Board order shall specify whether or not the Board expressly agrees with or is silent regarding any interpretations of the comprehensive plan policies or implementing ordinances made by the Hearings Official in the decision being appealed. The Board order shall affirm the Hearings Official decision.

If the Board's decision is to hear arguments on the appeal, then the Board must adopt an order and findings specifying the tentative date for a hearing and the parties who qualify to participate in a hearing on the record for the appeal. In order for the Board to hear the appeal, the Decision Criteria of LC 14.600(3) requires that one or more of the four criteria cited below, is satisfied:

(3) Decision Criteria. A decision by the Board to hear the appeal on the record must include the issue raised in the appeal to the Board could have been raised before the close of the record at or following the final evidentiary hearing and must comply with one or more of the following criteria:

a) The issue is of Countywide significance.
b) The issue will reoccur with frequency and there is a need for policy guidance.
c) The issue involves a unique environmental resource.
d) The Planning Director or Hearings Official recommends review.

C. Analysis

Appellant's grounds for appeal.

The appellant's (Heru Tarjoto) application for an appeal to the Board contends the Hearings Official misinterpreted Lane Code and state law by concluding the subject parcel was lawfully created prior to January 25, 1990, as required by Lane Code 16.211(7)(e). The grounds for the appeal centered on the determination as to whether or not the subject parcel's metes and bounds was a lawful creation by a 1981 lot line adjustment, or an illegal land division requiring review under Lane Code partition regulations. The appellant further alleged the granting of private access easements across the subject parcel should have also been subject to review under Lane Code partition regulations.

The Planning Director's analysis of the appeal and decision criteria is developed below in two sections. The review of the Hearings Official's decision and interpretation pursuant to Lane Code 14.600(2)(c) and (d) is taken first in order. The analysis of the decision criteria of Lane Code 14.600(3) follows thereafter.

Hearings Official's interpretation.

The Hearings Official's reconsidered decision dated January 8, 1997 (refer to Attachment 7, pages 24 and 25) included an interpretation of Lane Code 16.211(7)(e) which requires that:

(e) The parcel on which the dwelling would be located was lawfully created prior to January 25, 1990;

The Hearings Official concluded the record included evidence that the subject parcel's metes and bounds description had been lawfully created with a warranty deed as a lot line adjustment in 1981. He found that:

"This is the primary target of the opponent's attack on approval. Key to this issue is the transaction in 1981, when a portion of the larger lot that contained what is now the subject property was transferred to the owner of the adjacent parcel to the northeast. If this transfer of ownership was a partition, it would have been improper because it was not subject to partition approval."

"This transaction could be viewed as a not permitted partition or an appropriate lot line adjustment. It had all the characteristics of a lot line adjustment described in ORS 92.010(7)(b); the lot line affected was a common boundary between two parcels, no additional unit of land was created and the existing unit of land, the subject property, remained in compliance with the applicable zoning ordinances."

"It is Lane County policy to regard a real estate transaction as legal if that is technically and legally possible. The fact that the transaction was later redone in a manner that specifically recognized that it was a lot line adjustment does not affect the earlier transaction."

"Appellant also argues that the property in question was re-aggregated into one parcel during the time that it was held by George Zellneer, from 1949 to 1979. For a time the idea of aggregation by common ownership at the beginning of a calendar year was popular in some parts of Oregon. This notion was created by the language in the then applicable partition law, ORS 92.010. The notion was also ended by statute with the passage of ORS 92.017. In this case, the owner of the several parcels had not done anything to indicate that he regarded the parcels as being aggregated. In fact, he had done exactly the opposite, having sold one of the parcels. After the passage of ORS 92.017, common ownership of adjacent parcels is not enough to show that the parcels have been aggregated into a single parcel. Since there is no evidence of anything else in this case, appellant's arguments that the parcels were aggregated and thus required partition review are not correct."

"In the same way, appellant's arguments that the transactions wherein the owner of the subject property granted an easement across the property were partitions is not correct. Earlier definitions of partition in ORS 92.010 did focus on the creation of a road, and place special requirements on partitions that involved creation of a road. There is, however, a distinction between a sale of land that creates a separate parcel and the grant of an easement for road purposes. The transactions about which appellant is concerned were easements and not the actual sale of property, and thus do not fall within the regulation of partitions."

"The subject property was created as a separate parcel in 1907. It was reduced in size in 1981 but no new parcel was created at that time. The subject parcel qualifies under the criteria of Lane Code 16.211(7)(e)."

In the Hearings Official's memorandum dated January 23, 1997, (see Attachment 9), declining to reconsider his January 8th decision, the Hearings Official states his recommendation to the Board on page one:

"Because the appeal involves an interpretation of L.C. 16.211(7)(e), I recommend either that the Board entertain the appeal and apply their own interpretation, or that the Board specify, pursuant to LC 14.600(2)(d), what portions of the interpretation of the Lane Code by the Hearings Official they accept or do not accept."

Continuing on page two, the Hearings Official reinforces his January 8, 1997 interpretation in the following manner:

"Finally, Mr. Tarjoto claims error because, he asserts, streets or ways, or roads were created as a part of the transactions that resulted in the subject parcel, and the definition of partition makes any such action the subject of partition review. The evidence in this matter was that some of the transactions in question included a grant of an easement for access purposes. An easement does not divide land, and thus is not a partition, according to the definition of partition in ORS 92.010(6). Here the context of the definition suggests that creating access by an easement is categorically different from the type of transaction subject to partition approval. For that reason, Mr. Tarjoto's arguments that the property could only be lawfully created if there had been a partition review were not accepted."

If the Board agrees with the Hearings Official's interpretation it is appropriate to not hear arguments on the appeal and to expressly agree with the Hearings Official's justification for the decision, findings of fact, and conclusions of law as written in his reconsidered decision dated January 8, 1997 and his decision not to reconsider dated January 23, 1997.

Election to hear criteria

Each Lane Code 14.600(3)(a)-(d) election-to-hear criterion is presented below with the Director's analysis.

a. *The issue is of Countywide significance.*

The appeal alleges improper conveyance of the subject and adjacent properties. The lawfully created status of the subject property is specific to the subject parcel's history and is not of countywide significance.

b. *The issue will reoccur with frequency and there is a need for policy guidance.*

The lawfully created status of the subject parcel has been supported by the evidence in the record and the site specific issue is unlikely to reoccur with frequency on similar applications in the forest resource base. The Planning Director has reviewed the interpretation by the Hearings Official of Lane Code 16.211(7)(e) and agrees with the Hearings Official's conclusion that the applicable implementing regulations are clear in meaning. The issues were adequately briefed before the Hearings Official and further argument before the Board is not necessary. Board action to affirm the Hearings Official will provide adequate policy guidance and indicate the Board approval of the interpretation.

c. *The issue involves a unique environmental resource.*

The issue is whether the applicant has met the burden of proof to allow a dwelling in the Impacted Forest Land Zone and no unique environmental resources have been identified in the record.

d. *The Planning Director or Hearings Official recommends review.*

The Hearings Official has recommended that the Board review this appeal and elect to either affirm the Hearings Official's reconsidered decision dated January 8, 1997 and his interpretation of Lane Code 16.211(7)(e) therein, or hear this appeal on-the-record with the intent to modify the Hearings Official's interpretation.

The Planning Director agrees with the Hearings Official's interpretation and decision and recommends the Board adopt the attached Board Order affirming both.

D. Alternatives/Options

1. To hear the appeal on-the-record;
2. To not hear arguments on the appeal and to remain silent on the Hearings Official's decision and interpretations; or
3. To not hear arguments on the appeal, affirm the Hearings Official's decision, and to expressly agree with the interpretation of Lane Code 16.211(7)(e) made by the Hearings Official in the decision being appealed.

E. Recommendation

Option 3 is recommended

F. Timing

The Board is scheduled to review the issues and make this decision on February 26, 1997.

IV. IMPLEMENTATION/FOLLOW-UP

Adopt an order and findings. Notify the parties of the Board decision.

V. ATTACHMENTS

1. Board Order
2. Application For Appeal: Tarjoto, August 19, 1996;
   Supplemental Grounds For Appeal: Tarjoto, November 7, 1996.
3. Applicant's Memorandum to Hearings Official: Bartlett/Johnson, October 18, 1996.
4. Hearings Official's Decision: Mecham, November 26, 1996.
5. Application For Appeal/Request for Reconsideration: Bartlett/Taylor, December 6, 1996.
6. Hearings Official's Memorandum Granting Reconsider: Mecham, December 12, 1996.
7. Hearings Official's Reconsidered Decision: Mecham, January 8, 1997.
8. Application For Appeal: Tarjoto, January 21, 1997.
9. Hearings Official's Memorandum Declining to Reconsider: Mecham, January 23, 1997.

More background information can be supplied if needed. If an on-the-record appeal hearing is scheduled, a complete copy of the file with all evidence will be supplied to the Board.

EXHIBIT # 48

IN THE BOARD OF COMMISSIONERS OF LANE COUNTY, OREGON

Order No. 97-2-26-1

(In the Matter of Electing Whether or Not to
(Hear an Appeal of a Hearings Official's Decision
(Affirming the Planning Director's Approval For a
(Dwelling Within the Impacted Forest Land Zone
(F2/RCP. (Bartlett/PA 1841-96)

WHEREAS, the Lane County Hearings Official has made a decision on application PA 1841-96; and

WHEREAS, the Lane County Planning Director has accepted an appeal of the Hearings Official's Decision to the Board of County Commissioners pursuant to LC 14.515; and

WHEREAS, the Lane County Hearings Official has affirmed his decision on application PA 1841-96; and

WHEREAS, Lane Code 14.600 provides the procedure and criteria which the Board follows in deciding whether or not to conduct an on the record hearing for an appeal of a decision by the Hearings Official; and

WHEREAS, the Board of County Commissioners has reviewed this matter at a public meeting of the Board; NOW

THEREFORE, BE IT ORDERED the Board of County Commissioners of Lane County finds and orders as follows:

1. That the appeal does not comply with the criteria of Lane Code Chapter 14.600(3) and arguments on the appeal should therefore not be considered. Findings in support of this decision are attached as Exhibit "A".

2. That the Lane County Hearings Official decisions interpreting Lane Code 16.211(7)(e), dated January 8 and 23, 1997, attached as Exhibit "B", are affirmed and adopted by the Board of County Commissioners as its own interpretation in reaching a final decision on this application.

DATED this 26th day of February, 1997.

Cindy Wheeldreyer

Chairperson, Lane County Board of Commissioners

APPROVED AS TO FORM

Date 2-18-97 Lane County

OFFICE OF LEGAL COUNSEL

Exhibit "A"

Findings In Support of Order No. 97-2-26-1

1. The subject parcel is owned by Frank Bartlett, contains approximately 40 acres, identified as tax lot 400 of Lane County Assessor's Map 19-04-04 and is located southeast of Sarvis Berry Road, south of Eugene.

2. In 1984, the subject property was designated for Forest use in the Rural Comprehensive Plan and zoned Impacted Forest Land (F-2/RCP) consistent with the designation.

3. June 6, 1996: The applicant (Frank Bartlett) requested a Planning Director approval of a special use permit, PA 1841-96, for a dwelling in the Impacted Forest Land Zone (F-2), pursuant to ORS 215.730, 750, OAR 660-06-027(1)(d), 029, 035, 040, and LC 16.211(7) and (8) criteria and standards.

4. July 29, 1996: Special use permit PA 1841-96 was conditionally approved by the Planning Director. Pursuant to Lane Code 14.100(4), notice of the decision was provided on August 7, 1996.

5. August 19, 1996: Heru Tarjoto submitted a timely application for an appeal of the Planning Director's approval on the grounds that the Director had failed to follow the procedures applicable to the matter and misinterpreted the Lane Code or Manual, State Law (statutory or case law) or other applicable criteria. The appeal was set for public hearing on October 3, 1996. A request for continuance from the applicant was granted and the hearing was rescheduled to November 7, 1996.

6. November 7, 1996: The Lane County Hearings Official conducted a de novo hearing of the appeal.

7. November 26, 1996: Hearings Official issued a decision allowing an appeal, reversing the Planning Director's decision, and denying the request for a special use permit to allow a dwelling in the Impacted Forest Land Zone on the basis that the applicant omitted proof of one of the criteria necessary to establish a dwelling in the zone.

8. December 6, 1996: The applicant (Bartlett) filed a timely application for an appeal requesting reconsideration of the Hearings Official's decision. The appeal was received and accepted by the Planning Director and referred to the Hearings Official for reconsideration.

9. December 12, 1996: The Hearings Official agreed to reconsider his November 26, 1996 decision and to allow an opportunity for submission of additional evidence related to the number and date of creation for parcels and residences within the applicable template test area. An opportunity for rebuttal of the new evidence by the previous appellant (Tarjoto) was also granted.

10. January 8, 1997: The Hearings Official issued a decision on reconsideration affirming the Planning Director's approval of the request for a special use permit, PA 1841-96, to allow a dwelling in the Impacted Forest Land Zone.

11. January 21, 1997: The appellant (Tarjoto) submitted an application for an appeal of the Hearings Official's January 8, 1997 reconsidered decision.

12. January 23, 1997: The Hearings Official reviewed the reconsidered decision and the Tarjoto appeal and determined that he did not concur with the appellant's allegations that the Hearings Official failed to follow procedure applicable to the matter or misinterpreted the Lane Code or Manual, State Law or other applicable criteria, and reaffirmed his January 8, 1997.

13. In order for the Board to hear arguments on the appeal, LC 14.600(3) requires one or more of the following findings:

    A decision by the Board to hear the appeal on the record must comply with one or more of the following criteria:

    The issue is of Countywide significance.
    The issue will reoccur with frequency and there is a need for policy guidance.
    The issue involves a unique environmental resource.
    The Planning Director or Hearings Official recommends review.

14. The appeal alleges improper conveyance of the subject and adjacent properties. The lawfully created status of the subject property is specific to the subject parcel's history and is not of countywide significance.

15. The lawfully created status of the subject parcel has been supported by the evidence in the record and the site specific issue is unlikely to reoccur with frequency on similar applications in the forest resource base. The Planning Director has reviewed the interpretation by the Hearings Official of Lane Code 16.211(7)(e) and agrees with the Hearings Official's conclusion that the applicable implementing regulations are clear in meaning. The issues were adequately briefed before the Hearings Official and further argument before the Board is not necessary. Board action to affirm the Hearings Official will provide adequate policy guidance and indicate the Board approval of the interpretation.

16. The contested issues are limited to whether the applicant has met the burden of proof to allow a dwelling in the Impacted Forest Land Zone and no unique environmental resources have identified in the record.

17. The Hearings Official recommended that the Board review this appeal and elect to either affirm the Hearings Official's reconsidered decision dated January 8, 1997 and his interpretation of Lane Code 16.211(7)(e) therein, or hear this appeal on-the-record with the intent to modify the Hearings Official's interpretation. The Planning Director agreed with the Hearings Official's interpretation and decision and recommended the Board affirm both.

18. To meet the requirements of LC 14.600(2)(b) the Board was required to adopt a written decision and order electing to have a hearing on the record for the appeal or declining to further review the appeal,

19. The Board of County Commissioners reviewed this matter at a meeting on February 26, 1997 and found that the appeal does not comply with the criteria of Lane Code Chapter 14.600(3) and elected to not hold an on-the-record hearing.

20. The Board of County Commissioners expressly agrees with the Lane County Hearings Official's decisions interpreting Lane Code 16.211(7)(e) dated January 8 and 23, 1997, attached as Exhibit "B". The Hearings Official's decision and interpretation are affirmed and adopted by the Board of County Commissioners as its own interpretation.

Re: PA 1841-96 (Bartlett)

Dear Mr. Howe:

Enclosed is a copy of a Hearings Official's decision on reconsideration denying an appeal and approving the Director's decision allowing a special use permit for the location of a dwelling on impacted forest land. The property involved was a parcel zoned F-2, identified as tax lot 400, assessor's map 19-04-04. The applicant was Frank Bartlett, assisted by Harry Taylor. The matter was contested.

Please contact me if you have any questions.

Sincerely,

Milo Mecham
Lane County Hearings Official

LANE COUNTY HEARINGS OFFICIAL
APPEAL OF A PLANNING DIRECTOR APPROVAL OF A REQUEST FOR A SPECIAL USE PERMIT TO ALLOW A DWELLING NOT RELATED TO FOREST MANAGEMENT WITHIN AN IMPACTED FOREST LANDS ZONE

(CONTESTED)

Application Summary

Frank Bartlett, 88711 Knight Road, Veneta, Oregon, requested Planning Director approval for a special use permit to allow a dwelling not related to forest management within an Impacted Forest Lands (F-2) zone on Tax Lot 400, Assessor's Map 19-04-04. The application was approved, subject to conditions, on July 29, 1996. This approval was appealed in a timely manner by Heru Tarjoto to the Lane County Hearings Official. After the appeal was upheld and the Director's decision reversed on the grounds of insufficient evidence, applicant filed a timely appeal and sought reconsideration of the Hearings officer's decision. Reconsideration was granted.

Parties of Record

Frank Bartlett	Harry Taylor	Allen Johnson
Heru Tarjoto	Mike Farthing	

Application History

Hearing Date: November 7, 1996

Record Remained Open on Reconsideration until January 2, 1997

Decision Date: January 8, 1997

Appeal Deadline

An appeal must be filed on or before January 21, 1997, using the appeal form that accompanies this decision. The appeal will be considered by the Lane County Board of Commissioners.

Statement of Criteria

ORS 215.730
ORS 215.750
OAR 660-06-025(1)(d)
OAR 660-06
Lane County Rural Comprehensive Plan
Lane Code 16.211

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is identified as tax lot 400, assessor's map 19-04-04. The subject parcel is a 40.41 acre parcel located southeast of Sarvis Berry Road, south of Eugene. The subject parcel is designated as Forest Land and zoned Impacted Forest Land (F-2/RCP).

2. The subject parcel was originally created in 1907. It passed through a series of owners until it came into the ownership of George Zellner in 1944. Mr. Zellner also acquired an adjoining parcel, which now composes the larger portion of what is identified as tax lot 1600. Through a scrivener's error the deed for this property incorrectly described it as lying in a different section. Mr. Zellner conveyed this property (tax lot 1600) to Penn Timber Company in 1979. In 1981, Mr. Zellner conveyed the eastern and southern portion of the parcel then designated as tax lot 400, which was adjacent to tax lot 1600, to Penn Timber Company. The remaining portion of the property retained by Mr. Zellner constituted the present subject property. Mr. Zellner conveyed the subject property to the present owner in 1991.

3. The subject property is located in an area that consists primarily of Impacted Forest Land (F2). Properties to the west, south and east are zoned F-2. Lands to the north are zoned Rural Residential (RR-10). There is one parcel to the northeast that is zoned F-1, non impacted forest land. This property is near, but does not touch the northeast corner of the subject property. The subject property currently does not have a residence on it. The applicant does not own any contiguous property.

4. Access to the subject property comes from Laughlin Road across adjacent property by way of a recorded 40 foot easement. The proposed dwelling would be located approximately 600 feet south of Laughlin Road and approximately 1200 feet east of the point where Laughlin Road has its closest approach to the subject property.

5. Laughlin Road is a dedicated road, classified as a Rural Local road, that is not maintained by the County. The dedication for Laughlin Road extends from Peaceful Valley Road to Sarvis Berry Road. The middle segment of Laughlin Road is not improved. Access to the portion of Laughlin Road from which the subject property would in turn gain access comes from Sarvis Berry Road.

6. The dwelling site for the proposed dwelling is located approximately in the middle of the subject property, some 300 feet south of the northern border, a little further from the southern border. No property zoned EFU (Exclusive Farm Use) or F-1 (Nonimpacted Forest Land) is nearby.

7. The applicant requests a special use permit to construct a single family dwelling on the subject property. In connection with construction of the dwelling, a well and septic system will be located on the subject property.

8. None of the subject property is within the 100 year flood hazard zone. The National Wetlands Inventory maps indicate that a portion of the property contains jurisdictional wetlands. The proposed access road to the dwelling site would cross through this wetlands. The subject property lies within an area designated in the Lane County acknowledged Rural Comprehensive Plan as Peripheral Big Game Range. No sensitive wildlife habitat areas have been identified on or near the property. The property is characterized by some relatively steep but not extreme slopes. The proposed dwelling will be located on a relatively level portion of the property, surrounded by areas with slopes of from ten to fifteen percent. No areas of natural hazard have been identified on the property.

9. The subject property receives fire protection from the Lane County Rural Fire Protection District #1, and police protection from the Lane County Sheriff's Office and the Oregon State Police. Water for the subject property will be provided by an on-site well and sewage disposal will be provided by an on-site septic system. The Lane Electric Coop provides electrical services to the subject property, and telephone service is provided by U.S. West. The subject property is within the boundaries of the Eugene School District #4J. No increase in the need for or level of services is expected because of this proposal.

10. Slightly more than half of the subject property is composed of Bellpine 11D soils. The reminder of the subject property includes Hazelair 52D, Panther 102C and Witzel 138E soil. The only soils of the subject property that have any rated productivity are the Bellpine soils, which have a productivity rating of 3933 cf/ac/yr.

11. If a square 160-acre template is laid over a map of the area surrounding the subject parcel pursuant to the requirements of OAR 660-06-027(1)(d), twenty tax lots are identified by the assessor as existing within the template. Tax lots do not constitute "lots or parcels" within the meaning of the rule. Examining each of these tax lots for proof of legal parcel status, beginning with the property in the northwest corner, the following can be determined:

The parcel in the extreme northwest of the template, identifiable as tax lot 2003 of assessor's map 18-04-32, has been in existence as a parcel described by a separate metes and bounds description since December 9, 1993. Prior to that date what is now tax lot 2003 was described in a deed that referenced the entire southeast quarter of the southeast quarter of section 32, and noted that the sixteenth section was divided by a 60 foot strip deeded to Lane County for a road recorded July 12, 1943.

The parcel east of this parcel is identified as tax lot 1401, TRS 18-04-33. A building permit was issued on March 9, 1981 for the construction of a residence on the parcel.

The evidence shows that the residence was given final inspection and approval on August 24, 1981.

Continuing east across a parcel that appears on the assessor's maps to be a roadway within the template area, the next parcel about which evidence was submitted is identified as tax lot 1410, TRS 18-04-33. The evidence is that this parcel was first described in a land sale contract, executed on December 15, 1973, recorded the next year, and completed by a deed recorded on December 8, 1976. An appraisal report shows that a dwelling existed on the parcel since 1975.

The next two parcels to the east comprise a roadway that was first created by deed in 1978, and then divided as part of a partition approved August 30, 1978. The parcels are numbered 1407 and 1414 on the assessor's map, 18-04-33.

The next parcel to the east is across Laughlin Road, and is designated as tax lot 500, TRS 18-04-33. This parcel was created in its present configuration when a lot line adjustment was approved on January 6, 1988. The lot line adjustment was reviewed and approved because it involved the creation of a parcel smaller than the minimum parcels size of ten acres.

The next parcels to the east for which evidence was submitted were created as the result of an approved partition on March 17, 1981. The are now identified as tax lots 525 and 521 of assessor's map 18-04-33.The easternmost of these parcels, tax lot 521, has had an approved mobile home placed on it since September 1985. The appraiser's reports submitted after the hearing show that the other parcel has had a mobile home on it since May 1981.

Also south of Laughlin Road, and west of the parcels discussed so far are two parcels, identified as tax lots 520 and 523. These parcels were created as the result of a partition approval granted by Lane County on March 8, 1979. A dwelling was approved for the parcel identified as tax lot 523 in May 1986, and the appraiser's report indicates that the dwelling was completed in 1987.

The remaining parcel north of the subject parcel about which evidence of the date of creation was submitted is identified as tax lot 522, assessor's map 18-04-33. This parcel was created by deed on April 17, 1973. The assessment report shows a dwelling on the parcel in 1981.

To the east and south of the subject parcel lies a parcel identified as tax lot 1600 and 401. This parcel was created as the result of the lot line adjustment that created the subject parcel in 1981.

South of this parcel lie three parcels created as the result of a partition (PA 3346-90) approved November 13, 1992.

To the south and west of the subject parcel lie two parcels, identified as tax lots 800 and 803 on assessor's map 19-04-05. These parcels were discussed in the Hearings

Official's decision on PA 4375-92 and PA 4374-92. Tax lot 803 was created in its present configuration in 1976. Tax lot 800 was created in its present configuration at the same time.

12. The subject application was submitted in accordance with Lane Code 14.050, and the public hearing on the appeal of approval of the application was conducted in accordance with Lane Code 14.200. Notice of the scheduled hearing was sent to interested parties, including the Oregon Department of Forestry on October 3, 1996.

Decision

THE APPEAL OF THE DECISION OF THE PLANNING DIRECTOR IS DENIED. THE DECISION OF THE PLANNING DIRECTOR APPROVING A REQUEST FOR A SPECIAL USE PERMIT TO ALLOW A DWELLING WITHIN AN IMPACTED FOREST LANDS (F-2) ZONE IS AFFIRMED, SUBJECT TO THE FOLLOWING CONDITIONS:

1. The owner of the subject property, or the owner's representative, shall complete and submit to Lane County Land Management Division the APPLICATION TO VERIFY COMPLIANCE WITH CONDITIONS OF LAND USE APPROVAL available from the Land Management Division, together with the required processing fees, showing that compliance has been achieved with conditions 2 through 9 of this decision. Verification of compliance must be obtained before building permits or placement permits for the proposed residence are issued.

2. The proposed dwelling, septic tank and drainfields, water system, and driveway shall be located as indicated on the plot plan approved by the director. Any substantial deviation from this approved location shall invalidate this conditional approval. The designated water supply shall be connected with a delivery system capable of sustaining the delivery of a volume of 20 gallons per minute for not less than 20 continuous minutes. Documentation verifying the ability of the proposed system and verifying that permits or registrations for water diversion or storage have been obtained or are not required shall be submitted with the APPLICATION TO VERIFY COMPLIANCE WITH CONDITIONS OF LAND USE APPROVAL.

3. The owner of the subject property shall complete and record with the Lane County Deeds and Records Division the written easement attached to the director's decision, recognizing the rights of adjacent and nearby land owners to conduct forest operations consistent with the Forest Practices Act and Rules. A copy of this recorded easement, showing the recording information, shall be attached to the completed APPLICATION TO VERIFY COMPLIANCE WITH CONDITIONS OF LAND USE APPROVAL.

4. The owner of the subject property shall plant a sufficient number of trees on the subject property to demonstrate that the subject property is reasonably expected to meet Department of Forestry stocking requirements as specified in ORS 527 and OAR 629. The owner of the subject property shall submit a stocking survey report to the Lane County Assessor and the Lane County Assessor shall verify that the minimum stocking requirements have been met by the time required in ORS 527 and OAR 629. The Lane County Assessor shall inform the Department of Forestry if the property owner has not submitted a stocking survey report or if the survey report indicates that minimum stocking requirements have not been met. Upon notification by the Lane County Assessor, the Department of Forestry shall determine whether the subject property meets minimum stocking requirements of ORS 527. If the Forestry Department determines that the subject property does not meet those requirements, the Forestry Department shall notify the owner of the subject property and the Lane County Assessor that the land is not being managed as forest land. No building permit for the proposed dwelling shall be issued until compliance with the stocking requirements is attained.

5. Prior to applying for a building permit, the primary and secondary fuel breaks surrounding each of the proposed dwellings shall be established in accordance with Lane Code 16.211(8)(c). These fuel breaks shall be maintained in perpetuity. The following documents shall be attached to the APPLICATION TO VERIFY COMPLIANCE WITH CONDITIONS OF LAND USE APPROVAL in sufficient detail to verify compliance with the above Lane Code requirements:

   a. A final plot plan of the subject property, drawn to scale, showing the distances in feet of the boundaries of the subject property; the location of the foundations of the proposed dwelling and its distance in feet to at least two boundaries of the subject property; the location of the primary safety zone and secondary fuel break and their contours at five foot intervals for the proposed dwelling; the location of the source of the water supplies for fire suppression and domestic use, and any related facilities or structures such as water lines, water storage, and access to the water supply; and the location and grades of the roads and driveways for the proposed dwelling.

   b. Photographs showing the extent and condition of the primary safety zones and secondary fuel breaks for the proposed dwelling.

6. Prior to construction of the proposed access road or driveway, the applicant shall secure authorization from the Oregon Division of State Lands for any permits required for construction within wetlands identified on the National Wetlands Inventory Cottage Grove NW1 panel. Proof of compliance shall be supplied to the Lane County Land Management Division in the form of an approved DSL permit.

for the proposed work. Prior to applying for a building permit, the applicant shall supply documentation establishing that the driveway or access road from Laughlin Road to the proposed dwelling site and to within 15 feet of any source(s) of water supply to be used for fighting residential fires complies with the design standards for roads and driveways in Lane Code 16.211(8)(c)(ii) and (e). This documentation shall also show the existence of passage turnouts and emergency turnarounds sufficient for fire fighting equipment and of permanent signs indicating the location of a ~~water source. Any addition~~ to the easement to accommodate turnouts in excess of 20 feet in width must be recorded in the same manner as the existing easement. The length of the driveway requires that the applicant consult with Lane County Rural Fire Protection District #1 personnel concerning the location of the dwelling and the special characteristics of the access road. To assure that this consultation is adequate, documentation of compliance with the design standards of Lane Code 16.211(8) must be a signed statement from the Lane County Rural Fire Protection District #1, stating that the location and construction of the driveways and/or roads to the proposed dwelling and to any source(s) of water supply complies with the above Lane Code requirements for such roads and driveways. This statement must be made on the ROAD AND DRIVEWAY COMPLIANCE form available from the Land Management Division.

7. The owner of the subject property shall provide evidence that the domestic water supply for the proposed dwelling is from a source authorized in accordance with the Department of Water Resources' Oregon Administrative Rules for the appropriation of ground water or surface water, and is not from a Class II stream, and that a water use permit is not required for the proposed use. If the domestic water supply for the proposed dwelling is not available from existing public sources or sources located entirely upon the subject property, the owner of the subject property shall provide evidence that a legal easement has been obtained permitting water lines to cross the properties of affected owners and granting the owner of the subject property the right to water from the source. Any well constructed to supply domestic water shall comply with the requirements of OAR 690, and the well construction report shall be submitted to Lane County upon construction.

8. Unless appealed, approval of this special use permit shall be valid for a two year period after the date the approval becomes final. The building or placement application or construction plans for the proposed dwelling shall be submitted within two years from the date this decision becomes final and shall include the location of all components of the proposed fire suppression and domestic water systems. The applicant shall obtain all permits required by ORS 455 and OAR 918 prior to construction of the dwelling.

9. Prior to final inspection for legal occupancy as defined by the Building Code, the owner of the subject property shall provide the following for the proposed dwelling:

a. Sufficient water outlets and serviceable hose with an interior diameter of not less than ¾" and a nozzle which can reach the dwelling and nearby improvements.

b. A residence or other structure with chimneys shall have a spark arrester on each chimney, and the residence shall have a fire retardant roof.

10. This proposal ~~must be implemented~~ (*i. e.*, substantial construction completed) within two years from the date that this conditional approval becomes final. This period may be extended if a written request for an extension is received by the Hearings Official prior to the expiration of this two year period and approved by the Hearings Official.

11. The owner of the subject property shall maintain the required water supply, pump, hose, and nozzle as a connected, operating unit ready for immediate use during all periods of fire danger.

Justification for the Decision

I. PROCEDURAL BACKGROUND

The appeal of the Planning Director's conditional approval of the subject application was based on an assertion that the Director's decision misinterpreted the Lane Code, State law and other applicable criteria. Under Lane Code 14.300, however, appeals of a Planning Director decision are heard *de novo* by the Hearings Official. Accordingly, each approval criteria relevant to this request must be addressed for each of the applications in reaching a decision.

Applicant requested that the record of PA4374-92 and 4375-92 be included in the record of this matter. To avoid burdening this record with the volumes of information in the record of those other planning actions, the Hearings Official incorporates the final Hearings Official decision on those matters into the record on this matter, and accepts for the purposes of this decision, the factual findings made in those decisions.

II. STATEWIDE PLANNING GOALS

The subject property is within an area subject to the Lane County Rural Comprehensive Plan. This Plan has been acknowledged by the Land Conservation and Development Commission in a series of acknowledgment orders. Acknowledgment indicates that the Plan is generally in compliance with the applicable standards of the statewide planning goals, and that appropriate exceptions have been approved for any matters of noncompliance. Byrd v. Stringer, 295 Or. 311, 666 P.2d 1332 (1983). Accordingly, the state statutes and administrative rules, the standards of the Plan, and the Lane Code provisions implementing the Plan, are the standards relevant to this application.

III APPLICABLE STATE STATUTES

A. **ORS 215.750(1) In western Oregon, a governing body of a county or its designate may allow the establishment of a single-family dwelling on a lot or parcel located within a forest zone if the lot or parcel is predominantly composed of soils that are:**

* * *

(c): "Capable of producing more than 85 cubic feet per acre per year of wood fiber if:

(A) All or part of at least 11 other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993, on the other lots or parcels."

This same standard is adopted and applied in Lane Code 16.211(7)(g) to govern when Lane County will allow single-family dwellings in Impacted Forest Land. The predominant soil type on the subject property is capable of producing 3,933 cubic feet of timber per year per acre, making (c) the applicable subsection. Within a 160 acre square centered on the subject property, there are 17 other lots listed in the Lane County Assessor's files.

There is evidence in the record concerning the date of creation of sixteen parcels, which have on them, according to the evidence, four dwellings. Evidence was submitted concerning the of creation of an additional dwelling, but no evidence was submitted concerning the date of creation of the parcel upon which the dwelling sits (tax lot 1401). The wording of the statute indicates that, to be considered as one of the qualifying dwellings, the dwelling must be on one of the qualifying parcels.

The evidence clearly indicates that fifteen of the parcels were created before January 1, 1993. The evidence concerning one parcel, tax lot 2003 of assessor's map 18-04-32 is uncertain. The parcel was divided by a road from the other portion of the land described in the metes and bounds description given on the relevant deeds. According to Lane County policy, as stated in Lane Code 13.010, in the definition of "Contiguous," the northern portion of this property, what is now tax lot 2003, was a separate parcel. However, in 1991 the state legislature amended ORS 92.010(7)(d) to provide that 'any property divided by the sale or grant of property for state highway, county road, city street or other right of way purposes shall continue to be considered a single unit of land until such time as the property is further subdivided or partitioned." Arguments can be made for either interpretation of the facts concerning this parcel. Since a determination of the date of creation of this parcel is not necessary for the application to meet the template test, no determination is made concerning the availability of this parcel to meet the template test.

There is evidence that this property qualifies under the criteria of ORS 215.750(1).

B. **ORS 215.750(3): "Lots or parcels within urban growth boundaries shall not be used to satisfy the eligibility requirements under this subsection."**

None of the lots or parcels described above is within an urban growth boundary.

C. ORS 215.750(4): **"A proposed dwelling under this subsection is not allowed:**

(a) If it is prohibited by or will not comply with the requirements of an acknowledged comprehensive plan or acknowledged land use regulations or other provisions of law.

(b) Unless it complies with the requirements of ORS 215.730.

(c) Unless no dwellings are allowed on other lots or parcels that make up the tract and deed restrictions established under ORS 215.740(3) for the other lots or parcels that make up the tract are met.

(d) If the tract upon which the dwelling will be sited includes a dwelling."

How this request complies with the applicable comprehensive plan and land use regulations is considered in the following sections of this decision. The requirements of ORS 215.730 are considered below in this section. The subject property is a single tract, so paragraph (c) is inapplicable here. There is presently no dwelling on the subject property.

D. ORS 215.730(1)(a): **"The property owner submits a stocking survey report to the assessor and the assessor verifies that the minimum stocking requirements adopted under ORS 527.610 to 527.770 have been met."**

Compliance with this provision is required as a condition of approval of this application.

E. ORS 215.730(1)(b): **"The dwelling meets the following requirements:**

(A) The dwelling has a fire retardant roof.

(B) The dwelling will not be sited on a slope of greater than 40 percent.

(C) Evidence is provided that the domestic water supply is from a source authorized by the Water Resources Department and not from a Class II stream as designated by the State Board of Forestry.

(D) The dwelling is located upon a parcel within a fire protection district or is provided with residential fire protection by contract.

(E) If the dwelling is not within a fire protection district, the applicant provides evidence that the applicant has asked to be included in the nearest such district.

(F) If the dwelling has a chimney or chimneys, each chimney has a spark arrester.

(G) The owner provides and maintains primary fuel-free break and secondary break areas."

The proposed dwelling and dwelling site either satisfy each of these requirements presently, or are required to do so through conditions of approval. The dwelling will be required to have a fire

retardant roof as a condition of approval. The subject property does not have slopes greater than 40 percent, so the dwelling will not be located on an extreme slope. The domestic water supply is to be provided by an on-site well, which is consistent with Water Resources Department standards in ORS 537 and OAR 690. The subject property is located within the Lane County Rural Fire Protection District #1. The use of spark arresters in any chimneys and provision and maintenance of primary and secondary fuel break areas are required as conditions of approval. As conditioned, the proposed dwelling meets each of the applicable requirements of this statute.

No other statutory provisions appear relevant to this request.

IV. OREGON ADMINISTRATIVE RULES

OAR 660-06-025(1)(d) allows, among other uses in Forest zones, "[d]wellings authorized by ORS 215.720 to 215.750". Such dwellings are defined in OAR 660-06-027, and are subject to the siting and other standards of OAR 660-06-029. These regulations are considered here.

A. OAR 660-06-027(1)(d): **"In western Oregon, a governing body or its designate may allow the establishment of a single family dwelling on a lot or parcel located within a forest zone if the lot or parcel is predominantly composed of soils that are:**

...

(C) Capable of producing more than 85 cubic feet per acre per year of wood fiber if:

(i) All or part of at least 11 other lots or parcels that existed on January 1, 1993, are within a 160 acre square centered on the subject tract; and

(ii) At least three dwellings existed on January 1, 1993 on the other lots or parcels;".

This requirement is the same as discussed above for ORS 215.750, and thus will not be repeated here.

B. OAR 660-06-027(4): **"A proposed dwelling under this rule is not allowed:**

(a) If it is prohibited by or will not comply with the requirements of an acknowledged comprehensive plan or acknowledged land use regulations or other provisions of law.

(b) Unless it complies with the requirements of OAR 660-06-029 and 035.

(c) Unless no dwellings are allowed on other lots or parcels that make up the tract and deed restrictions established under subsection (6) of this rule for the other lots or parcels that make up the tract are met.

(d) If the tract on which the dwelling will be sited includes a dwelling."

With the exception of item (b), these criteria are the same as those of ORS 215.750(4), and were found to be met or to be inapplicable. The Administrative Rule requirements listed here are considered below.

C. OAR 660-06-029(1): **"Dwellings and structures shall be sited on the parcel so that:**

(a) They have the least impact on nearby or adjoining forest or agricultural lands;

(b) The siting ensures that adverse impacts on forest operations and accepted farming practices on the tract will be minimized;

(c) The amount of forest lands used to site access roads, service corridors, the dwelling and structures is minimized; and

(d) The risks associated with wildfire are minimized."

There are no nearby agricultural lands. Forest lands adjoin the subject parcel on the northwest, west, south and east. The proposed dwelling will be located almost exactly in the middle of the property, nearly the maximum possible distance from the forest land. The effect of the proposed dwelling will be minimized because in addition to the distance from forest land, the forest land in the vicinity has already been developed to a significant extent by itself having dwellings located on the forest land, or being adjacent to land with dwellings. The largest expanse of relatively undisturbed forest land lies adjacent to the south and east of the property, in tax lots 1600 and 401. The proposed dwelling is located approximately 1200 feet from the forest land to the east, and more than 300 feet from the land to the south. This distance includes crossing the watercourse that flows through the property. Access to the subject property is by way of a private easement that does not cross onto any forest land There should be no effect on the adjacent forest lands from the proposed dwelling.

The proposed dwelling site is located on a relatively level portion of the subject property. This will reduce the size of the required firebreak, and will therefore minimize the amount of property lost to forest production.

The risks associated with wildfires are minimized through the conditions for approval. The installation of a fire retardant roof and a spark arrester for the chimney, will minimize the risk of a wildfire, as will the construction of the required firebreaks.

D. OAR 660-06-029(2): **"Siting criteria satisfying subsection OAR 660-06-029(1) may include setbacks from adjoining properties, clustering near or among existing structures, siting close to existing roads and siting on that portion of the parcel least suited for growing trees."**

These standards are implemented through the more specific criteria of Lane Code 16.211(8)(a), which are considered below.

E. OAR 660-06-029(3): **"The applicant shall provide evidence to the governing body that the domestic water supply is from a source authorized in accordance with the Water Resources department's [*sic*] administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rules (OAR Chapter 629). For purposes of this subsection, evidence of a domestic water supply means:**

(a) Verification from a water purveyor that the use described in the application will be served by the purveyor under the purveyor's rights to appropriate water; or

(b) A water use permit issued by the Water Resources department [*sic*] for the use described in the application; or

(c) Verification from the Water Resources department [*sic*] that a water use permit is not required for the use described in the application. If the proposed water supply is from a well and is exempt from permitting requirements under ORS 537.545, the applicant shall submit the well constructor's report to the county upon completion of the well."

The proposed dwelling is to obtain water from an on-site well, so compliance with paragraph (c) is required as a condition of approval.

F. OAR 660-06-029(4): **"As a condition of approval, if road access to the dwelling is by a road owned and maintained by a private party or by the Oregon Department of Forestry, the United States Bureau of Land Management, or the United States Forest Service, then the applicant shall provide proof of a long-term road access use permit or agreement. The road use permit may require the applicant to agree to accept responsibility for road maintenance."**

The applicant has supplied proof of a recorded easement allowing access from Laughlin Road.

G. OAR 660-06-029(5): **"Approval of a dwelling shall be subject to the following requirements:**

(a) Approval of a dwelling requires the owner of the tract to plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in Department of Forestry administrative rules.

(b) The planning department shall notify the county assessor of the above condition at the time the dwelling is approved.

(c) The property owner shall submit a stocking survey report to the county assessor and the assessor shall verify that the minimum stocking requirements have been met by the time required by Department of Forestry Rules. The assessor shall inform the Department of Forestry in cases where the property owner has not

submitted a stocking survey report or where the survey report indicates that minimum stocking requirements have not been met.

(d) Upon notification by the assessor the Department of Forestry shall determine whether the tract meets minimum stocking requirements of the Forest Practices Act. If the department determines that the tract does not meet those requirements, the department shall notify the owner and the assessor that the land is not being managed as forest land. The assessor shall then remove the forest land designation pursuant to ORS 321.359 and impose the additional tax pursuant to ORS 321.372."

Compliance with these stocking standards is required as a condition of approval of this application. Compliance is determined by achievement with objective criteria, so no further discretionary review is required.

H. OAR 660-06-035(1): **"The dwelling shall be located upon a parcel within a fire protection district or shall be provided with residential fire protection by contract. . . ."**

The dwelling is within the Lane County Rural Fire Protection District #1.

I. OAR 660-06-035(2): **"Road access to the dwelling shall meet road design standards described in OAR 660-06-040."**

The standard from OAR 660-06-040 reads as follows:

> **"The governing body shall establish road design standards, except for private roads and bridges accessing only commercial forest uses, which ensure that public roads, bridges, private roads and driveways are constructed so as to provide adequate access for fire fighting equipment. Such standards shall address maximum grade, road width, turning radius, road surface, bridge design, culverts, and road access taking into consideration seasonal weather conditions. The governing body shall consult with the appropriate Rural Fire Protection District and Forest Protection District in establishing these standards."**

The established road design standards are provided in Lane Code 16.211(8)(e), and are considered below.

J. OAR 660-06-035(3): **"The owners of the dwellings and structures shall maintain a primary fuel-free break area surrounding all structures and clear and maintain a secondary fuel-free break area in accordance with the provisions in "Recommended**

Fire Siting Standards for Dwellings and Structures and Fire Safety Design Standards for Roads" dated March 1, 1991 and published by the Oregon Department of Forestry."

The relevant fuel break standards are provided in Lane Code 16.211(8)(c), and are considered below.

K. OAR 660-06-035(4): **"The dwelling shall have a fire retardant roof."**

A fire retardant roof is required as a condition of approval.

L. OAR 660-06-035(5): **"The dwelling shall not be sited on a slope of greater than 40 percent."**

As noted in the Findings of Fact above, there are no slopes of this degree on the subject property. The dwelling will be located on a portion of the property with a moderate slope.

M. OAR 660-06-035(6): **"If the dwelling has a chimney or chimneys, each chimney shall have a spark arrester."**

Compliance with this provision is required as a condition of approval.

No other Oregon Administrative Rules appear to apply to this request.

V. APPLICABLE PLAN POLICIES

The subject property is designated as forest land in the Lane County Rural Comprehensive Plan and is zoned F-2 (Impacted Forest Lands) consistent with that designation. The following policies of the Plan apply to this application:

A. Forest Lands Policy #1: **"Conserve forest lands by maintaining the forest land base and protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture. . . ."**

Forest Land Policy #6: **"Dwellings shall be allowed in the Impacted Forest Land (F-2/RCP) Zone District as provided in OAR 660-06."**

These policies are incorporated in or can be implemented through the standards contained in the OAR provisions considered above and in Lane Code 16.211, which adopts many of the OAR 660-

06 standards and addresses the minimizing of effects on forestry and forest practices resulting from dwellings not related to forest management.

B. Forest Lands Policy #8: **"New structures must comply with the Siting and Fire Safety Standards of OAR 660-06-029 and 660-06-035."**

The siting and fire safety standards of the administrative rule are incorporated in Lane Code 16.211(8), ~~which is considered below~~.

C. Public Facilities and Services Policy #6b (Impacted Forest Land): **"... Uses that are not forest or farm related should be allowed only after assurance that such uses will not adversely affect the surrounding forest land."**

This policy is implemented by Lane Code 16.211(8)(a)(i), which considers potential adverse impacts on surrounding forest land. Accordingly, this policy will be considered in the light of this Lane Code provision.

D. Flora and Fauna Policy #9: **"Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, and as revised and updated in 1983, shall include an indication of that Range, and a note that computability problems, such as damage to vegetation may occur."**

Flora and Fauna Policy # 10: **Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna and as revised and updated in 1983.**

Flora and Fauna Policy # 11: **"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program."**

The subject property is within the Peripheral Big Game Range. This raises the question of how the subject property is to comply with the Rural Comprehensive Plan policies concerning Big Game Range, and whether there is evidence in the record to show that the proposed location of a dwelling on the subject property can comply with the policies.

The above quoted Rural Comprehensive Plan policy statements do not reflect the current state of the regulation of big game habitat. Taken as a whole, however, the policies and the working papers that are referenced in the policies do establish the direction which regulation of big game habitat began to take in and after adoption of the policies. The 1982 working paper identified Peripheral Big Game Range as being composed of the foothill areas of the County generally located between commercial forest lands and valley floors. Peripheral Range was identified as important habitat which "can be particularly crucial in severe winters, but has enough development to limit big game use and management options." The 1982 working paper recognized that "[m]anagement of land for timber production does not conflict with big game habitat. With proper forest management techniques, big game habitat can be significantly enhanced. The forage provided deer and elk in clear-cut areas is very important, but the combination of areas in various successional stages is probably the vital factor in enhancing numbers of deer and elk." Finally, the 1982 working paper recognized that "[t]he primary conflict to big game, is residential use at certain densities." The 1982 paper suggested that the ODFW standards of one dwelling unit for 40 acres in Peripheral Range would set the standard for maximum density without conflict.

The 1983 revisions questioned that assumption and therefore made important changes in the standards.

> "Although [the ODFW 40 and 80 acre standards are] a useful index, officials of the ODFW stress the fact that a mere "numbers game" is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.
> A prime example is that of 'clustering' dwelling units in Peripheral or Major Range areas – siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.
> The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirements of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.
> * * * *
> The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner – including the involvement of that agency in land use regulation development. If the zoning procedures described above do not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the ESEE process and determine new ways of dealing with conflicts * * * "

It was this reevaluation of the original standards that led the County to add the final sentence concerning working through land use regulations, siting requirements and similar activities to the original Flora and Fauna policy # 11 quoted above.

The text and context of these policies and the working paper makes it clear that the standard is not the simple "40 acres or ESEE" standard suggested in the first working paper. The first working paper reflected the standards and concerns appropriate to a time before the Rural Comprehensive Plan was finalized and implemented by the present zoning ordinances. When the first working paper was developed Lane County was facing a choice of alternatives. One alternative was to preserve the Big Game Range as a separate criteria, requiring and extensive inventory of the actual range areas and the related ESEE analysis of OAR 660-16 to resolve conflicts, leading to the creation of a big game overlay zone in the zoning regulations. The other alternative was to incorporate the big game/residential development conflict resolution into the zoning code as a whole, using such factors as the connection between appropriate forest management and beneficial big game habitat to make certain that the value of big game habitat was preserved.

Lane County chose the second alternative. Instead of inserting a special set of big game criteria into each section of the zoning code, as was done with riparian and sensitive wildlife criteria, Lane County melded big game concerns with other relevant concerns relating to the possible development of resource lands. The first step in this melding was the distinction between F-1 and F-2 lands, with the greater than normal restrictions on development of F-1 lands. As developmental conditions on resource lands and state laws concerning development on resource lands has changed, the Lane Code has continued to adapt to maintain the protection of Big Game Range through the zoning regulations. The Lane Code now contains measures relating to restocking, clustering, reduction of impacts to forest practices and so forth. All of these provisions are consistent with the first working paper's discussion of how to resolve conflicts between residences and big game. Thus, Flora and Fauna Policy ## 9, 10 and 11 are met when the proposed development complies with the relevant portions of Lane Code 16.211(7) and 16.211(8).

VI. LANE CODE CRITERIA

Lane Code 16.211(7) provides that a dwelling not related to forest management may be located in an Impacted Forest Lands (F-2) Zone if application is made to the Director pursuant to Lane Code 14.050 and the procedural requirements of Lane Code 14.100 are satisfied (both of which have occurred with respect to this application), and proof of each of the following matters is provided. The concept of "a dwelling not related to forest management" has been dropped from ORS 215.750 by Chapter 792 of 1993 Oregon Laws, and from the implementing Administrative Rules in OAR 660-06. However, because of the latitude given by those authorities to local governments to implement the foregoing standards, and because the Lane Code provisions have not been repealed and are mostly consistent with the foregoing authorities, these Lane Code provisions remain valid criteria applicable to the application.

A. **Lane Code 16.211(7)(a): "The dwelling would not force a significant change in, significantly increase the costs of, or impede accepted farming or forest practices on agriculture or forest lands;"**

Lane Code 16.211(7)(c): "A written statement recorded with the deed or written contract with the County or its equivalent is obtained from the landowner which recognizes the rights of adjacent and nearby landowners to conduct forest operations consistent with the Forest Practices Act and Rules;"

The conditions of approval require the applicant to execute and record a statement in the form of the easement attached as Attachment B. This requirement may be obviated by the additions to ORS 30.930-947 made by Chapter 792 of 1993 Oregon Laws, which provide additional protections for forest practices on forest lands, but until this Lane Code provision is repealed or deemed expressly negated, it should be applied. The easement is one significant means whereby the dwelling will comply with the requirement that the dwelling not force a change in forest practices on adjacent lands. There are no agricultural lands in the vicinity. In addition to the easement, the location of the dwelling away from the forest lands to the south and east assures that there is a significant buffer between the dwelling and any other forest lands where forest practices would be carried out. The requirement that the applicant develop a stocking plan on his own property assures that the dwelling will not have an adverse effect on this part of forest practices. There is little risk that there will be trespassing or nuisance claims arising from the location of this dwelling. The addition of a few daily trips on the local roads should have no significant impact on the forest practices.

B. **Lane Code 16.211(7)(b): "The parcel of the proposed dwelling is located within a rural fire protection district or the proposed resident has contracted for residential fire protection;"**

The parcel is located in the Lane Rural Fire Protection District.

C. **Lane Code 16.211(7)(d): "The dwelling meets the siting and safety standards in LC 16.211(8) below;"**

Lane Code 16.211(8) imposes numerous siting and safety standards on dwellings not related to forest management in Impacted Forest Lands zones. While these standards apply to all new dwellings in such zones, they are not absolute; the standards of Lane Code 16.211(8)(a)-(b) are to be weighed against the standards in Lane Code 16.211(8)(c) and (e) to determine the appropriate dwelling location.[1] The relevant standards are:

[1] This does not affect the standards of Lane Code 16.211(7), however, which are described in absolute terms.

1. **Lane Code 16.211(8)(a): "Setbacks. Residences and structures shall be sited as follows:**

(i) Near residences on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet away from any ravine, ridge or slope;"

This subparagraph imposes five different siting standards, each of which must be applied to the dwelling proposed in this application.

Near Residences on Other Tracts: There are no residences especially near the subject property, except to the north, where two residences , on tax lots 522 and 520 lie near the center of the subject property. The proposed residence is as close to these residences as is practical, given the layout of the subject property and the need for setbacks to preserve the freedom to carry on forest practices.

Near Existing Roads: One existing road ends near the northwest corner of the subject property; while another county road crosses north of the subject property. The subject property is also crossed by several private easements. The proposed dwelling site is located near one of these private easements.

On the Least Suitable Portion of the Tract for Forest Use: The entire parcel produces timber, although only a portion of the parcel is of a soil type classified as productive. The proposed dwelling is located on a relatively level portion of the property, and will occupy a small area, whereas location elsewhere on the property would require a larger dwelling site. In this way the proposed location is better and less suitable for forest use.

At Least 30 Feet Away from any Ravine, Ridge or Slope: The proposed dwelling site is on a relatively level portion of the property away from the watercourse that runs through the property.

2. **Lane Code 16.211(8)(a)(ii): "With minimal intrusion into forest areas undeveloped by nonforest uses;"**

The only parcel adjacent to the subject property which has been undeveloped by nonforest uses is to the northeast. The dwelling site proposed for the subject property is located at least 1200 feet from this non-impacted forest land. The proposed dwelling site thus minimizes intrusion into forest areas undeveloped by nonforest uses.

3. **Lane Code 16.211(8)(a)(iii): "Where possible, when considering LC 16.211(8)(a)(i) and (ii) above and the dimensions and topography of the**

tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU;"

The proposed dwelling site is at least 300 feet from the borders of adjoining F-2 land. There are no EFU or F-1 parcels abutting the subject property, so the 100 foot setback thus applies and has been met.

4. **Lane Code 16.211(8)(a)(iv): "Not closer than 100 feet from ordinary high water of a Class I stream;"**

No class I streams are present on or near the subject property.

5. **Lane Code 16.211(8)(a)(v): "Not closer than**
   (aa) 20 feet from the planned right of way of a state road, County road or a local access public road specified in Lane Code Chapter 15; and
   (bb) 20 feet from an existing right-of-way of a state road, County road or a local access public road; and
   (cc) 10 feet from all other property lines."

An undeveloped public road ends at the northwest corner of the property. The proposed dwelling site is at least 1200 feet from the end of this road. The proposed dwelling site is further than ten feet from all property lines.

6. **Lane Code 16.211(8)(b): "The amount of lands used to site access roads, service corridors and structures shall be minimized."**

The location of the proposed dwelling does not absolutely minimize the length of the required access road. The location of proposed dwelling on a level portion of the property does minimize the amount of land used for the structure. Once access is gained to the property, the location of the proposed dwelling does not improperly increase the amount of forest land lost to an access road. Portions of the property have greater slopes than the portion where the dwelling is to be located. Location of the dwelling where it is proposed will reduce the amount of property dedicated to fire breaks, and in that way the proposed location does minimize the amount of land used to site the dwelling. This standard sets a goal toward which one can strive, not an absolute beyond which one must pass. Within the flexibility of the standard, the criteria are met.

7. **Lane Code 16.211(8)(c): "Fire Safety Measures. Residences, structures and roads shall comply with the following fire safety measures:**

(i) Fuel Breaks. Fuel breaks around residences shall be maintained as follows:

(aa) Primary Safety Zone. The primary safety zone is a fire break extending a minimum of 30 feet in all directions around dwellings. . . . As slope increases, the primary safety zone shall increase away from the house, parallel to the slope and down the slope, as shown in the table below:

Size of the Primary Safety Zone by Percent Slope

% Slope	Feet of Primary Safety Zone	Feet of Additional Safety Zone Down Slope
0	30	0
10	30	50
20	30	75
25	30	100
40	30	150

(bb) Secondary Fuel Break. The secondary fuel break is a fuel break extending a minimum of 100 feet in all directions around the primary safety zone. . . ."

As can be seen from the above table, the more level the proposed dwelling site, the smaller the fuel breaks need to be to satisfy this requirement. For this reason, locating dwellings in the most level parts of a tract minimizes the size of the required safety zone and fuel break, which thus preserves the greatest amount of forest resources. The subject property here has varying slopes, some portions of which would require much larger fire breaks. In connection with the construction and placement of the dwelling, the applicant will be required to provide these safety zones and fuel breaks by the Conditions of Approval.

8. **Lane Code 16.211(8)(c)(ii): "Fire Suppression Water Supplies. An adequate fire suppression system shall be provided. Unless otherwise authorized by the local fire official, the minimum acceptable system shall include the following:**

(aa) A water supply such as a pond, stream, tank, well, sump or any combination thereof, together with a delivery system capable of sustaining a volume of 20 gallons per minute for not less than 20 minutes. If a water supply is available and suitable for fire protection, such as a swimming pool, pond,

stream, or lake, then road access to within 15 feet of the water's edge shall be provided for pumping units. The road access shall accommodate the turnaround of fire fighting equipment during the fire season. Permanent signs shall be posted along the access route to indicate the location of the emergency water source.

(bb) Sufficient water outlets, together with serviceable hose not less than three-quarter inch inside diameter and a nozzle to reach the dwelling, and nearby improvements.

(cc) The water supply, pump, hose and nozzle shall be maintained as a connected, operating unit ready for immediate use during period [*sic*] of fire danger."

Compliance with each of these standards for the proposed dwelling is required by Conditions of Approval.

9. **Lane Code 16.211(8)(c)(iii): "Chimneys and Roofs. Residences or structures with any chimneys shall have a spark arrester on the chimneys, and residences shall have a fire retardant roof."**

Compliance with these conditions for the proposed dwelling is required by the Conditions of Approval.

10. **Lane Code 16.211(8)(d): "Domestic Water Supplies. Evidence shall be provided that the domestic water supply is from a source authorized in accordance with the Department of Water Resources Oregon Administrative Rules for the appropriation of ground water (OAR 690, Division 10) or surface water (OAR 690, Division 20) and not from a Class II stream . . . ."**

The proposed dwelling plans to use ground water for its domestic water supply. Compliance with this requirement is included as a condition of approval.

11. **Lane Code 16.211(8)(e): "Fire Safety Design Standards for Roads and Driveways. Except for private driveways, roads or bridges accessing only commercial forest uses, an applicant shall provide evidence and a clear explanation which demonstrates why the route of access for fire fighting equipment, from the fire station to the destination point, across public roads, bridges, private roads or private access easements and driveways will comply with the standards specified below in LC 16.211(8)(e). . . .**

(i) Road and Driveway Surfaces. Roads shall have unobstructed widths of at least 20 feet including: travel surfaces with widths of at least 16 feet constructed with gravel . . . .

. . .

(iv) Road and Driveway Grades. Road and driveway grades shall not exceed 16 feet except for short distances when topographic conditions make lesser grades impractical. . . ."

Access to the proposed dwelling site will be over a private driveway on the subject property. This driveway must be constructed to satisfy these requirements. Compliance with these standards for the final driveways is required by the Conditions of Approval.

The siting standards of Lane Code 16.211(8) indicate that the proposed dwelling site does not maximize all of the criteria of this subsection. These criteria are, however, not minimum standards, but are a series of measures which are used to locate the best site for the dwelling. In this case greater proximity to nearby dwellings has been reduced so as to reduce the length of the driveway. However, no matter where the dwelling was located on the property, it could not significantly increase its proximity to other dwellings because these other dwellings are located so far from the adjoining property lines. Therefore, the proposed dwelling site has complied with the requirements of LC 16.211(8).

E. **Lane Code 16.211(7)(e): "The parcel on which the dwelling would be located was lawfully created prior to January 25, 1990;"**

This is the primary target of the opponent's attack on approval. Key to this issue is the transaction in 1981, when a portion of the larger lot that contained what is now the subject property was transferred to the owner of the adjacent parcel to the northeast. If this transfer of ownership was a partition, it would have been improper because it was not subject to partition approval.

The transaction in question was a warranty deed where George Zellner transferred ownership of 84.39 acres to Penn Timber. Penn Timber already owned the parcel that was adjacent to the north of the 89.39 acre property transferred by the 1981 deed. This transaction could be viewed as a not permitted partition or an appropriate lot line adjustment. It had all the characteristics of a lot line adjustment described in ORS 92.010(7)(b): the lot line affected was a common boundary between two parcels, no additional unit of land was created and the existing unit of land, the subject property, remained in compliance with the applicable zoning ordinances. The fact that the assessor gave the enlarged parcel two tax lot numbers does not indicate that two parcels were created.

It is Lane County policy to regard a real estate transaction as legal if that is technically and legally possible. The fact that the transaction was later redone in a manner that specifically recognized that it was a lot line adjustment does not affect the earlier transaction.

Appellant also argues that the property in question was re-aggregated into one parcel during the time that it was held by George Zellneer, from 1949 to 1979. For a time the idea of aggregation by common ownership at the beginning of a calendar year was popular in some parts of Oregon. This notion was created by the language in the then applicable partition law, ORS 92.010. The notion was also ended by statute with the passage of ORS 92.017. In this case, the owner of the several parcels had not done anything to indicate that he regarded the parcels as being aggregated. In fact, he had done exactly the opposite, having sold one of the parcels. After the passage of ORS 92.017, common ownership of adjacent parcels is not enough to show that the parcels have been aggregated into a single parcel. Since there is no evidence of anything else in this case, appellant's arguments that the parcels were aggregated and thus required partition review are not correct.

In the same way, appellant's arguments that the transactions wherein the owner of the subject property granted an easement across the property were partitions is not correct. Earlier definitions of partition in ORS 92.010 did focus on the creation of a road, and place special requirements on partitions that involved the creation of a road. There is, however, a distinction between a sale of land that creates a separate parcel and the grant of an easement for road purposes. The transactions about which appellant is concerned were easements and not the actual sale of property, and thus do not fall within the regulation of partitions.

The subject property was created as a separate parcel in 1907. It was reduced in size in 1981 but no new parcel was created at that time. The subject parcel qualifies under the criteria of Lane Code 16.211(7)(e).

F. **Lane Code 16.211(7)(f): "The parcel on which the dwelling would be located has been disqualified from receiving a farm or forest tax deferral."**

This criterion existed to implement a now-repealed Oregon Administrative Rule, which considered dwellings not related to forest management. Because of the stocking requirements imposed on the subject property by the now-effective rules, this disqualification is not appropriate. To comply with the conditions necessary to obtain an occupancy permit, the owner must comply with a stocking plan, which will also qualify the property for the continued tax deferral.

G. **Lane Code 16.211(7)(g): "The parcel is composed of soils which are:**

...

(i) Capable of 0 to 49 cubic feet per acre per year (cf/ac/yr) and where this parcel and at least all or part of three other parcels exist within a 160-acre square when centered on the center of the subject parcel; or

(ii) Capable of 50 to 85 cf/ac/yr and where this parcel and at least all or part of seven other parcels exist within a 160 acre square when centered on the center of the subject parcel; or

(iii) Capable of above 85 cf/ac/yr and where this parcel and at least all or part of eleven other parcels exist within a 160 acre square when centered on the center of the subject parcel."

This criteria was considered above with regard to the similar requirement of ORS 215.750, and was satisfied.

H. **Lane Code 16.211(7)(h): "Parcels within urban growth boundaries shall not be counted to satisfy the eligibility requirements under Lane Code 16.211(7)(g) above."**

None of the parcels within the 160 acre square centered on the subject property are located within an urban growth boundary, so this requirement is satisfied.

I. **Lane Code 16.211(7)(i): "If road access to the dwelling is by a road owned and maintained boy [*sic*] a private party or the Oregon Department of Forestry, the Bureau of Land Management, or the United States Forest Service, then the applicant shall provide proof of a long-term road access use permit or agreement. The road use permit may require the applicant to agree to accept responsibility for road maintenance."**

The subject property is accessed by way of a recorded easement from Laughlin Road. This criteria is satisfied.

J. **Lane Code 16.211(7)(k): "Notice of a decision for an application pursuant to LC 16.211(7) above shall occur in compliance with LC 16.100(3)."**

This paragraph requires notice of a consideration of an application under Lane Code 16.211(7) to be sent to the Departments of Land Conservation and Development and Forestry ten days before the decision is made. Such notice has been sent.

VII. EXPIRATION OF APPROVAL

Consistent with Lane Code 14.700(4), this approval will be valid for a two year period from the date this decision becomes final. All conditions of approval must be satisfied within this time. This approval shall become null and void unless all such conditions are satisfied within that time, or a written request for an extension is received and approved by the Hearings Official in accordance with the Conditions of Approval.

Conclusion

State law and the Lane Code allows placement of dwellings on impacted forest land if the dwelling complies with a long list of rather onerous requirements. If the proposed dwelling can comply with

all the conditions imposed by the present zoning laws, the resource value of the property will be preserved to a greater extent than historically it has been on the properties that made this into impacted forest land. Subject to the conditions listed herein the Director's decision is affirmed and the appeal is denied. The proposed dwelling is allowed, subject to these conditions.

Re: Declining reconsideration of PA 1841-96 (Bartlett)

Dear Kent:

I received an appeal of the Hearings Official's decision in PA 1841-96, which approved the Director's decision allowing a dwelling in an impacted forest zone. For the reasons stated here, I decline to reconsider the Hearings Official's decision and affirm that decision. Because this appeal involves an interpretation of L.C. 16.211(7)(e), I recommend either that the Board entertain the appeal and apply their own interpretation, or that the Board specify, pursuant to LC 14.600(2)(d), what portions of the interpretation of the Lane Code by the Hearings Official they accept or do not accept.

This appeal by Heru Tarjoto raises some of the same issues Mr. Tarjoto raised at the hearing. Although the issues were not all discussed in the Hearings Official's decision, they were all considered in the course of reaching a decision. Because Mr. Tarjoto's present appeal is based on, but does not fully explain the contentions he made during the hearing, a brief explanation of his arguments and why I do not feel they warrant reconsideration may assist you in your evaluation of the appeal.

Mr. Tarjoto's appeal is based on his assertion that the subject parcel is not a legal parcel. This is an issue because of the requirement of LC 16.211(7)(e): "The parcel on which the dwelling would be located was lawfully created prior to January 25, 1990." Although Mr. Tarjoto quotes from several state laws, the dispute in this case is really centered around how Lane County wishes to apply the language of these state laws to determine whether or not the subject parcel was lawfully created prior to January 25, 1990.

Mr. Tarjoto begins his appeal with an assumption that was not made in the Hearings Official's decision: that the subject parcel was an undivided part of a single large 284 acre parcel in 1944. The Hearings Official's decision found that this was not the case because of the language in ORS 92.017[1], among other reasons. Contrary to Mr. Tarjoto's assumption, the evidence indicated that two parcels acquired by Mr. Zellner were separate parcels and were not merged into a single parcel. Because the Hearings Official's decision does not

[1] 92.017 A lot or parcel lawfully created shall remain a discrete lot or parcel, unless the lot or parcel lines are vacated or the lot or parcel is further divided as provided by law.

accept the idea of a merger of the two properties, the Hearings Official's decision did not conclude that partition review was necessary, as Mr. Tarjoto would have preferred.

Mr. Tarjoto also relies on the definitions of "lot" and "parcel" given in ORS 92.010(3) and (5). In this portion of the argument, Mr. Tarjoto is contending that because the properties in question were not created as a part of a subdivision, or as the product of a partitioning proceeding, the properties in question do not fit within the protection of ORS 92.017. In this argument, as in a similar argument made during the hearing, Mr. Tarjoto ignores the introductory language of ORS 92.010, which states that "unless the context requires otherwise" the definitions Mr. Tarjoto quotes apply. When we are dealing with properties created by deeds written before any law governed the creation of subdivisions or recognized the concept of partitioning, the context of the language obviously requires a slightly different meaning than the definition Mr. Tarjoto offers. Insisting on the statutory definition would defeat the legislature's intent in creating ORS 92.017.

Finally, Mr. Tarjoto claims error because, he asserts, streets or ways, or roads were created as a part of the transactions that resulted in the subject parcel, and the definition of partition makes any such action the subject of partition review. The evidence in this matter was that some of the transactions in question included a grant of an easement for access purposes. An easement does not divide land, and thus is not a partition, according to the definition of partition in ORS 92.010(6). Here the context of the definition suggests that creating access by an easement is categorically different from the type of transaction subject to partition approval. For that reason, Mr. Tarjoto's arguments that the property could only be lawfully created if there had been a partition review were not accepted.

Mr. Tarjoto's description of the holding in Higgins v. Marion County is correct, but it does not require reconsideration. I assume that by this argument Mr. Tarjoto is responding to the applicant's argument that he was entitled to rely on a previous legal lot determination that the subject parcel was lawfully created. For several reasons the Hearings Official's decision did not use the previous legal lot determination as evidence upon which the decision approving the application was based. Thus, the ruling in the Higgins case does not matter in these proceedings, however it may apply in other circumstances.

For these reasons, after reviewing the appeal and request for reconsideration, I have determined that reconsideration of the previous Hearings Official decision is not warranted, and I affirm that decision.

Respectfully submitted,

Milo Mecham

Re: Appeal of Planning Director approval of the request (PA 19–05299) by Gray & Dorotea Goodman for a forest template dwelling on Tax Lot 506, Assessor's Map 18–02–11.

Dear Mr. Miller:

Please find the Lane County Hearings Official's decision affirming the Planning Director's approval of the request (PA 19–05299) by Gray & Dorotea Goodman for a forest template dwelling on Tax Lot 506, Assessor's Map 18–02–11.

Sincerely,

Gary L. Darnielle
Lane County Hearings Official

LANE COUNTY HEARINGS OFFICIAL
APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On April 18, 2019, a request to establish a dwelling in the Impacted Forest Lands (F–2) zone was submitted to Lane County Land Management Division by James Belknap. The application was deemed complete on May 29, 2019. On September 20, 2019, the Director issued a determination that the subject property complied with the applicable standards and criteria for a Forest Template Dwelling pursuant to LC 16.211(5) and (8). Notice of the determination was mailed to surrounding property owners. On October 2, 2019, a timely appeal was submitted by LandWatch Lane County.

Parties of Record

James Belknap	LandWatch Lane County	Lauri Segel–Vaccher
Michael Farthing	Gray & Dorotea Goodman	Sean Malone

Application History

Hearing Date: November 12, 2019
(Record Held Open Until January 16, 2020)

Decision Date: January 27, 2020

Appeal Deadline

An appeal must be filed within 12 days of the mailing of this decision, using the form provided by the Lane County Land Management Division. The appeal will be considered by the Lane County Board of Commissioners.

Statement of Criteria

Lane Code 16.211(5) & (8)

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 506, assessor's map 18–02–11, 0.2 miles southeast of the City of Springfield's Urban Growth Boundary, north of Wallace Creek road. It takes access off of RR Baker Road, a private easement road. The subject property is vacant and is zoned F–2 Impacted Forest Lands. It is located within a Major Big Game Range and is not part of a tract.

The subject property slopes upward to the east with an elevation range between approximately 980 to 1120 feet above mean sea level (MSL) per Lane County GIS contour data. County contour and LiDAR data show that slopes range from less than 10 percent to greater than 40 percent, with a level area in the center. Lane County GIS aerial imagery shows that a majority of the property open pasture with scattered brush and a mixture of vegetation in the northern portion of the site. According to County GIS data layers, the property has areas rated by DOGAMI as "high" and "very high" for landslide susceptibility and does not contain floodplain, a Class 1 stream, or mapped wetlands.

The subject property is largely clear of timber and is open pasture with low vegetation. The home site is proposed in an area already clear of timber and will be serviced by an existing access that will be extended and improved to meet driveway standards.

2. The subject property abuts properties zoned F-2 Impacted Forest Lands on all sides. The surrounding area can generally be characterized as a mix of forest and low-density, rural residential uses.

3. The following table represents the soils on the subject property:

Map Symbol	Unit Name	Acreage	% of Tax Lot	Forestry Capability Class Cubic Feet per Acre per year
108F	Philomath cobbly silty clay; 12–45% slopes	6.94	57%	Oregon Department of Forestry Estimate ~ 45 Cu./Ft./Ac./yr.
107C	Philomath silty clay; 3–12% slopes	2.43	20%	Oregon Department of Forestry Estimate ~ 45 Cu./Ft./ Ac./yr.
113G	Ritner cobbly silty clay loam; 30–60 % slopes	2.31	19%	Oregon Department of Forestry Estimate ~ 149 Cu./Ft./Ac./yr.
116G	Rock outcrop–Witzel complex; 10–70 % slope	0.37	3%	Oregon Department of Forestry Estimate ~ 21 Cu./Ft./ Ac./yr.

4. Because 80 percent of the subject property's soils have less than a capability of 49 cubic feet per acre per year of wood fiber, the application qualifies for the 3-parcel template test required by Lane Code 16.211(5)(c)(i)(aa). The following table documents 11 parcels relied upon by the Applicant to satisfy Lane Code 16.211(5)(c)(i)(aa).

Count	Assessor's Map	Tax Lot	Date of Creation	Documentation / Deed / LLV / Partition
1	18–02–11	402 (now 405)	1915	Preliminary LLV PA04-5479 and Notice PA07-5918 / PA05-05303
2	18–02–11	1602	1898	Book 486 Page 298; LL PA04-05486; PA05-05303
3	18–02–11	1400	1964	Deed R452/90923
4	18–02–11	1401	1969	Deed R449/77304; Preliminary LLV PA 94-02225
5	18–02–11	500	1973	Deed R655/7342064
6	18–02–11	503	1964	Deed R245/61357
7	18–02–11	1300	1940	Deed V390/274
8	18–02–11	1200	1940	Deed V197/631
9	18–02–11	502	1964	R245/60012; Preliminary LLV PA91-01252
10	18–02–11	701	1976	Preliminary LLV PA92-00285
11	18–02–11	600	1983	Parcel 1 M43-81

5. Lane Code 16.211(5)(c)(i)(bb) requires that at least three dwellings existed on January 1, 1993, and continue to exist on lots located within a 160 acre square centered on the subject property. The Applicant has relied upon the following dwellings/tax lots:

Count	Assessor's Map	Tax Lot	Date of Dwelling on Property
1	18–02–11	503	1966
2	18–02–11	1300	1948
3	18–02–11	502	1964

6. Three dwellings are located within 1,000 feet of the subject property, all being located to the east and southeast across RR Baker Road on intervening ownership. The closest of these dwellings is located on Tax Lot 600 and is nearly 500 feet away from the subject property, and just over 700 feet from the proposed home site. With consideration of the access and slope limitations of the property, the proposed home site is located as close to these other dwellings as appears to be feasible considering the topography of the subject property.

The nearest public road is Wallace Creek Road, located to the south of the subject property. The subject property is proposed to take access from R.R. Baker Road, a private road built over a 40–foot wide easement, adjacent to the subject property.

Access from Wallace Creek Road is proposed via R.R. Baker Road and a 450–foot driveway leading to the development site. Per the application, the driveway access will be provided via an existing logging skid road that will be improved and extended approximately 200 feet to the dwelling site. The Applicants do not document the extent of the skid road and it is not clearly visible from recent County GIS imagery, but does appear on imagery dating back to 2000. The Applicants have provided a recorded easement document that allows for permanent use of the road for access and utilities with provisions for maintenance in compliance with LC 15.055(4), (5), and (7). Compliance with LC 15.055 has been made a condition of approval and any changes to this easement are subject to further review and approval as part of the Verification of Conditions application process.

September 16, 2019 driveway slope map with details stamped by the Applicants' surveyor indicate that the grade of the proposed road varies between two and 13 percent and the proposed driveway contains two segments with slopes that exceed 16 percent. These segments include a 32–foot span with a 16.1 percent slope near RR Baker Road and an 85–foot span with a slope up to 18.1 percent slope past the proposed turnout.

The proposed home site is approximately 450 feet from RR Baker Road, and as close to the road as appears to be feasible with consideration of slopes between the road and the dwelling site and other reasonably level portions of the property.

The Applicants' July 11, 2019 response includes a site plan that shows the primary and secondary fuel breaks around the proposed home site. The site plan detail is stamped by a registered professional land surveyor and includes 5–foot contours near the proposed home site and the slope percentages within 30 feet of the dwelling. The detail indicates the downslope within 30 feet of the home site to be 12 percent to the southwest, 2 percent to the northwest, and 10 percent to the northeast. These slopes dictate a 30–foot primary fuel break around the home site with an additional 50–foot safety zone downslope to the northwest and southwest of the dwelling, as shown on the site plan. The precise break point between the downslopes to the northwest, northeast, and southwest are not indicated in detail and need not be provided to demonstrate that compliance with fuel break standards is feasible, as it is clear that the 50–foot additional safety downslope could be accommodated regardless of the precise location of the transition. The site plan detail also shows a secondary fuel break around the primary safety zone.

7. The applicant proposes to install a private well for domestic water supply. Given the residential uses on properties surrounding the subject property, compliance with the above standard is feasible as proposed.

8. The subject property is located within the Pleasant Hill Goshen Rural Fire Protection District. The Applicant's submittal includes a March 14, 2019 letter from the Goshen Pleasant Hill Rural Fire Protection District confirming that the subject property will be serviced by the district. The Applicant's submittal also includes an April 15, 2019 email follow-up to a site visit by the fire district that confirms the equipment the firefighting equipment that the district has access to and would use to respond to a fire on the property from the nearest fire station at 36745 Jasper–Lowell Road, approximately 2.4 miles from the subject property.

9. On July 11, 2019, the Applicants submitted a revised access plan showing eight turnarounds spaced at intervals not less than 500 feet between Wallace Creek Road and the base of the driveway. The Applicants' submittal included photographs of the turnaround points as they exist in addition to the June 21, 2019 letter from the owner's Hendrickson Well Drilling attesting to the ability to construct the road in accordance with County standards as designed. The company has experience in road excavation, site preparation land clearing, and general contracting.

10. The subject property is bordered on the south by tax lot 508, on the southeast by tax lot 600, on the east by tax lot 507, on the north by tax lot 201 and on the west by tax lots 401 and 404; all within assessor's map 18–02–11. Adjacent on the east to tax lot 507 is tax lot 501, which has a dwelling. The development site (as amended 5/21/19) is located in the lower one–third portion of the subject property. Tax lots 506, 501 and 508 are owned by Gray and Dorotea Goodman, the applicants. Tax lots 507 and 509 are owned by Nimpkish LLC, whose registered agents are Gray Goodman and Dorotea Goodman.

    The secondary fuel break around the development site is 100 feet beyond the primary fuel break to the north, east and south. However, it does not extend its full length to the west where the subject property borders tax lots 401 and 404. These latter two properties are not owned by either the Applicants or Nimpkish, LLC.

11. The record contains an index of well logs for the township, range, and section within which the subject property lies. The well log for tax lot 506 shows a capacity of eight gallons per minute; the well logs for two wells on tax lot 501 show capacity of 3 and 5 gallons per minute, respectively; and well lots for two wells on tax lot 404 show a capacity of 1.5 and 2.6 gallons per minute. The well log for tax lot 600 shows a capacity of 5 gallons per minute. This data is relevant to LC 16.211(8)(d).

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 19–05299) BY GRAY AND DOROTEA GOODMAN FOR A TEMPLATE FOREST

DWELLING ON TAX LOT 506, ASSESSOR'S MAP 18–02–11 IS AFFIRMED subject to the following modification to Condition of Approval #3:

3. Excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose. Prior to building approval, the Applicants shall submit a Level II geotechnical report to the County. If the building inspector finds problems that would require a restriction on mechanical grading and/or clearing, that issue shall be reviewed by the Hearings Official through a Type III Modification of Decision.

Justification for the Decision (Conclusion)

The subject property is zoned F–2 Impacted Forest Land. The Applicant is requesting approval to construct a single–family dwelling as provided by Lane Code 16.211(5)(c). Dwellings authorized by this provision are known as "forest template" dwellings because some of the applicable approval criteria of Lane Code 16.211(5) must be analyzed through the placement of a 160–acre rectangle template centered on the center of the subject property (tract). Additionally, the placement of a dwelling on non–impacted forest land must meet the siting standards provided by Lane Code 16.211(8).

The allegations of error raised by the Appellant in its appeal are as follows:

1. ***The subject property is located within a Major Big Game Range and the application must conform to the requirement that the proposal must not result in a density greater than one dwelling unit per 80 acres.***

   The Appellant contends that the proposed template dwelling does not comply with the 80–acre minimum density requirement for Major Big Game Habitat mandated by OAR 660–006–0027(1)(d) and (f), and Goal 4, Policy #11 of the Rural Comprehensive Plan. Policy #11 states:

   "Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660–16–000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

As determined in earlier decisions,[1] the Flora and Fauna Working Paper (1982 and 1983 Addendum) of the Rural Comprehensive Plan and Flora and Fauna Policy #11 of the Plan explain that the Big Game Range density standards were never integrated into the zoning classifications and minimum lot size recommendations on a regional basis. The density recommendations were not applicable to existing parcels but were to be considered in rezoning applications. Therefore, the approval of template dwellings does not require a determination of consistency with Big Game Range density standards.

The Appellant relies upon LUBA's decision in *Cattoche v. Lane County*[2] for the proposition that density in the Impacted Forest Lands District is determined by the Rural Comprehensive Plan's March 1992 Flora & Fauna Working Paper as it applies to Flora & Fauna Policy #11 of the Rural Comprehensive Plan. The working paper stated that the county would be divided into regions and that the recommendations of the Oregon Department of Fish & Wildlife (ODF&W) would be used to determine appropriate densities in the peripheral and major big game ranges. Any proposed density above the ODF&W would represent a conflict with Statewide Planning Goal 5 and would require an ESEE analysis.

The record contains portions of the July 19 and September 12, 1984 DLCD staff reports for the acknowledgment of compliance of the Rural Comprehensive Plan. The version of Chapter 16 of the Lane Code that DLCD staff was reviewing included a minimum lot size of 40 acres for dwellings in the Non–Impacted Forest Lands District (F–1) and minimum lot sizes of 20 and 40 acres in the Impacted Forest Lands District (F–1). There were no provisions in the F–2 zoning district for residential siting standards that included the clustering of dwellings.

Kent Howe, former Lane County Planning Director, and Jim Mann, Former Principle Planner with Lane County, were working on the adoption of the Rural Comprehensive Plan in 1983 and 1984. Their recollection was that at the last hour, facing a negative DLCD staff review regarding compliance with Goal 5 issues dealing with wildlife and big game habitat, Lane County made significant changes to how big game habitat was to be protected. The primary change was to virtually eliminate residential development in the F–1 District, which represented 84 percent of the forest lands in Lane County. The second change was to require the clustering of dwellings in the F–2 District. Finally, the minimum lot size for F–2 zoned forest lands was set at 80 acres. With these changes, the Rural Comprehensive Plan was found to be consistent with Statewide Planning Goal 5 by the Land Conservation and Development Commission.

---

[1] See *Application of Michelle Miller*, Lane County Hearings Official Decision in PA 18–05471 (4/10/2019)
[2] *Cattoche v. Lane County*, __LUBA __ (LUBA No. 2018–109, May 22, 2019).

The Lane County Hearings Official, in the *Green* decision,[3] opined that Flora and Fauna Policy #11 is not an approval criterion but rather directs the County towards a method of determining the "overall" residential densities in different regions of the County. As noted above, Lane County planning staff never did divide the County into regions although big game habitat was inventoried and adopted through maps that identified major, peripheral, and impacted big game habitat.

As pointed out in the *Green* decision, the Oregon Legislature adopted HB 3661 in 1993. This bill provided for large tract dwellings in western Oregon, lot of record dwellings, and template dwellings. It was noted that Subsection (1)(f) of ORS 215.705 required the siting of lot of record dwellings to consider density standards based upon acknowledged big game habitat inventories. No such requirement was necessary for the siting of template dwellings. The Lane Code adopts the statutory language concerning template dwellings almost verbatim.

The siting standards for template dwellings primarily heavily rely upon forest soil productivity and the clustering of dwellings. Imposing a 40– or 80–acre dwelling per acre standard is contradictory with this rationale. In evaluating objections regarding Flora & Fauna Policy #11, DLCD staff noted that the adoption of ODF&W's density standards was an approach to resolve conflicts between dwellings and big game habitat but that Lane County had not adopted such standards in its zoning ordinance. DLCD staff recommendation in their September 12, 1984 report to LCDC was as follows:

"*Amend the F–2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum parcel sizes in the Big Game Habitat portions of those zones, **or** contain clustering requirements in those areas.*"[4]

As noted above, Lane County chose to require clustering of dwellings in the F–2 and EFU zones while enlarging the minimum lot size in the F–1 zone and eliminating dwellings in that zone.

The Appellant adopts the opposite conclusion from the acknowledgment process than the Applicants. It assumes that since the standards in Policy #11 were not explicitly incorporated into ordinance format, that Policy #11 applies directly. The Applicants conclude that other changes to the Code obviated the necessity of applying those standards directly to the land use permitting process. This latter conclusion is more consistent with the explanation from the planners who were

[4] Pages 24 and 25, September 12, 1984 DLCD supplemental staff report on the Acknowledgment of Compliance for Lane County and Rural Portion of Eugene/Springfield Metro Plan.

working in the acknowledgment of compliance process at the time, the recommendation of DLCD staff, and the acknowledged version of LC Chapter 16.

This allegation of error is dismissed.

2. ***The secondary fuel break should be required to extend into adjoining properties under the control of the Applicants.***

As noted in Finding of Fact #10 above, the Applicants' site plan shows that the secondary fuel break around the development site is 100 feet beyond the primary fuel break to the north, east and south and is located entirely within the subject property. However, it does not extend its full length to the west where the subject property borders tax lots 401 and 404. These latter two properties are neither owned nor controlled by the Applicants.

This allegation of error is dismissed.

3. ***Goal 7 Policies 1, 2, and 3 of the Rural Comprehensive Plan must be applied to this application.***

Goal 7, Policy #1: "*The Natural Hazards Inventory, as contained in the 1982 Natural Hazards Working Paper and associated materials, shall be used as a guide for general land use decisions. Specific land use decisions shall be based upon inventory and upon on-site or other evaluation as appropriate.*"

Goal 7, Policy #2: "*Development shall be commensurate with the type and degree of any natural hazards(s) present and appropriate safeguards against flooding, ponding, landslides, land slippage, erosion or other natural hazards applicable shall be assured. For purposes of evaluation and in the absence of any specific proposal, the provisions of the Oregon State Building Code shall be assumed to the sole means of safeguard against natural hazards.*"

Goal 7, Policy #3: "*When extensive or drastic safeguards must be employed in conjunction with development proposals, the immediate and ultimate impact, (including financial and economic considerations) of such safeguards on the environment and the public shall be considered.*"

In regard to Policy #1, the 1982 Natural Hazards Working paper does not contain any maps but it does indicate that "*...steep slopes -- specifically those greater than 15 percent -- present severe limitations for development and therefore should normally be left in a natural state.*" Other information in the record includes topographic mapping of the subject property that identify some steep slopes and DOGAMI's landslide map that shows a very high landslide potential on portions of the subject property.

Policies #2 and #3 indicate that development should be commensurate with the type and degree of hazards present and that after taking into account the immediate and ultimate impact of the development, safeguards on the environment and the public shall be considered when extensive or drastic safeguards must be employed in conjunction with development proposals. Consistent with Policy #3 is LC 16.005(2) which states:

"*Local governments shall require site–specific soil surveys and geologic studies where potential problems exist. When problems are identified, local governments shall require special design considerations and construction measures be taken to offset the soil and geologic constraints present, to protect life and property, public investments, and environmentally–sensitive areas.*"

R.R. Baker Road and the proposed driveway have been reviewed by Michael Remboldt, P.E., G.E. of K & A Engineering, Inc. Mr. Remboldt is a geotechnical engineer. Mr. Remboldt noted that R.R. Baker Road has not been the source of or impacted by large–scale, deep–seated landslide or debris flow. He concluded that any instability noted was limited to roadway cuts with slope movement impact constrained to the area from the road ditch to the top of the cut embankment. After inspection of the driveway, Mr. Remboldt's was of the opinion that its location would not inherently present a significant landslide hazard. Mr. Remboldt recommended that a Level II geotechnical investigation occur for the subject property prior to development because of the slopes in the area and the DOGAMI high–hazard mapping designation.

Lane Code 16.005(2) requires that the restrictions upon grading and clearing by mechanical equipment occur at the time of approval of a development permit or of an application if the concerns it identifies are present. It does not appear that the above–described Level I geotechnical report addresses all of those concerns.

In a prior appeal of a template dwelling in the general area of the subject property[5], this Hearings Official addressed the implications of the *Rhyne* case[6] in regard to LC16.005(2). In its decision in the *Rhyne* case, LUBA noted that local government had the option of deferring its determination of compliance of a standard to a subsequent proceeding. Lane County has a process where an applicant may be compelled to apply for a Type III Modification of Decision[7] when a substantial change in an approved application is necessary. This review would be before the Hearings Official and would require notice to the Appellant.

---

[5] *Application of McDougal Bros. Investments*, Lane County Hearings Official decision in PA 19–05768 (11/12/2019)

[6] *Rhyne v. Multnomah County*, 23 Or LUBA 442, 447 (1992).

[7] As authorized by LC 60.851(3).

Thus, the building inspector will review the Level II geotechnical report provided by the Applicants' engineer. Section 1803 of the Oregon Structural Specialty code gives the Building Official the authority to require and review geotechnical information. If the Building Official finds problems that would require a restriction on mechanical grading and/or clearing, that issue would be reviewed by the Hearings Official. Condition of Approval #3 has been modified to reflect this change.

This allegation of error is dismissed.

4. ***The subject property is part of a tract and therefore does not comply with LC 16.211(5)(a).***

Lane Code 16.211(5)(a) states that a template dwelling may not be approved if it is part of a tract that already contains a dwelling. ORS 215.010(2) defines "tract" as one or more contiguous lots or parcels under the same ownership. The Appellant argues that tax lots 501, 506, 507, 508 and 509 are a tract. As explained in Finding of Fact #10 above, tax lots 501, 506 and 508 are owned by Gray and Dorotea Goodman, the applicants, and tax lots 507 and 509 are owned by Nimpkish LLC, whose registered agents are Gray Goodman and Dorotea Goodman. The Goodman's have a membership interest in the limited liability company which is personal property but do not have "ownership" of the property.

The term "ownership" must be distinguished from the term "control." The former has a very precise legal meaning. For example, two contiguous parcels, one owned by Mr. and Mrs. Smith, tenants in entirety, and one owned by Smith, LLC, whose members are Mr. and Mrs. Smith, would not be under the same legal ownership. In the former, legal liability would attach to the collective assets of Mr. and Mrs. Smith, while in the latter example liability will be limited to the assets "owned" by the LLC. Thus, in the present case, if Nimpkish, LLC is sued then tax lots 507 and 509 might be in jeopardy but normally tax lots 501, 506 and 508 would not.

This allegation of error is dismissed.

5. ***The record does not demonstrate compliance with LC 16.211(8)(c).***

Lane Code 16.211(8)(c) contains fire siting standards. The Appellant has suggested that the record is not adequate to satisfy LC 16.211(8)(e), in regard to evidence of the adequacy of the access for fire-fighting equipment, or LC 16.211(8)(e)(iv), in regard to road grades.

The record contains an itemized list of the fire–fighting equipment that would be used by the Pleasant Hill Goshen Fire & Rescue Department to serve the subject property.[8] Andrew Smith, Fire Chief with the Pleasant Hill Goshen Fire & Rescue Department has taken a site view of R.R. Baker Road and the Applicants' driveway. He found that the grades and nine turn–outs (turnarounds) would provide adequate access for the departments vehicles.[9] He specifically noted that the portion of the driveway, which was less than 100 feet in length, that was about 18 percent before grading and would be 16 percent after grading, would provide acceptable access. He also noted that the required compliance with LC 16.211(8)(c) would greatly reduce or eliminate the risk factors of chimney draw effect.

It should also be mentioned that LC 16.211(8)(e)(vii) allows the standards of LC 16.211(8)(e)(i) through (vi) to be modified with a showing of objective evidence demonstrating that an alternative standard would ensure adequate access for fire–fighting equipment. The written assurances from the Fire Chief would provide this evidence had it been necessary.

This allegation of error is dismissed.

6. ***The application does not satisfy various road standards of LC 15.138.***

Lane Code 15.138 applies spacing standards to driveways and roads that intersect with County Roads. This standard is not applicable as the Applicants' driveway, as well as the other driveways, intersect with R.R. Baker Road, a private road.

This allegation of error is dismissed.

7. ***The frontage requirements of LC 15.120 are not met.***

The Hearings Official recognizes that Lane County Assessor's map for Township 18 South, Range 2 West, Section 11, is in this record and that it shows all properties taking access onto R.R. Baker Road to have at least 30 feet of frontage on that private facility.

This allegation of error is dismissed.

8. ***The entire roadway must be constructed to the standards of LC 16.211(8).***

The Appellant argues that the Applicant must improve RR Baker Road to the east because the adjoining properties are part of a tract that includes the subject property. As addressed in "Allegation of Error No. #4, the subject property is not within a tract of multiple properties. Further, there is no authority to require the

[8] See May 7, 2019 letter from Andrew Smith, Fire Chief, to Jim Belknap.
[9] See December 9, 2019 letter to Jim Belknap from Andrew Smith.

reconstruction of the road to properties that are not currently seeking land use approval.

This allegation of error is dismissed.

Summary

The application is consistent with applicable sections of the Rural Comprehensive Plan and LC 16.211(5) and (8). The appeal is therefore dismissed.

Respectfully Submitted,

Gary Darnielle
Lane County Hearings Official

LANE COUNTY HEARINGS OFFICIAL
APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On April 18, 2019, a request to establish a dwelling in the Impacted Forest Lands (F–2) zone was submitted to Lane County Land Management Division by James Belknap, an agent for Nimpkish, LLC. The application was deemed complete on May 17, 2017. On August 2, 2019, the Director issued a determination that the subject property complied with the applicable standards and criteria for a Forest Template Dwelling pursuant to LC 16.211(5) and (8). Notice of the determination was mailed to surrounding property owners. On August 14, 2019, a timely appeal was submitted by LandWatch Lane County.

Parties of Record

Nimpkish LLC	LandWatch Lane County	Lauri Segel–Vaccher
James Belknap	Michael Farthing	Sean Malone
1000 Friends of Oregon	Andrew Mulkey	

Application History

Hearing Date: September 26, 2019
(Record Held Open Until January 23, 2020)

Decision Date: February 4, 2020

Appeal Deadline

An appeal must be to the Oregon Land Use Board of Appeals within 21 days from the date that this decision becomes final. [ORS 197.830(9)] This decision becomes final after 12 days from the mailing of the decision if no request for reconsideration is made. [LC 14.080(1)(b)]

Statement of Criteria

Lane Code 16.211(5) & (8)

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 507, assessor's map 18–02–11, approximately one–half mile east of the City of Springfield's Urban Growth Boundary. The property is about 10 acres in size, is vacant, and does not have an address. The

subject property is not a part of a tract as the property owner does not own any adjacent property.

The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The property abuts F–2 zoned properties on all sides. The surrounding area can generally be characterized as a mix of forest and low-density, rural residential uses. The property does not contain floodplain, a Class 1 stream, or mapped wetlands but is located within a Major Big Game Range.

2. The property slopes from the north-west corner to the east property boundary, from a mean sea level (MSL) of approximately 1060 feet to 1200 feet MSL determined with Lane County contour data. The County LiDAR data show that slopes range from less than 10% to 40% or more with steep slopes located in the north-west and north-central portion of the subject property. More gentle slopes on the subject property are located in the south-west corner. The property is primarily open pasture with some scattered, low-lying brush and Douglas Fir.

3. Soils data show that the property is composed of two soil types, 107C Philomath silty clay and 113G Ritner cobbly clay loam, which have forestland capability of an estimated 45 and 149 cubic feet per acre per year, respectively. Soil type 107C composes approximately 53% of the subject property. The proposed development site is located on the Philomath soils.

4. The Applicant has is required to apply the 3–parcel template test required by Lane Code 16.211(5)(c)(i)(aa). The following table documents seven parcels relied upon by the Applicant to satisfy Lane Code 16.211(5)(c)(i)(aa).

Count	Assessor's Map	Tax Lot	Date of Creation	Documentation / Deed / LLV / Partition
1	18-02-11	600	1982	Parcel 1 of M43-81
2*	18-02-11	601	1982	Parcel 2 of M43-81
3*	18-02-12	201	1909	Final Legal Lot Verification 509-PA14-05513
4	18-02-12	303	1992	Parcel 1 of 92-P0221
5	18-02-12	302	1992	Parcel 2 of 92-P0221
6*	18-02-11	100	1953	460/235
7	18-02-10	100	1941	222/81

5. Lane Code 16.211(5)(c)(i)(bb) requires that at least three dwellings existed on January 1, 1993, and continue to exist on lots located within a 160 acre square centered on the subject property. The Applicant has relied upon the following dwellings/tax lots:

Count	Assessor's Map	Tax Lot	Date of Dwelling on Property
1	18-02-12	201	1910; RLID
2	18-02-11	601	1982/1999; Verification of Replacement Rights 509-PA98-5159
3	18-02-11	100	1958/2001; Verification of Replacement Rights 509-PA01-05596

6. The properties surrounding the subject property to the north and west do not contain any dwellings; although some of those properties have conditional approval for dwellings. Tax Lot 501, to the east of the subject property, and Tax Lot 600, across R.R. Baker Road to the south, contain the nearest existing dwellings. These dwellings are approximately 460 and 880 feet from the proposed home site.

7. The nearest public road is Wallace Creek Road, located to the south of the subject property. The subject property is proposed to take access from R.R. Baker Road, a private road adjacent to the subject property. The proposed homesite is approximately 189 feet from R.R. Baker Road and will be accessed by an existing spur road that will be improved to serve as the dwelling's driveway.

   R.R. Baker Road currently serves more than one dwelling and thus the portion of this road from Wallace Creek Road to the subject property must meet County standards. The Applicant's access site plan shows R.R. Baker Road as having a easement width of 40 feet. The application indicates that the road has a travel width that varies between 16 and 18 feet. Further, the Applicant's site plan shows the proposed driveway from R.R. Baker Road to the homesites as having a 12–foot width. The Applicant has access to the road via a March 21, 2019 easement (#2019-010337).

   The portion of R.R. Baker Road from Wallace Creek to the subject property must have nine turnarounds given the standard of LC 16.211(8)(e)(ii) and the road's length. Photographs of the turnaround points as they are located on the Applicant's site plan, given the topography and width of the road, indicate that it is feasible that the road can be improved to meet the above standards. These improvements will be accomplished by Hendrickson Well Drilling, a 25–year old company that does road excavation, site preparation, land clearing, general contracting and well drilling. The owner of the company has reviewed the plans for the widening of R.R. Baker Road, its improved road surface, and the construction of the turnarounds and has stated that his company if prepared to complete the reconstruction of the road. The record includes photographs of the road construction equipment used by the company.

Slopes for the proposed driveway vary between zero and 14 percent. The driveway slopes are indicated on the Applicant's site plan and are stamped by a registered professional land surveyor, David J. Collier. The Applicant also provides a letter from the Pleasant Hill Goshen Fire and Rescue that provides preliminary verification of compliance regarding access to the subject property.

There are several existing culverts that provide drainage for R.R. Baker Road as presently constructed. Two new culverts are proposed, one where R.R. Baker Road meets the proposed driveway and another along the proposed driveway. These culverts must be constructed to meet the Road Fire Safety Design requirements of LC 16.211(8)(e).

8. Based upon contour maps, the homesite is located at least 30 feet from a ravine ridge or slope greater than 40%. The proposed homesite is located on the Philomath soil, which is the soil type with a lowest capability of the soils on the subject property. The homesite is located in an area already clear of timber and developed with a roadway that will be improved to meet driveway standards.

9. The record contains an index of well logs for the township, range, and section within which the subject property lies. The well log for tax lot 506 shows a capacity of eight gallons per minute; the well logs for two wells on tax lot 501 show capacity of 3 and 5 gallons per minute, respectively; and well lots for two wells on tax lot 404 show a capacity of 1.5 and 2.6 gallons per minute. The well log for tax lot 600 shows a capacity of 5 gallons per minute. This data is relevant to LC 16.211(8)(d).

10. The subject property is located within the boundaries of the Pleasant Hill Rural Fire Protection District. The Applicant provides a letter (d. 5/14/2019) from the Fire Protection District that confirms service to the R.R. Baker Road area. Specifically, the review pertains to Map 18–02–11 Tax Lots 501 and 506, which were the tax lot numbers associated with the land that is now Tax Lot 507, the subject property.

    A letter in the record from the Pleasant Hill Rural Fire Protection District confirms that the subject property will be serviced by the District and a list of the fire–fighting equipment that the District has access to and would use to fight a fire on the property.[1] The Applicant also provides information regarding the nearest fire station at 36745 Jasper–Lowell Road, approximately 2.5 miles from the subject property. The way of access from the fire station to the subject property involves paved County roads and R.R. Baker Road. Fire Chief Andrew Smith, Pleasant Hill Goshen Fire and Rescue Department took a site view of R.R. Baker Road and the driveway of the subject property on December 6, 2019. Chief Smith had previously taken a site view of the road in regard to an earlier forest template dwelling application regarding tax lot 506. The Chief reviewed updated proposals

[1] Three Type 1Structure Firefighting Engines, three Type 1 Water Tenders, and one rescue vehicle.

for R.R. Baker Road improvements, which included nine turnarounds, and noted that the grade for the road and the proposed driveway was sufficient for Fire Department access. The Chief stated that the proposed defensible space around the proposed homesite, as depicted on the Applicant's site plan, would greatly reduce or eliminate the risk factors of chimney draw effect.

11. The proposed development site accounts for the required primary and secondary safety zones surrounding the dwelling. The primary safety zone is proposed as 30 feet on the east side of the home site. West of the home site, there is a 17% down slope which requires an additional 75 feet of primary safety zone down slope. This requirement is depicted on the applicant's site plan with an 80–foot primary fire break on the west side of the homesite. The primary safety zone with the additional down slope fit entirely within the boundaries of the subject property. Surrounding the primary safety zone will be a secondary safety zone of 100 feet in all directions on property owned or controlled by the owner. The secondary fuel break extends into tax lot 506, to the west. The Goodmans, owners of tax lot 506, have indicated that they would approve an easement for the extension of the secondary fuel break

12. The subject property is bordered on the south by tax lot 600, on the east by tax lot 501, on the west by tax lot 506, and on the north by tax lot 201; all within assessor's map 18–02–11. Tax lot 501, adjacent on the east, has a dwelling. The development site (as amended 5/21/19) is located in the lower one–third portion of the subject property. Tax lots 506, 501 and 508 are owned by Gray and Dorotea Goodman. Tax lots 507 and 509 are owned by Nimpkish LLC, whose registered agents are Gray Goodman and Dorotea Goodman. Tax lot 201 is owned by Betz/Evans Associates. Tax lot 600 is not owned by neither the Applicant nor Gray and Dorotea Goodman

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 19–05298) BY NIMPKISH, LLC FOR A TEMPLATE FOREST DWELLING ON TAX LOT 508, ASSESSOR'S MAP 18–02–11 IS AFFIRMED, with modifications to Condition of Approvals #6 and #13:

6. Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(6)(c) and as depicted on the applicant's site plan. **These fuel breaks shall be maintained in perpetuity.** The minimum primary safety zone surrounding the proposed dwelling shall be at least 30 feet plus the Additional Safety Zone Down Slope, as identified on the Applicant's site plan. The minimum secondary fuel breaks surrounding the primary safety zone shall be at least 100 feet on lands owned or controlled by the owner. For purposes of this approval, the Applicant is deemed to have control over adjacent tax lot 506.

13.c. Excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of the subject property made usable by means of fill shall be suitable for the intended purpose. Prior to building approval, the Applicants shall submit a Level II geotechnical report to the County. If the building inspector finds problems that would require a restriction on mechanical grading and/or clearing, that issue shall be reviewed by the Hearings Official through a Type III Modification of Decision.

Justification for the Decision (Conclusion)

The subject property is zoned F–2 Impacted Forest Land. The Applicant is requesting approval to construct a single–family dwelling as provided by Lane Code 16.211(5)(c). Dwellings authorized by this provision are known as "forest template" dwellings because some of the applicable approval criteria of Lane Code 16.211(5) must be analyzed through the placement of a 160–acre square template centered on the center of the subject property. In the present case, the Applicant has correctly centered the 160–acre rectangle, that is one mile long and a quarter mile wide, on the subject property. The abutting road is R.R. Baker Road, which is described on a 1982 survey, indicating that the road existed prior to January 1, 1993. The template appears to be aligned with the R.R. Baker Road to the maximum extent possible. Additionally, the placement of a dwelling on non–impacted forest land must meet the siting standards provided by Lane Code 16.211(8).

The allegations of error raised by the Appellant in its appeal are as follows:

1. The dwelling on Tax Lot 601, Assessor's Map 18–02–11 did not exist in 1993 and cannot be used to find compliance with LC 16.211(c)(i)(aa)(B).

The Appellant has argued that the Regional Land Information Database (RLID) does not show a dwelling on the subject property being on the tax rolls between 1993 and 1998.

County records include a mobile home placement permit BP 81–2367 that indicates the placement of a dwelling on the subject property in 1982. RLID actually shows an improvement value of zero from 1998 to 1999. This time frame aligns with the verification of a replacement rights planning action, which secured the replacement rights in 1998. A site–built structure was approved under PA 98–05159 and replaced the mobile home.

As a matter of policy, the Lane County Board of Commissioners has held that a replacement dwelling meets the standard of "continue to exist."[2] In addition, I would point to Multnomah County where this interpretation has been codified into the zoning ordinance.[3] Arguably, if either LUBA or the Oregon Court of

[2] Lane County Board of Commissioners Order No. 16–05–17–06, adopted May 17, 2016.
[3] *West v. Multnomah County*, 70 Or LUBA 235 (2014), 269 Or App 518 (2015)

Appeals would have taken exception to Multnomah County's explicit allowance of replacement dwellings they would have so stated.

Based upon adopted Lane County policy, I must conclude that a dwelling that lawfully replaced a dwelling that was lawfully established on January 1, 1993 meets the "*continues to exist*" standard of Lane Code 16.211(5)(c) and OAR 660–006–0027(3)(b).

This allegation of error is dismissed.

2. *The Director's decision is not consistent with the protections afforded Major Big Game ranges in accordance with the Lane County Rural Comprehensive Plan.*

The subject property lies within an area designated as Major Big Game Habitat. The Appellant contends that the proposed template dwelling does not comply with the 80–acre minimum density requirement for Major Big Game Habitat mandated by OAR 660–006–0027(1)(d) and (f), and Goal 4, Policy 11 of the Rural Comprehensive Plan.

Lane County's Rural Comprehensive Plan and Chapter 16 of the Lane Code were acknowledged by LCDC in 1984. Big Game Habitat was recognized as a 1C significant Goal 5 resource[4] and the County incorporated some of the protections recommended in two Flora and Fauna Working Papers into the Rural Comprehensive Plan. Thus, Flora and Fauna Policy 11, of Goal 5 of the Rural Comprehensive Plan states that Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game were to be used to determine the allowable number of residential units within regions of the County. This policy stated that any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660–16–000.

The Appellant relies upon LUBA's decision in *Cattoche v. Lane County*[5] for the proposition that density in the Impacted Forest Lands District is determined by the Rural Comprehensive Plan's March 1992 Flora & Fauna Working Paper as it applies to Flora & Fauna Policy #11 of the Rural Comprehensive Plan. The Big Game Range section of the 1982 Flora & Fauna Working Paper[6] notes that the County was to be divided into regions convenient for planning purposes; probably between 10 to 20 regions. Within the regions, excluding the Impacted Big Game Ranges, a residential carrying capacity was to be determined. The ODFW

[4] *Save TV Butte v. Lane County*, LUBA No. 2017–031, Slip Op at 26 (1/18/2018)
[5] *Cattoche v. Lane County*, __LUBA __ (LUBA No. 2018–109, May 22, 2019).
[6] It should be noted that the working papers that support the Rural Comprehensive Plan were not "elements" of the plan and did not carry any authority in and by themselves. Not all of their recommendations were implemented by plan policies although they generally provided information and analysis that supported adopted policies.

recommended a density of one dwelling unit per 40 acres for peripheral big game range areas and one dwelling unit per 80 acres for major big game range areas. Lane County never divided the County into geographic Big Game Range regions and the Appellant has not alleged that its analysis encompasses one of those regions.

It is important to distinguish between the planning work Lane County did in preparation for acknowledgment of compliance and what was actually acknowledged by LCDC. As noted above, the Flora and Fauna Working Paper's strategy of dividing the County up into regions was never implemented.

The DLCD staff report of July 19, 1984 indicates a concern with the minimum lot sizes in the resource zones coupled with a lack of siting and clustering requirements. The minimum parcel size was the County's chosen method to comply with the ODFW recommended maximum densities. The recommended densities –one dwelling per 40 acres in the peripheral big game range –depended entirely on the size of the area being studied. When considering an 80–acre study area, the recommendation would only allow two dwellings. However, the recommendation was intended to apply at a much higher level; which is why the County originally anticipated dividing the County into regions. Ultimately, the County, with the blessing of DLCD and ODFW, decided to rely on minimum parcel sizes to implement the ODFW recommendations. This view is borne out in DLCD's staff report which stated: "*Without siting clustering requirements, the minimum lot sizes in the F–1, F–2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable.)*" At this time, Lane County's proposal was to have a minimum lot size of 40 acres for the F–1 Zone, minimum lot size of 20 acres in the F–2 Zone, minimum lot size of 40 acres in the EFU Zone, and no clustering or siting standards for dwellings.

DLCD staff issued a second acknowledge of compliance report regarding Lane County's Rural Comprehensive Plan and implementing ordinances on September 12, 1984. The recommendation in this report was:

"*Amend the F–2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum parcel sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.*"[7]

Kent Howe, former Lane County Planning Director, and Jim Mann, Former Principle Planner with Lane County, were working on the adoption of the Rural Comprehensive Plan in 1983 and 1984. Their recollection was that at the last hour, facing a negative DLCD staff review regarding compliance with Goal 5 issues dealing with wildlife and big game habitat, Lane County made significant

[7] Pages 24 and 25, September 12, 1984 DLCD supplemental staff report on the Acknowledgment of Compliance for Lane County and Rural Portion of Eugene/Springfield Metro Plan.

changes to how big game habitat was to be protected. Last minute changes included increasing the minimum lot size to 80 acres in the F-2 Zone and adopting siting and clustering requirements in that zone. Where Policy #11 states that "*any density above that limit shall be considered a conflict*" it was referring to when the density prescribed by the minimum parcel size was to be lessened through a land division or rezoning. At that point in time, an ESEE analysis, via a comprehensive plan amendment, would be required.

The template dwelling regulations were adopted by the Legislature in 1993 and subsequently incorporated into administrative rule. These regulations were adopted verbatim by Lane County through a post-acknowledgment plan amendment which was not challenged.

Ultimately, the acknowledged zoning ordinance did not apply the Big Game limitations except in certain circumstances, such as in the Exclusive Farm Use Zone.[8] And in that case only properties lying within a Major Big Game area were affected. No specific siting regulations for forest template dwellings located within a peripheral big game range were adopted by the acknowledged Chapter 16 zoning code. That is, the Big Game Range density standards were integrated into the zoning classifications and minimum lot size recommendations within the Impact Forest Lands Zone. The density recommendations were not applicable to existing parcels but were to be considered only in rezoning and land division applications. Therefore, the approval of dwellings under a template dwelling test does not involve a determination of consistency with Big Game Range density standards.

This allegation of error is dismissed.

3. The Director's decision does not address Goal 7 policies of the Rural Comprehensive Plan addressing areas subject to natural hazards.

The Appellant asserts that the Planning Director has not made any findings regarding compliance with natural hazards policies of the Rural Comprehensive Plan. This is correct as there are no criteria in Lane Code 16.211(5) regarding compliance with these policies.

It is an open argument as to whether the natural hazards policies apply directly to land use applications. My assumption is that they do not but this decision will nevertheless address whether the present application is consistent with those policies. These policies are discussed below:

Goal 7, Policy #1: "*The Natural Hazards Inventory, as contained in the 1982 Natural Hazards Working Paper and associated materials, shall be used as a*

[8] See, for instance, Lane Code 16.212(10)(a)(i).

guide for general land use decisions. Specific land use decisions shall be based upon inventory and upon on-site or other evaluation as appropriate."

In regard to Policy #1, the 1982 Natural Hazards Working paper does not contain any maps but it does indicate that "*...steep slopes -- specifically those greater than 15 percent -- present severe limitations for development and therefore should normally be left in a natural state.*" Other information in the record includes topographic mapping of the subject property that identify some steep slopes and DOGAMI's landslide map that shows a very high landslide potential for the subject property.

Also included in the record is documentation of a site view of the subject property and R.R. Baker Road by Michael Remboldt, geotechnical engineer and principal with K & A Engineering, Inc. On November 13, 2019, Mr. Remboldt performed a Level I evaluation of slope study of the proposed development site and the road. A Level I evaluation includes a literature search about the geology and geologic hazards of a site, a visual inspection of the site for indicators of active slope movement, and a preliminary stability evaluation. A more detailed description of a level I evaluation was presented by Mr. Remboldt in a December 2, 2019 letter to Mr. Jim Belknap. Mr. Remboldt discussed the findings of his site view in a December 11, 2019 letter to Mr. Jim Belknap, Mr. Remboldt noted that the "*...proposed driveway location does not inherently present a significant landslide hazard.*" He also noted that there was no evidence the R.R. Baker road was the source or was impacted by large–scale deep–seated landslides or debris flow. Mr. Remboldt recommended that a Level II geotechnical investigation occur prior to development. This study would be used by the Lane County Building Inspector at the time a building permit was requested.

Goal 7, Policy #2: "*Development shall be commensurate with the type and degree of any natural hazards(s) present and appropriate safeguards against flooding, ponding, landslides, land slippage, erosion or other natural hazards applicable shall be assured. For purposes of evaluation and in the absence of any specific proposal, the provisions of the Oregon State Building Code shall be assumed to the sole means of safeguard against natural hazards.*"

This policy is a little confusing since it states that the provisions of the building code were the sole means of safeguarding against natural hazards in the absence of any specific proposal. It is hard to imagine when the building code would be applied when there was no specific proposal against which to apply those standards. Further, it leaves open the door as to what other methods are required to safeguard against natural hazards when there is a specific proposal. Nevertheless, the policy makes it clear that development must be commensurate with the type of natural hazard present. Mr. Remboldt's recommendation that a Level II geotechnical evaluation occur prior to development is therefore significant and has been integrated into the conditions of approval.

Goal 7, Policy #3: "*When extensive or drastic safeguards must be employed in conjunction with development proposals, the immediate and ultimate impact, (including financial and economic considerations) of such safeguards on the environment and the public shall be considered.*"

Consistent with Policy #3 is LC 16.005(2) which states:

"*Local governments shall require site–specific soil surveys and geologic studies where potential problems exist. When problems are identified, local governments shall require special design considerations and construction measures be taken to offset the soil and geologic constraints present, to protect life and property, public investments, and environmentally–sensitive areas.*"

In regard to Policy #3, the Level I geotechnical evaluation did not identify extensive or drastic safeguards that had to be employed in conjunction with the Applicants' development proposal. However, the location of the development within a very high landslide hazard area is an indication that potential development problems may exist. Thus, Mr. Remboldt wisely recommends that this evaluation be a prelude to a more comprehensive evaluation (Level II) when the actual development is proposed through the building permit process.

In a prior appeal of a template dwelling in the general area of the subject property[9], this Hearings Official addressed the implications of the *Rhyne* case[10] in regard to LC16.005(2). In its decision in the *Rhyne* case, LUBA noted that local government had the option of deferring its determination of compliance of a standard to a subsequent proceeding. Lane County has a process where an applicant may be compelled to apply for a Type III Modification of Decision[11] when a substantial change in an approved application is necessary. This review would be before the Hearings Official and would require notice to the Appellant.

Thus, the building inspector will review the Level II geotechnical report provided by the Applicants' engineer. Section 1803 of the Oregon Structural Specialty code gives the Building Official the authority to require and review geotechnical information. If the Building Official finds problems that would require a restriction on mechanical grading and/or clearing, that issue would be reviewed by the Hearings Official. Condition of Approval #13 has been modified to reflect this change.

This allegation of error is dismissed.

---

[9] *Application of McDougal Bros. Investments*, Lane County Hearings Official decision in PA 19-05768 (11/12/2019)

[10] *Rhyne v. Multnomah County*, 23 Or LUBA 442, 447 (1992).

[11] As authorized by LC 60.851(3).

4. The County cannot approve multiple forest template dwellings on a tract.

Lane Code 16.211(5)(a) states that a template dwelling may not be approved if it is part of a tract that already contains a dwelling. ORS 215.010(2) defines "tract" as one or more contiguous lots or parcels under the same ownership. The Appellant argues that tax lots 501, 506, 507, 508 and 509 are a tract.

The subject property is owned by Nimkish, LLC. It is bordered on the west by tax lot 506 and on the east by tax lot 501. Both properties are owned by Gray & Dorotea Goodman. On the north the subject property is bordered by tax lot 201, owned by Betz/Evans Associates. On the south it is bordered by tax lot 600, which is not owned by either Gray & Dorotea Goodman or the Applicant.

As explained in Finding of Fact #12 above, Gray and Dorotea Goodman, are the registered agents of Nimpkish, LLC. The Goodman's have a membership interest in the limited liability company which is personal property but do not have "ownership" of the property.

The term "ownership" must be distinguished from the term "control." The former has a very precise legal meaning. For example, two contiguous parcels, one owned by Mr. and Mrs. Smith, tenants in entirety, and one owned by Smith, LLC, whose members are Mr. and Mrs. Smith, would not be under the same legal ownership. In the former, legal liability would attach to the collective assets of Mr. and Mrs. Smith, while in the latter example liability will be limited to the assets "owned" by the LLC. Thus, in the present case, if Nimpkish, LLC is sued then tax lots 507 and 509 might be in jeopardy but normally tax lots 501, 506 and 508 would not.

This allegation of error is dismissed.

5. The application does is not consistent with the minimum fuel break standards of LC 16.211(8)(c).

The proposed development area is located in the southwest corner of the subject property. The secondary fuel break is contained within the subject property except on the west, where is encroaches into tax lot 506. This issue concerns whether the Applicant has control over tax lot 506 and therefore must receive an easement for the fuel break from the owners of that parcel; Gray & Dorotea Goodman. As addressed above under Allegation of Error #5, the term "control" is different from the term "ownership." In the present case, Gray & Dorotea Goodman are the only registered agents of Nimpkish, LLC and are the owners of tax lot 506. It is therefore evident that the Applicant, as it is constituted, has control over tax lot 506. Accordingly, Condition of Approval #6 has been modified to explicitly require that the secondary fuel break extend into tax lot 506.

This allegation of error is affirmed.

Summary

Based upon evidence in the record, and minor modifications to the Director's conditions of approval, I believe that this application for a template dwelling complies with LC 16.211(5)(c)(i)(aa) and LC 16.211(5)(c)(i)(bb) and otherwise complies with the applicable approval standards of LC 16.211(5)(c)(iii) and (8). I further believe that the application, as conditioned, is consistent with applicable policies of the Rural Comprehensive Plan. The Director's decision, with modifications, is therefore affirmed.

Respectfully Submitted,

Gary Darnielle
Lane County Hearings Official

RECEIVED APR 19 2021

BEFORE THE LANE COUNTY HEARINGS OFFICIAL

APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On February 5, 2020, the applicant, E.J.K Investments, filed an application seeking to establish a dwelling in the Impacted Forest Lands (F–2) zone on tax lot 2900, assessor's map 21–35–07–30. PA 20-05064. The application was deemed complete on March 6, 2020. On January 27, 2021, the Director approved the application, and on February 8, 2021, a timely appeal was submitted by LandWatch Lane County (LandWatch).

On January 21, 2021, six days before the Planning Director issued their decision approving the subject application, the Oregon Land Use Board of Appeals (LUBA) issued its decision in *LandWatch Lane County v. Lane County (Nimpkish)*, ___ Or LUBA ___ (LUBA No. 2020-030, January 21, 2021). As discussed further below, LandWatch based its appeal in this case on LUBA's holding in *Nimpkish*. In its staff report to the Hearings Official, staff concurred with LandWatch as to the significance of *Nimpkish* to the resolution of this appeal, and recommended denial.

Parties of Record

E.J.K. Investments (Kim O'Dea)

LandWatch Lane County (Lauri Segel; Sean Malone)

Jim McLaughlin

Application History

Hearing Date: March 4, 2021
(Record Held Open Until April 8, 2021)

Decision Date: April 19, 2021

Appeal Deadline

A party may request reconsideration of this decision by the Hearings Official, pursuant to Lane Code 14.080(1)(a)(iii) and (1)(b), by filing a notice of appeal within 12 business days after the date the notice of decision was mailed. If a party seeking further review chooses not to seek reconsideration, they must file an appeal directly with LUBA within the timelines set forth in state law. See LUBA's website for more information on appeal deadlines.

//////////////

Statement of Criteria

Lane Code 16.211(5) and (8)
House Bill 2225

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 2900, assessor's map 21–35–07–30, which is immediately north of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries.

   The property is approximately 12.05 acres and is vacant except for an existing roadway and powerlines largely within an east-west Bonneville Power Administration easement that transects the property.

   The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The entire property is designated Major Big Game by the Oregon Department of Fish and Wildlife (ODFW) Habitat Maps.

2. The subject application is one of two template dwelling applications approved by the Planning Director on the same date. The other application concerns a forest template dwelling proposal on a contiguous 13.28-acre parcel identified as tax lot 2800 of the same assessor's map, which is also designated Big Game Range.

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 20–05064) BY E.J.K. INVESTMENTS FOR A FOREST TEMPLATE DWELLING ON TAX LOT 2900, ASSESSOR'S MAP 21–35–07–30 IS REVERSED.

Justification for the Decision

The applicant is requesting approval to construct a single–family forest template dwelling in the F-2 zone as provided by Lane Code 16.211(5)(c).

A. Goal 5

The subject property is designated Major Big Game Habitat. Big Game Habitat is a Statewide Planning Goal 5 resource and thus is entitled to certain protections. Goal 5 (Open Spaces, Scenic and Historic Areas and Natural Resources) sets forth a process for evaluating, inventorying, and protecting significant natural resources, including big game habitat. The evaluation includes consideration of uses that conflict with the protected significant resource. In order to implement Goal 5, local governments are required to

adopt programs that will protect natural resources, and includes consideration and weighing the values of conflicting uses and the natural resource. OAR 660-015-0000(5).

ODFW has determined that the main use that conflicts with, and poses a significant threat to, big game habitat is residential development. Lane County's Goal 5 program includes the following comprehensive plan policy that implements Goal 5 and is intended to address this main conflict:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."* Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.[1]

The *Nimpkish* appeal referenced above involved a request for a forest template dwelling on a 10-acre property. The appellant in that case argued that a dwelling on a 10-acre property would violate the recommended density limitation (80 dwellings per acre), and thus violated Policy 11. The applicant asserted that Policy 11 did not apply to discrete land use applications for forest template dwellings. LUBA held that Policy 11 does apply to an application for a forest template dwelling.

As LUBA explained, the first sentence of Policy 11 acknowledges that the County is using the ODFW density recommendations as the baseline. The first sentence, and the County's Working Paper, also acknowledges that the County intended to study different regions of the County (most likely the County would be divided into 10 to 20 different regions in that study) to come up with a "residential carrying capacity." That information would then be used to determine appropriate zoning in the area. The petitioners in *Nimpkish* focused on the second sentence of Policy 11, arguing that the County is prohibited from allowing residential density above the ODFW-recommended limits without first conducting an Economic, Social, Environmental, and Energy (ESEE) analysis. LUBA agreed.

The applicant in this case does not challenge that holding *per se*. Rather, it argues that the addition of this one dwelling does not violate the ODFW-recommended limits, and therefore, an ESEE analysis is not required. That contention is based on the applicant's interpretation of the significance of the term "overall" in Policy 11.

---

[1] The ODFW recommendation for overall residential density in the Major Big Game Range Habitat is no more than 80 dwellings per acre. For Peripheral Big Game Range Habitat, the recommended density is no more than 40 dwellings per acre.

Anybody who has studied residential densities, either in urban or rural settings, understand that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings / acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county. The applicant argues that the denominator here should be the entire County, or at least a very large portion of the County, because Policy 11 uses the term "overall residential density."[2]

LandWatch relies on one sentence in LUBA's decision in *Nimpkish* in support of its argument that the subject property, not the entire County, must serve as the density denominator: "There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres." Slip op. 15.[3]

The applicant contends that LandWatch cannot rely on that statement because it was technically *dicta*. The issue addressed in that statement (whether the addition of the proposed dwelling would constitute a conflict that triggered an ESEE analysis) was not before LUBA in the *Nimpkish* appeal. The issue in that appeal was whether Policy 11 applied to a discrete application for a forest template dwelling. The Hearings Official had held that it did not, and LUBA overturned that ruling. On that basis, the decision was remanded. LUBA was not called upon to address (and the parties presumably did not brief) the issue of what the appropriate density denominator would be once it was determined that Policy 11 applied.

It may well be that LUBA's statement in *Nimpkish* that "the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres" was *dicta*. That said, even if that statement was *dicta* and, thus, is not clear precedent in this case, it seems clear that LUBA believed that, if Policy 11 applied, the appropriate density denominator would be the subject property. In other words, if the issue had been before LUBA, we now know how LUBA would have ruled. However, because LUBA made that statement somewhat in passing, it did not conduct a full interpretation of Policy 11 to reach that conclusion. That analysis is now provided here.

Text

The applicant argues that the term "overall" in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County

---

[2] Applicant submitted evidence supporting his conclusion that the "overall density" when viewed at the County level, is well below the ODFW recommended "overall density." He also submitted documentation regarding the residential density of smaller subsets of the County; *i.e.,* the area east of Interstate 5 and the area west of Interstate 5; regions divided by highway corridors; and watershed regions. All sets of numbers confirmed his theory that the residential densities are well below the ODFW recommended "overall" densities. Thus, the addition of one dwelling would not result in a Goal 5 conflict.

[3] LUBA then went on to make the following legal conclusion: "Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.'"

on the east or west side of Interstate 5. LandWatch points out that the use of the term "overall" in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of "overall residential density." The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to "determine the allowable number of residential dwelling units within regions of the county." The next sentence does not use the "overall" modifier: "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal.

Context/Caselaw

RCP Policy 11 implements Goal 5. Accordingly, Policy 11 must be interpreted in a manner that is consistent with the Goal that it implements. As stated above, Goal 5 is aimed at preserving and protecting significant natural resources, such as big game habitat. The evident purpose of applying a residential density limit is to minimize human impacts to wildlife habitat. LandWatch asserts that the applicant's proposed interpretation would effectively permit large areas protected as wildlife habitat to be developed at densities that destroy its value as wildlife habitat.

In a 2003 LUBA appeal, Douglas County made an interpretation of its code that is similar to the interpretation of Policy 11 that the applicant presents in this appeal. *See Wetherell v. Douglas County*, 44 Or LUBA 745 (2003). The application in that case was for approval of a site plan for a destination resort. The property fell within an area designated as Peripheral Big Game Habitat. The request was therefore subject to a code provision (LUDO 3.32.300) that limited residential density to one dwelling unit per 40 acres.[4] As is the case here, the code provision did not explicitly state the appropriate density denominator. The County determined that the appropriate density denominator under the applicable code provisions was an area of the county that included 1,121,378 acres.[5] On appeal to LUBA, the opponent argued that the proper denominator was a 500-acre portion of the subject 2,700-acre ranch. The Hearings Official sets forth LUBA's analysis in that case at length, because the analysis is the exact same analysis the Hearings Official adopts in this appeal:

> "LUDO 3.32.200 provides no express denominator for the density standard, so the county's view that the pertinent denominator is a 1,121,378-acre area of the county is not necessarily inconsistent with the text of LUDO 3.32.200. However, we agree with petitioners that that view is inconsistent with the purpose of the

[4] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[5] The area the county used was the Calapooya and Elk Creek geographic Planning Advisory Committee area.

density standard, to "preserve identified peripheral habitat areas." See n 4. Neither intervenors nor the county's decision provides any basis to question petitioners' view that the purpose of the density standard is to preserve big game wildlife habitat by minimizing human impacts on that habitat, specifically by limiting the density of residential uses. Under the county's view, large areas of Goal 5-protected wildlife habitat may be developed at residential densities that significantly exceed one dwelling per 40 acres, as long as the average density over a much larger area of the county does not exceed that standard. As the county interpreted LUDO 3.32.300, it will have no regulatory effect at all until over 28,000 dwellings are built in the 1,121,378-acre PBGHO. At that point, its regulatory effect would change from nonexistent to exceedingly harsh, because it would effectively impose a residential building moratorium throughout the PBGHO. * * * It seems exceedingly unlikely to us that anyone who thought about how LUDO 3.32.300 would be implemented could possibly have intended that it work in that way.

* * *

A construction of LUDO 3.32.300 that is far more consistent with its apparent purpose and the language of LUDO 3.32.300 is that the denominator for the one dwelling per 40-acre density limit is the subject property, in this case the 500 acres that make up the proposed destination resort.

* * *

We recognize that a density standard that permitted selection of some larger local area, i.e., a local area larger than the 500-acre subject property but smaller than the 1,121,378-acre applied here, might provide the county with desirable flexibility to permit clustered residential development in areas with lesser habitat value if some way could be found to further limit or bar residential development altogether in areas with high habitat value. However desirable that flexibility might be, as written, LUDO 3.32.300 does not permit application of the one dwelling unit per 40 acres standard over an area that is larger than the property that is the subject of the application. If the county wishes the density limit to apply in some other manner, it must amend LUDO 3.32.300 to achieve that result. In sum, the county's view that the denominator required by the LUDO 3.32.300 density standard is a 1,121,378-acre portion of the county is not reasonable and correct."[6]

The Hearings Official believes that the applicant's proposed interpretation in this case is similar to the position taken by Douglas County in *Wetherell.*[7] LUBA rejected that

---

[6] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[7] The applicant attempts to distinguish *Wetherell—Wetherell* did not involve a forest template dwelling application; *Wetherell* interpreted a code provision, not a comp plan policy; and the Douglas County code provision at issue did not include the term "overall." While the posture of that case was a bit different, the policy considerations and analysis are the same. The term "overall" in Policy 11 refers to the ODFW

interpretation, and the Hearings Official feels certain that LUBA would, for the reasons set forth above, also reject the applicant's interpretation in this case. Until the County conducts its region-by-region analysis, which is called for in Policy 11, the density denominator must be the subject property.

The applicant may assert that this approach is overly restrictive because it essentially means that a forest template dwelling proposed on a property smaller than 80 acres in the Major Big Game Habitat area will always be deemed to conflict with the resource. The Hearings Official responds that the determination of a conflict does not result in the development being prohibited. It merely requires that an ESEE analysis be conducted to determine whether the additional dwelling would harm the protected resource.

Summary

The subject property in this case is only 13.28 acres in size. If the forest template dwelling were approved, the residential density would exceed the ODFW recommended density of one dwelling per 80 acres, and, absent an ESEE analysis, would violate Policy 11.

B. Goal 2

Even if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that the applicant could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan.

Statewide Planning Goal 2 (Land Use Planning) requires that land use decisions be based on an "adequate factual base." There are circumstances where that requirement demands that the "factual base" upon which the quasi-judicial decision is based be found in the comprehensive plan. For instance, both LUBA and the Oregon Court of Appeals have held that for purposes of Statewide Planning Goal 10, an inventory of buildable lands that is relied upon for a quasi-judicial decision must first be adopted as part of the comprehensive plan. *See D.S. Parklane Development Inc. v. Metro*, 165 Or App 1, 994 P2d 1205 (2000); *1000 Friends of Oregon v. City of Dundee*, 203 Or App 207, 216, 124 P3d 1249 (2005); *Lengkeek v. City of Tangent*, 50 Or LUBA 367 (2005); *Lengkeek v. City of Tangent*, 52 Or LUBA 509, 515 (2006). This requirement reflects the emphasis in Goal 2 on consistency and predictability. "Citizens must be able to rely on the fact that the acknowledged comprehensive plan and information integrated in that plan will serve

---

density recommendation, which is apparently stated as an "overall residential density" standard. As LandWatch points out, the second sentence of Policy 11 does not use the "overall" modifier. Accordingly, this case is similar to *Wetherell*, where the text of the code did not spell out the density denominator. The context provided by the policies furthered by Goal 5 protections are the same in both cases--in *Wetherell*, those policies were set forth in the code's purpose section; in this case, the Goal 5 policies are relevant to the interpretation because Policy 11 implements Goal 5 and must be interpreted in a manner that is consistent with Goal 5. An interpretation that does nothing to protect big game habitat from conflicting residential uses is not consistent with Goal 5.

as the basis for land use decisions, rather than running the risk of being 'sandbagged' by government's reliance on new data." *1000 Friends of Oregon v. City of Dundee*, 203 Or App at 216.

The question here is whether the information provided by the applicant is regular, run of the mill evidence that can be relied upon, or whether it is more in the vein of a buildable lands inventory, which must be incorporated into the comprehensive plan, so that future applicants are using the same data.

As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study. Until that work is completed, Policy 11 makes clear, any density above the ODFW recommended density limits "shall be considered to conflict with Goal 5" and will be allowed only following an ESEE analysis.

The ideal solution is for the County to conduct the regional studies that Policy 11 and the Working Paper call for. Arguably, an applicant could perform all or some part of that work. However, if it were relied upon by an applicant to justify foregoing the ESEE analysis called for in Policy 11, then the documentation would have to first be adopted into the comprehensive plan.[8]

Conclusion

The applicant's argument for approval hinges on its proposed interpretation of Policy 11, which allows a density calculation that is based on using the entire County (or a very large swath of the County) as the density denominator. As discussed above, that interpretation would do little if anything to protect the County's designated Major Big Game Range from conflicting residential development. It is thus inconsistent with Goal 5 and is not reasonable or correct.

Because the County has not yet completed its regional study, the only appropriate density denominator is the subject property. In this case, the subject property is only 13.28 acres, and the ODFW-recommended overall residential density of one dwelling per 80 acres is exceeded. An ESEE analysis is required. Because no ESEE analysis has been provided, the Planning Director's approval must be reversed.

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

[8] This Goal 2 discussion is not necessary for the Hearings Official's conclusion in this appeal. The Policy 11 interpretation set forth above stands on its own. If, on appeal, LUBA disagrees with the Goal 2 discussion, it could still affirm the Hearings Official's decision.

This form is required for request for reconsideration of a Type III Hearings Official decision or a Hearings Official decision on an appeal of a Type II Director decision. Please note that your appeal application requesting reconsideration will be rejected if it does not meet all the requirements of Lane Code 14.080(1)(a) through (c). A notice of appeal must be filed with the Director prior to 4 p.m. Pacific Time 12 days after the date the notice of decision is mailed (see deadline specified on the decision).

1. A copy of the decision being appealed, with the Department file number: _____ and the date of the decision_____

2. The $1,216 appeal fee, payable to Lane County.

3. The appeal deadline, as stated in the Hearings Official's Decision: MAY 04 2021

4. Address each of the following:

   a. Check one of the items below demonstrating how the person filing the appeal is a party as that term is defined in LC 14.015(22) with the right to appeal the Hearings Official's decision:

      ☐ I am the applicant for the subject application;

      ☐ I am the owner or contract purchaser of the subject property;

☐ Prior to the decision, I provided testimony before the Hearings Official;

☐ I am not one of the persons mentioned above, but wish to appeal the Hearings Official's decision and my appeal submittal identifies how I qualify as a party (provide written description).

b. Please provide a written statement explaining the reason(s) why the decision of the Hearings Official was made in error or why the Hearings Official should reconsider the decision;

c. Please provide an explanation with detailed support specifying one or more of the following assignments of error, or request for reconsideration:

☐ The Hearings Official exceeded his or her authority;

☐ The Hearings Official failed to follow the procedure applicable to the matter;

☐ The Hearings Official rendered a decision that is unconstitutional;

☐ The Hearings Official misinterpreted the Lane Code, Lane Manual, State Law, or other applicable criteria; or

☐ Reconsideration of the decision is requested in order to submit additional evidence not available in the record at the hearing and addressing compliance with relevant standards and criteria.

d. Include any additional information in support of your appeal.

5. Per Lane Code 14.080(4)(a), if the applicant is requesting reconsideration, the applicant must first agree to extension of any statutory application timelines, and such extension must be in addition to any other extensions already given.

Notes:

- Lane County Ordinance No. 19-03, the adopting Ordinance for Lane Code Chapter 14 that regulates the Hearings Official decision and appeals process is under appeal to the Oregon Land Use Board of Appeals (LUBA). In the event that an appeal to LUBA results in a remand or reversal, the Ordinance will no longer be effective and the applicable version of Lane Code Chapter 14 will revert back to Lane County Ordinance No. 14-09 (December 2014).

- An appeal of a Hearings Official decision to the Lane County Board of County Commissioners is no longer allowed per the regulations of Lane Code Chapter 14 (Lane County Ordinance No. 19-03).

NOV 0 6 2023

BEFORE THE LANE COUNTY HEARINGS OFFICIAL

REVIEW OF AN APPLICATION FOR APPROVAL OF A FOREST TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On May 8 2023, the applicant, Edward J. King/E.J.K. Investments, filed an application seeking to establish a dwelling in the Impacted Forest Lands (F-2) zone on tax lot 843, assessors map 21-25-12. PA 23-05321. The application was deemed complete on June 7, 2023. County staff elected to hear this application through a Type III initial Hearings Official review, pursuant to Lane Code 14.030(1)(b)(ii)(cc). Accordingly, on August 16, 2023, Lane County staff sent notice of a public hearing to occur on September 7, 2023 before the Lane County Hearings Official. The initial public hearing was held on September 7, 2023.

Application History

Hearing Date: September 7, 2023
(Record Held Open Until October 12, 2023)

Decision Date: November 2, 2023

Appeal Deadline

A party may request reconsideration of this decision by the Hearings Official, pursuant to Lane Code 14.080(1)(a)(iii) and (1)(b), by filing a notice of appeal within 12 days after the date the notice of decision was mailed. If a party seeking further review chooses not to seek reconsideration, they must file an appeal directly with LUBA within the timelines set forth in state law. See LUBA's website for more information on appeal deadlines.

Statement of Criteria

Lane Code (LC) 16.211(2)-2.4; LC 16.211(3)(c), (3)(p), (3)(q), (5), and (6)
House Bill 2225
Rural Comprehensive Plan (RCP) Goal 5 Flora and Fauna Policy 11

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 843, assessor's map 21–25–12, which is immediately west of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries. The property is approximately 13.34 acres and is vacant.

   The subject property is zoned Impacted Forest Land (F–2) except for a small portion of the property's eastern corner, which is zoned Rural Residential (RR-5). The property also falls within the Airport Safety Combining Zone (/AS). The F-2 portion of the property is located entirely within designated Major Big Game Habitat recognized as a significant Goal 5 resource under the RCP.

2. The subject application is one of three template dwelling applications submitted on the same date. The other two applications are PA 23-05322 and PA 23-05323. The other two applications are requests for forest template dwelling approvals that were previously denied by the Hearings Official (PA 20-05064 and PA 20-05066) and subsequently appealed to LUBA.

Decision

THE EDWARD J. KING/E.J.K. INVESTMENTS APPLICATION FOR APPROVAL OF A FOREST TEMPLATE DWELLING (PA- 05321) ON TAX LOT 843, ASSESSOR'S MAP 21–25–12 IS DENIED.

Motion to Strike

At the hearing in this matter, the Hearings Official announced the following open record period:

September 21, 2023: First open record period
October 5, 2023: Responses to materials submitted during first open record period

October 12, 2023: Final rebuttal by applicant

During the time period for submitting responses (*i.e.*, from September 21 through October 5), Carlette Larson submitted written materials. The submittal included tax lot maps with writing on them; a list of tax lots and tax payers and owners; Assessment and Taxation records; and individual property account information. Ms. Larson does not explain how the documents are in response to issues raised in the open record period.

LandWatch moves to strike the submittal of Ms. Larson because the documents are not relevant to the issues before the Hearings Official, and LandWatch does not believe the documents are responsive to issues raised in the initial open record period. The Hearings Official agrees that the materials do not appear to be responsive to materials that were submitted during the first open record period. Accordingly, the motion to strike is granted.

Justification for the Decision

I. Goal 5, Policy 11

The main dispute in this case involves an interpretation of RCP Goal 5 Flora and Fauna Policy 11 (referred to herein as Policy 11). Policy 11 is a policy that is intended to implement the requirements of Statewide Planning Goal 5 (Natural Resources, Scenic and Historic Areas, and Open Spaces) aimed at preserving habitat for Big Game.[1] Policy 11 provides:

> "*Oregon Department of Fish and Wildlife [ODFW] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program.*" Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.

The history of the adoption of RCP Goal 5 Flora and Fauna Policy 11 goes all the way back to the 1980s, when the RCP was acknowledged by the Land Conservation and Development Commission (LCDC). This history is important to the Hearings Official's and the Board's mission in this case, which is to discern what the County Board at that time intended regarding the meaning and applicability of Policy 11.

The County's recent decision making on the issue began in November, 2019 with the Hearings Official's decision in *Green.* PA 18-05913 (November 25, 2019). A different Lane County Hearings Official issued a decision in *Nimpkish* a few months later, in February, 2020. PA 19-

[1] The County mapped areas of big game as Major Big Game (the most highly protected), Peripheral Big Game (the next highest level of protection), and Impacted Big Game (least protected).

05298 (February 4, 2020). Prior to *Green* and *Nimpkish*, the County did not require an application for a forest template dwelling to assess the impacts of such dwelling on Big Game Habitat. Both *Green* and *Nimpkish* involved applications for forest template dwellings on property located in the F-2 zone and within the County's areas designated for Major Big Game Habitat. In both cases, LandWatch argued that it was not sufficient for an applicant seeking approval of a forest template dwelling on property located within mapped Big Game Habitat areas, to demonstrate compliance with the applicable approval criteria found in the Lane Code. LandWatch argued that Policy 11 provided an approval criterion that applied directly to an application for a forest template dwelling where the property fell within a protected Major Big Game area.

The parties in *Green* and *Nimpkish* provided research regarding the initial RCP acknowledgment process in an attempt to shed light on the County's intent in adopting Policy 11. Ultimately, the Hearings Officials in both *Green* and *Nimpkish* held that Policy 11 did not apply directly to applications for forest template dwellings in this circumstance. The Hearings Official's decision in *Nimpkish* was appealed to LUBA.

LUBA disagreed with the Hearings Official's determination in *Nimpkish* and determined, based on a rather extensive review of the acknowledgment materials from the early 1980s, that Policy 11 applied directly as an approval criterion to applications for forest template dwellings on lands shown as protected big game habitat on the County's Goal 5 maps for big game habitat. *LandWatch Lane County v. Lane County (Nimpkish)*, ___ Or LUBA ___ (LUBA No. 2020-030, January 23, 2021).

In two subsequent appeals, the Lane County Hearings Official denied requests for forest template dwellings, based on LUBA's ruling in *Nimpkish*. PA 20-05064 and PA 20-05066 (*King*). These decisions were also appealed to LUBA, which affirmed the Hearings Official decisions denying the applications based on the applicant's failure to demonstrate compliance with Policy 11. *King v. Lane County (King* or *King 2021)*, ___ Or LUBA ___ (LUBA Nos. 2021-047/052, October 15, 2021).[2] On appeal to the Oregon Court of Appeals, the Court affirmed without opinion. *King v. Lane County*, 317 Or App 136, 501 P3d 1058 (2022).

LUBA's determinations in both *Nimpkish* and *King* involved a review of final local decisions rendered by the Lane County Hearings Official. When LUBA reviews a decision of a local hearings official, it is not required to "defer" to that decision. When LUBA reviews a decision of a local governing body (in this case, the Board of Commissioners), however, LUBA is required to defer to that body's interpretation of its own local legislation. The applicant in this case asserts that the Lane County Board of Commissioners can provide its own interpretation of Policy 11, and it argues that LUBA will be required to defer to that interpretation. That added deference, according to the applicant, could result in a different decision by LUBA.

---

[2] LUBA's decisions in the *King 2021* appeals went further than LUBA's decision in *Nimpkish* and examined how the "overall dwelling density" was to be determined—i.e., what unit of land was to be used for the denominator in the density calculation. That issue is not relevant to this appeal and will not be discussed further.

For the most part, the Hearings Official agrees with the applicant regarding this assertion. The Hearings Official does not agree with LandWatch that the County Board is bound by LUBA's previous rulings, because the scope of deference is different in this case.[3] The Hearings Official does note, however, that any interpretation that the Board adopts must also be consistent with state law, as Policy 11 is intended to implement the requirements of Statewide Planning Goal 5 as it relates to protection for Big Game Habitat. LUBA's discussions in both *Nimpkish* and *King* were based largely on the extent to which an interpretation of Policy 11 complied with state law, *i.e.*, the dictates of Statewide Planning Goal 5.[4] It seems likely that, on review of this decision, if appealed, LUBA will be concerned about an interpretation of Policy 11 that it feels lacks the necessary protections to fully implement the dictates of Goal 5.

The Hearings Official understands that the Board will likely review this Hearings Official decision so that it can provide a Board interpretation of Policy 11 that LUBA, on appeal, will be required to defer to. With that goal in mind, the Hearings Official provides the following interpretation as a guide to the Board's decision.

RCP Acknowledgment

At the time of acknowledgment of RCP Policy 11, it was well accepted that residential development was the main potential conflict with protection of Big Game Habitat. Accordingly, DLCD and ODFW staff's primary concern regarding Big Game Habitat was the allowed density of dwellings in areas mapped for Big Game Habitat protections. In that vein, DLCD aimed to help counties draft comprehensive plan policies and code language that would minimize the density of residences where such density could impact Big Game Habitat.

There is relevant analysis in both LUBA decisions in *Nimpkish* and *King* and in staff's memorandum to the Hearings Official in this case. However, this decision will attempt to narrow the discussion to the key issue in this case. That issue is to what extent the County and DLCD viewed the Lane Code provisions as adequate to protect the resource; *i.e.*, Big Game Habitat. That is, did the Code fully implement Policy 11, such that only the Code provisions applied? Or did Policy 11 contain protections that remained applicable to discrete land use applications such as requests for forest template dwellings on land protected for Big Game Habitat?

The first sentence of Policy 11 provides: *Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County.*

In the prior cases, it was assumed that the ODFW "recommendations for overall residential density for protection of big game" was no more than one dwelling per 80 acres in the Major Big Game Habitat areas and no more than one dwelling per 40 acres in the Peripheral Big Game

---

[3] The applicant is correct that LUBA would be required to affirm an interpretation so long as it is "plausible."
[4] LUBA stated: "Moreover, the county must interpret a provision of the RCP that was adopted to implement its Goal 5 program, which protects Big Game Range from conflicting residential development through density standards, in a manner that is not inconsistent with Goal 5. ORS 197.829(1)(d)." *Nimpkish*, slip op. 14.

Habitat. This assumption or assertion was not correct or complete. The record in this case makes clear that the ODFW overall residential density recommendations included an alternative for circumstances where clustering was required. In the Major Big Game Habitat, one dwelling per 40 acres (rather than one dwelling per 80 acres) is acceptable with cluster development. In Peripheral Big Game Habitat, one dwelling per 20 acres (rather than one dwelling per 40 acres) is acceptable with cluster development. *See* attachment to March 30, 1983 letter from Neal Coenen, ODFW Program Leader, to Aldie Howard, Benton County Planning Director.[5] The recommendation articulates clearly that it relates to "overall residential density" and not "minimum lot sizes." A minimum lot size only regulates how big or small a property must be when the property is being created. It does not address how big a property must be in order to site a dwelling on it. That said, the County relied, at least in part, on minimum lot sizes in the F-1 and F-2 zones to assist with compliance with Goal 5 Big Game Habitat protections.

Lane County's first attempt at acknowledgment of its Goal 5 program related to protection of Big Game Habitat was rejected by DLCD. It had proposed a minimum lot size in the F-2 zone of 20 acres and a minimum lot size in the F-1 zone of 40 acres. ODFW and 1000 Friends objected to that proposal, in part because it was not consistent with the ODFW density recommendations. As a result of the negative comments, Lane County ended up adopting much larger minimum lots sizes of 80 acres for the F-1 zone and 40 acres for the F-2 zone. It also adopted provisions that required clustering.

However, as DLCD and ODFW made clear, the recommended residential density related to overall residential density, not minimum lot size. That is, the County's choice to adopt a minimum lot size for the forest zone (and presumably for areas designated for protected Big Game Habitat), did not fully address ODFW's recommended residential densities. There was nothing in the adopted Code that addressed actual overall residential densities when a dwelling was proposed to be added. Specifically, the Code did not include a required minimum lot size for approval of a dwelling in the F-2 zone. Accordingly, the Code provisions did not fully address the overall residential density recommendations. For example, if there was a cluster of small, nonconforming (*i.e.*, smaller than the minimum lot size for the zone) properties zoned F-2, as long as the owners could satisfy the approval criteria in the Code, they could potentially build out the properties far in excess of ODFW's recommended residential density.

That all being said, the Hearings Official is aware that the question here is not whether Policy 11 and the Lane Code fully protect Big Game resources. Rather, the question is what the County and DLCD intended at the time the RCP was acknowledged in 1984. As discussed below, the Hearings Official believes that the intent of Policy 11 was to fill the hole with regard to Goal 5 protections that was left because the County Code did not have a minimum lot size requirement for placement of a dwelling.

The applicant's proposed interpretation of Policy 11 is found in the Home Builders Association of Lane County's letter of interpretation that was provided to the Board by Pete Barrell on May

---

[5] The ODFW policy recommendation for overall residential densities found attached to the March 30, 1983 letter was in relation to Benton County's acknowledgment. But the one-page attachment is entitled "Big Game Ranges—Northwest Oregon" and appears to contain the recommendations for Lane County as well.

8, 2022. That letter asserts that Lane Code 16.211, the chapter of the Code applicable to the F-2 zone, is intended as an exhaustive list of applicable approval criteria and standards. It relies on the Purpose statement in LC 16.211(1) and the introduction to the Table of Permitted Uses (Table 16.211-1) found at LC 16.211(2). The Table includes "Template Dwellings" as an allowed use in the F-2 zone and makes no mention of Policy 11 as an applicable approval standard. In general, the applicant is correct that comprehensive plan policies do not usually apply directly to discrete land use applications where there are land use regulations that fully implement that particular policy. However, as explained below, Policy 11 was not fully implemented by the Lane Code in this case. The legislative history of Policy 11 (*i.e.,* the acknowledgment materials) make clear that in certain circumstances, a full Goal 5 analysis would be required when a forest template dwelling was sought on lands protected as Big Game Habitat.

The applicant also argues, through the Home Builders' proposed interpretation, that the Flora and Fauna Working Paper "moved away from setting minimum lot sizes for dwelling applications on F-2 land and toward applying siting and clustering standards." The Hearings Official does not believe this argument, even if true, provides a basis for concluding that Policy 11 does not apply directly to certain applications for forest template dwellings.

The applicant relies, at least in part, on Directive 2.d of DLCD staff's July 19, 1984 staff report, which provides: "Amend the F-2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones or contain clustering requirements in those areas." Taken out of context, this statement could be read as an either/or directive: increase minimum lot sizes OR adopt clustering requirements. Read in context, however, it is clear that the County chose to address this directive by increasing the minimum lot size proposed in the F-2 zone (from 20 acres to 40 acres), AND by adopting clustering requirements for dwellings in an attempt to comply with the ODFW recommended density standards, which were one dwelling per 40 acres in the Major Big Game Habitat where clustering is required.

The Hearings Official believes that language found in the August 17, 1984 DLCD acknowledgment staff report to LCDC is determinative as to the intended meaning of Policy 11. In response to objections made to the version of Policy 11 that was ultimately adopted, DLCD found:

> "[Response 2]. [The proposed, and ultimately adopted, language of Policy 11 is cited here].
>
> Objectors are not correct that this policy [Policy 11] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. *The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made.* This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, [Marginal Lands] and EFU zones which ensure ODFW's density standards will be achieved.

> The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement[s]. *ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or prevent conflicts between dwellings and big game habitat. However as discussed below, the county has not adopted such standards in its zoning ordinance."* August 17, 1984 DLCD acknowledgment staff report to LCDC at page 39 (emphasis added).
>
> [Response 3]. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 zone, since in general, dwellings are not permitted in that zone." August 17, 1984 DLCD acknowledgment staff report to LCDC at page 39 (emphasis added).

The County ultimately adopted a minimum lot size in the F-2 zone of 40 acres, with clustering standards. However, as was made clear in the comment quoted above, this action only demonstrated compliance with the ODFW overall residential density standards where a property on which a dwelling would be sited satisfied the 40-acre minimum lot size requirement and where the siting of the dwelling satisfied the clustering siting standards. Consistent with the language in Policy 11, as explained in the July, 1984 staff report, "Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. *The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made.*" The County could have adopted minimum lot sizes for siting of dwellings that satisfied the ODFW recommended density standards. However, it chose not to do so. It chose, rather, to leave the Goal 5 analysis of the conflict created between a proposed dwelling and big game habitat to the time at which "such proposals are made"—that is, at the time the County processes an application for a forest template dwelling that, if approved, would create an overall residential density greater than the ODFW recommended residential density standards.

The Hearings Official believes that LUBA has already succinctly answered the applicant's arguments as follows:

> "the County's failure to take the step of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that the county is absolved from protecting land included on the Big Game Habitat Inventory as Major Big Game Range through the residential density recommendations referred to in RCP Goal 5, Flora and Fauna Policy 11, or that the density recommendations simply do not apply. * * * the County must interpret a provision of the RCP that was adopted to implement its Goal 5 program, which protects Big Game Range from conflicting residential

development through density standards, in a manner that is not inconsistent with Goal 5." *Nimpkish*, slip op. at 14.

The Hearings Official hereby incorporates the analysis in staff's August 31, 2023 Staff Report,[6] addressing the appeal issues, as well as staff's analysis addressing the remainder of the approval criteria. *See* Attachment 1 to Staff Report (Lane County Hearings Official Staff Analysis).

II. Needed Housing

The applicant raises another theory upon which he bases the assertion that Policy 11 does not apply directly to an application for a forest template dwelling. The applicant contends that Policy 11 is not clear and objective and therefore cannot be applied to needed housing, pursuant to ORS 197.307(4), the needed housing statute. The Hearings Official understands the applicant to have withdrawn this argument, based on the recent LUBA decision in *LandWatch Lane County v. Lane County (Helsel)*, ___ Or LUBA ___ (LUBA No. 2023-037, August 28, 2023). *Helsel* held that the clear and objective requirement found in ORS 197.307(4) does not apply to housing on EFU land outside the urban growth boundary. To the extent the applicant did not technically withdraw the "needed housing" argument, the Hearings Official determines that, based on the analysis in *Helsel*, the clear and objective requirement does not apply to applications for forest template dwellings on rural resource lands zoned F-2.

III. Access and Other Findings

During the open record period, the applicant submitted four revised site plans relevant to access to the subject property: one showing the proposed access for all three dwellings sought on tax lot 2800 (PA 23-05323), tax lot 2900 (PA 23-05422), and tax lot 843 (subject application); one showing access for tax lot 2800 only; one showing access for tax lot 2900 only; and one showing access for tax lot 843 only. *See* applicant's Open Record submittal letter dated September 21, 2023, with attached revised site plans (all dated September 20, 2023). The revised site plans are attached hereto as Exhibit A.

The Hearings Official understands the Planning Director to propose adopting the Planning Director analysis and proposed conditions of approval regarding the driveway (based on the revised site plans), as well as the rest of the findings addressing the remainder of the approval criteria.[7] That is, if the Board opts to adopt an interpretation of Policy 11 that would allow approval of the proposed dwelling, the remainder of the applicable approval criteria are satisfied, as set forth in the Lane County Hearings Official Staff Analysis (Staff Analysis), attached as Attachment 1 to the Lane County Hearings Official Staff Report, dated August 31, 2023, with the proposed conditions of approval, attached as Exhibit C to Staff Analysis.

---

[6] Caveat: The Hearings Official agrees with the opponents that the language in reference to Cerro Gordo is not particularly applicable to determining compliance with the Big Game aspects of Goal 5 as a whole.

[7] The Hearings Official's reliance on the revised site plans dated September 20, 2023 is based on the understanding that the accessway shown on the revised site plans accurately depicts the location of the existing roadway. That is, the evidentiary foundation for the determination that the approval criteria are satisfied assumes that a new roadway will not be created.

Conclusion

The Hearings Official agrees with the applicant that, in a review by LUBA of the Board's decision in this case, LUBA will be required to defer to the Board's interpretation of its own policy (Policy 11). However, that statement is tempered by the fact that any interpretation must also be consistent with the requirements imposed by Statewide Planning Goal 5 as it relates to protection of Big Game Habitat. Given the language of LUBA's opinions, quoted above, in *Nimpkish* and *King*, the Hearings Official believes that the Board has an uphill battle if it wishes to adopt an interpretation that does not fully implement ODFW's recommended residential densities, which is required by Policy 11.

With regard to any hope on the part of the County to "remove barriers" for approvals for dwellings in the F-2 zone due to the current emergency for needed housing, the Hearings Official does not believe that the answer to the housing crisis should include ignoring the protections of Goal 5 for Big Game Habitat to facilitate housing in a rural resource zone. There are better places for such needed housing where the necessary facilities are available and where precious resources will not be impacted.

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

This form is required for request for reconsideration of a Type III Hearings Official decision or a Hearings Official decision on an appeal of a Type II Director decision. Please note that your appeal application requesting reconsideration will be rejected if it does not meet all the requirements of Lane Code 14.080(1)(a) through (c). A notice of appeal must be filed with the Director prior to 4 p.m. Pacific Time 12 days after the date the notice of decision is mailed (see deadline specified on the decision).

1. A copy of the decision being appealed, with the Department file number: _____ and the date of the decision_____

2. The $1,327.36 appeal fee, payable to Lane County.

3. The appeal deadline, as stated in the Hearings Official's Decision: NOV 2 0 2023

4. Address each of the following:

   a. Check one of the items below demonstrating how the person filing the appeal is a party as that term is defined in LC 14.015(22) with the right to appeal the Hearings Official's decision:

      ☐ I am the applicant for the subject application;

- ☐ I am the owner or contract purchaser of the subject property;
- ☐ Prior to the decision, I provided testimony before the Hearings Official;
- ☐ I am not one of the persons mentioned above, but wish to appeal the Hearings Official's decision and my appeal submittal identifies how I qualify as a party (provide written description).

b. Please provide a written statement explaining the reason(s) why the decision of the Hearings Official was made in error or why the Hearings Official should reconsider the decision;

c. Please provide an explanation with detailed support specifying one or more of the following assignments of error, or request for reconsideration:

- ☐ The Hearings Official exceeded his or her authority;
- ☐ The Hearings Official failed to follow the procedure applicable to the matter;
- ☐ The Hearings Official rendered a decision that is unconstitutional;
- ☐ The Hearings Official misinterpreted the Lane Code, Lane Manual, State Law, or other applicable criteria; or
- ☐ Reconsideration of the decision is requested in order to submit additional evidence not available in the record at the hearing and addressing compliance with relevant standards and criteria.

d. Include any additional information in support of your appeal.

5. Per Lane Code 14.080(4)(a), if the applicant is requesting reconsideration, the applicant must first agree to extension of any statutory application timelines, and such extension must be in addition to any other extensions already given.

Notes:

- An appeal of a Hearings Official decision to the Lane County Board of County Commissioners is no longer allowed per the regulations of Lane Code Chapter 14 (Lane County Ordinance No. 20-05).

Subject: HO staff reports for PA23-05321, 05322, 05323 (Oakridge King template dwelling applications)

Good Morning, I have just received word that the Hearings Official staff reports for next weeks' hearings have been uploaded to the LMD hearings website and can be accessed via the following link: https://www.lanecounty.org/cms/One.aspx?pageId=6285782&portalId=3585881&objectId.94636=19771794&contextId.94636=6285783&parentId.94636=19771787

You should find two staff reports with attachments for the three applications. Attachments 3-7 relate to Goal 5 Flora & Fauna Policy 11 context and are identical for both staff reports.

Thank you for your patience with the uploading process and please advise if you are unable to access the documents or you find anything amiss.

Happy Friday,

LANE COUNTY HEARINGS OFFICIAL STAFF REPORT

Department Files:	509-PA23-05321
Hearing Date:	September 7, 2023
Report Date:	August 31, 2023
Owner/Applicant:	E.J.K. Investments ~~& Edward J. King~~
Agent:	Bill Kloos
Assessor's Map & Tax Lot:	21-25-12-00-00843
Acreage:	Approximately 13.34 acres (total)
Base Zone:	Impacted Forest Land Zone (F-2) Rural Residential, RR-5
Combining Zones:	Airport Safety Combining Zone (/AS)
Comprehensive Plan:	Lane County Rural Comprehensive Plan (/RCP)
Staff:	Julia Dobberstein, Planner Shawna Adams, Senior Planner

I. PROPOSAL DESCRIPTION

A request for a Type II Planning Director Approval of a forest template dwelling in the Impacted Forest Lands (F-2) Zone pursuant to Lane Code 16.211(2)-2.4, House Bill 2225, and RCP Goal 5 Flora and Fauna Policy 11. The Lane County Planning Director has elected to process the application through a Type III Hearings Official procedure in accordance with Lane Code 14.030(1)(b)(ii)(cc).

The proposals were submitted in conjunction with two other template dwelling requests, 509-PA23-05322 and 509-PA23-05323, which have been scheduled for the same hearing date and are addressed in a companion Hearings Official staff report.

II. PROPOSAL BACKGROUND

The subject property is located immediately west of the Oakridge Airport. The property is zoned F-2 Impacted Forest Land except for a small portion of the parcel's eastern corner, which is zoned Rural Residential (RR-5). The property takes access via Airport Road and a shared private access road that extends from Airport Road through the subject property, adjacent property to the north and the properties on which the other two template dwellings have been proposed. All three template dwelling requests are subject to the same criteria and standards, are comparable in size, with their F-2 portion entirely located within designated major big game habitat recognized as significant under Lane County Rural Comprehensive Plan (RCP). For the other two template dwelling proposals, the applicants have requested that the Director reissue the Director approvals for the 2020 *King* template dwelling applications that denied on appeal under 509-PA20-05066 for Tax Lot 2800 and 509-PA20-05064 for Tax Lot 2900 (*King v. Lane County*, Or LUBA (LUBA Nos. 2021-047/052, Oct. 15, 2021), *aff'd without opinion* 317 Or App 136, 501 P3d 1058 (2022).

In accordance with LUBA's ruling in *Nimpkish*, this Hearings Official denied the 2020 applications on the sole basis that they failed to comply with RCP Goal 5 Flora & Fauna Policy 11 (Policy 11) density standards (see

LandWatch Lane County v. Lane County (Nimpkish LLC), Or LUBA (No. 2020-030, Jan. 23, 2021). On appeal, LUBA recognized the text of Policy 11 to be ambiguous with respect to whether and how the Policy 11 density limitations apply to dwelling proposals in big game habitat (Slip op 13 and 22). LUBA concluded that that the Policy 11 text, context, and legislative history, together, make reasonably clear that the density limitations must be applied to forest template dwelling proposals and that it is reasonable to use parcel size as the denominator for calculating density.

The applicant argues that the 2017 'needed housing' statutes in effect when the subject application was submitted on May 8, 2023, preclude the County from applying Policy 11 density limitations, in keeping with the Hearings Official's decision for the *Helsel* relative farm help dwelling under 509-PA23-05928 (**Attachment 2**). The applicants rely on the Court of Appeals decision in *Warren v. Washington County*, Or LUBA (No. 2018-089, Nov 14, 2018), *aff'd* 296 Or App 595, 439 P3d 581 (March 20, 2019) and LUBA's decision in Community *Participation Organization 4M v Washington County*, OR LUBA (No. 2020-110, September 29, 2021). The applicant contends that Policy 11, like the criteria at issue in *Helsel*, is prohibited under ORS 197.307(4) because it cannot be applied in a "clear and objective" and objective manner. In support of this conclusion, the applicant notes that Policy 11 can be interpreted in multiple ways and cite LUBA's holding in *King* that the policy is ambiguous.

III. RECOMMENDATION

Inasmuch as the Hearings Official finds their needed housing determination in *Helsel* to remain valid and to apply to the circumstances of the subject proposal, the Director recommends approval based on the analysis provided in **Attachment 1.** Staff has provided an analysis and conditions of approval based on the current code format rather than the former Chapter 16 format addressed in the applicant's narrative.

The Director makes this recommendation with the understanding that the circumstance for the subject application differs from those considered by the Hearings Official in *Helsel* and may warrant a different conclusion. Chief among these circumstances would be LUBA's ruling for *Helsel*, regarding whether the needed housing statutes in question apply outside of UGBs or to dwellings on resource land, specifically forest template dwellings authorized under allowed under ORS 215.705(1)(f). Of note, LUBA's decision for Helsel was issued after this staff report was drafted and has not yet been fully reviewed by staff.

Regardless of whether the Hearings Official approves the application based on the applicant's 2017 needed housing statute argument, the Director respectfully requests that the Hearings Official make findings and conclusions for compliance with Policy 11. Specifically, the Director asks the Hearings Official consider text, context, and legislative history which indicates that, at the time of plan adoption and acknowledgment, DLCD, the county, and ODFW recognized the applicable density standard under Policy 11 to be much less restrictive than the one dwelling/80-acre standard that has been presumed to apply. In the Director's view, the legislative history and context makes clear that Policy 11 allows double the density that was presumed in *Nimpkish* and *King*, meaning that the subject properties would only need to be 40 acres in size, rather than 80 acres, to meet the applicable Policy 11 density standard for dwelling approval.

The subject proposal would fall short of meeting the Policy 11 density standard regardless of whether the 40-acre or 80-acre standard were determined to be the correct standard. Although the distinction would not be determinative for this proposal, certainty concerning the specific density standard that is applicable for F-2 dwellings in big game range habitat is a timely concern of Countywide significance - and one that merits a comprehensive analysis of the available information and matters of law by for the purposes of informing future land use decisions or legislative action by the Board of County Commissioners (Board).

The remainder of this staff report focuses on the circumstances that have given rise to the Director's request and the evidence that leads the Director to conclude that the density limitations of Policy 11 are significantly less restrictive than have been recognized for forest template dwelling proposals subject to F-2 siting standards.

IV. BACKGROUND AND BASIS FOR POLICY 11 REQUEST

Historically, Lane County has not applied Policy 11 as an approval criterion for forest template dwelling proposals. Beginning as early as 2018, the issue of noncompliance with Policy 11 density standards started being raised in testimony for template dwelling proposals in designated Goal 5 major and peripheral big game habitat range. Initially, the Director, Hearings Officials, and applicants were in agreement that Policy 11 did not apply directly to template dwelling proposals and was fully implemented in Lane Code Chapter 16. This position was comprehensively addressed by this Hearings Officials decision in Green (509-PA18-05913), which was relied on in support of the *Nimpkish* (509-PA19-05298) Hearings Official decision.

The Director approved the 2020 *King* template dwelling proposals in keeping with these Hearings Officials decisions. Thereafter, it was learned that LUBA had issued their decision for *Nimpkish* and held that Policy 11 density standards must be applied to forest template dwellings proposals. This Hearings Official applied Policy 11 density standards accordingly and concluded that the proposals failed to meet the density standards using parcel sizes of the subject property as the denominator.

In their appeal to LUBA for the 2020 *King* Hearings Official denials, the applicants asked LUBA to revisit their ruling in *Nimpkish* in consideration of additional policy text, context, and legislative history. They argued that the additional evidence clarifies that the F-2 siting standard were meant to fully implement Goal 5 big game habitat protections for dwelling proposals, in lieu of Policy 11 density standards applying directly to template dwelling proposals. In the alternative, the applicants asked that LUBA find the Hearings Official misconstrued Policy 11 by using lot size as the denominator to calculate density, rather than using the total County big game habitat acreage as the denominator.

LUBA denied both assignments of error and affirmed the County's denial of the 2020 King proposals on October 15, 2021. On May 3, 2022, Land Management Division staff provided the Board of County Commissioners an overview of the *Nimpkish* and *King* opinions. On May 10 of the following week, the Board requested that staff report back to the Board concerning a May 8, 2022 request from the Lane County Homebuilders Association (HBA) regarding Policy 11. The letter requests that the Board make a local interpretation of Policy 11. The specific interpretation proposed generally presents the same arguments rejected by LUBA in *King* concerning regarding whether Policy 11 applies directly to F-2 dwelling proposals, with the expectation that LUBA would be obligated to affirm the interpretation under the deferential standard afforded decisions by the Board. **See Attachment 7**.

On June 7, 2022, staff reported back to the Board with considerations and options for how the Board could proceed in responding to the letter. The Board directed staff to take the HBA request before the Lane County Planning Commission (LCPC) for a recommendation. The LCPC recommended that the Board take no action regarding the HBA proposal and further recommended that the Board direct staff to scope a post acknowledgement plan amendment to make amendments to Rural Comprehensive Plan Goal 5, Policy 11. Staff reported back to the Board on June 13, 2023. The Board directed staff to scope options for a Goal 5 Big Game update and to return to the Board with a formal project proposal. Most significant for this hearing matter, the Board directed staff to elevate the next relevant Hearings Official's decision involving Goal 5, Policy 11 to the Board for their consideration of whether to adopt a local interpretation of the policy, either by affirming the Hearing's Official interpretation or through an on-the-record review.

The Hearings Official decisions for the subject proposal and 509-PA23-05322 and 509-PA23-05323 would be the first relevant Hearings Official decisions involving Policy 11. Although the applicants argue that needed

housing statutes preclude the County from applying Policy 11, staff understands that such a conclusion could only be reached via a determination by the Hearings Official that Policy 11 cannot be imposed in a clear and objective manner. Staff also understands that such a determination would necessitate consideration of whether legislative history and context resolves any ambiguity in how the standard applies, with demonstration that no other plausible interpretations of the policy exist. See *Roberts v. City of Cannon Beach*, 316 Or. App. 305, 504 P.3d 1249 (Or. Ct. App. 2021).

With consideration of the *King* holding and related work assignments that have been assigned by Board, staff has undertaken a comprehensive examination of the text and context of the plan and code, and the events and documents in the 1980s plan acknowledgment process. These include the materials in the *King* LUBA record, and the additional material attached to this staff report. The most relevant context included in the *King* LUBA record have also been attached for ease of review.

V. LEGISLATIVE HISTORY AND CONTEXT SUPPORTING THE LESS RESTRICTIVE DENSITY STANDARD

As LUBA concluded in King, "the legislative history is reasonably clear that the LC 16.211(5) clustering standards were intended to supplement, rather than to replace, the other components of the county's Goal 5 program, including Policy 11". Equally clear to the Director, is that the F-2 siting standards were adopted to allow for the doubling of densities in big game habitat in keeping with Policy 11 density limitations.

Not considered by LUBA or any party in *Nimpkish* and *King* were any arguments as to how the F-2 siting standards *supplement* Policy 11. More particularly, not considered was whether the evidence the applicants relied on to support their argument that the F-2 siting standards codified or replaced the density standards, instead, served to clarify that the F-2 siting standards were adopted for the purpose of qualifying F-2 parcels for a less restrictive density standard under Policy 11. In the Director's view, the text, legislative history, and context makes reasonably clear that this was done for the purposes of aligning F-2 parcel size standards with the County's commitment to Policy 11 density limitations to the extent required for plan acknowledgment. Furthermore, this conclusion appears to be generally consistent with LUBA's reasoning in *King*, notwithstanding that LUBA upheld the denial based on an 80-acre standard rather than a 40-acre standard with clustering. As well, the legislative history demonstrates the F-2 siting standards that were adopted in keeping with the lesser 40-acre standard remain in place and are applicable to forest template dwelling proposals.

Policy text. RCP Goal 5 Flora & Fauna Policy 11 states:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of Big Game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."*

In *Nimpkish* and *King*, LUBA concluded that Policy 11 is part of and implements the County's acknowledged Goal 5 program and to give some effect to the second sentence of Policy 11, the County must apply Policy 11 to residential development where the proposal density exceeds ODFW recommendations. The recommendations on overall residential density referenced by Policy 11 are clarified in legislative history and context, most comprehensively in the DLCD staff reports at the time RCP adoption on September 12, 1984 and the DLCD staff reports referenced therein.

The Flora and Fauna Working Paper (March 1982) and its Addendum (November 1983): The Flora & Fauna Working Paper, as modified by the 1983 Addendum, identifies residential use above the overall residential densities recommended by ODFW as the primary conflict with big game. The documents further indicate that ODFW has recommended overall residential densities for Peripheral Big Game range at one dwelling/40 acres and for major big game at one dwelling/ 80 acres. The documents identify density above that limit as a conflict that would only be allowable if justified through the Goal 5 process.

The original Working Paper identified a process involving coordination with ODFW for implementing and codifying the density standards based on a regional approach. The Addendum entirely replaces the text related to that regional approach (beginning with the last paragraph of page 24 and all text on page 25) with new text that focuses on a combination of clustering and siting standards to avoid or resolve conflicts with big game. In *King*, the applicants argued that the revisions support the conclusion that the F-2 siting standards obviated the applicability of Policy 11 density limitations. LUBA disagreed, concluding that, "nothing in the Addendum supports the conclusion that the County proposed, and LCDC acknowledged, abandoning any reliance on density limitations as part of the Goal 5 program to protect big game habitat to rely solely on the siting standards fully implement Policy 11 and big game protections. As LUBA emphasizes, the Addendum left in place the original language that an overall residential density greater than one dwelling per 80 acres in major big game range conflicts with Goal 5. It also included language describing a process to ensure compliance with Goal 5 "in the event that other identified measures (the regional approach, minimum parcels sizes, and clustering) are insufficient- by applying the Goal 5 rule." (*King*, Slip op 19)

The Director understands the Addendum revisions to allow for the possibility of an alternative density standard for preventing -or resolving - big game conflicts via some combination of siting standards and less restrictive density standards that is acceptable to ODFW, as had been indicated in the ODFW correspondence attached to this staff report (**Attachment 4).** Accordingly, the Addendum identified the need for adding to Policy 11 the following statement: "The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

July 19, 1984 DLCD Staff Report to LCDC (See Attachment 3.a): The July 1984 DLCD staff report addresses the County's request for plan acknowledgment of compliance with Goals 2, 5, and 15. In *King*, LUBA concluded that the July 19 staff report "clearly illustrates DLCD's expectation that, while additional measures were necessary to ensure full compliance with Goal 5, the ODFW density standards embodied in Policy 11 would continue to play a role in evaluation of development proposals. Nothing in the acknowledgment process eliminated or vitiated the applicability of those density standards to proposed residential development in big game." The applicants had argued that the following DLCD response to objectors and associated "in order to comply" (IOTC) requirement supports the conclusion that Policy 11 Goal 5 protections were fully implemented and codified by the F-2 siting standards.

> *"[Response 3]. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 zone, since in general, dwellings are not permitted in that zone." (p. 39, emphasis added)*
>
> *"[IOTC 2.d.} Amend the F-2 and EFU zones to carry out the intent of [Policy 11}. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas." (p. 75, emphasis added)*

LUBA rejects the applicant's arguments and highlights DLCD's previous response to objectors concerning Policy 11 density standards and Goal 5 compliance:

> *"[Response 2]. Objectors are not correct that [Policy 11] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The county has, through [Policy 11], however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, [Marginal Lands] and EFU zones which ensure ODFW's density standards will be achieved.*
>
> *The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and or prevent conflicts between dwellings and big game habitat. However as discussed below, the county has not adopted such standards in its zoning ordinance." (p. 39, emphasis added).*

Additional context is provided in DLCD's summary of the objections raised by ODFW and 1000 Friends of Oregon on pages 24-36. These are followed by a summary of the County's Goal 5 analysis and implementation measures on pages 27-33. The most relevant statements include:

> *"Big Game Range: The primary conflict with big game range is identified as residential use at densities over one dwelling unit per 40 acres in Peripheral Range, and one unit per 80 acres in Major Range ....The County indicates that its 80-acre commercial timber zoning is very restrictive in terms of dwelling unit placement, and therefore, "it is unlikely that conflicts will occur" in Major Range areas (Addendum, p. 14). Similarly, the County believes its 40-acre zone will satisfy ODFW's recommended density in the Peripheral Range (p. 14)." (p. 27, emphasis added)*
>
> *"The [F-2 Zone] requires a minimum of 20 acres for creation of a woodlot or farm parcel...However, there is no requirement that, in the Big Game Range portions of that zone, densities will not exceed those recommended by ODFW (i.e. one unit per 40 acres in the Peripheral Range, or one unit per 20 acres with clustering and siting standards; one unit per 80 acres win the Major Range, or one unit per 40 acres with clustering and siting standards)." (p. 33, emphasis added)*
>
> *"In the [EFU Zone], a dwelling...may be approved if it meets certain criteria; similarly, a division of land may be allowed for a dwelling....if it meets those criteria...However, none of the criteria address ODFW's dwelling density recommendations...As noted in the Flora and Fauna Working Paper (p.24)...ODFW's recommended density in Peripheral Big Game Range (which , according to the County, is mostly zoned [EFU] is one unit per 40 acres or greater in the Peripheral Big Game Range. There are no standards in the zone which require lot sizes to be 40 acres or greater in the Peripheral Big Game Range portions of the zone, or alternatively, that require clustering of dwellings (to allow densities as greater as one unit per 20 acres." (p. 33, emphasis added)*
>
> *"[Objection 2]. ODFW and 1000 Friends have objected to [Policy 11] since it regards densities above ODFW's recommendations in big game areas to constitute a conflict. ODFW regards its recommended densities as the approach to resolve conflicts between dwellings and game range. 1000 Friends state that Policy 11 allows residential densities to exceed ODFW recommendations 'if conflicts can be resolved in accordance with OAR 660-16-000.' Objectors believe this allows the County to justify density*

levels which exceed those recommended by ODFW through an analysis of ESEE consequences. Objectors do not believe this exclusion is consistent with the Goal 5 Rule. (p. 35, emphasis added)

"[Objection 3]. ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendation in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones. Similar objections have been filed by 1000 Friends of Oregon. Objectors point out the F-1 zone establishes a minimum lot size of 40 acres, but smaller divisions can be made without regard to big game impacts. The F-2 zone establishes minimum lot sizes of 20 and 40 acres for forest and farm uses, which also fail to meet ODFW's recommended densities for the Peripheral Range, according to objectors. 1000 Friends points out that the Flora and Fauna Working Paper Addendum and Policy 11 prescribe clustering and siting standards, but these are not carried out in the F-2 zone. The Addendum also references forest land minimum lot sizes which are no longer current." (pgs. 35-36, emphasis added)

"[Objection 4.] ODFW and 1000 Friends object because Goal 5 has apparently not been applied in the process of designating marginal land nonresource lands. Objectors are particularly concerned how this affects big game range areas. ODFW contends that the County's plan provisions for lots of record, resource and nonresource-related dwellings, marginal lands, and nonresource lands could allow considerable development in game range. The County's F-1 and F-2 zones do not adequately assure that recommended densities will be maintained. This is further complicated by the fact that it is unclear where marginal and nonresource lands are located, and therefore the extent to which they are in game range areas...1000 Friends points out the Goal 5 must be applied wherever Goal 5 resources occur, even in areas designated marginal or nonresource land." (p. 36, emphasis added)

The above passages recognize that the County's expectation was that the density limitations adopted under Policy 11 were not likely to be exceeded based on other restrictions in place for forest dwellings. They also support LUBA's conclusions in *King* that F-2 siting standard were intended to supplement those density limitations. Specifically, the passages clarify that that ODFW and DLCD understood the County to adopt and adhere to ODFW's density recommendation in big game habitat areas, and that apart from any need to codify the density standards, the general F-2 lot area requirements and dwelling clustering standards were inconsistent with the County's density commitment under Policy 11. Moreover, they clarify that the specific siting standards that were ultimately adopted to satisfy IOTC 2.d. were intended to carry out the purpose of Policy 11 by bringing F-2 lot size requirements into alignment with the County's Policy 11, and that this occurred by justifying the doubling of densities in big game habit in accordance with ODFW overall residential density recommendations in keeping with ODFW's "clustered" density standard. The passages also acknowledge certain differences between other objector's and ODFW's understanding of how ODFW 's density recommendations with clustering square with the Goal 5 rule and Policy 11, with regard to preventing or mitigating conflicts.

August 17, 1984 DLCD Report to LCDC (See Attachment 3.b): DLCD's August 17, 1984 report makes revisions to their July 19 report. The revised response for Objection 4 makes clear that the ODFW density recommendations referenced in Policy 11 include the 'clustered' density standard.

"[Response 4.] Objectors are not correct that the Goal 5 process was not addressed in the process of designating nonresource lands. However, the Goal 5 conflicting uses/ESEE consequences analysis for one of the nonresource areas- Cerro Gordo—does not justify the residential densities proposed....The applicant has proposed a wildlife management plan which calls for clustering buildings and maintaining wildlife corridors. Although the proposed clustering and wildlife corridor measures will help resolve some of the conflicts identified, the overall density of the development 'with clustering' is one unit per five acres. ODFW recommendations are one per 80 acres (or one per 40 acres with clustering) in major big

game habitat, and one per 40 acres (or one per 20 acres with clustering in peripheral habitat. According to the County's own plan (Policy 11), such densities cannot be exceeded without being justified through an ESEE consequences analysis..." (p. 8, mark-up removed, emphasis added).

Relatedly, the August 17 report revises the conclusions and options for Cerro Gordo, and further clarifies how Goal 5 compliance is achieved under Policy 11, in consideration of the clarifications made in ODFW's objections.

"However, one unresolved Goal 5 issue remains. The Oregon department of Fish and Wildlife (ODFW) indicates (within their objection regarding big game habitat—see Goal 5 section p.35) that provisions authorizing a doubling of densities in big game habitat area is a measure satisfying OAR 660-16-010(3) when clustering of dwellings occurs.

Because the density authorized by Lane County for Cerro Gordo exceeds ODFW's accepted densities mitigation strategy under the "3C" approach (OAR 660-16-010(3)), one of three options remains open to the County to resolve this issue. These options are as follows:

1) *Provide additional ESEE consequences analysis justifying the decision to 'allow the conflicting uses fully' (OAR 660-16-010(2)) at a density exceeding a threshold acceptable to ODFW; or*
2) *Limit the density in the Cerro Gordo development to ODFW's recommended density with clustering consistent with (OAR 660-16-010(3); or*
3) *Cooperate with ODFW to design a mitigation strategy which combines (a) the current wildlife management plan for Cerro Gordo; (b) additional ESEE consequence analysis supporting the decision to allow a density which exceeds ODFW's recommended density with clustering; and (c) other mitigation measures deemed necessary by ODFW..." (pgs. 12 and 13, emphasis added).*

The revised options provided for Cerro Gordo reinforce the view that ODFW's clustered density standard was understood to be a mitigation measure that did not require additional ESEE justification and ODFW acceptance under Policy 11.

September 12, 1984, DLCD Staff Report to LCDC (See Attachment 3.c): The September 12 DLCD staff report recommends acknowledgment of the County's RCP and implementation measures related to big game habitat protection. The report summarizes the steps taken by the County to resolve the deficiencies necessary for acknowledgment. Specific to the July 19, 1984 IOTC 2.d. requirement that the County adopt larger lot sizes or clustering standards to align the F-2 and EFU lot size requirements with ODFW residential density recommendations, the report concludes that Lane County opted to meet the requirement via clustering:

"Requirement [IOTC 2.d.} Amend the F-2 and EFU zones to carry out the intent of [Policy 11}. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.

Response. Lane County has added the following new language to both the F-2 and EFU Zones:

(a) The Approval Authority shall balance the setback standards of LC 16.211(a)(a) with the siting requirements and application of approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of proposed residences consistent with the purposes of the F-2 [EFU] zone.
   (i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:
      (aa) Near residences on other tracts.
      (bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Specific to Cerro Gordo, the report concludes that compliance was achieved as follows:

"The County's policy is to abide by ODFW's density recommendation unless the entire Goal 5 process is applied and a decision to exceed these recommendations is justified. Lane County has adopted supplementary findings (Order No. 84-9-11-23) and has revised its ESEE consequences analysis and wildlife habitat management plan for Cerro Gordo to justify development in a recognized big game habitat area, in excess of ODFW's recommended density standards. A meeting was held on August 14, 1984 with ODFW, Cerro Gordo, and DLCD representatives to discuss this issue. It was determined that, in this case, ODFW density recommendations do not have as much bearing on the acceptability of the development as do other factors. These factors include the overall number and location of dwellings and roads, as well as mitigating measures incorporated into the development. The following factors in the revised Cerro Gordo proposal are particularly relevant (Order No. 84-9-11-23)...

Because of these and other factors addressed in the County's amended findings, the impacts on big game range are thought to be acceptable by ODFW. Allowing such conflicts to occur, but with restrictions outlined above, is a (3C) decision under the Goal 5 Administrative Rule. The County has justified this decision. (p. 11-12, original emphasis preserved)

Noteworthy is that DLCD's response includes no caveats with respect to the County's policy to abide by ODFW's density limitations. Also noteworthy is that the response suggests that the County's choice to justify exceeding ODFW overall density recommendations via the Goal 5 process, and ODFW acceptance of mitigation measures on a different basis than density, were emphasized to be isolated to Cerro Gordo proposal. DLCD's response underscores that as of the date of RCP adoption, Policy 11 was understood by the County, DLCD, and ODFW to require additional ESEE justification and ODFW's blessing to justify approval of dwellings that exceed the ODFW clustered density standard and such path had not been taken for implementation of Goal 5 protections in F-2 big game habitat areas.

Ordinance No 11-84, enacted September 12, 1984 (See Attachment 5): Under this ordinance, the Board adopted multiple changes to Lane Code Chapter 16 satisfy LCDC's IOTC requirements and gain RCP acknowledgment. These included changes to the F-2 and EFU siting standards for clustering in big game habitat areas to resolve IOTC 2.d. The adopted siting standards for the F-2 and EFU zones each included a two-track approach, depending on whether a property was located within or outside of big game habitat. Per the Board findings, "small groupings of residences will have less of an adverse impact on wildlife and resource uses in the big game range than would more scattered residences. However, if not within the big game range, mitigation of possible adverse effects on the resource uses of neighboring properties is a more important consideration."

Ordinance No. 11-91A, enacted July 31, 1991 (See Attachment 6): LCDC's acknowledgment of the RCP and Chapter 16 under Ordinance No. 11-84 was appealed and remanded by the Supreme Court in 1988. The County's Goal 5 big game habitat protection program was not an appeal issue. In response to Goal 4 and other related Goal 5 compliance issues remanded back to LCDC by the Supreme Court, LCDC required certain changes to the F-2 zone, included changes to the F-2 siting standards. In response, Lane County was directed to make several changes to bring the F-1 and F-2 zone siting standards into compliance with Goal 4. These included a requirement to bring the RCP into compliance with Goal 4 via the elimination of the siting standards track that had applied to tracts outside of big game habitat areas "with the result that [the big game habitat] standards have now become applicable to all areas."

Denominator for Calculating Density - ODFW Correspondence. In *King*, LUBA recognized that the Policy 11 text is ambiguous with respect *how* density standards apply, particularly with respect to the denominator to be used for applying the standard. LUBA agreed that the reference to "overall" in the first sentence suggests averaging more than one unit or number, such as averaging parcel sizes for two or more parcels, but saw no mathematical or logical reason why the appropriate denominator cannot be based on the number of acres in a single unit of land. As noted by LUBA, this was the approach that had been adopted by the Board and affirmed by LUBA for *Cattoche* v. *Lane County*, 79 Or LUBA 466 (2019).

On the whole, the legislative history and context generally indicates the expectation that the decision on how to apply ODFW density limitations would necessarily require further coordination with ODFW how to apply and codify ODFW's density recommendation and that alternative mitigation measures would require additional ESEE justification. This is made clear in the available ODFW correspondence regarding the department's density recommendations referenced in the Flora & Fauna Working Paper and Addendum and Policy 11. It should be noted that the correspondence predates ODFW's objection letters to DLCD and DLCD's responses provided in the 1984 DLCD staff reports and was not in the *King* LUBA record.

That RCP acknowledgement was predicated on the actions taken by the County to make F-2 lot size and clustering standards consistent with Policy 11 density limitations, lends support for the conclusion that ODFW's overall density recommendations were acknowledged to be reasonably applied based on parcel size in the absence of further coordination with ODFW.

In sum, the context makes clear that ODFW density recommendations referenced under Policy 11 consisted of a preferred density standard and an acceptable density standard with clustering. The context also indicates that the County adopted siting standards to qualify for the lesser density standard with clustering. Further, the context appears to indicate that the County and DLCD contemplated that these would be applied on a parcel size denominator absent further coordination with ODFW. Accordingly, the subject properties would each need to be 40 acres in size to satisfy Policy 11 standards rather than 80 acres, as had been understood for the 2020 *King* proposals.

VI. REFERRAL COMMENTS

As of the date of this report, no referral comments or written testimony has been submitted in response to the hearing notice.

VII. CONCLUSION

For the reasons explained above, the Director concludes that the proposal does not satisfy Policy 11, based on its failure to meet ODFW's recommended 40-acre 'clustered' density standard for major big game habitat with parcel size as the denominator.

Apart from Policy 11 density standards, the Director concludes that the applicable criteria and standards would be satisfied based on the staff evaluation and conditions of approval provided in **Attachment 1**.

I. PROPOSAL DESCRIPTION

A request for Director Approval of a dwelling in the Impacted Forest Lands (F-2) Zone pursuant to the 'Template Dwelling' provisions of Lane Code 16.211(2)-2.4, House Bill 2225, and RCP Goal 5 Flora and Fauna Policy 11. The Lane County Planning Director has elected to process this Type II application through a Type III Hearings Official procedure in accordance with Lane Code 14.030(1)(b)(ii)(cc).

II. BACKGROUND INFORMATION

On May 8, 2023, the Land Management Division received the applicant's Type II: Planning Director application to establish a dwelling in the Impacted Forest Lands (F-2) Zone. Staff reviewed the submitted materials and deemed the subject application complete on June 7, 2023.

On August 16, 2023, Lane County staff sent notice of public hearing to occur on September 7, 2023, to property owners, agencies, and community organizations.

This application was submitted in conjunction with two other template dwelling requests, File No. 509-PA23-05322 and 509-PA23-05323, which have been scheduled for the same hearing date.

Of note, the applicant's narrative addresses a prior version of Lane Code Chapter 16. The applicable standards and criteria under the current code are substantially the same as those addressed in the applicant's submittal but have been reorganized with different numerical references. The following staff analysis is based on the current code format.

III. PROPERTY DESCRIPTION

a. **LOCATION:** The subject property is identified as Assessor's Map and Taxlot 21-25-12-00-00843. The property is located immediately west of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries (UGBs).

b. **PHYSICAL DESCRIPTION:** The subject property is approximately 13.34 acres in size and vacant. The property slopes downward from the southwest to the northeast. According to Lane County GIS data layers, the property is mapped by DOGAMI as having "moderate" landslide susceptibility and does not contain floodplain, a Class I stream, or wetlands. Per the applicant, the property contains mainly open land, with scattered vegetation of fir, oak, and maple trees.

c. **ZONING & SURROUNDING USES:** The property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F-2), consistent with that plan designation. The property is bordered to the north and east by the Oakridge Airport within the Airport Operations (AO-RCP) zoning district, and abuts Nonimpacted Forest Lands (F-1) and Rural Residential (RR-5) zoned properties to the south and Impacted Forest Lands (F-2) to the north and west.

IV. APPROVAL CRITERIA AND ANALYSIS

This application is evaluated pursuant to the applicable criteria found in Lane Code 16.211(2)-2.4 and other standards as applicable. The code language is in **boldface** type, followed by the findings of fact.

A. Conformity with Lane Code 16.211(3)(c):

(c) A single family "template" dwelling authorized on a lot or parcel located within a forest zone pursuant to the following:

Finding 1: The subject parcel was verified to be a legal lot through File No. 509-PA08-06330 and noticed as a final land use decision without appeal through File No. 509-PA08-06329 and remains in the same configuration. Accordingly, this criterion is met.

(i) If the lot or parcel is predominantly composed of soils that are:

(cc) Capable of producing more than 85 cubic feet per acre per year of wood fiber if:

(A) All or part of at least 11 other lots or parcels that existed on January 1, 1993, are within a 160 acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

(ii) Lots or parcels within urban growth boundaries cannot be used to satisfy the eligibility requirements of subsection (i) above;

(iii) A dwelling, as used in subsection (i) above, is considered to be in the 160-acre template if any part of the parcel is in the 160-acre template;

(iv) Except as provided by subsection (v) below, if the subject tract abuts a road that existed on January 1, 1993, the measurement required in (i) above may be made by creating a 160 acre rectangle that is one mile long and ¼ mile wide centered on the center of the subject tract and that is to the maximum extent possible, aligned with the road;

(v) The following applies where a tract 60 acres or larger abuts a road or perennial stream:

(aa) The measurement must be made in accordance with paragraph (iv). However, one of the three required dwellings must be on the same side of the road or stream as the tract, and:

(A) Be located within a 160-acre rectangle that is one mile long and one-quarter mile wide centered on the center of the subject tract and that is, to the maximum extent possible aligned with the road or stream; or

(B) Be within one-quarter mile from the edge of the subject tract but not outside the length of the 160-acre rectangle, and on the same side of the road or stream as the tract;

(bb) If a road crosses the tract on which the dwelling will be located, at least one of the three required dwellings must be on the same side of the road as the proposed dwelling;

Finding 2: The applicant chose to document the presence of at least 12 other lots or parcels that existed on January 1, 1993, within a 160-acre rectangle centered on the subject property. This is the most rigorous of the three "tests" outlined in subsection (3)(c) above, and it appears to be the only option given that the Regional Land Information Database (RLID) soils data indicates that 75% of the property is comprised of 63D Jory Silty Clay Loam soils, having an estimated forestland capability of 178 cubic feet per acre per year.

Consistent with LC 16.211(3)(c)(ii), none of the qualifying parcels listed in **Figure 1** below are located in an urban growth boundary. Staff also finds that the applicant's 160-acre template square appears to be centered on the mathematical center of the tract in accordance with LC 16.211(3)(c)(i)(cc) and the requirements of House Bill 2225, effective January 1, 2020, as codified in OAR 660-006-027(3)(d) and ORS 215.750(1). Per House Bill 2225, the "center of the subject tract" means the mathematical centroid of the tract. Using County licensed ArcGIS software, staff verified the accuracy of the applicant's derived centroid appears to meet this requirement. Subsections (iv) and (v) of LC 16.211(3)(c)(i) do not apply to template squares for sites less than 60 acres.

Based on staff's review of the current property description cards, other documentation submitted by the applicant, and available County records included in the application file, staff finds that the 12 parcels identified by the applicant appear to have been lawfully created prior to January 1, 1993. These parcels that fall partially or wholly within the template satisfy LC 16.211(3)(c)(i)(cc)(A) and are described in **Figure 1**.

FIGURE 1: LOTS, PARCELS AND UNITS OF LAND WITHIN TEMPLATE AREA

Count (*dwelling)	Assessor's Map	Tax Lot	Date of Creation	Documentation / Deed / LLV / Partition
1	21-35-07-30	2700	1972	R360D/96687
2	21-35-18-00	914	1980	P1 of M463-79
3*	21-35-18-00	913	1980	P2 of M463-79
4	21-35-18-00	911	1979	P2 of M316-78
5*	21-35-18-00	912	1979	P1 of M316-78
6*	21-35-18-00	906	1970	Reel 469-D/95859
7*	21-35-18-00	908	1970	LSC R1437/8652701; Deed R484/10186; LL PA87-02870 Part 2

Count (*dwelling)	Assessor's Map	Tax Lot	Date of Creation	Documentation / Deed / LLV / Partition
8	21-35-18-00	901	1986	P2 of PA3201-86
9*	21-35-18-00	915	1986	P1 of PA3201-86
10	21-25-12-00	700	1848	USDA
11	21-25-13-00	900	1971	R517/34757
12	21-35-18-00	902	1968	R382/16860

*Note: Verification of the parcels above is preliminary and does **not** constitute a determination of legal lot status.*

The applicant provided documentation for five (5) dwellings located on the parcels identified in **Figure 1** above. These are denoted with an asterisk. As evidenced by the RLID reports and other records submitted by the applicant and 2023 aerial photography, staff verified at least five (5) of the five (5) dwellings existed on January 1, 1993, continue to exist on the qualifying lots partially or wholly located within the template square. The relative location of the dwellings is not relevant because the template measurement was not made according to LC 16.211(5)(c)(iii)(aa)(B). The dwellings found to satisfy LC 16.211(3)(c)(i)(cc)(B) are listed below in **Figure 2**.

For the reasons explained above, staff find the proposal satisfies LC 16.211(3)(c).

FIGURE 2: QUALIFYING DWELLINGS WITHIN TEMPLATE DWELLING

Count	Assessor's Map	Tax Lot	Date of Dwelling on Property
2	21-35-18-00	913	1980 MH; RLID; LC 2322-80
4	21-35-18-00	912	1965; RLID
5	21-35-18-00	906	1991 MH; RLID; 509-BP90-02787
6	21-35-18-00	908	1954; RLID
7	21-35-18-00	915	1986 MH; RLID; 509-BP87-01419

(vi) A proposed "template" dwelling under this section is not allowed:

(aa) Unless no dwellings are allowed on other lots or parcels that make up the tract and deed restrictions established under paragraph (3)(a)(iii) for the other lots or parcels that make up the tract are met; or

(bb) If the tract on which the dwelling will be sited includes a dwelling;

Finding 3: The subject tract consists of Assessor's Map and Tax Lot 21-25-12-00-00843. According to Lane County Assessment and Taxation information, the parcel is owned by EJK Investments LLC. According to Lane County Land Management and Assessment and Taxation records, the tax lot is not developed with a dwelling nor is the tax lot currently approved for a dwelling. Therefore, the criteria of Lane Code 16.211(3)(a)(vi) above do not apply.

(vii) Where other lots or parcels that make up a tract in Subsection (vi):

(aa) The applicant must provide evidence that the covenants, conditions, and restrictions form adopted as "Exhibit A" in OAR chapter 660, division 6 has been recorded with the county clerk of the county or counties where the property subject to the covenants, conditions, and restrictions is located;

(bb) The covenants, conditions, an restrictions are irrevocable, unless a statement of release is signed by an authorized representative of the county or counties where the property subject to the covenants, conditions, and restrictions is allocated;

(viii) The Director shall maintain a copy of the covenants, conditions, and restrictions filed in the county deed records pursuant to this section and a map or other record depicting tracts do not qualify for the siting of a dwelling under the covenants, conditions, and restrictions filed in the county deed records pursuant to this section. The map or other record required by this subsection shall be readily available to the public in the county planning office.

Finding 4: The subject tract consists only of Assessor's Map and Tax Lot 21-25-12-00-00843; therefore, this criterion is not applicable.

(p) For single-family dwellings, the landowner must sign and record in the deed records for the County a document binding the landowner, and the landowner's successors in interest, prohibiting them from pursuing a claim for relief or cause of action alleging injury from farming or forest practices for which no action or claim is allowed under ORS 30.936 or 30.937.

Finding 5: The applicant must record a Farm and Forest Management Practices Agreement (**Exhibit G**) with Lane County Deeds and Records office and submit a copy of the recorded agreement to Land Management Division as part of the Verification of Conditions application. This requirement must be satisfied prior to the issuance of a building permit for a single family dwelling or a placement permit for a manufactured home and has been made a condition of approval.

(q) For single-family dwelling, the approval is valid for four years from the date of approval, unless otherwise specified in the approval or by other provisions of Lane Code. Notwithstanding the requirements of LC Chapter 14, an application for a two year extension of the timelines for the permit approval can be made and approved pursuant to LC Chapter 14.

Finding 6: This approval will be valid for four (4) years from the final date of approval indicated on the Notice of Decision. This has been made a condition of approval.

B. Conformance with Lane Code 16.211(5): Siting Standards for Uses, Activities, and Structures

(a) Residences, dwellings, and structures must be sited as follows:

(i) Near dwellings on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet from any ravine, ridge or slope greater than 40 percent (40%);

Finding 7: Near dwellings on other tracts: The applicant's site plan identifies a 120-foot by 150-foot homesite area, which is setback 130 feet from the southern property line and 290 feet from the western property line (**Exhibit B**). According to Lane County aerial imagery, the subject property is near multiple other dwellings, the closest being on Assessor's Map and Tax Lot 21-35-18-00-00914, approximately 1,000 feet southeast of the proposed home site. As indicated by the applicant, the proposed home site is as close to dwellings on other tracts as it can be given the configuration of the parcel and the proximity of the airport.

Near existing roads: The proposed homesite is located immediately adjacent to the existing private roadway that runs through the subject property from Airport Road.

Most level part of the tract/Ravines, ridges, or slopes greater than 40%: According to the applicant's contour data, the tract slopes down to the northeast. The proposed homesite is located on one of the most level parts of the tract, especially when balanced with other requirements such as setbacks, access, and minimal intrusion into forestland. Additionally, the applicant's LiDAR data and Lane County LiDAR data demonstrate that there are no ravines, ridges, or slopes greater than 40% within 30 feet of the site.

Soil suitability: **Figure 3** below shows the percentage of soil units present within the subject tract (derived from RLID information). Exhibit T of the applicant's materials shows the location of soil units on the subject property.

The proposed home site is located within soil unit 63D, which is classified as a high value soil for forestry (approximately 178 cu. ft. per acre per year of timber fiber). The area of the tract that is comprised of soil unit 52D, is located underneath the Approach Surface of the Oakridge Airport. Siting the dwelling in the northeast portion of the property would not balance the requirements of being close to existing dwellings and roads, and with minimal intrusion into forest areas. Therefore, when balanced with other criteria, the proposed homesite is located on one of the least suitable portions of the tract for forest use.

Figure 3—(NRCS) Identified Soils on Subject Tract

Soil Unit #	Soil Type Description	% of Tract	ODOF Cu. Ft. / Acre / Year of Timber Fiber	NRCS Cu. Ft. / Acre / Year of Timber Fiber
63D	Jory Silty Clay Loam, 12 – 20 percent slopes	75		178
52D	Hazelair Silty Clay Loam, 7 – 20 percent slopes	24		No Rating
63C	Jory Silty Clay Loam, 2 – 12 percent slopes	1		178

Note: Information derived from (NRCS) and (ODOF) estimates.

With further consideration of the remaining standards of LC 16.211(5) and (6) addressed below, staff find that the proposed dwelling site substantially conforms to the criteria described above, as conditioned.

(ii) With minimal intrusion into forest areas undeveloped by non-forest uses;

Finding 8: The applicant proposes a 120-foot by 150-foot homesite area in the southwest portion of the property. Considering the parcel's size, configuration, and the Oakridge Airport's Approach Surface located along the northern portion of the property, there are limited options for siting a moderately sized dwelling on the property. The proposed homesite is adjacent to an existing access roadway easement where the need for primary fuel-free breaks and a driveway extension will be minimized. Staff find the proposal sufficiently minimizes intrusion into forest areas undeveloped by non-forest uses to comply with this standard.

(iii) Where possible, when considering LC 16.211(5)(a)(i) and (ii) and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU; and

Finding 9: The subject tract abuts lands zoned Nonimpacted Forest Lands (F-1) and Rural Residential (RR-5) to the south, Impacted Forest Lands (F-2) to the west and north, and the Oakridge Airport to the north and east.

Based on the applicant's site plan, the proposed homesite is setback 130 feet from the southern property boundary and well over 100 feet from all other property boundaries. As discussed in **Finding 7** and **8**, due to the constraints imposed by the parcel's size, configuration, and the presence of the Oakridge Airport's Approach Surface, there is a restricted number of feasible locations for siting a dwelling on the property. Furthermore, as

indicated by the applicant, the north-south dimension of the parcel is only 550 feet long, which severely limits the ability to maintain a setback of 500 feet from the southern property line while also ensuring a sufficient area for fuel breaks. Accordingly, staff finds that the proposed homesite complies with this standard to the extent the circumstances allow.

(iv) The amount of forest lands used to site access roads, service corridors, and structures must be minimized.

Finding 10: The proposed homesite area is adjacent to an existing private access road that runs through the subject property, where the need for a driveway extension is minimized. The amount of forest lands required for any access improvements is as much or less than what is typically needed to establish a forest template dwelling. Staff finds intrusion into forestlands is expected to be minimal. Compliance with this standard will be field verified by staff through the Verification of Conditions application process.

(b) Setbacks. Structures other than a fence or sign cannot be located closer than:

(i) 20 feet from the right-of-way of a state road, County road, or a local access public road specified in LC Chapter 15.

(ii) 30 feet from all property lines other than those described in Section (5)(b)(i).

(iii) The minimum distance necessary to comply Sections (5)(a) and (6).

(iv) Riparian Setback Area. A riparian setback area applies to the area between a line that is 100 feet from an parallel to the ordinary high water of a Class I stream designated in the Rural Comprehensive Plan. No structure other than a fence may be located closer than 100 feet from the ordinary high water of a Class I stream unless a riparian modification application is approved in accordance with CL 15.253(3). Vegetation maintenance, removal, and replacement standards and exceptions to these setbacks are found in LC 16.253.

Finding 11: Based on the applicant's site plan, the proposed homesite area is setback at least 30 feet from all property lines and more than 20 feet from Airport Road, the nearest right-of-way of a County Road. No riparian setback requirements apply to the subject property since it is located well over 100 feet away from the Middle Fork of the Willamette, which is located south of Westfir-Oakridge Road. The above standards of (i), (ii), and (iv) are satisfied. LC 16.211(5)(a) is addressed above and found to be satisfied as conditioned. LC 16.211(6) is addressed below and is satisfied or met with conditions of approval. These standards are met as proposed.

(c) Domestic Water Supplies. For new dwellings and non-farm structures on vacant land, evidence must be provided that the domestic water supply is from a source authorized in accordance with the Water Resources Department's administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rule, OAR Chapter 629. If the water supply is unavailable from public sources or sources located entirely on the property, then the applicant must provide evidence that a legal easement has been obtained permitting domestic water lines to cross the properties of affected owners. For purposes of LC 16.211(5)(c) above, evidence of domestic water supply means:

(i) Verification from a water purveyor that the use described in the application will be served by the purveyor under the purveyor's rights to appropriate water;

(ii) A water use permit issued by the Water Resources Department for the use described in the application; or

(iii) Verification from the Water Resources Department that a water use permit is not required for the use described in the application. If the proposed water supply is from a well and is exempt

from permitting requirements under ORS 537.545, the applicant must submit the well constructor's report to the Director upon completion of the well.

Finding 12: The applicant proposes to drill a new private well to provide domestic water supply. Exhibit M of the applicant's submittal includes several well reports for properties in the vicinity to demonstrate feasibility.

Per the Lane County Hearings Official findings in Planning Action No. 509-PA18-05804, compliance with Lane Manual Chapter 9.005.160 is required. Lane Manual requires that a well for use in conjunction with a single family dwelling must be verified to flow at five (5) gallons per minute for a duration of no less than five (5) hours. As a condition of approval to ensure compliance with this standard, the applicant will be required to provide a well log or well constructor's report that conforms with LC 16.211(5)(c)(i-iii) and Lane Manual 9.005.160.A.1. In the event that the Well Report does not verify compliance with this standard, the land owner will be required to satisfy the requirements of LM 9.005.160.A.2. These criteria are met as conditioned.

(d) As a condition of approval, if road access to the dwelling is by a road owned and maintained by a private party or by the Oregon Department of Forestry, the U.S. Bureau of Land Management, or the U.S. Forest Service, then the applicant must provide proof of a long-term road access use permit or agreement. The road use permit may require the applicant to agree to accept responsibility for road maintenance.

Finding 13: The applicant proposes to take access to the property from Airport Road, a Lane County owned and maintained Rural Local road. This standard does not apply.

(e) Approval of a dwelling is subject to the following requirements:

(i) Approval of a dwelling requires the owner of the tract to plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in department of Forestry administrative rules.

(ii) The Director must notify the County Assessor of the above condition at the time the dwelling is approved.

(iii) Stocking survey report:

(aa) If the lot or parcel is more than ten acres, the property owner must submit a stocking survey report to the County Assessor and the Assessor will verify that the minimum stocking requirements have been met by the time required by Department of Forestry rules; and

(bb) Upon notification by the Assessor, the Department of Forestry will determine whether the tract meets minimum stocking requirements of the Forest Practices Act. If the Department of Forestry determines that the tract does not meet those requirements, that department will notify the owner and the Assessor that the land is not being managed as forest land. The Assessor will then remove the forest land designation pursuant to ORS 321.359 and impose the additional tax.

Finding 14: The subject property consists of more than 10 acres. Accordingly, the applicant must submit a stocking survey report to the County Assessor to determine compliance with minimum stocking requirements of the Forest Practices Act. The owner must plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in Department of Forestry administrative rules. These requirements have been made conditions of approval and will be verified by staff as part of the Verification of Conditions application process.

C. Conformance with Lane Code 16.211(6) Fire-Siting Standards for Dwellings and Structures

The following fire-siting standards or their equivalent apply to new residences, dwellings, manufactured dwellings, or structures allowed in Lane Code 16.211:

(a) The dwelling must be located upon a parcel within a fire protection district or must be provided with residential fire protection by contract. If the dwelling is not within a fire protection district, the applicant must provide evidence that the applicant has asked to be included within the nearest such district. If the Director determines that inclusion within a fire protection district or contracting for residential fire protection is impracticable, the dwelling must comply with the following fire safety plan requirements:

(i) The means selected may include a fire sprinkling system, onsite equipment and water storage or other methods that are reasonable, given the site conditions;

(ii) If a water supply is required for fire protection, it must be a swimming pool, pond, lake, or similar body of water that at all times contains at least 4,000 gallons or a stream that has a continuous year round flow of at least one cubic foot per second;

(iii) The applicant must provide verification from the Water Resources Department that any permits or registrations required for water diversion or storage have been obtained or that permits or registrations are not required for the use;

(iv) Road access must be provided to within 15 feet of the water's edge for firefighting pumping units. The road access must accommodate the turnaround of firefighting equipment during the fire season. Permanent signs must be posted along the access route to indicate the location of the emergency water source; and

(v) A 100-foot wide primary safety zone and a 100-foot wide secondary safety zone surrounding the perimeter of the dwelling or manufactured dwelling structures must be provided and maintained in perpetuity in compliance with the standards in (6)(c).

Finding 15: The subject tract is located within the Hazeldell Rural Fire District. Thus, this standard is satisfied without need for a Structural Fire Protection plan.

(b) Fire Safety Design Standards for Roads and Driveways.

(i) Private driveways, roads or bridges accessing only commercial forest uses are not subject to compliance with these fire safety design standards for roads and driveways. The route of access for firefighting equipment, from the fire station to the destination point, across public roads, bridges, private roads or private access easements and driveways must comply with the standards specified below. Evidence of compliance with the standards specified in (6)(b) should include objective information about the firefighting equipment, the physical nature of the access route, the nature of any proposed improvements to the access route, and it may also include a written verification of compliance from the agency providing fire protection, or a written certification of compliance from an Oregon Registered Professional Engineer. As used herein, "road" means a way of access used for more than one use and accessory uses dwelling or manufactured dwelling. As used herein, "driveway" means a way of access used for only one dwelling or manufactured dwelling.

Finding 16: Access from Airport Road to the homesite area is proposed via an existing private access road and a proposed driveway. The existing private access road also serves Tax Lot 133, 2900 and 2800. The application materials detail the route of access from the fire station to the homesite. Exhibit AA of the applicant's

materials includes publicly available information indicating that the Hazeldell Rural Fire Protection District contracts with the Oakridge Fire Department to provide service and the equipment used by the District.

As such, from its beginning at Airport Road to the point at which the access stops serving multiple uses, it is considered a "road" per the definition of LC 16.211(6)(b)(i) above. From the point of which the access stops serving multiple uses and to the point at which it reaches the homesite area, it is considered a "driveway" because it will provide access to a single (1) use per the definition of LC 16.211(6)(b)(i) above.

Staff find that the evidence is sufficient to demonstrate it is feasible for the road access and driveway to meet the standards of LC 16.211(6)(b). Compliance with Lane Code 16.211(6)(b) and field verification by staff has been made a condition of approval. Also, written verification of compliance from an Oregon Registered Professional Engineer or the fire district providing residential fire protection service must be provided. All road and driveway improvements, including turnarounds, turnouts, and culverts, and all easement locations must be shown on the site plan.

(ii) Road and Driveway Surfaces. Roads must have unobstructed widths of at least 20 feet including: travel surfaces with widths of at least 16 feet constructed with gravel to a depth sufficient to provide access for fire fighting vehicles and containing gravel to a depth of at least six-inches or with paving having a crushed base equivalent to six inches of gravel, an unobstructed area two feet in width at right angles with each side of the constructed surface, curve radii of at least 50 feet, and a vertical clearance of at least 13 feet 6 inches. Driveways must have: constructed widths of at least 12 feet with at least six inches of gravel or with paving having a crushed base equivalent to six inches of gravel and must have a vertical clearance of 13 feet 6 inches.

Finding 17: The applicant proposes to improve the existing shared access easement road and proposed driveway as necessary to comply with the above standards. As a condition of approval, compliance with the road and driveway standards of Lane Code 16.211(6)(b)(ii) will be field verified by staff through the Verification of Conditions process. Therefore, staff find the above criteria conditionally met.

(iii) Turnarounds. Any dead-end road over 200 feet in length and not maintained by Lane County must meet these standards for turnarounds. Dead-end roads must have turnarounds spaced at intervals of not more than 500 feet. Turnarounds must comply with these design and construction standards:

(aa) Hammerhead Turnarounds. Hammerhead turnarounds (for emergency vehicles to drive into and back out of to reverse their direction on the road) must intersect the road as near as possible at a 90 degree angle and extend from the road at that angle for a distance of at least 20 feet. They must be constructed to the standards for driveways in LC 16.211(6)(b)(i) above and must be marked and signed by the applicant as "NO PARKING." Such signs must be of metal or wood construction with minimum dimensions of 12 inches by 12 inches; or

(bb) Cul-de-sac Turnarounds. Cul-de-sac turnarounds must have a right-of-way width with a radius of at least 45 feet and an improved surface with a width of at least 36 feet and must be marked and signed by the applicant as "NO PARKING." Such signs must be of metal or wood construction with minimum dimensions of 12 inches by 12 inches; and

(cc) No cul-de-sacs or hammerhead turnarounds must be allowed to cross any slope which will allow chimney-effect draws unless the dangerous effects of

the chimney-effect draws have been mitigated by the location of the road and, where necessary, by the creation of permanent fire breaks around the road.

Finding 18: The proposed homesite area is to be accessed from Airport Road via a private shared access easement road and driveway. The private road does not appear to exit onto any other roads and is therefore considered to be a dead-end road necessitating turnarounds. The applicant's site plan identifies two (2) turnarounds spaced at intervals of not more than 500 feet apart on the portion of the private access road located on the subject property. Additionally, the applicant identifies that a hammerhead turnaround is proposed where the driveway will terminate at the proposed homesite area. Staff find it feasible that the turnarounds can be constructed in compliance with the requirements of LC16.211(6)(b)(iii) above. Compliance with the above standards has been made a condition of approval and will be field verified by staff as part of the Verification of Condition application process.

(iv) Bridges and Culverts. Bridges and culverts must be constructed to sustain a minimum gross vehicle weight of 50,000 lbs. and to maintain a minimum 16-foot road width surface or a minimum 12-foot driveway surface. The Planning Director may allow a single-span bridge utilizing a converted railroad flatcar as an alternative to the road and driveway surface width requirements, subject to verification from an engineer licensed in the State of Oregon that the structure will comply with the minimum gross weight standard of 50,000 lbs.

Finding 19: The applicant does not propose any bridges or culverts as a part of the proposed development. In the event that a bridge or culvert becomes necessary during construction of the access, it must be constructed to meet the above standard. General compliance with the applicable standards of LC 16.211(6)(b) has been made a condition of approval and must be verified by staff as part of the verification of conditions application process. As conditioned, written verification of compliance from an Oregon Registered Professional Engineer or the fire district providing residential fire protection service must be provided for any bridges or culverts.

(v) Road and Driveway Grades. Road and driveway grades cannot exceed 16 percent except for short distances when topographic conditions make lesser grades impractical. In such instances, grades up to 20 percent may be allowed for spans not to exceed 100 feet. An applicant must submit information from a Fire Protection District or engineer licensed in the State of Oregon demonstrating that road and driveway grades in excess of eight percent are adequate for the firefighting equipment of the agency providing fire protection to access the use, firefighting equipment and water supply.

Finding 20: County LiDAR data, contour data, and aerial imagery indicate that the road and driveway are existing and slopes do not exceed 16%. Additionally, clinometer readings from Brinks Land Improvement, included as an Exhibit in File No. 509-PA20-05064 and 509-PA20-05065, indicate there are no areas in excess of 10%, most grades measured 3-6 percent, and no presence of inclines that would exceed 15 percent along the shared access road, which is also used to access Tax Lot 133, 2900, and 2800. As such, compliance with the slopes standards provided by Lane Code 16.211(6)(b)(v) above is feasible, and, as a condition of approval will be field verified by staff through the Verification of Condition application process.

(vi) Identification. Roads must be named and addressed in compliance with LC 15.305 through 15.335.

Finding 21: As an informational condition, any future naming if the proposed shared access easement road is subject to the provisions of LC 15.305 through 15.335. Naming of the road is not required at this time.

(vii) Driveway Vehicle Passage Turnouts. Driveways in excess of 200 feet must provide for a 20-foot long and eight-foot wide passage space (turn out) with six inches in depth of gravel and at a maximum spacing of 400 feet. Shorter or longer intervals between turnouts may be

authorized by the Planning Director where the Director inspects the road and determines that topography, vegetation, corners or turns obstruct visibility.

Finding 22: Based on the applicant's site plan, the portion of the access that is classified as a "driveway" is approximately 450 feet in length. Therefore, in accordance with the above standard, at least one (1) turnout is required. Compliance with LC 16.211(6)(b), including the above turnout standard, has been made a condition of approval and will be verified by staff as part of the Verification of Conditions application process.

(viii) Modifications and Alternatives. The standards in (6)(b)(i) through (6)(b)(vii) above may be modified by the approval authority provided the applicant has submitted objective evidence demonstrating that an alternative standard would insure adequate access for firefighting equipment from its point of origination to its point of destination.

Finding 23: The applicant does not request any modifications to the standards in (6)(b)(i) through (6)(b)(viii).

(c) Fuel-Free Breaks. The owners of dwellings and structures must maintain a primary safety zone surrounding all structures and clear and maintain a secondary safety zone on land surrounding the dwelling that is owned or controlled by the owner in compliance with these requirements.

(i) Primary Safety Zone. The primary safety zone is a fire break extending a minimum of 30 feet in all directions around dwellings, manufactured dwellings and structures, unless otherwise specifically stated in LC 16.211. The goal within the primary safety zone is to exclude fuels that will produce flame lengths in excess of one foot. Vegetation within the primary safety zone could include green lawns and low shrubs (less than 24 inches in height). Trees must be spaced with greater than 15 feet between the crown and pruned to remove dead and low (less than eight feet) branches. Accumulated leaves, needles, and other dead vegetation must be removed from beneath trees. Nonflammable materials (i.e., rock) instead of flammable materials (i.e., bark mulch) must be placed next to the house.

(aa) As slope increases, the primary safety zone must increase away from the house, parallel to the slope and down the slope, as shown in the table and figure below:

(ii) Secondary Safety Zone. The secondary safety zone is a fuel break extending a minimum of 100 feet in all directions around the primary safety zone. The goal of the secondary safety zone is to reduce fuels so that the overall intensity of any wildfire would be lessened and the likelihood of crown fires and crowning is reduced. Vegetation within the secondary safety zone must be pruned and spaced so that fire will not spread between crowns of trees. Small trees and brush growing underneath larger trees must be removed to prevent spread of fire up into the crowns of the larger trees. Dead fuels must be removed.

Finding 24: In the application, the applicant indicates that the slopes within 30 feet of the dwelling are less than 10%. However, the applicant's written statement indicates that there are slopes greater than 20% within 30 feet of the dwelling. The applicant's site plan (**Exhibit C**) shows the standard 30-foot primary fuel break on the south and west sides of the proposed 120-foot by 150-foot homesite and the standard 30-foot primary fuel break with an additional 75-foot safety zone down slope on the north and east sides of the proposed homesite. The applicant's site plan also shows a secondary 100-foot fuel break on lands controlled by the owner.

Exhibit S and X of the applicant's submittal includes LiDAR and contour data of the site. The applicant's data appears to be generally consistent with County GIS contour and LiDAR data. The data suggests that downslopes to the northeast of the homesite between 20-25% exist. Therefore, it appears the applicant's site plan depicting fuel breaks around the proposed homesite is consistent with the available data.

Compliance with fuel break standards is required as a condition of approval and will be field verified as part of the Verification of Conditions application review. The required fuel breaks must be maintained in perpetuity. Any change to the homesite location may require a Type II Modification of Approval at the discretion of the Planning Director.

(d) The dwelling must have a fire retardant roof.

Finding 25: As condition of approval, the applicant must provide evidence that the building plans conform to this provision. Staff will field verify compliance with said provision as part of required building inspections.

(e) Dwellings or manufactured dwellings must be sited at least 30 feet away from a ravine, ridge, or any slope greater than 40 percent slope.

Finding 26: See **Finding 7**. The proposal meets this requirement, and a condition of approval has been established to ensure compliance.

(f) If the dwelling has a chimney or chimneys, each chimney must have a spark arrester.

Finding 27: As a condition of approval, the applicant must provide evidence that the building plans conform to this provision. Staff will field verify compliance with said provision as part of required building inspections.

D. Conformance with Other Development Standards:

Lane Code Chapter 16.005(2) Grading, Excavation and Clearing. Grading and clearing by mechanical equipment for either road and/or development purposes may be restricted or regulated by the Approval Authority either at the time of approval of a development permit or of and application if there is a finding that such grading or clearing presents a real threat of pollution, contamination, silting of water bodies or water supplies, erosion and slide damage, or alteration of natural drainage patterns in the area. In all cases, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose.

Finding 28: According to the Oregon Department of Geology and Mineral Industries (DOGAMI) landslide index, the subject property contains areas mapped as having "moderate" landslide susceptibility. Consistent with LC 16.005(2), excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The applicant is advised to contact the Lane County Building Program to determine building permit requirements and a geotechnical report or other information may be required for the proposed development due to landslide susceptibility rating(s) applicable to the property.

Lane Code 16.095: Compliance with LC Chapter 15, Roads

Finding 29: As of the date of this staff report, Lane County Transportation Planning (LCTP) has not provided comments on the proposal for this application. However, on April 2, 2020, LCTP provided comments on the proposals for previously denied template dwelling applications, File No. 509-PA20-05064 (Tax lot 2900) and 509-PA20-05066 (Tax lot 2800), which proposed to utilize the same existing private access road that runs through the subject property. In summary LCTP's April 2, 2020 referral comments, provided as **Exhibit F,** confirm Airport Road is a Rural Local Road under the jurisdiction and maintenance of Lane County and that Facility permit approval will be required to ensure the existing approach is adequate to support a shared approach to multiple properties and dwellings in accordance with applicable Chapter 15 requirements. LCTP staff further confirm that the private access easements serving the proposed dwelling must meet the minimum private access easement requirements of LC 15.055 (4), (5), and (7). Staff find that establishment and improvement of the shared access and utility easement compliance with LC 15.055 appears feasible and has been made a condition of approval along with field verification by staff as part of the Verifications of Conditions process.

Lane Code 16.246, Airport Safety Combining Zone (/AS):

(3) Use Limitations. In a/AS-RCP Zone, the following limitations and standards shall apply to all uses permitted, allowed conditionally or allowed as special uses by the primary zone with which the /AS-RCP Zone is combined.

(a) The height of structures or objects shall not exceed the maximum height of the primary zone with which the /AS-RCP Zone is combined. Furthermore, no structure or object shall be erected, altered, allowed to grow or be maintained in such a manner as to penetrate the surfaces described in LC 16.246(5) below. Areas located in more than one of the described surfaces shall be subject to the most restrictive (i.e., lowest) surface.

(b) All structures and uses within the /AS-RCP Zone shall conform to the requirements of Federal Aviation Regulations, Part 77 or successor. No use may be made of land or water in such a manner as to create electrical interference with navigation signals or radio communication between the airport and aircraft, making it difficult for pilots to distinguish between airport lights and others, resulting in glare in the eyes of pilots using the airport, impairing visibility in the vicinity of the airport, or otherwise in any way endangering the landing, take off or maneuvering of aircraft intending to use the airport.

(c) All structures and uses within this combining district shall conform to the requirements of Federal Aviation Regulations, Part 77 or successor, and to other Federal and State laws as supplemented by Lane County ordinances, particularly Lane County Ordinance No. 105, or successor, regulating structure height, lights, glare producing surfaces, radio interference, smoke, steam or dust, and other hazards to flight, air navigation or public health, safety and welfare.

Finding 30: According to Lane County GIS, the subject property is located within the Primary Surface, Transitional Surface, and Approach Surface of the Oakridge Airport. Per LC 16.246(5)(d), the Primary Surface is a plane longitudinally centered on the runway centerline and extending 200 feet beyond the ends of the prepared runway surface and having a width of 250 feet. Per LC 16.246(5)(a), the Approach Surface is a surface longitudinally centered on the runway centerline, extending outward and upward from the ends of the Primary Surface at a slope of 20 horizontal feet to one vertical foot for a horizontal distance of 5,000 feet and widening from the width of 250 feet to 1,250 feet at its outer edge. Per LC 16.246(4), no structure or object is allowed to be erected, placed, grown, or maintained above the surface of the ground of the Approach Surface. Compliance with LC 16.246(4) is a condition of approval.

The proposed homesite area is located within the Transitional Surface of the Oakridge Airport. Per LC 16.246(5)(e), the Transitional Surface extends upward and outward at 90 degree angles to the runway centerline and the runway centerline extended at a slope of seven feet horizontally for each foot vertically from the sides of the Primary Surface and Approach Surface to the point of intersection with the Horizontal Surface. The Transitional Surface extends to a height of 150 feet above the runway. Per LC 16.246(2)(d), the elevation of the Oakridge runway is 1419 feet above sea level. Based on Lane County GIS and the applicant's site plan, the center of the northern boundary of the proposed homesite is located approximately 60 feet south of the Approach Surface. Accordingly, the height of the proposed dwelling is not to penetrate 1427 above sea level, which is approximately equivalent to 8 feet ($60 \div 7 \approx 8$) above the elevation of the runway.

As of the date of this staff report, the Oregon Department of Aviation (ODA) has not submitted referral comments on the proposal for this application. However, Exhibit DD of the applicant's submittal includes referral comments from ODA in 2020 for previously withdrawn template dwelling application File No. 509-PA20-05065 (Tax lot 843) and previously denied template dwelling applications File No. 509-PA20-05064 (Tax lot 2900) and

509-PA20-05066 (Tax lot 2800) (See **Exhibit E**). The comments indicate that pursuant to OAR 738-070-0060, the applicant must submit FAA Form 7460-1 documents to the ODA and receive a Letters of Determination for the proposed construction prior to issuance of any building permits for the template dwelling and provide information about additional ODA and Federal Aviation Administration (FAA) requirements. As conditioned to ensure compliance with the above standards, the applicant must submit a copy of the FAA Form and Letter of Determination at the time of building permit. The applicant is advised that the ODA will also require post construction documentation.

Compliance with Oregon House Bill 2225 (2019); ORS 215.750:

Finding 31: Approval of this request is subject to compliance with the provisions House Bill (HB) 2225, as implemented in OAR 660-06-027(6)(a). Consistent with these provisions, the subject property has not been reconfigured/property line adjusted since January 1, 2019 in order to meet the template test or to qualify for dwelling. The remaining requirements of HB 2225 have been addressed in this report, as applicable.

Applicability of the *Nimpkish* Decision (LUBA 2020-030)

Finding 32: The applicant argues that RCP Goal 5 Flora & Fauna Policy 11 density standards cannot be applied to the subject application. These issues are further addressed in the Hearing Memo for this application.

V. CONCLUSION/RECOMMENDATION

Apart from Policy 11 density standards, the application for a forest template dwelling appears to meet the criteria of Lane Code 16.211(2)-2.4, House Bill 2225 (2019), and other applicable criteria. Should the Hearings Official approve the application, staff recommend making such approval contingent upon the recommended conditions of approval in **Exhibit C**.

EXHIBIT C

RECOMMENDED CONDITIONS OF APPROVAL IF APPROVED

509-PA23-05321

All of the following conditions are binding on the applicant or successive owner(s) of the parcel or successive applicant(s) who exercise this approval action.

1. Approval of **509-PA23-05321** is valid for a **four-year** period from the final date of approval, except as extended otherwise in accordance with Lane Code Chapter 14 requirements in effect at the time such a request is made. Approval of an extension granted under this rule is an administrative decision, is not a land use decision as described in ORS 197.015, and is not subject to appeal as a land use decision.

The following conditions must be met prior to the expiration date in condition #1 and prior to approval of a building or placement permit for a dwelling, septic system, or accessory structure. Failure to meet conditions of approval as specified prior to the expiration date, and if no extension has been granted prior to that date, will invalidate this approval, and the development rights conditionally allowed by this planning action will cease:

2. The dwelling must be located within the proposed 120-foot by 150-foot dwelling site area depicted on the site plan, and located at least 30 feet away from any ravine, ridge or slope greater than 40 percent.

3. Complete, have notarized, and record the enclosed *Farm and Forest Management Agreement* (included as **Exhibit G** of this report) with an attached "Exhibit A" depicting the legal description of the property (which must be recorded together with the Agreement at the Lane County Deeds and Records office).

4. Submit a stocking survey report prepared by a qualified forester to the Lane County Assessor per Lane Code 16.211(5)(e)(iii). The applicant must provide a copy of the stocking survey to the Land Management Division with evidence of receipt from the Assessor in accordance with Lane Code 16.211(5)(e)(iii).

5. Construct the driveway to the minimum standards of Lane Code 16.211(6) and the applicable standards of Lane Code Chapter 15.706. For roads greater than 8% slope, road and drainage plans shall be prepared by an engineer licensed by the State of Oregon or certified for compliance with the rural fire protection district providing fire protection to the subject property.

6. Submit written verification from Hazeldell Rural Fire Protection District, or written certification from an Oregon Registered Professional Engineer, stating that the route of access for firefighting equipment from the fire station to the building site, across public roads, bridges, private roads, private access easements, and driveways comply with and meet the construction standards Lane Code 16.211(6) and Fire District standards.

7. Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(6)(c). **These fuel breaks must be maintained in perpetuity.** The minimum primary safety zone surrounding the proposed dwelling must be as depicted on the Applicant's site plan and as described in **Finding 24**. The minimum secondary fuel breaks surrounding the primary safety zone must be at least 100 feet or on lands controlled by the owner, whichever is applicable.

8. Provide evidence to the Planning Director that the domestic water supply is from a source authorized in accordance with the Water Resources Department's administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rule (OAR Chapter

629). This can be satisfied by providing a copy of the Well Log for the property that complies with the requirements outlined in Lane Manual Chapter 9.005.160, specifically a five-hour flow test.

9. Upon completion of **conditions #2 through #9**, the applicant must complete and submit a Land Use Application form to Verify Compliance with Conditions of Approval, with the required processing fee. **Attach to this form a copy of:**

- ☐ Signed, notarized, and recorded *Farm Use and Forest Management Agreement* and description of property, along with all required exhibits;
- ☐ Signed, notarized, and recorded access easement to the subject property;
- ☐ Copy of the forest stocking survey with evidence of receipt from the Assessor;
- ☐ Well log or well constructor's report and pump test that complies with the Requirements of Lane Manual 9.005.160;
- ☐ Verification letter from Hazeldell Rural Fire District, or written certification from an Oregon Registered Professional Engineer, regarding adequacy of access route; and
- ☐ Approved Site Development Plan, or a plot plan that conforms with the approved plans, drawn to scale, including the same information, and meeting other minimum standards of the Land Management Division. These final plans must include the primary and secondary fuel breaks surrounding the proposed dwelling as required by Lane Code 16.211(6)(c) and this approval.

10. As part of the Verification of Conditions process, the access road, driveway and fuel breaks must be field inspected by Planning Office staff to verify that requirements stated in **conditions #5 - 7** have been met. Failure to meet minimum siting and/or fuel break and/or driveway and/or grade standards as in LC 16.211(5), (6)(c) and (d) upon first inspection may require an additional application for fuel break and road inspection, with the applicable fee, at the determination of the Planning Director.

11. Upon completion of Verification of Conditions, submit a building permit to verify that the construction of the dwelling meets current Oregon Structural Specialty Code application for the proposed dwelling, with the appropriate deposit fee. Contact the Building Program at 541-682-4651 and the On-Site Wastewater Program at 541-682-3754 with questions regarding building and sanitation requirements.

12. In the building or placement permit application submittal, the applicant must submit a site plan demonstrating that the parcel configuration, and the proposed dwelling, driveway, and septic system, are located consistent with the approved site development plan, unless modification is authorized by the Planning Director. Any modification to the approved site plan may require an application for Modification of Conditions with the required processing fee, at the determination of the Planning Director.

The following condition must be met prior to approval for legal occupancy of the proposed dwelling.

13. The proposed dwelling must meet the following requirements, to be verified by the Lane County Building Official:

a. All buildings or structures with chimneys must have a spark arrester on all chimneys.

b. Wood shingles, wood shakes, or shingles made from wood products for use as roof covering materials for dwellings and accessory structures are prohibited. Such use is a violation of ORS 215.730(1)(b)(A) and subject to civil penalties as contained in Chapter 5, Lane Code. This provision applies to new roofs, reinstallation of roofs, and repair of roofs.

(Please contact a Lane County plans examiner at 541-682-4651 with questions about building code requirements).

The following conditions are provided for informational purposes and must be fulfilled as they apply to the proposed development:

14. The applicant is responsible for complying with any applicable local, state, and federal laws, including Oregon Department of State Lands (DSL) and/or Army Corps of Engineers (ACOE) wetland regulations and Oregon Department of Aviation (ODA) and Federal Aviation Administration (FAA) requirements.

15. Future development must comply with the limitations and standards of the Airport Safety Combining Zone, LC 16.246

16. Excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control, consistent with LC 16.005(2). A geotechnical report may be required due to landslide susceptibility. Please consult with Lane County Building staff at 541-682-4651.

17. Any future naming of the proposed shared access easement road is subject to the provisions of LC 15.305 through 15.335

18. The applicant is responsible for complying with any applicable local, state, and federal laws.

19. Storm water runoff from the subject property must not be directed to the Lane County road right-of-way or into any Lane County drainage facility, including roadside ditches. Ditches adjacent to County roads are designed solely to accommodate roadway storm water runoff.

20. The owner must plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in Department of Forestry administrative rules. It is the owner's responsibility to document that the required tree planting was done in conformance with the criteria of Lane Code 16.211(5)(d). If the Department of Forestry determines that the tract does not meet those requirements and notifies the owner and the Assessor that the land is not being managed as forest land, the Assessor will remove the forest land designation pursuant to ORS 321.359 and impose the additional tax pursuant to ORS 321.372. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry at (541) 935-2283 (in western Lane County); (541) 726-2501 (in eastern Lane County).

21. The following is provided for informational purposes as an **Advisory Notice**: Section 93.040(1) of the Oregon Revised Statutes requires the following statement to be included in the body of any instrument transferring or contracting to transfer fee title to real property:

> "THIS INSTRUMENT WILL NOT ALLOW USE OF THE PROPERTY DESCRIBED IN THIS INSTRUMENT IN VIOLATION OF APPLICABLE LAND USE LAWS AND REGULATIONS. BEFORE SIGNING OR ACCEPTING THIS INSTRUMENT, THE PERSON ACQUIRING FEE TITLE TO THE PROPERTY SHOULD CHECK WITH THE APPROPRIATE CITY OR COUNTY PLANNING DEPARTMENT TO VERIFY APPROVED USES AND TO DETERMINE ANY LIMITS ON LAWSUITS AGAINST FARMING OR FOREST PRACTICES AS DEFINED IN ORS 30.930."

This Oregon Law disclosure requirement serves a constructive purpose. Approval of a residence for this property is contingent upon compliance with the conditions of the special use permit, and any future owners of the subject property need to understand and adhere to these conditions. This disclosure statement should alert the cautious and potential purchaser to inquire with the Lane County Land Management Division about the conditions of this special use permit.

Subject: Oakridge Access Road Grade Statement

Thom,

To whom it may concern , We did an evaluation of the road to access lots 2800 and 2900 next to the Oakridge Airport that need to be used for access, By using a clinometer to measure the percentage of slope at any point in the road. We found no area that exceeded 10% and most areas were 3% - 6% there are no inclines that would exceed 15% on the road areas in question.

Any Questions please let me know.

Thanks,
Mark W. Brink

Subject: RE: ODA Comment: 509-PA20-05065 & 509-PA20-05066

[EXTERNAL ⚠]

Hi Jared,

Great to hear from you and thanks for reaching out. I'm doing well, thank you. I hope you are as well.

Yes, the ODA requests submittal of the FAA Form 7460-1 still be a required condition of approval for the King/O'Dea Template Dwellings near the Oakridge Airport.

The applicant must submit FAA Form 7460-1 documents to the ODA and receive Letters of Determination for the proposed construction as required by OAR 738-070-0060, prior to issuance of any building permits for the Template Dwellings.

The applicant should note that a separate FAA Form 7460-1 must be submitted for each Template Dwelling.

Notification to the FAA is also required for each Template Dwelling and is completed through the FAA's online portal:

https://oeaaa.faa.gov/oeaaa/external/portal.jsp

The ODA Letters of Determination will provide recommendations for the proposed construction in regards to aviation and public safety.

I am happy to reach out to the applicant directly if further clarification is needed.

Thanks again and please let me know if you have further questions.

Best regards,

Seth Thompson

Hi Seth –

Exhibit E

I hope all is well with you. I just want to confirm that the ODA would still like the attached form to be a required condition of approval for the King/O'Dea Template Dwellings near the Oakridge Airport?

If so, is their submittal of the form to you all sufficient for the County to issue building permits, or do they need to see the processing of the form through with ODA first?

Thank you much,

Jared Bauder | Planner, CFM

[EXTERNAL ⚠]

Good afternoon,

Thank you for providing the opportunity for the Oregon Department of Aviation (ODA) to comment on Department File: 509-PA20-05065.

The ODA has determined that a FAA FORM 7460-1 will need to be completed by the applicant for the proposed construction.

The completed FAA FORM 7460-1 must be submitted to the ODA and FAA prior to final approval of building permits or land use decisions.

I have attached a FAA FORM 7460-1 for reference.

Please let me know if you have any questions.

Best regards,

Seth Thompson

NOTICE OF PROPOSED CONSTRUCTION OR ALTERATION

§ 77.7 Form and time of notice.

(a) If you are required to file notice under §77.9, you must submit to the FAA a completed FAA Form 7460–1, Notice of Proposed Construction or Alteration. FAA Form 7460–1 is available at FAA regional offices and on the Internet.

(b) You must submit this form at least 45 days before the start date of the proposed construction or alteration or the date an application for a construction permit is filed, whichever is earliest.

(c) If you propose construction or alteration that is also subject to the licensing requirements of the Federal Communications Commission (FCC), you must submit notice to the FAA on or before the date that the application is filed with the FCC.

(d) If you propose construction or alteration to an existing structure that exceeds 2,000 ft. in height above ground level (AGL), the FAA presumes it to be a hazard to air navigation that results in an inefficient use of airspace. You must include details explaining both why the proposal would not constitute a hazard to air navigation and why it would not cause an inefficient use of airspace.

(e) The 45-day advance notice requirement is waived if immediate construction or alteration is required because of an emergency involving essential public services, public health, or public safety. You may provide notice to the FAA by any available, expeditious means. You must file a completed FAA Form 7460–1 within 5 days of the initial notice to the FAA. Outside normal business hours, the nearest flight service station will accept emergency notices.

§ 77.9 Construction or alteration requiring notice.

If requested by the FAA, or if you propose any of the following types of construction or alteration, you must file notice with the FAA of:

(a) Any construction or alteration that is more than 200 ft. AGL at its site.

(b) Any construction or alteration that exceeds an imaginary surface extending outward and upward at any of the following slopes:

(1) 100 to 1 for a horizontal distance of 20,000 ft. from the nearest point of the nearest runway of each airport described in paragraph (d) of this section with its longest runway more than 3,200 ft. in actual length, excluding heliports.

(2) 50 to 1 for a horizontal distance of 10,000 ft. from the nearest point of the nearest runway of each airport described in paragraph (d) of this section with its longest runway no more than 3,200 ft. in actual length, excluding heliports.

(3) 25 to 1 for a horizontal distance of 5,000 ft. from the nearest point of the nearest landing and takeoff area of each heliport described in paragraph (d) of this section.

(c) Any highway, railroad, or other traverse way for mobile objects, of a height which, if adjusted upward 17 feet for an Interstate Highway that is part of the National System of Military and Interstate Highways where overcrossings are designed for a minimum of 17 feet vertical distance, 15 feet for any other public roadway, 10 feet or the height of the highest mobile object that would normally traverse the road, whichever is greater, for a private road, 23 feet for a railroad, and for a waterway or any other traverse way not previously mentioned, an amount equal to the height of the highest mobile object that would normally traverse it, would exceed a standard of paragraph (a) or (b) of this section.

(d) Any construction or alteration on any of the following airports and heliports:

(1) A public use airport listed in the Airport/Facility Directory, Alaska Supplement, or Pacific Chart Supplement of the U.S. Government Flight Information Publications;

(2) A military airport under construction, or an airport under construction that will be available for public use;

(3) An airport operated by a Federal agency or the DOD.

(4) An airport or heliport with at least one FAA-approved instrument approach procedure.

(e) You do not need to file notice for construction or alteration of:

(1) Any object that will be shielded by existing structures of a permanent and substantial nature or by natural terrain or topographic features of equal or greater height, and will be located in the congested area of a city, town, or settlement where the shielded structure will not adversely affect safety in air navigation;

(2) Any air navigation facility, airport visual approach or landing aid, aircraft arresting device, or meteorological device meeting FAA-approved siting criteria or an appropriate military service siting criteria on military airports, the location and height of which are fixed by its functional purpose;

(3) Any construction or alteration for which notice is required by any other FAA regulation.

(4) Any antenna structure of 20 feet or less in height, except one that would increase the height of another antenna structure.

INSTRUCTIONS FOR COMPLETING FAA FORM 7460-1

PLEASE TYPE or PRINT

ITEM #1. Please include the name, address and phone number of a personal contact point as well as the company name.

ITEM #2. Please include the name, address and phone number of a personal contact point as well as the company name.

ITEM #3. New Construction would be a structure that has not yet been built.

Alteration is a change to an existing structure such as the addition of a side mounted antenna, a change to the marking and lighting, a change to power and/or frequency, or a change to the height. The nature of the alteration shall be included in ITEM #21 "Complete Description of Proposal".

Existing would be a correction to the latitude and/or longitude, a correction to the height, or if filing on an existing structure which has never been studied by the FAA. The reason for the notice shall be included in ITEM #21 "Complete Description of Proposal".

ITEM #4. If Permanent, so indicate. If Temporary, such as a crane or drilling derrick, enters the estimated length of time the temporary structure will be up.

ITEM #5. Enter the date that construction is expected to start and the date that construction should be completed.

ITEM #6. Please indicate the type of structure. DO NOT LEAVE BLANK.

ITEM #7. In the event that obstruction marking and lighting is required, please indicate type desired. If no preference, check "other" and indicate "no preference" DO NOT LEAVE BLANK. NOTE: High Intensity lighting shall be used only for structures over 500' AGL. In the absence of high intensity lighting for structures over 500' AGL, marking is also required.

ITEM #8. If this is an existing tower that has been registered with the FCC, enter the FCC Antenna Structure Registration number here.

ITEM #9 and #10. Latitude and longitude must be geographic coordinates, accurate to within the nearest second or to the nearest hundredth of a second if known. Latitude and longitude derived solely from a hand-held G P S instrument is NOT acceptable. A hand-held GPS is only accurate to within 100 meters (328 feet) 95 percent of the time. This data, when plotted, should match the site depiction submitted under ITEM #20.

ITEM #11. NAD 83 is preferred; however, latitude and longitude may be submitted in NAD 27. Also, in some geographic areas where NAD 27 and NAD 83 are not available other datum may be used. It is important to know which datum is used. DO NOT LEAVE BLANK.
ITEM #12. Enter the name of the nearest city and state to the site. If the structure is or will be in a city, enter the name of that city and state.

ITEM #13. Enter the full name of the nearest public-use (not private-use) airport or heliport or military airport or heliport to the site.

ITEM #14. Enter the distance from the airport or heliport listed in #13 to the structure.

ITEM #15. Enter the direction from the airport or heliport listed in #13 to the structure.

ITEM #16. Enter the site elevation above mean sea level and expressed in whole feet rounded to the nearest foot (e.g. 17'3" rounds to 17', 17'6" rounds to 18'). This data should match the ground contour elevations for site depiction submitted under ITEM #20.
ITEM #17. Enter the total structure height above ground level in whole feet rounded to the next highest foot (e.g. 17'3" rounds to 18'). The total structure height shall include anything mounted on top of the structure, such as antennas, obstruction lights, lightning rods, etc.

ITEM #18. Enter the overall height above mean sea level and expressed in whole feet. This will be the total of ITEM #16 + ITEM #17.

ITEM #19. If an FAA aeronautical study was previously conducted, enter the previous study number.

ITEM #20. Enter the relationship of the structure to roads, airports, prominent terrain, existing structures, etc. Attach an 8-1/2" x 11" non-reduced copy of the appropriate 7.5 minute U.S. Geological Survey (USGS) Quadrangle Map MARKED WITH A PRECISE INDICATION OF THE SITE LOCATION. To obtain maps, contact USGS at 1-888-275-8747 or via internet at "http://store.usgs.gov". If available, attach a copy of a documented site survey with the surveyor's certification stating the amount of vertical and horizontal accuracy in feet.

ITEM #21.

- For transmitting stations, include maximum effective radiated power (ERP) and all frequencies.
- For antennas, include the type of antenna and center of radiation (Attach the antenna pattern, if available).
- For microwave, include azimuth relative to true north.
- For overhead wires or transmission lines, include size and configuration of wires and their supporting structures (Attach depiction).
- For each pole/support, include coordinates, site elevation, and structure height above ground level or water.
- For buildings, include site orientation, coordinates of each corner, dimensions, and construction materials.
- For alterations, explain the alteration thoroughly.
- For existing structures, thoroughly explain the reason for notifying the FAA (e.g. corrections, no record or previous study, etc.).

Filing this information with the FAA does not relieve the sponsor of this construction or alteration from complying with any other federal, state or local rules or regulations. If you are not sure what other rules or regulations apply to your proposal, contact local/state aviation's and zoning authorities.

Paperwork Reduction Work Act Statement: A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection displays a currently valid OMB Control Number. The OMB control number for this information collection is 2120-0001. Public reporting for this collection of information is estimated to be approximately 19 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, completing and reviewing the collection of information. All responses to this collection of information are mandatory for anyone proposing construction or alteration that meets the criteria contained in 14 CFR 77. This information is collected to evaluate the effect of proposed construction or alteration on air navigation and is not confidential. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177-1524.

Federal Regulations (14 CFR), part 77 authorizes FAA to collect this information. PURPOSE(S): FAA will use the information provided to administer the Aeronautical Study Process. ROUTINE USE(S): In accordance with DOT's system of records notice, DOT/ALL 16 Mailing Management System and DOT/FAA 826 Petitions for Exemption, Other than Medical Exemption-Public Dockets, the information provided may be disclosed to officials within the Federal government and [illegible]

April 2, 2020

LMD FILE:	509-PA20-05064
APPLICANT:	Edward King
OWNER:	E J K Investments LLC
AGENT:	Kim O'Dea – Law Office of Bill Kloos
MAP & TAX LOT(S):	21-35-07-30-02900
ZONING:	Impacted Forest Lands Zone (/F-2)
PROPOSAL:	**A REQUEST FOR DIRECTOR APPROVAL OF A DWELLING IN THE IMPACTED FOREST LANDS ZONE (F-2), IN ACCORDANCE WITH THE 'TEMPLATE TEST' PROVISIONS OF LANE CODE 16.211(5) AND (8).**

Thank you for the opportunity to review and comment on this proposal. Please accept the following comments from Lane County Transportation Planning:

COMMENTS FROM LANE COUNTY TRANSPORTATION PLANNING

CONDITIONS

- Any private access easements serving the subject property must meet the requirements of Lane Code 15.055(2), (4), (5), and (7).

- Facility Permit approval will be required to ensure the existing access is adequate to support a shared approach to multiple properties/dwellings as proposed in the written statement. For more information about Facility Permits, please call 541.682.6902 or visit: https://lanecounty.org/government/county_departments/public_works/right-of-way_permits/facility_permits/

- As an informational item, stormwater runoff from the subject property must not be directed to the Lane County road right-of-way or into any Lane County drainage facility, including roadside ditches.

FINDINGS

Based on the site plan, the subject property "property" is proposed to take access via an existing driveway off Airport Road. The existing access will extend to the proposed dwelling as a private access easement. Airport Road is owned and maintained by Lane County and is functionally classified as a Rural Local road. For the purpose of establishing development setbacks, the minimum right-of-way (ROW) width of Rural Local roads is 50 feet (Lane Code [LC] 15.070(1)(c)(gg)). Proposed development as conceptually shown meets this requirement.

Lane Code 15.055: Minimum Requirements for Private Access Easements

(2) When a Private Access Easement is used to provide access to a vacant lot or parcel where development is proposed, prior to land use and zoning authorization for the proposed development the following shall apply:

Exhibit F

(c) **The requirements specified above in LC 15.055(2)(a) through (b) shall apply only to lands outside of a County-designated Forest zone. Lands within a Forest zone shall be governed by the siting and development standards of the applicable zoning district.**

Pursuant to Lane Code 15.055(2)(c), transportation Planning defers to Land Management Division to ensure the private access easement meets the applicable siting and development standards of the Impacted Forest Lands Zone (F-2).

(4) The minimum width for private access easement shall be of a width determined by the County suitable for the intended use, but in no case less than 30 feet. Notwithstanding this requirement, a pre-existing easement of at least 20 feet in width and serving a lot or parcel created in its present configuration prior to April 28, 2004 is allowable provided it complies with other requirements of this chapter.

(5) All approved documents creating a private access easement shall provide for the installation, construction and maintenance thereof of all utilities and facilities which are now or may in the future be needed for the area abutting the road and the surrounding area.

(7) Any easement approved as a private access easement shall be an affirmative, perpetual easement appurtenant to the property that will be served by the easement, and contain at a minimum the names of the grantor and grantee, the description of the land covered by the easement, a description of the lot(s) or parcel(s) to be served by the easement, a description of the intent or purpose of the easement and a statement of maintenance responsibility. All approved easements shall be recorded.

Compliance with LC 15.055(4), (5), and (7) must be demonstrated.

Lane Code 15.205: Facility Permits

Facility Permits are required for the placement of facilities and development within Lane County right-of-way. Facilities and development include, but are not limited to: road improvements; sidewalks; new or reconstructed driveway or road approach intersections; utility placements; excavation; clearing; grading; culvert placement or replacement; stormwater facilities; or any other facility, thing, or appurtenance [Lane Code 15.205(1)].

A review of Lane County Facility Permit records indicates that there is no record of a Facility Permit for the existing access off Airport Road.

Lane Manual 15.515: Drainage

Stormwater runoff from new private development must not be directed to the Lane County road right-of-way or into any Lane County drainage facility, including roadside ditches (Lane Manual 15.515). Accordingly, levels of stormwater directed off-site post-construction of the improvements must match pre-development flows. Ditches adjacent to County roads are designed solely to accommodate stormwater runoff generated by the roadways themselves.

FARM USE AND FOREST MANAGEMENT EASEMENT

Grantor(s)_____
print name(s)

is/are the owner(s) of real property as described on Exhibit "A", attached hereto. In accordance with the conditions set forth in the decision of the Lane County Land Management Division dated _____ approving Planning Action PA # _____, for Assessor's Map and Tax Lot _____ **Grantor(s)** hereby grant(s) to the owner(s), **(Grantees),** of all property zoned for farm or forest use, a perpetual non-exclusive farm use and forest practices management easement as follows:

1. The Grantor(s), the heirs, successors, and assignees acknowledge by the granting of this easement that the above described property is situated in a farm or forest zone in Lane County, Oregon, and may be subjected to conditions resulting from farm use or commercial forests operations on lands zoned for farm or forest use. Such operations may include farm use as defined in ORS 215.203 and management and harvesting of timber, disposal of slash, reforestation, application of chemicals, road construction and maintenance, and other accepted and customary forest management activities conducted in accordance with Federal and State Laws. Said farm use and forest management activities ordinarily and necessarily produce noise, dust, odors, smoke and other conditions, which may conflict with Grantor's use of Grantor's property for residential purposes, and Grantor(s) hereby give(s) an easement to the property owners of lands zoned for farm or forest use for the resultant impact on Grantors property caused by the farm use or forest management activities on such lands.

2. Grantor(s) shall comply with all restrictions and conditions for maintaining residences in farm and forest zones that may be required by State, Federal, and local land use laws and regulations. Grantor(s) will comply with all fire safety regulations developed by the Oregon Department of Forestry for residential development within a forest zone.

This easement is appurtenant to all property zoned for farm or forest use, and shall bind the heirs, successors, and assignees of Grantor(s), and shall endure for the benefit of the owners of lands zoned for farm or forest use, their heirs, successors, and assignees. The grantees, their heirs, successors, and assignees are hereby expressly granted the right of third party enforcement of this easement.

Re: Forest Template Dwelling Application
E.J. King Investments
Map 21-25-12, TL 00843

Dear Lane County:

This is an application for a forest template dwelling. This same application was filed several years ago. However, prior to a decision by the Planning Director, the Land Use Board of Appeals (LUBA) interpreted RCP Goal 5 Policy 11. Based on that LUBA decision, the application was withdrawn, along with many others.

LUBA was forced to interpret Policy 11 on its own in the absence of an interpretation of Policy 11 by the County Board. LUBA interpreted Policy 11 to mean that the ODFW recommended minimum acreages for Big Game Habitat must be applied directly to forest template dwelling applications. See *King v. Lane County*, __ Or LUBA __ (LUBA Nos. 2021-047/052, Oct. 15, 2021), *aff'd without opinion* 317 Or App 136, 501 P3d 1058 (2022). The interpretation by LUBA was required because Policy 11 is ambiguous – that is, it is subject to multiple, plausible interpretations. LUBA explained: "[T]he text of Policy 11 is ambiguous and requires interpretation to determine how to apply the ODFW density limitations* * * *" Slip op 22.

Recent decisions by LUBA and the Court of Appeals have determined that, based on a statute relating to housing, ambiguous standards in county plans and codes may not be applied at all in reviewing applications related to housing, such as this one. The relevant statute is ORS 197.307(4) which provides: "Except as provided in subsection (6) of this section, a local government may adopt and apply only clear and objective standards, conditions and procedures regulating the development of housing, including needed housing."

There are several recent cases involving this statute. The decision that is most directly on point is *Community Participation Organization 4M v. Washington County*, __ Or LUBA __ (No.

> proposed development of housing be on buildable land" and that it be for "needed housing." By its terms, the clear and objective requirement applies to "the development of housing, including needed housing." ORS 197.307(4). The applicability of ORS 197.307(4) is not confined to areas within a UGB by the definition of needed housing in ORS 197.303(1)."

A more comprehensive treatment of how this statute now applies, including to this application, is found in *Warren v. Washington County*, __ Or LUBA __ (No. 2018-089, Nov, 14, 2018), *aff'd* 296 Or App 595, 439 P3d 581 (March 20, 2019), which involved county approval of a six-lot subdivision on rural land with a Goal 5 resource protection. Both LUBA and the Court of Appeals discussed the 2017 amendments to the statute in detail and concluded that the statute now applies to any housing proposal, whether or not the land is inventoried as "buildable land." As the Court of Appeals concluded, *id.* at 598:

> "Thus, ORS 197.307(4) no longer refers to "buildable land," and, by its terms, provides that local government can regulate the development of housing only through clear and objective standards, conditions, and procedures."

This is a proposal to develop housing on rural resource land. Based on ORS 197.307(4), the County is prohibited from applying any standard that is not clear and objective. That includes RCP Plan Goal 5 Policy 11, which LUBA has correctly determined is ambiguous. As a final note, opponents of this application may say that the Policy is no longer ambiguous because LUBA stated an interpretation. That view is fatally facile. LUBA interpreted the policy because it is ambiguous; picking one among multiple plausible interpretations does not make the policy clear and objective. It remains ambiguous on its face. It is the ambiguity that drives the need for an interpretation; the interpretation does not negate the ambiguous character of the policy.

As a final note, this application should be treated by the County the same way that the Hearings Official treated an application for a Relative Farm Help Dwelling on EFU land. See *Helsel*, PA 21-05928 (March 30, 2023). There the Hearing Official approved the dwelling use over the objections of LandWatch for the reason that none of the standards pressed by LandWatch for a denial is clear and objective and, thus, were not a basis for denial.

> "LandWatch contends that the application fails to satisfy the following approval criteria: that the farm operation qualifies as a 'commercial' farm operation; whether the operation is 'existing.' As opposed to planned; and that help on the farm from the relative is 'necessary' or 'needed.' As asserted by the applicants, all of the approval criteria that form the basis of these arguments are not clear and objective. Accordingly, pursuant to state law and the needed housing statute, they

cannot be applied to the subject application." *Helsel* at 6.

Sincerely,

Bill Kloos

PROPOSAL: A request for Type II determination for a Template dwelling in the Impacted Forest Lands (F-2) Zone, pursuant to the provisions of Lane Code 16.211(2)-2.4.

Version 2/2019

REQUIRED SUBMITTALS (Also reference the Application Standards handout)

Lane Code 14.020 (3)(b) Electronic Materials.

(i) **When application or appeal materials submitted in hard copy format are over five pages in length, an applicant or appellant must provide an identical electronic version of the submitted materials in addition to a hard copy. Any other party submitting written materials into the record that are over five pages is also encouraged to submit an identical electronic copy. Any electronic materials must be in a format acceptable to the Director. This provision should not be interpreted to prohibit electronic submittals of materials less than five pages in length. The County will scan submitted materials upon request for fee. The County cannot be held responsible for electronic submittals that are not received by the Director or not confirmed by the Director to have been received.**

(ii) **When electronic materials over five pages in length are submitted by any party for inclusion in an application record, an identical hard copy of the materials must also be submitted unless this requirement is waived by the Director.**

Lane Code 14.040 Application Requirements

(1) **Minimum Submittal Requirements. Applications for a Type I through Type IV procedure must be submitted on a form provided by the Director, address all applicable standards and criteria, and include the following materials and information:**

- (a) **Applications must include at least one hard copy of all application materials, no larger than 11 inch x 17 inch in size;**
- (b) **All applicable information requested on the application form;**
- (c) **Required filing fee, except that the required filing fee may not be required when Lane County initiates an application;**
- (d) **Signature of each applicant;**
- (e) **Signature of a property owner or property owner's authorized representative;**
- (f) **Proof of property ownership by providing a certified or recorded copy of a deed, or land sale contract, or Lane County Tax Assessor's records;**
- (g) **Assessor's map and tax lot number of the subject property;**
- (h) **A site plan drawn to a standard engineer's scale, and conforming to the County's site plan submittal standards;**

  A site plan must be included. Refer to the handout entitled "How to prepare your plot plan." Identify nearby driveways. Driveways spacing standards are contained in Lane Code 15.138.

- (i) **Information demonstrating compliance with any applicable prior decisions and conditions of approval for the subject property;**
- (j) **A written narrative clearly indicating what action is requested and addressing all applicable standards and criteria;**
- (k) **Supporting information required to evaluate the application and address the applicable standards and criteria;**
- (l) **A written statement indicating whether a railroad-highway crossing provides or will provide the only access to land that is the subject of an application; and**

  Does a railroad-highway crossing provide the only access to the subject property?

  Yes ___ No X

(m) Additional information needed to evaluate applicable standards and criteria.

(2) Fees Required. In addition to any other applicable approval criteria, an approvable Type II or III application must be accompanied by the appropriate filing fee unless the Director authorizes a waiver or reduction to filing fees pursuant to Lane Manual Chapter 60.850.

(3) Determination of Application Requirements. The Director may waive any of the requirements of subsection (1) above if deemed to be inapplicable to the application.

(4) Applicant's Burden. It is the applicant's responsibility to provide evidence demonstrating that the application complies with all applicable standards and criteria.

ADDITIONAL INFORMATION REQUESTED FOR THIS APPLICATION:

ZONING F-2 **ACREAGE:** 13.34 acres

DESCRIBE THE ACCESS TO THE PROPERTY (circle the answer):

State Hwy (County Rd) Public Rd Private Easement

Road name: Airport Road

NUMBER OF EXISTING DWELLINGS ON PARCEL: None

EXISTING IMPROVEMENTS: What structures or improvements does the property contain (i.e., outbuildings, roads, driveways, wells, septic tanks, drainfields)? Will any structure or improvement be removed/demolished?

None

PHYSICAL FEATURES: Describe the site.

- The Vegetation on the property: The parcel is mostly open with scattered vegetation of fir, oak and maple trees.
- The Topography of the property: The parcel slopes downhill to the northeast.
- Any Significant Features of the property (steep slopes, water bodies, etc.): None.

APPROVAL CRITERIA

Lane Code 16.211(2) contains the Impacted Forest Lands (F-2) Zone Table of Permitted Uses. Use 2.4, the template dwelling, is subject to (3)(c), (3)(q), (3)(r), (5), and (6).

(3) Use Standards

(c) A single family "template" dwelling authorized on a lot or parcel located within a forest zone pursuant to the following:

The subject property must be a lawfully established unit of land:

- Was the property created by a partition or subdivision? List plat number _____
- If not, a final legal lot verification is required prior to submittal of this application. What is the file number for the legal lot verification?

LLV PA08-6330 Notice PA08-6329

(i) If the lot or parcel is predominantly composed of soils that are:

The minimum number of parcels within the template depends on the productivity of the soil type. At least 51% of the acreage of the parcel is composed of soils capable of producing:

____ (1) Less than 50 cubic feet per acre per year: See subsection (aa)

____ (2) 50 to 85 cubic feet per acre per year: See subsection (bb)

X (3) More than 85 cubic feet per acre per year: See subsection (cc)

Soil Type	(Cubic ft/acre/yr)	% of Parcel
Total (must equal 100 %)		

(aa) Capable of producing zero to 49 cubic feet per acre per year of wood fiber if:

(A) All or part of at least <u>three</u> other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

(bb) Capable of producing 50 to 85 cubic feet per acre per year of wood fiber if:

(A) All or part of at least <u>seven</u> other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

(cc) Capable of producing more than 85 cubic feet per acre per year of wood fiber if:

(A) All or part of at least <u>11</u> other lots or parcels that existed on January 1, 1993, are within a 160 acre square centered on the center of the subject tract; and

(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

Include a scaled map and the template used to verify the requirements in (aa), (bb), or (cc) showing the 1993 configuration of the parcels.

How many lots or parcels existed on January 1, 1993? 12

How many dwellings existed on January 1, 1993 and continue to exist? 5

Complete the following table to support your answers on the previous page.

	map and tax lot	deed & date	dwelling date

10.			
11.			
12.			
13.			
14.			
15.			
16.			
17.			
18.			

Include property description cards, which you can obtain from Lane County Assessment & Taxation.

If necessary, see the Planner on Duty for prior partitions/subdivision/legal lot status of surrounding properties. If a property was created via a partition or subdivision, please list that above in the deed/date column. If a legal lot verification was completed on a property, please include the PA# along with the year of creation.

If the dwelling is a manufactured dwelling, provide evidence it was placed on the property prior to January 1, 1993.

(ii) Lots or parcels within urban growth boundaries cannot be used to satisfy the eligibility requirements of subsection (i) above;

(iii) A dwelling, as used in subsection (i) above, is considered to be in the 160-acre template if any part of the parcel is in the 160-acre template;

(iv) Except as provided by subsection (v) below, if the subject tract abuts a road that existed on January 1, 1993, the measurement required in (i) above may be made by creating a 160 acre rectangle that is one mile long and 1/4 mile wide centered on the center of the subject tract and that is to the maximum extent possible, aligned with the road;

(v) The following applies where a tract 60 acres or larger abuts a road or perennial stream:

(aa) The measurement must be made in accordance with paragraph (iv). However, one of the three required dwellings must be on the same side of the road or stream as the tract, and:

(A) Be located within a 160-acre rectangle that is one mile long and one-quarter mile wide centered on the center of the subject tract and that is, to the maximum extent possible aligned with the road or stream; or

(B) Be within one-quarter mile from the edge of the subject tract but not outside the length of the 160 acre rectangle, and on the same side of the road or stream as the tract;

(bb) If a road crosses the tract on which the dwelling will be located, at least one of the three required dwellings must be on the same side of the road as the proposed dwelling;

Will you be using the 160 acre rectangle template aligned with the road? Yes X No ___

If yes, is least one of the dwellings used in the dwelling count located on the same side of the road as the proposed dwelling? NA Yes ___ No ___ (If no, you cannot use the rectangle template)

(vi) A proposed "template" dwelling under this section is not allowed:

(aa) Unless no dwellings are allowed on other lots or parcels that make up the tract and deed restrictions established under paragraph (3)(c)(vii) for the other lots or parcels that make up the tract are met; or

(bb) If the tract on which the dwelling will be sited includes a dwelling;

Does the tract contain any other dwellings? Yes ___ No X

(vii) Where other lots or parcels that make up a tract in Subsection (vi):

(aa) The applicant must provide evidence that the covenants, conditions, and restrictions form adopted as "Exhibit A" in OAR chapter 660, division 6 has been recorded with the county clerk of the county or counties where the property subject to the covenants, conditions, and restrictions is located;

(bb) The covenants, conditions, and restrictions are irrevocable, unless a statement of release is signed by an authorized representative of the county or counties where the property subject to the covenants, conditions, and restrictions is located;

(viii) The Director shall maintain a copy of the covenants, conditions, and restrictions filed in the county deed records pursuant to this section and a map or other record depicting tracts do not qualify for the siting of a dwelling under the covenants, conditions, and

restrictions filed in the county deed records pursuant to this section. The map or other record required by this subsection shall be readily available to the public in the county planning office.

(q) For single-family dwellings, the landowner must sign and record in the deed records for the County a document binding the landowner, and the landowner's successors in interest, prohibiting them from pursuing a claim for relief or cause of action alleging injury from farming or forest practices for which no action or claim is allowed under ORS 30.936 or 30.937.

If this application is approved, this will be made a condition of approval.

(r) For single-family dwellings, the approval is valid for four years from the date of approval, unless otherwise specified in the approval or by other provisions of Lane Code. Notwithstanding the requirements of LC Chapter 14, an application for a two year extension of the timelines for the permit approval can be made and approved pursuant to LC Chapter 14.

Pursuant to ORS 215.417, this application, if approved, will be valid for four years from the date of approval and one two year extension of the timelines can be made. This will be made a condition of approval.

SITING CRITERIA

(5) Siting Standards for Uses, Activities, and Structures

The following siting criteria apply to all new uses, activities, and structures allowed by LC 16.211. These criteria are designed to make such uses compatible with forest operations, to minimize wildfire hazards and risks and to conserve values found on forest lands. The Director must consider the criteria in this section together with the requirements of Section (6) to identify the building site.

(a) Residences, dwellings, and structures must be sited as follows:

(i) Near dwellings on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet from any ravine, ridge or slope greater than 40 percent (40%);

Explain the reason for the proposed location. You must address the following issues:

- How is the new dwelling close to other dwellings on adjacent property? Explain.
  See attached Applicant's Statement
- How is the dwelling near existing roads?
  See attached Applicant's Statement
- Will a new driveway be constructed or will an existing driveway be extended?
  See attached Applicant's Statement
- What is the most level part of the property?
  See attached Applicant's Statement

- What is the area that is least suitable for forest use based on the soil productivity, forest management and forest harvesting practices?

  See attached Applicant's Statement

- Is there a ravine, ridge or slope greater than 40% within 30 feet of the new dwelling?

  See attached Applicant's Statement

(ii) With minimal intrusion into forest areas undeveloped by nonforest uses;

Will the dwelling encroach into a forested area? Or will it be located in an existing developed or open area? Explain how the dwelling location will cause minimal intrusion to forested areas:

See attached Applicant's Statement

(iii) Where possible, when considering LC 16.210(5)(a)(i) and (ii) and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU; and

Is the dwelling within 500 feet of adjoining property zoned F-1? Yes X No ___

If yes, explain:

See attached Applicant's Statement

Is the dwelling within 100 feet of adjoining property zoned F-2 or EFU? Yes ___ No X

If yes, explain:

See attached Applicant's Statement

(iv) The amount of forest lands used to site access roads, service corridors, and structures must be minimized.

Explain how the location of the dwelling and driveway minimize intrusion into the forest. Attach additional pages if necessary.

See attached Applicant's Statement

(b) Setbacks. Structures other than a fence or sign cannot be located closer than:

(i) 20 feet from the right-of-way of a state road, County road, or a local access public road specified in LC Chapter 15.

(ii) 30 feet from all property lines other than those described in Section (5)(b)(i).

(iii) The minimum distance necessary to comply Sections (5)(a) and (6).

Does the property front County Right-of-way? Yes X No ___

If yes, what is the distance from the proposed dwelling to the County Right-of-way? 1200 Feet

How far is the proposed dwelling from the northern property line? 300 Feet

How far is the proposed dwelling from the eastern property line? 400 Feet

How far is the proposed dwelling from the southern property line? 300 Feet

How far is the proposed dwelling from the western property line? 130 Feet

Are these setbacks at least the minimum distance to comply with (5)(a) and (6)?

Yes

(iv) Riparian Setback Area. A riparian setback area applies to the area (iv) between a line that is 100 feet from and parallel to the ordinary high water of a Class I stream designated in the Rural Comprehensive Plan. No structure other than a fence may be located closer than 100 feet from the ordinary high water of a Class I stream unless a riparian modification application is approved in accordance with LC 16.253(3). Vegetation maintenance, removal, and replacement standards and exceptions to these setbacks are found in LC 16.253.

Is there a designated Class 1 stream on the property? Yes ___ No X

If yes, how far will the dwelling be from the Class 1 stream? _____ Feet

(c) Domestic Water Supplies. For new dwellings and non-farm structures on vacant land, evidence must be provided that the domestic water supply is from a source authorized in accordance with the Water Resources Department's administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rule, OAR Chapter 629. If the water supply is unavailable from public sources or sources located entirely on the property, then the applicant must provide evidence that a legal easement has been obtained permitting domestic water lines to cross the properties of affected owners. For purposes of LC 16.211(5)(c) above, evidence of domestic water supply means:

(i) Verification from a water purveyor that the use described in the application will be served by the purveyor under the purveyor's rights to appropriate water;

(ii) A water use permit issued by the Water Resources Department for the use described in the application; or

(iii) Verification from the Water Resources Department that a water use permit is not required for the use described in the application. If the proposed water supply is from a well and is exempt from permitting requirements under ORS 537.545, the applicant must submit the well constructor's report to the Director upon completion of the well.

What is your proposed water source (check the answer):

Private Well X Community System ___ Public system ___

Describe: Existing wells on nearby properties show adequate supply of water available for parcel. See attached Exhibit M

For a community or public system, do you have written verification the provider can serve your dwelling?

Yes ___ No ___ If yes, include a copy with this application.

Do you have a water use permit (well log) for an existing well, issued by the Water Resources Department? Yes ___ No X

If yes, include a copy with this application. Copies can be obtained by searching for groundwater data at the following website: https://www.oregon.gov/OWRD/pages/index.aspx

(d) As a condition of approval, if road access to the dwelling is by a road owned and maintained by a private party or by the Oregon Department of Forestry, the U.S. Bureau of Land Management, or the U.S. Forest Service, then the applicant must provide proof of a long-term road access use permit or agreement. The road use permit may require the applicant to agree to accept responsibility for road maintenance.

(e) Approval of a dwelling is subject to the following requirements:

(i) Approval of a dwelling requires the owner of the tract to plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in department of Forestry administrative rules.

(ii) The Director must notify the County Assessor of the above condition at the time the dwelling is approved.

(iii) Stocking survey report:

(aa) If the lot or parcel is more than ten acres, the property owner must submit a stocking survey report to the County Assessor and the Assessor will verify that the minimum stocking requirements have been met by the time required by Department of Forestry rules; and

(bb) Upon notification by the Assessor, the Department of Forestry will determine whether the tract meets minimum stocking requirements of the Forest Practices Act. If the Department of Forestry determines that the tract does not meet those requirements, that department will notify the owner and the Assessor that the land is not being managed as forest land. The Assessor will then remove the forest land designation pursuant to ORS 321.359 and impose the additional tax.

If this proposal is approved, (d) and (e) above will be made conditions of approval.

(6) Fire-Siting Standards for Dwellings and Structures

The following fire-siting standards or their equivalent apply to new residences, dwellings, manufactured dwellings, or structures allowed in Lane Code 16.211:

(a) The dwelling must be located upon a parcel within a fire protection district or must be provided with residential fire protection by contract. If the dwelling is not within a fire protection district, the applicant must provide evidence that the applicant has asked to be included within the nearest such district. If the Director determines that inclusion within a fire protection district or contracting for residential fire protection is impracticable, the dwelling must comply with the following fire safety plan requirements:

Is the property within a fire district? Yes X No ___ If yes, go to (b) below.

If the property is not within a fire district, you have two options (choose one):

____ (A) Submit evidence of a long term services contract with the nearest fire district and request annexation into the fire district, or

____ (B) Develop a Fire Protection Plan. It must comply with standards in (i) - (v) below. The Fire Protection Plan will be verified as a Condition of Approval, but it is recommended that you submit the plan with this application.

(i) The means selected may include a fire sprinkling system, onsite equipment and water storage or other methods that are reasonable, given the site conditions;

(ii) If a water supply is required for fire protection, it must be a swimming pool, pond, lake, or similar body of water that at all times contains at least 4,000 gallons or a stream that has a continuous year round flow of at least one cubic foot per second;

(iii) The applicant must provide verification from the Water Resources Department that any permits or registrations required for water diversion or storage have been obtained or that permits or registrations are not required for the use;

(iv) Road access must be provided to within 15 feet of the water's edge for firefighting pumping units. The road access must accommodate the turnaround of firefighting equipment during the fire season. Permanent signs must be posted along the access route to indicate the location of the emergency water source; and

(v) A 100-foot wide primary safety zone and a 100-foot wide secondary safety zone surrounding the perimeter of the dwelling or manufactured dwelling structures must be provided and maintained in perpetuity in compliance with the standards in (6)(c).

(b) Fire Safety Design Standards for Roads and Driveways.

(i) Private driveways, roads or bridges accessing only commercial forest uses are not subject to compliance with these fire safety design standards for roads and driveways. The route of access for firefighting equipment, from the fire station to the destination point, across public roads, bridges, private roads or private access easements and driveways must comply with the standards specified below. Evidence of compliance with the standards specified in (6)(b) should include objective information about the firefighting equipment, the physical nature of the access route, the nature of any proposed improvements to the access route, and it may also include a written verification of compliance from the agency providing fire protection, or a written certification of compliance from an Oregon Registered Professional Engineer. As used herein, "road" means a way of access used for more than one use and accessory uses dwelling or manufactured dwelling. As used herein, "driveway" means a way of access used for only one dwelling or manufactured dwelling.

Attach to this application objective information demonstrating compliance or feasibility of compliance with Lane Code 16.211(6)(b)(i), including:

X Itemized list of firefighting equipment. Obtain from the fire district (if applicable).

X Description and evidence of physical nature of access or driveway route. Topography maps, photos, or other evidence may be included in the application.

See attached Applicant's Statement

X Description of proposed improvements to access or driveway route. Design drawings may be included in the application.

See attached Applicant's Statement

In addition to the above items, the application may also include:

____ A preliminary written verification of compliance from the agency providing fire protection, or a preliminary written certification of compliance from an Oregon Registered Professional Engineer. However, please note that such certification will also be made a condition of approval to verify final access and/or driveway construction.

The standards below will be a condition of approval and will be verified by staff.

(ii) Road and Driveway Surfaces. Roads must have unobstructed widths of at least 20 feet including: travel surfaces with widths of at least 16 feet constructed with gravel to a depth sufficient to provide access for fire fighting vehicles and containing gravel to a depth of at least six-inches or with paving having a crushed base equivalent to six inches of gravel, an unobstructed area two feet in width at right angles with each side of the constructed surface, curve radii of at least 50 feet, and a vertical clearance of at least 13 feet 6 inches. Driveways must have: constructed widths of at least 12 feet with at least six inches of gravel or with paving having a crushed base equivalent to six inches of gravel and must have a vertical clearance of 13 feet 6 inches.

Will an existing driveway be extended to serve the new dwelling? Yes X No ___

Will there be a new driveway in a new location? Yes X No ___

(iii) Turnarounds. Any dead-end road over 200 feet in length and not maintained by Lane County must meet these standards for turnarounds. Dead-end roads must have turnarounds spaced at intervals of not more than 500 feet. Turnarounds must comply with these design and construction standards:

(aa) Hammerhead Turnarounds. Hammerhead turnarounds (for emergency vehicles to drive into and back out of to reverse their direction on the road) must intersect the road as near as possible at a 90 degree angle and extend from the road at that angle for a distance of at least 20 feet. They must be constructed to the standards for driveways in LC 16.211(6)(b)(i) above and must be marked and signed by the applicant as "NO PARKING." Such signs must be of metal or wood construction with minimum dimensions of 12 inches by 12 inches; or

(bb) Cul-de-sac Turnarounds. Cul-de-sac turnarounds must have a right-of-way width with a radius of at least 45 feet and an improved surface with a width of at least 36 feet and must be marked and signed by the applicant as "NO PARKING." Such signs must be of metal or wood construction with minimum dimensions of 12 inches by 12 inches; and

(cc) No cul-de-sacs or hammerhead turnarounds must be allowed to cross any slope which will allow chimney-effect draws unless the dangerous effects of the chimney-effect draws have been mitigated by the location of the road and, where necessary, by the creation of permanent fire breaks around the road.

Are you proposing a dead-end road? Yes ___ No X

Is it over 200 feet long? Yes ___ No ___

If yes, it must contain turnouts. Explain: _____

See attached Applicant's Statement

(iv) Bridges and Culverts. Bridges and culverts must be constructed to sustain a minimum gross vehicle weight of 50,000 lbs. and to maintain a minimum 16-foot road width

surface or a minimum 12-foot driveway surface. The Planning Director may allow a single-span bridge utilizing a converted railroad flatcar as an alternative to the road and driveway surface width requirements, subject to verification from an engineer licensed in the State of Oregon that the structure will comply with the minimum gross weight standard of 50,000 lbs.

Will the new driveway or extension of the driveway contain any culverts or bridges? Yes ___ No X

If yes, explain: _____

_____

(v) Road and Driveway Grades. Road and driveway grades cannot exceed 16 percent except for short distances when topographic conditions make lesser grades impractical. In such instances, grades up to 20 percent may be allowed for spans not to exceed 100 feet. An applicant must submit information from a Fire Protection District or engineer licensed in the State of Oregon demonstrating that road and driveway grades in excess of eight percent are adequate for the firefighting equipment of the agency providing fire protection to access the use, firefighting equipment and water supply.

Will the road or driveway contain any slopes in excess of 8%? Yes ___ No X

If yes, explain: _____

_____

(vi) Identification. Roads must be named and addressed in compliance with LC 15.305 through 15.335.

Please be advised that staff will evaluate the route of the road serving your dwelling, from the homesite back to the public road to which it connects. Staff will determine if the road is to be named, per LC 15.312 and LM 15.015(3).

(vii) Driveway Vehicle Passage Turnouts. Driveways in excess of 200 feet must provide for a 20-foot long and eight-foot wide passage space (turn out) with six inches in depth of gravel and at a maximum spacing of 400 feet. Shorter or longer intervals between turnouts may be authorized by the Planning Director where the Director inspects the road and determines that topography, vegetation, corners or turns obstruct visibility.

The driveway must be 12 feet wide. How wide is the driveway? 12'

Is it over 200 feet long? Yes X No ___

If yes, it must contain turnouts. Turnouts are not required if the driveway is 16 feet wide.

Will the driveway have turnouts? Yes X No ___

Will the driveway be 16 feet wide? Yes ___ No X

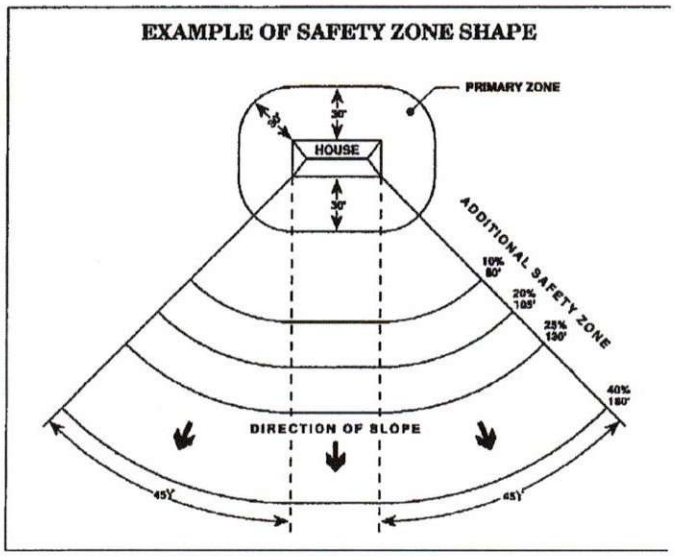
(viii) Modifications and Alternatives. The standards in (6)(b)(i) through (6)(b)(vii) above may be modified by the approval authority provided the applicant has submitted objective evidence demonstrating that an alternative standard would insure adequate access for firefighting equipment from its point of origination to its point of destination.

Are you proposing any modifications or alternatives to the road or driveway standards? If yes, explain. Attach additional pages of necessary.

None.

(c) Fuel-Free Breaks. The owners of dwellings and structures must maintain a primary safety zone surrounding all structures and clear and maintain a secondary safety zone on land surrounding the dwelling that is owned or controlled by the owner in compliance with these requirements.

(i) Primary Safety Zone. The primary safety zone is a fire break extending a minimum of 30 feet in all directions around dwellings, manufactured dwellings and structures, unless otherwise specifically stated in LC 16.211. The goal within the primary safety zone is to exclude fuels that will produce flame lengths in excess of one foot. Vegetation within the primary safety zone could include green lawns and low shrubs (less than 24 inches in height). Trees must be spaced with greater than 15 feet between the crown and pruned to remove dead and low (less than eight feet) branches. Accumulated leaves, needles, and other dead vegetation must be removed from beneath trees. Nonflammable materials (i.e., rock) instead of flammable materials (i.e., bark mulch) must be placed next to the house.



(aa) As slope increases, the primary safety zone must increase away from the house, parallel to the slope and down the slope, as shown in the table and figure below:

The new dwelling must be surrounded by a 30 foot primary safety zone. If the dwelling is on a slope, the safety zone will increase, as shown in the table.

Table 16.211-2 Minimum Primary Safety Zone

Slope	Feet of Primary Safety Zone	Feet of Additional Primary Safety Zone Down Slope
0%	30	0
10%	30	50
20%	30	75
25%	30	100
40%	30	150

Figure 16.211-1

(ii) Secondary Safety Zone. The secondary safety zone is a fuel break extending a minimum of 100 feet in all directions around the primary safety zone. The goal of the secondary safety zone is to reduce fuels so that the overall intensity of any wildfire would be lessened and the likelihood of crown fires and crowning is reduced. Vegetation within the secondary safety zone must be pruned and spaced so that fire will not spread between crowns of trees. Small trees and brush growing underneath larger trees must be removed to prevent spread of fire up into the crowns of the larger trees. Dead fuels must be removed.

The secondary fuel break must be established an additional 100 feet from the primary safety zone, but only on property you own.

* Show the fuel breaks on the site plan. If approved, the primary safety zone and the secondary fuel break will be verified as a condition of approval. Contact staff (541-682-3577) or visit the Planning website (www.lanecounty.org/planning) for details regarding fire break standards.

* The establishment and maintenance of fuel breaks within the Riparian Setback Area must comply with the applicable requirements of Lane Code 16.253.

(d) The dwelling must have a fire retardant roof.

(e) Dwellings or manufactured dwellings must be sited at least 30 feet away from a ravine, ridge, or any slope greater than 40 percent slope.

Substantial evidence may need to be submitted with the application to determine slope. This could include photos, slope calculations, and/or evidence from a private engineer or surveyor such as a stamped site plan. What is the slope of the land within 30 feet of the dwelling? less than 10%

(f) If the dwelling has a chimney or chimneys, each chimney must have a spark arrester.

If the proposal is approved, (d) and (f) above will be made conditions of approval and will be verified by staff.

Applicant's Supplemental Narrative

LC 16.211(3)(c) A single family "template" dwelling authorized on a lot or parcel located within a forest zone pursuant to the following:

(i) If the lot or parcel is predominantly composed of soils that are:
(aa) Capable of producing zero to 49 cubic feet per acre per year of wood fiber if:
(A) All or part of at least three other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and
(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

RESPONSE: Not applicable.

(bb) Capable of producing 50 to 85 cubic feet per acre per year of wood fiber if:
(A) All or part of at least three other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and
(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

RESPONSE: Not applicable.

(cc) Capable of producing more than 85 cubic feet per acre per year of wood fiber if:
(A) All or part of at least three other lots or parcels that existed on January 1, 1993, are within a 160-acre square centered on the center of the subject tract; and
(B) At least three dwellings existed on January 1, 1993 and continue to exist on the other lots or parcels.

RESPONSE: Not applicable. The subject property is predominately comprised of soils capable of producing more than 85 cubic feet per acre per year of wood fiber. 75% of the subject property is comprised of soil map unit 63D Jory capable of producing 178 cubic feet per acre per year of wood fiber as documented in the Lane County Soil Ratings for Forestry August 2011 Update. Exhibits G & T.

(ii) Lots or parcels within urban growth boundaries cannot be used to satisfy the eligibility requirements of subsection (i) above;

RESPONSE: No parcels used to satisfy the eligibility requirements are within the Urban Growth Boundary of Oakridge – Westfir. Exhibit B.

(iii) A dwelling, as used in subsection (i) above, is considered to be in the 160-acre template if any part of the parcel is in the 160-acre template;

RESPONSE: The 5 dwellings relied upon for eligibility are on parcels that are at least partially in the boundaries of the 160-acre template.

(iv) Except as provided by subsection (v) below, if the subject tract abuts a road that existed on January 1, 1993, the measurement required in (i) above may be made by creating a 160 acre rectangle that is one mile long and 1/4 mile wide centered on the center of the subject tract and that is to the maximum extent possible, aligned with the road;

RESPONSE: The subject property abuts a County Road, Airport Road. The applicant has chosen to use a 160-acre rectangle that is one mile long and 1/4 mile wide centered on the center of the subject tract and that is to the maximum extent possible, aligned with the road. An alternate road alignment template map is also provided to demonstrate conformance with the requirements. Exhibit J1 and J2.

(v) The following applies where a tract 60 acres or larger abuts a road or perennial stream:
(aa) The measurement must be made in accordance with paragraph (iv). However, one of the three required dwellings must be on the same side of the road or stream as the tract, and:
(A) Be located within a 160-acre rectangle that is one mile long and one-quarter mile wide centered on the center of the subject tract and that is, to the maximum extent possible aligned with the road or stream; or
(B) Be within one-quarter mile from the edge of the subject tract but not outside the length of the 160 acre rectangle, and on the same side of the road or stream as the tract;
(bb) If a road crosses the tract on which the dwelling will be located, at least one of the three required dwellings must be on the same side of the road as the proposed dwelling;

RESPONSE: Not applicable. The subject property is less than 60 acres in size.

(vi) A proposed "template" dwelling under this section is not allowed:
(aa) Unless no dwellings are allowed on other lots or parcels that make up the tract and deed restrictions established under paragraph (3)(a)(iii) for the other lots or parcels that make up the tract are met; or
(bb) If the tract on which the dwelling will be sited includes a dwelling;

RESPONSE: Not applicable. The subject property is vacant. The tract consists of only one parcel.

(vii) Where other lots or parcels that make up a tract in Subsection (vi):
(aa) The applicant must provide evidence that the covenants, conditions, and restrictions form adopted as "Exhibit A" in OAR chapter 660, division 6 has been recorded with the county clerk of the county or counties where the property subject to the covenants, conditions, and restrictions is located;

(bb) The covenants, conditions, and restrictions are irrevocable, unless a statement of release is signed by an authorized representative of the county or counties where the property subject to the covenants, conditions, and restrictions is located;

RESPONSE: Not applicable. The subject tract consists of only one parcel.

(viii) The Director shall maintain a copy of the covenants, conditions, and restrictions filed in the county deed records pursuant to this section and a map or other record depicting tracts do not qualify for the siting of a dwelling under the covenants, conditions, and restrictions filed in the county deed records pursuant to this section. The map or other record required by this subsection shall be readily available to the public in the county planning office.

RESPONSE: Not applicable. The subject tract consists of only one parcel.

OAR 660-006-0027 (6)(h) If the lot or parcel on which the dwelling will be sited was part of a tract on January 1, 2019, no dwelling existed on the tract on that date, and no dwelling exists or has been approved on another lot or parcel that was part of the tract.

RESPONSE: The subject property was not part of a tract on January 1, 2019. Exhibit H.

LC 16.211(5) Siting Standards for Uses, Activities, and Structures
The following siting criteria apply to all new uses, activities, and structures allowed by LC 16.211. These criteria are designed to make such uses compatible with forest operations, to minimize wildfire hazards and risks and to conserve values found on forest lands. The Director must consider the criteria in this section together with the requirements of Section (6) to identify the building site.

RESPONSE: The above provision requires that the standards of subsections (a) through (b) below be weighed together with the requirements of Section (6) below to determine the building site. As discussed below, placement of the dwelling at the site is the building site that best meets the above objectives.

(a) Residences, dwellings, and structures must be sited as follows:

(i) Near dwellings on other tracks, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet away from any ravine, ridge or slope greater than 40 percent (40%);

RESPONSE:
Near other dwellings: The dwelling site is located in the west portion of the parcel. The area is sparsely settled with dwellings. The proposed dwelling site is located approximately 1000 feet from the house to the east which is the nearest in any direction on Map 21-35-18 Tax lot 914. The site is as close to dwellings on other tracts as it can be while respecting the configuration of the parcel and the proximity of the airport.

Near existing roads: The homesite is located immediately adjacent to an existing timber road extending through the parcel from Airport Road. See Exhibits A & D – Site Plan and Aerial.

On the most level part of the tract. The tract slopes down to the northeast. See Exhibits S & X. Based on these materials, the dwelling site is on the most level portion of the tract, especially when this provision is balanced with other provisions, such as setbacks, access, slopes, and minimal intrusion into forested areas.

On the least suitable portion of the tract for forest use: The entire area of the parcel not underneath the approach surface of the Oakridge airport is comprised of Soil Map Unit Jory (63D) with a forest productivity ratings of at least 178 cu.ft./ac/yr. There is no ability to construct the home within an area of less forest productivity. Exhibit T. Soils are not determinative of forestry suitability, but are relevant. When balanced with other standards, the dwelling site is located on the least suitable portion of the tract for forest use.

At least 30 feet from any ravine, ridge or slope greater than 40%. There are no ravines, ridges or slopes greater than 40% within 30 feet of the site. See Exhibit S –LIDAR

(ii) With minimal intrusion into forest areas undeveloped by nonforest uses;

RESPONSE: The size and configuration of the parcel, combined with the proximity of the Oakridge Airport with the accompanying Approach Surface, severely limit the available locations for the homesite. The placement has been determined by the necessity for adequate fuel breaks and access. The dwelling site accomplishes this.

(iii) Where possible when considering LC 16.211(5)(a)(i) and (ii) and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU; and

RESPONSE: The subject property is bordered by property zoned F-1 to the west and south. Property to the north is zoned F-2 and AO. The dwelling site is setback 130 feet and 290 feet from the south and west property lines respectively (the directions of the F-1 properties). The north-south dimension of the parcel is only 550 feet which limits the ability to achieve a setback of 500 feet from the south property line and still achieve an adequate area for fuel breaks. The homesite is centered in the east-west direction below the area impacted by the Airport Approach Surface restrictions.

(iv) The amount of forest lands used to site access roads, service corridors, and structures must be minimized.

RESPONSE: The site will be accessed in part by an existing access road that serves the BPA power line easement and will be shared by easement by two parcels to the northeast, Map 21-35-07-30 Tax lots 2800 and 2900. The roadway will be constructed to county standards. Service corridors for utilities will run adjacent to the proposed roadway and driveway. Thus, the use of the existing roadway assures the amount of forestland used to site roads and services will be

minimized.

(b) Setbacks. Structures other than a fence or sign cannot be located closer than:

- ***(i) 20 feet from the right-of-way of a state road, County road, or a local access public road specified in LC Chapter 15.***
- ***(ii) 30 feet from all property lines other than those described in Section (5)(b)(i).***
- ***(iii) The minimum distance necessary to comply Sections (5)(a) and (6).***

RESPONSE: The dwelling site is at least 30 feet from all property lines and more than 20 feet from Airport Road. See Site Plan. (5)(a) and (6). See Site Plan.

(iv) Riparian Setback Area. A riparian setback area applies to the area between a line that is 100 feet from and parallel to the ordinary high water of a Class I stream designated in the Rural Comprehensive Plan. No structure other than a fence may be located closer than 100 feet from the ordinary high water of a Class I stream unless a riparian modification application is approved in accordance with LC 16.253(3). Vegetation maintenance, removal, and replacement standards and exceptions to these setbacks are found in LC 16.253.

RESPONSE: No Class I Stream is within 100 feet of the subject property. See Exhibit R.

(c) Domestic Water Supplies. For new dwellings and non-farm structures on vacant land, evidence must be provided that the domestic water supply is from a source authorized in accordance with the Water Resources Department's administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rule, OAR Chapter 629. If the water supply is unavailable from public sources or sources located entirely on the property, then the applicant must provide evidence that a legal easement has been obtained permitting domestic water lines to cross the properties of affected owners. For purposes of LC 16.211(5)(c) above, evidence of domestic water supply means:

- ***(i) Verification from a water purveyor that the use described in the application will be served by the purveyor under the purveyor's rights to appropriate water;***
- ***(ii) A water use permit issued by the Water Resources Department for the use described in the application; or***
- ***(iii) Verification from the Water Resources Department that a water use permit is not required for the use described in the application. If the proposed water supply is from a well and is exempt from permitting requirements under ORS 537.545, the applicant must submit the well constructor's report to the Director upon completion of the well.***

RESPONSE: The applicant will drill a new well. Based on well log data for nearby wells, particularly well LANE 4467 located on the adjacent property Map 21-35-18 Tax lot 914, Exhibit M – Water Resources Well Records, there is sufficient proof to make a conclusion that

there is a feasible domestic water supply available. The subject property is exempt under ORS 537.545, and agrees to submit the required report once the well is complete.

(d) As a condition of approval, if road access to the dwelling is by a road owned and maintained by a private party or by the Oregon Department of Forestry, the U.S. Bureau of Land Management, or the U.S. Forest Service, then the applicant must provide proof of a long-term road access use permit or agreement. The road use permit may require the applicant to agree to accept responsibility for road maintenance.

RESPONSE: Road access to the subject property is provided by a Rural Local County Road – Airport Road.

(e) Approval of a dwelling is subject to the following requirements:

(i) Approval of a dwelling requires the owner of the tract to plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in department of Forestry administrative rules.

(ii) The Director must notify the County Assessor of the above condition at the time the dwelling is approved.

(iii) Stocking survey report:

(aa) If the lot or parcel is more than ten acres, the property owner must submit a stocking survey report to the County Assessor and the Assessor will verify that the minimum stocking requirements have been met by the time required by Department of Forestry rules; and

(bb) Upon notification by the Assessor, the Department of Forestry will determine whether the tract meets minimum stocking requirements of the Forest Practices Act. If the Department of Forestry determines that the tract does not meet those requirements, that department will notify the owner and the Assessor that the land is not being managed as forest land. The Assessor will then remove the forest land designation pursuant to ORS 321.359 and impose the additional tax.

RESPONSE: It is feasible to demonstrate \conformance with this requirement as a condition of approval.

(f) Signs.

(i) Signs cannot extend over a public right-of-way or project beyond the property line;

(ii) Signs cannot be illuminated, flashing, blinking, contain scrolling images, or capable of movement; and

(iii) Signs are to be limited to 200 square feet in area.

RESPONSE: No signs are proposed.

(6) Fire-Siting Standards for Dwellings and Structures

The following fire-siting standards or their equivalent apply to new residences, dwellings,

manufactured dwellings, or structures allowed in Lane Code 16.211:

(a) The dwelling must be located upon a parcel within a fire protection district or must be provided with residential fire protection by contract. If the dwelling is not within a fire protection district, the applicant must provide evidence that the applicant has asked to be included within the nearest such district. If the Director determines that inclusion within a fire protection district or contracting for residential fire protection is impracticable, the dwelling must comply with the following fire safety plan requirements:

(i) The means selected may include a fire sprinkling system, onsite equipment and water storage or other methods that are reasonable, given the site conditions;

(ii) If a water supply is required for fire protection, it must be a swimming pool, pond, lake, or similar body of water that at all times contains at least 4,000 gallons or a stream that has a continuous year round flow of at least one cubic foot per second;

(iii) The applicant must provide verification from the Water Resources Department that any permits or registrations required for water diversion or storage have been obtained or that permits or registrations are not required for the use;

(iv) Road access must be provided to within 15 feet of the water's edge for firefighting pumping units. The road access must accommodate the turnaround of firefighting equipment during the fire season. Permanent signs must be posted along the access route to indicate the location of the emergency water source; and

(v) A 100-foot wide primary safety zone and a 100-foot wide secondary safety zone surrounding the perimeter of the dwelling or manufactured dwelling structures must be provided and maintained in perpetuity in compliance with the standards in (6)(c).

RESPONSE: The parcel is located within the Hazeldell Rural Fire Protection District which has an intergovernmental agreement (IGA) with the Oakridge Fire Protection District to respond to all emergency calls. The proposed shared road and driveway will be improved to the applicable Lane Code 16.211 fire standards. See Exhibit A. The route of access from the Fire District located at 47592 Hwy 58 is by way of a State Highway (58) for a distance of 1 mile to Airport Road (County road). Airport Road is paved for the entire ¾ mile length to get to the subject property.

(b) Fire Safety Design Standards for Roads and Driveways.

(i) Private driveways, roads or bridges accessing only commercial forest uses are not subject to compliance with these fire safety design standards for roads and driveways. The route of access for firefighting equipment, from the fire station to the destination point, across public roads, bridges, private roads or private access easements and driveways must comply with the standards specified below. Evidence of compliance with the standards specified in (6)(b) should include objective information about the firefighting equipment, the physical nature of the access route, the nature of any proposed improvements to

the access route, and it may also include a written verification of compliance from the agency providing fire protection, or a written certification of compliance from an Oregon Registered Professional Engineer. As used herein, "road" means a way of access used for more than one use and accessory uses dwelling or manufactured dwelling. As used herein, "driveway" means a way of access used for only one dwelling or manufactured dwelling.

RESPONSE: The subject property is within a fire district. The proposed shared road and driveway will be improved to the applicable Lane Code 16.211 fire standards. See Exhibit A. The route of access from the Fire District located at 47592 Hwy 58 is by way of a State Highway (58) for a distance of 1 mile to Airport Road (County road). Airport Road is paved for the entire ¾ mile length to get to the subject property.

(ii) Road and Driveway Surfaces. Roads must have unobstructed widths of at least 20 feet including: travel surfaces with widths of at least 16 feet constructed with gravel to a depth sufficient to provide access for fire fighting vehicles and containing gravel to a depth of at least six-inches or with paving having a crushed base equivalent to six inches of gravel, an unobstructed area two feet in width at right angles with each side of the constructed surface, curve radii of at least 50 feet, and a vertical clearance of at least 13 feet 6 inches. Driveways must have: constructed widths of at least 12 feet with at least six inches of gravel or with paving having a crushed base equivalent to six inches of gravel and must have a vertical clearance of 13 feet 6 inches.

RESPONSE: Access to the site is from Airport Road via an existing shared easement road and a driveway that will be improved to Lane Code 16.211 standards. Exhibit A. It is feasible to construct the road and driveway to the above county standards.

(iii) Turnarounds. Any dead-end road over 200 feet in length and not maintained by Lane County must meet these standards for turnarounds. Dead-end roads must have turnarounds spaced at intervals of not more than 500 feet. Turnarounds must comply with these design and construction standards:
(aa) Hammerhead Turnarounds. Hammerhead turnarounds (for emergency vehicles to drive into and back out of to reverse their direction on the road) must intersect the road as near as possible at a 90 degree angle and extend from the road at that angle for a distance of at least 20 feet. They must be constructed to the standards for driveways in LC 16.211(6)(b)(i) above and must be marked and signed by the applicant as "NO PARKING." Such signs must be of metal or wood construction with minimum dimensions of 12 inches by 12 inches; or
(bb) Cul-de-sac Turnarounds. Cul-de-sac turnarounds must have a right-of-way width with a radius of at least 45 feet and an improved surface with a width of at least 36 feet and must be marked and signed by the applicant as "NO PARKING." Such signs must be of metal or wood construction with minimum dimensions of 12 inches by 12 inches; and
(cc) No cul-de-sacs or hammerhead turnarounds must be allowed to cross any slope which will allow chimney-effect draws unless the dangerous effects of the

chimney-effect draws have been mitigated by the location of the road and, where necessary, by the creation of permanent fire breaks around the road.

RESPONSE: Turn arounds within the road portion of the shared access are illustrated on Exhibit A at intervals of not more than 500 feet. A turn around will be provided at the dwelling,

(iv) Bridges and Culverts. Bridges and culverts must be constructed to sustain a minimum gross vehicle weight of 50,000 lbs. and to maintain a minimum 16-foot road width surface or a minimum 12-foot driveway surface. The Planning Director may allow a single-span bridge utilizing a converted railroad flatcar as an alternative to the road and driveway surface width requirements, subject to verification from an engineer licensed in the State of Oregon that the structure will comply with the minimum gross weight standard of 50,000 lbs.

RESPONSE: No bridges are required or existing. No new culverts are proposed. However, if any are needed, the applicant agrees to install per the above.

(v) Road and Driveway Grades. Road and driveway grades cannot exceed 16 percent except for short distances when topographic conditions make lesser grades impractical. In such instances, grades up to 20 percent may be allowed for spans not to exceed 100 feet. An applicant must submit information from a Fire Protection District or engineer licensed in the State of Oregon demonstrating that road and driveway grades in excess of eight percent are adequate for the firefighting equipment of the agency providing fire protection to access the use, firefighting equipment and water supply.

RESPONSE: The proposed shared roadway and driveway can be constructed on slopes not exceeding 16%.

(vi) Identification. Roads must be named and addressed in compliance with LC 15.305 through 15.335.

RESPONSE: This is instructional.

(vii) Driveway Vehicle Passage Turnouts. Driveways in excess of 200 feet must provide for a 20-foot long and eight-foot wide passage space (turn out) with six inches in depth of gravel and at a maximum spacing of 400 feet. Shorter or longer intervals between turnouts may be authorized by the Planning Director where the Director inspects the road and determines that topography, vegetation, corners or turns obstruct visibility.

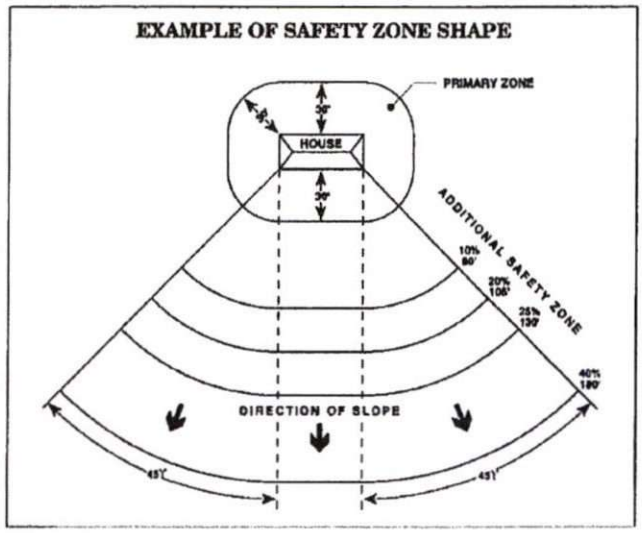
RESPONSE: The driveway portion of the access is roughly 450 feet in length to the home site. See site plan, Exhibit A. Based on topography, it is possible to provide the necessary 1 turnout. A turn around will be provided at the dwelling, Exhibit A.

(viii) Modifications and Alternatives. The standards in (6)(b)(i) through

(6)(b)(vii) above may be modified by the approval authority provided the applicant has submitted objective evidence demonstrating that an alternative standard would insure adequate access for firefighting equipment from its point of origination to its point of destination.

RESPONSE: Not applicable.

(c) Fuel-Free Breaks. The owners of dwellings and structures must maintain a primary safety zone surrounding all structures and clear and maintain a secondary safety zone on land surrounding the dwelling that is owned or controlled by the owner in compliance with these requirements.



(i) Primary Safety Zone. The primary safety zone is a fire break extending a minimum of 30 feet in all directions around dwellings, manufactured dwellings and structures, unless otherwise specifically stated in LC 16.211. The goal within the primary safety zone is to exclude fuels that will produce flame lengths in excess of one foot. Vegetation within the primary safety zone could include green lawns and low shrubs (less than 24 inches in height). Trees must be spaced with greater than 15 feet between the crown and pruned to remove dead and low (less than eight feet) branches. Accumulated leaves, needles, and other dead vegetation must be removed from beneath trees. Nonflammable materials (i.e., rock) instead of flammable materials (i.e., bark mulch) must be placed next to the house.

(aa) As slope increases, the primary safety zone must increase away from the house, parallel to the slope and down the slope, as shown in the table and figure below:

Table 16.211-2 Minimum Primary Safety Zone

Slope	Feet of Primary Safety Zone	Feet of Additional Primary Safety Zone Down Slope
0%	30	0
10%	30	50
20%	30	75
25%	30	100
40%	30	150

Figure 16.211-1

RESPONSE: The site slopes downward to the northeast. There are slopes greater than 20% within 30 feet of the dwelling site. The applicant has provided a 30-foot primary fuel break, plus an additional 75' primary fuel break in the northeast direction. See Exhibit A - Site Plan. There are no slopes in excess of 40% within 30 feet of the home site.

> ***(ii) Secondary Safety Zone. The secondary safety zone is a fuel break extending a minimum of 100 feet in all directions around the primary safety zone. The goal of the secondary safety zone is to reduce fuels so that the overall intensity of any wildfire would be lessened and the likelihood of crown fires and crowning is reduced. Vegetation within the secondary safety zone must be pruned and spaced so that fire will not spread between crowns of trees. Small trees and brush growing underneath larger trees must be removed to prevent spread of fire up into the crowns of the larger trees. Dead fuels must be removed.***

RESPONSE: The proposed dwelling site will have a full secondary fuel break in all directions around the primary safety zone.

> ***(d) The dwelling must have a fire retardant roof.***

RESPONSE: This is instructional.

> ***(e) Dwellings or manufactured dwellings must be sited at least 30 feet away from a ravine, ridge, or any slope greater than 40 percent slope.***

RESPONSE: There are no slopes in excess of 40% within 30 feet of the home site. See Exhibit S.

(f) If the dwelling has a chimney or chimneys, each chimney must have a spark arrester.

RESPONSE: This is instructional.

VICTOR ATIYEH
GOVERNOR

Department of Land Conservation and Development

1175 COURT STREET N.E., SALEM, OREGON 97310-0590 PHONE (503) 378-4926

July 19, 1984

The Honorable Peter DeFazio
Chairman, Board of Commissioners
Lane County Courthouse
125 East Eighth
Eugene, OR 97401

Dear Chairman DeFazio:

Enclosed is the Department's report on the Lane County and the Eugene/Springfield Metro area request for Acknowledgment of Compliance with Statewide Planning Goals 5 and 15. The Department's recommendation to the Commission is that your request be continued to the August 16-17, 1984 meeting to complete necessary revisions to your plan and land use regulations for Goals 5 and 15.

The Commission will consider your acknowledgment request on August 16 or 17, 1984, at the State Capitol. You and other officials and citizens are welcome to attend this meeting and participate in the Commission's review of your acknowledgment request. You have 10 calendar days from the date the attached report was mailed to file written exceptions to the report with the Commission at the Salem office (OAR 660-03-025(2)). We would urge you to send copies of any exceptions to commentors or objectors affected by exceptions.

Please contact your Field Representatives, Bob Rindy at 378-4095 or Glen Hale at 265-8869, if you have any questions and for the time when your item will appear on the agenda.

Sincerely,

James F. Ross
Director

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE

Lane County
and
Rural Portion of Eugene/Springfield Metro Plan
Goal 2--Nonresource Lands, Goal 5, Goal 15

Response from Denial Order of November 6, 1981
and from Continuance Order of November 6, 1981

DATE RECEIVED:
March 15, 1984

DATE OF COMMISSION ACTION:
August 17, 1984

REQUEST

The County has requested that its comprehensive plan and implementing measures be acknowledged as in compliance with the Statewide Planning Goals for areas outside adopted urban growth boundaries. Also, the County and the Cities of Eugene and Springfield request acknowledgment of compliance for the rural portions of the Eugene/Springfield Area General Plan.

SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission continue Lane County's request to allow amendments to the plan to comply with Statewide Planning Goals 2, 5, and 15. The Commission should hear testimony on these issues July 19, 1984, but not take final action until the August hearing.

Recommends the Commission continue the request to allow amendments to the Eugene/Springfield Metro Area General Plan under Goals 2, 5, and 15. The Commission should not take final action on this until the August Commission hearing.

FIELD REPRESENTATIVES: Bob Rindy/Glen Hale (Coastal)

LEAD REVIEWERS: Mike Rupp (Goals 2--Nonresource Lands
Claire Puchy (Goals 5 and 15)
Phone: 378-4926

COORDINATOR: Gary Darnielle
Phone: 687-4283

Date of Report: July 19, 1984

GOAL 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

This Goal 5 report is divided into two major parts. The first part is the review for all areas of Lane County outside the Metro Plan Boundary. The second part is for those areas inside the Metro Plan Boundary, but outside the Metro Area UGB.

PART I--AREAS OUTSIDE THE METRO PLAN BOUNDARY

Introduction

All Goal 5 resource categories are applicable to Lane County, and are addressed in separate subsections of this report.

According to Section 660-16-025 of the Goal 5 Administrative Rule (OAR 660-6-000 through 660-16-025), the Goal 5 Rule requirements apply to jurisdictions under denial orders as of the date the adoption of the Rule (June 1981). Lane County was issued a denial order in March of 1981. Therefore, the Goal 5 Rule has been used during this review for purposes of judging compliance.

In the following discussion, the numbers and letters in parentheses refer to sections of the Goal 5 Administrative Rule (e.g., (1A), (1B), (1C), (2A), (3A), (3B), (3C)). It should be noted, however, that these are the citations used by the Commission in its June 1981 adoption of the Rule. Since that time, the Secretary of State's office has recodified the Rule and has assigned different numbers and letters to its various subsections. The references in this report are to the Commission's 1981 version, since it is the one with which most readers are familiar. A copy of this Rule is attached to this report for reference.

Goals 16 and 17 establish more specific inventory and protection requirements for some Goal 5 resources that are located in estuarine or coastal shorelands areas.

Lane County's plan and implementing measures were acknowledged as being in compliance with the Coastal Goals in July, 1983. Therefore, this Goal 5 review does not address the following Goal 5 resources in those areas:

	Addressed Under	
Goal 5 Resource	Goal 16	Goal 17
Open Space	X	
Mineral and Aggregate Resources		
Energy Sources		

Fish and Wildlife	X	X (only "riparian," "major marshes and significant wildlife habitats")
Ecologically Significant Natural Areas	X	X
Scientifically Significant Natural Areas	X	
Outstanding Scenic Views and Sites		X (where the quality is primarily derived from or related to the association with coastal water areas)
Watersheds		
Groundwater Resources		
Wetlands	X	X (only "major marshes," "significant wildlife habitat," and wetlands with "exceptional aesthetic quality")
Historic/Archaeological Sites		X
Wilderness	X	X
Oregon Recreation Trails		
Wild and Scenic Rivers and Waterways		

Land Needed or Desirable for Open Space

Inventory

Lane County's Recreational Resources Working Paper contains a section addressing open space (pp. 4-5). The County discusses the various kinds of open space, and the benefits of preserving open space. The County indicates that it considers "all lands designated for agricultural or forest use, or for other clearly similar resource-production use" to be open space (p. 5). Additionally, the County concedes that recreational

areas, including parks, and significant or scientific natural areas also contain open space qualities. Because of "its broad nature, open space is not mapped as a site-specific, separate resource item. Instead...other designations with open space qualities are mapped..." (p. 5). Please refer to the Goal 3, 4, 9, 15 and other Goal 5 portions of this report for more detailed information about Lane County's inventories of lands possessing open space values. See also the July 1983 staff report adopted by the Commission for a discussion of compliance with inventory requirements of Goals 16-18.

Policies

Lane County has adopted one policy which addresses open space resources, per se (Open Space and Scenic Areas Policy 1, Plan, p. 16):

> Lane County has determined that all resource lands in the County are also open space lands. Resource related activities shall predominate on these lands. Where proposals are developed land uses are made consistent with the Comprehensive Plan and Statewide Goals, development standards shall be applied which minimize loss of open space.

In addition, the County has adopted numerous policies regarding agricultural and forest lands, a variety of Goal 5 resources which possess open space values, the Willamette Greenway recreation areas, and coastal resources. Please refer to the Goal 3, 4, 8, 15 and remaining Goal 5 sections of this report for details. See also the July, 1983 Commission action for a discussion of policies addressing Goals 16-18.

Implementing Measures

As noted in the Goal 3 and 4 sections of this report, Lane County has several resource zones which it has applied throughout the County. It has also adopted and applied a Greenway Permit ordinance to lands within the Willamette Greenway (see the Goal 15 section of this report for details). However, these Goals have not yet been fully satisfied, nor have some Goal 2 exceptions been justified. Several coastal zones have been developed and applied in coastal shorelands, estuarine, and beaches and dunes areas (see the July, 1983 staff report adopted by the Commission regarding compliance with Goals 16-18).

Finally, as noted in the remaining subsections of the Goal 5 section of this report, the County has adopted several implementing measures for the protection and/or resolution of conflicts with Goal 5 resource sites containing open space values.

In particular, the County has adopted a Natural Resource Zone (NR-RCP) (Lane Code, Section 16.213), which is intended to protect areas having unique and irreplaceable natural resources which are vital elements for a safe, healthful and pleasant environment for human life. The Natural Resource Zone states that it may be applied to public and private lands where the Rural Comprehensive Plan requires natural resource site

protection, but that the zone is not intended to be applied to other types of resource land, such as agricultural land and forest land. This is not to say, however, that the Natural Resource Zone cannot be applied to agricultural and forest lands. If a Goal 5 resource site is located on agricultural or forest land, Natural Resource zoning will be applied after an analysis of the ESEE consequences of conflicting uses has been completed demonstrating the appropriateness of Natural Resource zoning (confirmed by Jim Mann, Senior Planner, personal communication, June 20, 1984).

Emphasis of the Natural Resource Zone will be placed on limiting and regulating human activity in areas where:

(a) The acceptable water quality of streams, lakes, estuaries of the ocean may be endangered;
(b) Watersheds and their streams or lakes are used for domestic water supplies;
(c) Vegetative cover is essential to maintain soil stability and prevent erosion;
(d) Natural conditions are vital for either unique vegetative ecosystems, aquatic or wildlife habitat; and
(e) Scenic quality or vistas or open space is unique and/or irreplaceable.

In the NR Zone, the following uses are allowed outright (Section 16.213(2):

(a) The following recreational facilities and uses owned by a governmental agency of a nonprofit community organization limited to day use.

(i) Exhibitions of the natural conditions of shorelands, dunelands, forested areas, streams and lakes, marshlands, or similar areas of unique and irreplaceable value, and the vegetation and wildlife supported by such lands and waters provided that in no event shall such activity destroy, or endanger the relationships between the natural conditions being exhibited.

(ii) Picnicking areas, day parks and playgrounds.

(iii) Accessory facilities for outdoor recreation activity such as fishing, clam digging and hunting (provided such activity is conducted only in those areas allowed pursuant to Federal, State and Local fish and game regulations) and hiking and horseback riding.

(b) Fish and wildlife habitat management and the propagation of fish and wildlife.

Single family dwellings or mobile homes for residential purposes for a watchman, caretaker or operator in conjunction with a permitted use, in the NR Zone above, are considered "Special Uses" subject to approval by the Planning Director (Section 16.213(3)). The following "Special Uses" are subject to approval by a Hearings Officer (Section 16.213(4)):

(a) Piers and boat houses.
(b) Single-family dwelling or mobile home and accessory structures.
(c) Farm uses as defined by ORS 215.203(2), and any accessory uses.
(d) Forest uses and any accessory uses.

Uses in Section 16.213(4) above are subject to compliance with the following conditional use criteria (Section 16.213(5)):

(a) (i) Evidence is provided supporting reasons why the proposed use should be sited in a natural resource area.
(ii) That the proposed site is on land generally unsuitable for natural resource uses.
(b) That the proposed use will not significantly impact natural resource uses on adjacent and nearby natural resource lands, and will not significantly impact natural resources on the site of the proposed uses;
(c) That the proposed use will not significantly increase the costs of natural resource management on adjacent and nearby resource lands;
(d) That the site is limited in size to that area suitable and appropriate only for the needs of the proposed use;
(e) That, where necessary, measures are taken to minimize potential negative impacts on adjacent and nearby NR zoned lands, and these measures may be established as conditions of approval; and
(f) That the proposed use is consistent with the policies contained in the Rural Comprehensive Plan and the purpose of the NR zone.

Property development standards for all uses allowed in the NR Zone are set forth in Section 16.213(6) and include setbacks from front, side and rear yards.

Specific application of the Natural Resource Zone is discussed in the other Goal 5 sections of this report. A review of the County's zoning maps indicates that the NR Zone has been applied to a number of Goal 5 areas in the County.

Section 16.215 of the Zone Code is the County's Park and Recreation (PR-RCP) zone which has been applied to a number of sites in the County. The zone permits a number of recreational uses outright and conditionally. However, as noted in the Goal 2 Section of this report, the PR Zone allows a number of uses which could conflict with the purpose of the zone. Some of these uses could also conflict with a number of

Goal 5 resources including open space. This issue is dealt with in the Goal 2 portion of this report.

Conclusion--Open Space

Lane County has not inventoried any specific open space areas, per se. However, it considers farm and forest lands, recreation areas as well as natural areas to possess open space values. These have been inventoried as part of other Goal requirements. The County has a policy recognizing all resource lands as open space lands and indicating that resource-related activities shall predominate in these areas. Open space loss will be minimized where development is proposed, according to the County's policy. Resource zoning has been applied to most of the County, along with special zoning districts which help protect open space (e.g., Willamette Greenway, Natural Resource Zones).

Mineral and Aggregate Resources

Inventory

Lane County's inventory of mineral and aggregate resources is contained in its Mineral and Aggregate Working Paper.

Mineral Resources: The Working Paper addresses the following minerals: clay, copper, lead, gold, zinc, silver, mercury, antimony, arsenic, tourmaline, molybdenum, and pumice (pp. 3-5). The general locations of these mineral deposits are shown on a map (Appendix A), and are concentrated in four main areas: Hobart Butte, Bohemia, Fall Creek, and Blue River. The locations of these four areas are shown on the map as well. Information about the general quality, and quantity of these resources is provided. The County has not provided information on the location, quality, and quantity of specific sites, however.

Aggregate Resources: Lane County inventoried its aggregate supplies by examining permit lists from the Department of Geology and Mineral Industries and the Division of State Lands, by conducting telephone searches, taking on-site tours of aggregate-producing areas; and by talking with industry representatives (p. 6). The locations of 30 identified sites appear on a map in Appendix C and are listed by legal descriptions and tax lot numbers in Appendix D. A more extensive list of all tax parcels having any record of previous aggregate extraction is included in Appendices E and F. Appendix D is considered the County's (1C) inventory for lands outside the Metro Planning Area. Appendix E is the (1B) inventory for lands inside the Metro Area. Appendix F is the (1B) inventory for lands outside the Metro Area (confirmed by Mike Copely, Lane County Planner, personal communication, July 16, 1984).

Information on quantity of (1C) sites is presented in cubic yards, but the County cautions that the accuracy of this information is limited. In many cases, individual suppliers had only a cursory knowledge of the extent of their resources (p. 7). Quality of the supplies was not evaluated, due to time and budget constraints as well as the variability of resource materials.

Supply estimates were compiled by region (there are four regions in the County) and then coupled with demand estimates for each region in order to assess localized needs and supply/demand situations (p. 7). Demand forecasts were based on population projections and a per capita consumption figure of 22 tons annually (p. 7). Based on these estimates, cumulative demands for each region were projected. This analysis shows that existing supplies will be sufficient to satisfy demand to the year 2000. This will be particularly true if actual population growth rates are on the low side of the estimates. The available supply for the non-metropolitan area of the County is about three times the figure for projected consumption even when assuming the high population projections (p. 8). However, in terms of the supply/demand situation for each region, the margin of supply over demand for the southern section is relatively small. This is true also (but less so) for the western region. Also, the Metro Area will use some of the County supplies. Similarly, 5 to 10 percent of the U.S. Forest Service and BLM needs are supplied by the private market (p. 9).

Conflicting Uses/ESEE Consequences Analyses

Mineral Resources: Lane County reports that most of the mineral areas are on public lands (either the BLM or U.S. Forest Service). As such, federal laws govern prospecting, claims, and mining activities. Current forest resource designation and zoning for these areas "do not appear to preclude their development potential. Forest management and mining activities are considered to be compatible activites by most authorities" (p. 5).

Aggregate Resources: Each of the 30 inventoried sites was evaluated in terms of the following potential conflicts:

1. Areas of significant natural value contained in the Oregon Natural Heritage Program inventory;
2. Historical resources contained in the Working Paper on Historical Resources;
3. Willamette Greenway;
4. Park and recreation sites contained in the Lane County Parks and Open Space Master Plan;
5. Sensitive fish and waterfowl habitat identified in the Working Paper on Flora and Fauna; and
6. Existing or planned residential development.

Appendix J summarizes the results of the County's analysis. No conflicts were noted for any of the sites. Sites were not evaluated in terms of conflicts with agricultural or forest lands, since all of the sites are existing sites and therefore no longer available for these uses (p. 10).

Policies

A number of mineral and aggregate resources policies have been adopted (Plan, pp. 13-14). These include:

1. Known mineral resource sites within the County, which include those identified in Appendix "D" of the "Mineral and Aggregate Resources Working Paper," shall be conserved for both present and future uses through the application of Plan designations and compatible land use regulation measures. Such designation and regulation is to follow the requirements of the Goal 5 rule (OAR 660-16-000 through 660-16-025), which is addressed in Appendix "J" of the "Mineral and Aggregate Resources Working Paper."

2. Exploration for mineral resources (in contrast to actual mining) shall be a permitted activity in the rural portions of the County. Areas designated primarily for residential purposes are to be excluded from this policy as are areas that, having undergone analysis in accordance with OAR 660-16-000, are designated as having some unique natural, historical or cultural value. Exploratory drilling for gas, oil or other hydrocarbons is not within the scope of this policy.

3. Mining operations are regulated by state and federal government agencies. County regulations shall supplement these actions only as necessary to ensure compatibility in the area, or to protect other resources.

4. Conserve and manage land, soil and mineral resources by respecting their physical limitations and environmental assets.

5. Update, in cooperation with local aggregate operations, federal, state and local agencies, past sand and gravel inventories to ensure supply/demand information is current.

6. Protect aggregate deposits from encroachment of incompatible uses and ensure that aggregate material in close proximity to its point of use will be available when needed.

7. Present and future land use controls shall be implemented to allow for the discovery of new mineral and aggregate resources when it is demonstrated that the projected demand for those resources in a given area will exceed available supply and conflict with adjacent uses can be minimized. Conflict analysis and resolution shall follow the methodology set forth in Appendix "J" of the Working Paper: Mineral and Aggregate Resources; however possible impact on agricultural lands, forest lands and residential

development (existing or planned) must also be considered. For sites within the Willamette Greenway or near Goal 5 inventoried resources, notification of the potential conflict shall be sent to the appropriate body (e.g., Pioneer Museum, Oregon Department of Transportation, Oregon Department of Fish and Wildlife, etc.).

8. Encourage farm and forestry use of aggregate land prior to extraction; minimize negative environmental impacts during extraction; require reclamation after extraction which is compatible with adjacent uses.

9. Lane County shall apply the appropriate district (SG, SG/CP, /QM) to the sites listed in Appendix "J" of the Mineral and Aggregate Working Paper. Those sites with potential conflicts shall be placed in the SG/CP or QM/SR Districts.

10. Sites for which not enough information is presently available to determine quality, quantity and conflicts with other uses which include those sites listed in Appendix "F" of the "Mineral and Aggregate Working Paper," shall be considered "Significant" in terms of OAR 660-16-000 through 660-16-025, but requiring that the Goal 5 evaluation process be delayed (the "1B" option). At such a time as it is clear that these sites will be needed within the County's advance framework, they shall be evaluated per the Goal 5 rule including conflict analysis and implementation of protective measures. Such evaluation will take the form of Plan amendment or revision studies. Notwithstanding the above schedule, all "1B" sites will be evaluated within five years of the date of this Policy adoption. These sites are included herein as Goal #5 Mineral and Aggregate Exhibit A.

11. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with section C.3.i. of the Goal. Major adverse effects of extraction on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, scenic quality, noise and safety are to be minimized, and such values reclaimed where possible. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Policy 11 above indicates that significant fish and wildlife habitat areas in the Greenway shall be protected in accordance with Section C.3.i. of Goal 15. Section C.3.i. requires that aggregate extraction be allowed only when "subject to compliance with local regulations designated to minimize adverse effects on water quality,

fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise, safety and to guarantee necessary reclamation" (emphasis added). The Goal standard for significant fish and wildlife habitat areas, however, is stronger. It is spelled out in Section C.3.d. of Goal 15, rather than simply Section C.3.i. (This is also addressed in the Goal 15 section of this report).

Implementing Measures

Lane County has adopted a Quarry and Mine Operations Combining (/QM-RCP) Zone to protect major deposits of minerals, rock, and related material resources, and to resolve conflicts with surrounding uses (Lane Code, Section 16.216).

The Quarry and Mine Operations Combining Zone shall be available for use by the County for new or existing operations when requests are received as part of an areawide or legislative rezoning, or a specific property or quasi-judicial rezoning. When property under consideration of /QM zoning is in close proximity to existing and planned uses potentially incompatible with /QM uses, the application of the zone may be limited to a specific portion of a property in order to encourage the compatibility and proper management of land uses.

The Quarry and Mine Operations Combining Zone is intended to be applied only to those operations which have been evaluated through the Goal 5 Administrative Rule process. Other quarry and mining operations of short-term or intermittent duration should be provided pursuant to the special use provisions of the various zones.

In the Quarry and Mine Operations Combining Zone, the following types of buildings and uses are permitted, subject to the provisions of the Quarry and Mining Operation Reclamation Permit and exceptions set forth in the code (Section 16.216(4)).

(a) Uses permitted in the parent zone with which the /QM zone is combined.
(b) Extracting and storing of minerals, including equipment and materials necessary to carry out these functions.
(c) Plants for the processing of minerals from quarry and mine extraction operations.
(d) Sale of products generated from the quarrying and mining operation.
(e) Activities pemitted as part of the reclamation process provided for in the Reclamation Plan.
(f) Structures an buildings used in conjunction with the extracting and storing of minerals.

The zone requires that a surface mining permit first be obtained from the Department of Geology and Mineral Industries (Section 16.216(5). Section 16.216(6) sets forth blasting notice and records requirements.

Section 16.217 of the Lane Code is the County's Sand, Gravel, and Rock Products (SG-RCP) Zone. The SG Zone "shall only be applied to those sites which have been evaluated consistently with the Statewide Planning Goal No. 5 Administrative Rule conflict resolution process (Sec. 16.217(4)). In the SG-RCP Zone, sand and gravel operations are permitted subsequent to the following restrictions: For any property designated in the Eugene-Springfield Metropolitan Plan as significant in terms of OAR 660-16-000/025 and designated as '1B', a Goal 5 ESEE consequences analysis per the Goal No. 5 Administrative Rule must first be completed. If the landowner and County do not agree on the method to achieve the Goal, the matter shall be forwarded to the Hearings Official for processing consistent with LC 16.100.

A number of uses are allowed in the SG-RCP Zone when conducted in conjunction with a sand and gravel operation (Sec. 16.217), including asphalt paving-mix plant and accessory buildings; cement concrete batching plant; aggregate products fabrication and sale; sand and gravel resource-related equipment storage yard, maintenance and storage buildings, offices and warehouses "appropriate to the uses permitted in this District"; retail or wholesale sales of products related to the use of sand, gravel and related products; agriculture, grazing or timber raising; dwellings for owners, operators or help required; and signs. The zone contains site improvement standards, as well as setback standards, cover, planting, drainage and topsoil standards, and operating standards.

The SG-RCP Zone establishes a Sand and Gravel Review Committee to determine if operating plans or revised plans comply with the requirements of the zone or with "a river plan which may be adopted by the Board." The committee is made up of the Planning Director, the Public Works Director, the Parks and Recreation Director, the Chief Sanitarian, the County Hydrologist, and the County Floodplain Specialist. The Review Committee is notified of all operating plans and revised plans, and has seven days to approve the plan or require modification of the plan.

It appears, from an examination of zoning maps, that the SG Zone has been applied to a number of sites that are not included on any plan inventory of (1C) sites. Yet, contrary to the zone's purpose statements, the County has not applied the Goal 5 process to these sites to justify SG zoning.

Section 16.218 of the Lane Code is the County's Sand, Gravel and Rock Products-Controlled Process (SG-CP-RCP) Zone. The zone is intended to provide more restrictive control of processing activities than the SG-RCP Zone (described above) for the protection of surrounding properties or for greater control over the location and operation of processing activities. The SG-CP-RCP Zone shall apply only to sites which have been evaluated via the Goal 5 Rule process (Sec. 16.216(3)).

The requirements of the SG-CP-RCP Zone are the same as in the SG-RCP Zone except that the Sand and Gravel Review Committee, in its evaluation of operational plans, must evaluate "the location for the erection or enlargement of all processing equipment and activities, including, but not limited to asphalt paving mix and cement concrete batching plants" according to the following "Operational Plan Approval Criteria":

(1) Conformity with the Rural Comprehensive Plan for Lane County.

(2) The location, size, design and operating characteristics of the proposed use:

(a) Will be compatible with and will not adversely affect the livability or appropriate development of abutting properties and the surrounding vicinity; and

(b) Will not be adversely affected by the development of abutting properties and the surrounding vicinity. (Consideration may be given to harmony in scale, bulk, coverge and density; to the availability of public facilities and utilities; to the harmful effect, if any, upon desirable neighborhood character, to the generation of traffic and the capacity of surrounding streets and roads; and to any other relevant impact of the use.)

(c) Will not be adversely affected by known natural hazards, such as floods, slides, erosion.

(d) Will not create a hazardous natural condition such as erosion, landslide, flooding.

Among the permitted uses in the F-1 Zone are (1) mining and quarrying and processing of rock permitted in accordance with the FPA for forest road construction or other forest related uses, or when used solely in conjunction with a farm use on which the mining or quarrying occurs, and (2) operations conducted for the exploration of aggregate or other mineral and subsurface resources (Lane Code, Section 16.210(2)(c) and (g)). Mining, quarry, and processing of mineral, geothermal and other subsurface resources; and rock mining, quarrying and processing which exceeds the standards in 16.210(2)(c), above, are allowed conditionally subject to a Hearings Official approval. Conditional use criteria in the F-1 Zone have been discussed in the Goal 4 section of this report.

In the F-2 Zone, mining, quarrying, and processing of rock for forest or farm road construction is permitted outright on the same tract as the mining or quarrying occurs (Sec. 16.211(2)(c)), as are operations for the exploration for aggregate or other mineral or subsurface resources (Sec. 16.211(2)(e)). The mining, quarrying, and processing of mineral and other subsurface resources; and rock mining and quarrying and processing that exceeds the standards in Section 16.211(2)(c), above are

considered Special Uses, subject to Hearings Official approval (Sec. 16.211(5)(d)). This is also the case for operations conducted for the exploration, mining and processing of aggregate or other mineral resources or other subsurface resources (Sec. 16.211(5)(k)). Criteria for permitting these uses are found in Section 16.211(6).

In the Exclusive Farm Use Zone, operations for the exploration, mining and processing of aggregate and other mineral resources or other subsurface resources are Special Uses, subject to Hearings Official Approval (Sec. 16.212(4)(b)).

Please refer to the Goal 15 section of this report for a discussion of the County's approach to mineral and aggregate sites located within the Willamette Greenway.

Objections

1. Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the sand and gravel plan and zone designations given to a site known as the Pudding Creek Heronry. Since this site is within the Willamette River Greenway, please refer to the Goal 15 section of this report for details about these objections.

2. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Inasmuch as this site is within the Willamette Greenway Boundary, the objections are presented in greater detail in the Goal 15 section of this report.

3. James Spickerman (on behalf of Leon Funke and Michael Horton) has objected to the zoning of farm lands for sand and gravel extraction and processing uses.

   a. Objectors are specifically concerned about the following parcels:

      17-03-06 TL 400, 500, 300, 201
      17-03-05 TL 300, 1500, 1300, 1900
      16-03-31 TL 901, 500 and 101

      The 455 acres in these parcels are primarily agricultural land and have been zoned SG-RCP according to objectors. Allowed uses include sand and gravel extraction as well as asphalt paving mix plant, concrete batching plant, aggregate products fabrication and sale, and retail or wholesale sales of products. The land was previously designated EFU. Objectors point out that in Westerburg v. Linn County, LUBA held that a Goal 2 exception to Goal 3 was required when a zone change was made from EFU to aggregate extraction and processing where the new zone permitted

manufacturing processes and activities. Objectors believe, therefore, that Lane County should have taken an exception prior to rezoning these parcels.

b. Objectors claim that the County applied SG zoning to parcel 16-03-31 Tax Lot 601 and 602 without the necessary ESEE consequences analysis of conflicts with Goal 3 uses and other Goal 5 uses. Objectors point out that the site has a "long history of documented conflict between the sand and gravel extraction use and adjacent agricultural and residential uses. Objectors further point out that in Olsen et al. vs. Scappoose Sand and Gravel Co., LUBA indicated that the Goal 5 Rule requires that, where conflicting uses have been identified, the Goal 5 resource site (e.g., mining) may itself have an impact on other uses and these impacts must be considered in analyzing the ESEE consequences.

c. Objectors believe that plan policies do not address the Goals adequately because there is no method set forth in the plan for Goal 5 conflict resolution analysis. The plan states that such analysis and resolution of conflicts shall follow the methodology in Appendix J of the Mineral and Aggregate Working Paper. Objectors, however, state that Appendix J contains no such methodology, but only a statement of conclusions regarding particular sites.

d. Objectors point out that the plan policies set forth no method to reconcile Goal 5 and Goal 3 conflicts (specifically, where agricultural soils are underlaid with aggregate resources).

e. Objectors claim that plan policies make no provision for ESEE analysis of conflicting Goal 5 uses.

f. Objectors claim that the plan does not comply with Goal 5 Guideline B9 which states:

> Areas identified as having non-renewable mineral and aggregate resources should be planned for interim, transitional and "second use" utilization, as well as for the primary use.

g. Objectors claim that, although a number of sites are to be considered under the (1B) process at a later date, the sites are not included on the plan inventory as a "special category," as required by the Goal 5 Rule.

h. Objectors believe the plan is not internally consistent. Specifically, objectors point out that EFU lands are zoned SG-RCP, but there is no basis for this in policies or in working papers. A number of parcels are zoned for sand and gravel extraction, but not all have been designated for such uses.

Objectors also point out that SG-RCP zoning is contrary to agricultural lands policies (to provide maximum protection for agricultural activities by minimizing activities that could conflict with such uses.

i. Objectors point out that no consideration is given to the effects of SG-RCP zoning on the groundwater resources of agricultural lands adjacent to the land designated SG-RCP.

Response to Objections

1. The response to the objections regarding the Pudding Creek heronry is presented in the Goal 15 section of this report.

2. The response to the objections regarding the Confluence Heronry is presented in the Goal 15 section of this report.

3. a. Objectors contend that sites 17-03-06, TL 400, 500, 300, 201; 17-03-05 TL 300, 1500, 1300, 1900; 16-03-31 TL 901, 500, and 1001 were all rezoned from EFU to S-G-RCP without an exception. Objectors cite Westerberg vs. Linn County as requiring this be done where the new zone permits processing activities. This was based on the fact that ORS 215.213 allows processing conditionally, but at the time of Westerberg vs. Linn County, "processing" did not include the batching and blending of aggregate. However, the 1983 Legislature changed the statutory definition of "processing" (ORS 517.750(9)) to include "crushing, washing, milling, screening as well as the batching and blending of mineral aggregate into asphaltic and portland cement concrete product . . .". Therefore, objectors are not correct in suggesting that a Goal 2 exception be taken for such sites. However, this is not to say that the Goal 5 Rule process does not apply. In the case of the parcels cited by objectors, this process has been completed for only 17-03-06 TL 400, 17-03-05 TL 300, 16-03-31 TL 901, and 16-03-31 TL 1001. The Mineral and Aggregate Working Paper (p. 10) indicates that, because these are existing operating sites, these sites are no longer available for agricultural use. No conflicts were found to exist for any of these four sites.

b. Objectors are correct that parcel 16-03-31 TL 601 has not been analyzed according to the Goal 5 process. Site 16-03-31 TL 602, however, is included as Site No. 21 in Appendix D of the County's Mineral and Aggregate Working Paper. No conflicts were found to exist with Site No. 21. Conflicts with agricultural uses for the site were not analyzed because the site is an operating site and it is assumed it is no longer available for agricultural use (Working Paper, p. 10). Objectors are correct, however, that the County did not address conflicts with adjacent agricultural and residential uses. This has not been required except when a new site or expansion of an existing site is

proposed. Policies 7 and 10 require Goal 5 analysis in such circumstances, including analyzing and resolving conflicts with surrounding uses.

c. Objectors are not correct that the County lacks a method for analyzing and resolving conflicts pertaining to (1C) mineral and aggregate resources in Appendix D. The County indicates that there are no conflicting uses for these sites, and therefore either the SG ,/QM or SG/CP zone will apply. It also indicates that sites with potential conflicts shall be placed in the SG/CP or QM/SR Districts (Mineral and Aggregate Policy 9). All (1B) sites require a full Goal 5 evaluation, including conflict resolution and plan amendments or revision studies before extraction activities are allowed, according to Mineral and Aggregate Policy 10.

Objectors are correct that Appendix J is a statement of conclusions about the conflicts with the 30 (1C) sites, and not a methodology for analyzing and resolving conflicts per se. However, the policy should be interpreted as requiring that the same methodology used in producing Appendix J will be used in future conflict/resolution situations (i.e., determining whether there are conflicts with other Goal 5, 8, and 15 resources, or with planned or existing development). The policy would also require consideration of possible impact or agricultural and forest lands in approval of any new site or expansion of an existing site.

d. Objectors are not correct that there is no plan policy method to reconcile conflicts on agricultural lands that contain aggregate resources for those (1B) sites in Appendix F. Specifically, Mineral and Aggregate Policy 10 requires a full Goal 5 Rule evaluation of (1B) sites. This will require a site-by-site analysis of conflicts (including those with agricultural lands), an ESEE consequences determination of those conflicts, and application of measures to resolve conflicts.

e. There is no specific Goal 5 requirement to adopt plan policies which require analysis of ESEE consequences of identified conflicting uses. Rather, such conflicts are to be resolved during the planning process, based on such an analysis which is to be incorporated into the plan. (The exception to this is for (1B) sites. Jurisdictions must adopt policies to apply all applicable steps of the Goal 5 Rule to such sites. Lane County has such a policy for its (1B) mineral and aggregate resources--Mineral and Aggregate Policy 10).

f. Guidelines do not carry the same weight as the Goals, and therefore, this objector's concern is not a Goal requirement. However, objectors do raise an important concern, and the County is urged to plan such sites for interim, transitional and "second" use.

g. Contrary to objector's statements, the County has placed its (1B) sites on a special category inventory--Appendix E and F of the Mineral and Aggregate Resources Working Paper. It also has expressed this in Mineral and Aggregate Policy 10.

h. Objectors are correct that some lands are zoned SG that are not on the (1C) inventory, nor has the Goal 5 process been applied to them to justify SG zoning rather than EFU, or some other zoning.

SG zoning for a particular site may be counter to the County's policy of providing maximum protection for agricultural activities by minimizing activities that could conflict with such uses. However, Goal 5 requires protection of mineral and aggregate resources. These Goal requirements must be balanced. This is done through the Goal 5 process. When analyzing the ESEE consequences of conflicting uses for a particular site, the requirements of other Statewide Goals must be considered and balanced against Goal 5 requirements.

i. Objectors have not provided information demonstrating how SG zoning will have an effect on groundwater resources of adjacent agricultural lands. Other state statutes require that this concern be addressed.

Conclusion--Mineral and Aggregate Resources

Lane County has inventoried its mineral and aggregate resources and has identified 30 specific aggregate sites which are considered (1C) sites. The amount of aggregate contained in these 30 sites is sufficient to satisfy the demand to the year 2000. The County indicates there are no conflicting uses with any of these sites, and has applied QM-RCP, SG-RCP, or SG-CP-RCP zoning to those sites. These zones assure that extraction can occur, subject to appropriate conditions regarding such things as setbacks, drainage, traffic and operation.

The County has identified a number of (1B) sites which will be evaluated according to the Goal 5 process (including plan amendments, where necessary), within the next five years.

A number of sites not in any plan inventory have been zoned for sand and gravel extraction, but have not been justified as such, based on an analysis of ESEE consequences of conflicting uses.

Energy Sources

Inventory

Lane County has adopted an Energy Working Paper which describes energy consumption and both conventional and alternative energy sources. Conventional sources includes electrical energy from seven utility

companies and natural gas and petroleum from out-of-state sources (pp. 7-15). Alternative sources include solar, hydroelectric, biomass, cogeneration, wind, and geothermal energy (pp. 15-29). Of these, the County considers only hydro power and geothermal sites to be site-specific (p. 39).

The Working Paper identifies eight dams currently generating power or having the potential to do so (p. 18), as well as eight existing nonpower dams with hydroelectric generation potentials exceeding 200kW (p. 18). Maps showing the general locations of these sites are on page 19 of the Working Paper. Information about the dam height, hydraulic head and capacity for each site is presented on page 18. Proposed dams with generation potentials exceeding 25MW and those with potentials between 200kW and 25MW are identified on page 21 of the Working Paper and mapped on page 22. Information about dam height (where known), hydraulic head, system head, and capacity is presented (p. 21).

Wind potential in Lane County is through to be highest along the Coast and Coast Range. Eugene Water and Electric Board (EWEB) and 19 public utilities operate an experimental windmill in the Coast Range north of Lane County, and PP&L operates a wind turbine near Coos Bay. Average wind speeds in Lane County, however are too low to power such windmills (p. 26).

There are two known Geothermal Resource Areas (KGRA's), both of which are in the eastern portion of the County on federal land. Both are under study by the Oregon Department of Geology and Mineral Industries (p. 29). The locations of the two KGRA's--Belknap-Foley KGRA and McCredie KGRA--are shown on Map 7 (p. 30). Information regarding their reservoir temperatures, mean reservoir volume, wellhead thermal energy and thermal power, and resource to land distance is presented in Table 11 (p. 31). The Energy Working Paper also describes the stages of geothermal energy development and discusses the constraints upon geothermal power generation (pp. 28-29). Although the potential for geothermal energy development in Lane County is "significant," further information is needed regarding its potential in the two KGRA's and the environmental impacts associated with such development (p. 29).

A cogeneration facility capable of producing 28,000 kilowatts of power exists at the Weyerhaeuser plant in Springfield, and another facility capable of producing 800 kilowatts is being installed in the Lane Plywood Company of Eugene (pp. 25-26).

The Working Paper disucsses the potential for biomass as an energy source in Lane County (pp. 23-25). There are two major sources--forest lands and farm lands. The potential for energy generation from these sources is great, but economic feasibility and environmental impacts are primary constraints to development of these sources at this time (p. 25).

Conflicting Uses/ESEE Consequences Analyses

General, non-site-specific conflicts are discussed for each of the major energy source categories identified (i.e., hydroelectric, biomass, solar, cogeneration, wind).

Regarding hydro sites, the County states:

> Maps have been presented illustrating a number of alternative hydro sites on various rivers in the County. Since these sites are, at present, in the proposal stage, it is premature to evaluate conflicting uses for each one, but the sites need to be acknowledged by designation on Plan Diagrams, and some effort made to ensure their availability when needed. Conflicting uses will be examined and resolved at such a time as the sites are actually being proposed for development; this could probably be done most efficiently as part of the elaborate permitting process hydro power must undergo before approved. In most cases, conflict resolution is a major factor in hydro development even through many of the sites are located on public land, or lands presently set aside for resource uses--especially timber lands. Existing resource-based zoning can do much to prevent them from being subjected to development if energy considerations are incorporated into the zoning requirements. In Goal 5 language, the "1B" option should be taken at this time (p. 39).

Regarding geothermal sites, the County indicates that because they are located on federal lands, they will have to go through a series of state and federal permit approvals. Zoning "only reflects the County's desire that the sites be protected from conflicting uses." Therefore, the County has not conducted an analysis of conflicting uses (p. 39).

Solar access does not appear to be endangered at this time in the rural areas. However, this is not the case in newly developing residential and commercial areas (p. 39).

Policies

Five Energy Resource policies have been adopted by Lane County (Plan, p. 17):

1. Lane County shall identify energy resource areas within the County and protect such areas through the use of existing ordinances and regulations. Such regulations shall address hydroelectirc, geothermal, and wind power sites.

2. Lane County shall encourage the exploration and development by other agencies of renewable energy resources such as geothermal, wind, biomass, hydroelectric and solar, and shall monitor such development to ensure that the development does not cause adverse effects within the County.

3. Lane County will use the work of the L-COG Committee on Energy, and its report, "Lane County Electic Energy Planning Program, Final Report (1983)" as a source of resource identification and site protection measures. This will supplement the County's own measure expressed in Policy and Zoning Statements.

4. The County shall protect the sites of hydroelectric resources through conditional or special use provisions of its resource zones. Sites for which a license has been applied for with federal and state authorities, or for which water impoundments of more than 100 acre-feet are proposed, or which will generate power in excess of 75KW, shall be shown on the Plan as a special designation, an Exception to applicable LCDC Goals taken if necessary, and a special zoning district applied. At that time, the Goal 5 rule conflict analysis shall also be carried out.

5. For additional energy policies see Goal 3.

Implementing Measures

Hydroelecric generating facilities with water impoundments of less than 100 acre-feet are allowed conditionally subject to Hearing Official approval in the F-1 and F-2 Zones (Lane Code, Sections 16.210(4)(g), 16.211(5)(g)).

A hydroelectric generating facility not exceeding 10 acres in size and located at an existing water impoundment which will not be increased in size because of the generating facility is also permitted conditionally (subject to Hearings Official approval) in the F-1 and F-2 zones (Section 16.210(4)(h), 16.211(5)(h)).

The conditional use criteria for approving or denying these hydroelectric facilities are those for other nonforest uses (Sec. 16.210(5)(a) through (f); 16.211(5)(f)(i) through (vi)).

Hydroelectric facilities having impoundments over 100 acre-feet are not permitted outright or conditionally in the Lane Code. Instead, the County shall analyze the conflicts per the Goal 5 Rule, take an Exception to the applicable Goal if necessary, and apply a special zone to those sites, as specified in Energy Policy 4.

As noted in the Working Paper, resource zoning will help prevent possible sites from being developed for other uses.

Conclusion - Energy Sources

Lane County has identified a number of potential energy sources, many of which are on federal land, and all of which are (1B) sites at this time. There is potential for hydroelectric developments on nonfederal land, but the County contends that it is premature to evaluate conflicting uses.

Nevertheless, the County has decided to allow small sites in its F-1 and F-2 Zones conditionally. Larger sites will require plan amendments, along with application of the Goal 5 Rule, exceptions to appropriate goals and possible development and application of a special zone. The County has adopted a policy commitment to this effect. In the meantime, resource zoning will help prevent potential sites from being lost to other uses. (See, however, the Goal 4 section of this report for a discussion of problems with the F-2 Zone.)

Fish and Wildlife Areas and Habitats

Inventory

Information about Lane County's fish and wildlife resources is contained in its Flora and Fauna Working Paper and the addendum to that working paper. Pages 5-10 describe in general each of the 11 major habitat types in the County, along with a discussion of the value of the habitat type to wildlife, and general location of each habitat type. These include:

1. Estuary and Bay
2. Inland Marsh
3. Wet Meadows
4. Lakes and Reservoirs
5. Riparian Vegetation
6. Annual and Perennial Grasslands
7. Coastal Shore Pine/Spruce
8. Douglas Fir/Trailing Blackberry
9. True Fir/Alpine
10. Deciduous Hardwoods
11. Agricultural Lands.

The County prefaces this material by stating that this information "is not considered an inventory and is not accompanied by maps. It is intended merely as background information."

The Working Paper and its addendum contain special sections addressing endangered, threatened, and special concern species, riparian and wetland areas, sensitive fish and waterfowl areas, and big game range. These are discussed separately below.

Endangered, Threatened and Special Concern Species: The Working Paper lists plants and animals which are threatened, endangered, or of special interest (pp. 11-12). Further information is provided for six of these species--northern spotted owl, northern bald eagle, wolverine, silverspot

butterfly, western snowy plover, and American osprey (pp. 12-13). This information does not provide location, quality, or quantity information on any specific habitat areas or sites. However, the County indicates that:

1. No spotted owl or bald eagle nests are known to occur on private property;

2. Wolverine habitat is in high elevation, remote areas and therefore in federal ownership;

3. Snowy plover habitat is within state jurisdiction.

4. Osprey nests are found throughout the County, although not in great numbers. The County indicates the ODFW maps show their locations, but these maps have not been adopted or submitted for review.

5. Silverspot butterfly habitat is found only "along a small section of the Oregon Coast." It is recognized in the Coastal Resource Management Plan of Lane County.

Lane County has indicated that Silverspot butterfly habitat occurs on federal land adjacent to the Big Creek (Reneghan) Exception Area as well as on the Renaghan property itself (Exhibit E--Renaghan Amendment, pp. 27, 31). It should be noted that the Exception document contains one statement (Finding 37e) on page 27 which appears to contradict this. Specifically, finding 37e states there are no sensitive species on the property, and that the Silverspot butterfly habitat is located on adjacent federal land only. The Exception document contains several other statements indicating that such habitat occurs in the northwest corner of the property.

The County provides no information at all regarding great blue heron rookeries or pigeon mineral springs, which are considered sensitive bird habitat areas by the Department of Fish and Wildlife. (The exception to this is for two rookeries in the Willamette Greenway. They are addressed in the Goal 15 section of this report.) The inventory of sensitive bird sites developed by ODFW and provided to the Department of Forestry (DOF) as part of a recent management agreement between those agencies, identifies 15 great blue heron rookeries, 21 osprey nest sites, three pigeon mineral springs, and at least one bald eagle nest site in Lane County, most of which are on nonfederal land. According to Flora and Fauna Policy 15, "currently known pigeon springs, heron and raptor (hawk, osprey, and eagle) nest sites. . . shall be placed in a '1B' category."

Riparian and Wetland Areas: Riparian lands are defined by the County as all lands along both banks of Class I streams in Lane County, to a setback line of 100 feet from ordinary high water (Addendum, p. 7).

The County indicates in its Flora and Fauna Working Paper (p. 16) that all lakes, reservoirs, and Class I streams in Lane County have been mapped, but were not included because of budgetary limitations. They are

available in the Planning Department offices. The Addendum to the Working Paper (p. 6) states that ODFW has provided maps of all Class I streams, as well as major significant wetland areas. Detailed maps are available for review in County offices, and a generalized summary map is included in the Addendum (p. 20).

The Flora and Fauna Working Paper discusses the values associated with wetlands and riparian areas for both fish and other wildlife types (pp. 14-15). The County notes that the U.S. Fish and Wildlife Service has identified a number of wetland types in its National Wetland Inventory. Currently, about half of the County has been mapped, enabling identification of major wetlands. These include:

1. Fern Ridge periphery, exclusive of parkland;

2. Old Long Tom River channel below Fern Ridge dam, including lands between it and new channel;

3. North Fork Siuslaw fresh-water marsh;

4. Maple Creek marsh;

5. Amazon Canal at its confluence with the waters of Fern Ridge Reservoir.

The County indicates that these areas are mapped in detail on the Plan Diagram maps. More specific location, quality, and quantity information for each of these five wetland areas is contained in the Working Paper Addendum (pp. 11-13).

The County has not inventoried a wetland south of Sutton Lake and east of Highway 101, or a Darlingtonia bog east of Florence. As noted in the 1983 Coastal Goals review of Lane County (p. 8), these wetland were to be addressed under Goal 5:

> The County notes there are only two Goal 18 resource areas east of Highway 101 which do not fall within the coastal shorelands boundary. They are two wetland habitat areas identified in the coastal resource inventory maps. The County should note that it will have to adequately address these two areas later under Goal 5 when it brings the remainder of the County plan into compliance.

The Darlingtonia bog is addressed in more detail in the Natural Areas section of this report.

Sensitive Fish and Waterfowl Areas: The County notes that this is a subcategory of the previous section, Riparian and Wetland Areas (p. 20). Maps have been provided the County by ODFW showing important waterfowl nesting habitat and streams that receive high use by anglers and/or game fish (p. 20), but were not submitted for review. A large-scale map is available in the County Planning offices (Addendum, p. 5). A

generalized, small-scale map is included on page 20 of the Addendum which shows the locations of important streams and stream reaches. A list of these specific reaches, by basin, is included in the Addendum (pp. 2-4). All identified areas are of high quality and are considered important (Working Paper, p. 21). The extent of riparian vegetation is described in the previous subsection of this report. The County notes that there are native anadramous fish runs in Big Creek within the Big Creek Exception Area (Exhibit E--Renaghan Amendment, p. 44). These include coho salmon, cutthroat trout and steelhead.

Big Game Range: The County notes that ODFW divides big game range in Lane County into three categories--Major, Peripherial, and Impacted. The Major Range supports the majority of big game and, in general, consists of sparcely developed commercial forest lands. Peripheral Range is generally located on foothill areas between commercial forest lands and valley floors. Peripheral Range supports substantial big game populations and serves as wintering areas for animals in severe winters. Impacted Range consists of those areas that have existing levels of development which preclude future wildlife management options for maintaining viable wildlife populations and recreational opportunity, although they frequently contain big game populations.

All three big game range areas are depicted on Lane County Wildlife Inventory Maps, according to the Flora and Fauna Working Paper (p. 23). However, these maps were not submitted for review because of budget constraints. They are available in the Planning Department Office (p. 23). The Working Paper notes that the highest quality big game range is in the Major Range because development is limited. Peripheral Range is important, but has enough development to limit big game use and managment options. Impacted Range is of the lowest quality because of existing development (p. 23). The County provides acreages for these three categories (p. 24).

The County recognizes major elk habitat on a portion of the Big Creek Exception site (Exhibit E-Renaghan Amendment, p. 52).

Conflicting Uses/ESEE Consequences Analyses

Endangered, Threatened and Special Concern Species: As indicated earlier, Lane County knows of no spotted owl or bald eagle nest sites on private land. Similarly, wolverine habitat is on federal land. The County notes that the State Parks Division of ODOT regulates vehicular uses in snowy plover habitat (Working Paper pp. 12-13). Specific conflicts with osprey nest areas are not identified, but the County notes that protective measures in riparian areas (e.g., Willamette Greenway permit requirements, coastal shorelands overlays, riparian and wetland area provisions) will resolve conflicts (Addendum, p. 15).

The Working Paper indicates that the Coastal Resources Management Plan of Lane County recognizes the Silverspot butterfly and applies a prime wildlife managment unit to its habitat (p. 13). Specific conflicts and ESEE consequences are not discussed in the Working Paper, however.

It should be noted that a portion of the critical habitat for the Silverspot butterfly is included in the Rock Creek Federal Wilderness Area, recently approved by Congress. Another portion of the habitat is located within the County's Big Creek Exception Area. That exception indicates that the applicant "will enter into contractual arrangements with the Siuslaw National Forest or Western Oregon State College to take whatever measures are necessary to mitigate any potential conflicts or adverse impacts associated with the development" (Exhibit E--Renaghan Amendment, p. 27). According to the Exception (p. 28), the U.S. Fish and Wildlife Service's Endangered Species Office indicates that this project will have not significant adverse impact on the Silverspot's habitat.

Conflicting uses and ESEE consequences analysis have not been conducted for sensitive bird habitat areas, since these resource sites have been placed in a (1B) category.

Inasmuch as the County failed to inventory a number of nonfederal sites as (1C) resource sites (e.g., great blue heron rookeries, pigeon mineral springs, bald eagle nest, osprey nests), the County has not identified conflicting uses or ESEE consequences of those conflicting uses with these sites. Information does exist for these sites, however, as indicated earlier, enabling the County to conduct such analyses.

Riparian and Wetland Areas: Two major activities conflict with riparian and wetland habitat areas, according to the County's Working Paper (p. 17)--destruction of vegetation for any purpose (e.g., forestry, agriculture, construction, recreation, aggregate extraction), and draining surface or subsurface water which then changes the vegetative structure and generally the habitat value. The County has developed separate ESEE consequence analyses for riparian lands and wetlands.

The riparian lands ESEE consequence analysis is further divided into three categories--(1) resource areas (forest and agricultural lands), (2) rural lands (partially or sparsely developed), and (3) developed and committed lands, including communities (Addendum, pp. 7-10). Based on these analyses, the County decided to develop a (3C) approach in order to limit conflicting uses. ODFW has recommended a 50 foot setback along all class I streams in rural development zones and a 100 foot setback in rural resource zones (Addendum, p. 10).

Separate conflicting uses/ESEE consequences analyses have been conducted for each of the five major wetlands identified (Addendum, pp. 11-13). Based on these analyses, the County has determined that areas owned by the Corps of Engineers (Fern Ridge Reservoir, part of Lower Long Tom, Amazon Canal) have sufficient protection, and furthermore, cannot be regulated by the County since they are in federal ownership. Areas under Coastal Resources Zoning (North Fork Siuslaw, Maple Creek Marsh) are also assumed to be adequately protected. A (3C) approach (e.g., Natural Resource Zoning) is appropriate for all other privately-owned areas (part of Lower Long Tom) (p. 13).

Sensitive Fish and Waterfowl Areas: Removal of riparian vegetation in identified sensitive areas is considered the major conflicting use with these resources (Working Paper, p. 21). The County notes that the ESEE consequences analysis is generally the same as that for riparian areas and wetlands, summarized in the previous section of this report (Working Paper, p. 21). However, the County indicates that since the sensitive fish and waterfowl areas are considered more valuable than others in the County, the effects of vegetation removal can be more significant (p. 21). Based on these analyses, Lane County has chosen a (3C) approach to protect riparian vegetation in such areas "whenever possible" (p. 22). The County notes that ODFW has recommended setbacks of 50 to 100 feet along waterways designated as sensitive fish habitat, plus natural resource zoning for wetlands not within that riparian strip (Addendum, p. 5).

Conflicting uses and ESEE consequences of conflicting uses with fish habitat in the Big Creek Exception Area are addressed on pages 54-56 of the Exception. Based on this analysis, the applicant will be required to protect the anadromous fish through development of a management plan and protection or riparian vegetation (pp. 27, 55).

Big Game Range: The primary conflict with big game range is identified as residential use at densities over one dwelling unit per 40 acres in Peripheral Range, and one unit per 80 acres in Major Range (Working Paper, p. 24). The County indicates that its 80-acre commercial timber zoning is very restrictive in terms of dwelling unit placement, and therefore, "it is unlikely that conflicts will occur" in Major Range areas (Addendum, p. 14). Similarly, the County believes its 40-acre zone will satisfy ODFW's recommended density in Peripheral Range (p. 14). Developed and committed exception areas are considered impacted, and the County has decided that conflicting uses should be permitted in those areas (p. 14).

The conflicts and ESEE consequences of conflicts with major elk habitat in the Big Creek Exception area are discussed on pages 53-54, and 56 of the Exception document. Based on this analysis, the applicant will be required to protect elk winter forage areas (p. 27) and to develop an elk managment plan (p. 32).

Policies

Lane County has adopted numerous policies regarding its fish and wildlife resources (Flora and Fauna Policies, Plan, pp. 14-16). These policies include the following:

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Through the use of County regulations including zoning, seek to minimize the adverse impacts of land use changes on sensitive species (those susceptible to significant population declines resulting from habitat modification).

4. Public agencies are encouraged to work with landowners to conserve wildlife habitats.

5. Lane County shall investigate fee acquisitions, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to protect Goal 5 resources.

6. Riparian vegetation along all Class I streams in the County is recognized as being of high value for many purposes, notably wildlife habitat and streambank stabilization. Riparian lands shall be defined as the lands within 100 feet of ordinary high water on Class I streams, and shall be considered "Significant" "1C" areas (in the language of OAR 660-16-000/025); "3C" protection of the riparian resource shall be achieved through development setbacks and vegetation management regulations within the riparian strip. The setback distance will vary from 100 feet from ordinary high water in rural resource zones to 50 feet from ordinary high water in developed and committed areas; provided a means is made available for review and modification of these requirements where it can be demonstrated that an unduly restrictive burden would be placed on the property owner or, that riparian vegetation does actually extend all the way into the 500 foot or 100 foot setback to the location of the proposed improvements.

   Such review and modification shall be spelled out in the zoning districts affected, and shall involve consultation with officials of the Oregon Department of Fish and Wildlife.

7. Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal state ownership; where these do not occur, an appropriate wetlands zoning district shall be developed and applied. Other wetlands from the National Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per

Goal 5 requirements if it is clearly demonstrated that an unprotected signficiant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction. (Modification in process.)

8. Sensitive Fish and Waterfowl Areas as identified in the 1983 Revision the Flora and Fauna Working Paper, shall be considered "significant" "1C" resources per OAR 660-16-000/025, and protected per "3C" requirements through protection of riparian and wetland resources as described in the above Policy statement.

9. Residential building permits issued within Major or Peripheral Big Game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna, and as revised and updated in 1983, shall include an indication of that Range and a note that compatibility problems, such as damage to vegetation, may occur.

10. Lands with an acknowledged exception as "built upon or committed" will be treated as Impacted Big game Range, as identified in the 1982 Lane County Working Paper on Flora and Fauna and as revised and updated in 1983.

11. Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program.

12. If uses are identified (which were not previously identified in the Plan) which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

13. In its program of protecting "1C" resources, the County shall make maximum practical use of existing land use regulations (e.g., Willamette Greenway Permit, Coastal Resources Zoning overlays, rural forest and agricultural resource zones) to achieve such protection. Duplication of existing standards shall be avoided wherever practicable, provided County-determined Goal 5 and OAR 660-16-000/025 objectives are met.

14. A group known as the "Lane County Flora and Fauna Committee" is to be established and given permanent status by the Board of County Commissioners. The committee shall represent a wide array of environmental interests and the interests of property owners. Its tasks shall include: evaluation of LCDC Goal 5 concerns and resources, development of information to help the County comply with OAT [sic] 660-16-000/025 ("Goal 5 Rule"), research and provision of resource site data to the County, and response to work in progress. Outputs of the Committee shall be presented to the Planning Commissions and subsequently to the Board of County Commissioners.

15. Currently known pigeon springs, heron and raptor (hawk, osprey and eagle) nest sites shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluation per "1B" requirements within two years of the date of plan adoption. Lane County shall consider enlarging the list of significant nest sites whenever information about additional sites becomes available. The significant nest sites shall be those identified by Jim Greer and Jim Hutchison (Department of Fish and Wildlife biologists) in a 12/20/83 letter to Jim Mann (Senior Planner, Lane County Land Management Division), and these sites shall be incorporated into the Lane County General Plan Policies document as Flora and Fauna Exhibit A.

16. Rare and endangered vascular plants, identified in the 1/8/84 list prepared by the Native Plant Society of Oregon shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluated per "1B" requirements within two years of the date of plan adoption. This list of rare and endangered vascular plants is included into the Lane County General Plan Policies document as Flora and Fauna Exhibit B.

17. Lane County recognizes that Douglas fir old growth stands provide valuable and unique wildlife habitat and will encourage the Forest Service and Bureau of Land Management to maintain acreage in this age class sufficient to ensure viable populations of dependent wildlife species.

Policy 22 (Plan. p. 5) states:

> Sites considered 'significant' in terms of OAR 660-16-000 through 660-16-025 but requiring that the Goal 5 ESEE consequences analysis process be delayed (the '1B' option) shall be protected by Lane County through the application of interim protection measures. Such interim protective measures shall be considered and applied at the beginning of the plan refinement

process for the "significant" sites and after sufficient information is available regarding the location, quality and quantity of the "significant" sites.

Lane County's Forest Lands Policy 17 (Plan, p. 10) states:

> Lane County recognizes that the Oregon Forest Practices Act shall be the only mechanism regulating the growing and harvesting of forest tree species on commercial forest lands unless Goal 5 resource sites have been recognized and identified as being more important through an analysis of ESEE consequences and conflict resolution as per Goal 5. No other findings, assumption, goal policy, or other planning regulation shall be construed as additional regulation of forest management activities.

Implementing Measures

Lane County has adopted the following riparian setback standards and riparian vegetation maintenance standards in its F-1, F-2, E-RCP, ML-RCP, PR-RCP, and DR-RCP Zones (Lane Code, Sections 16.210(7)(a) and (b), 16.211 (9)(b) and (c), 16.212 (8)(b) and (c), 16.214(7)(b) and (c), 16.215(6)(a) and (b), and 16.232(5)(b) and (c), respectively):

> (b) Class I Stream Setbacks. No structure other than a fence or sign shall be located closer than 100 feet from the ordinary high water of a Class I stream designated for riparian vegetation protection by the Comprehensive Plan. A lesser setback may be allowed if:
>
> (i) The Department of Fish and Wildlife is consulted by the Department at least 10 days prior to issuing a permit for a structure; and
>
> (ii) The riparian vegetation does not actually extend all the way into the 100-foot setback to the location of the proposed structure, and the riparian vegetation has not been removed in violation of the below riparian vegetation maintenance standards; or
>
> (iii) An application for a variance to the above setback standard has been approved pursuant to LC 16.256 with findings of compliance to the Comprehensive Plan policies for the protection of Class I streams and riparian vegetation.
>
> (c) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Comprehensive Plan:
>
> (i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.212(8)(c)(i) above. Where vegetation removal beyond that allowed in LC 16.212(8)(c)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(a) Commercial forest practices regulated by the Oregon Forest Practices Act.

(b) Vegetation removal necessary to provide water access for a water dependent use.

(c) Removal of dead or diseased vegetation that poses a safety or health hazard.

(d) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

In the PF/RCP C-R, RCP, RA-RCP, and RR-RCP Zones (Sections 16.219(4)(b) and (c); 16.223(5)(b) and (c); 16.229(7)(b) and (c); and 16.231(7)(b) and (c), respectively), the setback is 50 feet, rather than 100 feet.

The following zones indicate the Class I Stream and Riparian Vegetation requirements of LC 16.229-35(2) and (3) shall apply: C-1, RCP (Section 16.220); C-2, RCP (Section 16.221); C-3,RCP (Section 16.222); M-1, RCP (Section 16.224); M-2, RCP (Section 16.225); and M-3, RCP (Section 16.226). The RG-RCP Zone (Section 16.230) indicates that Section 16.299(2) and (3) shall apply. However, the Lane Code does not contain any section with the numbers 16.299-35(2) and (3) or 16.229 (2) and (3).

As discussed in the open space section of this report, Lane County has adopted a Natural Resource Zone (NR-RCP) (Lane Code, Section 16.213) which is, in part, intended to protect aquatic and other wildlife habitat areas. Please refer to that section of this report for details. It should be pointed out that the NR zone does not contain riparian setback and vegetative maintenance standards. Although major development in the NR zone is not anticipated, the NR zone permits a variety of structures. These structures should be required to be set back in order to protect riparian vegetation, just as they are in other zoning districts. In fact, since the purpose of the NR zone is to protect wildlife and aquatic habitats, there is even more reason why such setbacks should be required.

A review of the County's zoning maps indicates that the NR Zone has been applied to a number of habitat areas in the County. One of the sites zoned NR is the Big Creek Exception Area, which contains fish and big game habitat, and habitat for the endangered Silverspot butterfly.

According to the Exception (p. 27), no alteration of the riparian vegetation will occur, and the owner has agreed to enter into contractual arrangements to protect elk winter forage areas. The applicant will also take measures that may be necessary to protect the habitat of the Silverspot butterfly.

Contrary to statements contained in the Flora and Fauna Working Paper, Lane County's F-1 (Nonimpacted Forest Lands) Zone establishes a 40-acre (rather than an 80-acre) minimum lot size (Lane Code, Section 16.210(6)), except that (a) a land division to create a parcel of less than 40 acres may be allowed conditionally if it is for separating an existing residence from adjoining forest land, and (b) a common property boundary may be adjusted so long as no additional parcels are created. As noted in the Flora and Fauna Working Paper (p. 24), and as discussed earlier in this report, ODFW's recommended density in Major Big Game Range (which, according to the County, is mostly zoned F-1) is one unit per 80 acres. Inasmuch as the F-1 zone does not allow dwellings, this density standard has less meaning in Lane County's F-1 Zone.

The F-2 (Impacted Forest Lands) Zone (Lane Code, Section 16.211) requires a minimum of 20 acres for creation of a woodlot or farm parcel for growing grapes, berries, or horticultural specialties, and 40 acres for creation of a farm parcel. However, there is no requirement that, in the Big Game Range portions of that zone, densities will not exceed those recommended by ODFW (i.e., one unit per 40 acres in the Peripheral Range, or one unit per 20 acres with clustering and siting standards; one unit per 80 acres in the Major Range, or one unit per 40 acres with clustering and siting standards).

In the Exclusive Farm Use Zone (Lane Code, Section 16.212), a dwelling or mobile home not in conjunction with farm use may be approved if it meets certain criteria; similarly, a division of land may be allowed for a dwelling not in conjunction with farm use if it meets those criteria and does not conflict with the purpose of the zone. However, none of the criteria address ODFW's dwelling density recommendations, and the purpose statement of the zone does not refer to maintaining wildlife habitat values. As noted in the Goal 3 section of this report, minimum lot size is from 20 to 60 acres, depending upon location. As noted in the Flora and Fauna Working Paper (p. 24) and as discussed earlier in this report, ODFW's recommended density in Peripheral Big Game Range (which, according to the County, is mostly zoned Exclusive Farm Use) is one unit per 40 acres. There are no standards in the zone which require lot sizes to be 40 acres or greater in the Peripheral Big Game Range portions of the zone, or alternatively, that require clustering of dwellings (to allow densities as great as one unit per 20 acres.

Lane County has adopted a Marginal Lands (ML-RCP) Zone (Lane Code, Section 16.214) which appears to have been applied to wildlife habitat areas, and could be applied to other areas in the future. (The County did not submit maps showing the locations of its big game habitat areas, so it cannot be determined with certainty whether it has been applied in big game habitat areas). ORS 197.247(8) requires that application of

such a zone satisfy all requirements of other Goals, in this case, Goal 5. The County has not adopted findings demonstrating how the specific applications of the ML zone comply with the Goal 5 Rule. Criteria for approval of future ML zoning (Section 16.214(4)) do not include compliance with Goal 5.

Section 16.215 of the Lane Code is the County's Park and Recreation (PR-RCP) zone which has been applied to a number of sites in the County. The zone permits a number of recreational uses and activities outright, and a number of others if within a built and committed exception area that is designated as nonresource land. The zone also lists uses that are subject to hearings official approval. Section 16.215(5)(e) of the zone contains the following conditional use approval critera:

> When a use is proposed in an area designated as Major Peripheral Big Game Range or as Sensitive Fish and Waterfowl areas as shown on the Lane County Wildlife inventory, the Oregon Department of Fish and Wildlife shall be notified and their comments shall be considered in evaluating the proposed use.

The PR zone allows a number of uses that could conflict with wildlife habitat and other Goal 5 values, and with the purpose of the zone, as noted in the Goal 2 section of this report.

The County has not adopted any implementing measures to protect and/or resolve conflicts with sensitive bird habitat sites.

As noted in previous acknowledgment reviews (e.g., Tillamook County), the Commission has allowed counties to adopt plan policies and ordinance language which clearly expresses the intent to rely on the FPA, Rules, and the March 1984 agreement between the Board of Forestry (BOF) and the Fish and Wildlife Commission (F&WC) to resolve conflicts between timber management activities and sensitive bird sites. Lane County has no such policy commitment, and it has not inventoried all sites on the BOF/F&WC list of sites covered by this agreement. However, even if such a policy is adopted by counties, they are still required to adopt implementing measures to resolve conflicts between other uses (e.g., development) and sensitive bird sites. Lane County has not adopted such measures.

Lane County has not identified sites that are considered to be more important than commercial forest operations based on a Goal 5 ESEE consequences analysis, per Forest Lands Policy 17 (Plan, p. 10), nor has it adopted and applied any implementing mesures to such sites which regulate timber management activities.

Objections

1. The Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon and the Legue of Women Voters of Central Lane County (LWV) have objected to the County's approach to sensitive bird nesting and use sites. Specifically objectors point out that the Flora and Fauna Working Paper discusses only some of the species considered

sensitive. Missing are designations of heron rookeries and pigeon mineral springs. Policy 15 addresses all sensitive species (bald eagle nests, heron rookeries, snowy plover habitat, spotted owl nests, osprey nests and pigeon mineral springs). Further, objectors point out that Policy 15 places these species in a (1B) category. Both ODFW and 1000 Friends indicate that the County possesses inventory information (including recent ODFW updated information) which is sufficient to complete the Goal 5 process for this resource category. ODFW indicates that the location, quality, and quantity information provided the County is similar to that provided to other counties which have completed the Goal 5 process and which have been acknowledged. The League of Women Voters is concerned that two years is too long for these resource sites to be without protection. Most are not in the Greenway, and therefore do not even receive minimal protection.

1000 Friends also objects to the fact that neither Flora and Fauna Policy 2 or 3 provides adequate protection for these sensitive species. Policy 2 simply indicates the County will recognize existing programs that protect species; it does not bind the County to any particular course of action. 1000 Friends believes the County must make an affirmative commitment to protect threatened and endangered fish and wildlife species. Policy 3 also fails to guarantee protection of sensitive species since it requires the County to seek to minimize adverse impacts through County regulations (including zoning). 1000 Friends suggests that present zoning may be construed to "minimize adverse impacts" but this may not necessarily provide adequate protection for particular sites.

1000 Friends also objects to the use of the definition of "sensitive species" used in Policy 3. Objectors believe it is overly general and could be construed by decision-makers to exclude certain species. Objectors believe that County Policy 3 should reference the list of "species of special concern" that appears in the Working Paper, rather than use a vague term in the policy. Similar comments have been filed by Oregon Forest Industries Council.

2. ODFW and 1000 Friends have objected to Flora and Fauna Policy 11 since it regards densities above ODFW's recommendations in big game areas to constitute a conflict. ODFW regards its recommended densities as the approach to resolve conflicts between dwellings and game range. 1000 Friends states that Policy 11 allows residential densities to exceed ODFW recommendations "if conflicts can be resolved in accordance with OAR 660-16-000." Objectors believe this allows the County to justify density levels which exceed those recommended by ODFW through an analysis of ESEE consequences. Objectors do not believe this exclusion is consistent with the Goal 5 Rule.

3. ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements

that need to accompany the density levels allowed in those zones. Similar objections have been filed by 1000 Friends of Oregon. Objectors point out the the F-1 zone establishes a minimum lot size of 40 acres, but smaller divisions can be made without regard to big game impacts. The F-2 zone establishes minimum lot sizes of 20 and 40 acres for forest and farm uses, which also fail to meet ODFW's recommended densities for Peripheral Range, according to objectors. 1000 Friends points out that the Flora and Fauna Working Paper Addendum and Policy 11 prescribe clustering and siting of standards, but these are not carried out in the F-2 zone. The Addendum (p. 14) also references forest land minimum lot sizes which are no longer current.

4. ODFW and 1000 Friends object because Goal 5 has apparently not been applied in the process of designating marginal and nonresource lands. Objectors are particularly concerned how this affects big game range areas. ODFW contends that the County's plan provisions for lots of record, resource and nonresource-related dwellings, marginal lands, and nonresource lands could allow considerable development in game range. The County's F-1 and F-2 zones do not adequately assure that recommended densities will be maintained. This is further complicated by the fact that it is unclear where marginal and nonresource lands are located, and therefore the extent to which they are in game range areas, since the zone map format and resource inventory map formats are not easily comparable. 1000 Friends points out the Goal 5 must be applied whereever Goal 5 resources occur, even in areas designated marginal or nonresource land.

5. ODFW, 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's treatment of the Pudding Creek Heronry. Objectors point out that the County conducted a Goal 5 ESEE consequences analysis, but that inasmuch as the sand and gravel plan and zone designations have been retained on the site, conflicts have not been resolved. Please refer to the Goal 15 section of this report for further details concerning objections to the zoning of this site.

6. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willamette Rivers. Objectors indicate that the County has not adopted a program that is adequate to protect and/or resolve conflicts with the site under Section (3C) of the Goal 5 Rule. Objectors point out that the 1981 LCDC order for the Eugene/Springfield Metro area include a requirement that the ESEE consequences of designating the island for sand and gravel use must be evaluated in the context of regional aggregate supply and demand. The IOTC further required that if the island were to retain a partial sand and gravel designation, the Metro Area Plan and the Lane Code (Section 10.210) must be amended to require that limited aggregate extraction will minimize the impact on scenic and wildlife values.

The IOTC also referenced Goal 15 requirements and IOTCs. Objectors contend that neither the Goal 5 nor Goal 15 IOTCs have been adequately addressed. These objections are also contained in the Goal 15 section of this report.

7. 1000 Friends of Oregon has objected to the fact that Lane County has placed only five noncoastal wetlands in its (1C) inventory, and has placed all others in a (1B) category. 1000 Friends believes the County has sufficient information to be able to classify the others as either (1A) or (1C), since such information was given to the County by ODFW, interested citizens, and the Lane County Flora and Fauna Committee. Objectors indicate that Goal 2 Policy 22 is inadequate for these (1B) sites since it requires only that interim protection be applied at the beginning of the plan refinement process --no sooner. Objectors point out that Goal 15 requires protective measures be applied as soon as their significance has been determined.

   Finally, 1000 Friends indicates that the U.S. Fish and Wildlife Service's National Wetland Inventory is the basis for Lane County's wetland inventory. Flora and Fauna Policy 7 states that this inventory, although incomplete in Lane County, will be used to evaluate (1B) wetlands within two years of the date of plan adoption or when the national inventory is completed. 1000 Friends points out, however, that such an inventory is not scheduled for completion for another 5-10 years, and Lane County is not within a priority inventory area. Objectors believe the County should amend Policy 7 and the Addendum to the Flora and Fauna Working Paper (p. 6) to recognize alternative sources of data shall be used to assess the significance of wetlands and to identify their boundaries.

8. 1000 Friends has objected because the County definition of wetlands in its Working Paper is much narrower than that contained in the Statewide Planning Goals or the U.S. Fish and Wildlife Service, but the County has not justified how such a definition is consistent with Goal 5. The Working Paper states that a wetland is "an area in which open, standing water is present for at least six months out of the year and is a minimum size of one acre." Objectors indicate the County has no definition of wetlands in either its plan policy document or in its zoning ordinance.

9. 1000 Friends objects to the fact that Lane County is relying on the FPA to maintain riparian corridors along Class I streams and wetlands, and will take no actions to limit conflicting uses in areas subject to the FPA. Objectors state that there is no analysis in the submittal materials which demonstrates how the FPA and Rules provide protection for riparian resources consistent with Goal 5. Therefore, 1000 Friends objects to LC 16.210(7) and 16.211(9).

10. 1000 Friends objects to the County's failure to apply riparian protection measures around lakes and along Class II streams. Objectors point out that Class II streams regulate water temperature, quality, and quantity of downstream Class I streams.

11. Friends of the Oregon Coast has objected to the County's Renaghan Amendment (Big Creek Exception) for a number of reasons, some of which relate to fish and wildlife concerns. These are as follows:

    a. Objectors believe that many of the findings are "contractory and irrelevant." Objectors cite two examples. The first is that finding 37d (p. 27) conflicts within finding 37e (p. 27). One calls for establishing permanent elk forage areas; the other calls for maintaining the property in forest. Objectors also indicate that the County's claim that there are no sensitive species on the property contradicts findings 40a (5) and 44b(6) which state that the northwest corner of the property contains Silverspot butterfly habitat.

    b. Objectors claim that because the applicant retained a consulting wildlife biologist, his statements in the record should be expected to support the establishment of a destination resort. Objectors believe that his statements are treated by the County as findings of fact although they sometimes "are argumentative of the County's Coastal Sub-Area Plan and of the Oregon Department of Fish and Wildlife's Management plans."

    c. Objectors believe that, although the applicant and ODFW will be required to work together to mitigate adverse impacts on fish and wildlife, these efforts will be "experimental" and therefore cannot justify the resort complex in the the middle of prime and sensitive habitats.

    d. Objectors point out that the Exception recognizes ODFW's concerns about increased fishing pressure on Big Creek as a result of the development, and that potential harm can only be mitigated by regulating sport fishing (through reductions) on the creek. Objectors feel that long-time anglers will therefore be penalized by the development.

Response to Objections

1. Objectors are correct in pointing out deficiencies in the County's inventory of sensitive bird nesting and use sites. Information on location, quality, and quantity is available, yet the County has taken a (1B) approach to several of the species identified. Sufficient information exists for the County to be able to complete the Goal 5 process for this resource category.

   Objectors are also correct that Flora and Fauna Policies 2 an 3, themselves, do not guarantee protection for sensitive species, particularly in light of the absence of implementing measures to provide such protection. The adequacy of these policies can be judged only after the County completes the Goal 5 process for the habitat areas of these species. Lane County has erroneously placed such species in a (1B) category, and has not yet completed the Goal 5

process. Depending upon this analysis, the policies may have to be modified, and implementing measures will have to be adopted. The concern that Policy 3 is unclear as to which species or habitat areas are covered by the policy is valid.

2. Policy 11 states:

> Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similiar activities which are already a part of the County's rural resource zoning program.

Objectors are not correct that this policy violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, ML, and EFU Zones which ensure that ODFW's density standards will be achieved.

The second part of the policy requires the County to work with ODFW in preventing conflicts from occurring through land use regulations in resource areas and such things as siting requirement. ODFW is correct that its recommended density standards (if adopted in the ordinance) would constitute an approach to resolve and/or prevent conflicts between dwellings and big game habitat. However, as discussed below, the County has not adopted such standards in its zoning ordinance.

3. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone.

4. Objectors are correct that Goal 5 has not been applied by the County in the process of designating marginal lands. ORS 197.247(8) requires that applications of a marginal lands zone must satisfy all requirements of other Goals, including Goal 5.

5. The response to the objections regarding Pudding Creek Heronry is presented in the Goal 15 section of this report.

6. The response to the objections regarding Big Island is presented in the Goal 15 section of this report.

7. The County has indicated it has sufficient inventory information on only five noncoastal wetlands at this time. 1000 Friends has not provided location, quality, or quantity information on specific wetlands it believes should be (1C) sites, rather than (1B) sites.

   ODFW has not objected to the County's determination that only five wetlands are (1C) and the remainder are (1B) sites. 1000 Friends is correct that Policy 22 calls for protection of (1B) sites only at the beginning of the plan refinement process. However, the Goal 5 Rule does not require any interim protection for (1B) sites.

   Although the incomplete National Wetlands Inventory is the basis for the County's wetlands inventory, 1000 Friends is not correct that the County must wait until the National Inventory is completed before it can apply the Goal 5 process to (1B) sites. Furthermore, Policy 7 does not prevent the County from considering information about other sites not on the national inventory during its plan update process. 1000 Friends, or other parties may supply the County with information about wetlands, and the County would be required to apply the Goal 5 process to those sites. Plan Policy 7 states:

   > Because of incomplete County coverage by, and interpretation of, the National Wetlands Inventory, wetland resources are to be considered "significant" in terms of OAR 660-16-000/025 and placed in "1B" and "1C" categories. Major wetlands designated "1C" resources shall be protected per the "3C" option through a combination of existing County Coastal and Greenway zoning regulations, and federal; state ownership; where these do not occur, an appropriate wetlands zoning district shall be developed and applied. Other wetlands from the national Wetlands Inventory shall be evaluated per "1B" requirements within two years of the date of Plan adoption, and decisions made on the protection or use of the resource. The County shall consider enlarging the list of protected wetlands per Goal 5 requirements if it is clearly demonstrated that an unprotected significant wetland(s) is likely to be significantly impacted by a land use action over which the County has jurisdiction. (Modification in process).

While the policy does not permit the use of alternative sources of information during the update process, 1000 Friends is correct in suggesting that the policy could be improved by actually stating that other sources of information (besides the National Inventory) will be used.

8. 1000 Friends is correct in pointing out that the County's Working Paper definition of "wetlands" is narrower than that contained in the Statewide Planning Goals. Wetlands very often do not have open, standing water present at least six months out of the year. Reliance on the County's definition could result in some wetlands possibly being excluded from the County's (1C) inventory.

9. 1000 Friends is correct that the County is relying on the FPA to resolve conflicts between timber management activities and riparian areas along Class I streams and wetlands, although the County has not made a statement to this effect. It is clear in Forest Lands Policy 17 and in various sections of the Zone Code that the County is not regulating harvest activites. Objectors are also correct that the County has not provided an analysis demonstrating how the FPA and Rules provide protection for the Goal 5 resource. However, it has been Commission practice not to require counties to adopt implementing measures to resolve conflicts between timber management activities and riparian corridors.

10. 1000 Friends is correct that the County has not applied riparian protection measures around lakes or along Class II streams, or otherwise justified not providing such protection, based on an ESEE consequences analysis of conflicting uses. Information in the Flora and Fauna Working Paper (pp. 6 and 15) suggests that these are important Goal 5 resources.

11. The objections of Friends of the Oregon Coast are not sustained with regard to fish and wildlife concerns for the following reasons:

    a. Objectors are correct that the Exceptions document contains some conflicting statements, particularly whether the property contains Silverspot butterfly habitat. Specifically, finding 37e (p. 27) is misleading, since the site does contain Silverspot habitat. In light of the fact that the County's intent is clearly to take whatever actions are necessary to protect the Silverspot butterfly, this inconsistency is not a Goal violation.

       With regard to the Exception documents' statements regarding elk forage, it can be assumed that, although the main intent is to keep the property in forest, portions of the property will be in other uses. These findings are broadly written, and, as such, are not contradictory.

    b. Objectors have not indicated how findings 47d(1) through (13) violate Goal 5, only that they are sometimes "argumentative" of other documents.

c. Objectors have not indicated why they believe ODFW's attempt to mitigate impacts on habitats will be experimental, or otherwise why they cannot suceed in providing adequate protection.

d. Objectors have not indicated how regulating sport fishing on Big Creek to protect the resource long-term violates Goal 5. While it is unfortunate that long-term anglers may be "penalized," this is not a Goal issue.

Comments

Oregon Forest Industries Council (OFIC) and the Lane County Landowners Association have commented that Policy 22's intent is unclear, since it calls for interim protection measures for "significant" Goal 5 resource sites. However, the policy addresses (1B) sites. The association indicates that (1B) applies where some information exists but is inadequate for purposes of identifying a site and determining its significance. Commentors also point out that interim protective measures are neither required nor appropriate for Goal 5 compliance.

Response to Comments

Policy 22 (Plan p. 5) states:

> Sites considerd 'significant' in terms of OAR 660-16-000 through 660-16-025 but requiring that the Goal 5 ESEE consequences analysis process be delayed (the '1B' option) shall be protected by Lane County through the application of interim protection measures. Such interim protective measures shall be considered and applied at the beginning of the plan refinement process for the 'significant' sites and after sufficient information is available regarding the location, quality, and quantity of the 'significant sites.

While it is true that Policy 22 is somewhat ambiguous, the policy appears to recognize the fact that certain Goal 5 resource categories have significance (e.g., all eagle nests are significant), although their specific locations may not be known at this time. Therefore a (1B) classification is appropriate. The Goal 5 Rule does not require interim protection measures for (1B) sites. However, the Rule does not prohibit jurisdictions from adopting and applying interim measures to (1B) sites.

Conclusion -- Fish and Wildlife Habitats

Lane County has adopted inventory information for a number of fish and wildlife habitat areas, and has identified conflicting uses and ESEE consequences of those conflicting uses. Implementing measures including riparian setbacks and vegetation maintenance standards and a Natural Resource Zone have been adopted. However, a number of deficiencies still remain and must be corrected before acknowledgement can be granted. These are summarized below.

Lane County has placed all sensitive bird habitat sites in a (1B) category, even though information is currently available and is adequate for completing the Goal 5 Rule process. The County needs to adopt a (1C) inventory for known sites and complete the Goal 5 process.

Implementing measures which carry out ODFW's development density recommendations in Major and Peripheral Big Game Range areas have not been adopted, particularly in the F-2, ML and EFU zones. The County has not applied the Goal 5 process to "nonresource" lands.

The County's three commercial, three industrial, and its garden-apartment zones reference a nonexisting code section for their riparian setback and vegetation maintenance standards. It is obvious that the County intended to apply such standards in those zones but until the zones are amended to either (1) reference the correct section of the code containing those standards, or (2) incorporate such standards themselves, there are no riparian standards in effect in those seven zones. Riparian protection measures have not been applied around lakes, in the Natural Resources Zone, or along Class II streams, or justified as not being necessary, based on an analysis of ESEE consequences of conflicting uses.

The County uses a narrower definition of "wetlands" than in the Goals, and therefore, some wetlands may be left off any future (1C) inventory.

The Parks and Recreation zone allows a number of uses which could conflict with the purpose of that zone, and with Goal 5 resources present (including fish and wildlife habitat values).

A Natural Resources Zone has been developed and applied to lands in the County, but it is unclear which habitat sites have been given NR zoning or whether it has been appropriately applied.

Ecologically and Scientifically Significant Natural Areas

Inventory

The County's Flora and Fauna Working Paper contains the County's inventory information on natural areas (pp. 26-32). This working paper indicates that the County evaluated the 86 sites on the Natural Heritage Inventory and the nine sites identified by the Natural Areas Preserves Advisory Committee. (Note: The Committee is now known as the Natural Heritage Advisory Council). These sites were evaluated by Lane County, first of all, to determine whether there was adequate information on location, quality and quantity. If this was the case, and that information suggested that a site was "significant," it was placed in a (1C) category. If information existed, but the site was determined to be not significant, it was classified (1A). If there was inadequate information, sites were placed in a (1B) category (pp. 26-27).

The County placed six sites in the (1B) category:

1. Booth Island/Siltcoos Lake
2. McKenzie River Island (not be confused with the island at the confluence of the McKenzie and Willamette Rivers)
3. South Fork Gate Creek
4. Swamp Creek
5. Marshall Island Heronry
6. Willamette Valley Quaking Aspen Grove

The County has provided justification why it believes the (1B) classification is appropriate for each of the site sites (pp. 27-28). The Nature Conservancy has indicated it has no updated information for any of the six sites at this time and that a (1B) classification is appropriate (Curt Soper, personal communication, June 15, 1984).

Fifty-six other sites were determined to be in a (1C) category and therefore constitute the County's natural areas inventory (p. 28). The County has grouped these sites according to their ownership. There are 23 sites on U.S. Forest Service land, six on BLM land, four sites within state parks, and 25 that are either in the Willamette Greenway or covered by the Coastal Resources Management Plan (pp. 30-32). Two additional sites (Upper Yachats Elk Pasture and Fern Ridge) are also (1C) sites, but do not fall into the above categories (p. 32).

No information regarding location, quality or quantity of the federally-owned sites is provided in the Working Paper. Information regarding the natural features present in the State park sites and at the 25 Greenway or Coastal sites is summarized (pp. 30-32). All are significant in terms of quality. Locations of these sites have not been provided.

It should be noted that, during the review of the coastal portion of the Lane County plan, a privately-owned Darlingtonia bog, east of Highway 101 and east of the City of Florence, was identified. The bog did not quailify as an ecologically significant natural area under the Coastal Goal requirements. It does, however, possess natural values that could qualify it as a Goal 5 (1C) natural area. However, Lane County has not addressed this site in its Working Paper or other submittal materials.

Conflicting Uses/ESEE Consequences Analyses

Because of their ownership by the U.S. Forest Service or the BLM, the County believes no conflicts exist for the 29 federal sites (Flora and Fauna Working Paper, p. 28).

The County indicates that no conflicts exist for the four state park sites based on uses allowed in zoning districts applied to those sites (p. 29). The Flora and Fauna Working Paper Addendum (p. 15) states, "the State of Oregon Parks and Recreation Division has, in a letter to Lane County, stated that the natural area values of these parks are being and will be protected, and that no conflicts with the resource are foreseen." However, as noted in the Goal 2 section of this report, the Parks and Recreation zone which has been applied to these state parks, allows a number of uses which could conflict with natural area values.

No conflicts have been identified for the Coastal or Greenway sites because of programs and zoning districts applied to them (p. 30).

With regard to the two remaining sites (the Elk Pasture and Fern Ridge), the County indicates there are no conflicts. The Siuslaw National Forest and ODFW own the site and have an agreement concerning use of the site as an elk wintering area. Fern Ridge is owned by the Corps of Engineers and, under a 1980 management plan for the reservoir, the natural values present will be protected (p. 32).

It should be pointed out that public ownership, in and of itself, does not necessarily mean there are no conflicting uses, nor does it guarantee site protection. Although several of the U.S. Forest Service and BLM sites are formally protected by those agencies (e.g., wilderness areas, designated research natural areas), others are not. Unless the federal agencies have formal protection programs in place for natural areas, it cannot be assumed that no conflicts exist, nor can they be considered "2A" (protected) Goal 5 resource sites. However, since the Commission has not required counties to complete steps (2) and (3) of the Goal 5 Rule for sites on federal land, it is recommended--but not required--that Lane County correct the statement on page 28 of the Flora and Fauna Working Paper regarding conflicts on federal land.

Policies

Lane County has adopted the following policies regarding natural areas (Flora and Fauna Policies, Plan, pp. 14-16):

1. Implement construction, development and other land use activities which significantly alter natural systems only after evaluation of effects on wildlife habitats and natural areas.

2. Recognize existing federal and state programs protecting threatened or endangered fish and wildlife species.

3. Through the use of County regulations including zoning, seek to minimize the adverse impacts of land use changes on sensitive species (those susceptible to significant population declines resulting from habitat modification).

12. If uses are identified (which were not previously identified in the Plan which would conflict with a Goal 5 resource, an evaluation of the economic, social, environmental and energy consequences shall be used to determine the level of protection necessary for the resource. The procedure outlined in OAR 660-16-000 will be followed.

16. Rare and endangered vascular plants, identified in a 1/8/84 list prepared by the Native Plant Society of Oregon shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluated per "1B" requirements within two years of the date of plan adoption. This list of rare and endangered vascular plants is included into the Lane County General Plan Policies document as Flora and Fauna Exhibit B.

Policy 22 (Plan, p. 5) states:

> Sites considerd "significant" in terms of OAR 660-16-000 through 660-16-025 but requiring that the Goal 5 ESEE consequences analysis process be delayed (the '1B' option) shall be protected by Lane County through the application of interim protection measures. Such interim protective measures shall be considered and applied at the beginning of the plan refinement process for the "significant" sites and after sufficient information is available regarding the location, quality, and quantity of the "significant sites".

See also the Goal 15 section of this report and the coastal review of the Lane County Plan for a discussion of other relevant plan policies which address natural area.

Implementing Measures

As indicated by the County, a number of natural area sites are located on federal land, over which the County lacks jurisdiction. A number of other sites are significant natural areas within the Coastal Planning Area and the implementing measures applied to them have been acknowledged as being in compliance with the Coastal Goals. The two Greenway sites are actually riparian areas along the Middle Fork and the Coast Fork of the Willamette River. The County's Greenway Permit ordinance and its riparian setback and maintenance standards provide a degree of protection for these areas. (See, however, the Goal 15 section of this report for a discussion of specific deficiencies in the Greenway ordinance).

The four state parks have been zoned Parks and Recreation. However, as noted in the Goal 2 section of this report, the PR zone allows a number of uses that could conflict with the natural area values of the sites. ODOT has indicated it does not forsee conflicts with the four sites, according to the County. However, there are no management plans for the sites, or letters from ODOT which confirm that this is the case.

Objections

1. The League of Women Voters of Central Lane County (LWV) has objected to the fact that the County has placed rare and endangered plant species in a (1B) category with a two year time delay for their evaluation through the Goal 5 process. The LWV is concerned because it believes two years it too long for these resources to be without protection. Objectors point out that since most of these resources are not within the Willamette Greenway, they will not receive even minimum interim protection.

2. Lane County Audubon Society and 1000 Friends of Oregon have objected because the County has not provided adequate protection to a natural area known as Russel Creek Basin. This objection is described in more detail in Part II of this Goal 5 Report.

Response to Objections

1. Flora and Fauna Policy 16, which requires Lane County to evaluate the (1B) rare and endangered plant species list in two years does not refer to any particular sites containing these species, nor have objectors provided a list of sites which they believe should have been placed in a (1C) rather that a (1B) category. If sites are not known at this time, then a (1B) classification is appropriate, including policy commitment to address them in the future.

2. Objectors are correct that protection and/or conflict resolution measures have not been applied to the Russel Creek Basin natural area, in spite of an ESEE consequences analysis and recommendations regarding protection of the site in the Metro Working Paper. This issue is addressed in greater detail in the Part II section of this Goal 5 report.

Comments

1. Lane County Landowners Association has pointed out that the County's list of rare and endangered plants is simply a list of species and does not address any specific or general sites. Commentors believe, therefore, the Goal 5 Rule does not apply to these species until sites are identified. (Flora and Fauna Policy 16 indicates that certain plants are considered significant and shall be placed in a (1B) category and evaluated with two years).

2. Lane County Landowners Association also comments that, contrary to Flora and Fauna Policy 7, wetland resources cannot be considered "significant" while placed in a (1B) category.

Response to Comments

1. Commentors are correct that Policy 16 refers only to a list of species, and does not address any sites. Therefore, the Goal 5 Rule will apply if and when sites containing these species are identified.

2. Contrary to the commentor's statements, wetlands--as a resource category--can be (and generally are) considered "significant," even through individual sites may be in a (1B) category because of lack of site-specific inventory information.

Conclusion -- Natural Areas

Lane County has identified 62 natural areas, 56 of which it has classified as (1C) sites. The County has provided sufficient justification for the (1B) classification of the other six sites. Most of the 56 (1C) sites are on federal land, within the Coastal Planning area, or the Willamette Greenway. Therefore, the County has found that the sites are either not within its jurisdiction to regulate, or implementing measures have been applied which provide adequate protection.

Four state parks contain natural area values. The County indicates that because of their zoning (Parks and Recreation), they are adequately protected. However, an examination of that zone reveals that a number of uses are allowed in that zone which could conflict with the natural values present. State ownership in and of itself does not guarantee protection of these values, unless the agency has an adopted park managment plan, which requires protection. As noted in Goal 2, state agencies are also subject to Goal compliance and acknowledged plans. This is an issue which should be further explored through State Agency Coordination agreements.

The County has not applied the Goal 5 Administrative Rule to a Goal 5 Darlingtonia bog located east of the City of Florence that is not covered by the Coastal Goals.

Outstanding Scenic Views and Sites

Inventory

The County's scenic views and sites inventory information is contained in the Recreational Resources Working Paper (pp. 5-13). This consists of a discussion of several inventories and rating systems used by other public entities (e.g., Bureau of Land Management, U.S. Forest Service, State Department of Transportation, former Coastal Conservation and Development Commission, several parks and open space plans of Lane County and the City of Eugene) (p. 6). However, the Working Paper contains no location, quality or quantity information for any specific sites, nor are any of the aforementioned inventories adopted by reference. Instead, the County has decided that, given the time and resources available as well as the difficulty, it cannot conduct site-specific inventory (p. 7). The County suggests that this be undertaken before the first plan review/revision

occurs (p. 7). The County describes in some detail how such an inventory could be conducted, including defining the objective, determining what areas or types of scenic types are "critical", establishing an evaluating or rating system, applying a rating system, and implementing decisions made regarding such areas (pp. 6-14).

The County's Exception for the Big Creek area recognizes scenic values on he property, and on surrounding federal lands (Exhibit E--Renaghan Amendment, p. 53).

Conflicting Uses/ESEE Consequences Analyses

Because the County has not conducted an inventory of outstanding scenic reviews and sites, it has not identified conflicting uses with specifies sites or ESEE consequences of those conflicting uses.

Policies

Lane County's policy regarding scenic resources is as follows (Open Space and Scenic Areas Policy 3, Plan, p. 17):

> Initiate a program to identify areas of outstanding scenic value, identify and resolve conflicts after consideration of social, economic, energy and environmental consequences and protect sites for which conflict resolution indicates protection is desirable. This program will be initiated prior to the next scheduled Plan update (five years from adoption of revised Plan). The County is encouraged to investigate and utilize fee acquisition, easements, cluster developments, preferential assessment, development rights acquisition and similar techniques to implement this policy.

Implementing Measures

Because Lane County has decided to put off the application of the Goal 5 process for this resource category until a later date, no implementing measures regarding the protection and/or resolution of conflicts with scenic views sites have been adopted or applied.

The scenic values of the Big Creek Exception Area are to be maintained through a combination of measures, including keeping 87 percent of the property in open space; placing development away from Big Creek and east of Highway 101 (so it is not visible from the north and will not interfere with the most viewed coastal areas); designating the site Conservation/Recreation/Open Space; and by imposing site review requirements. The site will be zoned NR, as well (Exhibit E--Renaghan Amendment, p. 56).

Objection

Friends of the Oregon Coast object because they believe the proposed development in the Big Creek Exception Area will not enhance the outstanding scenic view associated with the site, and would, in fact, destroy the "picture-book" setting.

Response to Objection

Objectors have not provided specific information as to why the combination of plan and zone designations for the site, site review and the requirement for 87 percent open space is not sufficient to protect scenic resources associated with the site.

Determining what is sufficient to protect scenic views and sites is more difficult and more subjective than for other Goal 5 resource categories. However, in the absence of more specific information from objectors, the objection cannot be sustained.

Conclusion--Scenic Views and Sites

Lane County has not inventoried outstanding scenic views or sites, nor has it identified conflicting uses and ESEE consequences of conflicting uses. No implementing measures addressing this resource category have been adopted or applied on the ground. Instead, the County has a policy to initiate a program to address this resource category prior to the next plan update (five years from adoption of the revised plan).

Lane County should be commended for the serious thought and consideration it has given to this subject, and for its commitment to initiate a comprehensive program to identify and protect outstanding scenic resources. Understandably, such a program can be complex and time-consuming, particularly as it is outlined in the County's Working Paper. However, the Goal 5 Rule requires counties to develop programs prior to acknowledgment, based on information that is currently available. According to the County's own Working Paper, several inventories already exist. For example, the County recognizes that there are several state scenic highways, sites recognized in its own Parks and Open Space Master Plan, as well as sites within federal wilderness areas or on other federal lands. It should be noted that, in the 1981 denial order for Lane County, there were in-order-to-comply requirements directing the County to inventory scenic resources and to apply Goal 5 to those sites.

Neither the Goal nor the planning process itself requires that new information be generated or that information be perfect before planning decisions are made. If this were to case, nearly all planning decisions would be put off until the post-acknowledgment period. It is recommended that Lane County embark on a comprehensive scenic resources program during post-acknowledgment, as called for in its plan. However, prior to

acknowledgment, the County must, at a minimum, inventory known sites, and complete the Goal 5 process for those sites. This work may be refined during post-acknowledgment as part of the County's more detailed, comprehensive scenic resources program work.

Water Areas, Wetlands, Watersheds and Groundwater Resources

Inventory

Lane County has developed a separate document, Water Resources Working Paper, which contains inventory information, and conflicting uses/ESEE consequences analyses for this Goal 5 topic.

Watersheds: A map showing the locations of Lane County's water basins is contained in the Appendix to the Working Paper (Map 2). The County does not provide quality or quantity information for each individual basin, but rather indicates that quality and size vary (p. 5). The County does note, however, that the Upper Middle Fork Willamette, Mosby Creek, and the entire Siuslaw River have severe sedimentation problems. The remainder of the Willamette and the tributary streams to the Willamette and the Siuslaw have moderate sedimentation problems. According to DEQ, the Siuslaw River basin is a "regional hot spot," (i.e., a considerable portion has a severe problem but is not as important as compared to other hot spots, statewide). DEQ has indicated that 410 miles of streams in Lane County have streambank erosion problems, 67 of them having severe erosion. This is particularly true in the Siuslaw Basin, and in tributary streams to the Willamette and short reaches of the Willamette River itself (p. 4).

Wetlands: Please refer to the Fish and Wildlife section of this report for a discussion of the County's wetlands inventory.

Surface Waters: Lane County streams are shown on Map 2 in the Appendix to the Water Resources Working Paper. More complete mapping of surface water is available in the Planning Department office, however (p. 7). Based on a 1974 Water Quality Report and its 1981 update, the County reports that the quality of water in Lane County is generally quite high (p. 7) However, the Mowhawk, Long Tom, and portions of the Coast Fork and Main Stem of the Willamette have slow, meandering reaches and are affected by extensive development (p. 7). Specific problems along these rivers are discussed briefly (pp. 7-8). The Water Resources Working Paper contains a brief discussion of minimum stream flows, particularly those on the Willamette which are regulated by reservoir releases determined by the Corps of Engineers (pp. 8-9).

The Flora and Fauna Working Paper (p. 16) indicates that all lakes and reservoirs have been mapped and are available in the County Planning Department offices. There are about 300 Alpine Cascade Lakes in the County, varying in size from Waldo Lake (6,420 acres) to Mouse Lake (.05 acres) (Water Resource Working Paper, p. 8).

Groundwater: The principal aquifiers which yield moderate to high volumes of water are located on the coast near Florence in dunal sands, along the lower McKenzie Valley, the lower Middle Fork Willamette Valley, the Lower Coast Fork Willamette Valley, and on the valley floor north of Eugene along the Willamette River (p. 10). Map 3 in the Working Paper shows the quantity of groundwater in Lane County; groundwater quality is depicted on Map 3.

Conflicting Uses/ESEE Consequences Analyses

Watersheds: The County states that the only conflict that is specifically a watershed conflict, and not a surface or groundwater conflict, is contamination or possible contamination of surface water supplies used for domestic purposes. Timber propagation and harvesting activities, particularly herbicide use and erosion caused by ground disturbance can affect municipal water sources (p. 5) Residential development and road construction also cause erosion problems (p. 5). The County notes that resolution of timber harvesting conflicts is beyond its regulatory scope. It also points out that several watersheds used for domestic water supplies are "substantially within federal owernship." The County notes that the watershed for the City of Cottage Grove is almost entirely within federal ownership. The Umpqua National Forest and the U.S. EPA have adopted a plan to address problems, yet these problems continue (p. 5). The County indicates that the potential for similar problems exist for domestic suppies from federally-owned watersheds such as Mapleton, Tide, London Springs, and Eugene's supply, the McKenzie River (p. 5).

The County has not conducted an ESEE consequences analysis because the problem is outside its jurisdiction to resolve. However, the County supports adoption of policies or amendments to state and federal laws (including the FPA) which provide greater levels of protection for watershed (p. 6).

Development -- which is regulated by the County -- could impact the Clear Lake watershed. This watershed serves the Heceta Water District and provides a portion of the water for the City of Florence (p. 6). The County discusses the possibility of designating a "protected watershed" but has decided to take no action until sufficient information is gathered on the sources of pollutants. (p. 6). An intensive study is presently underway in response to a temporary DEQ rule (p. 6).

Wetlands: Please refer to the Fish and Wildlife section of this report for a discussion of the County's conflicting uses/ESEE consequences analysis for wetlands.

Surface Waters: A number of conflicts exist for surface waters of the County, but the County asserts they are not consequences of County actions. Rather, it believes they are the result of federal agency management programs (e.g., reservoirs have certain congressioally authorized uses, but these often do not include some uses that are of importance of the County, such as waste dilution, fish and wildlife and recreation). The Corps of Engineers is in the process of reviewing authorized uses on six reservoirs, and could propose reauthorization (p. 9).

Similarly, certain streams such as the Coast Fork Willamette, Coyote Creek, Long Tom River and Lost Creek, appear to have been overallocated. The County recognizes that the State Water Resources Department (WRD) has responsibility for establishing minimum streamflows. The County believes WRD should initiate adjudication, including establishing minimum streamflows for major waterways (p. 9).

Erosion from forest lands is also a conflict with water quality, but the County points out that it is regulated by the FPA or federal regulations. (p. 9). Agriculturally caused water quality problems are being addressed by DEQ and soil and water conservation districts, although three SWDs in the County have not yet adopted model Best Management Practices by DEQ (p. 9). Outside UGBs, urban runoff is primarily from industrial facilities, especially hazardous materials stored at this sites (p. 9-10). This is also regulated by DEQ.

Groundwater: Two conflicts have been identified for groundwater resources -- development in quantity-limited aquifers, and development in areas where groundwater quality may be polluted. Separate ESEE consequences analyses are presented for these two types of conflicts. The County has concluded that:

1. For a quality-limited aquifer, otherwise acceptable development should be allowed if there is an adequate showing that water will be available for a forseeable period in the future, and that the additional withdrawal will not negatively impact surrounding water users. A number of specific code revisions are recommended to carry out these requirements (p. 12).

2. For groundwater quality problem areas, the County has determined that resolution of conflicts should be different for different types of contaminants (p. 14). These include:

    a. For development in aquifers contaminated by natural means, there should be a system to inform people of potential problems, and to suggest that well drilling and testing take place prior to construcion. Areas of quality limitation could be placed on a computerized land file, and could be checked when a building permit application is reviewed. Similarly, notification would be a matter of public record and would be available to future parties interested in these properties as well.

b. Old and smaller solid waste sites in the County are mapped, but not enough is known about specific leachate problems or groundwater characteristics to designate hazard notification areas around them. The Working Paper recommends inventorying each site, including period of operation, type of wastes deposited, and groundwater characteristics. Based on the information, a hazard notification system should be established (p. 14).

c. Two sensitive aquifers are currently subject to DEQ rules for sewage system installation -- the River Road/Santa Clara area, and the North Florence area. For other developed areas located on sensitive aquifers and which have known or suspected contamination problems (Mapleton, Noti, Elmira, Crow, Coburg, Goshen, Creswell urbanizing area, Saginaw, Marcola, Dexter, Cedar Flats, Walterville, Leaburg, Vida, Blue River, and McKenzie Bridge), current County policy calls for a minimum parcel size of one acre if community water is available, or two acres if individual wells are used. The County points out that this policy does not correct the existing situation, but should prevent aggravation of the situation (p. 15). These quality-limited aquifier areas will be placed on the County computer file, and applicants for building permits involving new wells will be informed of possible sewage contamination in the groundwater.

Policies

The following policies address water resource issues in Lane County (Water Resources Policies, Plan, pp. 17-18):

1. State policy normally promotes multiple use of surface waters throughout Lane County. Under such policy, use conflicts can and do occur. As the first step in addressing this problem, the County urges the Oregon Water Policy Review Board and the Department of Environmental Quality to update the existing water basin plans and establish priorities among the varous beneficial uses for specific water areas. The economic, social, environmental and energy consequences of each use should be considered in establishing priorities and resolving any identified conflicts. Lane County will cooperate to the maximum extent practicable in such a program.

2. The County supports congressional reauthorization of upper Willamette basin reservoirs, to reflect actual use priorities. To the extent practicable, the County will cooperate with the Corps of Engineers in resolving existing use conflicts and accommodating the needs of competing uses.

3. Adequacy of water supply, particularly those relying on groundwater sources, shall be a major concern in reviewing major land use changes. For the purpose of applying this policy, major land use change shall be any application reviewed by the Hearings Official or the Planning Commission.

4. The primary means of evaluating groundwater resources for land use planning purposes shall be through the land division review process. The Little Butte Volcanics, Eugene Formation, Fisher Formation, Spencer Formation, Flourney Formation, Alluvium and Older Dunes geological units shall be designated as quality and/or quantity limited aquifers. As such the provisions of Chapter 13, Lane Code (Land Divisions) regarding areas so designated will apply.

5. Land use designations in the Comprehensive Plan and implementing zoning shall be commensurate with groundwater aquifer capacities.

Additional policies regarding water resources, including wetlands, are discussed in the Fish and Wildlife section of this report, as well as in the Goal 6 and 11 sections.

Implementing Measures

As noted in the Fish and Wildlife section of this report, the County has adopted riparian setback and vegetation maintenance standards in a number of zoning districts.

A Natural Resources Zone has been applied to several wetlands (confirmed by Mike Copely, County Planner, personal communication, July 16, 1984).

Section 13.050(13) of the Lane Code addresses the provision of water in the County. This section requires lots and parcels to be served by an approved public, community, or individual water system. Aquifer and quality tests are required for public and community systems, and may be required for individual water sytems. These tests are as follows (Section 13.050(13)):

(c) Aquifer and quality tests or geological evaluation may be required by Lane County for any lot or parcel. These requirements may include, but need not be limited to, evaluation of existing well logs and preparation of a geological report on the area, and evaluation of the site by a professional geologist, or engineering geologist or full scale aquifer tests as required. In determining the detail of analysis required, the following apply:

(i) Areas designated by Board order as having problems in the quantity or quality of available water as adopted, documented in Lane Manual and filed in the office of the Department shall meet

the following requirements for all parcesl less than 20 acres in size. The applicant must affirmatively demonstrate, in a manner acceptable to Lane County, that the proposed subdivision/partition is capable of sustaining the devlopment anticipated with sufficient potable water. This demonstration must include, but need not be limited to, aquifer tests. More specifically, the aquifer test shall show coefficient of transmissivity, permeabiltiy, storage and the specific yield. The bacteriology/ chemical tests shall show compliance with standards set by the Oregon State Health Division and Lane County. The test procedure shall utilize standard acceptable practices for aquifer tests using pumped and observation wells and records of static water level, date, clock, elapsed time (in min.), depth of water, drawdown and recovery. Analysis using the non-equilibrium method (or other methods where appropriate) must be performed by a licensed geologist or engineer. A copy of all field notes and test results shall be submitted with the report, together with summary statements which indicate whether the proposed use of the aquifer could adversely impact the neighboring wells or properties or deplete the aquifer and the general impact of the proposed use.

(d) For all areas not designated as problem areas by the procedures documented in LC 13.050(13)(a) above, a pump test report or a well log report shall be supplied, unless determined by Lane County to be not necessary.

Pump test and well log reports shall be prepared according to criteria in the ordinance.

Conclusion -- Water Resources

The County has done a good job of inventorying its water resources and problems associated with those resources. The County has analyzed the ESEE consequences of conflicting uses, and has adopted some excellent implementing measures to help resolve conflicts, particularly riparian setback and vegetation maintenance standards and aquifer and quality requirements.

Wilderness Areas

Inventory

Lane County's inventory of designated wilderness areas is contained in its Recreational Resources Working Paper on a map entitled, Recreational Resources. The locations of three wilderness areas are depicted--Mt. Washington Wilderness, Three Sisters Wilderness, and Diamond Park Wilderness.

Page 4 of the Working Paper describes in general the County's role in managing such areas.

It should be noted that recently, new wilderness legislation was passed by the U.S. Congress, establishing a number of new wilderness areas in Oregon. Several of these are within Lane County. These include Rock Creek, Cummins Creek, Three Sisters Additions, Diamond Peak Additions, and Waldo Lake.

Because of the fact that Congressional action occurred so recently (after Lane County submitted its plan), it is suggested--but not required until first plan update--that the plan be amended to inventory these new areas.

Conflicting Uses/ESEE Consequences Analyses

Because of their federal ownership, remote locations and federal protection for wilderness values, the County indicates that wilderness areas are "free from County-generated conflicts" (p. 4).

Policies

Lane County has one policy addressing wilderness areas (Open Space and Scenic Areas Policy 2; Plan, p. 17):

> Lane County will recommend that no new wilderness areas be designated in the County without a complete analysis of the revenue and employment impacts to Lane County. Where designations are made, negative employment and revenue impacts should be mitigated by increasing allowable timber harvest on other public lands.

Implementing Measures

Forest resource zoning has been applied to wilderness areas. The County explains in its Recreational Resources Working Paper (p. 4) that this zoning "will pay homage to the concept of County 'protection' of them, but in practical fact they are simply out of the relm of County authority."

Conclusion--Wilderness Areas

Lane County has inventoried the three wilderness areas within its boundaries and has adopted a plan policy recommending that no new wilderness areas be designated without an analysis of revenue and employment impacts. The areas have been given forest resource zoning. It is recommended that, by first plan update, the County amend its plan to inventory the recently designated new wilderness areas.

Historic and Cultural Resources

Inventory

The Working Paper identifies each of the approximately 500 sites identified in Lane County on a preliminary inventory and survey of historic and archaeological resources. Each is identified by site number or name, by location (township, range, section) and by map symbol. Each appears on a quad map included in that document. A map symbol for each site indicates whether it is an archaeological site, a transportation site or route, a settlement feature, an agricultural site, a mining site, a logging site, a marine site, an historical site, or a natural feature.

Lane County has adopted an Historical Resources Working Paper which explains the process and criteria used in evaluating the "significance" of the 500 sites identified in the County (Addendum to the Working Paper, pp. 1-2). All sites on the National Register of Historic Places are considered significant and are in the (1C) category of the Goal 5 Rule. All sites or structures still in existence contained in the Statewide Inventory are also considered significant, and where sufficient information is available to carry out a conflicting uses analysis, a (1C) label has been given. Archaeological sites are considered (1B) sites, but the County indicates they should be given special interim protection until a data and a protective program for them are developed. All other sites identified are (1A) sites (pp. 1-2).

In all, the County determined there are 63 (1C) sites. These are listed on pages 3 and 4 of the Working Paper Addendum, along with their locations and map numbers. These sites are mapped on quadrangle maps that are included in the Working Paper. Each site has been given a map code which specifies the "theme" of the site (i.e., archaeological, transportation, settlement features, cemetery, century farm, grange hall, old barn, mining, logging, marine industry, historical site, natural landmark, and hot springs). Further information about each (1C) site that is also on the Statewide Inventory is appended to the addendum to the Working Paper. The Addendum to the Working Paper also summarizes the quality and quantity of these (1C) sites (pp. 5-9).

It should be noted that the County has indicated that several (1C) sites on the historic sites inventory in the Working Paper Addendum (pp. 3-4) were deleted by the Board of Commissioners during final plan adoption, including sites # 32, 34, 39, and 42 (Mike Copely, County Planner, personal communication, June 15, 1984). There is no indication of this in any of the resubmittal materials. Site 34 is within the Creswell UGB. However, there are no reasons presented supporting deletion of sites # 32, 39, or 42 (the Andrew Keeney House, the Paschelke House, and Fall Creek Christian Church, respectively).

Conflicting Uses/ESEE Consequences Analyses

Pages 5-9 of the Addendum to the Working Paper contain the County's conflicting uses identification and ESEE consequences analyses for the (1C) sites. These analyses are presented by category for the following categories: Transportation Sites (bridges), Settlement Features, Barns, Marine Sites, Historical Sites/Landmarks, and Archaeological Sites.

In its Working Paper, the County recognizes destruction of the structural sites as a conflict, but fails to recognize major exterior alteration as a conflicting activity. However, it is clear in the County's zoning ordinance that the County considers major exterior alteration as an activity which could conflict with historic resources. For archaeological sites, the County identifies any land use or activity which damages the integrity of the site as a conflict.

Policies

Lane County has adopted a number of plan policies which address historic and archaeological resources (Plan, pp. 12-13). These include the following:

1. A group known as the "Lane County Historic Resource Committee" is to be established and given permanent status by the Board of County Commissioners. The Committee shall represent a wide array of historical interests and the interest of property owners. Its tasks shall include: general concern with historical matters in the County; to monitor conditions affecting such resources; to devise criteria and methods for the selection of newly-designated historical resources; to advise the staff and officials of the County on proposed new historical sites and structures; to oversee the administration of the Historic Structures or Sites ordinance; and other related tasks and duties. Outputs of the Committee shall be presented to the Planning Commissions and subsequently to the Board of County Commissioners.

2. The County shall administer the "Historic Structures or Sites" section of Lane Code Chapter 10 as a means of protecting historic resources. These regulations shall be applied to all sites contained in [the] list of "Historic Structures or Sites" referenced by the ordinance, which are sites deemed significant by the County, and therefore meriting protection from conflicting uses by a limitation of such conflicting uses.

3. The Goal 5 conflict resolution process (OAR 660-16-000 through 660-16-025) which has been applied in the selection of historical sites and structures contained in the General Plan and implemented through the "Historic Structures or

Sites" ordinance, shall continue to be applied, where appropriate, to historic sites and places prior to regulation of them.

4. The County shall seek to enlist voluntary compliance with individual landowners in the addition of their property as historical sites, and landowners shall be notified of Public Hearings, including information about inclusion as a Historical Site.

5. The County shall encourage its own agencies, and communities within the County, to emphasize their historical, geographic and other unique qualities.

6. The County shall review proposals for development or change in land use for possible impacts with designated historical sites. When proposed development or land use changes will cause harm or degradation of a designated site, such effects shall be mitigated in a satisfactory manner.

7. The County shall continually develop and refine, through review, and update, its inventory of historic sites and resources. A long-term objective shall be in the inclusion of historical sites in the County's geo-data system.

8. The County shall take advantage, where practical, of state and federal programs to assist in the identification and protection of historical resources, including the use of financial assistance from these programs.

9. The County shall work with concern local, state and federal agencies to coordinate efforts to identify and protect historical resources.

10. Archeological sites identified in the Historical Resources Working Paper and Addendum to the Historic Resources Working Paper shall be considered significant in terms of OAR 660-16-000/025 and shall be placed in a "1B" category and evaluated per "1B" requirements within two years of the date of plan adoption. These significant sites shall be incorporated into the Lane County General Plan Policies document as Historical Resources Exhibit A.

Note: Policy 2, above, incorrectly refers to Lane Code Chapter 10, rather than Chapter 16 as its implementing measure for historic sites.

Implementing Measures

Section 16.233 of the Lane County Development Code is the Historic Structures of Sites Combining Zone (/H-RCP), the stated purpose of which is to allow the County to review building and demolition permits to

ensure historic resources are preserved. The Code specifies that "no person may alter or demolish any Historic Structure or Site" unless a permit to do so has been issued. Upon receipt of an application for such a permit, the Planning Director shall notify the Lane County Museum Director and the State Historic Preservation Officer.

A demolition permit shall be approved only if evidence is submitted demonstrating that "every reasonable effort shall be made to maintain the Historic Structure by acquisition, protection, stabilization, rehabilitation, restoration or reconstruction project (a demonstrated lack of private and public funding for maintenance of a structure is sufficient cause to allow demolition)." A permit to alter an historic site or structure shall be approved only upon submission of evidence that (a) any use or change "should be compatible with the historical nature of the property," and (2) only the minimum alteration of the structure or site and its environment necessary to achieve the intended use shall be allowed. Consideration shall be given to four alteration guidelines in satisfying the second criteria, above. These guidelines are as follows:

(1) Only the minimum alteration of the designated historic building, structure or site and its environment necessary to achieve the intended use shall be allowed.

(2) The distinguishing original qualities or character of a designated building, structure or site and its environment should not be destroyed. The removal or alteration of any historical material or distinctive architectural features should be avoided.

(3) All designated buildings, structures and sites shall be recognized as products of their own time. Alterations which have no historical basis and which seek to create an earlier appearance should be discouraged.

(4) Changes which may have taken place in the course of time are evidence of the history and development of a building, structure or site and its environment. These changes may have acquired significance in their own right and this significance shall be recognized and respected.

It must be noted that the zoning maps do not show that the combining zone has been applied to all 63 inventoried (1C) sites as intended. Specifically, the maps do not show that the combining zone is applied to (1C) sites 1-20, 24, 35, 38, 44, 45, 46, 48, 55, 57, 59 or 61. The ordinance also does not indicate which sites fall within that zone designation. This is also contrary to Historic Policy 2, which states that the zone shall be applied to all sites on a list referenced in the ordinance.

Objections

1. The Oregon Department of Transportation (ODOT) has objected because of a conflict between the historic resources working papers and the ordinance. Specifically, ODOT finds that the historic ordinance applies only to sites and structures on the National Register of Historic Places, and does not cover other (1C) sites identified in the working papers.

2. Friends of the Oregon Coast object because of the failure of Lane County to address cultural and archaeological resources of the Big Creek Exception Area. Specifically, objectors indicate that Goal 5 requires such resources to be inventoried. Yet, according to objectors, the Exception does not address this topic "in any way." Objectors provide information indicating that such resources are common at the mouths of coastal rivers. Due to the probability of Indian graves and/or a significant archeological site at the mouth of Big Creek, and the fact that, based on the County's own definition of conflicting uses, road building, building construction and land clearing for a destination resort are considered conflicting uses, objectors believe that "the new zoning of the Renaghan property is in violation of Goal 5 until an intenstive cultural resources inventory has been conducted and this portion of Goal 5 addressed."

Response to Objections

1. ODOT has misread the Lane Code with regarding to the County's Historic Structures of Sites Combining Zone. ODOT has apparently reviewed the County ordinance which applies inside UGBs. That zone does limit the zone's application to National Register sites. However, ODOT has failed to note that the ordinance which applies outside UGB's (in rural Lane County) is somewhat different. Specifically, the rural zone does not contain language that limits application to National Register sites. Therefore, the objection is not sustained.

2. Objectors are correct that the exception for the Renaghan property does not address historic or cultural resources. However, as pointed out by the objectors themselves, the State Historic Preservation Office knows of no site on the property, nor do anthropoligists at Oregon State University. County's are required, under Goal 5, to rely on whatever information is available in producing comprehensive plans. They are not required to conduct extensive archaeological surveys. Therefore, the County's exception does not violate Goal 5 for cultural or archeological resources. If, in the event, such resources are discovered during site development, the Goal 5 Rule would have to be applied by the County, including possible plan amendments.

Conclusion--Historic Resources

Lane County has adopted an inventory of historic resources and has analyzed conflicts and ESEE consequences of conflicts with these resources. The County has a combining zone which is intended to be applied to historic sites.

The zone provides procedures and criteria for resolving conflicts with inventoried sites, particularly major exterior alterations and demolitions. However, the County has not applied the zone to all 63 (1C) sites identified in its plan, as intended.

Oregon Recreation Trails

Inventory

Lane County's inventory of Oregon Recreation Trails is included in its Recreational Resources Working Paper (p. 15, Recreational Resources Map).

The County describes these trails as follows:

1. Coast Range Trail--not developed. Funding limitations and the desire of the state not to condemn private land for trail development suggests that it will be some time before it is completed. Mapped route is general in nature.

2. TransAmerica Bike Trail--fully signed and marked, with route maps published by the state.

3. Eugene to Pacific Crest Trail--a few portions are developed with work now underway by a local chapter of the Sierra Club. Uses bikeways in Eugene Area.

4. High Divide Trail--proposal only, same as #1 above.

5. Coast Trail--Lane County developed portions occur in Cape Perpetua and Heceta Head recreational areas, with preparations being made for inclusion of Oregon Dunes National Recreation Area lands. No private lands involved at this point.

6. Coast Bicycle Trail--designated, signed and mapped.

7. Pacific Crest Trail--fully developed. No private lands involved in Lane County. Located in Willamette National Forest.

These descriptions are basically accurate. It should be noted that, according to Jack Remington, State Trails Coordinator, ODOT has proposed general routes for the unbuilt portions of the Eugene to Pacific Crest Trail and the Coast Trail. Portions of the High Divide Trail already exist since they follow several other developed trails. However, only general routes have been proposed for the unbuilt portions of the High Divide Trail (personal communication, June 20, 1984).

The general location of each of the seven trails is depicted on the County's Recreational Resources Map in the Working Paper. No specific locations have been provided in either the text or on the map, however, for existing trails. Specific routes for the Pacific Crest Trail, the TransAmerica Bike Trail, the Coast Bike Route, and portions of the High Divide Trail and the Eugene to Pacific Crest Trail are known, since these trails are developed.

Conflicting Uses/ESEE Consequences Analyses

The County has not identified specific conflicting uses with the seven proposed or existing Oregon Recreation Trails.

However, the Coast Bicycle Trail, TransAmerica Bike Trail and the Pacific Crest Trail are fully developed and are either on federal or other public lands or on public rights-of-way, as are portions of Eugene to Pacific Crest Trail and portions of the Coast Trail. Therefore, the County concludes that they are likely to experience few conflicts.

No specific routes for the Coast Range Trail or the unbuilt segments of the Coast Trail, the Eugene to Pacific Crest Trail, or the High Divide Trail have been determined by ODOT. Although most of these proposed trails would cross public lands, segments of these trails are proposed to cross private lands, and conflicts could occur. However, since their locations are only generally known at this time, specific conflicts cannot be determined.

Policies

Lane County's recreational trails policy (Open Space and Scenic Areas Policy 4, Plan, p. 17) is:

> The County shall acknowledge recreational trails which are developed by the Oregon Parks Outdoor Recreation Plan and shall display the routes on its Plan documents.

Lane County lacks a policy to cooperate with ODOT in the protection of existing trails. The County also lacks a policy to coordinate with the Oregon Department of Transportation in applying the steps of the Goal 5 Rule during any future identification or establishment of proposed trails or trail segments.

Implementing Measures

No specific implementing measures have been adopted by Lane County for the protection and/or resolution of conflicts with existing or proposed trails.

Conclusion--Recreation Trails

Lane County has identified the seven existing or potential state recreation trails in its Recreational Resources Working Paper, but has not provided a description or map of the specific locations of existing trails. It has, however, recognized the fact that ODOT has maps of these trails. The County lacks a plan policy to coordinate with ODOT in applying the Goal 5 Rule if and when any of the unbuilt trail segments are identified or proposed for construction or designation. The County also lacks a policy to cooperate with ODOT in the protection of existing trails.

No conflicts exist with developed trails and trail segments, and therefore, special implementing measures are not necessary in those areas. Implementing measures have not been adopted for the protection and/or resolution of conflicts with the proposed trails and trail segments, nor are any appropriate at this time since their specific locations are not yet known.

Potential and Approved Scenic Rivers and Waterways

Inventory

The County's Recreational Resources Working Paper briefly describes both the State Scenic Waterways Program and the Federal Wild and Scenic Rivers Program (p. 16). The County correctly notes that there are no designated federal rivers in Lane County at this time. However, the County fails to note that during the 1983 Legislative Session, a bill was passed (HB 2435) designating Waldo Lake and the North Fork of the Middle Fork of the Willamette River (from Waldo Lake to about one mile upstream from Westfir) as a State Scenic Waterway. The County's working paper incorrectly indicates there are no state designated waterways.

The Working Paper correctly recognizes that five river stretches are on the U.S. Interior Department's inventory of potential scenic rivers (p. 17):

1. Upper McKenzie (from Tamolitch Falls to McKenzie Bridge);

2. Steamboat Creek (from its source to its confluence with the Umpqua River);

3. Alsea (entire length; only a small upper portion in Lane County);

4. Siuslaw (from its source to Lake Creek confluence); and

5. Willamette (from Eugene to Corvallis).

All five of these river segments are shown in a general fashion on the Recreational Resources Map contained in the County's Recreational Resources Working Paper.

The County correctly notes that the Upper McKenzie (from Tamolitch Falls to McKenzie Bridge) is also on the state potential scenic waterways list. However, the County fails to mention that Steamboat Creek and Alsea River (the same stretches as on the federal potential list) are also on the state potential list.

The County recognizes that the area affected along each of the inventoried rivers is one-quarter mile on each side measured from ordinary high water (p. 16).

Policies

The following policy has been adopted regarding wild and scenic rivers (Open Space and Scenic Areas Policy 5, Plan, p. 17):

> The County shall cooperate with appropriate state and federal agencies in the selection of scenic and wild rivers.

This policy does not commit the County to coordinate with those agencies in applying the Goal 5 Rule process in studying rivers for possible state or federal designation and in making such selections.

Conflicting Uses/ESEE Consequences Analyses

Lane County suggests that conflicting uses and ESEE/consequences should be identified at the time a river is studied for designation (pp. 17-18). The County also suggests that resource zoning should provide protection for such rivers (p. 17).

Implementing Measures

Waldo Lake and the stretch of the North Fork of the Middle Fork of the Willamette River that is designated as a State Scenic Waterway are located entirely on federal land (confirmed by Jim Payne, State Rivers Program Coordinator, personal communication, June 14, 1984). The portion of the Alsea River that is on the state and federal potential lists is also in federal ownership. The Willamette River is within the Willamette River Greenway, to which the County has applied a Greenway Development ordinance (see the Goal 15 section of this report for details).

Portions of the McKenzie River, Steamboat Creek, and the Siuslaw River flow through federally-owned lands. However, some stretches are in non-federal, private ownership. Developed and committed exceptions have been taken along all of these stretches of the McKenzie and Siuslaw Rivers and Steamboat Creek, most of which have been found to be valid under the Goal 2 analysis in this report. However, as noted in that report section, exceptions in plats 23, 204, 230 (Siuslaw River), 627, 628, 629, 630 and 631 (McKenzie River) have not been justified. No needs exceptions have been taken along the McKenzie River, Steamboat Creek, or the Siuslaw River. It has been the practice of the Commission to require jurisdictions to analyze the ESEE consequences of taking needs exceptions along potential federal or state scenic rivers and waterways, but not to require such an analysis for built and committed exceptions.

Conclusion--Scenic Rivers and Waterways

Lane County has inventoried five federal potential scenic rivers and one state potential scenic waterway (the McKenzie River) but has failed to note that, besides the McKenzie River, two of the federal potential rivers are also potential state waterways (i.e., the Alsea River and Steamboat Creek). The County has also failed to mention that Waldo Lake and the North Fork of the Middle Fork of the Willamette River are designated State Scenic Waterways.

The County lacks a policy commitment to coordinate with appropriate state and federal agencies in applying the Goal 5 Rule process in studying rivers for possible designation as well as in the actual selection of rivers for designation.

Built and committed exceptions have been taken along all nonfederal lands along state and federal potential scenic rivers, some of which have not been found to be valid under Goal 2. The County needs to either not take these exceptions, or justify them as being built or committed.

PART II--EUGENE/SPRINGFIELD METROPOLITAN AREA OUTSIDE THE METRO UGB

In August, 1982, the Commission reviewed and acknowledged the Eugene/Springfield Metro Area Plan and implementing measures for lands within the Metro UGB. However, the cities of Eugene and Springfield as well as Lane County were granted a continuance for lands outside the UGB but within the Metro Planning Area Boundary in order to comply with Goal 5, (as well as several other Goals). The following section of this report analyzes Lane County's responses to the "in-order-to-comply" requirements contained in the August, 1982 staff report, adopted by the Commission.

Requirement

1. Amend the Metro Plan to include a separate evaluation of the "ESEE" consequences of allowing conflicting uses for those sites which are the subject of a Goal 5 objection filed pursuant to OAR 660-116-00 (i.e., Sites 4, 5, 7, 12, 19, 21 and 28 shown on Figure D-3). For specific direction on individual sites see underscored portions of Comments and Objections subsection, preceeding.

Response

The following sites were to be addressed under this requirement:

Site	Name
4	Bertelsen Slough
5	Willow Creek Wetlands
7	Confluence Heronry
12	Gillespie Butte
19	Spencer Butte Ridgetop
21	Russel Creek Basin
28	Pudding Creek Heronry

Sites 4, 5, 12 and 19 are located within the Metro UGB and have been acknowledged by the Commission (see the August 19, 1982 Commission action, pp. 10-11). Therefore, they are not addressed in this report.

The Confluence Heronry, Pudding Creek Heronry and Russel Creek Basin are outside the Metro UGB and inside the Metro Planning Area Boundary and were therefore addressed in this plan submittal. Specific Goal 5 analyses for each of the three sites are presented separately below.

Confluence (Big Island) Heronry: The Lane County Rural Comprehensive Plan, Plan Diagram Zoning Maps and Metro Area of Influence document (January 1984) contains a 1982 working paper entitled, "Metropolitan Plan Update, Natural Resource Areas: Conflict Resolution For Potential Significant Areas." Part V of that working paper addresses a site known as the Confluence Heronry, or the Big Island Heronry. This working paper supplements Lane Council of Governments' (L-COG's) inventory in the Natural Assets and Constraints working papers of April 1978.

As explained in the 1982 working papers, p. V-1, the 235-acre island is located in the Willamette River near the confluence with the McKenzie River. The County has specifically mapped the location of the island as well as a large Great Blue Heron rookery located on the island. The heronry has been determined to be of local and statewide significance, and is on the State Natural Heritage Inventory. The island's other resources (e.g., agricultural land, vegetation, wildlife and wildlife habitats, sand and gravel resources, scenery and water are described (pp. V-1 through V-5). The island is within the Willamette Greenway and is a potential Greenway acquisition site in the ODOT Greenway Plan (Working Paper, p. V-7).

L-COG has reassessed the significance of the resources on the island and has provided more detailed locational information about the heronry and its significances, statewide, based on information on other heronries (p. V-8). More refined information has also been adopted regarding vegetation, soils, agricultural values, and sand and gravel resources (pp. V-8, V-11 through V-17).

Conflicting uses are identified (pp. V-8 through V-10) as recreation, sand and gravel extraction, timber harvest, agricultural practices, wildlife and wildlife habitat, scenic assets and public improvements. Each of these uses is described, particularly as it could affect the heronry. Pages V-11 through V-17 contain L-COG's ESEE consequences analysis.

The analysis concludes that the heronry and vegetative fringe of the island are significant resources that should be protected. However, not allowing sand and gravel extraction on the island would result in negative impacts on property owners and the public. Extraction can be conducted in a manner that is compatible with the heronry (p. V-18). Recommendations regarding the island are made on page V-18. Among these are recommendations to:

1. Designate the heronry and buffer area as "natural resource" and designate the fringe of the island as "park and open space." The interior of the island should be designated "sand and gravel."

2. Exchange land (between property owners and the state) so that the heronry and buffer are in perpetual public ownership.

3. Protect the riparian habitat on the island periphery by maintaining an adequate Willamette River Greenway vegetative fringe.

4. Develop controls on sand and gravel extraction between the operator and ODFW in order to protect the heronry.

5. Rely on state and County permits for addressing the details of sand and gravel operations.

See also the Goal 15 section of this report.

Pudding Creek Heronry: The Lane County Rural Comprehensive Plan, Plan Diagram Zoning Maps and Metro Area of Influence document (January 1984) contains a 1982 working paper entitled, "Metropolitan Plan Update, Natural Resource Areas: Conflict Resolution For Potential Significant Areas." Part VI of that working paper as well as 1984 Addendum to Part VI addresses a site known as the Pudding Creek Heronry. These working appears supplement L-COG's inventory in the Natural Assets and Constraints working papers of April 1978.

The heronry is one of the largest in Western Oregon (about 54 nests) and continues to be productive (Addendum, p. 1). The heronry is currently designated and zoned "sand and gravel," and potential mining operations

could conflict with the heronry. The site is on the Middle Fork of the Willamette River (Working Paper, p. VI-5). The Addendum indicates that the site is also within the Willamette Greenway.

The 1982 Working Paper summarizes in greater detail the resource values of the site (pp. VI-1 through VI-5), as well as the nature of the potential conflicts (pp. VI-6 though VI-7). Inasmuch as the heronry is in the middle of the potential extraction operation, and the owner has an operating permit from the Oregon Department of Geology and Mineral Industries, this appears to be the greatest conflict. Timber harvest and vegetative clearing, which normally precede extraction, would also conflict with the heronry (pp. VI-5, V-6).

Pages VI-7 through VI-12 analyze the ESEE consequences of the various competing uses for the site, and conflict-resolution alternatives ranging from no protection for the heronry to full protection of the heronry through public acquisition or land trade are analyzed (pp. VI-13 and VI-14).

The Working Paper recommends interim protection for the heronry, plus possible land exchange or transfer of mining rights. It also recommends that ODFW cooperate with the landowner to develop a management plan for the site (should no land exchange take place).

The 1984 Addendum to the 1982 Working Paper reassesses the significance of the heronry, updates the inventory, and summarizes the results of negotiations which have taken place between Lane County, ODFW and the landowner (Wildish Land Company).

The 1984 Addendum to the Working Paper contains a discussion of the conflict-resolution process that took place in 1983 (pp. 1-2). ODFW drafted a trade agreement for an exchange of land and mineral rights of like value between State Parks Division, Lane County, and the Wildish Land Company (pp. 1-2). Such a trade would result in protection of the heronry and protection of the landowner's ability to extract aggregate (p. 3). Based on the analysis of conflicts, ESEE consequences, and the possibility of a land exchange, the Addendum contains the following updated recommendations (p. 4):

1. Change the plan designation for the heronry and surrounding buffer area from "sand and gravel" and "park and open space" to "natural resources."

2. Change the plan designation for an equal value land within Buford Park from "parks and open space" to "sand and gravel."

3. Lane County should rezone each area to correspond to these plan designations.

4. The potential land exchange area should be contiguous to existing Wildish holdings to avoid creating noncontiguous park boundaries.

See also the Goal 15 section of this report.

Russel Creek Basin: The Lane County Rural Comprehensive Plan, Plan Diagram Zoning Map and Metro Area of Influence document (January 1984) contains a working paper which is entitled, "Metropolitan Plan Update, Natural Resource Areas: Conflict Resolution For Potential Significant Areas--Russel Creek Basin Addendum." This working paper supplements Lane Council of Governments' inventory in the Natural Assets and Constraints working appers of 1978 and the 1982 Natural Assets: Conflict Resolution for Significant Areas.

The 1984 working paper provides a history of the treatment of Russel Creek in the Metro Plan update process (pp. 1-5), and notes that LCDC's 1981 review of the plan required an ESEE consequences analysis of the site (p. 4). The working paper describes the natural features of the five subbasins comprising Russel Creek Basin as well as the specific ownerships and conflicting uses present (pp. 5-10). Maps are also provides showing the specific location of the basin, its subbasins, and vaious natural features. Species lists--both plant and animal--are appended to the working paper as well. The site is a significant natural area and, among other things, contains at least one threatened plan species, and several other species of special significance. Major conflicting uses on the 410-acre site include timber harvesting, agriculture, and certain types of recreation (p. 10).

The ESEE consequences of these conflicting uses are presented on pages 11-12 of the working paper, and, based on this analysis, the following recommendations are made (p. 14):

1. Lane County should adopt interim protective measures that prohibit grazing, logging and any other activity that may adversely affect future protection of the proposed natural area.

2. Conflict resolution and resulting plan amendments required for preserving Russel Creek should occur in conjunction with the Metropolitan Plan mid-period review.

3. Russel Creek property owners should be contacted, and negotiations should commence regarding conflict resolution for the proposed natural area.

4. The options of acquisition, donation or long-term lease should be explored along with the possibility of a joint program of interest among identified groups and governments.

Conclusion: Requirement 1 has been satisfied.

The Metro Plan has been amended to include separate evaluations of ESEE consequences of allowing conflicting uses for sites within the Metro Planning Area Boundary but outside the Metro UGB, namely, Confluence Heronry, Pudding Creek Heronry, and Russel Creek Basin.

Requirement

2. Amend the Metro Plan to include mandatory policy language requiring local governments to adopt resource protection/conflict resolution measures consistent with the plan's adopted text and findings.

Response

The Metro Plan was amended to include mandatory policy language requiring local governments to adopt implementing measures consistent with the plan's text and findings. These amendments were made and acknowledged by the Commission in August 1982 as part of the review of Metro Area (see Commission action, p. 12). Since these policies also apply outside the Metro UGB and inside the Metro Planning Area Boundary, this requirement has been satisfied.

Conclusion: Requirement 2 has been satisfied.

The Metro Plan has been amended as required, and acknowledged in August 1982.

Requirement

3. Eugene, Springfield and Lane County must amend their implementing measures to clarify the meaning of Policy 12 in habitat/scenic areas, as applied in the "Forest" and "Parks and Open Space" plan designation outside the UGB.

Response

Policy 12 referred to in this IOTC is on page III-C-8 of the 1980 Metro Plan. It reads:

> When evaluating the desirability of harvesting commercial timber on forest lands within the jurisdictional boundary but outside the urban growth boundary, great emphasis shall be placed on preserving scenic and water quality, as well as protection of wildlife, open space, and recreational potential.

In its most recent submittal, Lane County has not amended its implementing measures to clarify how this policy will be carried out in habitat or scenic areas that are designated "Forest" or "Parks and Open Space."

The meaning of Policy 12 is further confused by the more recent adoption by Lane County of Forest Lands Policy 17 (Plan, p. 10) which states:

> Lane County recognizes the Oregon Forest Practices Act shall be the only mechanism regulating the growing and harvesting of forest trees species on commercial forest lands unless Goal 5 resource sites have been recognized and identified as being more important through an analysis of ESEE consequences and conflict

resolution as per Goal 5. No other findings, assumption, goal policy, or other planning regulation shall be construed as additional regulation of forest management activities.

As noted in Part I of the Goal 5 section of this report, the County has not indicated which sites are "more important" based on a Goal 5 ESEE consequences analysis, nor has it adopted implementing measures to protect such sites through the regulation of forest management activities, or to otherwise resolve such conflicts, per Policy 12.

The Cities of Eugene and Springfield have adopted "tree-cutting" ordinances in response to this IOTC and have been acknowledged by the Commission.

Conclusion: Requirement 3 has not been satisfied.

Lane County has not amended its implementing measures to clarify how Policy 12 is to be carried out in habitat and scenic areas designated "Forest" and "Parks and Open Space."

Requirement

4. Eugene, Springfield and Lane County must ensure that Metro Area Plan policies are implemented in all natural resource areas as mapped in accordance with compliance requirements outlined above.

Response

As noted earlier, the plans for lands within the cities of Springfield and Eugene and lands within the Metro UGB have been acknowledged as being in compliance with Goal 5. Implementing measures that are adequate for protection and/or conflict resolution for the resource sites outside the Metro UGB but inside the Metro Planning Area Boundary (i.e., Russel Creek Basin, Confluence Heronry, Pudding Heronry) have not been adopted. The Russel Creek site is designated and zoned for forestry and residential use. Recommendations contained in the Working Paper of the Metro Plan Update document have not been carried out. Implementing measures for Pudding Creek and Confluence Heronries are addressed in the Goal 15 section of this report, since they are located within the Willamette River Greenway, and Goal 15 implementation requirements are more stringent than--and therefore supercede--those for Goal 5. As explained in the Goal 15 section of this report, adequate implementing measures for these two Greenway sites have not yet been adopted.

Objections

1. 1000 Friends of Oregon and Lane County Audubon Society have objected to the fact that Russel Creek Basin has been designated "Forest" and has been zoned for forest and residential uses. Specifically, objectors point out that in its 1981 review of the Metro Plan, LCDC found that the County identified this 410-acre site as a significant Goal 5 resource (because of its diversity, wetland, riparian

vegetation, unique species, wildlife, and climax ecosystems, including old growth). LCDC also found, however, that the County needed to analyze the ESEE consequences of conflicting uses with the site, and to complete the Goal 5 process. Objectors contend that although the County's resubmittal indicates that continued logging and future grazing may destroy these values, and the site is designated "forest" in the Metro Plan, and zoned for forest and residential uses. This would allow timber harvest, grazing and development which could adversely affect the resource. Objectors indicate the County has not taken steps to resolve these conflicts in accordance with the Goal 5 Rule, or with recommendations in the plan itself. Objectors also indicate that the County's "conflict resolution" document simply postpones the resolution of conflicts by recommending a negotiation phase and because interim protection (which is also recommended) has not been implemented.

2. Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the sand and gravel plan and zone designations given to a site known as the Pudding Creek Heronry. Since this site is within the Willamette River Greenway, please refer to the Goal 15 section of this report for details about these objections.

3. 1000 Friends of Oregon, League of Women Voters of Central Lane County, and Lane County Audubon Society have objected to the County's plan and zone designations for the Big Island (or Confluence) Heronry at the confluence of the McKenzie and Willametter Rivers. Inasmuch as this site is within the Willamette Greenway Boundary, the objections are presented in greater detail in th Goal 15 section of this report.

Response to Objections

1. Objectors are correct that Lane County has taken no action to resolve conflicting uses for Russel Creek Basin, based on its own ESEE consequences analysis.

2. The response to the objections regarding the Pudding Creek Heronry is presented in the Goal 15 section of this report.

3. The response to the objections regarding the Confluence Heronry is presented in the Goal 15 section of this report.

Conclusion: Requirement 4 has not been satisfied.

Adequate implementing measures have not yet been adopted for the Confluence Heronry, Pudding Creek Heronry, or Russel Creek Basin.

Conclusion - Goal 5

Lane County does not comply with Goal 5.

Lane County has compiled inventory information for most Goal 5 resource categories and has made (1A), (1B) and (1C) decisions, based on this information. Conflicting uses for most categories have been analyzed. Based upon this work, the County has made protection/nonprotection decisions and has adopted plan policies and applied several implementing measures to many Goal 5 sites. Most noteworthy of these implementing measures are the County's riparian setback and vegetation maintenance standards, its groundwater protection provisions, and its Natural Resource zone. However, there are a number of deficiencies in the County's Goal 5 element which must be corrected before acknowledgement can be granted. These deficiencies have been summarized in the previous sections of this report.

In order to comply with Goal 5, Lane County and the Cities of Springfield and Eugene must:

1. Mineral and Aggregate Resources: Apply the Goal 5 process to sites zoned SG which are not included on the County's (1C) inventory and, based on an analysis of the ESEE consequences of conflicting uses, either (1) add them to the (1C) inventory if justified, or (2) rezone the sites for other uses.

2. Fish and Wildlife Habitats:

   a. Amend the Natural Resource Zone to include riparian setback and vegetation maintenance standards.

   b. Amend the C-1, C-2, C-3, M-1, M-2, M-3, and RG zones to either (1) include riparian setback and vegetation maintenance standards, or (2) incorporate by reference another section of the Lane Code which contains such standards.

   c. Apply riparian setback and vegetation maintenance requirements along lakes and Class II streams, or otherwise justify not providing such protection, based on an ESEE consequences analysis of conflicting uses.

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.

   e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.(*)

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

i. Carry out Forest Lands Policy 17 (Plan, p. 10) by identifying sites that are considered more important than commercial timber management activities, based on a Goal 5 ESEE consequences analysis, and adopt appropriate implementing measures to protect and/or resolve timber management conflicts with those sites, consistent with that policy.

4. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.(*)

5. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

6. Historic Sites:

   a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

   b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

7. Oregon Recreation Trails:

   a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

b. Adopt policies to:

(1) Cooperate with ODOT in the protection of existing trails; and

(2) Coordinate with ODOT in applying the Goal 5 Rule during any future identification, or establishment of proposed trail segments.

8. Scenic Rivers and Waterways:

a. Amend the Recreational Resources Working Paper to recognize that:

(1) Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir are within the designated State Scenic Waterway system; and

(2) The portions of the Alsea River, and Steamboat Creek that are on the federal potential list are also on the state list of potential scenic waterways.(*)

b. Amend Open Space and Scenic Areas Policy 5 (p. 17) to also indicate that the County will coordinate with appropriate state and federal agencies in applying all applicable steps of the Goal 5 Administrative Rule in studying rivers for possible designation and in actually selecting wild and scenic rivers for designation.(*)

9. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflict-resolution recommendations contained in the Metro Plan Update Working Paper.

Note: Those IOTC's which pertain only to Lane County are followed by an asterisk (*).

Suggestions for Plan and Implementing Measures Improvement

It is suggested that on or before the first plan update, Lane County:

1. Amend the plan to inventory the recently designated wilderness areas (Rock Creek, Cummins Creek, Three Sisters Additions, Diamond Peak Additions, and Waldo Lake).

2. Amend page 28 of the Flora and Fauna Working Paper to indicate that not all sites on federal land are necessarily protected (i.e., there may be conflicts with sites unless they are formally protected by the federal resource agency).

3. Amend Flora and Fauna Policy 7 to indicate that in evaluating (1B) wetland sites for possible inclusion on its (1C) inventory, information sources besides the National Wetlands Inventory will be used.

4. Adopt implementing measures to carry out Flora and Fauna Policy 9 (requiring residential building permits in Big Game Range areas to include a note indicating that the site is in Big Game Range and conflicts may occur).

GOAL 15: WILLAMETTE RIVER GREENWAY

This Goal 15 report is divided into two major parts. The first part is the review for all areas within the Willamette Greenway Boundary in Lane County outside the Metro Plan Boundary. The second part is for those Greenway areas inside the Metro Plan Boundary, but outside the Metro UGB.

PART I--GREENWAY AREAS
OUTSIDE THE METRO PLAN BOUNDARY

Inventory

Lane County has adopted a Willamette Greenway Working Paper which states (p. 7) that inventories of various Greenway resources are contained in the Greenway Plan. This Greenway Plan is incorporated into the Working Paper by reference (p. 7). As noted in the 1981 review of the Lane County plan and ordinances, the County's Greenway inventories are contained in its Greenway Technical Report, and are summarized in its Greenway Plan. This information was determined to adequately address the fifteen resource topics listed in Section B of Goal 15.

Greenway Boundary

Lane County has displayed the LCDC-approved Greenway Boundary on both its plan maps and its zoning maps, as required under sections E.1 and F.1 of the Goal. The boundary is clearly labeled and, for the most part, its location is accurately drawn. However, there are several minor inconsistencies on map Nos. 304, 304A, 305, 347, 437, and 528. The boundary is not shown on map Nos. 330, 332, 396, 411, 417, 418, 425, 440, 448, 471, 1005, 1006, 1008, 1010, 1011, 1012, and 1013.

The recently adopted Willamette Greenway Working Paper (p. 8) states that the Greenway Boundary is correctly displayed in the County's Greenway Plan and in the Eugene-Springfield Metro Area General Plan (which supercedes the 1990 Plan).

The County notes that the separate subarea plans and diagrams are being replaced by single documents for Coastal and Inland Regions. The Greenway is in the Inland Region (p. 8). The County indicates that in future documents, the LCDC-approved Greenway Boundary maps will be referenced and the Boundary will be shown on the Plan Diagram (p. 8).

Section 16.254(1)(j) of the Lane Code (the Greenway Development Ordinance) states that the boundaries for the Willamette River Greenway are those adopted by the Land Conservation and Development Commission in 1977, together with any changes when and as approved by LCDC.

Policies

Lane County has adopted 37 policies address the Willamette Greenway (Plan, pp. 33-35). These policies address all Use Management Considerations of Goal 15 (Section C.3.). Among these policies are the following:

1. Maintain and support continuation of existing uses within the Greenway Boundary.

2. Intensification and change of use of lands within the Greenway Boundary shall remain compatible with the protection, conservation and enhancement of the natural, scenic, historic, agricultural, economic and recreational qualities of the Willamette River Greenway Program.

3. Recognize that the Greenway consists of a multitude of resources and due to continued growth, 100 percent protection to all resources will never be realized.

4. Protect, conserve and preserve important economic uses such as, but not limited to agriculture, sand and gravel, tourism and recreation, fish and wildlife, urban lands and timber within the Greenway.

5. Maintain sufficient water flows to support water uses such as municipal, agricultural, industrial, natural resources (i.e., fish, aquatic life, wildlife) and recreation within the Greenway.

6. Prioritize water quality management controls along the Coast Fork and the Main Stem, especially in the Metropolitan area.

7. Acquisitions for Greenway purposes must be consistent with noninterference or interruption of farm uses.

8. Recognize that DOT cannot condemn for a scenic or use easements of lands devoted to farm use; however, easements may be given by owners of lands being used for farm purposes.

9. Protect water rights and access to the river for irrigation purposes.

10. Development shall be directed away from the river, to the greatest degree possible.

11. A setback line shall be established in order to protect, maintain, preserve and enhance the natural, scenic, historic and recreational qualities of the Greenway.

12. The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or, is not covered by the FPA, then with an approved plan under the Greenway compatibility review provisions. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

13. Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resource.

14. Where feasible, point bar removal shall be accommodated by temporary access points.

15. In assessing the impact which an extraction and/or processing operation has on the natural and cultural attributes of the Greenway, the County shall require (within its realm of authority) mining methods which reduce or mitigate adverse impacts, as well as considering the economic and other benefits which will accrue in both short and long terms.

16. Aggregate operations occuring within the Greenway shall comply with the provisions of applicable state statutes and local zoning ordinances in regard to safety, operational standards, public review, reclamation and protection of Greenway values.

17. The relationship between the demand for the resource and the amount and location of land available for aggregate extraction and/or processing shall be closely monitored, so as to ensure the future availability of aggregate material in close proximity in conjunction with the industry and state and local efforts.

18. Protect vegetation resources which are identified as having unique recreational, aesthetic, scientific or wildlife habitat values. Encourage acquisition of these areas or obtain a protective scenic easement.

19. The County shall require to the maximum feasible extent the protection of the vegetative fringe within the Greenway, and shall require the re-establishment of vegetative cover where it has been significantly removed during the land development process.

20. Conserve the rural character of the river bank as a primary objective within the Greenway.

21. Encourage a river-related mixture of industrial, commercial, residential and public land uses where appropriate in the Greenway.

22. In instances where a public agency has acquired productive farmlands or other resource lands as long-range reserve for recreational use, if possible, such property should be leased back for agricultural or other resource use until it is required for public purposes.

23. Provide and encourage use of public lands within the Greenway.

24. Accommodate public access to the river and to public lands within the Greenway by:
    a. Controlled, clearly designated, access points;
    b. Establishment of an integrated system of safe river lands, hiking and cycle paths, and public roads leading in and out of the Greenway at strategic locations;
    c. Use of a limited number of access points, each with improved facilities, good roads and high-visibility connectors.

25. Provide appropriate levels of police protection in those areas subject to public use.

26. Encourage additional police security for private and publicly owned lands within the Greenway.

27. Protect, conserve or preserve the scenic and recreational qualities of the land within the Greenway Boundary.

28. Public recreation use areas shall be located in or near the more populated urban areas and shall emphasize access to the river.

29. The sensitivity of lands within the Greenway shall determine the level of human activity.

30. Recreation development shall include a variety of river-oriented opportunities in urban areas but shall be limited in rural areas to those river-oriented recreation uses that are compatible with the sensitive character of the river and other important resources.

31. Consider and minimize the possibility that public recreation use might disturb adjacent private property owners.

32. Scenic easements shall not be acquired through the exercise of the power of eminent domain on lands in farm use.

33. Control vehicle access to the river.

34. Consider and adopt policies that would not hinder the physically handicapped from using public recreation facilities within the Greenway Boundary.

35. Emphasize public access to the river in the metropolitan area and other urban areas which discouraging upland access in rural areas.

36. Measures should be taken to minimize disturbance to private property, including the implementation of programs to eliminate trespass and vandalism on private lands and destruction of ecological fragile areas.

37. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Sections C.3.d. and C.3.i. of the Goal. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Mineral and Aggregate Policy 11 also addresses mineral and aggregate sites within the Greenway:

> Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Section C.3.i. of the Goal. Major adverse effects of extraction on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, scenic quality, noise, and safety are to be minimized, and such values reclaimed where possible. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

As discussed in the Goal 5 section of this report, the policy fails to reference Section C.3.d. of Goal 15 regarding the protection of significant fish and wildlife habitats. Therefore, the policy is inconsistent with Goal 15 as well as with the County's Greenway Policy 37.

Plan Designations

In the 1981 review of Lane County's Greenway element, the Commission determined that plan designations in subarea plans, the 1990 Plan, and the County Greenway Plan were inconsistent in several locations. The new Greenway Working Paper explains that subarea plans in the Greenway are

being replaced by the Inland Region document, whose Plan Diagram will show land use designation "in a manner consistent with other County and metro area plan documents" (p. 8). See the Goal 2 section of this report for further discussion regarding the County's plan designations.

Implementing Measures

Included in the Lane Code are Greenway Development Permit procedures for the review of certain land use activities in the Willamette River Greenway (Lane Code, Section 16.254). A Greenway Development Permit is required for any new intensification, change of use or development, including public improvements and partitions and subdivisions. The County's ordinance defines the terms "intensification," "change of use," and "development" consistent with definitions contained in Goal 15.

Section 16.254(2) of the Lane Code lists those uses and activities that do not require a Greenway Development Permit. All are consistent with Goal 15 except subsections (a) and (k). Subsection (a) exempts uses "where the location is within areas designated as 'urban' on Greenway maps adopted by the Oregon Land Conservation and Development Commission and is beyond 150 feet of the ordinary low waterline." As noted in the 1981 denial order for Lane County, any intensification, change of use or development in "urban" Greenway areas, as defined in Goal 15, and as designated in the ODOT Greenway Plan, is subject to local Greenway review. (Note: The term, "urban" as used in the context of Goal 15 is not the same as that used in Goal 14. In this case, "urban" refers to designations in the ODOT Greenway Plan). However, as noted in the 1981 review of the County's ordinance, there was only one area where this provision applies--just outside of the Cottage Grove UGB. The County has not requested that LCDC change the designation of this area from "urban" to "rural" nor has it deleted Section 16.254(2)(a).

Subsection 16.254(2)(k) exempts the propagation of timber or the cutting of timber for public safety or personal noncommercial use or where the harvest is consistent with an approved permit under the FPA "(i) for a farm woodlot of less than 20 acres, or (ii) consistent with recommendations made by" ODOT to the Department of Forestry, designed to address Goal 15, Sections c-h. It is acceptable to exempt timber propagation and harvest for public safety or personal noncommercial use, under Goal 15. However, subsection (i) in the second part of subsection (k) appears to be based on language in the Greenway Interim Order. Such language was eliminated in the adoption of Goal 15. Subsection (ii) of subsection (k) has no procedure for implementation, since, according to the Department of Forestry's directive for operations in the Greenway, it can make recommendations to operations regarding Greenway concerns, but cannot enforce them.

A decision to approve a Greenway Development Permit--where one is required by the Code--requires findings that the proposed intensification, change of use or development conforms to certain criteria, guidelines and setback requirements set forth in Sections 16.254(3)(a), (b), and (c), respectively. Specifically, the "criteria" in subsection (a) include the following:

(i) The development protects or enhances the existing vegetative fringe between the activity and the river. Where such protective action is shown to be impractical under the circumstances, the maximum landscaped area or open space shall be provided between the activity and the river and the development provides for the re-establishment of vegetative cover where it will be significantly removed during the process of land development.

(ii) Public access to and along the river either is not necessary or the necessary access will be provided by appropriate legal means.

(iii) A development which is mining or a mineral extraction and/or processing operation must include mining or extraction and/or processing methods which reduce or mitigate adverse impacts to the natural and cultural attributes of the Greenway.

Affirmative findings of compatibility with the Willamette River Greenway "based on due consideration and the relative importance" of guidelines must also be made. These "Guidelines" under subsection (b) are as follows:

(i) Preservation and maintenance of land designated "agricultural" in the adopted Willamette River Greenway Plan for farm use and minimize interference with the long-term capacity of lands for farm use.
(ii) Protection, conservation or preservation of significant scenic areas, viewpoints and vistas.
(iii) Protection, preservation, rehabilitation, reconstruction or restoration of significant historic and archeological resouces.
(iv) Preserve areas of annual flooding, floodplains and wetlands.
(v) Protection, conservation or preservation of areas along the alluvial bottomlands and lands with severe soil limitations from intensive development.
(vi) Consideration of the impacts from consumptive uses of water (i.e., domestic, agriculture, industrial) and nonconsumptive uses (i.e., recreation and natural resources) in efforts of maintaining sufficient flows to support water users.
(vii) Sustenance and enhancement of water quality by managing or controlling sources of water pollution from uses such as: domestic and industrial wastes, agricultural and timber runoff, septic tank seepage, gravel operations and other intermittent sources.
(viii) Maintenance and sustenance of natural riparian vegetation found upon the lower alluvial bottomlands and upper terrances bordering the river for the following reasons: provide habitat, food and shade for wildlife; protect natural areas; anchor river bank soils and protect agricultural land from seasonal erosion; ensure scenic quality and screening of uses from the river; control trespass; and to control pollution sources to the river.

(ix) Harvesting of timber in a manner that wildlife habitat, riparian and other significant vegetation and the natural scenic qualities of the Greenway will be preserved, conserved or restored and otherwise result in only the partial harvest of timber beyond the vegetative fringe.
(x) Minimize vandalism and trespass.
(xi) Location of nonwater dependent and nonwater related development away from the river.
(xii) Compatibility with the site and surrounding area.
(xiv) Protection of significant fish, wildlife habitat and natural areas.
(xv) Protection and conservation of lands designated aggregate resources within the adopted Willamette Greenway Plan.

It must be noted that compliance with these "Guidelines" is to be judged based on their "relative importance." However, there is no clear guidance as to how "relative importance" will be determined. This is particularly a problem where Goal 15 requires certain types of resources to be protected, regardless of other completing values (e.g., significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints) (Goal 15, Sections C.3.d., a., and e.). To the extent that the County's "Guidelines" do not require protection of such areas, the County's Greenway ordinance does not comply with Goal 15.

Section 16.254(c) requires new intensifications, developments and changes of use to be set back 100 feet from ordinary high waterline of the river "except for those in conjunction with a water related or water dependent use" (emphasis added). Exceptions to this requirement shall be allowed when affirmative findings are made to satisfy two criteria:

(i) The proposal would provide better protection, maintenance, preservation and enhancement of the natural, scenic, historic and recreational qualities of the Willamette River Greenway than would occur by observance of the setback requirment; or
(ii) The protection, maintenance, preservation and enhancement of the natural, scenic, historic and recreational qualities of the Willamette River Greenway are not applicable to the proposal.

It should be noted that, according to the Goal, only water-dependent and water-related intensifications, developments, or changes of use themselves are exempt from Greenway setback requirements. However, Lane County also exempts uses in conjunction with water-related and water-dependent uses. As noted in a number of other reviews, this is inconsistent with the Goal, since it would allow a number of uses to be exempt from the setback which are not envisioned by the Goal. The County's ordinances also identify two ways in which exceptions to the 100-foot setback are permitted. One of these is if a proposal would provide better protection of Greenway values, and the other is if such protection is not applicable to the proposal. The Goal does not permit exceptions to the setback, except for water-dependent and water-related uses, even if a proposal might enhance Greenway values. This is because the intent of the Goal is to keep structures separated from the river and

to protect areas immediately adjacent to the river for water-dependent and water-related uses. For example, a restaurant, including landscaping and other amenities may, in the opinion of a Hearings Officer, enhance Greenway values. However, it is not, by definition, a water-related or water-dependent use and therefore is not permitted within the established Greenway setback.

The Commission amended its administrative rule on exceptions to set forth standards for taking exceptions to the Greenway setback. These standards apply to urban areas only. The Commission did not adopt standards for taking exceptions to the setback requirement in rural areas. It should be pointed out that juridictions may structure their Greenway ordinances to permit establishment of a setback on a case-by-case basis, as long as it meets the requirements of Section C.3.k. of the Goal. Alternatively, jurisdictions may adjust established setback standards through the plan amendment process.

Conditions may be imposed in conjunction with a Greenway Development Permit, as necessary (Section 16.254(4).

Section 16.254(5) sets forth the application and review procedure by a Hearings Officer for Greenway Development Permits.

Section 16.254(6) requires the County to notify the Department of Transportation when an application is made. The ordinance does not require the County to also notify that agency of actions taken on an application. This is required by Goal 15 (Section G).

As noted in the Goal 7 section of this report, Lane County has adopted adequate flood hazard provisions.

Objections

1. The Oregon Department of Transportation (ODOT), Parks and Recreation Division, has objected to an inconsistency between the inventoried aggregate sites within the Greenway, and those which are shown on plan maps and designated Sand/Gravel. ODOT states there are a number of aggregate sites in the ODOT Greenway Plan which are not included in the County's inventory. Further, the County's plan maps show a Sand/Gravel designation for some areas which are not in the County's aggregate sites inventory, according to objectors.

2. ODOT objects because of the lack of an inventory of sites for potential acquisition within the Greenway. ODOT points out that this is required by Section E.3. of the Goal, and that the ODOT Greenway Plan identifies such areas.

3. ODOT objects because Plan Policy 7 conflicts with Goal 15. Policy 7 states that acquisitions for Greenway purposes must be consistent with non-interference or interruption of farm uses. ODOT points out that Goal 15 is intended to protect farm uses, but does not prohibit farmland acquisition for public Greenway purposes. Objectors believe Policy 7 also conflicts with Policy 24 (which encourages development of a system of river access points).

4. ODOT objects because Policy 8 and Policy 32 are inconsistent with ORS 390.334, which allows condemnation of scenic easements on farmland. Objectors recommend that the policies be deleted or amended to be consistent with that statute.

5. ODOT objects to the County's inadequate compatibility review provisions for commercial timber harvest. Objectors indicate adequate provisions are a requirement of Goal 15. Further, ODOT believes the zoning ordinance fails to carry out Policy 12.

6. ODOT objects because Policy 13 is inconsistent with Policies 2, 4, 18, 20, 21, 23, 24, 27, 29 and 37. ODOT indicates that Policy 13 appears to give the highest use protection to sites designated and zoned for sand and gravel. However, objectors state that Policy 13 does not consider Greenway river processes and values.

7. ODOT objects to Policies 28, 30 and 35 because they conflict with Policy 24. Specifically, Policies 28, 30, and 35 call for a Greenway public access program aimed at serving urban residents in urban areas, and discouraging access to the river in the more attractive rural settings with greater recreational amenities. Policy 24 calls for a system of access points and trails, which is inconsistent with Policies 28, 30 and 35, according to ODOT.

8. ODOT objects to the lack of an inventory of "significant natural and scenic areas and vegetative cover," as required in Section B, Subsection 6 of the Goal. Without such an inventory, ODOT believes Policies 2, 4, 11, 12, 18 an 27 an the zoning ordinance "cannot be carried out with consistency.

9. ODOT objects to Section 16.254(2) (Exemptions from Permits) of the County's zoning ordinance. Objectors believe it should be deleted. Specifically, subsection (k) exempts certain timber harvest operations from Greenway Development Permit requirements. ODOT believes all commercial timber harvest activities must obtain such a permit. Objectors point out that the Forest Practices Act (FPA) notification does not cover scenic, recreational or historical impacts of harvesting. The Comprehensive Plan requires ODOT to make recommendations to the Department of Forestry (DOF). However, objectors point out that DOF is not required to act on ODOT's recommendations. Objectors feel this establishes a complex and misleading enforcement process.

10. ODOT objects to the County's Greenway setback provisions because it does not believe exceptions to the 100-foot requirement should be allowed unless criteria in LCDC's Exception Rule for the Greenway are met.

Response to Objections

1. Goal 15 (Section B.2) requires Greenway jurisdictions to inventory "all current aggregate excavation and processing sites, and all known extractable aggregate sources." The Goal also requires local

plans to be consistent with the ODOT Greenway Plan, which shows the location of such sites. ODOT has not specified which aggregate sites have been omitted from the County's inventory which are included in the ODOT Greenway Plan. In the 1981 review of Lane County's plan, the Commission found the County's inventory of Greenway sites to be adequate. The County has adopted this inventory by reference as part of its new Working Paper for the Greenway. ODOT is correct that a number of sites which are not included on the County's inventory of aggregate sites have been given a sand and gravel plan and zone designation, however. As indicated in the Goal 5 section of this report, the County has not justified such designations. This is more of a Goal 5 than a Goal 15 concern, however.

2. Aquisition sites were inventoried by Lane County in its 1981 Greenway Plan. In its 1981 review of that plan, the Commission found that inventory to be in compliance with Goal 15. The County has adopted its Greenway Plan by reference as part of its new Greenway Working Paper. Therefore, the objection is not sustained.

3. ODOT is correct that the Goal does not prohibit acquisition of farmland for public Greenway purposes. However, Section C.4.b. of the Goal indicates that areas to be acquired must "to the maximum extent practicable, be consistent with non-interference or non-interruption of farm uses as defined in ORS Chapter 215.203(2)." Policy 7 indicates such acquisitions must be consistent with non-interference or non-interruption of farm uses. While Policy 7 certainly carries out the intent of Section C.4.b. of the Goal, ODOT is apparently concerned that neither the County nor ODOT would be able to acquire farmland for Greenway purposes in the future unless Policy 7 is modified to use the term "should," rather than "shall." ODOT is also concerned that because Policy 7 is so restrictive, Policy 24 cannot be carried out, since it calls for providing public access to the river and public lands through access points, establishment of river lands, hiking and cycle paths, and public roads. There is no Goal violation in County Policy 7 being more restrictive and protective of farmland than the Goal, unless this restrictiveness prevents the County from meeting other Goal requirements or carrying out other policies. While Policy 7 certainly limits the County's options (as well as ODOT's options) in implementing Greenway programs, there are other means available, short of acquiring land which results in interfering with, or interrupting farm uses. The County is therefore urged, but not directed, to modify Policy 7 to use the term, "should," rather than "shall."

4. ODOT is incorrect in its interpretation of ORS 390.334. That provision (particularly subsection (2)) expressly prohibits the use of condemnation for acquiring scenic easements on farmland in the Greenway. Therefore, County Greenway Policy 32 is consistent with ORS 390.334. The objection is not sustained.

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.(*)

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

i. Carry out Forest Lands Policy 17 (Plan, p. 10) by identifying sites that are considered more important than commercial timber management activities, based on a Goal 5 ESEE consequences analysis, and adopt appropriate implementing measures to protect and/or resolve timber management conflicts with those sites, consistent with that policy.

4. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.(*)

5. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

6. Historic Sites:

   a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

   b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

7. Oregon Recreation Trails:

   a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

b. Adopt policies to:

(1) Cooperate with ODOT in the protection of existing trails; and

(2) Coordinate with ODOT in applying the Goal 5 Rule during any future identification, or establishment of proposed trail segments.

8. Scenic Rivers and Waterways:

a. Amend the Recreational Resources Working Paper to recognize that:

(1) Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir are within the designated State Scenic Waterway system; and

(2) The portions of the Alsea River, and Steamboat Creek that are on the federal potential list are also on the state list of potential scenic waterways.(*)

b. Amend Open Space and Scenic Areas Policy 5 (p. 17) to also indicate that the County will coordinate with appropriate state and federal agencies in applying all applicable steps of the Goal 5 Administrative Rule in studying rivers for possible designation and in actually selecting wild and scenic rivers for designation.(*)

9. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflict-resolution recommendations contained in the Metro Plan Update Working Paper.

Note: Those IOTC's which pertain only to Lane County are followed by an asterisk (*).

Suggestions for Plan and Implementing Measures Improvement

It is suggested that on or before the first plan update, Lane County:

1. Amend the plan to inventory the recently designated wilderness areas (Rock Creek, Cummins Creek, Three Sisters Additions, Diamond Peak Additions, and Waldo Lake).

2. Amend page 28 of the Flora and Fauna Working Paper to indicate that not all sites on federal land are necessarily protected (i.e., there may be conflicts with sites unless they are formally protected by the federal resource agency).

3. Amend Flora and Fauna Policy 7 to indicate that in evaluating (1B) wetland sites for possible inclusion on its (1C) inventory, information sources besides the National Wetlands Inventory will be used.

4. Adopt implementing measures to carry out Flora and Fauna Policy 9 (requiring residential building permits in Big Game Range areas to include a note indicating that the site is in Big Game Range and conflicts may occur).

GOAL 15: WILLAMETTE RIVER GREENWAY

This Goal 15 report is divided into two major parts. The first part is the review for all areas within the Willamette Greenway Boundary in Lane County outside the Metro Plan Boundary. The second part is for those Greenway areas inside the Metro Plan Boundary, but outside the Metro UGB.

PART I--GREENWAY AREAS
OUTSIDE THE METRO PLAN BOUNDARY

Inventory

Lane County has adopted a Willamette Greenway Working Paper which states (p. 7) that inventories of various Greenway resources are contained in the Greenway Plan. This Greenway Plan is incorporated into the Working Paper by reference (p. 7). As noted in the 1981 review of the Lane County plan and ordinances, the County's Greenway inventories are contained in its Greenway Technical Report, and are summarized in its Greenway Plan. This information was determined to adequately address the fifteen resource topics listed in Section B of Goal 15.

Greenway Boundary

Lane County has displayed the LCDC-approved Greenway Boundary on both its plan maps and its zoning maps, as required under sections E.1 and F.1 of the Goal. The boundary is clearly labeled and, for the most part, its location is accurately drawn. However, there are several minor inconsistencies on map Nos. 304, 304A, 305, 347, 437, and 528. The boundary is not shown on map Nos. 330, 332, 396, 411, 417, 418, 425, 440, 448, 471, 1005, 1006, 1008, 1010, 1011, 1012, and 1013.

The recently adopted Willamette Greenway Working Paper (p. 8) states that the Greenway Boundary is correctly displayed in the County's Greenway Plan and in the Eugene-Springfield Metro Area General Plan (which supercedes the 1990 Plan).

The County notes that the separate subarea plans and diagrams are being replaced by single documents for Coastal and Inland Regions. The Greenway is in the Inland Region (p. 8). The County indicates that in future documents, the LCDC-approved Greenway Boundary maps will be referenced and the Boundary will be shown on the Plan Diagram (p. 8).

Section 16.254(1)(j) of the Lane Code (the Greenway Development Ordinance) states that the boundaries for the Willamette River Greenway are those adopted by the Land Conservation and Development Commission in 1977, together with any changes when and as approved by LCDC.

Policies

Lane County has adopted 37 policies address the Willamette Greenway (Plan, pp. 33-35). These policies address all Use Management Considerations of Goal 15 (Section C.3.). Among these policies are the following:

1. Maintain and support continuation of existing uses within the Greenway Boundary.

2. Intensification and change of use of lands within the Greenway Boundary shall remain compatible with the protection, conservation and enhancement of the natural, scenic, historic, agricultural, economic and recreational qualities of the Willamette River Greenway Program.

3. Recognize that the Greenway consists of a multitude of resources and due to continued growth, 100 percent protection to all resources will never be realized.

4. Protect, conserve and preserve important economic uses such as, but not limited to agriculture, sand and gravel, tourism and recreation, fish and wildlife, urban lands and timber within the Greenway.

5. Maintain sufficient water flows to support water uses such as municipal, agricultural, industrial, natural resources (i.e., fish, aquatic life, wildlife) and recreation within the Greenway.

6. Prioritize water quality management controls along the Coast Fork and the Main Stem, especially in the Metropolitan area.

7. Acquisitions for Greenway purposes must be consistent with noninterference or interruption of farm uses.

8. Recognize that DOT cannot condemn for a scenic or use easements of lands devoted to farm use; however, easements may be given by owners of lands being used for farm purposes.

9. Protect water rights and access to the river for irrigation purposes.

10. Development shall be directed away from the river, to the greatest degree possible.

11. A setback line shall be established in order to protect, maintain, preserve and enhance the natural, scenic, historic and recreational qualities of the Greenway.

12. The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or, is not covered by the FPA, then with an approved plan under the Greenway compatibility review provisions. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

13. Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resource.

14. Where feasible, point bar removal shall be accommodated by temporary access points.

15. In assessing the impact which an extraction and/or processing operation has on the natural and cultural attributes of the Greenway, the County shall require (within its realm of authority) mining methods which reduce or mitigate adverse impacts, as well as considering the economic and other benefits which will accrue in both short and long terms.

16. Aggregate operations occuring within the Greenway shall comply with the provisions of applicable state statutes and local zoning ordinances in regard to safety, operational standards, public review, reclamation and protection of Greenway values.

17. The relationship between the demand for the resource and the amount and location of land available for aggregate extraction and/or processing shall be closely monitored, so as to ensure the future availability of aggregate material in close proximity in conjunction with the industry and state and local efforts.

18. Protect vegetation resources which are identified as having unique recreational, aesthetic, scientific or wildlife habitat values. Encourage acquisition of these areas or obtain a protective scenic easement.

19. The County shall require to the maximum feasible extent the protection of the vegetative fringe within the Greenway, and shall require the re-establishment of vegetative cover where it has been significantly removed during the land development process.

20. Conserve the rural character of the river bank as a primary objective within the Greenway.

21. Encourage a river-related mixture of industrial, commercial, residential and public land uses where appropriate in the Greenway.

22. In instances where a public agency has acquired productive farmlands or other resource lands as long-range reserve for recreational use, if possible, such property should be leased back for agricultural or other resource use until it is required for public purposes.

23. Provide and encourage use of public lands within the Greenway.

24. Accommodate public access to the river and to public lands within the Greenway by:
    a. Controlled, clearly designated, access points;
    b. Establishment of an integrated system of safe river lands, hiking and cycle paths, and public roads leading in and out of the Greenway at strategic locations;
    c. Use of a limited number of access points, each with improved facilities, good roads and high-visibility connectors.

25. Provide appropriate levels of police protection in those areas subject to public use.

26. Encourage additional police security for private and publicly owned lands within the Greenway.

27. Protect, conserve or preserve the scenic and recreational qualities of the land within the Greenway Boundary.

28. Public recreation use areas shall be located in or near the more populated urban areas and shall emphasize access to the river.

29. The sensitivity of lands within the Greenway shall determine the level of human activity.

30. Recreation development shall include a variety of river-oriented opportunities in urban areas but shall be limited in rural areas to those river-oriented recreation uses that are compatible with the sensitive character of the river and other important resources.

31. Consider and minimize the possibility that public recreation use might disturb adjacent private property owners.

32. Scenic easements shall not be acquired through the exercise of the power of eminent domain on lands in farm use.

33. Control vehicle access to the river.

34. Consider and adopt policies that would not hinder the physically handicapped from using public recreation facilities within the Greenway Boundary.

35. Emphasize public access to the river in the metropolitan area and other urban areas which discouraging upland access in rural areas.

36. Measures should be taken to minimize disturbance to private property, including the implementation of programs to eliminate trespass and vandalism on private lands and destruction of ecological fragile areas.

37. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Sections C.3.d. and C.3.i. of the Goal. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Mineral and Aggregate Policy 11 also addresses mineral and aggregate sites within the Greenway:

> Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Section C.3.i. of the Goal. Major adverse effects of extraction on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, scenic quality, noise, and safety are to be minimized, and such values reclaimed where possible. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

As discussed in the Goal 5 section of this report, the policy fails to reference Section C.3.d. of Goal 15 regarding the protection of significant fish and wildlife habitats. Therefore, the policy is inconsistent with Goal 15 as well as with the County's Greenway Policy 37.

Plan Designations

In the 1981 review of Lane County's Greenway element, the Commission determined that plan designations in subarea plans, the 1990 Plan, and the County Greenway Plan were inconsistent in several locations. The new Greenway Working Paper explains that subarea plans in the Greenway are

being replaced by the Inland Region document, whose Plan Diagram will show land use designation "in a manner consistent with other County and metro area plan documents" (p. 8). See the Goal 2 section of this report for further discussion regarding the County's plan designations.

Implementing Measures

Included in the Lane Code are Greenway Development Permit procedures for the review of certain land use activities in the Willamette River Greenway (Lane Code, Section 16.254). A Greenway Development Permit is required for any new intensification, change of use or development, including public improvements and partitions and subdivisions. The County's ordinance defines the terms "intensification," "change of use," and "development" consistent with definitions contained in Goal 15.

Section 16.254(2) of the Lane Code lists those uses and activities that do not require a Greenway Development Permit. All are consistent with Goal 15 except subsections (a) and (k). Subsection (a) exempts uses "where the location is within areas designated as 'urban' on Greenway maps adopted by the Oregon Land Conservation and Development Commission and is beyond 150 feet of the ordinary low waterline." As noted in the 1981 denial order for Lane County, any intensification, change of use or development in "urban" Greenway areas, as defined in Goal 15, and as designated in the ODOT Greenway Plan, is subject to local Greenway review. (Note: The term, "urban" as used in the context of Goal 15 is not the same as that used in Goal 14. In this case, "urban" refers to designations in the ODOT Greenway Plan). However, as noted in the 1981 review of the County's ordinance, there was only one area where this provision applies--just outside of the Cottage Grove UGB. The County has not requested that LCDC change the designation of this area from "urban" to "rural" nor has it deleted Section 16.254(2)(a).

Subsection 16.254(2)(k) exempts the propagation of timber or the cutting of timber for public safety or personal noncommercial use or where the harvest is consistent with an approved permit under the FPA "(i) for a farm woodlot of less than 20 acres, or (ii) consistent with recommendations made by" ODOT to the Department of Forestry, designed to address Goal 15, Sections c-h. It is acceptable to exempt timber propagation and harvest for public safety or personal noncommercial use, under Goal 15. However, subsection (i) in the second part of subsection (k) appears to be based on language in the Greenway Interim Order. Such language was eliminated in the adoption of Goal 15. Subsection (ii) of subsection (k) has no procedure for implementation, since, according to the Department of Forestry's directive for operations in the Greenway, it can make recommendations to operations regarding Greenway concerns, but cannot enforce them.

A decision to approve a Greenway Development Permit--where one is required by the Code--requires findings that the proposed intensification, change of use or development conforms to certain criteria, guidelines and setback requirements set forth in Sections 16.254(3)(a), (b), and (c), respectively. Specifically, the "criteria" in subsection (a) include the following:

(i) The development protects or enhances the existing vegetative fringe between the activity and the river. Where such protective action is shown to be impractical under the circumstances, the maximum landscaped area or open space shall be provided between the activity and the river and the development provides for the re-establishment of vegetative cover where it will be significantly removed during the process of land development.

(ii) Public access to and along the river either is not necessary or the necessary access will be provided by appropriate legal means.

(iii) A development which is mining or a mineral extraction and/or processing operation must include mining or extraction and/or processing methods which reduce or mitigate adverse impacts to the natural and cultural attributes of the Greenway.

Affirmative findings of compatibility with the Willamette River Greenway "based on due consideration and the relative importance" of guidelines must also be made. These "Guidelines" under subsection (b) are as follows:

(i) Preservation and maintenance of land designated "agricultural" in the adopted Willamette River Greenway Plan for farm use and minimize interference with the long-term capacity of lands for farm use.
(ii) Protection, conservation or preservation of significant scenic areas, viewpoints and vistas.
(iii) Protection, preservation, rehabilitation, reconstruction or restoration of significant historic and archeological resouces.
(iv) Preserve areas of annual flooding, floodplains and wetlands.
(v) Protection, conservation or preservation of areas along the alluvial bottomlands and lands with severe soil limitations from intensive development.
(vi) Consideration of the impacts from consumptive uses of water (i.e., domestic, agriculture, industrial) and nonconsumptive uses (i.e., recreation and natural resources) in efforts of maintaining sufficient flows to support water users.
(vii) Sustenance and enhancement of water quality by managing or controlling sources of water pollution from uses such as: domestic and industrial wastes, agricultural and timber runoff, septic tank seepage, gravel operations and other intermittent sources.
(viii) Maintenance and sustenance of natural riparian vegetation found upon the lower alluvial bottomlands and upper terrances bordering the river for the following reasons: provide habitat, food and shade for wildlife; protect natural areas; anchor river bank soils and protect agricultural land from seasonal erosion; ensure scenic quality and screening of uses from the river; control trespass; and to control pollution sources to the river.

(ix) Harvesting of timber in a manner that wildlife habitat, riparian and other significant vegetation and the natural scenic qualities of the Greenway will be preserved, conserved or restored and otherwise result in only the partial harvest of timber beyond the vegetative fringe.
(x) Minimize vandalism and trespass.
(xi) Location of nonwater dependent and nonwater related development away from the river.
(xii) Compatibility with the site and surrounding area.
(xiv) Protection of significant fish, wildlife habitat and natural areas.
(xv) Protection and conservation of lands designated aggregate resources within the adopted Willamette Greenway Plan.

It must be noted that compliance with these "Guidelines" is to be judged based on their "relative importance." However, there is no clear guidance as to how "relative importance" will be determined. This is particularly a problem where Goal 15 requires certain types of resources to be protected, regardless of other completing values (e.g., significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints) (Goal 15, Sections C.3.d., a., and e.). To the extent that the County's "Guidelines" do not require protection of such areas, the County's Greenway ordinance does not comply with Goal 15.

Section 16.254(c) requires new intensifications, developments and changes of use to be set back 100 feet from ordinary high waterline of the river "except for those in conjunction with a water related or water dependent use" (emphasis added). Exceptions to this requirement shall be allowed when affirmative findings are made to satisfy two criteria:

(i) The proposal would provide better protection, maintenance, preservation and enhancement of the natural, scenic, historic and recreational qualities of the Willamette River Greenway than would occur by observance of the setback requirment; or
(ii) The protection, maintenance, preservation and enhancement of the natural, scenic, historic and recreational qualities of the Willamette River Greenway are not applicable to the proposal.

It should be noted that, according to the Goal, only water-dependent and water-related intensifications, developments, or changes of use themselves are exempt from Greenway setback requirements. However, Lane County also exempts uses in conjunction with water-related and water-dependent uses. As noted in a number of other reviews, this is inconsistent with the Goal, since it would allow a number of uses to be exempt from the setback which are not envisioned by the Goal. The County's ordinances also identify two ways in which exceptions to the 100-foot setback are permitted. One of these is if a proposal would provide better protection of Greenway values, and the other is if such protection is not applicable to the proposal. The Goal does not permit exceptions to the setback, except for water-dependent and water-related uses, even if a proposal might enhance Greenway values. This is because the intent of the Goal is to keep structures separated from the river and

to protect areas immediately adjacent to the river for water-dependent and water-related uses. For example, a restaurant, including landscaping and other amenities may, in the opinion of a Hearings Officer, enhance Greenway values. However, it is not, by definition, a water-related or water-dependent use and therefore is not permitted within the established Greenway setback.

The Commission amended its administrative rule on exceptions to set forth standards for taking exceptions to the Greenway setback. These standards apply to urban areas only. The Commission did not adopt standards for taking exceptions to the setback requirement in rural areas. It should be pointed out that juridictions may structure their Greenway ordinances to permit establishment of a setback on a case-by-case basis, as long as it meets the requirements of Section C.3.k. of the Goal. Alternatively, jurisdictions may adjust established setback standards through the plan amendment process.

Conditions may be imposed in conjunction with a Greenway Development Permit, as necessary (Section 16.254(4).

Section 16.254(5) sets forth the application and review procedure by a Hearings Officer for Greenway Development Permits.

Section 16.254(6) requires the County to notify the Department of Transportation when an application is made. The ordinance does not require the County to also notify that agency of actions taken on an application. This is required by Goal 15 (Section G).

As noted in the Goal 7 section of this report, Lane County has adopted adequate flood hazard provisions.

Objections

1. The Oregon Department of Transportation (ODOT), Parks and Recreation Division, has objected to an inconsistency between the inventoried aggregate sites within the Greenway, and those which are shown on plan maps and designated Sand/Gravel. ODOT states there are a number of aggregate sites in the ODOT Greenway Plan which are not included in the County's inventory. Further, the County's plan maps show a Sand/Gravel designation for some areas which are not in the County's aggregate sites inventory, according to objectors.

2. ODOT objects because of the lack of an inventory of sites for potential acquisition within the Greenway. ODOT points out that this is required by Section E.3. of the Goal, and that the ODOT Greenway Plan identifies such areas.

3. ODOT objects because Plan Policy 7 conflicts with Goal 15. Policy 7 states that acquisitions for Greenway purposes must be consistent with non-interference or interruption of farm uses. ODOT points out that Goal 15 is intended to protect farm uses, but does not prohibit farmland acquisition for public Greenway purposes. Objectors believe Policy 7 also conflicts with Policy 24 (which encourages development of a system of river access points).

4. ODOT objects because Policy 8 and Policy 32 are inconsistent with ORS 390.334, which allows condemnation of scenic easements on farmland. Objectors recommend that the policies be deleted or amended to be consistent with that statute.

5. ODOT objects to the County's inadequate compatibility review provisions for commercial timber harvest. Objectors indicate adequate provisions are a requirement of Goal 15. Further, ODOT believes the zoning ordinance fails to carry out Policy 12.

6. ODOT objects because Policy 13 is inconsistent with Policies 2, 4, 18, 20, 21, 23, 24, 27, 29 and 37. ODOT indicates that Policy 13 appears to give the highest use protection to sites designated and zoned for sand and gravel. However, objectors state that Policy 13 does not consider Greenway river processes and values.

7. ODOT objects to Policies 28, 30 and 35 because they conflict with Policy 24. Specifically, Policies 28, 30, and 35 call for a Greenway public access program aimed at serving urban residents in urban areas, and discouraging access to the river in the more attractive rural settings with greater recreational amenities. Policy 24 calls for a system of access points and trails, which is inconsistent with Policies 28, 30 and 35, according to ODOT.

8. ODOT objects to the lack of an inventory of "significant natural and scenic areas and vegetative cover," as required in Section B, Subsection 6 of the Goal. Without such an inventory, ODOT believes Policies 2, 4, 11, 12, 18 an 27 an the zoning ordinance "cannot be carried out with consistency.

9. ODOT objects to Section 16.254(2) (Exemptions from Permits) of the County's zoning ordinance. Objectors believe it should be deleted. Specifically, subsection (k) exempts certain timber harvest operations from Greenway Development Permit requirements. ODOT believes all commercial timber harvest activities must obtain such a permit. Objectors point out that the Forest Practices Act (FPA) notification does not cover scenic, recreational or historical impacts of harvesting. The Comprehensive Plan requires ODOT to make recommendations to the Department of Forestry (DOF). However, objectors point out that DOF is not required to act on ODOT's recommendations. Objectors feel this establishes a complex and misleading enforcement process.

10. ODOT objects to the County's Greenway setback provisions because it does not believe exceptions to the 100-foot requirement should be allowed unless criteria in LCDC's Exception Rule for the Greenway are met.

Response to Objections

1. Goal 15 (Section B.2) requires Greenway jurisdictions to inventory "all current aggregate excavation and processing sites, and all known extractable aggregate sources." The Goal also requires local

plans to be consistent with the ODOT Greenway Plan, which shows the location of such sites. ODOT has not specified which aggregate sites have been omitted from the County's inventory which are included in the ODOT Greenway Plan. In the 1981 review of Lane County's plan, the Commission found the County's inventory of Greenway sites to be adequate. The County has adopted this inventory by reference as part of its new Working Paper for the Greenway. ODOT is correct that a number of sites which are not included on the County's inventory of aggregate sites have been given a sand and gravel plan and zone designation, however. As indicated in the Goal 5 section of this report, the County has not justified such designations. This is more of a Goal 5 than a Goal 15 concern, however.

2. Aquisition sites were inventoried by Lane County in its 1981 Greenway Plan. In its 1981 review of that plan, the Commission found that inventory to be in compliance with Goal 15. The County has adopted its Greenway Plan by reference as part of its new Greenway Working Paper. Therefore, the objection is not sustained.

3. ODOT is correct that the Goal does not prohibit acquisition of farmland for public Greenway purposes. However, Section C.4.b. of the Goal indicates that areas to be acquired must "to the maximum extent practicable, be consistent with non-interference or non-interruption of farm uses as defined in ORS Chapter 215.203(2)." Policy 7 indicates such acquisitions must be consistent with non-interference or non-interruption of farm uses. While Policy 7 certainly carries out the intent of Section C.4.b. of the Goal, ODOT is apparently concerned that neither the County nor ODOT would be able to acquire farmland for Greenway purposes in the future unless Policy 7 is modified to use the term "should," rather than "shall." ODOT is also concerned that because Policy 7 is so restrictive, Policy 24 cannot be carried out, since it calls for providing public access to the river and public lands through access points, establishment of river lands, hiking and cycle paths, and public roads. There is no Goal violation in County Policy 7 being more restrictive and protective of farmland than the Goal, unless this restrictiveness prevents the County from meeting other Goal requirements or carrying out other policies. While Policy 7 certainly limits the County's options (as well as ODOT's options) in implementing Greenway programs, there are other means available, short of acquiring land which results in interfering with, or interrupting farm uses. The County is therefore urged, but not directed, to modify Policy 7 to use the term, "should," rather than "shall."

4. ODOT is incorrect in its interpretation of ORS 390.334. That provision (particularly subsection (2)) expressly prohibits the use of condemnation for acquiring scenic easements on farmland in the Greenway. Therefore, County Greenway Policy 32 is consistent with ORS 390.334. The objection is not sustained.

5. Lane County's Greenway Policy 12 states:

> The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or if not covered by the FPA, then with an approved plan under the Greenway compatibility review provisons. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

This above policy language repeats language in Goal 15, Section C.3.1. Section 16.254(3)(ix) of the Lane Code specifies that affirmative findings must be made, including "Harvesting of timber in a manner that wildlife habitat, riparian and other significant vegetation and the natural scenic qualities of the Greenway will be preserved, conserved, or restored and otherwise result in only the partial harvest of timber beyond the vegative fringe." This is consistent with Goal 15. However, Section 16.254(2)(k) of the ordinance specifically exempts certain harvest activities, not consistent with the Goal. These problems are addressed in the response to ODOT's objection 9.

6. Greenway Policy 13 states:

> Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resources.

Policies 2, 4, 18, 20, 21, 23, 24, 27, 29, and 37 are aimed at preserving other values in the Greenway (e.g., vegetation, fish and wildlife habitat, scenic qualities, recreational opportunities), and where appropriate, balancing such uses with the need for sand and gravel resources. Policy 13 in and of itself would not preclude protection of other Greenway values present. Presumably, the County's Greenway ordinance should ensure that extraction will not occur unless adequate safeguards for other resources are provided. Policy 13 simply indicates that uses that are incompatible with extraction activities will not be permitted on sites that are either active, zoned, or designated for aggregate extraction or processing. This policy presumes that the plan and zone designations for aggregate extraction and processing have been applied appropriately. However, even if the plan and zone designations are applied correctly, the policy does seem to ignore the fact that such operations can be allowed only if they are conducted in a manner consistent with the Goal's intent of protecting natural, scenic, historic, and recreational values. Other plan policies for the Greenway do express this, however (e.g., Policies 2, 3, 4, 15, 16, and 37). Therefore, the objection is not sustained. However, it is recommended that the policy be clarified to indicate that such operations are still subject to local Greenway Permit review or must be conducted in a manner consistent with the protection of other Greenway values.

5. Lane County's Greenway Policy 12 states:

> The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or if not covered by the FPA, then with an approved plan under the Greenway compatibility review provisons. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

This above policy language repeats language in Goal 15, Section C.3.1. Section 16.254(3)(ix) of the Lane Code specifies that affirmative findings must be made, including "Harvesting of timber in a manner that wildlife habitat, riparian and other significant vegetation and the natural scenic qualities of the Greenway will be preserved, conserved, or restored and otherwise result in only the partial harvest of timber beyond the vegative fringe." This is consistent with Goal 15. However, Section 16.254(2)(k) of the ordinance specifically exempts certain harvest activities, not consistent with the Goal. These problems are addressed in the response to ODOT's objection 9.

6. Greenway Policy 13 states:

> Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resources.

Policies 2, 4, 18, 20, 21, 23, 24, 27, 29, and 37 are aimed at preserving other values in the Greenway (e.g., vegetation, fish and wildlife habitat, scenic qualities, recreational opportunities), and where appropriate, balancing such uses with the need for sand and gravel resources. Policy 13 in and of itself would not preclude protection of other Greenway values present. Presumably, the County's Greenway ordinance should ensure that extraction will not occur unless adequate safeguards for other resources are provided. Policy 13 simply indicates that uses that are incompatible with extraction activities will not be permitted on sites that are either active, zoned, or designated for aggregate extraction or processing. This policy presumes that the plan and zone designations for aggregate extraction and processing have been applied appropriately. However, even if the plan and zone designations are applied correctly, the policy does seem to ignore the fact that such operations can be allowed only if they are conducted in a manner consistent with the Goal's intent of protecting natural, scenic, historic, and recreational values. Other plan policies for the Greenway do express this, however (e.g., Policies 2, 3, 4, 15, 16, and 37). Therefore, the objection is not sustained. However, it is recommended that the policy be clarified to indicate that such operations are still subject to local Greenway Permit review or must be conducted in a manner consistent with the protection of other Greenway values.

7. Policy 24 states:

> Accommodate public access to the river and to public lands within the Greenway by:
> a. Controlled, clearly designated, access points;
> b. Establishment of an integrated system of safe river landings, hiking and cycle paths, and public roads leading in and out of the Greenway at strategic locations;
> c. Use of a limited number of access points, each with improved facilities, good roads and high-visibility connectors.

Policies 28, 30, and 35 are:

> Public recreation use areas shall be located in or near the more populated urban areas and shall emphasize access to the river.
>
> Recreation development shall include a variety of river-oriented opportunities in urban areas but shall be limited in rural areas to those river-oriented recreation uses that are compatible with the sensitive character of the river and other important resources.
>
> Emphasize public access to the river in the metropolitan area and other urban areas while discouraging upland access in rural areas.

Section C.3.b. of Goal 15 indicates that recreational needs must be provided for, but must be consistent with the carrying capacity of the land, must not substantially interfere with the long-term capacity of the land for farm use, and must minimize disturbance to adjacent property. Section C.3.c. of Goal 15 indicates that adequate public access to the river shall be provided for, with emphasis on urban and urbanizable uses. County Policies 24, 28, 30, and 35 are consistent with these Goal directives. The objection is not sustained.

8. As indicated earlier, the County's inventory of Greenway values and resources is the same as the one submitted and reviewed in 1981. The Commission found the inventory to be adequate.

9. ODOT is in error in requesting that the entirety of Section 16.254(2) be deleted from the Greenway ordinance. The Goal 15 definitions of "intensification," "change of use" and "development" specify certain uses and activities that may be exempt from local Greenway permit review. Most of Lane County's exemptions are consistent with the Goal and are similar to those exempted by other Greenway jurisdictions whose plans and ordinances have been acknowledged by the Commission.

ODOT is correct, however, that subsection (k), which exempts certain kinds of timber harvest activities, is inappropriate. That subsection is consistent with the Greenway Interim Order, but the Goal itself does not exempt such activities from local Greenway review. It has been the Commission's practice to allow propagation of timber or cutting of timber for public safety or personal non-commercial use to be exempt from local Greenway permit review. To that extent, the first part of subsection (k) is acceptable. However, the second part (which exempts harvest activities if consistent with an approved permit under the FPA, for a farm woodlot less than 20 acres, or if consistent with recommendations of ODOT to DOF), is not. Therefore the objection is only partly sustained.

10. ODOT is correct that the County's Greenway setback exceptions are not consistent with the Goal. However, ODOT is not correct in suggesting that the LCDC Exception Rule be followed to allow such exceptions. This is because the Commission's Exception Rule contains criteria for taking exceptions to the Greenway setback requirement in urban areas only. Therefore, they do not apply to most of the Lane County planning area.

PART II--EUGENE/SPRINGFIELD METROPOLITAN AREA OUTSIDE THE METRO UGB

In August 1982, the Commission reviewed and acknowledged the Eugene/Springfield Metro Area Plan for lands within the Metro UGB. However, the cities of Eugene and Springfield as well as Lane County were granted a continuance for lands within the UGB but within the Metro Planning Area Boundary in order to comply with Goal 15 (as well as several other Goals).

The following section of this report analyzes Lane County's responses to the Goal 15 'in-order-to-comply" requirements contained in the August 1982 staff report, adopted by the Commission.

Requirement

1. Ensure that the LCDC-approved Greenway Boundary is shown or referenced in the appropriate subarea plans.

Response

As noted in Part I of this report, the County is replacing subarea plans with two documents--one for the Coastal region and one for the Inland Region. The Greenway is within the Inland Region. The County indicates in its Greenway Working Paper (p. 8) that the LCDC-approved Greenway boundary will be referenced in that document and the Boundary will be shown on the Plan Diagram. Please refer to Part I of this Goal 15 report for a discussion of the County's plan and zone maps and the extent to which they correctly display the Greenway Boundary.

Mining and processing activities in the Greenway must comply with provisions in the County's Greenway ordinance, including the following:

> A development which is mining or mineral extraction and/or processing operation must include mining or extraction and/or processing methods which reduce or mitigate adverse impacts to the natural and cultural attributes of the Greenway (Section 16.254(3)(a)(iii)).

In addition, affirmative findings of compatibility must be made with regard to a number of "Guidelines," including those addressing the protection of scenic and historic resources, areas of flooding and wetlands, the protection and enhancement of water quality, maintenance of natural riparian vegetation, erosion, protection of significant fish and wildlife habitat and natural areas, and compatibility with the site and the surrounding area (Section 16.254(3)(b)).

At the same time, Guideline (xv) calls for protection and conservation of lands designated aggregate resources within the adopted Willamette Greenway Plan. However, Section 16.254(3)(b)(i) through (xv) are "Guidelines" and compliance with them is to be judged according to their "relative importance." To this intent, the County does not have a clear procedure for assuring protection of significant fish and wildlife habitat areas within the Greenway on sites that also have sand and gravel resources. This is most evident in two particular areas--the Confluence Heronry and the Pudding Creek Heronry. Both have unquestionably significant wildlife resources present, and both contain significant aggregate resources. Application of plan policies, the Greenway ordinance, and various other zones does not result in clear policy direction for these sites. In that respect, the conflicts between these various resource uses have not been resolved.

Conclusion

Requirement 8 has not been satisfied.

Lane County has not adopted satisfactory procedures for carrying out Requirements C.3.d. and C.3.i. of Goal 15.

Requirement

9. Amend the Metro Area General Plan or the Lane County Willamette Greenway Plan to assure that land use designations are consistent.

Response

A new Metro Area General Plan Map was submitted as part of the 1982 Metro Plan review. It corrects the inconsistencies identified in 1981.

Response

The County has adopted the following Greenway policies regarding sand and gravel extraction and significant fish and wildlife habitats (Plan, pp. 33-35):

4. Protect, conserve, and preserve important economic uses such as, but not limited to agriculture, sand and gravel, tourism and recreation, fish and wildlife, urban lands, and timber within the Greenway.

13. Active, zoned, or designated aggregate extraction and/or processing sites shall be protected from noncompatible uses which would preclude future utilization of the resource.

14. Where feasible, point bar removal shall be accommodated by temporary access points.

15. In assessing the impact which an extraction and/or processing operation has on the natural and cultural attributes of the Greenway, the County shall require (within its realm of authority) mining methods which reduce or mitigate adverse impacts, as well as considering the economic and other benefits which will accrue in both short and long terms.

16. Aggregate operations occurring within the Greenway shall comply with the provisions of applicable state statutes and local zoning ordinances in regard to safety, operational standards, public review, reclamation and protection of Greenway values.

17. The relationship between the demand for the resource and the amount and location of land available for aggregate extraction and/or processing shall be closely monitored, so as to ensure the future availability of aggregate material in close proximity to urban areas and other points of use. Such monitoring shall be conducted in conjunction with the industry and state and local efforts.

18. Protect vegetation resources which are identified as having unique recreational, aesthetic, scientific or wildlife habitat values. Encourage acquisition of these areas or obtain a protective scenic easement.

37. Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with sections C.3.d. and C.d.i. of the Goal. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose.

Conclusion

Requirement 4 has been satisfied.

Lane County has adopted "shall" policies regarding sand and gravel extraction and significant fish and wildlife habitats in the Greenway. However, as noted in Part I of the Goal 15 section of this report, as well as in several of the following sections, not all of them have been implemented consistent with Goal 15.

Requirement

5. Adopt policies that address Sections C.3.h., j., and k. of Goal 15 (regarding timber resources, development away from the river, and Greenway setback).

Response

The following Greenway policies have been adopted by Lane County (Plan, pp. 33-35):

10. Development shall be directed away from the river, to the greatest degree possible.

11. A setback line shall be established in order to protect, maintain, preserve and enhance the natural, scenic, historic and recreational qualities of the Greenway.

12. The partial harvest of timber shall be permitted beyond the vegetative fringes in areas not covered by a scenic easement when the harvest is consistent with an approved plan under the Forest Practices Act, or, it not covered by the FPA, then with an approved plan under the Greenway compatibility review provisions. Such a plan shall insure that the natural scenic qualities of the Greenway will be maintained to the greatest extent feasible or restored within a brief period of time.

Conclusion

Requirement 5 has been satisfied.

Lane County has adopted Greenway policies that adequately address Sections C.3.h., j., and k. of the Goal.

Requirement

6. Amend Section 10.322 of the Lane Code to require either:

a. Greenway permits in areas designated "urban" beyond 150 feet of ordinary low water.

b. Some other mechanism which ensures protection of Greenway values in "urban" areas beyond 150 feet of ordinary low water.

This could also be accomplished by LCDC amendment of the DOT Greenway Plan to change the designation of the area south of the Cottage Grove UGB from "urban" to "rural."

Response

As indicated in the 1981 denial of the County's Greenway ordinance, any intensification, change of use or development in "urban" Greenway areas, as defined in Goal 15 and designated in the ODOT Greenway Plan, must either be reviewed locally according to Greenway Permit review procedurs or must comply with other measures designed to ensure protection of Greenway values. (Note: The term "urban" as used in the context of Goal 15 is not equivalent to "urban" as used in Goal 14, or to areas within UGB's. In this case, "urban" refers to designations in the ODOT Greenway Plan. In Lane County, there is land outside the Cottage Grove UGB which has an "urban" designation in the ODOT Greenway Plan.)

The County's Greenway Working Paper recommends requesting that the "urban"/"rural" boundary line be relocated to coincide with the adopted UGB of Cottage Grove (p. 10). However, neither the County nor ODOT have reguested LCDC change this designation.

As noted in the Metro Area Acknowledgment Report, approved by LCDC in August 1982, Section 10.322-15(1)(b) of the Lane Code was amended so that it no longer distinguishes between "rural" and "urban" areas.

Conclusion

Requirement 6 has been satisfied.

The Greenway Ordinance has been amended to require Greenway permits or other measures in "urban" areas beyond 150 feet of ordinary low water.

Requirement

7. Apply EFU zoning to all agricultural lands in the Greenway (see also the Goal 3 section of this report).

Response

The County has not applied EFU zoning to 85 acres of agricultural lands on the "Confluence Island." Instead, the majority of this land is zoned "sand and gravel." All other agricultural lands in the Greenway have been zoned EFU.

Conclusion

Requirement 7 has not been satisfied.

Requirement

8. Adopt a procedure for minimizing the impacts of sand and gravel extraction on significant fish and wildlife so that the Goal's requirements (Section C.3.d. and C.3.i.) are met.

Response

Section C.3.d. of Goal 15 states: "Significant fish and wildlife habitats shall be protected."

Section C.3.i. states that aggregate extraction:

> . . . may be permitted when compatible with the purposes of the Willamette River Greenway, and when economically feasible, subject to compliance with ORS 541.605 to 541.695; ORS 517.750 to 517.900 and subject to compliance with local regulations designed to minimize adverse effects on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise, safety, and to guarantee necessary reclamation.

Lane County has adopted several plan policies which address this issue. The first set of policies address Section C.3.d. They include the following:

> Mineral and aggregate extraction activities within the Willamette Greenway shall comply with the requirements of Statewide Planning Goal 15 (Willamette Greenway). Significant fish and wildlife habitat areas shall be protected in accordance with Sections C.3.d. and C.3.i. of the Goal. The provisions of the Lane County Willamette Greenway Plan and implementing regulations shall be used to this purpose (Greenway Policy 37).

As noted earlier (in the Mineral and Aggregate portion of the Goal 5, and the previous section of the Goal 15 sections of this report), Mineral and Aggregate Policy 11 is similar, except that it refers only to Section C.3.i. of Goal 15 for the protection of significant fish and wildife habitat areas. Section C.3.d. is the appropriate section of this Goal regarding significant habitat areas, whereas Section C.3.i. covers other less significant habitat areas and is less protective than Section C.3.d. (i.e., it requires only that the impacts of mining are minimized). Section C.3.d., on the other hand, requires that all significant habitat areas to be protected. The County needs to amend Mineral and Aggregate Policy 11 to be consistent with Goal 15 as well as with Greenway Policy 37.

The second set of Greenway policies address Section C.3.i. of the Goal, since they are aimed at minimizing the impact of any intensification, change of use, or development on Greenway values (e.g., Policies 2, 5, 15, 16, 18, 19, 27, 29).

Mining and processing activities in the Greenway must comply with provisions in the County's Greenway ordinance, including the following:

> A development which is mining or mineral extraction and/or processing operation must include mining or extraction and/or processing methods which reduce or mitigate adverse impacts to the natural and cultural attributes of the Greenway (Section 16.254(3)(a)(iii)).

In addition, affirmative findings of compatibility must be made with regard to a number of "Guidelines," including those addressing the protection of scenic and historic resources, areas of flooding and wetlands, the protection and enhancement of water quality, maintenance of natural riparian vegetation, erosion, protection of significant fish and wildlife habitat and natural areas, and compatibility with the site and the surrounding area (Section 16.254(3)(b)).

At the same time, Guideline (xv) calls for protection and conservation of lands designated aggregate resources within the adopted Willamette Greenway Plan. However, Section 16.254(3)(b)(i) through (xv) are "Guidelines" and compliance with them is to be judged according to their "relative importance." To this intent, the County does not have a clear procedure for assuring protection of significant fish and wildlife habitat areas within the Greenway on sites that also have sand and gravel resources. This is most evident in two particular areas--the Confluence Heronry and the Pudding Creek Heronry. Both have unquestionably significant wildlife resources present, and both contain significant aggregate resources. Application of plan policies, the Greenway ordinance, and various other zones does not result in clear policy direction for these sites. In that respect, the conflicts between these various resource uses have not been resolved.

Conclusion

Requirement 8 has not been satisfied.

Lane County has not adopted satisfactory procedures for carrying out Requirements C.3.d. and C.3.i. of Goal 15.

Requirement

9. Amend the Metro Area General Plan or the Lane County Willamette Greenway Plan to assure that land use designations are consistent.

Response

A new Metro Area General Plan Map was submitted as part of the 1982 Metro Plan review. It corrects the inconsistencies identified in 1981.

Conclusion

Requirement 9 has been satisfied.

Requirement

10. Amend the Lane County Greenway ordinance to ensure that the only erosion control activities that are exempt from Greenway review are those for emergency situations, safety, and protection of property.

Response

Lane County's Greenway ordinance has been amended so that the only erosion control activities that are exempt from Greenway Permit review are those "erosion control operations required in emergency situations for the safety and protection of property" (Lane Code, Section 16.254(2)(f)).

Conclusion

Requirement 10 has been satisfied.

Objections

1. A number of objections have been received regarding the County's treatment of the 300-acre area known as "Big Island" or "Confluence Island" at the confluence of the McKenzie and Willamette Rivers. Specifically, 1000 Friends of Oregon, League of Women Voters of Central Lane County (LWV), Harold Chapman, and Lane County Audubon Society have objected because the County has failed to provide adequate protection for the great blue heron rookery on the island. The heronry is one of the largest in the Willamette River Basin (about 55 nests) and is identified in the State Natural Heritage Inventory. Objectors point out that the County has zoned the site for sand and gravel use except for the heronry itself and an unspecified buffer area. Objectors feel this is not only inadequate, but also fails to carry out specific in-order-to-comply requirements adopted by the Commission. Specifically:

   a. Objectors note that Goal 15 (Section C.3.a.) requires that agricultural land in the Greenway be protected. Further, the denial order of Lane County's plan issued in 1981 as well as the 1982 continuance order for the Eugene/Springfield Metro Area specified that EFU zoning had to be applied to all agricultural lands in the Greenway. Several objectors have provided information demonstrating that a large portion of the island contains soils which are SCS Class II and IV. The area has been farmed historically, and about 85 acres are currently farmed. The County has not applied EFU zoning to all these areas. Some areas with these soils are zoned Natural Resource, but the majority are not. Instead, they have been zoned for sand and gravel.

b. Objectors believe that the County has not demonstrated that a minimum 300-foot buffer around the rookery will be adequate to protect the rookery. Objectors point out that Section C.3.d. of Goal 15 requires protection of all significant habitats in the Greenway. Objectors state that the compromise reached and which was adopted by the County was based on incorrect information about the location of the rookery, and therefore a larger area is needed for protection of the site itself. Objectors further point out that, on many occasions, the Commission has indicated that fish and wildlife areas and habitats include nest sites as well as other areas important to the species, including impact areas. Evidence submitted by objectors suggests that buffers of even 450 feet are inadequate and would result in abandonment of the site. Herons react to disturbances up to about 700 feet, according to research submitted by objectors.

c. Objectors also indicate that the County has failed to recognize the importance of providing adequate future habitat (available nest trees) in the event that existing nest trees (which are older and more susceptible to windthrow) are lost. Objectors point out that such habitat is being lost at a rapid rate along the Willamette River system. Objectors note that it is "absolutely necessary to preserve as many of the inland big trees as possible "because the island is eroding on the east side and water is undercutting nest existing trees, and because there are few places for the herons to relocate. The north end of the island (which is to be protected) is subject to windthrow.

d. Objectors indicate that the County has not adopted any implementing measures to minimize the impacts of sand and gravel extraction on this significant habitat area, so that Sections C.3.d. and C.3.i. of Goal 15 are met as specified in the 1981 denial order for Lane County and the 1982 continuance order for the Metro plan. Specifically, objectors point out that Section C.3.i. requires measures designed to minimize adverse effects on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise safety, and to guarantee necessary reclamation. Policy 11 contains this language but the Greenway Development permit criteria requires only that extraction reduce or mitigate adverse impacts to the natural attributes of the Greenway. Objectors indicate that the County's Sand and Gravel Zone also does not contain criteria which address the specific concerns listed in Section C.3.i. of Goal 15.

e. In the 1982 continuance order for the Metro Plan, LCDC specified that the ESEE consequences of designating the island for sand and gravel had to be evaluated in the context of regional aggregate supply and demand. Objectors contend that this has not been done, and (based on data in the County's own plan), they provide information demonstrating that in the Metro Area, supply is 10 to 20 times the demand for aggregate to the

year 2000. In the island alone, there is about five to ten times the total Metro Area demand to the year 2000. Therefore, objectors contend that the County cannot demonstrate the need to zone Big Island for sand and gravel extraction.

f. Objectors indicate that the entire island is within the floodway as determined by FEMA. County adoption of the current zoning for the island was based on a misunderstanding that the island was in the floodway fringe. Objectors indicate that a sand and gravel operation on the island will require dikes and other protective construction projects. FEMA standards do not normally permit dikes or other above-grade type development to be constructed in a floodway. Objectors also point out that Goal 7, Guideline 2 indicates that uses that do not require protection through dams, dikes and levies should be given preference over uses requiring such protection.

g. Objectors contend that the noise from a sand and gravel operation on the island would not be compatible with the purpose of the Greenway relative to a County park on the opposite bank. This is the only site with public access to the river in a natural state in the River Road-Santa Clara area.

2. A number of objections have been received regarding the County's treatment of the Pudding Creek Heronry on the Middle Fork of the Willamette River, within the Willamette Greenway. Specifically, Oregon Department of Fish and Wildlife (ODFW), 1000 Friends of Oregon, League of Women Voters of Central Lane County (LWV), and Lane County Audubon Society have objected to the Sand and Gravel Zone designation applied to the site.

Objectors point out that this great blue heron rookery is one of the largest in the Greenway and in Western Oregon (54 nests in 31 trees), and is on the State Natural Heritage Inventory. The site is within the Metro Planning area but outside the UGB. Objectors note that the heronry is recognized by the Lane Council of Governments (LCOG) as a significant wildlife resource. Objectors state that, during 1983, extensive negotiations occurred between Lane County, ODFW and the Wildish Land Company regarding the site, and that a land trade agreement was drafted in order to protect the heronry. Objectors point out that the Metro Plan Update Addendum indicates that a "Natural Resource" plan designation is to be applied to the site and buffer area and that land exchange is to be the means to resolve sand and gravel use conflicts. However, objectors indicate that Lane County has not zoned the rookery for natural resource protection and instead has applied Sand and Gravel zoning.

Several objectors note the similarity between the Pudding Creek Heronry and the Big Island Heronry (i.e., both are in the Greenway, and both have sand and gravel operation conflicts). Objectors note Goal 15 requirements regarding protection of significant fish and wildlife habitats and conditions which must be satisfied in order to allow mining activities.

Several objectors note that the County's failure to evaluate the Pudding Creek Heronry site in terms of the Goal 5 Administrative Rule process also violates Goal 5 as well as LC 10.205-05 and Ordinance 16.217 (Sand, Gravel and Rock Products Zone, SG-RCP). The Code states that the SG-RCP Zone shall only apply to sites which have been evaluated consistently with the Statewide Planning Goal 5 Administrative Rule conflict resolution process.

Response to Objections

1. Many of the objections regarding the Big Island Confluence Heronry are valid. Specifically,

   a. Objectors are correct that EFU zoning has not been applied to the 85 acres of agricultural lands on Big Island. Goal 15 (Section C.3.a.) requires this to be done.

   b. There is no evidence in the County's policies or implementing measures that a 300 foot buffer around the heron rookery was adopted, although such a buffer was proposed in the Metro Plan update document. Objectors are correct, however, that there is not sufficient information in that document as to why a 300 foot buffer--as opposed to a 400 foot or 700 foot buffer (for example) is adequate to protect the heronry. This is particularly true if, as objectors point out, such a proposed buffer was based upon incorrect information about the location of the rookery.

      On the other hand, objectors have indicated what buffer distances would not be acceptable, but have not recommnded a specific buffer in this case. In light of these facts, the objection is sustained in part. If sand and gravel extraction is to be permitted on the island, the County needs to reexamine what would constitute an adequate buffer for protection of the rookery, based on accurate locational information, and based on advice from objectors as well as ODFW biologists. Based on this re-examination, the County needs to adopt justification for an appropriate buffer, and must adopt such a buffer in plan policies and implementing measures for the site (see, however, response (e) below).

   c. Objectors are correct that the County has not discussed the importance of providing future habitat, such as trees in the inland portion of the island, although the County does recognize that the entire island has habitat value. The County needs to address this when developing a program to protect the site.

   d. Objectors are correct that neither the SG Zone nor the County's Greenway ordinance clearly require protection for significant wildlife habitats, such as the Confluence Heronry. Objectors are correct in saying that the Greenway ordinance does not contain provisions for carrying out Section C.3.i. of Goal 15, inasmuch as it is unclear that extraction will be allowed to occur only if certain conditions are met (these are spelled out

in Section C.3.i. of the Goal). The ordinance refers to most of the topics in Section C.3.i. in its "Guidelines" but does not relate these guidelines to aggregate extraction activities per se. It only requires that findings of compatibility be made based on the "relative importance" of individual Guidelines in any given case. This is not sufficient to ensure that Sections C.3.d. and C.3.i. of Goal 15 will be achieved. Objectors are not correct that Mineral and Aggregate Policy 11 contains adequate assurance, since it fails to reference Section C.3.d. of Goal 15.

e. Objectors are correct that the ESEE consequences analysis for designation of the island did not take into account the regional aggregate supply and demand, although the County's analysis does indicate that "from 3-7 times the amount of land needed for urban aggregate consumption during the planning period has been allocated for this use" (p. V-7). Objectors are correct that the County has not demonstrated a need to zone the island for sand and gravel extraction.

f. Objectors are correct that the entire island is within the floodway. However, this is not a Goal 15 compliance issue, per se, since Goal 15 simply requires floodplain zoning of all areas subject to flooding. As noted in the Goal 7 section of this report, this has been accomplished. Such zoning, plus FEMA regulations will limit activities that can take place on the island.

g. The County has not assessed the impact of noise from a sand and gravel operation in the County park on the opposite bank. However, this would be required according to Sections 16.254(3)(a)(iii) and (3)(b)(xiii) of the Greenway ordinance.

2. Goal 15 (Section C.3.d.) states: "Significant fish and wildlife habitats shall be protected" (emphasis added). Section C.3.i. of the Goal addresses aggregate extraction, and indicates that it "may be permitted when compatible with the purposes of the Willamette River Greenway, and when economically feasible, subject to compliance with ORS 541.605 to 541.695; ORS 517.750 to 517.900 and subject to compliance with local regulations designed to minimize adverse effects on water quality, fish and wildlife, vegetation, bank stabilization, streamflow, visual quality, noise, safety and to guarantee necessary reclamation."

Although the heronry is a significant Goal 5 resource as well as a significant Goal 15 resource, the requirements of Goal 15 are stricter than those for Goal 5 and the Goal 5 Administrative Rule. Goal 15 requires protection of significant fish and wildlife habitats; it does not allow the "balancing" that is permitted under Goal 5, based on specific circumstances and ESEE consequences of conflicting uses. Extraction in the Greenway may occur only when certain criteria are satisfied. In no instance can it occur if it results in non-protection of a significant habitat area.

There is apparently some confusion as to the actual zoning of the Pudding Creek Heronry, based on the comments and objections received, the various plan and zoning maps submitted for review, and information from the Planning Department itself. This is probably due to the fact that the zoning of the site has changed several times. The plot maps submitted indicate that part of the Pudding Creek Heronry site has been zoned for sand and gravel extraction, and part has been zoned NR. However, the Planning Department indicates that the entire site is zoned SG (Jim Mann, personal communication, July 17, 1984). Criteria in the County's Sand and Gravel Zone and Greenway ordinance do not ensure that the requirement of Section C.3.i. of Goal 15 will be satisfied for reasons discussed earlier. The adopted background materials which analyze the conflicts and ESEE consequences for the site call for protection of the heronry. There is no basis for SG zoning of the entire site, not is there any basis for the current configuration of NR zoning and SR zoning shown on the plot maps. There is no assurance that this configuration would be adequate to protect the heronry. The objections are sustained.

It should be noted that in 1983, extensive negotiations took place between the landowner, Lane County, ODOT, and ODFW for resolution of these conflicts. A proposal for a land exchange (involving land in a nearby state park being rezoned for sand and gravel, and the rookery to be zoned for protection) was drafted, but never executed. The draft proposal was not submitted as part of this current review, but a review of the proposal submitted informally to DLCD by LCOG indicates that, if adopted, it would satisfy Goal 5 and 15 concerns. Other implementing strategies and measures may also be available which would satisfy these Goals as well.

Comment

Wildish Land Company supports the County's plan and zone designations for the Pudding Creek Heronry, as submitted. Wildish (the property owner) indicates that, although the LCOG Working Paper, "Natural Resource Areas: Conflict Resolution for Significant Areas," recommends a land exchange or transfer of mining rights in order to resolve conflicts, redsignation and rezoning proposals were part of a preliminary draft and unadopted addendum to the Working Paper. To date, there has been no land exchange or rezoning. Wildish indicates that Policy 32 of the Environmental Resources Element of the Metro Plan simply requires further study of this issue. Wildish indicates that such a study has been completed and a decision made. The Mineral and Aggregate Resources Element of the County Plan specifies that the Goal 5 Rule will be followed (Policy 1, p. 13). Wildish indicates that LC10.205-10 of the Sand, Gravel and Rock Products Zone implements this policy.

Response

As noted earlier, while the Pudding Creek Heronry is a significant Goal 5 resource, it is also a significant Goal 15 habitat area. As such, the more restrictive standards of Goal 15 must be applied (i.e., the rookery

must be protected). Mining can occur only if the rookery is protected and other Goal 15 criteria are met. Contrary to the Wildish Land Company's statement in its letter, the County must be directed to amend its plan and implementing measures to protect the site.

Conclusion - Goal 15

Lane County does not comply with Goal 15.

Lane County has made many improvements to its Greenway element, in terms of both policies and implementing measures. However, there remain several deficiencies which must be corrected in both the rural plan element and in the Metro Planning Area outside the Metro UGB, in order to fully satisfy Goal 15. Summaries of these deficiencies have been presented in the previous subsections of this report.

In order to comply with Goal 15, Lane County and the Cities of Eugene and Springfield must:

1. Amend zoning maps 304, 304A, 305, 330, 332, 347, 396, 411, 417, 418, 425, 437, 440, 448, 471, 528, 1005, 1006, 1008, 1010, 1011, 1012, and 1013 to display the correct LCDC-approved Greenway Boundary.

2. Amend the Greenway ordinance to clearly require protection of significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints, per Sections C.3.d., a., and e. of the Goal.

3. Amend Section 16.254(2)(k) of the Greenway Ordinance to eliminate all language following the phrase, "or personal noncommercial use."

4. Amend Section 16.254(c) of the Lane Code to ensure that only water-dependent and water-related uses themselves are exempt from the 100-foot Greenway setback requirement.

5. Amend Section 16.254(6) of the Lane Code to require notification of ODOT of actions taken on applications for intensification, change of use or development in the Willamette Greenway.

6. Amend Section 16.254(2)(a) of the Greenway Ordinance to require either:

   a. Greenway permits in areas designated "urban" beyond 150 feet of the ordinary low water line, or

   b. Some other mechanism which ensures protection of Greenway values in these areas.

   (Note: This could also be accomplished by LCDC amendment of the ODOT Greenway Plan by changing the designation of the area south of the Cottage Grove UGB from "urban" to "rural.")

7. Adopt implementing measures that protect the Pudding Creek Heronry.

8. Adopt implementing measures that protect the Confluence Heronry.

In order to comply with Goal 15, Lane County must:

Modify Mineral and Aggregate Resources Policy 11 to also reference Section C.3.d. of Goal 15 to ensure protection of significant fish and wildlife habitats in the Willamette Greenway.

Suggestions for Plan and Implementing Measures Improvement

It is suggested that, by the first plan update, Lane County:

Amend Greenway Policy 13 to indicate that such operations are subject to local Greenway Permit review, or (alternatively) they must be conducted in a manner consistent with protection of other Greenway values.

Lane County's Nonresource Lands Process (Part II)

In the Lane County Acknowledgment Review of June 29, 1984, Lane County's Nonresource/Nonexception Lands designation process is reviewed. Information presented in the June 29 review includes (1) the County's plan policies for designating lands as nonresource/nonexception and applying residential densities to these lands (Policies 16(a) and 17, respectively, Plan, p. 4) and (2) the "general criteria" for determining nonresource lands contained in the County's marginal lands working paper (Marginal Lands Working Paper, pp. 7-9).

The County's process for determining that Goals 3 and 4 do not apply was found to be consistent with applicable Goal requirements. The information regarding Lane County's nonresource/nonexception lands contained on pages 47 through 50 of the June 29 review is considered Part I of a two part review of the issue. Part II of the review consists of an evaluation of six site specific areas for which information has been adopted indicating that these six areas qualify for the nonresource/nonexception designations.

The County's findings and record regarding these six areas were submitted for review in two parts. Part I was submitted with the rest of Lane County's plan on May 24, 1984. On June 25, 1984, Part II of the County's record regarding nonresource/nonexception lands was received by the Department. The information received on June 25, 1984, was adopted by the Lane County Commissioners without proper notification of objectors as required by OAR 660-03-032(1) (Expedited Review Requirements).

Therefore, Lane County must satisfy the requirements of OAR 660-03-032, before the Commission can formally accept relevant findings contained in materials submitted for review on June 25, 1984.

Evaluation of the Six Site Specific Areas Found to Qualify as Nonresource by the County

Lane County indicates that (1) Agate Creek Planned Unit Development (Wolf), (2) McKenzie Ridge (Thurmond), (3) Addition to Dillard and Highlands (Hemmenway), (4) Second Addition to Dillard Highlands (Hemmenway), (5) Meltebeke's on Van Duyn Road, and (6) Cerro Gordo (Canfield) qualify as nonresource lands. In assessing whether these six areas do qualify as lands for which Goals 3 and 4 do not apply, the Department found that in some cases, a determination could be made based on the information submitted in May of 1984. In other cases, the information submitted on June 25 was necessary to complete the record. The Department also found that adequate justification to support the County's "nonresource" claim for a couple of the areas in question was lacking despite the additional June 25 information. The following matrix will assist in clarifying this issue discussed above:

	Original Submittal (5-24-84)		Supplemental Findings (6-25-84)	
	Adequate	Deficient	Adequate	Deficient
1. Agate Creek PUD		X	X	
2. McKenzie Ridge	X			
3. Addition to Dillard Highlands		X	X	
4. Second addition to Dillard Highlands	No information submitted			X
5. Meltebeke's on Van Duyn Road	X			
6. Cerro Gordo	X			

Agate Creek Planned Unit Development (PUD)

This proposal is for 16 lots to be developed in two stages. Findings for this designated nonresource site consist of two pages of supplementary findings, the official public hearing notice and a memorandum to the Lane County Hearings Official from staff member George Currin regarding the PUD (5/5/83). Contained in the "original submittal" (5-24-84) is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. A statement that the "majority of soils on the subject property possess no woodland suitability." (NOTE: reference is made to an "Attachment A"--LCPC staff report PZC-82-190. This attachment was not furnished as part of the original submittal.)

2. Statements are provided indicating that 1) no site characteristics are present which make this site desirable for open space, 2) no mineral or energy resources are present, 3) no known ecological or scientifically significant natural areas are identified, 4) designation of this land for non-resource will not affect management of the land for wildlife habitat, 5) this site does not contain or impact scenic areas, 6) the site is not part of a water area, wilderness, wetland, groundwater resource area, or watershed, or 7) this site is not part of a known historical area or a potential or approved recreation trail or scenic waterway. (Supplementary Findings);

Contained in the "supplemental findings" of June 25, 1984, is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. Lane County Planning Commission Staff Report of November 9, 1982, which indicates the following:

   a. Lane County staff agrees that SCS Class I-IV Soils are not predominantly found on this property.

   b. This land is identified by the Lane County Wildlife Habitat Inventory as "sensitive" big game habitat.

   c. The applicant is in error that the suggested big game habitat density is one dwelling per 40 acres. It is one dwelling per 80 acres in sensitive big game areas.

2. LCDC Goal Requirement Report (Attachment A-November 9, 1982)

   a. The subject property is 53 percent nonagricultural soils. Attachment A to this LCDC Goal Compliance Report, which is referenced, indicates that of the 78 acres in question, 41 acres are SCS Class VI, 25 acres Class IV and 12 acres Class III (p. 1).

   b. A perched water table, poor soils, and steep slopes are given as reasons why this land is not "other land" suitable for farm use. SCS Soils OR-1 sheets are provided for each soil which generally support the County's position (p. 1).

   c. The County indicates that this land is not other lands necessary to permit farm practices to be undertaken on adjacent or nearby lands because none of the adjacent or nearby lands are engaged in farm use as defined by the ORS (p. 2).

   d. Regarding Goal 4, the County indicates that the land in question is composed of 59 percent (48 acres) of soils that have no woodland suitability for commercial forest uses. Only Dixonville Soil, which is cubic foot site Class 4, is capable of supporting commercial forest species.

   e. The County states that the parcel is not "other forested" lands needed for other resource uses listed in the Goal 4 definition. Specifically, the property has not been identified as needed for any of the other uses except big game habitat (p. 3). The issue of whether this land is forested land needed for big game habitat is addressed under a Goal 5 statement on page 4; the following statement is provided:

      > While the subject property is not shown on the Lane County Comprehensive Plan Inventory as significant fish or wildlife habitat or habitat for any endangered or threatened species, the Department of Fish and Wildlife has noted that this property is located in habitat for black-tail deer. The concerns of the Department of Fish and Wildlife can be addressed in

that a clustering of dwelling through a Planned Unit Development will significantly minimize the impact on black-tail deer habitat. Such a development will offer better protection to the habitat than scattering dwellings on the acreage which could occur under current land divisions. The dwelling density allowed under this proposal will not exceed the overall dwelling to acre ratio of 1-40 recommended by the State Fish and Wildlife Department for this type of black-tail deer habitat. The overall dwelling to acre ratio will not be exceeded in that the habitat in question is only a part of the total black-tail deer habitat in this area. Adjacent habitat areas will be maintained due to other prime forest land qualities. It is preferable to accommodate dwellings in this location given the poor resource soils and impact of surrounding development than on surrounding lands which are not impacted or of marginal capability.

With regard to the Fish and Wildlife Department's concern about deer damage to gardens and shrubs and the state's obligation to respond to complaints, the applicant will include deed provisions with all sales of property that black-tail deer inhabit the area and that the associated risks should be recognized.

Objection

1000 Friends of Oregon objects to the claim that Goals 3 and 4 do not apply to the Agate Creek PUD because the findings submitted on March 15, 1984, fail to address Goal 3. Regarding Goal 4, 1000 Friends objects to the conclusion that "the majority of soils on the subject property possess no woodland suitability" without specific soils and specific acreages as supportive evidence.

In addition, specific referenced attachments were not included in the County's original submittal of May 24, 1984.

Response to Objection

This objection is partially sustained. 1000 Friends' objection is generally correct with respect to the information contained in the original May 24, 1984, submittal. However, objectors will find that their specific objection is addressed by the Supplemental Findings submitted for review on June 25, 1984.

Conclusion for Agate Creek PUD

The claim that Goals 3 and 4 do not apply is not sustained.

Substantial evidence is provided in the record supporting the claim that Goals 3 and 4 do not apply to the property in question and that Goal 5 big game habitat value will be protected through clustering provisions.

McKenzie Ridge (also known as Camp Creek Ridge)

This PUD proposal would establish 79 dwellings on 385 acres of land north of Springfield.

Information in the record includes: (1) an affidavit by the applicant, Robert E. Thurmond, detailing the history of and expenses incurred for this development; and (2) a statement of findings, reasons and conditions. This latter statement includes findings addressing all applicable Statewide Planning Goals as well as applicable County requirement and conditions of approval.

This particular claim that Goals 3 and 4 do not apply to this property has been previously before LUBA and the Commission in Osborne v. Lane County [LUBA No. 81.107].

In their March 18, 1982 decision, LUBA found and the Commission affirmed, that the land in question is not subject to Goal 3 because it is not agricultural land be definition. Also, LUBA found that this land is not subject to Goal 4 primarily because the land is not predominantly forested nor suitable for commercial forest use.

Objection

1000 Friends objects to the McKenzie Ridge PUD because the assumptions regarding the interpretation of soils information are correct. The County has relied totally on SCS soils maps even though such maps can be incorrect.

Response to Objection

This objection is not sustained.

Objectors do not present any specific information regarding the property in question to justify invalidating the Commission's earlier decision in Osborne v. Lane County.

Conclusion for McKenzie Ridge

The County's decision indicating that Goals 3 and 4 do not apply to the 385 acres in question is sustained (see Osborne v. Lane County [LUBA No. 81.107]) and the County's finding contained in the May 24, 1984, submittal.

Dillard Highlands Addition

This subdivision is located approximately two miles south of the Eugene city limits. Phase 1 of Dillard Highlands consists of 14 parcels on 100 acres and is "committed" to non-resource use. The second phase of this development consists of 24 parcels.

Findings from the "original" May 24, 1984, submittal supporting this

nonresource/nonexception claim consist of a five-page statement (prepared by David Pedersen and Associates for applicant David Hemenway) titled "Application For Addition to Dillard Highlands Subdivision."

Information from the "original" submittal (5-24-84) relevant to the requirements for substantiating that Goals 3 and 4 do not apply are as follows:

1. A statement indicating "that the predominant soils on the property consist of:

   Dixonville-Philomath Hazelair complex (SCS Class VIe); Philomath SC (SCS Class VIs; Panther CL (SCS Class VIw) and Witzel CL (SCS Class VIs). These non-agricultural soils comprise approximately 92% of the subject property. A small patch (about 10 acres) of Hazelair soils is located on 20-30% slopes on the northern edge of the proposed division. These soils have SCS Classes IVe, subject to severe erosion (Pederson Statement, p. 3).

   Reference is made to an attached soils map which was not forwarded as part of the original submittal (May 24, 1984).

2. Regarding the "other land suitable for farm use" and "lands in other classes which are necessary to permit farm practices to be undertaken on adjacent or nearby lands," the following statement is provided:

   > This land does not meet the second definition of agricultural land. That is, it cannot be used for farm use (the current employment of land for the primary purpose of obtaining a profit) nor is it related to the continuation of agricultural activities on adjacent or nearby lands. Other lands in this area are either developed as rural residential or have physical characteristics similar to the subject proprty: gently rolling to steep terrain, a predominance of SCS Class VI soils and little if any potential "farm use". In addition, there is very little physical connection between the subject property and surrounding lands because of the variation in topography. Thus, even if farm use were possible on nearby lands, this proposal would not impact on or adversely affect such activities.
   >
   > In summary, the subject property is not agricultural land either in terms of its soil classification or its relationship to other surrounding lands. The surrounding lands are also not agricultural lands as defined by Goal 3 (Pedersen Statement, p. 4).

3. In response to Goal 4 requirements, statements are made that (1) the subject property has no timber site class ratings; (2) that it is predominantly open land; (3) that adjacent lands are similar in character and not used for commercial forest purposes; (4) that other forest uses (i.e., watershed protection, wildlife and fisheries

habitat, recreation, extreme conditions of climate, forested lands in urban and agricultural areas) are not applicable or present on the subject property.

In support of the above statement, the following is provided:

The general area slopes south and east towards Dillard Road and Camas Swale. It contains no rivers or creeks and only a small water natural drainage channel flows southeast towards Dillard Road and into Camas Swale. This drainage basin has no watershed value, nor would the proposed subdivision at the low densities proposed impact on any watershed if one were present. The subject property lies in a low, open area surrounded by steep hillsides. The Significant Vegetation and Wildlife Areas working paper indicates that the vegetation on the property is not unique and contains no elements which contribute to making it a signicant Wildlife Area.

4. Additional statements are provided indicating that (1) the subject property has not been considered for nor does it have recreational value; (2) no extreme climatic conditions exist; (3) this land is not needed for open space, wind breaks; and (4) no scenic values are present on the property.

Contained in the "supplementary findings" submittal of June 25, 1984, are (1) a chart titled "Soil Types on Dillard Highlands, 1st Addition," (2) a SCS Soils map for the subject property, and (3) a soils investigation report apparently prepared by Lane County including soils maps. The chart is relevant to the review of this proposed nonresource site summarized as follows:

1. The chart indicates that of the approximately 107 acres of the Dillard Highlands, 1st Addition, (a) 31.5 acres consists of the Dixonville-Philomath-Hazelaire Complex which has no woodland suitability and has SCS Class IVe agricultural soils; (b) 27 acres consists of Panther Silty Clay Loam which has no woodland suitability and has SCS Class VIw agricultural soils; and (c) 22.4 acres consists of Hazelaire Silty Clay Loam which has not woodland suitability and has SCS Class IVe agricultural soils.

   Of the approximate 107 acres, only 2.6 acres have a woodland suitability while only 22.4 acres are SCS agricultural suitability Class IV.

Objections

1000 Friends of Oregon objects because the findings presented are actually conclusionary statements for which supporting factual information is lacking.

Response to Objection

This objection is not sustained. Additional soils information contained in the supplementary findings submitted for review on June 25, 1984 supports the statements presented by the County in their original submittal indicating that Goals 3 and 4 do not apply. (Also see conclusion)

Conclusion for Dillard Highlands Addition

The claim that Goals 3 and 4 do not apply is sustained. Findings contained in the original submittal of May 24, 1984, are supported by information contained in the "supplemental findings" submitted for review on June 25, 1984, of particular significance is the information indicating that only 22.4 acres of the soils present on this property are SCS Class IV with no SCS Class I-III soils and that only 2.6 acres of the 107 acres in question have any woodland suitability rating at all.

Dillard Highlands, 2nd Addition

This proposal involves approximately 154 acres consisting of 29 five acre lots. It is located approximately one third of a mile southeast of the Eugene city limits and the UGB (application for the Second Addition to the Dillard Highlands Subdivision, p. 3).

Findings addressing this proposal were submitted for review on June 25, 1984 (supplementary findings). Included within the County's record for Dillard Highlands 2nd Addition review as lands for which Goals 3 and 4 do not apply is (1) a document titled "Application for the Second Addition to the Dillard Highlands Subdivision," (2) a list of soils with marginal woodland potential, and (3) a soils investigation report (apparently prepared by Lane County) which includes "forest" and "Ag" soils mapping.

Findings indicating why Goal 3 does not apply to the subject property are as follows:

1. Based on SCS soils mapping, the subject property is composed of 53 percent "nonagricultural soils"--Classes V-VIII--Exhibits A, B, and D are referenced.

2. Table 1 on page 11 indicates that 64% of the property is Class I-IV soils.

3. The soils investigation and accompanying "Ag" soils maps appear to indicate that the majority of the property in question is in fact composed of SCS Class I-IV soils. Also, handwritten statements on the "soils investigation report" indicate that "the application is general concerning soils if there are several more than mentioned" (Request for Soils Investigation, pp. 1 and 2).

4. The subject property is not "other lands" suitable for grazing "because of a combination of problems affecting the growth of pasture and the adverse effects of erosion which would accompany the grazing cattle." The County continues its assesssment of agricultural capabilities by stating the following:

The various limitations on grazing described upon the applicable SCS soil sheets include low fertility, strong acidity, seasonal high water table, clayey topsoil susceptible to compaction when wet, summer droughtiness, slow permeability, and susceptibility to erosion. Climatic conditions of winter rainfall and summer drought lead to the aforementioned soils problems and do not lead to favorable grazing conditions. The soils can become very dry in the summer, and given the high cost of drilling wells and the restricted grazing time, the prospect of irrigation for this purpose is rendered infeasible now and in the future. Existing rural residential land use patterns within the area and the subject property's proximity to the Metropolitan area make it most valuable for rural residential development. The technological and energy inputs required to farm the subject property due to the combination of soils and slope render it not farmable by a reasonable and prudent farmer for the primary purpose of obtaining a profit in money. Even if there were accepted farming practices which made grazing profitable on this site, the erosion potential of this activity makes this property unsuitable for grazing (Application for Dillard Highlands 2nd Addition, pp. 10 and 12--hereby referenced on Application).

5. The subject property is not lands in other classes necessary to permit farm practices to be undertaken on adjacent or nearby lands "as none of the adjacent lands are engaged in farming practices" (Application, p. 12).

Findings indicating why Goal 4 does not apply to the subject property are as follows:

1. In assessing whether this land is lands composed of existing and potential forest lands which are suitable for commercial forest uses the County indicates that of the 154 acrs, 57 acres is composed of Site Class III (site index 140), 31 acres is composed of Site Class IV (site index 110), 43 acres is composed of noncommercial forest lands, 18 acres is used for utility easements, and 5 acres is "deemed" as necessary lands for management (Application, p. 14). The County indicates that for this discussion, Site Class 125 (borrowed from Douglas County) was used to assess commercial forest land suitability (Application, p. 16).

   The County concludes that "only 57 acres, or 37 percent of the subject property has any commercial forest potential" (Application, p. 16).

2. The soils investigation and accompanying "Forest" soils maps indicate that additional soils not discussed by the County exist on the subject property (Request for Soils Investigation, pp. 1 and 2).

3. The County's "Exhibit F" presents from Forester Bob Hohenhaus an evaluation economic returns from commercial forest production. The County concludes that at the land's purchase price of $2,395,302, the net return from commercial forest production of the Site III and IV land is $217 per acre (Exhibit F, p. 2).

4. The County indicates that subject property is not "other lands" used for watershed protection, wildlife and fisheries habitat, and recreation because (a) no inventories identify it as needed for watershed protection; (b) the area is identified as the "impacted" and thus, not needed for big game habitat as well as not identified as significant habitat for fish or other wildlife species; (c) the subject property has not been identified as needed for recreation (Application, pp. 24-26).

5. In addressing the other aspects of the "Forest Lands" definition, the County indicates (a) that any soil conditions requiring maintenance of vegetative cover will be protected through conditions attached to development approvals, and (b) because the property is not within a UGB or in agricultural land, the "other forested "lands" definition does not apply (Application, pp. 26-27).

Conclusion for Dillard Highlands 2nd Addition

The claim that Goals 3 and 4 do not apply to the subject property is not sustained.

First, evidence is provided indicating that the subject property is predominantly SCS Class I-IV soils and thus subject to Goal 3. (Table 1-p.11, and soils investigation reports). Second, substantial evidence is not provided indicating that Goal 4 does not apply. The County's claim that forest site index 125 can be used to assess the commercial viability of this property is in consistent with its own definition for commercial forest lands. Also, the County's standards for determining income (under the F-2 Zone's woodland suitability test) seems to indicate that the land is potential commercial forest land. The basis for the County's position that this land is not capable of economic forest management (net return of $217 per acre) appears to be based entirely on the land cost (at residential values rather than at forest land value.)

Meltebeke's on Van Duyn Road

This proposal involves the rezoning of 258 acres from a forest zone to GR-10 based on the claim that Goals 3 and 4 do not apply. Buidling sites for 24 dwellings are proposed. This land is part of a larger 598-acre parcel owned by the applicant. Also, a portion of this 258-acre parcel is platted as County View Estates, lots 1 through 5.

Information contained in the original May 24, 1984, submittal includes:

1. A statement titled "Findings Supporting nonresource Designation for Certain Lands of Bob Meltebeke on Van Duyn Road" (with a map Exhibit A, attached).

2. Exhibit B is a copy of the Lane county Planning Commission's findings in support of this zone change.

3. Exhibit C is a map of the subject property depicting its soil types.

4. Exhibit D is a list of the soil types along with each soil's SCS classification and percentage of occurance on the subject property.

5. Lane County Planning Commission--Addendum to Staff Report (8/23/83).

6. Area map depicting the property to be rezoned.

7. Applicant's supplemental statement to the Lane County Planning Commission.

Contained in this "original" submittal is the following information addressing the Commission's requirements for substantiating that Goals 3 and 4 do not apply:

1. That the land is not SCS Class I-IV agricultural lands. Lane County Exhibit B--Lane County Planning Commission (LCPC), Findings of Fact--is referenced. Some of the findings addressing this issue are as follows:

   A detailed soils investigation of the subject property was undertaken for the applicant by Consulting Environmental Sanitarians, Ltd. (See June 21, 1983, transmittal letter from Terry M. Rahe of CES, Ltd. to Bob Meltebeke.) The results of the soils analysis are summarized in the Applicants' Statement at 5-7.)

   Only 5.9% of the 258 acres proposed for rezoning are SCS Class I-IV soils.

   When the entire Meltebeke ownership of 598 acres is considered together, ony 27.1% has an SCS Class of IV or better (LCPC, p. 2).

2. That the land is not other lands suitable for farm uses . . . suitable for grazing . . . some finding addressing this issue are as follows:

   Almost all of the Bashaw Clay and Conser Silty Clay Loam (Class III and IV soils) occupy the flat field in the northwest portion of the property that is not to be rezoned. These soils have drainage and overflow problems, based upon SCS data. They are subject to winter flooding and are very droughty in summer. (SCS soils tables.)

   The Dixonville/Philomath/Hazelaire complex and Panther Silty Clays (Class VI soils) are the predominate soil types. They occupy 33.7 percent of the entire ownership

and 42 percent of the area propoed to be rezoned. These soils have low permeability, low available water capacity, moderate erosion potential, high plasticity, thin and rocky soils, and droughty conditions. They are poorly suited for production of conifers, which tend to suffer from root rot and windthrow. (SCS soils tables.)

The present lessee of the Meltebeke property raises cattle on this and several other tracts in the vicinity. The property is suitable for grazing less than six months a year due to wetness in winter (which causes cattle to destroy the pasture) and dryness in summer (which inhibits growth of grass). (Letter from DuWayne Penfold, July 10, 1983).

The entire Meltebeke property is not a viable economic unit as a farm. It is incapable of producing a cash crop, including grazing of animals, that would be sufficient to cover operating expenses and retire indebtedness on the land. (See letter of Floyd W. Holbrook, Agricultural Management Specialist, August 4, 1983.) (LCPC, p. 3).

On page 9 of "Attachment 2," Meletebeke supplemental zoning App. Statement, the County provides the following assessment of this property's agricultural suitability:

In addition, Floyd Holbrook, Agricultural Management Specialist, has submitted a report stating that, while the property can be grazed, it would be necessary to do intensive clearing and planting, with a resulting production level that would not support an income adequate to retire the debt on the property, based on current farmland values in the area:

"The major problem with improving the property for grazing is that the acreage can not support enough animals in either beef or sheep in order to pay operating expenses and retire the land debt. The main reason for not being able t (sic) support adequate livestock is due to the moisture availability and the shallow soil depth. The soil types are such that fertilizers are restrictedby (sic) chemical bonds and do not allow for maximum pasture production."

"These figures [see letter] clearly show that the subject property will not support an economic unit." August 4 Holbrook letter.

3. That the land is not "lands in other classes . . . necessary to permit farm practices to be undertaken on adjacent or nearby lands. Some findings regarding this issue are as follows:

No adjacent or nearby farmer has voiced opposition to this rezoning proposal.

Dr. Penfold leases Meltebeke land to the northwest of the area to be rezoned. It is a hayfield on which he raises cattle. Dr. Penfold also raises cattle on several other tracts near the Coburg/I-5 interchange.

The Meltebeke property leased by Penfold has little value for grazing, and the proposed rezoning will have little impact on the productivity of the Penfold farm. (Letter of DuWayne Penfold, July 10, 1983.)

The area to the north of the subject property is scrub hillside and part of the Coglietti ranch. The immediately abutting area is not cultivated and receives limited grazing use.

All other agricultural lands are isolated from the subject property by the ridge to the east and south, and the residential land to the west.

A Wildlife Management Plan has been submitted by the Applicant and is a condition on zoning approval. Under this management plan there will be protective corridors running the length of the property which will buffer residential and farm uses. Under the plan animals will be restrained through fencing and deed restrictions.

Purchase of the subject property by adjacent farmers might increase their total income but reduce their return per acre. (Letter of Floyd W. Holbrook, Agricultural Management Specialist, August 4, 1983.)

4. That the land is not inventoried as forest land, not predominantly forested, and is not suitable for commercial forest production. County Exhibit B--Lane County Planning Commission (LCPC)--Findings of Fact--is referenced. Some of the findings addressing this issue are as follows:

   Neither the 258 acres to be rezoned nor the entire 598 acres is inventoried as forest land.

   Neither the 258 acres nor the 598 acres is presently "forested" in the meaning of the goal. A majority of neither acreage is covered with a commercial stand of conifers. Neither is a greater portion of either acreage covered with oak or similar noncommercial species.

   The vast majority of both the 258 acres and the 598 acres has no forest site class at all.

Only 54 acres or 21 percent of the 258 acres to be rezoned has soil with commercial forest potential, and this acreage is in four scattered locations. (Letter from Robert Hoenhaus, Consulting Forester, June 28, 1983.)

5. That the land is not forested land based on the following findings:

The upland areas between the subject property and the crest of the Coburg Hills, which contains the most densely wooded area, will be left in forest use, and will be managed under a management plan submitted by the applicnt's consulting forester.

Wildlife corridors provided in the wildlife management plan will provide protection for wildlife resources. (See Goal 3 findings above.)

The proposed 24 units will be clustered. Clustering will minimize impacts on wildlife and will permit protection of vegetative cover.

Development density will be more than 10 acres per unit on the property to be rezoned, about 30 acres per unit for all the Meltebeke property, and far more than 40 acres per unit in the surrounding area.

Grazing on the dry slopes of the subject property is a use that presently conflicts with goals of protecting vegetative cover and preventing soil erosion.

Conversion of the property to low density, clustered residential use with extensive wildlife corridors under the wildlife management plan will displace grazing, a use that conflicts with vegetation, soil, watershed and wildlife protection, with a use that will improve forest land, open space, wildlife values that the site does possess.

County General Plan Policy 5C13 requires application of Goal 5 conflict-resolution procedures and administrative (OAR 660-16-000) when, as here, the proposed development density is below that recommended by the Oregon Department of Fish and Wildlife for big game (LCPC, Exhibit B, pp. 5-6).

Some information contained in the record, contlicts with the findings adopted by the County. No specific discussion is contained in the "original submittal" clarifying the relationship of this information to that used by the County in making its decision is provided. (However, information contained in the supplemental findings--letter from Rober A. Holenhaus--indicates that the revised proposal of 258 acres excludes the majority forest soils discussed on page two of the "LCPC Addendum."

Relevant information regarding the "Nonresource" claim included in the "supplementary findings" submitted on June 25, 1984, are:

1. An area map showing the proposed 258 acres;

2. An aerial photo and a series of overlays which consists of a soils map, a colored overlay showing "Ag and forest soils" and the development area;

3. A sheet listing specific soils and acreages;

4. A large scale soils map prepared by Terrance Rahe;

5. Another aerial map containing soil lines;

6. A letter from R. Holenhaus, professional forester;

7. A letter from T. Rahe, soil scientist, describing the soils found on the property; and

8. A letter from J. Lockard, SCS District Conservationist, discussing the soil known as the Dixonville-Philomath-Hazelaire complex.

With the exception of a statement indicating that only 54 scattered acres are suitable for commercial forest use (Hoenhaus) specific findings or conclusions were contained in the supplemental findings. This information apparently was supplied to corroborate the statements contained in the "original submittal."

Objection:

1000 Friends of Oregon objects because information in the record contradicts findings that Goal 4 does not apply. Also, the County relies on soils mapping for this determination.

Response to Objection

This objection is partially sustained.

The objectors are correct that information in the record (page 2 of the "Lane County Planning Commission Addendum to Staff Report") indicates that Goal 4 does apply to this land or a portion of the property in question. However, information contained in the supplementary findings of June 25, 1984, addresses this issue (letter from R. Hohenhaus and also personal communication from J. Mann, Lane County Planning Department, 7/16/84).

Regarding the County's reliance on soils mapping, this objection is not sustained. In order to complete inventory requirements for both Goals 3 and 4, most counties have had to rely on such information to satisfy their land use planning obligations. The Commission has found acceptable

on numerous occasions, soils mapping prepared by the U.S. Soil Conservation Service (or other governmental agencies--e.g., BLM) provided it is the best information available at that time.

Conclusion for Meltebecke's on Van Duyn Road

When considering both the original submittal of "May 24, 1984" and the "supplementary findings" of June 25, 1984, substantial evidence is provided to sustain the claim that Goals 3 and 4 do not apply to the 258 acres in question.

Cerro Gordo

This proposal is for 60 residential lots and one common area lot on 604 acres on Dorena Reservoir in southern Lane County. Findings for this designated nonresource site were submitted with the County's original submittal of March 15, 1984, as well as with the supplemental findings submitted on June 25, 1984.

The "original" submittal for Cerro Gordo consists of a number of exhibits which are as follows:

1. A map of the property displaying (a) the nonforest soils, forest soils, and committed lands; (b) ridge lines, Row River Road, and Dorena Lake; and (c) adjacent ownerships and the area zoned RR-10 for which the nonresource claim is made.

2. Findings and conclusions in support of nonresource designation for Cerro Gordo Ranch--CPR Application No. 1102.

This statement consists of 173 pages including a 44 page wildlife management plan, a forest lands assessment by Woodland Management, Inc., an appraisal by Terrance Rahe (registered sanitarian) of the area's suitability for subsurface sewage disposal, and a detailed discussion addressing each Statewide Planning Goal as well as numerous letters generally in support of the proposed development.

The "supplemental findings" (June 25, 1984) for Cerro Gordo consists of (1) a five page document labeled "Incorporation of Applicant's Findings and Conclusions," (2) the "Cerro Gordo Preliminary Cluster Subdivision Plan," as well as (3) a number of letters addressing a range of issues, some of which not directly associated with the Goal 3 and 4 applicability question while others are duplicate information contained in the original submittal.

Contained in the "original" submittal (3-15-84) is the following information addressing the Commission's requirement for substantiating that Goals 3 and 4 do not apply:

1. In addressing Goal 3, the County indicates that 76 acres of the 604 acres consists of soils with SCS agricultural suitability Classes III-IV (12 percent). The dominant soil type (302.6 acres) is the Dixonville-Philomath-Hazelaire Complex (Findings and Conclusions . . ., p. 12).

2. Regarding the other aspects of the Goal 3 defintion, the County indicates:

   a. That there is no evidence of recent agricultural activity;

   b. Due to the lack of rainfall in the summer, the southern exposure of this site and no source for water for irrigation agricultural productivity is limited;

   c. The Dixonville-Philomath-Hazelaire Complex is rated three to six AUMs per acre for grazing and no suitability for crop production while the soils;

   d. Ninety percent of the property products less than ten AUMs of pasture per acre;

   e. Two hundred ten acres (35 percent) of the property is situated on Cerro Gordo Mountain which rises 1,200 feet above the lowest elevation point.

   Based on the preceding findings, the County concluded that the property as a whole would not be an economic farming unit (nor would be purchased for agricultural use) under Goal 3's "other lands suitable for agricultural use . . .definition (Findings and Conclusions . . ., pp. 12-14).

3. Regarding whether this site qualifies as "lands in other classes necessary to permit farm practice to be undertaken on adjacent or nearby lands," Lane County indicates that (a) there are no agricultural lands or agricultural uses in the imediate vicinity of the subject property, (b) Dorena Lake and the ridges of the mountain combine to surround the property, and (c) the nearest agricultural uses are approximately one mile from the property in question. Given the preceding facts, the County concludes that this site does not qualify as "lands in other classes necessary to permit farm practice on adjacent or nearby lands" (Findings and Conclusions . . ., p. 14).

4. Regarding whether the site is composed of existing and potential forest land suitable for commercial forest use, the County indicates that 507 acres of the 604 acres is composed of soils with no woodland suitability indicated by the U.S. Soil Conservation Service (Findings and Conclusions . . ., p. 16).

5. In addressing the other aspects of the Forest Lands definition, the County responds as follows:

   a. From aerial photographs, the forested and nonforested acreages were calculated. Douglas Fir is growing on 198 or 32.8 percent of this site. Oak is growing on 119 acres or 19.7 percent of this site while 287 acres or 47.5 percent remains nonforested. Fifty-two point five percent of the site is covered by trees. The County recites from LUBA's Osborne v. Lane County decision

(5 Or LUBA 172) that LUBA does "not view the fact that trees may be growing on the property in various places, as the record seems to indicate, to mean the land is forested within the meaning of Goal 4." The County indicates that the opinion implies that when considering species such as oak, not a simple majority, but rather " the far greater area" must be covered by trees to conclude that a property is forested (Findings and Conclusions . . ., p. 17). Thus, the County indicates that 52 percent forest cover alone does automatically qualify this land under the forest land definition. The County concludes by stating, "Considering the total extent of tree cover, the subject property is not forested within the meaning of Goal 4.

b. With regard to "lands where extreme conditions of climate, soil, and topography require vegetative cover irrespective of use," and "other forested lands in urban and agricultural areas which provide buffers, windbreaks, wildlife and fisheries habitat, livestock habitat, scenic corridors, and recreational use, the County indicates the following:

(1) The property is not (a) identified as an important watershed, (b) an agricultural or urban area, (c) needed for recreation, (d) necessary to be maintained in its present condition to provide buffers, scenic corridors, livestock habitat, or windbreaks (Findings and Conclusions . . ., pp. 18-21).

(2) The conditions imposed during this development's approval will resolve any potential problems presented by extreme soil and slope conditions as well as conflicts with big game (Findings and Conclusions . . ., pp. 18-20).

Also, findings addressing other relevant Statewide Planning Goals were included. Of particular significance to the "nonresource" designation issue are findings addressing wildlife habitat and the "Goal 5 process." The following are findings contained within the "Findings and Conclusions" document presented in the County's original submittal (5-24-84):

1. On pages 123 and 123, a detailed statement of potential consequences on big game habitat from residential development is presented.

2. A series of recommendations for mitigating asdverse impacts from residential development on big game habitat are presented on pages 125-127.

3. A discussion of residential densities and deer habitat is presented on page 217. As stated, the recommended density for big game is one unit per 80 acres preferred; one unit per 40 acres is acceptable with clustering. The County states that, "The Cerro Gordo property is requesting a subdivision of 100 lots with clustering, thus maintaining an average lot size of 10 acres" (p. 217).

4. The County indicates that "residential development in rural areas rarely acts to exclude or reduce deer populations," "the contrary usually occurs (Jim Greer, 1983)." The main impact of development is the loss of hunting lands. Cerro Gordo prohibits hunting (p. 128).

5. On page 125, the County concludes its discussion of density as follows:

> The Cerro Gordo project, which calls for a density of one lot for every 10 acres, can be thought of in the larger ecological context of the drainage basin (approximately 2000 acres) as resulting in a density approaching one lot for 20 acres. Again considering the clustered design of the development this leaves considerable land for natural processes to occur.

6. On pages 129-131, the County discusses the wildlive habitat and the Goal 5 Rule requirements. These are excerpts from this discussion:

   a. In identifying conflictihg uses there has previously been discussion as to whether residential development actually negatively impacts wildlife. Experts tend to feel that deer populations usually are minimally affected by rural residential development and tend to adapt to people's presence quite rapidly (Jim Greer, ODF&W; Lane County Extension Service, 1983) (p. 130).

   b. The ESEE consequences on both wildlfe and rural residents have been fully detailed in the previous section--"Potential Impacts of Development in Wildlife." The primary consequence on wildife is loss of habitat (environmental) while the primary consequence on rural residents is damage to landscaping and gardens (economic) and ultimately not being allowed to live in a rural setting (social). The section on "Mitigation of Impacts" gives recommendations for resolving these issues.

      Therefore, in section 660-16-010 of LCDC's interpretive rules the way to resolve the conflict of uses is seen as (3) limiting conflicting uses (pp. 130-131).

7. On pages 133 through 147, present a detailed "wildlife and development plan" which was designed to satisfy OAR 660-16-010(3), "Limit Conflicting Uses."

   As indicated, Lane County also submitted information regarding this developmental in their "supplemental findings" received by the Department on June 25, 1984. The information regarding Cerro Gordo contained within the supplemental findings was a reiteration of the conclusions and findings already present in the original submittal of May 24, 1984.

Objection

1000 Friends objects to the designation of Cerro Gordo as "nonresource" because of the County's reliance on SCS soils mapping information. Objectors claim that this information is inappropriate to judge the capability of this land for commercial forest use.

Response to Objection

This objectin is not sustained. In order to complete inventory requirements for both Goals 3 and 4, most counties have had to rely on such information to satisfy their land use planning obligations. The Commission has found acceptable on numerous occasions, soils mapping prepared by the U.S. Soil Conservation Service (or other governmental agencies--e.g., BLM) provided it is the best information available at that time.

Conclusion for Cerro Gordo

The claim that Goals 3 and 4 do no apply is sustained; however, one unresolved Goal 3 issue as well as a Goal 14 issue (see Goal 2) remains substantial evidence is contained within the "original submittal" to indicate that this land is not agricultural land under the Goal 3 definition. The approximately 604 acres in question is not predominantly SCS Class I-IV soils nor do findings indicate that it is reasonable to conclude that this property is "other lands" suitable for farm use or "lands in other classes" necessary to permit farm practices to be undertaken or adjacent or nearby lands.

Substantial evidence is provided also indicating that the property in question is not (1) "lands composed of existing and potential forest lands which are suitable for commercial forest uses and (2) other forested lands in urban and agricultural areas which provide urban buffers, wind breaks, wildlife and fisheries habitat, livestock, scenic corridors, and recreational use.

Also, the County has adequately addressed through open space requirements and developmental conditions the issue raised regarding extreme conditions of soil and topography where maintenance of vegetative cover qualifies as forest lands.

The question of whether this property qualifies as "other forested lands needed for wildlife habitat" has also been addressed. Substantial evidence has been provided showing that this two part definition, ((1) other forested land and needed for wildlife habitat) does not apply as the County's findings adequately address OAR 660-16-000 requirements; thus, indicating tht this land is not needed for wildlife habitat.

However, one unresolved Goal 5 issue remains. The County needs to address the issue of how the "acceptable" density of one unit per 40 acres with clustering is satisfied by authorizing one dwelling per ten acres as zoned or 60 lots under a cluster provision allowing duplexes (or 120 units per 600 acres or one unit per five acre overall density.

In order to comply, Lane County must:

1. Amend the plan (a) to include additional fundings justifying the claim that Goals 3 and 4 do not apply to property known as Dillard Highland's 2nd Addition, or (b) justify an exception to Goals 3 and 4, or (c) rezone the subject property with a suitable resource zone. If the county chooses option (a) or (b), Goal 5 wildlife habitat issues must also be addressed.

2. Amend the plan to justify the potential one dwelling unit per 5 acre density authorized for Cerro Gordo's 600 acres in view of ODFW's accepted wildlife habitat density standard for cluster developments of one dwelling unit per 40 acres. (see also Goal 2's cluster development issue)

M E M O R A N D U M

August 17, 1984

TO: Land Conservation and Development Commission

FROM: James F. Ross, Director

SUBJECT: ITEM 7.1: LANE COUNTY ACKNOWLEDGMENT REVIEW

TOPICS: Response to Exceptions to the Lane County Acknowledgment Review and Proposed Amendments to the Lane County Acknowledgment Review for Goals 5, 15, and Goal 2 Nonresource Areas.

This memorandum is divided into two parts. Part I includes by Goal topic responses to exceptions filed by objectors to the Lane County Acknowledgment Review. Part II contains by Goal Topic the Department's recommended changes to the Lane County Continuance Report along with the reasons to support those changes.

I. Response to Exceptions

A. Goal 2--"Nonresource" Lands

1. David Hemenway and Paul Mehnert regarding Dillard Highlands Second Addition

Mr. Hemenway indicates that some errors are contained within the Department's Report discussing Dillard Highlands' Second Addition. We concur with Mr. Hemenway regarding objections 1 (page 112 of the Department's report), 2 (page 113), and 4 (page 115). Corrections to the Department's report for the objections discussed above are contained in Part II of this memorandum. We disagree with Mr. Hemenway regarding objections 3 and 5.

Objection 3 claims that the Department's report is incorrect because the "County's" soils investigation report, quoted by the Department, is inaccurate. The Department is unable to reconcile the factual inconsistencies contained within the County's findings for Dillard Highlands' Second Addition.

The two sets of soils data, provided as findings, present different conclusions about the characteristics of the site. The County must review this material to determine which soils data are accurate. We recommend that Mr. Hemenway be afforded the opportunity to be involved in this determination.

Objection 5 claims that the Department's recommendation for Dillard Highlands' Second Addition is in error. The record lacks substantial evidence indicating that Goals 3 and 4 do not apply to this land. Until the County clearly indicates from revised soils information, that Goal 3 is not applicable to this site, the County lacks substantial evidence supporting its claim regarding Goal 3. Additionally, reliance on a forester's economic analysis to support the conclusion that Goal 4 does not apply to this site, when the record indicates it is composed predominantly of soils with commercial forest capabilities (Site Class III and IV, County's Findings, p. 14) is inconsistent with Goal 4's requirements (see amended conclusion for Dillard Highlands' Second Addition).

2. Canfield and Associates on behalf of Cerro Gordo

Mr. Canfield's exceptions to the Department's report are only partially sustained. The issues regarding the proposed density of this development as discussed in the report remain. However, the Department concurs with Mr. Canfield that amendments to clarify the Department's position are necessary (see amendments to the report).

B. Goal 5

1. Lane County

Lane County filed an exception to in-order-to-comply requirements 2c, d, e, f, and i. All pertain to fish and wildlife habitat issues.

Response: On August 8, DLCD staff met with Lane County planners to discuss these issues. All were resolved. IOTC 2c, d, e, and f remain, but 2i should be eliminated (see amendments to staff report in the Part II of this memo).

2. Wildish Sand and Gravel Company

Wildish believes that several statements in the July 19, 1984, report are inaccurate. Specifically:

a. Wildish is concerned that DLCD is recommending that sites in Appendix D of the Mineral and Aggregate Working Paper (which is the County's (1C) inventory for rural lands) need to be reevaluated and SG Zoning be rejustified per Steps 2 and 3 of the Goal 5 Rule. Wildish indicates that Appendix J represents Steps 2 and 3 of the Goal 5 Rule.

Response: The July 19, 1984, report recognizes Appendix J (p. 8) and does not recommend these sites be reevaluated per the Goal 5 Rule. However, SG Zoning was applied to other sites that were not on the (1C) list (Appendix D) nor the County's (1B) list (Appendix F). These are the sites which need to be reevaluated. No changes to the report are necessary.

b. Wildish is concerned that Appendix E of the Mineral and Aggregate Working Paper was identified by the County as the (1B) list for the Metro Area. Wildish points out that this list is essentially the (1C) inventory in the Metro Plan which has been acknowledged, with some inconsistencies.

Response: DLCD staff discussed this with Lane County planners on August 8. The County indicated it recognizes the Metro Plan (1C) inventory, and that Appendix E should be deleted from the Working Paper, since it is out-of-date and is inconsistent with the Metro Plan inventory. Page 7 of the July 19, 1984, report should be modified as indicated in Part II of this memo.

3. Richard Gold

Mr. Gold has filed an exception with regard to the Big Creek Exception (Renaghan Amendment), specifically with regard to Goals 2 and 17.

Response: Inasmuch as the record is closed for Goals 2 and 17, no response to this exception is warranted. No changes to the Goal 5 section of the July 19, 1984, report are necessary as a result of the exception.

4. James W. Spickerman

Mr. Spickerman disagrees with the July 19, 1984, report's statement that County's Appendix D is a valid (1C) inventory of mineral and aggregate sites. Mr. Spickerman indicates that the inventory is inaccurate and that only one of the 30 sites contains existing extraction, contrary to statements in the County's Working Paper and the July 19, 1984, report. Mr. Spickerman asserts that all but one are

in agriculatural use. Mr. Spickerman points out that, because of the belief that all are active sites, DLCD staff has incorrectly concluded that the sites are no longer available for agricultural use and that no conflicts exist.

Response: The County has indicated (Mike Copely, County Planner, personal communication, August 8, 1984) that there are some minor inaccuracies in Appendix D and that they will be corrected in responding to Goal 5 IOTC No. 1 (see July 19, 1984, report, p. 75).

According to the County, Mr. Spickerman is not correct in stating that only one of the 30 sites has extraction activities. The County has re-checked the sites in Appendix D and indicates that all 30 sites have active permits or have been actively mined in the past. Therefore, no changes to the July 19, 1984, report are necessary.

C. Goal 15

1. Lane County

Lane County filed exceptions to Goal 15 in-order-to-comply requirements 7-9.

Response: On August 8, 1984, DLCD staff met with Lane County and representatives of Lane Council of Governments and the City of Eugene to discuss these IOTC requirements. It was agreed that IOTC 7 and 9 should remain, but that IOTC 8 (regarding the Big Island Confluence Heronry) should be amended to provide the jurisdiction with the option of justifying (through an amended ESEE consequences analysis and Working Paper) the current NR Zone designation as providing adequate protection for the heronry. The specific IOTC amendments are contained in Part II of this memo.

2. Robert E. Moulton

Robert Moulton has filed an exception relating to the Big Island Confluence Heronry. Specifically:

a. Mr. Moulton contends that the County should not have to designate all agricultural land in the Greenway as EFU. Mr. Moulton reasons that, since aggregate resources are also Goal 5 resources, the Goal 5 process gives the County the option of not applying EFU zoning. Mr. Moulton also provides information suggesting that the County's figure of 85 acres of agricultural land on the island is incorrect, and that there are only about 30 acres of SCS class II and IV land.

Response: The Greenway Goal clearly requires EFU zoning be applied to all agricultural lands in and adjacent to the Greenway. Sections C.3.a. and F.2.a. of Goal 15 state:

> "The agricultural lands identified in the inventory shall be preserved and maintained as provided in Goal 3 as an effective means to carry out the purposes of the Greenway including those agricultural lands near the Greenway."
>
> "Measures for managing uses within the Greenway shall include at least ... exclusive farm use zoning of all agricultural land withing and adjacent to the Greenway..."

Because Goal 15 contains more prescriptive requirements than does Goal 5, the requirements of Goal 15 supercede.

There appear to be conflicting data regarding the amount of agricultural land on Big Island. The County should look into this matter during the continuance and zone all agricultural land EFU, as appropriate, whether 30 or 85 acres. However, where Goal 15 resources that are required to be protected by Goal 15 are located on agricultural land (e.g., significant wildlife habitats such as heron rookeries), measures that are more protective than EFU zoning must be adopted. It was the intent of Goal 15 IOTC 2 and 8 (pages 104 and 105 of the July 19, 1984 report) to include EFU zoning of all agricultural land on Big Island, except where Goal 15 requires stronger protection measures for resources such as the heronry. However, if the Commission believes it will assist in the resolution of this issue, the following additional IOTC could be adopted (page 105 of the July 19, 1984 report):

> 9. Apply EFU zoning to all SCS Class I-IV soils on Big Island, except where Goal 15 requires stronger protection measures for Greenway resources (e.g., significant wildlife habitats)."

However, no changes to the July 19, 1984, report are recommended.

b. Mr. Moulton disagrees with the July 19, 1984, report's IOTC for the Big Island, indicating that current NR Zoning is adequate.

Response: The current NR Zone designation may be adequate for the protection of the rookery, as Mr. Moulton contends. However, the County's Working

Paper contained contradictory information which did not support the NR Zone designation as adopted. The July 19, 1984, report should be amended to provide the County the opportunity to better justify its NR Zone of the rookery. These report amendments are presented in Part II of this memo.

c. Mr. Moulton challenges the County's contention that aggregate supplies are three to seven times the amount needed to the year 2000. He maintains that there is only 25 percent more than the amount needed, and has submitted an analysis which supports this new figure.

Response: In re-evaluating the zoning for Big Island, the County should consider Mr. Moulton's figures. However, Goal 15 requires protection of the heron rookery and EFU zoning of all agricultural land on the island. Aggregate extraction may be allowed under a Greenway conditional use permit if certain conditions are met. Neither Goal 5 nor Goal 15 requires SG Zoning of all aggregate sites, nor do these Goals prevent SG Zoning from being applied to sites that contain aggregate supplies not necessarily needed within the planning period. However, this is one of many factors that needs to be considered when determining appropriate zone designations. The July 19, 1984, report should be amended to make this clear. Specific proposed amendments are presented in Part II of this memo.

II. Amendments to the Report

A. Goal 5

1. Page 7--The fourth line from the bottom of the page should be amended as follows:

"Appendix E is [the (1B)] an inventory for lands inside the Metro Area. However, it is inconsistent with the (1C) inventory contained in the Metro Plan. The County has indicated it recognizes the Metro Plan inventory and will be deleting Appendix E (confirmed by Mike Copely, Lane County Planner, personal communication, August 8, 1984)."

Reason: This amendment is needed to clarify an error in the July 19, 1984, report.

2. Page 34--Add the following at the end of the paragraph immediately preceding the heading, "Objections:"

"However, this is because the County knows of no such sites at this time. The County has indicated that this is a policy which will be applied in the future, as appropriate" (Roy Burns, Planning Director, personal communication, August 8, 1984).

Reason: This statement is needed to clarify why the County has not carried out Policy 17.

3. Page 76--Eliminate "in-order-to-comply" requirement 2i.

Reason: In light of the explanation provided in the previous amendment, this in-order-to-comply is no longer valid.

4. Page 40--Amend the first paragraph as follows:

"4. Objectors are correct that Goal 5 has not been applied by the County in the process of designating marginal lands. ORS 197.247(8) requires that applications of a marginal lands zone must satisfy all requirements of other Goals, including Goal 5. The ML Zone itself also does not include language which assures compliance with Policy 11."

"Objectors are not correct that the Goal 5 process was not addressed in the process of designating nonresource lands. However, the Goal 5 conflicting uses/ESEE consequences analysis for one of the nonresource areas--Cerro Gordo--does not justify the residential densities proposed. Specifically, the site is located within major as well as peripheral big game habitat. Conflicts with big game habitat are recognized, but the applicant asserts that the RR-5 designation 'clearly and precisely limits the densities and uses allowed on the property to a level which will assure good deer habitat . . .' However, the ESEE consequences analysis does not support this statement. The applicant summarizes the negative environmental consequences of development in deer habitat as loss of habitat, disturbance of wildlife, interference with wildlife movement,

increased deer populations due to decreased hunting pressure, wildlife damage, imbalance of species diversity, pollution of water sources, wildlife injuries, and ODFW complaints. The only positive impact identified is improvement to the habitat due to possible native plantings and water impoundments and education of residents about the needs of wildlife. The economic consequences are identified as damage to landscaping and gardens. The social impacts are described as 'ultimately not being allowed to live in a rural setting.'

The applicant has proposed a wildlife management plan which calls for clustering buildings and maintaining wildlife corridors. Although the proposed clustering and wildlife corridor measures will help resolve some of the conflicts identified, the overall density of development (with clustering) is one unit per five acres. ODFW recommendations are one per 80 acres (or one per 40 acres with clustering) in major big game habitat, and one per 40 acres (or one per 20 acres with clustering in peripheral habitat. According to the County's own plan (Policy 11), such densities cannot be exceeded without being justified through an ESEE consequences analysis. As indicated above, the applicant's ESEE consequences analysis does not support development at densities which exceed ODFW's recommendations, nor does the analysis provide justification for that level of development, in light of the negative impacts such development would have on habitat values. The County's findings in support of nonresource designation for Cerro Gordo indicate that approval is conditioned upon the fact that residential development will be clustered, and that provisions of the wildlife management plan 'in substantially its present form subject to modifications' will be followed. However, it is unclear what the word "substantially" means, and

what modifications would be made. Also, the degree of clustering is unclear in the wildlife management plan. The plan proposes 10 to 20 clusters of 1 to 30 lots each. The ultimate number and configuration of these clusters is not specific. There is a significant difference between 10 clusters of 2 lots and 20 clusters of 30 lots each. It should be pointed out that the wildlife management plan was prepared for a 1,000 acre proposal. According to the applicants, this proposal has been reduced to 600 acres (Chris Canfield, personal communication, August 14, 1984). This adjustment has not been reflected in the submittal materials, however.

The mitigation measures proposed will help lessen the conflicts between deer and the development. However, even with the implementation of such measures, negative impacts will occur. The County has decided to allow such impacts to occur, but has not justified such a decision through an ESEE consequences analysis. This is not to say that no development would be possible at the Cerro Gordo site. However, the County must clearly specify what level of development and density and clustering provisions are anticipated, and must either justify (through an ESEE consequences analysis) allowing such impacts to occur, or modify the density and/or configuration of units so that the impacts are acceptable. Whatever decision is made must be supported by adequate reasons, according to the Goal 5 Rule." See the Goal 2 section of this report for further information.

Reason: These amendments are necessary since this issue was not addressed in the July 19, 1984, report, in response to objections received. It is also needed in response to exceptions to the July 19 report which were filed by Canfield and Associates on behalf of Cerro Gordo.

B. Goal 15

1. Page 102--Add the following at the end of paragraph "e:"

> "This is not to say, however, that lands that are not needed for sand and gravel cannot be designated and zoned SG. However, supply and demand data should be factored into any ESEE consequences analysis for Big Island, and be considered when deciding what implementing measures are appropriate. In this case, there is a greater burden placed on the County to protect the heronry and agricultural land because of Goal 15 requirements and no shortage of aggregate supplies."

Reason: This statement should be added to the report to address concerns expressed in several letters of exception. Specifically, parties were concerned that the staff report implied that only sites demonstrated to be needed in the future (based on a supply/demand study) could be zoned SG.

2. Page 105--Amend "in-order-to-comply" Requirement 8 as follows:

> "8. Either adopt findings which explain how the current zone designations for Big Island protect the Confluence Heronry, or adopt other implementing measures that protect the Confluence Heronry."

Reason: The in-order-comply statement needs to be broadened to provide the County with more flexibility in addressing issues for Big Island.

C. Goal 2

1. Page 109--Under "Conclusion for Agate Creek PUD," delete the word "not" from the first sentence. It should read as follows:

> "The claim that Goals 3 and 4 do not apply is [not] sustained."

2. Page 112--Under the "Supplemental Findings" discussion (located in the middle of the page) within the fourth sentence of quoted item No. "1," replace SCS Class "IVe" with Class "VIe."

3. Page 113--Under Dillard Highlands, 2nd Addition finding No. "2," replace "64 percent" with "47 percent."

4. Page 115--Amend the last line of the County's finding No. 3 (at the top of the page) to indicate that $217 figure for the net return is actually "-" (minus) 217 dollars.

5. Page 115--Replace the conclusion for Dillard Highlands 2nd Addition with the following:

> "First, evidence is provided indicating that the subject property is predominantly SCS Class I-IV soils and thus subject to Goal 3 (soils investigation reports). Second, substantial evidence is not provided indicating that Goal 4 does not apply. The County's claim that forest site index 125 can be used to assess the commercial viability of this property is inconsistent with the County's definition of commercial forest lands. Also, the County's standards for determining income (under the F-2 Zone's woodland suitability test) seems to indicate that the land is potential commercial forest land."
>
> "The County's conclusion that Goal 4's forest lands definition ('lands composed of existing and potential forest lands which are suitable for commercial forest uses') does not apply to Dillard Highlands' Second Addition, because the current rate of return is negative for managing this land as commercial forest land is invalid. As is the case under Goal 3 (Goal 3 must be applied to lands with SCS Classes I-IV soils), the Commission requires counties to apply Goal 4 to lands with cubic foot site classes suitable for commercial forest managment as reasonably defined and inventoried by the County or the County maust take an exception to Goal 4. The requirement to apply Goal 4 in the manner stated above is consistent with the 1983 Legislature's marginal lands requirements which indicate that lands capable of producing 50 cubic feet of merchantable timber per acre per year can not be considered as marginal lands unless extensive parcelization exists within the area (see ORS 197.247(1)(b))."

6. Page 125--Under the Conclusion for Cerro Gordo, amend the following:

   a. In the second line replace Goal ["3"] with Goal "5."

   b. Place a period after "remains" in the second sentence. Begin a new sentence with "Substantial" on line three.

   c. Replace paragraphs 4 and 5, beginning with the second sentence in paragraph 4 with the following:

> [Substantial evidence has been provided ... indicating that the land is not needed for wildlife habitat.]
>
> "With appropriate density limitations, Goal 5's requirements for big game habitat under OAR 660-16-010(3) (limit conflicting uses) could be met. Thus, the County has satisfactorily addressed the 'other forested lands needed for wildlife habitat' issue and justified their claim that Goal 4 does not apply."
>
> "However, one unresolved Goal 5 issue remains. [The County needs to ... or one unit per five acre overall density.] The Oregon Department of Fish and Wildlife (ODFW) indicates (within their objection regarding big game habitat--see Goal 5 section, p. 35) that provisions authorizing a doubling of densities in big game habitat areas is a measure satisfying OAR 660-16-010(3) when a clustering of dwellings occurs."
>
> "Because the density authorized by Lane County for Cerro Gordo exceeds ODFW's accepted densities mitigation strategy under the "3C" approach (OAR 660-16-010(3)), one of three options remains open to the County to resolve this issue. These options are as follows:
>
> 1. Provide additional ESEE consequences analysis justifying the decision to 'allow the conflicting uses fully' (OAR 660-16-010(2)) at a density exceeding a threshold acceptable to ODFW; or

2. Limit the density in the Cerro Gordo development to ODFW's recommended density with clustering consistent with (OAR 660-16-010(3)); or

3. Cooperate with ODFW to design a mitigation strategy which combines (a) the current wildlife management plan for Cerro Gordo; (b) additional ESEE consequence analysis supporting the decision to allow a density which exceeds ODFW's recommended density with clustering; and (c) other mitigation measures deemed necessary by ODFW. Also, the Department suggests that the Goal 2 density issue be considered and resolved in conjunction with the Goal 5 density question."

0341D

LAND CONSERVATION AND DEVELOPMENT COMMISSION
ACKNOWLEDGMENT OF COMPLIANCE
Lane County
(Rural Portion, Excluding Eugene Metro Area)
Supplement to Staff Reports of June 29, 1984 and July 19, 1984 as Amended

DATE RECEIVED:
August 16, 1984 through September 13, 1984

DATE OF COMMISSION ACTION:
September 13, 1984

I. REQUEST

Acknowledgment of Compliance with the Statewide Planning Goals for the comprehensive plan and implementing measures.

II. SUMMARY OF RECOMMENDATIONS

Staff

Recommends the Commission acknowledge the rural portion of Lane County's plan and land use regulations to be in compliance with Statewide Planning Goals 1-14, 16.

FIELD REPRESENTATIVES: Bob Rindy, Glen Hale
Phone: 378-4095

LEAD REVIEWER: Doug White, Mike Rupp, Claire Puchy
Phone: 378-4926

PLANNING DIRECTOR: Roy Burns
Phone: 687-3958

Date of Supplemental Report: September 12, 1984

III. BACKGROUND INFORMATION

On June 29, 1984, the Department issued a staff recommendation for Goals 1-4, 6-14, in response to Lane County's request for acknowledgment. The Commission took testimony but did not take final action on the request at the July 19, 1984 meeting. Also, on July 19, 1984, the Department issued a staff recommendation regarding Goals 5 and 15, and Goal 2 nonresource lands. At their August 17, 1984 meeting, the Commission again postponed final action on the June 29, 1984 report, and on the July 19, 1984 report, except for the portions pertaining to the rural areas in the Eugene/Springfield Metro Plan. These areas were granted a continuance to October 11, 1984.

In the period following the issuance of the Department recommendations, Lane County has made numerous revisions to their comprehensive plan and implementing ordinances in response to the Department's recommended in-order-to-comply requirements. These amendments were made under the provisions of the Expedited Notice Procedure for Acknowledgment (OAR 660-03-033). According to County Notices (July 19, 1984 and August 23, 1984), commentors and objectors were notified and provided opportunities for review and comment on these amendments prior to County adoption.

Section IV below summarizes the DLCD proposed requirements from the June 29 and July 19 reports and summarizes the County's response to each requirement. These are intended as supplemental findings, rather than as amendments to the previous DLCD recommendations.

Submitted Documents

Document	Ordinance	Adoption
Revisions to Development Code (Chapter 16)	9-84; 11-84	8-9-84; 9-12-84
Amendments to Plan Policies and Comprehensive Plan	889; 892	8-9-84; 9-12-84
Revisions to Development Code (Chapters 13 and 14)	10-84	8-9-84
Amendments to Comprehensive Plan	888	9-12-84
Supplemental Findings for Exceptions, Maringal Lands and Non-Resource Areas	84-9-11-22 (Order) 84-9-11-23 (Order)	9-12-84 9-12-84
Revised Comprehensive Plan Map and Zoning Map	891; PA 884	9-12-84

IV. FINDINGS

GOAL 2: LAND USE PLANNING

Requirement

1. Provide legible maps for all rural lands showing adopted plan categories.

Response

Lane County adopted a set of revised plan maps (ORD. No. 884). These plan maps replace previously submitted plan maps. The plan designations are site specific following legally identifed boundaries. Each plan designation is identified by a specific code symbol and defined in the County's plan.

Conclusion

The requirement has been met.

Requirement

2. Clearly define which zones are intended to implement each plan category.

Response

The County's plan was amended (ORD. 889) to include the following plan policy (Goal 2, Policy 26):

"Each of the land use designations applied to the Plan Diagram shall be implemented by one or more zoning districts as follows:

Plan Designation(s)*	Zone Classification
Forest land	Nonimpacted Forest Lands
Forest Land	Impacted Forest Lands
Agriculture Land	Exclusive Farm Use
Natural Resource	Natural Resource
Marginal Land	Marginal Lands
Park and Recreation	Park and Recreation
Natural Resource	Quarry and Mining Operations Combining
Natural Resource	Sand, Gravel and Rock Products
Natural Resource	Sand, Gravel and Rock Products Processing
Public Facility, Community	Public Facility
Commercial, Community	Limited Commercial
Comercial, Community	Neighborhood Commercial
Commercial, Community	Commercial
Rural Commercial	Rural Commercial
Industrial, Community	Limited Industrial

Industrial, Community	Light Industrial
Industrial, Community	Heavy Industrial
Rural, Community	Suburban Residential
Rural, Community	Garden Apartment Residential
Rural, Community	Rural Residential
Destination Resort	Destination Resort
Historical Structure/Site	Historic Structures or Sites Combining
Natural Estuary	Natural Estuary
Conservation Estuary	Conservation Estuary
Development Estuary	Development Estuary
Sign. Natural Shorelands	Significant Natural Shorelands Combining
Prime Wildlife	Prime Wildlife Shorelands Combining
Natural Resources Consv.	Natural Resources Conservation Combining
Residential Development	Residential Development Shorelands Combining
Shorelands Mixed Develop.	Shorelands Mixed Development Combining
Dredge Material/Mitigation	Dredge Material/Mitigation Site Combining
Beaches & Dunes	Beaches and Dunes Combining
	Floodplain Combining
Airport	Commercial Airport Safety District
Airport	Airport Safety District
Airport	Airport Operation
Nonresource	Rural Residential

* Note: The 'Community' Plan Designation is implemented by various zoning districts as indicated, zones which also implement specific Plan designations other than 'Community'."

Conclusion

The requirement has been met.

Requirement

3. Delete the provision in Sections 16.015 and 16.252 which permit legislative zone amendments to be adopted by order rather than by ordinance.

Response

Lane County's Development Code (Section 16.015) was amended (Ord. 9-84) to require that only quasi-judicial zone amendments be adopted by order. The section in the County Code which permits adoption by order applies to the County Board, Planning Commission and Hearings Official. An adoption by Ordinance is required for all legislative amendments.

Conclusion

The requirement has been met.

Requirement

4. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone these lands identified in the Goal 2 Exception with the appropriate resource zone.

Response

Early in the review of the County's built and committed exceptions areas, Department staff identified certain areas that were not justified. In response to these noted deficiencies, the County adopted the first set of supplemental findings prior to issuance of the DLCD June 29, 1984 report (Order No. 84-6-19-16). These findings were reviewed in that report and found to address most of the deficiencies identified by Department staff. However, the Commission did not accept and approve these findings at their July 19, 1984 meeting because the County had not complied with the Expedited Notice Procedures for Acknowledgment (OAR 660-04-033) (See Lane County Acknowledgment Report, June 29, 1984, p. 26). To correct the oversight, the County followed the Expedited Notice Procedures leading up to the adoption of the second set of supplemental findings and provided oportunities for commentors and objectors to review the first set of supplemental findings. As a result of compliance with OAR 660-03-033, the first set of supplemental findings (Order No. 84-6-19-16) along with the other revisions can be affirmed.

In response to IOTC (4), Lane County redesignated 870 acres to an appropriate resource desigation (ORD. No. 891). For the remaining areas, the County adopted the second set of supplemental findings (Order No. 84-9-11-23) to justify the areas as committed. These findings provide additional information on recent partitions and subdivision activities along with information on more recent development. This information was not provided in the earlier submittal because of outdated maps and ownership listings. Address maps showing location of dwellings, mobile homes and recent road development provide most of the information addressing the deficiencies noted earlier. In addition, specific findings provide reasons why it is impracticable to apply a resource goal to areas that are not built upon but are irrevocably committed to nonresource uses.

Conclusion

The requirement has been met.

Based on the information contained in the County's original exception document and supplemental findings (Order No. 84-6-19-16 and Order No. 84-9-11-23), the County has provided substantial evidence consistent with OAR 660-04-025 and OAR 660-04-028 to support the conclusion that all areas, for which the County has taken a Goal 2 exception are no longer available for resource use and are irrevocably committed in their entirety.

Requirement

5. Amend the plan to clearly identify areas zoned PR which are within built and committed exception areas. For those areas within an exception area, provide for information addressing OAR 660-04-025 requirements or exclude those lands from areas designated as a built and committed exception area.

Response

The plan was amended (Ord. No.889) to include a list of tax lots zoned PR that are within built and committed exception areas. This action satisfies the first part of the above requirement. Information addressing the exception criteria can be found in the County's original exception document (Ord. No. 884) and the two sets of supplemental findings (Order No. 84-6-19-16 and Order No. 84-8-11-23). The adequacy of these findings is discussed under Goal 2 requirement 4 of this report.

Conclusion

The requirement has been met.

Requirement

6. Amend the PR-RCP Zone to include standards for uses permitted outright (consistent with ORS 215.213(2)). Note: These should not include review of minor betterment activities as described in ODOT's State Agency Coordination Program.

Response

The PR-RCP Zone was amended (ORD. 9-84) to require that uses authorized under ORS 215.213(2)(G) be subject to Director approval consistent with ORS 215.213(2)(LC 16.215(3)). Minor betterments and general improvement of existing parks or recreational facilities are permitted outright (LC 16.215(2)(d)).

Conclusion

The requirement has been met.

Requirement

7. Amend the zoning code to exempt maintenance and improvments in Jennie B. Harris State Park and Squaw Creek State Wayside from conditional use procedures. This is most easily accomplished by zoning all of these parks to PR.

Response

The County plan and zoning maps were amended (Ord. No. 898) redesignating Jennie B. Harris State Park and Squaw Creek State Wayside as Park and Recreation (PR).

Conclusion

The requirement has been met.

Requirement

8. In conjunction with compliance requirements under Goal 11 of this report, the County must (1) clearly define uses, densities, unit quantity, and levels of service appropriate to rural "cluster" subdivisions, and (2) adopt appropriate ordinance amendments implementing these standards. Densities exceeding those appropriate for rural areas shall additionally require a Goal 14 exception.

Response

The County has amended the plan to contain a policy which insures that urban levels of development will not occur in rural areas under the Cluster Subdivision Standards. The policy contains language parallel to the Commission's administrative rule on establishing new urban uses in rural areas (OAR 660-14-040). Prior to approving a cluster subdivision, with more than 20 units and which includes any lots less than 5 acres, the County must make findings similar to those required for an exception under Goal 14. These amended requirements are as follows (Ordinance PA 889):

> "Cluster subdivisions shall be deemed appropriate to a rural area when the following criteria are satisfied:
> 1. Consistent with the intent and requirements of OAR 660-14-040(2) and (3), a showing must be made that the development will not represent an urban population or demand an urban level of facilities and services. For purposes of meeting this standard, affirmative findings must be made addressing the following:
> a. The level of development represented by the development cannot be reasonably accommodated through the expansion of an existing urban growth boundary or by intensification oif development at an existing rural center.
> b. The long-term environmental, economic, social and energy consequences resulting from the development, considering measures designed to mitigate negative impacts, are appropriate to the rural area. Factors to be considered include whether the size of the development is appropriate to the proposed rural area and whether the air, water, energy and land resources of the surrounding area are adequate to serve and not adversely affected by the development.
> c. The proposed development is compatible with or can be made compatible with adjacent uses considering:

(1) Whether the development detracts from the ability of existing cities and service districts to provide services, and
(2) Whether the potential for continued resource management of the land at present levels surrounding and nearby the development is assured.

d. An appropriate level of rural facilities and services are available or can be provided in a timely and efficient manner.
e. The approval of the development is coordinated with affected jurisdictions and is consistent with the comprehensive plans of the affected jurisdictions and the Lane County Rural Comprehensive Plan.

2. The development will not:
   a. Generate traffic which will exceed the carrying capacity, as defined by Lane Code Chapter 15, of adjacent public and private roads.
   b. necessitate a higher level of police service than presently provided to the surrounding area.
   c. Occur within one mile of an existing urban growth boundary and/or share any urban service provided within a neighboring urban growth boundary.
   d. On the whole require an urban level of service.
3. Reasonable assurances must be provided that the cluster shall not generate students in excess of the capacity of affected facilities within the appropriate school district.
4. The development represents a concentration of people who generally reside and work in the area.
5. Deed restrictions which ensure that commucnity water and sewer systems shall remain viable and under private ownership shall be required. Cluster subdivisions which propose to form or use a public water or sewer system shall not be allowed.
6. Cluster subdivsions shall be limited to residential use. No commercial or industrial uses will be allowed within existing or proposed cluster subdivisions.
7. All cluster subdiviions must be within an existing Rural Fire Protection District.
8. No other identifiablke substantial increase of a public service shall be necessitated by the approval of a cluster subdivision."

The cluster development standards also contain provisions to assure their application to a series of small cluster developments (i.e., less than 20 units and therefore, exempt from standards 1 through 8 above).

Conclusion

The requirement has been met.

The Lane County cluster development standards contain the same standards as OAR 660-014-040. These standards assure that urban development will not occur in rural areas except where OAR 660-14-040 criterion are met.

Requirement

9. Amend Lane Code Chapter 16 to correct inconsistencies in the cross-referencing system, where subsections are referred to within the same section of the ordinance.

Response

The County Rural Zoning Ordinance (Chapter 16) has been codified eliminating cross referencing from the older Zoning Ordinance (Chapter 10). As a result, all inconsistencies previously identified have been corrected.

Conclusion

The requirement has been met.

Requirement

10. Amend the plan (a) to include additional findings justifying the claim that Goals 3 and 4 do not apply to property known as Dillard Highland's 2nd Addition, or (b) justify an exception to Goals 3 and 4, or (c) rezone the subject property with a suitable resource zone. If the County chooses option (a) or (b), Goal 5 wildlife habitat issues must also be addressed.

Response

Lane County amended its nonresource findings for Dillard Highland's Second Addition to include additional findings supporting the claim that Goals 3 and 4 do not apply as well as information indicating that the Goal 5 wildlife habitat issue has been resolved. The contents of the County's supplementary findings includes the following information: (1) amended soils information, introduced by soil scientist Joel A Norgren, PHD, which concludes that (a) 99.5 acres (65 percent) of the 154-acre parcel consists of SCS agricultural capability classes VI, and (b) 85.5 acres (56 percent of the 154-acre parcel consist of soils with no woodland site class; and (2) findings indicating why it is impractical to apply Goals 3 and 4 to this property. Reasons supporting these findings include the following:

"a) The Dillard Highlands is located on the east side of Dillard Road and the south hills ridgeline approximately one-third of a mile southeast of the Eugene city limits and the urban growth boundary.

It is within an area of very poor soils as indicated by the Soil Conservation Service maps. It is surrounded by a sloping terrain and a 'Developed and committed' area to the west, a 'developed and committed' area and a major BPA powerline to the north, a 'developed and committed' 260 feet power line and natural gas easement to the east, and an approved 'Non-Resource' area to the south. Although man-created boiundaries, they make it impracticable to apply the resource goals to he subject property (Dillard Highland's 2nd Addition; Supplemental Findings, August 24, 1984, pp. 15, 16).

b) Dillard Highland's status as a significant wildlife habitat has already experienced significant impacts because of existing urban and rural residential development in the area. Areas with 'built and committed' exceptions and this level of existing conflict are defined as 'Impacted Big Game Range' by Lane County's Flora & Fauna working paper (March 1982). These are areas 'that have existing levels of land use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity...the subject property is already impacted as big game habtat..." (Dillard Highlands, 2nd Addition, Supplemental Findings, August 24, 1984, pp. 18-19).

Conclusion for Dillard Highland's Second Addition

The claim that Goals 3 and 4 do not apply to Dillard Highland's Second Addition is sustained.

Substantial evidence has been provided by the County indicating that the 154 acres of Dillard Highland's Second Addition is not composed of predominantly SCS Class I-IV agricultural soils or soils with a cubic foot site index capable of producing commercial forest species.

In addition, the County indicates that the property is considered "impacted" big game habitat because of surrounding development activities and that, issues regarding Goals 4 and 5's habitat requirements are therefore resolved.

The supplemental findings of August 24, 1984, when combined with the findings previously discussed in the Departments' July 19, 1984 (addressing the "other lands" tests contained in Goal 3's definition and the remaining aspects of Goal 4's definition) are adequate to support the position that Goals 3 and 4 do not apply.

Requirement

11. Amend the plan to justify the potential one dwelling unit per 5-acre density authorized for Cerro Gordo's 600 acres in view of ODFW's

accepted wildlife habitat density standard for cluster developments of one dwelling unit per 40 acres. (See also Goal 2's cluster development issue.)

Response

The County's policy is to abide by ODFW's density recommendations unless the entire Goal 5 process is applied and a decision to exceed these recommendations is justified. Lane County has adopted supplementary findings (Order No. 84-9-11-23) and has revised its ESEE consequences analysis and wildlife habitat management plan for Cerro Gordo to justify development in a recognized big game habitat area, in excess of ODFW's recommended density standards. A meeting was held on August 14, 1984, with ODFW, Cerro Gordo and DLCD representatives to discuss this issue. It was determined that, in this case, ODFW density recommendations do not have as much bearing on the acceptability of the development as do other factors. These factors include the overall number and location of dwellings and roads, as well as mitigating measures incorporated into the development. The following factors in the revised Cerro Gordo proposal are particularly relevant (Order No. 84-9-11-23):

1. There is an overall "cap" on the number of lots which could be developed (i.e., 60 lots).

2. No more than one-third of the residences will be located north of the BLM road (the habitat area considered more sensitive to human disturbances).

3. Wildlife corridors from 600 to 1800 feet in width shall be provided along streams.

4. Residential development will be confined to a band 2,400 feet in width along an existing BLM road.

5. Residences must be clustered.

6. Goal 2 cluster subdivision requirements shall apply (see the Goal 2 section of this report for details).

7. Cerro Gordo is either adjacent to or near large tracts of federal and private forest land.

8. Lane County will provide ODFW with the opportunity to review and comment on the preliminary subdivision application to assure mitigation measures are achieved through proper clustering.

9. Road development will be minimized and private roads within forested areas will be closed to vehicular use except for emergencies, maintenance, and forest management activities.

10. A Cerro Gordo Design Committee as well as the Cerro Gordo Cooperative itself shall review and monitor actions and changes in wildlife conditions on an ongoing basis.

11. Pets shall be limited.

Because of these and other factors addressed in the County's amended findings, the impacts on big game range are thought to be acceptable by ODFW. Allowing such conflicts to occur, but with restrictions outlined above, is a (3C) decision under the Goal 5 Administrative Rule. The County has justified this decision.

Conclusion

The requirement has been met.

Requirement

12. Remove the AO zoning from all privately owned parcels within the Mahlon Sweet Airport Exception Area consistent with Transportation Policy 11 and apply an appropriate resource zone to these lands.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Requirement

13. Amend the Committed Lands Exception to provide additional information addressing OAR 660-04-025 requirements or rezone TL 1600 in the Royal Avenue Exception area with the appropriate resource zone.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Requirement

14. Amend the zoning code to exempt maintenance and improvements in Armitage State Park from conditional use procedures. This is most easily accomplished by zoning all of this park to PR.

Response

This requirement pertains to the Eugene-Springfield Metro plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 2

Lane County complies with Goal 2 for the rural portions of the County, excluding the Metro Plan area.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 2.

GOAL 3: AGRICULTURAL LANDS

Requirement

1. Amend the EFU Zone to require disqualification from farm tax deferral of parcels prior to final building permit approval for nonfarm dwellings pursuant to ORS 197.236.

Response

Lane County's Development Code was amended (ORD. 9-84) to include a provisions requiring compliance with ORS 215.236 regarding the establishment of nonfarm dwellings in the EFU Zone (LC 16.215(4)(j)(IV)).

Conclusion

The requirement has been met.

Requirement

2. Adopt a plan policy requiring a plan amendment to the County Plan when designating land as Marginal Lands.

Response

The County plan was amended (ORD 889) to include the following plan policy (Goal 2, Policy 25):

> "Outside of designated 'Community' areas, all changes to Plan Diagram designations shall be evaluated through the County's Plan Amendment procedure (LC 16.400) and approval based upon fulfillment of criteria therein."

Conclusion

The requirement has been met.

Although this policy might imply that plan amendments are not necessary to change designations in community aras, in fact there is only one category--"community"--that can be applied to community areas. The policy should be clarified in the future to indicate that it is zoning within community areas that maybe changed without a plan amendment.

Requirement

3. Amend the plan to include adequate findings and reasons for applying the marginal lands zone to the Merz/603, Harrison, Peters, Hledik, G.E. Credit Corp., and KVAL properties and provide the required information to determine compliance with ORS 197.247. If the information provided shows that the land does not qualify as marginal land under ORS 197.247, plan and rezone the properties with appropriate resource designations and implementing zones.

Response

The County's plan was amended (Order No. 84-9-11-23) to include additional findings and reasons for applying marginal lands to the Merz/602, Harrison, Mathers and G.E. Credit Corp. properties. The County has also amended the plan and adopted an additional marginal land area known as the Moshofsky property (Order No. 84-19-11-22). The Peters, Hledix, and KVAL properties have been redesignated an appropriate resource designation (Ord. No. 898).

Information regarding the five marginal land areas is described below (Source: Order No. 84-9-11-22 and 84-9-11-23 (Moshofsky)):

Merz/603 - 70 acres

57.3 acres - SCS Class VIII (Dune Land)
12.7 acres - SCS Class III/Forest Site Class 3

Harrison - 45 acres

13.5 acres - SCS Class III
7. acres - SCS Class IV
49.5 acres - SCS Class VI
No woodland suitability

Mathers - 111 acres

4.7 acres - SCS Class III/Forest Site Class 3
13.7 acres - SCS Class IV/Forest Site Class 3
92.6 acres - SCS Class VI

G.E. CREdit - 20 acres

20 acres - SCS Class VI
No woodland suitability

Moshofsky - 68 acres

14.5 acres - SCS Class III
8.7 acres - SCS Class IV
42.6 acres - SCS Class VI
2.1 acres - SCS Class VII

MOSHOFSKY SOIL CALCULATIONS
AS PER F-2 WOODLAND SITE CLASS STANDARDS

Woodland Site Class	Acreage Needed Disqualification	Acreage Found Moshofsky	Percentage Of Standard
2	17	8.7	51.1%
3	24	0	0%
4	34	14.5	42.6%
5	43	2.1	4.8%
None		42.65	

Percentage Total = 98.5%

Conclusion

The requirement has been met.

The previous findings found lacking for these properties have now been corrected as is required under ORS 197.247.

Based on the evidence submitted, and along with the findings in the previous staff recommendations, the following areas qualify as marginal lands under ORS 197.247:

Mertz/603
Harrison
Mathers
G.E. Credit Corp
Moshofsky

Requirement

4. Amend the Plan Map and Zoning Map for the Cuddeback and Rodman properties to an appropriate resource designation and implementing zone.

Response

The Cuddeback and the Rodman properties have been redesignated Impacted Forest Lands (Ord. No. 898).

Conclusion

The requirement has been met.

Conclusion - Goal 3

Lane County complies with Goal 3.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 3.

GOAL 4: FOREST LANDS

Requirement

1. Amend the Forest Working Paper and addendum to:

   a. Provide justification for the F-1 Zone's 40 acre minimum.

   b. (1) include information on the pattern of contiguous ownerships (either map or statistical) in support of a decision to retain current F-2 zoning. Such information must show that the minimum lot size is representative of the ownership pattern of the area

and that the zone actually limits further opportunity for development; or (2) include information justifying an alternative approach consistent with Goal 4 taken to resolve issues raised regarding the F-2 Zone.

c. Amend the Forest Working Paper Appendix 1--Lane County Forest Soils--to include "all commercial forest soils" in a manner consistent with an appropriate definition of commercial forest lands.

Response

1. a. Lane County has adopted additional information supporting its decision for assigning a 40-acre minimum lot size in the F-1 Zone. Specifically, the County has included as findings, two letters from Carl Ehlen (Lane County Landowners Assoc. and Rex Timber Co.) regarding the viability of a 40-acre parcel to be commercially managed as a forest parcel and Exhibit "D" from Ordinance No. PA 889 which cites the following findings:

"1) In support of the proposed Comprehensive Plan developed in 1982 the Lane County Landowners Association provided written testimony that the minimum land division size of 40 acres in the F-1 Zone represented an acreage that could be an operationally and economically manageable unit within the industry. At that time, the F-1 Zone proposal allowed dwellings on parcels down to the minimum size. (See attached letter dated November 23, 1982)

2) The Addendum to the Forest Lands Working Paper dated November 1983, justifies the 40 acre minimum land division from the data which show a significant number of parcels and amount of acreage that represent that size class within the industrial forest land ownership.

The following excerpt is from Suggestion Policy XI. 1) of the Addendum to the Forest Lands Working Paper:

'92% of the Industrial forest land acreage that lies on parcels less than 80 acres in size occurs on parcel sizes between the range of 40 to 80 acres, with approximately 25% of that area occuring at the 40 acre parcel size category.'

'75% of the number of parcels in the Industrial owned forest land that lies on parcels less than 80 acres in size occurs on parcel sizes between the range of 40 to

80 acres, with approximately 28% of the number of parcels occuring within that range at the 40 acre parcel size category.'

3) The letter received June 21, 1984, from the Lane County Landowners Association reiterates their former position in support of the 40 acre minimum land division standard noting that under the current proposal the F-1 Zone excludes residences. (See copy attached.)

4) In addition, preliminary data from the computerized zoning file of the current F-1 proposal indicates that of the parcels zoned F-1 that are between 40 and 80 acres in size, 27% of the acreage occurs on parcels of the 40 acre size class which represents 39% of the number of parcels between 40 and 80 acres in size."

The County has indicated further that the County's decision establishing the 40-acre minimum lot size in the F-1 Zone is supported because:

"Commercial forest representatives in Lane County requested 40 acres as a minimum lot size in the F-1 Zone based upon 40 acres being a commonly acquired, managed and exchanged unit of commercial forest land in Lane County."

Because Lane County's F-1 Zone does not allow dwellings, the price of forest land will reflect forest land values instead of rural residential values and conflicts with forest management activities will be minimal. Thus, a small minimum lot size conducive to commercial forest management, such as the F-1's 40-acre minimum is appropriate.

b. Lane County has rezoned approximately 56,080 acres of land from F-2 to F-1 and EFU in accordance with requirement "1.b(1)." Lands for which the F-2 zone was retained generally exhibit one or more of the characteristics for impacted forest lands presented in the response to requirement "2a." In addition, the County's revised Goal 4 Policy 12 provision (discussed under Goal 4 Response 3 of this report) presents additional limitations on divisions of resource land by establishing a 80-acre minimum lot size for all forest parcels which are (1) 160 acres in size, (2) zoned F-2, and (3) adjacent to F-1 zoned lands.

c. Lane County has amended, through Ordinance No. PA 889 (p. 6), their definition of commercial forest land to be 50 cubic feet per acre per year. By adopting a single commercial forest lands definition in its forest lands working paper rather than relying

on inconsistent references to 20 cubic feet, 50 cubic feet or the list of forest soils contained in Appendix 1, a consistent standard for inventorying forest lands and evaluating nonresource lands is established.

Conclusion

Lane County satisfies this requirement.

Requirement

2. Amend the comprehensive plan to:

   a. Include a Forest Policy which establishes precise criteria for applying the F-1 and F-2 Zones. (At a minimum, criteria for applying the F-1 Zone must include ownerships of a size capable of being managed as commercial forest lands.)

   b. Amend the four characteristics discussed under the Goal 4 conclusion for policies to establish criteria which apply only to lands appropriately zoned F-2 as per the examples discussed under "application;" or

   c. Include a policy which requires a plan amendment to rezone lands from F-1 to F-2.

   d. Delete the following from Forest Policy 11(a) "if adjacent to other nonimpacted forest lands.

Response

2a. In response to the above requirement, Lane County revised the criteria for applying the Non-Inpacted (F-1) and Impacted (F-2) Zone designations to eliminate the specific "vague" criteria discussed in the June 29, 1984 review. The revised criteria can be used to more specifically determine the proper zone designation. Ordinance No. P. 899 (p. 5, Item 10) adds Goal 4, Policy 19 which reads as follows:

"Lands designated within the Rural Comprehensive Plan as forest land shall be zoned Non-Impacted Forest Lands (F-1, RCP) or Impacted Forest Lands (F-2, RCP). A decision to apply one of the above zones or both of the above zones in a split zone fashion shall be based upon:

'a. A conclusion that characteristics of the land correspond more closely to the characteristics of the other forest zone. The zoning characteristics referred to are specified below in subsections b and c. This conclusion shall be supported by a statement of reasons explaining why the facts support the conclusion.

'b. Non-impacted Forest Land Zone (F-1, RCP) Characteristics

'i. Predominantely ownerships not developed by residences or nonforest uses.
'ii. Predominantely contiguous ownerships of 80 acres or larger in size.
'iii. Predominantely ownerships contiguous, to other lands utilized for commercial forest or commercial farm uses.
'iv. Accessed by arterial roads or roads intended primarily under commercial forest management.

'c Impacted Forest Land Zone (F-1, RCP) Characteristics

'i. Predominantly ownerships developed by residences or nonforest uses.
'ii. Predominantely ownerships 80 acres or less in size.
'iii. Ownerships generally contiguous to tracts containing less than 80 acres and residences and/or adjacent to developed or committed areas for which an exception has been taken in the Rural Comprehensive Plan.
'iv. Provided with a level of public facilities and services, and roads, intended primarily for direct services to rural residences."

In addition, nonforest uses authorized under the F-1 Zone (LC 16.2104) can not be used as the basis for supporting a zone change from F-1 to F-2; the criteria established in LC 16.210(5) require as a condition of approval that findsigs be provided indicating such uses do not significantly impact forest uses. Thus, establishment of such nonforest uses in an F-1 Zone can not be the basis for a zone change to F-2 under the "impacted" criteria adopted by Lane County.

2b. or c.

Lane County revised its plan to delete the four vague characteristics used in applying the F-1 and F-2 zones. As indicated in the conclusion to "2a," the revised criteria successfully address the issue.

2d. On page 4 of Lane County Ordinance "No. PA 889, #8," the County states: "Goal No. 4, Policy No. 11a--delete if adjacent to other nonimpacted forest lands."

Conclusion

Lane County satisfies this requirement.

Requirement

3. Amend the County zoning map by rezoning private non-industrial ownerships capable of commercial forest management (including forested portions of commercial farm-forest operations) currently zoned F-2 with an appropriate resource zone. An acceptable forest zone is the F-1 Zone or forest zone containing a minimum lot size of

at least 80 acres as justified by the County's "Forest Working Paper Addendum."

Also, where the County can justify such a decision, the County may apply the marginal lands zone or rural residential zones to "committed" or nonresource lands.

Response

Lane County has rezoned 24,075 acres of land from F-2 to F-1 and rezoned 32,005 acres from F-2 to EFU. Generally, ownerships greater than 120 acres in size capable of being managed as a farm unit were rezoned to EFU. Ownerships of 160 acres or greater capable of being managed as commercial forest lands were rezoned to F-1. Some large ownerships were zoned with more than one zone depending on adjacent land uses and impacts. Also, the F-2 zone was retained on a few large ownerships, where soils information indicated that non-commercial forest soils predominate.

In order to reduce potential conflicts between authorized land uses in the F-2 Zone and commercial forest management activities occuring on F-1 lands, Lane County adopted a new version of Goal 4 Policy 12 (Ordinance No. PA 889, p. 4, Item 9) which contains the following provision:

> "(b) To substantially limit any adverse impacts upon commercial forest management which might result from land divisions and subsequent residential development (accessory and necessary to commercial forest management) a minimum area of 80 acres shall be required for the division of large forest tracts:
> '(i) zoned F-2
> '(ii) containing at least 160 acres
> '(iii) for the creation of lots or parcels adjacent to F-1, RCP zoned lands."

Conclusion

Lane County has satisfied this requirement.

The County has amended its zoning map, through the rezoning of some lands previously zoned F-2, in a manner consistent with this requirement. With the elimination of 56,080 acres from the F-2 Zone, the County's current application of the F-2 Zone is more representative of the ownership patterns within areas where non-commercial forest management and other non-resource activities occur.

Requirement

4. Amend LC 16.210(4)(i) of the F-1 Zone and LC 16.211(5)(ii) to require that "lodges" be evaluated against the "generally unsuitable test" in addition to the other review standards already applied to this specific use.

Response

Lane County through the adoption of Ordinance No. 9-84 amended LC 16.210(4)(i) and LC 16.211(5)(ii) to require under LC 16.210(4)(i) and LC 16.211(5)(r) that in addition to other review criteria, lodges will be required to locate on land generally unsuitable for forest uses in the F-1 and F-2 Zones or an exception to Goal 4 would be necessary.

The County also adopted Plan Policy No. 27 which requires an exception to resource Goals for transmission lines with right-of-way widths in excess of 50 feet (Ord. No. PA 889, p. 4). In addition, the County has limited farm equipment maintenance to that "incidental to a forest repair" (Ord. No. 9-84, p. 16-29).

Conclusion

Lane County satisfies this requirement.

Requirement

5. Amend the F-2 zoning provisions as follows:

   a. In 16.211(3)(b), adopt informational requirements for the "detailed forest management plan." At a minimum, such provisions must require sufficient information to establish adequate findings that a proposed "forest" dwelling is "necessary" and "incidental and subordinate to" the primary forest management activities described in the forest management plan.

   b. Include in LC 16.211(3)(b) a "floor" or minimum parcel size requiring parcels below 10 acres to be assessed against the nonforest dwelling or lot of record provisions.

   c. Amend 16.211(7)(b) to apply to all commercial forest grazing operations zoned F-2 the larger size (120 acres) for extensive animal grazing as required by LC 16.212(6)(d).

Response

5a. Lane County has amended LC 16.211(3)(b), through the adoption of Ordinance NO.9-84, to include specific requirements for preparing an acceptable forest management plan. Included within the revised LC 16.211(3)(b) is the following additional requirement:

"(iii) The forest management plan shall specify how the following practices, when applicable, are to be addressed: road and fire trail construction and maintenance, site preparation, reforestation, stand conversion, planting of nonstocked openings, competition reduction/release, precommercial thinning, harvest scheduling/rotation and special site treatments for topography and other concerns."

Because active forest management is required to retain forest land taxation rates and failure to implement the forest management plan is a violation of LC 15.211(3)(b). The combination of the above requirements for forest related dwellings in the F-2 Zone assures that active forest management must occur on forest lands in order to establish a forest related dwelling; thus, satisfying the accessory and necessary test. These requirements for approving a forest related dwellings in Lane County's F-2 Zone are similar to the provisions contained in Benton County's acknowledged secondary forest zone.

5b. Through the adoption of Ordinance No. 9-84, Lane County amended LC 16.211(3)(b) of the F-2 Zone to include a "10 acre" floor which will be used for assessing "forest" dwelling applications. Applications for dwellings on parcels zoned F-2 which are less than 10 acres will be reviewed as nonforest dwellings.

5c. Upon further review of LC 16.211(7)(c) regarding the F-2 zone's minimum lot size requirements for farm unit size requirements for commercial grazing operations, it was determined that this provision's 40-acre minimum "farm unit size" requirement is identical to the County's EFU Zone minimum farm unit size requirement. For specific uses, such as dwellings, LC 16.212(2)(f) of the EFU Zone must be satisfied before approval can be granted.

Conclusion

The County satisfies this requirement.

Conclusion - Goal 4

Lane County complies with Goal 4.

Lane County's approach to conserving forest lands contains some plan policy and ordinance provisions unique to Lane County. The strength of their forest lands conservation program is the F-1 Zone which prohibits the siting of all dwellings (other than those required to be authorized by state statutes). This zone is applied to 2,449,775 acres of Lane County's forest lands.

The County's F-2 Zone is applied to 145,356 acres of privately owned lands which consist generally of large lot rural residential parcels, nonproductive or marginally productive resource lands, or underutilized resource lands. Lands zoned F-2 are generally located adjacent to or near developed urban or rural areas and well travelled transportation routes; all of which have an impact on the commercial management of forest lands.

In the F-2 Zone, the County requires that before a permanent dwelling is sited on forest land, assurances are obtained that forest production on the lot will be enhanced by active forest management. The requirements associated with the siting of dwellings in the F-2 Zone are similar to those provisions approved by the Commission in Benton County's acknowledgment with recent changes to the County's forest policies and

ordinance provisions. The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 4.

GOAL 5: OPEN SPACES, SCENIC AND HISTORIC AREAS, AND NATURAL RESOURCES

Requirement

1. Mineral and Aggregate Resources: Apply the Goal 5 process to sites zoned SC which are not included on the County's (1C) inventory and, based on an analysis of the ESEE consequences of conflicting uses, either (1) add them to the (1C) inventory if justified, or (2) rezone the sites for other uses.

Response

In responding to this IOTC, Lane County discovered that not only were there sites zoned SG which were not on its (1C) inventory, but that there were other errors on its inventory. Therefore, the County revised its (1C) inventory as well as its (1B) inventory. Supplemental findings to Ord. No. PA 892 state:

> "The IOTC to correct the zoning citations was the stimulus for a complete review of sites listed in Appendix D vs. zoned sites. Several of those in the original Appendix D have been deleted--none of which carried SG or QM zoning. No "unzoning" will be necessary. Most of those deleted are also reflected in Appendix F of the Working Paper, which is the "pool" for later evaluation under the Goal 5 Rule "1B" option. Thus, any sites deleted in this effort are not lost from consideration, merely set aside for more detailed examination later on. All but one of the sites of Appendix D correspond with on-the-ground zoning of SG or QM."

The one site referred to in the last sentence of the previous quote (site #21) is an active site. The County completed all steps of the Goal 5 Administrative Rule for the site, and subsequently zoned it QM (Ord. No. PA 891). These findings are now part of the County's Mineral and Aggregate Resources Working Paper.

The County's three Mineral and Aggregate Resources inventories--Appendices D, E, and J--have been revised as follows: Appendix D has been reorganized to read more clearly, the Conflict Analysis (Appendix J) expanded to deal with new sites per the IOTC, and a third map (Appendix E) created to display the sites on new Appendix D. The original Appendix E--a listing of sites in the Metro Area--has been deleted since it was inconsistent with the list contained in the Metro Plan.

Conclusion

Requirement 1 has been met.

Requirement

2. Fish and Wildlife:

   a. Amend the Natural Resource Zone to include riparian setback and vegetation maintenance standards.

Response

Lane County has amended its Natural Resource Zone to include riparian setback and vegetation maintenance standards similar to those in other resource zones (Ord. No. 11-84).

Conclusion

Requirement 2a has been met.

Requirement

2. Fish and Wildlife Habitats:

   b. Amend the C-1, C-2, C-3, M-1, M-2, M-3, and RG zones to either (1) include riparian setback and vegetation and maintenance standards, or (2) incorporate by reference anothr section of the Lane Code which contains such standards.

Response

Lane County has amended the above zoning districts to include appropriate riparian setback and vegetation maintenance standards as required (Ord. No. 9-84).

Conclusion

Requirement 2b has been met.

Requirement

2. Fish and Wildlife Habitats:

   c. Apply riparian setback and vegetation maintenance requirements along lakes and Class II streams, or otherwise justify not providing such protection, based on an ESEE consequences analysis of conflicting uses.

Response

Lane County has responded to this IOTC by amending the Flora and Fauna Working Paper Addendum (p. 7) to include the following justification for not applying riparian setback and vegetation maintenance requirements to lakes or Class II streams (Ord. No. PA 892):

> "For purposes of this analysis, only Class I riparian lands are considered. Class II streams (using ODF standards) are not fish-bearing streams, according to Oregon Fish and Wildlife Department staff, and often dry up in the summer months. Additionally, they are located in remote areas in public ownership or limited to resource uses by resource zones. Many of them have not been inventoried, and location maps are not easily available. Most lakes outside of the coast are impoundments, such as Fern Ridge Reservoir, and have COE easements plus County PR zoning to protect their shorelines. The remaining natural lakes are protected by coastal overlays or are in High Cascade wilderness areas such as Waldo. The Oregon Fish & Wildlife Department, which worked closely with the County in devising a method of protecting Class I riparian lands, did not indicate a need to similarly protect Class II riparian lands. In the nomenclature of the Goal 5 Rule, the County determines the Class II streams are to be considered '1A' resources--not to be included on the Plan inventory."

Conclusion

Requirement 2c has been met.

Requirement

2. Fish and Wildlife Habitats:

   d. Amend the F-2 and EFU zones to carry out the intent of Flora and Fauna Policy II. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of these zones, or contain clustering requirements in those areas.

Response

Lane County has added the following new language to both the F-2 and EFU Zones:

> "(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of

proposed residences consistent with the purposes the F-2 [EFU] Zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

Conclusion

Requirement 2d has been met.

Requirement

2. Fish and Wildlife Habitats:

e. Amend the Flora and Fauna Working Paper to include location, quality and quantity information for sensitive bird habitat areas, including great blue heron rookeries, bald eagle and osprey nests, and pigeon mineral springs. Apply all applicable steps of the Goal 5 process to all known sensitive bird sites. Flora and Fauna Policy 15 must also be modified, consistent with these tasks.

Response

Lane County has adopted (Ord. No. PA 892) as part of its Flora and Fauna Working Paper, an inventory of known sensitive bird sites, including location, quality and quantity information. The County has identified conflicting uses and analyzed ESEE consequences. Based on this analysis, Lane County has decided to adopt a procedure for "flagging" areas in which such sites occur and requiring conflicting uses to be subject to conditional use approval. For all conflicting uses except timber management activities, the County has adopted "Sensitive Bird Habitat Protection Standards and Criteria" as part of the Lane Code (Ord. No. 11-84). Excerpts from that zone section are as follows (LC 16.005(4)(1)):

"(b) Development Plan Submittal. The person proposing the development shall submit plans to the

Department which sufficiently identify the location, nature and scope of the proposed use or activity.

(c) Referral. Upon receipt of the plan identified in LC 16.005(4)(b) above, the Department shall refer a copy of the plans to the Oregon Department of Fish and Wildlife (ODFW).

(d) ODFW Review. Upon receipt of the plans identified in LC 16.005(4)(b) above, the ODFW shall review the proposed use or activity and make a determination of whether or not the use or activity would affect a sensitive bird habitat. In making this review and determination, the ODFW shall consult with the affected landowner(s) and appropriate state agencies, and shall address the standards in LC 16.005(4)(d)(i) and (ii) below. The basis for the determination shall be stated in writing, completed within seven working days of receipt, and then submitted to the Department (Lane County).

(i) A sensitive bird habitat will be considered affected by a use or activity if the use or activity is located within 660 feet of an eagle or osprey site or within 300 feet of a heron rookery or pigeon mineral spring.

(ii) A sensitive bird habitat may also be considered affected by a use or activity if the use or activity is located a greater distance than specified in LC 16.005(4)(d)(i) above, considering unique conditions of topography to the individual habitats of the bird(s).

(e) No Affects Determined. If the ODFW determines that the senstive habitat area will not be affected, then the ODFW will give the Department written notice of its determination, and Lane County may proceed with authorization o the use or activity, or with the processing of any other required applications.

(f) Affects Determined and Protection Plan. If the ODFW determines that the sensitive habitat area will be affected, the ODFW shall work with the affected landowner(s) in the development of a site specific habitat protection plan. The plan shall consider the proposed use or activity and its interrelationship to and affects upon nesting trees, perch trees, critical nesting period roosting sites and/or buffers for wind, vision and noise. The plan must contain a statement of reasons, supported by facts, explaining why the sensitive bird habitat would not be adversely affected by the proposed use or activity. The plan shall then be submitted to the Department.

(g) Director Approval. The proposed uses or activities identified in the habitat protection plan shall be reviewed by the Director pursuant to LC 14.100 and shall be allowed if in conformance with the following approval criteria:

(i) The proposed use or activity would not adversely impact a sensitive wildlife habitat.

(ii) Conditions placed upon the approval of the habitat protection plan would avoid or eliminate any adverse impacts upon a sensitive wildlife habitat. Conditions may include setbacks, limitations upon the time period for the operation of the use or activity and/or prohibition of conflicting uses.

(h) LC 16.005(4)(a)-(g) do not apply to the protection of sensitive bird habitat from forest practices as regulated by the Forest Practices Act and as regulated by the COOPERATIVE AGREEMENT BETWEEN OREGON STATE BOARD OF FORESTRY AND OREGON STATE FISH AND WILDLIFE COMMISSION as adopted by Lane County in Rural Comprehensive Plan Goal 5 Flora and Fauna Policy 17."

The following new Policy 17 has been adopted to replace old Flora and Fauna Policy 15 (Ord. No. PA 892):

"The Cooperative Agreement between Oregon State Board of Forestry and Oregon State Fish and Wildlife Commission shall constitute Lane County's means of protecting sensitive bird habitat sites from conflicts which may result from forest practices as regulated by the Forest Pracices Act. Within two years of the date of acknowledgment of the Rural Comprehensive Plan, Lane County shall evaluate the effectiveness of the use of this agreement in providing actual protection to sensitive bird habitat sites, and if necessary, shall consider the adoption of more effective means of protecting sensitive bird habitat sites. This agreement is incorporated into the Lane County General Plan Policies as Flora and Fauna, Exhibit 'A'."

The following new Flora and Fauna policy has also been adopted (Ord. No. PA 892):

"18. Owners of property designated as a sensitive bird habitat and as identified in Lane Manual 11.400 shall be encouraged to develop a management plan in conjunction with the Oregon Department of Fish and Wildlife prior to beginning any development which may adversely affect the habitat. Such management plans shall consider nesting trees, perch trees, critical nesting period, roosting sites and buffer zones, and shall demonstrate how the proposed development will not adversely affect the sensitive bird habitat site. The policy shall not apply to forest practices covered by the above Flora and Fauna Policy 17."

Conclusion

Requirement 2e has been met.

Requirement

2. Fish and Wildlife Habitats:

f. Modify the definition of "wetlands" used in the Flora and Fauna Working Paper to be consistent with the definition contained in the Statewide Planning Goals.

Response

Lane County has replaced its definition of "wetland" with the following definition (Ord. No. PA 892):

> "For purposes of County management, wetlands should be defined as land areas where excess water is the dominant factor determining the nature of soil development and the types of plant and animal communities living at the soil surface. Wetland soils retain sufficient moisture to support aquatic or semi-aquatic plant life. In marine and estuarine areas, wetlands are bounded at the lower extreme by extreme low water; in freshwater areas, by a depth of six feet. The areas below wetlands are submerged lands."

This new definition is consistent with that contained in the Statewide Planning Goals.

The Working Paper has also been amended to contain the following explanation:

> "For purposes of County management, principal concern shall be given to wetlands of an acre or greater in size, to exclude small 'backyard' areas, unless the future County evaluation of the National Wetlands Inventory and/or information from ODFW indicate that specified wetlands smaller than one acre in size require the same level of protection as their larger counterparts."

Conclusion

Requirement 2f has been met.

Requirement

2. Fish and Wildlife Habitats:

g. Amend the Flora and Fauna Working Paper to identify the Goal 5 wetland area east of Highway 101 and south of Sutton Lake. Apply all applicable steps of the Goal 5 Rule to this site.

Response

The County examined this site ("Blueberry Acres") and documented its location, quality and quantity. Conflicting uses were identified, and an ESEE consequences analysis was performed by the County. Based on this analysis, the County determined that the wetland required additional protection. It, therefore, has applied its Natural Resource Zone to the site. The Addendum to the Flora and Fauna Working Paper has been amended to contain background information and findings regarding application of the Goal 5 process to "Blueberry Acres" (Ord. No. PA 892).

Conclusion

Requirement 2g has been met.

Requirement

2. Fish and Wildlife Habitats:

h. Amend the ML Zone to require compliance with the Goal 5 Administrative Rule in future applications of the zone. For those sites currently zoned ML, identify the Goal 5 resources present, identify conflicting uses and ESEE consequences, and develop a program to achieve the Goal, consistent with the Goal 5 Rule.

Response

Section 13.050(1) of the Lane Code requires conformity with the Comprehensive Plan (including all plan policies) when considering partition or subdivision plans.

Also, Policy 14 (Goal 3) has been amended so as to require compliance with Goal 5 policies 11 and 12 in the future application of the ML Zone. Policy 11 requires conformance to ODFW density recommendations, unless justified through a separate Goal 5 analysis. Policy 12 requires a Goal 5 analysis if conflicting uses are identified that were not contemplated in the Plan.

Findings have been added to the Flora and Fauna Working Paper Addendum (p. 14) which discuss application of current ML zoning in Goal 5 resource areas. Goal 5 conflicts with many of these sites are primarily with big game habitat. The County has analyzed the ESEE consequences of conflicting uses for these areas and has decided to apply the ML Zone in spite of the conflicts.

Conclusion

Requirement 2h has been met.

Requirement

3. Natural Areas: Amend the Flora and Fauna Working Paper to include inventory information on the Goal 5 Darlingtonia natural area east of the City of Florence. Apply all applicable steps of the Goal 5 Rule to this site.

Response

Supplementary Findings to Ordinance No. PA 892 adopted by Lane County provide the following explanation:

> "This site is shown on the Coastal Resources Inventory maps as being located east of North Fork Road, near the Chief Drew historical site. It was field-checked by County and ODFW staff. Neigher effort could locate Darlingtonia, although a small bog existed in the approximate area of the site. A larger bog to the north (within the Florence UGB) may be the one referred to in the Inventory, but has been partially filled by structures and is not within the concern of the Rural Comprehensive Plan--the Florence plan having been acknowledged in 1983. It too was found to contain no Darlingtonia.
>
> Thus, it appears that no rezoning action will be necessary to preserve the reported bog."

Page 27 of the Flora and Fauna Working Paper has been amended to include the following new paragraph:

> "1A Category
>
> One site--identified on the Coastal Resources Inventory as a significant natural area--has been placed in the '1A' category because it was either erroneously identified in the Inventory or because conditions have changed since the Inventory was done which have destroyed the feature that first caused its inclusion. This area is noted as "unique Darlingtonia habitat" east of North Fork Road in 18-12-24. Because DLCD raised the issue of preservation of this resource under Goal 5 Rule requirements, field checks were conducted by both County staff and staff of the Oregon Fish & Wildlife Department. Neither effort could locate any Darlingtonia. A bog north of the one shown on the inventory map (excerpt attached) may have been the one referred to, but that particular bog has been partially filled and is also located within the UGB of Florence

which has an acknowledged Plan. Even assuming the Plan should be changed, that northern bog (at the intersection of Munsel Lake and North Fork Roads) is not significant enough Darlingtonia area to merit further action by the City/County. In sum, the area should be deleted from the Plan inventory as a '1A' site, with no further action required on it."

Conclusion

Requirement 3 has been met.

Requirement

4. Scenic Views and Sites: Inventory known scenic views and sites and apply all applicable steps of the Goal 5 Administrative Rule to those sites.

Response

Lane County has adopted an Addendum to its Recreational Resources Working Paper (Ord. No. PA 892) which contains an inventory of scenic resources in the County, including the coastal strip, the Willamette River Greenway, Coburg Ridge, McKenzie River Valley, Willamette Highway/Salt Creek Valley Corridor, and ODOT-identified scenic areas. Each is described and location, quality and quantity documented. Each is evaluated in terms of conflicting uses and ESEE consequences. Based on these analyses, the County has determined that existing coastal zoning is sufficient protection for the coastal zone, and that the County Greenway Plan and Permit process should be the implementing measure in the Willamette Greenway. No conflicts were identified with ODOT scenic areas. Coburg Ridge is essentially undeveloped and partly in BLM ownership or in ranchland. Slopes exceed 100 percent in many places. Therefore, conflicts appear to be limited primarily to forestry activities, which are regulated by the FPA. Most of the McKenzie Valley and the Willamette Highway/Salt Creek Corridor is within the Willamette National Forest.

Conclusion

Requirement 4 has been met.

Requirement

5. Historic Sites:

a. Amend the zoning maps to show that the Historic Structures of Sites Combining Zone has been applied to all (1C) sites identified in the Working Paper, and amend the Zoning Code to make it clear that the combining zone applies to all (1C) sites.

Response

The County has ensured that all (1C) sites appear on zoning maps with the "/H" symbol, except for 20 covered bridge sites (Supplementary Findings to Ord. No. PA 892). The County indicates that these are not on maps because they are bridges and are not keyed to tax lot citations. This prevents the digitized Plan Diagram maps from properly displaying them. However, all are publicly-owned, and are covered by the /H Combining Zone (Ord. No. 892).

Lane County has added a definition of "Historic Structure or Site" to the definition section of its ordinance. This definition specifically includes property which had been identified by Lane County in its adopted Rural Comprehensive Plan findings as historically significant. (This list includes the 20 covered bridges as well as all other (1C) sites.)

Conclusion

Requirement 5a has been met.

Requirement

5. Historic Sites:

   b. Justify deletion of sites 32, 39, and 42 from the inventory of historic sites, and amend the Historic Sites Working Paper to reflect these deletions; or apply the Historic Sites Combining Zone to those sites.

Response

Lane County has deleted sites 34 and 57 as well as sites 32, 39 and 42 from its historic sites inventory, and has amended the Addendum to its Historical Resources Working Paper as follows:

> "From the above list, five sites have been deleted by County action: sites 32, 34, 49, 42 & 57. Sites 34 and 57 are not within the purview of the Rural Comprehensive Plan and thus are the responsibility of other planning efforts. Site 32 (Keeney House) is no longer considered historically significant because the structure has been relocated on its site and has been remodeled both inside and outside. Site 39 (Paschelke House) is incorrectly represented in the State Inventory and has been extensively remodeled. Site 42 (Fall Creek Christian Church) has been remodeled several times from its original use as a school building, and is being expanded. These sites should be exempted from the Historical Combining District which is being applied to the other sites on the above list."

Conclusion

Requirement 5b has been met.

Requirement

6. Oregon Recreation Trails:

a. Amend the Recreational Resources Working Paper to provide more detailed locational information (text or maps) for all the existing trails and trail segments.

Response

Lane County has amended the Recreational Resources Working Paper (p. 15) by inserting a new paragraph indicating that ODOT has supplied the County with detailed maps of trail segments. Such information is included as Appendix A to the Working Paper (Ord. No. PA 892).

Conclusion

Requirement 6a has been met.

Requirement

6. Oregon Recreation Trails:

b. Adopt policies to:

(1) Cooperate with ODOT in the protection of existing trails; and

(2) Coordinate with ODOT in applying the Goal 5 Rule during any future identification, or establishment of proposed trail segments.

Response

Goal 5 (Policy 4) has been replaced with the following new policy (Ord. No. PA 892):

"The County shall recognize and acknowledge existing and potential recreational trails designated by the Oregon Parks Outdoor Recreation Plan, shall cooperate with the Oregon Department of Transportation in the identification of specific routes for potential trails, and in the completion of applicable steps of OAR 660-160-000/025. Existing developed trails shall be displayed on the County's planning documents."

Conclusion

Requirement 6b has been met.

Requirement

7. Scenic Rivers and Waterways:

a. Amend the Recreational Resources Working Paper to recognize that:

(1) Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir are within the designated State Scenic Waterway system; and

(2) The portions of the Alsea River, and Steamboat Creek that are on the federal potential list are also on the state list of potential scenic waterways.

Response

The County has adopted an Addendum to its Recreational Resources Working Paper (Ord. No. PA 892). This addendum recognizes Waldo Lake and the North Fork of the Middle Fork of the Willamette River to about one mile upstream from Westfir as within the State Scenic Waterway system (p. 8). It also recognizes portions of the Alsea River and Steamboat Creek that are on the federal and state potential lists (p. 9).

Conclusion

Requirement 7a has been met.

Requirement

7. Scenic Rivers and Waterways:

b. Amend Open Space and Scenic Areas Policy 5 (p. 17) to also indicate that the County will coordinate with appropriate state and federal agencies in applying all applicable steps of the Goal 5 Administrative Rule in studying rivers for possible designation and in actually selecting wild and scenic rivers for designation.

Response

Policy 5 has been replaced with the following policy language:

"The County shall cooperate with appropriate state and federal agencies in the selection of wild and scenic rivers, and will cooperate with these agencies in the completion of applicable steps of OAR 660-16-00/025 in making such selections" (Ord. No. PA 892).

Conclusion

Requirement 7b has been met.

Requirement

8. Adopt implementing measures to resolve conflicting uses for the area known as Russel Creek Basin, based on the ESEE consequences analysis and conflicting-resolution recommendations contained in the Metro Plan Update Working Paper.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Conclusion - Goal 5

Lane County complies with Goal 5.

GOAL 7: AREAS SUBJECT TO NATURAL DISASTERS AND HAZARDS

Requirement

1. Amend the Development Code to require review of any proposed development within known geologic hazard areas.

Response

Lane County Development Code was amended (ORD. 9-84) to include the following provision (LC 16.005):

> "(2) Grading, Excavation and Clearing. Grading and clearing by mechanical equipment for either road and/or development purposes may be restricted or regulated by the Approval Authority either at the time of approval of a development permit or of an application if there is a finding that such grading or clearing presents a real threat of pollution, contamination, silting of water bodies or water supplies, erosion and slide damage, or alteration of natural drainage patterns in the area. In all cases, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose."

Conclusion

The requirement has been met.

The County Development Code has been amended to require a review of any proposed development that is found to present a threat to life and property.

Requirement

2. Adopt standards which will be applied to development in known geologic hazardous areas.

Response

Lane County Development Code was amended (Ord. 9-84) to include the following standards pursuant to LC 16.005(2) cited previously under Goal 7, Requirement 1 (LC 16.005):

> "(3) Conditions. The following conditions may be imposed at the time of approval of a development for which a permit or application is required and for which a finding has been made as required in LC 16.005(2) above in order to ensure site and area stability:
>
> (a) Maintain vegetation and eliminate widespread destruction of vegetation.
>
> (b) Carefully design new roads and buildings with respect to:
>
> (i) Placement of roads and structures on the surface topography.
>
> (ii) Surface drainage on and around the site.
>
> (iii) Drainage from buildings and road surfaces.
>
> (iv) Placement of septic tank disposal fields.
>
> (c) Careful construction of roads and buildings:
>
> (i) Avoid cutting toeslopes of slump blocks.
>
> (ii) Careful grading around the site, especially avoiding oversteepened cut banks.

(iii) Revegetating distubed areas as soon as possible.

(d) Certification by a geologist or engineer that the above conditions have been complied with and/or that a hazard does not exist."

Conclusion

The requirement has been met.

Lane County has adopted appropriate standards which will be applied to development in geologic hazard areas.

Conclusion - Goal 7

Lane County complies with Goal 7.

The findings contained in this supplemental report and those contained in the Department's June 29, 1984 review support the decision that Lane County complies with Goal 7.

GOAL 11: PUBLIC FACILITIES AND SERVICES

Requirement

1. Adopt a plan policy which specifies the appropriate levels of service for rural areas, including unincorporated minor development centers and rural service centers. Note: This IOTC can be satisfied by adopting a policy identifying land classifications and service levels similar to those contained in the Public Facilities and Service Working Paper--Appendix B. If Appendix B is used, the classification titles must be amended to correspond with "current" classification titles (Example: Forest Lands I is now called Non-Impacted).

Response

Through the adoption of Ordinance No. PA 889 (Item 13), Lane County deleted Goal 11 Policies 1 and 2 and replaced them with the following:

"Lane County shall provide an orderly and efficient arrangement for the provision of public facilities, services and utilities. Designation of land into any given use category, either initially or by subsequent plan amendment, shall be consistent with the minimum level of services established for that category."

The County also adopted Policy No. 6 which references descriptions of their plan designations and service levels which are as follows:

Forest Land

Nonimpacted (F-1):

"Service Level: No minimum level of services is established for this category as it is intended primarily for resource management and not for habitation."

Impacted (F-2):

"Service Level: No minimum level of services is established. The category is intended primarily for resource management and although some degree of habitation will occur space population patterns are expected."

Agricultural Land

Exclusive Farm Use:

"Service Level: No minimum level of services is established. The category is intended primarily for resource management and although some degree of habitation will occur, sparce population patterns are expected."

Natural Resource

Mineral:

"Service Level: No minimum level of services is established. Category is intended for resource management and not habitation."

Rural Residential:

"Service Level: Schools, on-site sewage disposal, individual water supply systems, electrical service, telephone service, rural level fire and police protection, reasonable access to solid waste disposal facility."

Community:

"Service Level: Schools, on-site or community sewage disposal, individual or community water supply, electrical service, telephone service, rural level of fire and police protection, reasonable access to solid waste disposal facility."

Rural Commercial:

"Service Level: The same as required for Rural Residential (outside Community Designations)" (Ord. No. PA 892, Goal 11, Appendix 4).

Industrial (outside community designation):

"Service Level: The same as required for Rural Residential (outside Community Designations)" (Ord. No. PA 892, Goal 11, Appendix 4).

Park or Recreation:

"Service Level: No minimum level of services is established for Park or Recreation areas outside committed areas. Service level for Park or Recreation areas inside committed areas shall be consistent with that level required for the Community or committed area outside of a Community."

Marginal Lands:

"Service Level: Consistent with service levels for Rural Residential outside a Community designation."

Nonresource:

"Service Level: Consistent with service levels for Rural Residential outside a Community designation. The service level for cluster subdivisions of nonresource shall be consistent with Goal 2 policy 24."

Conclusion

Lane County satisfies this requirement.

Requirement

2. a. By policy or zoning provisions, limit development (in a manner consistent with Goal 11 (and the County's decisions regarding rural sewage systems) within unincorporated rural communities with known or suspected sewerage problem (Chesire, Elmira, Heceta, Goshen, Mapleton, Marcola and Vaughn); or

   b. Provide additional information which justifies in a manner consistent with the discussion under Goal 11, the county's decisions regarding development in rural communities with known or suspected sewerage problems.

Response

With the adoption of Ordinance 9-84, Lane County amended Chapter 16.004(5) of their Development Code to address IOTC 2a by including the following:

> "Prior to the zoning or rezoning of land under this Chapter, for lands situated within the designated community areas listed below, an affirmative conclusion stating the reasoning and facts relied upon, must be made that densities allowed by the proposed rezoning are low enough to provide reasonable assurance that any existing sewage problems will not be further aggrevated by development of the subject property:
>
> (a) Cheshire
> (b) Elmira
> (c) Goshen
> (d) Heceta
> (e) Mapleton
> (f) Marcola
> (g) Vaughn"

In addition, LC 13.050(12)(b), which established the County's requirements for obtaining individual sewage disposal systems, requires "reasonable proof that each prosposed parcel or lot can accommodate an individual sewage disposal system and at least one acceptable replacement area which meets the criteria established by OAR Chs.340-71-005 to 45." The above requirement provides adequate assurance that additional development in the seven referenced communities with existing or potential sewage problems will not aggrevate the sewerage situation.

Conclusion

Lane County satisfies this requirement.

Requirement

3. Amend Sections 13.050(12) and 13.050(13) to indicate that the establishment of rural sewage or water systems must be consistent with the appropriate of levels of service policies required by Goal 11, IOTC 1.

Response

Ordinance 10-84 amends Chapter 13.010(12) and (13) of Lane County's Development Code to require that the establishment of rural sewerage facilities and water systems shall be consistent with RCP Goal 2 Policy 24 and RCP Goal 11 Policies, including level of service definitions. Lane County also indicates the following:

> "With this ordinance, Land County has amended Sections 13.050(12) and (13) to provide that the

establishment of rural sewerage and water facilities must be consistent with RCP Goal 2 Policy #24, provision of services to cluster subdivisions in the rural area, and RCP Goal 11 policies. By requiring consistency between the proviion of services in the rural areas and the above-mentioned policies, Lane County is ensuring the 'timely, orderly and efficient provision of services' to new development approved within the rural areas. Sections 13.050(12) and 13.050(13) now require community sewer or community water systems be established only in a manner consistent with public facility and service policies (including appropriate levels of service for rural areas)" (Ordinance 10-84, Exhibit A, p. 2).

Conclusion

Lane County satisfies this requirement.

Conclusion - Goal 11

Lane County complies with Goal 11. Lane County's Public Facilities Working Paper, Goal 11 Plan Policies and Development Code requirements as well as specific amendments which include: (1) level of service definitions for each plan designation, (2) a requirement to examine proposed zone changes in suspected rural "sewerage" problem areas to insure that any existing problems will not be aggrevated through an intensification of density, and (3) policy and ordinance requirments that rural development consistent with the specified rural level of service definitions, all contribute to the orderly provision of public facilities and services in rural Lane County.

GOAL 15: WILLAMETTE RIVER GREENWAY

Requirement

1. Amend zoning maps 304, 304A, 305, 330, 332, 347, 396, 411, 417, 418, 425, 437, 440, 448, 471, 528, 1005, 1006, 1008, 1010, 1011, 1012, and 1013 to display the correct LCDC-approved Greenway Boundary.

Response

The County has amended the zoning maps listed above that apply to areas outside the Eugene/Springfield Metro Area so as to display the correct LCDC-approved Greenway Boundary. Changes to maps 347, 396, 411, 437, 528, 1005, 1006, 1008 and 1012 will be corrected in conjunction with the Eugene/Springfield Metro Area continuance.

Conclusion

The requirement has been met.

Requirement

2. Amend the Greenway ordinance to clearly require protection of significant fish and wildlife habitats, agricultural lands, and identified scenic qualities and viewpoints, per Sections C.3.d., a., and c. of the Goal.

Response

Lane County has eliminated the term "guidelines" from the Greenway Development Permit Approval section of its Greenway Ordinance (Section 16.254(4)) and has added the following as criteria for permit approval:

> "(i) Preservation and maintenance of land inventoried as 'agriculture' in the adopted Willamette River Greenway Plan for farm use and minimize interference with the long-term capacity of lands for farm use.
>
> (ii) Protection, conservation or preservation of significant scenic areas, viewpoints and vistas...
>
> (xiv) Protection of significant fish, wildlife habitat and natural areas."

A decision to approve a Greenway Development Permit must require findings that the proposed intensification, change of use or development conforms to these (as well as other) criteria, according to Section 16.254(4) of the Greenway Ordinance.

Conclusion

The requirement has been met.

Requirement

3. Amend Section 16.254(2)(k) of the Greenway Ordinance to eliminate all language following the phrase, "or personal noncommercial use."

Response

Section 16.254(2)(k) of the Greenway Ordinance has been amended to eliminate all language following the phrase, "or personal noncommercial use." This was done so that only the propagation or cutting of timber for public safety or personal noncommercial use is exempt from local Greenway Permit review, consistent with Goal 15.

Conclusion

The requirement has been met.

Requirement

4. Amend Section 16.254(c) of the Lane Code to ensure that only water-dependent and water-related uses themselves are exempt from the 100-foot Greenway setback requirement.

Response

Section 16.254(b) has been amended (Ord. No. 11-84) so as to eliminate the phrase "those in conjunction with." Therefore, the Code exempts only water-dependent and water-related uses themselves from the Greenway setback requirement.

Conclusion

The requirement has been met.

Requirement

5. Amend Section 16.254(6) of the Lane Code to require notification of ODOT of actions taken on applications for intensification, change of use or development in the Willamette Greenway.

Response

Section 16.254(6) of the Code has been amended to require notification of ODOT of actions taken on applications for a Greenway Permit, as required.

Conclusion

The requirement has been met.

Requirement

6. Amend Section 16.254(2)(a) of the Greenway Ordinance to require either:

   a. Greenway permits in areas designated "urban" beyond 150 feet of the ordinary low water line, or

   b. Some other mechanism which ensures protection of Greenway values in these areas.

(Note: This could also be accomplished by LCDC amendment of the ODOT Greenway Plan by changing the designation of the area south of the Cottage Grove UGB from "urban" to "rural.")

Response

Section 16.254(2)(a) has been deleted from the Greenway Ordinance. This has the effect of requiring Greenway permits in areas designated "urban" beyond the 150-foot line.

Conclusion

The requirement has been met.

Requirement

7. Adopt implementing measures that protect the Pudding Creek Heronry.

Response

This requirement pertains to the Eugene/Springfield Metro Plan, which has been segmented and continued until October 11, 1984.

Requirement

8. Either adopt findings which explain how the current zone designations for Big Island protect the Confluence Heronry, or adopt other implementing measures that protect the Confluence Heronry.

Response

This requirement pertains to the Eugene/Springfield Metro Plan which has been segmented and continued until October 11, 1984.

Requirement

9. Modify Mineral and Aggregate Resources Policy 11 to also reference Section C.3.d. of Goal 15 to ensure protection and significant fish and wildlife habitats in the Willamette Greenway.

Response

Lane County has amended Mineral and Aggregate Policy 11 to also reference Section C.3.d. of Goal 15 (Ord. No. PA 892).

Conclusion

This requirement has been met.

Conclusion - Goal 15

Lane County complies with Goal 15.

The findings contained in this supplemental report and those contained in the Department's July 19, 1984 review support the decision that Lane County complies with Goal 15.

VICTOR ATIYEH
GOVERNOR

Department of Fish and Wildlife
506 S.W. MILL STREET, P.O. BOX 3503, PORTLAND, OREGON 97208

NOV 3 1983
SANITATION DIVISION
LANE COUNTY

November 1, 1983

Mr. Mike Copely
Lane County Planning Department
Public Service Building
125 East 8th Street
Eugene, OR 97410

Dear Mike:

I have completed my review of forest land materials, discussions with Claire Puchy and review of the NR zone. My comments follow.

Forest Land Designation Criteria/Report on Land Size Question

Overall, these reports are very good. Indirectly, they consider fish and wildlife values by recognizing such are included in Goal 4's definition of forest uses. On this point however, we request that maintenance and protection of fish and wildlife resources be stated explicitly as a purpose of any forest zone.

The basic distinction being made by the County, at this time, between non-impacted and impacted forest lands divided at 80 acres. The County's purpose for this seems clear. We are, however, concerned about possible confusion. We also refer to impacted game range (e.g., where management opportunities are already lost).

Forest lands above 80 acres, if planned and zoned for 80-acre minimums, would be consistent with our game range policies. An appropriate minimum for your impacted forest lands, as you state, still is to be determined. This is the area where we see potential problems developing. First, it is not clear now whether such lands are in major or peripheral range or both. The amount of conflict would vary depending on the range type based on our policies for overall densities. It is not known what, if any, further analysis you are considering for private non-industrial lands to find a parcel size. From the table and graphs on pages 8 and 9 of the land size report, it appears that breaks exist around 20 acres. Possibly, doing a frequency distribution just for private non-industrial lands might reveal a logical cutoff point; particularly, if you do so in conjunction with separating or modifying some of the impacted lands designation criteria. In any event, when we begin reviewing game range maps with your parcel plots we will be employing our overall density standards and looking at lot sizes and geographic distribution. It would be desirable to have reviewed your proposed ordinances by this time so we can discuss density standards more directly.

Application of Goal 5 to Inventory - Levels of Specificality

As we discussed over the phone on October 25, 1983, I had met with Claire Puchy of DLCD on October 13, 1983. Claire indicated that in May and August of this year she had met with Jim Mann and Gary Darnielle to review the February memo to Greg Winterowd. Apparently, the clarifications offered at those meetings may have not all been communicated. In any event, I believe some of the specific issues we discussed are now more clear. Here is what I found out.

1. For streams and wetlands the level of detail in the example of sensitive fish and waterfowl habitat would be acceptable. What is needed is a map of the streams and wetlands and a brief text description (note: the example is attached - although I am not sure where it comes from).

   I also understand from reviewing my May 6, 1983 letter to Jim Mann that the streams may already be mapped. We may have to develop a map on wetlands if the National Wetlands Inventory is not completed for Lane County. A map is needed because of difficulties in textually describing them. Such a map would plot significant known wetlands. Others could be described generically. In any event, the bottom line is use of existing information. Therefore, an update requirement may be needed when the national inventory is completed.

2. On riparian areas a justification is needed specifically addressing the impact area of development alterations. For instance, the description of the resource, its values, conflicts, etc., may be generic, but the impact area must be specific 50 feet, 100 feet, etc. The reason for this is a relationship must exist between the impact and the area regulated.

3. Resource Inventory Generic Identification/Level of Detail

   Goal 5 recognizes some resources are site specific and others are not. Fish and wildlife resources may be in both categories or different aspects of the ESEE analysis may need to be addressed site specifically or generically. Generally, Claire indicated that LCDC has ruled that the more similar the sites, conficts and consequences the more a generic approach can be used. The attached was provided to me by Claire. It comes from LCDC review of Hood River County and provides added guidance.

4. I neglected to discuss with Claire your question on mapping of the twelve general habitat types. After reading this section of the Flora and Fauna Report I do not believe it would be useful to map them. Rather, I think the focus should be on identifiable resources - some of which are included in the twelve and which are addressed as Habitats of Particular Concern. The list I would focus on in terms of ESEE analysis is riparian

vegetation, non-coastal wetlands (since coastal wetlands are done) and streams, sensitive fish and waterfowl, big game range and significant bird sites (e.g., herons, eagles, etc.). I believe all of these are discrete enough to discuss generically or specifically.

Natural Resource Zone

Attached are copies of our initial comments on this zone. In addition, we also commented on it in our May 6, 1983 letter to Jim Mann. You might want to consider these comments and we can discuss it further. I believe the County faces a basic issue in dealing with resources in general. That is, you can have a special code applied as an overlay addressing all fish and wildlife resources or address them specifically in other zones. I guess you could employ a combination as well.

Mike, after looking all this over and reviewing the Flora/Fauna Report, I think it would be a good idea if we met again soon and invited Claire Puchy to assist. In this way, if any confusion remains or questions need to be answered, we can do so before your work proceeds too far. Please contact me to set up a meeting if this is desirable.

Sincerely,

Neal Coenen
Staff Biologist

Puchy - DLCD

through tax exemption. Lane County should promote protection of these lands by encouraging land owners to take part in the program.

IB Sites

Besides the identified significant riparian and wetlands areas, many sites exist which cannot presently be identified with adequate information. The attached list of sensitive fish and waterfowl habitat identified by ODFW ~~and those wetlands located on the National Wetland Inventory are recognized as~~ significant resources. The Goal 5 process will be applied to these resource sites when the adequate data becomes available. Until this time, they shall be reviewed and recognized for their significance.

following Maps

Is this sufficient for F&F input?

SENSITIVE FISH AND WATER FOWL HABITAT

MIDDLE FORK WILLAMETTE BASIN

Middle Fork Willamette	Dexter Reservoir to Confluence of Coast and Middle Forks Hills Creek Reservoir to Lookout Point Reservoir Staley Creek to Hills Creek
North Fork of Middle Fork Willamette	East Boundary of 19-65-26 to Middle Fork Willamette
Salmon Creek	Black Creek to Middle Fork Willamette
Salt Creek	East Boundary of 22-55-21 to Middle Fork Willamette
Hills Creek	Warfield Creek to Hills Creek Reservoir
Fall Creek	Fall Creek to Middle Fork Willamette Gold Creek to Fall Creek Reservoir
Little Fall Creek	West Boundary of 18-25-07 to Fall Creek
Winberry Creek	South Fork Winberry Creek to Fall Creek Reservoir

COAST FORK WILLAMETTE BASIN

Coast Fork Willamette	Cottage Grove Reservoir to Confluence of Coast and Middle Fork Willamette
Big River	East Boundary of 23-25-17 to Cottage Grove Reservoir

Row River	Dorena Reservoir to Coast Fork Willamette Layng Creek to Dorena Reservoir
Layng Creek	South Boundary of 21-15-24 to Row River
Brice Creek	South Boundary of 22-25-29 to Row River
Sharps Creek	Clark Creek to Row River

Sutton Creek	Sutton Lake to Pacific Ocean Exclusive of CRMP MU's Mercer Lake to Sutton Lake Exclusive of CRMP MU's

4. OBPC: "Contrary to the staff response on page 24, there is no discussion in the Columbia Gorge Planning Unit text of the conflict between Bohemia's timber management improvement plans and the selective cutting requirements of the SP Zone."

   Department: The staff report on Hood River County does not say that the County's CG Plan addressed conflicts "between Bohemia's timber mangement improvement plans and the selective cutting requirements of the SP Zone." Rather, it states (on page 24), "The County has identified conflicting uses in the CG Unit, including 'intensive forest harvesting.'"

   The Department does not find that OAR 660-16-000 on Goal 5 requires the County to address conflicts on a parcel-by-parcel basis, unless, of course, the resource site comprises only one or a few parcels. The resource site in this case has an area of 18,900 acres and is divided into many parcels. The County has identified "the uses allowed in broad zoning districts," to use the language of Section 2, OAR 660-16-000. Section 2 of that rule does not require the County to reiterate the conflicts that would occur on each and every parcel in the CG Unit if such conflicts are generally similar. The County identified clearcutting and "intensive forest harvesting" as conflicting uses in the entire CG Unit, including the Bohemia parcels.

5. OBPC: "Contrary to the staff response on page 24, there is no analysis of ESEE consequences of prohibiting clear-cuts on the Bohemia property. The economic consequences of prohibiting forest management operations to Bohemia, Inc., as well as to the County, for sites not visible from Interstate 80 are not documented in the Plan."

   Department: The staff report does not say that there is an "analysis of ESEE consequences of prohibiting clear-cuts on the Bohemia property." Rather, it states that the County "...has evaluated the ESEE consequences of the conflict between protection of the scenic resource and farming, forestry, and development." That evaluation is shown on Attachment "B" to this memorandum. As is discussed above, the County is not obligated to conduct a separate evaluation for each parcel in the CG Unit.

6. OBPC: "The County has not detailed the specifics of how the SP Zone program provisions will be administered and enforced. The Staff Report does not direct Hood River County to comply with this Administrative Rule requirement."

   Department: The administration of Hood River County's Zoning Ordinance is set forth in Articles 1, 4, 60, and 61 of that ordinance. Enforcement is discussed in Article 70. It is unclear to the Department what administrative-rule requirement OBPC refers to.

7. OBPC: The City Westside Plan "allows 'small clear-cuts of 20-25 acres or less.'" The Central Valley Background Report concludes that intensive, sustained yield management will be especially important during the next few years.

OAR 660-16-000(2B) provides one general standard for evaluating ESEE consequences: "A determination of the ESEE consequences of identified conflicting uses is adequate if it enables a jurisdiction to provide reasons to explain why decisions are made for specific sites." The Department does not understand this to mean that a detailed report such as an environmental impact statement is required. It also does not understand this to mean that a parcel-by-parcel analysis must be undertaken in all cases. The phrase "specific sites" does not mean each parcel within a resource site; rather, it means areas--comprising one, several, or many parcels--that have been identified as Goal 5 resources. If the resources, conflicting uses, and consequences of the conflicts are largely the same for all of the parcels within an identified resource site, a local government need not conduct a separate analysis of each of those parcels.

The Department believes that the level of detail provided in Hood River County's evaluation of ESEE consequences is consistent with the requirements of OAR 660-16-000(2).

MR:gv
7708A/10B

slowly, over time, this has also been broadened in interpretation to apply to "groups" of but separate/individual similar sites as well.

REQUEST: Apply Natural Resource District (NR) zoning to all important wetlands.

Reasons: Protection of wetlands is required by Statewide Goal 5. Wetlands provide vital habitat for wildlife. A county-wide inventory of important wetlands was made by Lane County with our assistance. County maps currently propose NR zoning of coastal wetlands; inland wetlands are proposed mainly as Forest Land or Farm Use. Therefore, a confusing mix of zones exists for a single habitat type. The county's NR District description (11-19-82 draft) states that this district "is not intended to be applied to other types of resource land, such as agricultural land and forest land."

Mr. Mike Copely
Lane County Planning Department
Public Service Building
125 E. 8th Street
Eugene, OR 97410

Dear Mike:

This letter follows our meeting of September 28, 1983 to discuss the County's Goal 5 planning for fish, wildlife and related resources. My purpose is to outline the different work tasks ODFW agreed to undertake to assist you in completing the plans Goal 5 element. ODFW personnel will do the following:

- Neal Coenen
  (1) Review county forest land designation criteria
  (2) Work with Jim Greer in adjusting game range
  (3) Check with Claire Puchy on ESEE consequences, and level of specificity needed on streams and wetlands
  (4) Examine NR zone overlay

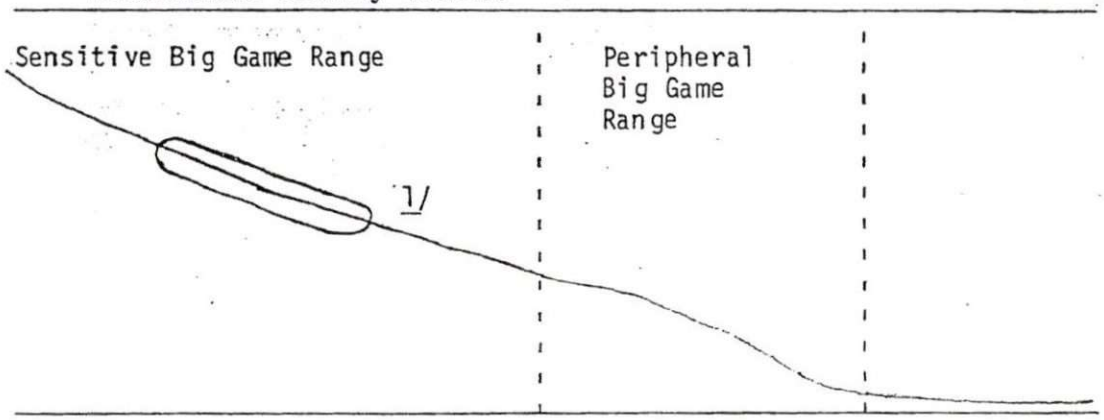
- Jim Huchison
  (1) To determine if USFWS has completed its wetland inventory in Lane County and provide appropriate information
  (2) Provide indication of preferred stream setbacks by zone
  (3) Provide performance standards and suggest review procedures to meet riparian protection needs
  (4) Review the floodplain ordinance to identify concerns and possible improvements

- Jim Greer
  (1) To work in county offices to revise game range boundaries as appropriate when county makes maps available
  (2) Update Heron and Eagle inventory

Northwest

BIG GAME RANGES - COASTAL AREAS

Definitions



Sensitive Big Game Range - That portion of the county which supports the majority of big game. In general these lands are sparsely developed commercial forest lands. They also provide the majority of big game recreational opportunity.

Peripheral Big Game Range - Foothill areas of the county generally located between commercial forest lands and productive agricultural lands. These lands support substantial big game populations and serve as a wintering area for animals from sensitive range in severe winters. However, conflicts exist between big game and other uses. These conflicts limit management options and recreational opportunities.

Note: The Peripheral Big Game Ranges were of equally high value as Sensitive Big Game Range before development.

Development Within Big Game Ranges

1. Sensitive Elk Range: 1:80 acres
2. Peripheral Elk Range: 1:40 acres
3. Sensitive Deer Range: Prefer 1:80 acres, acceptable 1:40 acres with cluster development.
4. Peripheral Deer Range: Prefer 1:40 acres, acceptable 1:20 acres with cluster development.
   *The plans should not allow for subdivisions or partitioning below the recommended density levels.

1/ Lands Already developed to a density which precludes big game usage should not be included within big game range maps.

Mike, I believe this is fairly complete based on my notes. I would like you to let me know if anything is missing. Finally, I will stay in touch with Hutch and Greer as things move along. For a start, I hope to have items 1, 3 and 4 that I am responsible for completed by October 21, 1983.

Sincerely,

Neal Coenen

Eugene, OR 97410

Dear Mike:

This letter follows our discussion on August 8, 1983 on the Big Game Range policies of the Department. For your information I've attached material on this subject. Similar material was provided to Roy Burns and Jim Mann several months ago. The density and lot size components of the policy should be clear. The clustering concept can be worked around in a number of ways. Basically, our view is that as the lot size decreases (and density increases) the impact increases and needs to be mitigated. This can be done through ordinance provisions requiring residences: to be as close as possible to each other; located adjacent to existing roads and minimizing residential serving roads. There are other ways of mitigating as well and could depend on specific conditions and resource characteristics. When densities exceed a certain level we regard management opportunities as lost.

10 +20

Regarding the approach you have considered (e.g., calculating future densities to identify and allocate capacities) I believe a more simple and less time consuming approach could be effective for the County in protection of Big Game range. Specifically, existing residences and unbuilt lots of various sizes could be plotted. These data could then be compared to the distribution of range types we have identified. If agreement can be reached on both areas and type of zone to be applied to range types conflicts could be minimized and implementation simplified. As we disscussed, a meeting after you have generated your data would be advisable to review these results.

I will discuss the above with Jim Greer, our District Wildlife Biologist, and alert him to the need for future meetings on this subject. It probably would be desirable as well to consider the need for discussion and review of the status of your work on other Goal 5 fish and wildlife resources.

Finally, if you have questions, contact Jim Hutchison or Jim Greer in our Springfield office.

Sincerely,

Neal L. Coenen

LANE COUNTY

May 6, 1983

Mr. Jim Mann
Department of Planning
and Community Development
125 East 8th Avenue
Eugene, OR 97401

Dear Jim:

First, let me apologize for taking so long to respond to the information requests that came out of our meeting in mid-February. I hope that the delay has not created any difficult problems for you.

In this letter, I do two things. First, as I recall, we were each to do a summary of our respective notes and distribute them. Second, I was to pull together information on riparian vegetation and game range policies, standards, etc. that we have seen in other plans.

Summary

1. ODFW would be opposed to the zone change east of the City of Florence and South of the highway.

2. ODFW understood need for and would assist in added environmental assessment for several sites around Eugene.

3. ODFW indicated the NR zone should be applied to inland areas as well as, or, preferably, developed as an overlay to other zones, such as EFU, F-1, 2 and 3. These zones also should expressly mention that one of their purposes is to protect, maintain or provide for fish and wildlife habitats.

4. ODFW recognized the County's intention of introducing the 100-foot setback on Class I streams into the EFU zone as it exists in the F zones. However, ODFW was concerned that the setback did not clearly set the level of protection afforded riparian vegetation and that fish and wildlife values were reasons for its application in addition to geologic hazards.

5. The County asked if ODFW had mapped Class I streams. ODFW indicated it had done so in the past and if those maps were not available, it would not be difficult to do it again.

6. ODFW was interested in having the plan current and include wetlands now rather than wait for the national wetland inventory. With regard to wetlands, concern was expressed about how effective the NR zone could be in these areas.

7. ODFW had several concerns about dwelling densities in major and peripheral big game range areas and how both dwellings and densities were addressed by the various F zones. The County indicated willingness to re-examine the zone provisions and placement of the zones compared to distribution of the range types. The County's computer capabilities would assist this. A policy issue was discussed involving factoring the publicly-owned forest land base into calculation of overall dwelling densities. ODFW indicated it did not support this as it was inconsistent with the Department's purpose for identifying overall densities. This is to say that the density policy is only seen as applicable where it is possible to develop housing. Accordingly, since public forest land is not available for this use, it should not be included in the base. ODFW agreed to provide a copy of its game range policy on dwelling densities.

8. ODFW indicated a need for having a complete Goal 5 element for wildlife, including ESEE consequences, ect.

Materials

The following are attached:

1. Tualatin River Riparian Setback - Sections 30.060 - 30.100 may provide good ideas for specific standards.

2. DLCD Interoffice Memo, RE: Clatsop County Watershed Overlay Zone - This overlay is specific in some ways and may be useful in developing zone approach and standards.

3. Goal 5 element from Douglas County Plan - This material addresses Riparian Habitat, Special Bird Habitat and Game Range. It also includes ESEE consequences analysis. It is acknowledged although we did not agree to the 50-foot riparian buffer as it was regarded as too small. The County's approach on wetlands was similar to that on riparian vegetation. I want to note, due to industry pressure and misinformation, the special bird overlay was unadopted by the County the day before LCDC acknowledgement. In part, this was because of the belief that the LCDC Goal 5/FPA analysis would provide a way to protect bird sites. We disagreed then and continue to do so now. The FPA may yet be found adequate where it regulates forest operations. However, many uses not considered forest operations could conflict with bird sites. Accordingly, counties, in our view, must still regulate such uses to meet Goal 5. The approach outlined by the County had our support and could have been acknowledged.

4. Letter from ODFW to Aldie Howard - Benton County. This letter discusses a number of issues and ODFW positions related to game range zoning. A copy of the Department's policy is also included.

5. Letter from ODFW to Rainman Bartt regarding Tillamook County Goal 5 element and forest zoning. The important point here is how we view clustering. That is, clustering is a siting standard to minimize loss of resource. It is applied after approval standards are met (eg., residences are in conjunction with a forest use).

If you have questions or if a meeting is needed, please contact Jim Hutchison and myself.

Sincerely,

Neal Coenen

INTEROFFICE MEMO

January 20, 1983

TO: Bob Cortright

FROM: Claire Puchy

SUBJECT: CLATSOP COUNTY WATERSHED OVERLAY ZONE

Per our phone conversation the other day, I have reviewed Clatsop County's Watershed Protection Overlay Zone, and in my opinion, it not only complies with Goal 5, but also does not violate the 3008 amendment to the Forest Practices Rules. More specifically:

Goal 5

1. The overlay is essentially a (3C) approach under OAR 660-16-000. Conflicting uses are limited to a desired degree to achieve a certain level of resource protection. There may be other (3C) approaches which would work equally well.

2. Per Section (3C) of OAR 660-16-000, the ordinance clearly specifies what uses are permitted outright and what uses are allowed conditionally and under what conditions. The standards for conditional uses are clear and objective.

3008

1. Based on existing AG opinions (Nos. 7910 and 7894), the County is within its rights to "regulate" harvest activities, inasmuch as the County clearly states that the purpose and primary use of the overlay zone is watershed protection, and not timber harvest activities. (There is, however, a question that is currently being addressed by the AG regarding the use of overlay zones and 3008. We haven't seen a response as yet.)

2. There is a question of whether counties may regulate chemical applications, as this overlay does, and there is an AG opinion (No. 7924) which says a county cannot. However, the basis for that conclusion was not so much 3008 as it was other state and federal statutes.

In short, I believe this overlay zone is well-constructed, well-thought-out and clearly satisfies Section (3C) of the Goal 5 Administrative Rule. The County should, however, be reminded that it will be expected to submit its findings (including an identification of conflicting uses and ESEE consequences analysis) which justify this overlay. The County should consult its own legal counsel as to the 3008 issue, and as to whether it violates other state and federal statutes. Clatsop County should be complimented for its work.

Clatsop Co.

WATERSHED PROTECTION OVERLAY ZONE

.010 Intent. The purpose of the Watershed Overlay Zone is to provide for implementation of a working relationship among federal and state agencies, land owners, local governments and special districts which have programs, land or responsibilities within domestic watershed areas. It is intended that watershed area zoning be applied only to land areas from which the quality of surface runoff affects downstream use by a state-licensed water system. Furthermore, it is intended that such zoning shall be applied by the county only at the request of special districts or cities which demonstrate a need, desire and willingness to cooperate in planning for land use activities within their own community watersheds. The overall purpose of the community watershed zoning classification is two-fold: first, to provide a means for notification of affected local jurisdictions concerning significant activities within watershed areas; and, second, to assure that only those commercial management activities are permitted which are consistent with the adequate protection of water quality necessary for individual licensed water systems. Full commercial use of all watershed overlay zones is anticipated; on the other hand, land uses should not endanger the health of community residents, nor should watershed land uses inadvertantly necessitate redevelopment of community water systems.

.020 Permitted Principal Uses. In a watershed overlay zone area the following uses and their accessory uses are permitted outright, where consistent with state and federal requirements:

1. Stream bank and stream quality enhancement;

2. Road maintenance of existing road surfaces which does not contribute to hydrologic problems in watershed tributaries;

3. Tree planting,

4. Pruning of trees;

5. Pre-commercial thinning outside a buffer area of one chain (66 feet) in width on each side of streams. Such pre-commercial thinning shall not deplete standing timber below normal stocking levels and not exceed the removal of greater than one-half (½) of standing conifer per acre.

6. Selective logging by lateral skyline yarding or helicopter outside buffer area of one chain (66 feet) in width on each side of streams; such selective logging on at least a seven year cycle, each cycle designed to remove not more than one-third of the year's eligible standing timber supply per acre.

7. Low intensity recreational activity, not including developed picnic or camping facilities.

.030 Conditional Uses. The following uses are permitted in the watershed overlay zone area as conditional uses if the county Planning Commission determines, after a public hearing, that the use complies with applicable standards in Section .040:

1. Use of Environmental Protection Agency approved herbicides, pesticides and other man-made chemicals, which have been approved by independent scientific research to be non-carcinogenic, non-mutagenic and non-tetragenic used in the control of brush for forest management;

2. Development and replacement of roads, bridges, culverts and utility rights of way;

3. Use of natural-source fertilizers which are free of active pathogenic bacteria;

4. Logging of forest not specifically permitted outright in section .020;

5. Construction of such water impoundments, treatment facilities and distribution lines as can be arranged for with the land owner;

6. Mining, quarrying or other extractive activity requiring State Department of Geology and Mineral Industry permit;

7. Livestock use under noncontinuous grazing patterns.

.040 Use Standards. The following standards when applicable shall apply within the watershed overlay zone area:

1. Chemical applications. Herbicides, pesticides, fertilizers and other artificial chemical applications shall be applied by hand application. No chemical applications shall be permitted within three chains (198 feet) of each side of streams with perennial flow, and no chemical applications shall be permitted within one chain width (66 feet) of streams with intermittent flows.

2. Use of Stream Buffers. Logs shall not be skidded across the stream, and shall not be skidded across the ground within 50 feet on each side of streams. Man-caused woody debris must not be allowed to enter the stream channel. Removal of stream debris and streambank vegetation, such as vegetation providing shade, shall be done only in cases where excessive erosion is occurring as a result of woody material. Use of equimpent in streams shall be allowed only for the installation of crossing structures. Logging equipment shall be kept out of streams; roads shall be located, constructed and maintained so that sedimentation and accumulation of woody debris will not take place in stream channels. Specific plans for vegetation removal within 50 feet on each side of streams shall be prepared at developer's expense for public review, showing: stream grade; contour at a scale of 20 foot intervals; or more detailed. Such plans shall also indicate which trees are to be removed and which are to be retained, as well as any changes in existing grade greater than 10 percent.

3. Clearcut and Other Intensive Logging. All logging activities not permitted outright, including clearcut operations and selective cutting to remove in excess of one-third harvestable timber, shall be designed to prevent erosion. No conditionally permitted activities will be allowed between November 1 and March 31. Special installations (e.g. sediment traps, settlement ponds, etc.) will be utilized to keep sediment from reaching streams.

Monitoring of stream turbidity levels by the DEQ prior to, during and following logging activities may be required by the county when appropriate to determine stream changes. Results shall be reported to the county, to the affected city or special district, and to the State Health Department. The county may require that monitoring shall be conducted at developer's expense at regular intervals for up to one year or more.

4. Mineral, Quarrying and Aggregate Extraction. Mining shall be conducted in such a manner as to eliminate, as far as practical, any water quality impacts. Leaching of substances into ground and surface waters shall be prevented, and public health and safety shall be protected. All mining and other extractive activities shall demonstrate a major burden of proof in showing why other areas not involving domestic watershed areas are not available for meeting public need for mining material.

5. Notification and Local Public Involvement. All conditional uses outlined in Section .030 shall allow for public review. Applicants for conditional uses will make themselves available for other forms of local communications and cooperation, including: a) site investigations or field trips for the benefit of interested parties such as the County Planning Commission, the City Planning Commission, County Board of Commissioners, City Council members, or special district board members; b) public information meetings and/or public hearings; c) other public meetings as appropriate. Conditional uses provide for local approval, denial or approval with conditions.

6. State and Federal Conditions. The Oregon Forest Practices Act, Department of Environmental Quality and other state and federal rules shall apply to domestic watershed areas, and provisions of such rules which are more stringent than the preceding local ordinance provision shall take precedance in determining land management.

LCDC Goal 5 mandates the conservation and protection of a variety of natural resources including specifically "Water areas, wetlands, watersheds and groundwater resources." It is incumbent upon the County of Clatsop to provide policies to protect this resource. The Southwest Community Plan, rural policy #3, provides that "all watershed areas need to be defined, and development in the surrounding vicinity shall avoid degradation of water quality."

The intent of this zone is set out in .010 of Exhibit A. Identification and inventory of watershed areas shall be on a case by case basis after adoption of the zone.

Care has been taken in the text of the zone to allow for other uses in the watershed area recognizing that watershed protection is the primary use. We do not believe that the Forest Practices Act provides adequate standards for protection of watersheds in forested areas. The proposed ordinance provided standards in excess of the minimum standards of the Forest Practices Act, but in all other respects the ordinance is consistent with LCDC Goal 4 and the purposes of the Forest Practices Act.

30.000 TUALATIN RIVER SETBACK

30.010 PURPOSE

The purpose of this overlay zone is to maintain the integrity of the Tualatin River by establishing standards which will minimize erosion, promote bank stability, maintain and enhance water quality, and fish and wildlife habitats, and preserve the scenic quality and recreation potential, assure that streams and drainways are protected for their drainage and implement the comprehensive plan.

30.020 APPLICABILITY & DEFINITIONS

A. This zone is an overlay zone.

B. All uses permitted under the provisions of the underlying base zone are allowed in the manner prescribed by the base zone subject to an approved Tualatin Setback Permit under the provisions of this chapter.

C. Development as used in this chapter includes any change of use or intensification of the use of land or water or any changes to the existing topography or vegetation except the activities listed in section 30.030 are exempt from the requirements of this chapter.

D. This overlay zone applies to all development within one hundred fifty feet of the mean low water line of the Tualatin River.

30.030 EXEMPTIONS

The following development activities do not require approval under the provisions of this chapter:

A. Customary dredging and channel maintenance conducted under permit from the State of Oregon.

B. Seasonal increases in gravel operations under permit from the State of Oregon.

C. Scenic easements acquired under ORS 390.332 and their maintenance as authorized by that statute and ORS 390.368.

D. Addition or modification by public utilities for existing utility lines, wires, fixtures, equipment, circuits, appliances and conductors.

E. Flood emergency procedures and the maintenance and repair of existing flood control facilities.

F. Signs, markers, ads, etc., placed by a public agency to serve the public.

G. Residential accessory development (excluding structures) such as lawns, gardens, and play areas.

H. Storage of equipment or material associated with uses permitted, providing that the storage complies with applicable provisions of this chapter.

I. Minor repairs or alterations to an existing structure for which no building permit is required.

J. A change of use of a building or other structure which does not substantially alter or affect the land or water upon which it is situated.

K. The completion of a structure for which a valid permit has been issued as of the effective date of this chapter.

L. Landscaping.

M. Construction of driveways.

N. Maintenance and repair, usual and necessary for the continuance of an existing use.

O. Reasonable emergency procedures necessary for the safety or protection of property.

30.040 ADMINISTRATION & APPROVAL PROCESS

A. An application for a Tualatin River Setback for a use permitted outright in the underlying base zone and not subject to Development Review approval shall be issued by the Planning Director without notice based on the standards in section 30.0[illegible]. The decision of the director may be appealed as provided by section 02.240B.

B. An application for a use permitted outright, but subject to Development Review approval under chapter 55 shall be decided by the Development Review Board in accordance with the provisions of 02.060C and the standards in section 30.0[illegible]. The board shall also decide the application subject to the Development Review provisions of this code in the manner set forth in 02.060C. The Development Review application and Tu[illegible]

River Setback Permit application shall be a separate decision, but may be heard concurrently as provided by 02.070. A petition for review by the council may be filed as provided by 02.240B.

C. An application for a Tualatin River Setback permit for a conditional use allowed in the underlying base zone shall be decided by the Planning Commission in accordance with the standards in section 30.060 as a part of the conditional use approval under chapter 60.060 and as set forth in 02.060B. Notwithstanding the provisions of chapter 2 and chapter 55, the Planning Commission shall also decide a Development Review application under the provisions of Chapter 55 in conjunction with a Tualatin River Setback Permit application. The application for the conditional use, the Tualatin River Setback Permit, and Development Review may be heard concurrently as provided by 02.070, however separate actions shall be taken on each application. A petition for review by the council may be filed as provided by 02.240.B.

30.050 TIME LIMIT ON APPROVAL

Approval of a Tualatin River Setback Permit shall be void if:

A. The Conditional Use Permit becomes void under 60.040; or

B. The site plan on which the approval is based is modified. Any change in the plan or conditions of approval shall required a new application and hearing pursuant to the provisions setforth in this chapter and 02.120B.

30.060 APPROVAL STANDARDS

A permit shall be issued for a Tualatin River Setback Permit upon written findings that:

A. The setback provisions of section 30.070 are met;

B. The design standards of section 30.070 are met;

C. A buffer or filter strip of existing vegetation will be preserved in accordance with the standards of section 30.090A; or the buffer will be adequate based on the standards in 30.090B or the existing vegetation will be replaced by comparable vegetation as provided by 30.090 (c) and

D. There will be no grading or tree cutting in the buffer or filter strip except as may be permitted by 30.100.

30.070 SETBACK REQUIREMENT & EXCEPTIONS

A. All structures and nonwater oriented accessory structures shall be setback ___ feet from mean low water line of the Tualatin River.

B. The following exceptions shall apply:

1. Residential lots of record which have a lot depth which precludes compliance with the setback standards of this section, shall be exempt from the strict application of these standards. Such structures shall be setback the maximum practicable distance.

2. Water dependent commercial and industrial uses and such uses as private boat docks, marinas, or boat ramps shall be exempt from the setback requirements.

3. Additions to existing structures which are located closer than the setback requirements of this section shall be permitted.

4. Public uses, such as bridges for public roads, shall be allowed within the setbacks stated in this section provided that adverse impacts are mitigated.

30.080 DESIGN STANDARDS FOR THE TUALATIN RIVER

The following design standards apply to the area within 150 feet from the mean low water line of the Tualatin River:

A. All structures which are painted or will be painted shall be painted muted earth tones or white.

B. Parking and storage areas shall be screened from view by appropriate vegetative buffers.

30.090 VEGETATIVE PRESERVATION REQUIREMENTS AND EXCEPTIONS

A. A buffer or filter strip of existing vegetation shall be preserved along the Tualatin River for a width of ___ feet along the bank

B. Exceptions to the width of the buffer or filter area may be granted as part of the approval process based on the following standards:

1. The character and size of the proposed development and its potential for adverse impacts on the river is minimal and therefore the buffer area may be reduced;

2. The topography of the area will act as a buffer; or

3. The type and density of the existing vegetation is such that the width of the buffer may be reduced; and

4. The type and stability of the soils will preclude erosion.

C. The existing vegetation may be removed provided it is replaced by comparable vegetation.

30.100 TREE CUTTING & GRADING IN BUFFER PROHIBITED

A. Three cutting and grading shall be prohibited within the buffer or filter strip, with the following exceptions:

1. Diseased trees or trees in danger of falling may be removed.

2. Tree cutting or grading may be permitted in conjunction with those uses listed in 30.070 (S) to the extent necessary to accomodate those uses.

B. Commercial forest activities and harvesting practices shall provide for vegetative buffers and the intended shading, soil stabilizing and water filtering effects as required by the Oregon Forest Practices Act and administered by the State Department of Forestry, but need not otherwise comply with the provisions of this section.

30.110 THE APPLICATION

A. An application for a Tualatin River Setback Permit shall be initiated by the property owner or the owner's authorized agent.

B. A prerequisite to the filing of an application is a preapplication conference at which time the director shall explain the requirements and provide the appropriate forms as provided in 02.030B.

C. An application for a Tualatin River Setback Permit shall include fifteen copies of each of the following except for each drawing submitted, there shall be eight copies at the original scale and seven copies reduced to a paper size not greater than eleven inches by seventeen inches (11 x 17):

1. The completed application forms.

2. A site plan (30.130)

3. A grading plan (30.140).

4. Architectural drawings (30.150)

5. A landscape plan. (30.160)

D. The applicant shall pay the requisite fees.

30.120 ADDITIONAL INFORMATION REQUIRED & WAIVER OF REQUIREMENTS

A. The Planning Director may require additional information as part of the application subject to the provisions of section 02.035A.

B. The Planning Director may waive any requirement for the application subject to the provisions of section 02.035 (B) & (C).

30.130 SITE PLAN.

A. All plot plans and maps shall include the name, address and telephone number of the applicant, the scale of the plot plan, a north arrow, and a vicinity map.

B. The applicant shall submit a plot plan or an aerial photograph to an appropriate scale (in order of preference; 1" = 10' to 1" = 30') which contain the following information:

1. The subdivision name, block and lot number or the section, township, range and tax lot number.
2. The parcel boundaries, dimensions and gross area.
3. The location of the required vegetative buffer area (30.090), building setback line (30.070) and line showing the boundary of this overlay zone (30.020).
4. The location, dimensions and setback distances, within the boundary of this overlay zone of the following:
   a. Existing structures, improvements, utility facilities and drainage ways on adjoining properties.
   b. Existing structures, improvements, utility facilities and drainageways to remain on the site.
   c. Proposed structures or changes to existing structures, improvements, utility facilities and drainage ways on the site.

5. The proposed and existing location and dimensions within the boundary of this overlay zone applies to the following:
   a. The entrances and exists to the site.
   b. The parking and circulation areas.
   c. Loading and service areas for waste disposal, loading and delivery.
   d. Pedestrian and bicycle circulation areas.
   e. On site outdoor recreation spaces and common areas.
   f. Above ground utilities.
6. The type, location, size, height, typical design, material, color and method of illumination of outdoor lighting.

30.140 A GRADING PLAN

The grading plan shall be at the same scale as the site plan (30.130) and show the following:

A. The location and extent to which grading will take place indicating general contour lines, slope ratios and slope stabilization proposals.

B. The location of the proposed drainage ways.

30.150 ARCHITECTURAL SKETCHES

The architectural sketches to be submitted shall show the exterior building materials including type, color and texture for development abutting the Tualatin River.

30.160 A LANDSCAPE PLAN

The landscape plan for properties abutting the Tualatin River shall be prepared on the site plan (30.130) and show the following:

A. The location of existing trees and vegetation to be removed and to be retained.

B. The location and design of landscaped areas.

C. The varities and sizes of trees and materials to be planted.

D. The location and height of fences and other buffering or screening materials.

VICTOR ATIYEH
GOVERNOR

Department of Fish and Wildlife
506 S.W. MILL STREET, P.O. BOX 3503, PORTLAND, OREGON 97208

April 28, 1983

Mr. Mark Barnes
Clatsop County Planning Dept.
County Courthouse
Astoria, OR 97103

Dear Mark:

We are concerned about the potential for too many reviews in the AF-20 zone. This could take a lot of time. If amounts of peripheral range zoned AF-20 are small, the district biologist may want to avoid reviews entirely. We do however, want to see application of siting standards. Similarly, but at the other end of the scale, we may want to review all of the F-80 requests because these would most likely be in major range and few in number. On F-38, the proposed procedure is probably acceptable as this zone most likely contains major and peripheral range dominated by major.

We are concerned over the deletion of clustering standards for siting dwellings in all zones proposed. While it may not be as critical in the F-80 because low densities would be maintained,the concern in the AF-20 and F-38 remains. Your letter stating that "clustered dwellings do not appear to be valid in forest uses" applies a different meaning to "clustering" than we have used in the context of game range. By clustering we mean minimizing the impact of a forest dwelling on the resource. We do not mean to imply that a non-forest dwelling, a PUD, etc., should be allowed if clustered. Clustering to our Department in the context of game range means keeping as much habitat alteration on a parcel to a minimum and among parcels keeping development as close together as possible. This retains the highest percentage of an individual parcel or number of parcels in resource use as effective habitat.

To resolve the above concerns I have revised the proposal. By copy of this letter to Doug Taylor I am asking for his comment and concurrence. I have also marked up other parts of the text of these zones on minor points.

Mark, I will contact Doug shortly to discuss the above and then contact you. I apologize for taking so long to review this.

Sincerely,

Neal L Coenen

VICTOR ATIYEH
GOVERNOR

Department of Fish and Wildlife

506 S.W. MILL STREET, P.O. BOX 3503, PORTLAND, OREGON 97208

May 6, 1983

Mr. Rainmar Bartl
Clatsop - Tillamook Intergovernmental Council
Box 488
Cannon Beach, OR 97110

Dear Rainmar:

This letter comments on your Goal 5 report. On the whole I think it's very good and reflects a lot of our concerns expressed previously in the Clatsop County report. Below, I've numbered my comments corresponding to the attached pages. At the end of the Goal 5 review I also make comments on the SFW-20 and F zones based on recent proposals I've received from Doug Taylor.

1. See later comments on SFW-20.

2. Based on the SFW-20 siting criteria you could drop "clustered and" in this sentence. My concern still is with clustering but, per my comments on Clatsop County, we have not viewed this in the traditional way. Your presentation [at 3.006 (4) (g)] of the concept is actually better because it relates clustering of a number of structures. This still allows the siting of structures on different parcels close together to maintain the largest area of habitat.

3. I'm not sure what you were getting at here but suggested a few zones where there might be conflict.

4. Hunted and Nongame seem contradictory.

5. What is the source of these restrictions - the FPA? Are these the only restrictions?

6. Assuming LCDC eventually finishes the Goal 5/FPA analysis and counties may rely on the FPA, I believe a similar process will also be required to control those actions that could conflict with bird sites but which are not controlled by the FPA (e.g. road building, land clearing for structures, recreational development and dwellings.)

7. A question in my mind here is do merchantable trees also qualify as agricultural crops? If so, you are leaving "merchantable" out of riparian. Under existing the FPA merchantable trees have been recognized as being needed in the buffer to provide shading where sufficient non-merchantable trees do not exist.

8. Your riparian material is very good. I suggest, however, that you add wildlife values as being included. As it stands now the focus is on erosion and water quality.

9. I like your wetland work. Similar to Clatsop County, it is among the most forthright work I've seen in a county. One question, however, is what sites were not included in the 1,044 acres and why per LCDC's Goal 5 rule. Unless Doug has specific concerns, my concern would be for you to have a ready answer for LCDC.

10. My basic concern is that all dwellings be sited using the same criteria for siting because the impacts are not different. See my earlier comments on clustering.

11. A little confusion could result from this language. The real distinction is or should be jurisdictional, not geographical. If actions are not controlled by the FPA the county should control them. You may have a point, however, in that some geographical limits exist on the FPA (Class II stream definition).

SFW-20 and F Zones

Doug Taylor sent me a draft of the SFW-20 and F zone towards the end of March. The conditional use siting language v/v big game is the same as your Goal 5 material. This draft, however, did not include the review provision for the Director to control positioning to minimize impacts on big game. As indicated above, both resource-related and non-related dwellings should, in our view, be subject to the same siting standards. Approvability as an overall issue is difficult to discuss here because of unclear LCDC policy. Also, the purposes and permitted uses sections do not recognize fish and wildlife values or management. Language similar to the Clatsop code or the Tillamook County F zone could do this. Furthermore, we would like to identify how boat ramps would be allowed. Perhaps, as in the F zone, these should be a conditional use falling under (3) (d) other recreational uses that require...structures.

The F zone seems very satisfactory given the minimum lot size which would, for the most part, be consistent with our overall density policies for deer. Larger areas are required for elk, however, and this zone may or may not achieve it.

One problem exists overall in both zones and that is the siting language applied to the conditional use dwellings addresses both peripheral and major range. Our policies anticipated that zoning would be applied, in part, on the basis of the type of range present since range type was determined on existing levels of buildout parcelization, etc. The wording in the code implies the SFW-20 is applied to major range and F is applied to peripheral. The Goal 5 write-up says peripheral is predominantly SFW-20. I believe Doug can assure the Department of this as I have no feel for it without a detailed comparison of game and zone maps. However, a significant size difference exists between the F (80) and SFW-20 (20) minimum lot sizes. This range does not address the 40-acre overall dwelling density aspects of our policy. I'm not arguing that it should necessarily...but I am looking for assurance that SFW-20 is not being applied to lands that might otherwise be appropriately zoned for a larger size.

Rainmar, after you've looked this over perhaps you, Doug, and I should get together briefly to discuss any questions.

Sincerely,

Neal Coenen

BO STAFF REPORT 9-7-23
ATTACHMENT 4.34

VICTOR ATIYEH
GOVERNOR

Department of Fish and Wildlife

506 S.W. MILL STREET, P.O. BOX 3503, PORTLAND, OREGON 97208

March 30, 1983

Mr. Aldie Howard, Director
Benton County Planning Department
180 N.W. Fifth Street
Corvallis, Oregon 97330

Dear Mr. Howard:

This letter follows-up our discussions of 3/21/83 on the County's FC zone. At that meeting we discussed a variety of problems with the code in the context of managing big game resources and conflicts. You requested that we respond to the problems we perceive with specific proposals for their resolution. This letter is designed to meet your request. In doing so we first cite a problem and then provide a proposal for its resolution.

Problem No. 1. Two aspects are involved in dealing with residences in the FC zone. First are standards relating to approval of a dwelling. Second are standards for siting or locating the dwelling on a parcel. The most fundamental conflict with the FC code is its internal inconsistency. This is to say that the purpose statement is to retain forest land for forest uses. Under Permitted Uses (III.03) the code contradicts itself by failing: (1) to restrict single-family residences to those needed for a forest use; and, (2) under Conditional Uses (III.04), by failing to appropriately limit non-resource related dwellings.

Solution No. 1. Addition of the following language to III.03(5) and (6) would move in the right direction to resolve the problem. Add, after the phrase "single-family residence," needed for and in conjunction with or accessory to a commercial forest use. This added language, in our view, would substantially resolve the codes existing internal inconsistency by allowing single-family dwellings only for the purposes of commercial forest use. Commercial forest use is generally consistent with management of big game resources.

This solution only resolves in part the issue of approval standards. We deal with dwelling densities appropriate to big game resources and conditional uses below.

Problem No. 2. Conditional Use provisions III.04(8) allows non-forest use single-family residences, if conditions are met, without restriction on lot size or overall density.

Solution No. 2. We suggest adding the following to conditions 8 a-e...f. that the parcel size be the minimum necessary to support the proposed use; and, g. it be shown that the parcel is of a size not capable of supporting a single family residence in conjunction with a commercial forest use as we suggest be required by III.03.

Problem No. 3. Regarding covenants running with the land we have consistently recommended such covenants recognize the existence of potential big game use.

Solution No. 3. Wherever covenants are referred to, in plan policy and the FC zone, we recommend inserting the phrase "big game use". This would disclose to all owners the existence of possible big game use in resource zones.

Problem No. 4. The issue of dwelling densities appropriate to big game resources is inadequately addressed by the code, primarily in parts III.05 and III.06. The Department's policy on big game range dwelling densities is attached for your use and addresses both approval and siting standards. The basic approval standard involves our preferred overall dwelling densities (e.g., major or sensitive range - one dwelling per 80 acres; and, peripheral range - one dwelling per 40 acres). Siting standards come into play at higher densities than those preferred (e.g., major or sensitive range - one dwelling per 40 acres with clustering).

The general concept of "clustering" means all of the following as applicable to the situation:

1. Locating dwellings and structures near each other and existing roads;

2. Locating dwellings and structures to avoid habitat conflicts and utilize least valuable habitat areas; and

3. Minimize residence-serving road development to that necessary to support the residential use.

The above standards are intended to mitigate the conflicts of dwellings with habitat by reducing to the lowest possible level the extent of habitat area affected. The benefits are two-fold; the maximum amount of habitat base and forest resource are retained and both have economic value.

The basic problem with the code in general and sections III.05 and .06 in particular is that the concept of overall dwelling densities does not expressly respond to the Department's policy which addressed two types of game range. Also, the provision for the 40 acre minimum size lot to be created is diluted by the provision for allowing creation of smaller lots if conditional use standards are met and by not having mandatory and clear siting standards. The conditional use standards also fail to respond to our dwelling density recommendations of type of range present.

Solution No. 4. We recognize that III.06 refers to maintaining overall densities compatible with habitat management. However, as noted the code does not carry out the concept. In order to do so several options exist that involve different approaches.

One could be to rework the permitted use and lot area requirements sections to allow single-family dwellings in conjunction with (etc.) forest uses on minimum lot sizes of 80 acres, or 40 acres with clustering standards in major range areas; and, 40 acre, or 20 acres with clustering in peripheral range areas. If this approach were used the clustering standards outlined earlier could be placed in the siting and construction standards section; although III.06.4. would need revision to provide lot line setbacks capable of allowing setbacks needed to achieve clustering.

A second approach could involve the same concepts above, but be placed in a floating zone applicable only to FC planned and zoned lands mapped as major or peripheral range.

Whatever approach is desirable the County and the Department yet need to devise a procedure for determining overall dwelling density. We suggest an approach which considers the number of parcels and dwellings in a section area (one square mile) centered around a parcel in question. We seek, as we are sure the County does, a process which is administratively efficient and effective.

We hope the above clarifies our position for you and is useful. If you have further questions, please let us know. We will continue to assist you in every possible way. We want to also note in conclusion however, that we believe some clarification is needed from LCDC regarding non-resource related residences in the FC zone because such a determination will control how and in what way the Departments' policies are accomodated in response to Goal 5.

Sincerely,

Neal Coenen

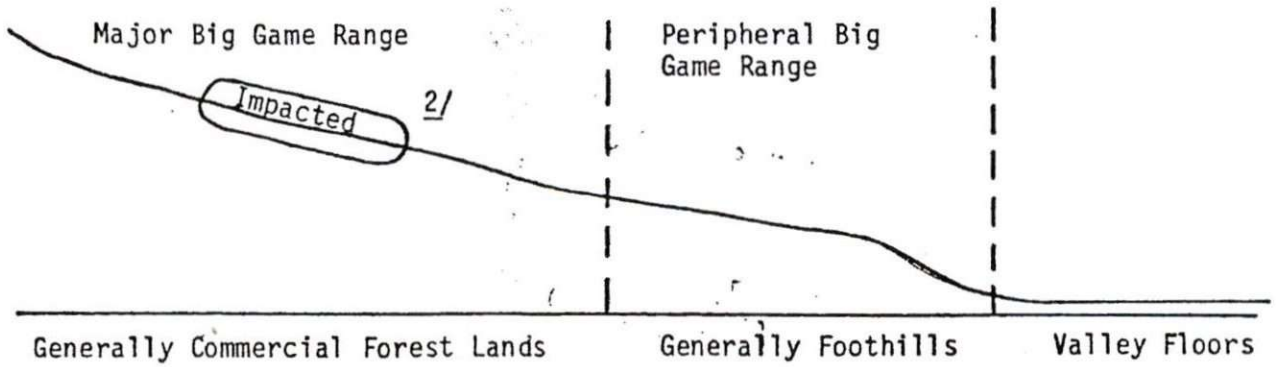
BIG GAME RANGES - NORTHWEST OREGON

Definitions

Major Big Game Range - That portion of the county which supports the majority of big game. In general these lands are sparsely developed commercial forest lands. They also provide the majority of big game recreational opportunity.

Peripheral Big Game Range - Foothill areas of the county generally located between commercial forest lands and valley floors. These lands support substantial big game populations and serve as a wintering area for animals from major range in severe winters. However, conflicts exist between big game and other uses. These existing conflicts limit management options and recreational opportunities.



Impacted Big Game Range - Those areas of the county that have existing levels of land-use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity. These areas frequently contain populations of big game animals.

Development Within Big Game Ranges 1/

1. Major Big Game Range: Prefer - 1:80 acres, acceptable - 1:40 acres with cluster development.

2. Peripheral Big Game Range: Prefer - 1:40 acres, acceptable - 1:20 acres with cluster development.

   * The plans should not allow for subdivisions or partitioning below the recommended density levels.

1/ The Department's recommendations relate to overall residential density and not minimum lot sizes.

2/ Lands already developed to a density which precludes big game usage should not be included within big game range maps.

PLAN ELEMENTS

RIPARIAN HABITAT

NATURAL FEATURES

1. Add Finding 24b - Riparian Vegetation Corridors Along Rivers and Streams:

Riparian Vegetation Corridors Along Rivers and Streams

A. Application of the Goal 5 Process for Riparian Vegetation Along Rivers and Streams: The following information addresses the location, quality and quantity of the resource:

1. Location: At the present time a map of specific riparian vegetation corridors in Douglas County is not available. Upon consulting with the Oregon Department of Fish and Wildlife, all riparian vegetation located within 50' of the streambank adjacent to identified perennial and intermittent streams has been classified as important. The location of important perennial and intermittent streams in Douglas County is shown in the State Water Resource Maps for the Umpqua, South Coast, Rogue, Klamath, Willamette and Mid Coast drainage basins.

2. Quality: The quality of riparian vegetation is generally good. Such areas enhance shoreline stability and water quality and provide an excellent habitat for fish and wildlife.

3. Quantity: The quantity of riparian vegetation in Douglas County has been determined to include all lands within 50 feet of the bankline of perennial water courses. Although the riparian vegetation varies in width, depending on location, it has been determined that 50 feet adequately represents the average width of riparian vegetation found in Douglas County.

B. Potentially Conflicting Uses in Riparian Vegetation Corridors: For those areas classified as important riparian vegetation corridors, Douglas County employs most if not all of its present land use classifications. Within these land use classifications certain activities, if allowed, could permanently alter riparian vegetation. Such activities include structural development such as single-family dwellings, commercial and industrial buildings, churches, public and private schools, community centers, kennels, roadside stands and accessory buildings, etc.

C. Economic, Social, Environmental and Energy Consequences of Conserving Riparian Vegetation Corridors

1. Economic Consequences: Although dollar figures are not available, it is estimated that a substantial amount of money is spent each year attempting to resolve conflicts from locating structural development in riparian vegetation corridors. The major conflict centers on the removal of riparian vegetation which reduces fish and wildlife

habitat and endangers adjacent development through streambank erosion and flooding. In many areas loss of riparian vegetation has caused excessive erosion depleting agricultural land and damaging residential structures. This loss is incurred by the property owner as well as local jurisdictions involved.

Given the importance of the riparian vegetation, it would appear that regulating structural development in such areas would be economically beneficial.

2. Social Consequences: Although the benefits of conserving riparian vegetation appear to be great, as shown in the economic consequences, a conflict arises when attempting to regulate riparian vegetation in nonresource areas. In many designated residential, industrial and commercial areas, existing development is located well within the riparian vegetation corridor. Land in such areas is at a high demand and is usually purchased at a good price due to river frontage and view. Although regulating development would conserve riparian vegetation, a hardship may be incurred by a property owner desiring to build in the riparian corridor. If construction is prohibited on prime river frontage, the property owner could experience a substantial decrease in property value, not to mention a significant change in personal desires. This hardship would be magnified if adjacent development had already occurred within the riparian corridor. In many cases, regulating the development in such areas would not conform to existing land use patterns.

   A positive social consequence of conserving riparian vegetation would include the protection of property from flood hazards. Given that most riparian vegetation corridors are located well within designated floodplain areas, regulating development would help reduce hazards associated with flooding.

3. Environmental Consequences: The environmental consequences of limiting structural development in riparian vegetation corridors is positive. By limiting development, erosion is reduced which increases habitat protection and helps to maintain water quality.

4. Energy Consequences: The energy consequences of limiting structural development in riparian vegetation corridors is also positive. By protecting riparian vegetation, less energy will be spent trying to rectify erosion problems.

5. Conclusion: Excluding some areas presently designated for future development in the County's Comprehensive Plan, it appears that regulating structural development in riparian vegetation corridors would have a positive

effect on conserving fish and wildlife habitat and maintaining streambank stability.

D. A Program to Conserve Riparian Vegetation Corridors: Riparian vegetation corridors in Douglas County were identified with the assistance of the Oregon Department of Fish and Wildlife (ODFW). The ODFW has specified that a building setback of fifty (50) feet from the bank of all identified perennial and intermittent water courses shall be adequate to protect riparian vegetation corridors. For those areas presently developed and designated for future growth, the ODFW has recommended that a reduction in setback requirements be allowed if the development is shown to be consistent with the area's natural resources.

The following policies from the County's Comprehensive Plan provide the basis for conserving riparian vegetation corridors.

a) Page 112 of Comprehensive Plan, Objective C, Policy 3:

3. Encourage the retention of riparian vegetation whenever possible.

b) Page 114 of Comprehensive Plan, Objective E, Policies 1 and 2:

1. Existing riparian vegetation along streams and river banks shall be maintained whenever feasible to provide fishlife and wildlife habitat, minimize erosion and scouring, retard water velocities and suppress water temperatures. Regarding forest management activities on forest land, the riparian vegetation shall be protected as required by the Oregon Forest Practices Act.

2. Encourage the use of nonstructural methods of bank stabi ation in agriculture or forest areas exper ncing accelerated soil loss.

c. Page 139 of Comprehensive Plan, Objective E, Policy 4:

4. Lands not suited for development shall be used for open space, agriculture, forestry, recreation or other suitable uses.

d. Page 140 of Comprehensive Plan, Objective H, Policies 3, 5 and

3. An new development within the floodplain shall be designed to avoid damage from flooding and to minimize the damage potential to other developments or properties.

5. Encourage the retention and restoration of natural or other suitable vegetation adjacent to waterways.

6. Promote increased public awareness of flood hazards and how to deal with them.

e. Page 194 of Comprehensive Plan, Objective A, Policy 3:

3. Land usage should maintain the vegetation along the stream banks, in fence rows and woodlots; where possible, developers are encouraged to provide deer-proof fencing in areas where such conflicts exist.

f. Page 194 of Comprehensive Plan, Policy 5 of General Policies:

5. A building setback of 50 feet from all identified perennial and intermittent watercourses shall be maintained in areas outside of adopted urban growth boundaries, unless the County finds, after consultation with the Oregon Department of Fish and Wildlife, that such setback is unnecessary as a mitigation measure for the protection of wildlife, and reduction of the setback will not jeopardize streambank stability, water quality, etc.

g. Page 195 of Comprehensive Plan, Objective B, Policy 1:

1. Encourage the retention and protection of existing ponds, wetlands, and riparian vegetation especially inside urban growth boundaries.

h. Pages 303-304 of Comprehensive Plan, Policies 4, 5 and 7.

4. In all shoreland areas, riparian vegetation shall be maintained to the maximum extent possible.

5. Riparian vegetation moved or damaged as a result of permissible development shall be restored and enhanced when appropriate and consistent with the water-dependent use.

7. Nonstructural solutions to problems of shoreline erosion and flooding shall be preferred over structural methods.

Policy Implementation

To help implement policies addressing riparian vegetation, the County has adopted a Riparian Vegetation Corridor Overlay Zone which applies to lands located 50 feet from the bank of all identified perennial and intermittent water courses. This Overlay Zone requires all structural development to be set back 50 feet from the streambank unless after consultation with the Oregon Department of Fish and Wildlife it is found that such a setback is unnecessary, and that reduction of the setback will not jeopardize streambank stability, water quality, etc. See Section 3.32.___ of Douglas County's Land Use and Development Ordinance for additional implementation requirements.

6. The map entitled

UMPQUA DRAINAGE BASIN OREGON
STATE WATER RESOURCES BOARD
Salem, Oregon
1974

is hereby adopted as the official map showing the stream and rivers to which the overlay zone shall be applied. (NOTE: Due to map scale, the map cannot be included with this packet. A map is on file at the Planning Department Office.

BIG GAME HABITAT

NATURAL FEATURES ISSUES

1. Amend the second sentence on page 184 as follows:

   These species include 66 mammals, 254 resident and migratory birds and 38 amphibian and reptile species as listed and discussed in the general wildlife overview found in the wildlife element of the Natural Features Element.

2. Delete the paragraph on page 184 under "General Land Use Conflicts" and replace with the following paragraph:

   Wildlife habitat competes with several other land uses. Uses or activities, such as rural residential developments, some industrial uses, etc., could impact a habitat to a degree that it precludes its use as habitat. Other uses such as logging and water impoundments may eliminate or alter specific habitat for some species while providing new habitat for other animals. An understanding of animal habitats is important for decision makers in order to satisfy both the needs of man and animals.

3. Delete 13(a) and (b) under General Land Use Conflicts on p. 188.

4. Add the following sentence to Finding 19 on p. 189:

   Although currently listed as an endangered species, the U.S. Fish and Wildlife Service is currently preparing a recommendation to reclassify the Columbian white-tailed deer from "endangered" to "threatened".

5. Remove #23 from under the title "Threatened and Protected Species" and place it under its own title, "Sensitive, Peripheral and Impacted Big Game Habitats", as follows: (Although new, the following material has not been underlined for reasons of clarity.)

   Sensitive, Peripheral and Impacted Big Game Habitats:

   Lands identified by the big game habitat map describe those habitat areas deemed "sensitive" or that area which supports the majority of big game; deemed "peripheral" or those which support large quantities of big game but where existing land uses do not allow management options favorable to big game; and deemed "impacted" or developed areas no longer considered to be viable big game habitat.

   A. Application of the Goal 5 Process for Big Game Habitats: The following information addresses the location, quality and quantity of the resource:

      1) Location - See map on page 189a

2) Quality - Generally good as forest practices allow for vegetation diversity and cover and the climate is mild, thus leaving an abundance of year-round food sources.

3)

Acres of Sensitive:	2,049,818
Acres of Peripheral:	694,170
Acres of Impacted:	428,953
Acres of Columbian white-tailed deer:	67,379

B. Potentially Conflicting Uses in Big Game Habitat Areas: For a majority of those lands in Douglas County delineated as big game habitat by the Oregon Department of Fish and Wildlife, Douglas County employs 3 resource zones: TR (Timberland Resource), FF (Farm Forest) and EFU-G (Exclusive Farm Use - Grazing). The major issue regarding big game habitat is the loss of habitat due to increased residential densities beyond the preferred density of 1 dwelling per 40 acres in peripheral areas and 1 dwelling per 80 acres in sensitive big game habitats.

Many nonresource uses, if approved, could permanently alter big game habitat areas. Some generally common characteristics among these uses include: 1) the introduction of people to habitat areas on a year-round basis; 2) the permanent introduction of groups of people on a seasonal or weekly basis; or 3) the use of land in a manner which necessitates the removal of large amounts of vegetative cover. Specific potentially conflicting uses contained within the TR, FF, EFU and AW zones are as follows:

Zone	Permitted Uses	Conditional Uses
TR		Single family dwelling Lodges
FF	Single family dwelling in conjunction with farm use Second DU in conjunction with farm use Churches Public and private schools	Accessory DUs Commercial activities in conjunction with EFU Community center 215.213(3) nonfarm DU Kennels
EFU-G	Same as FF	Same as FF

C. Economic, Social, Environmental and Energy Consequences of Conserving Big Game Habitats

1) Economic consequences: Each year the Department of Fish and Wildlife spends a substantial amount of money and staff time attempting to resolve perennial conflicts between big game and rural residents. Attempting to minimize future conflicts between big game and residential development and other nonresource uses certainly will prove to be a cost-saving measure for ODFW.

The hunting of big game species is a major form of recreation in this state. Annually hunters become significant contributors to numerous local economies as well as substantial financiers of the Oregon Department of Fish and Wildlife. Because hunting and hunters are dependent on the survival of the species, the economic consequences of not insuring adequate quantities of habitat would be very costly both locally and statewide. The general economic benefits associated with land use planning also can be considered as an economic consequence of limiting development in rural areas. Other resources besides wildlife benefit from a minimization of development. Also, facility and other potential development costs to taxpayers are reduced.

The negative economic consequences of applying regulations are generally borne by individuals prevented from doing an activity such as building a home on a specific site. In some instances, this can become an extreme financial hardship to an individual. However, for most individuals, the economic consequences of not receiving an approval become a short term inconvenience, eventually resolved by building elsewhere.

2) Social Consequences: Only a small portion of the actual conflicts associated with rural living and big game are documented by the Oregon Department of Fish and Wildlife. Browsing by deer and elk on ornamental vegetation is a most common nuisance. This potential conflict can be minimized by limiting uses in designated habitat areas. The negative social consequences of limiting residential densities in habitat areas means the desire to live in rural areas for many people will remain unsatisfied. Also, as mentioned under economic consequences, personal financial hardship may be a social as well as economic by-product of strict adherence to a prescribed regulation.

3) Environmental Consequences: Opportunities for big game to flourish in a habitat without repeated interference or disturbances from man should be a positive environmental consequence. Also, other animal species who require a large open space environment shall benefit from low density requirements.

4) Energy Consequences: The energy consequences of limiting development should be entirely positive. Trip generation associated with development located in remote parts of the County will be minimized by density and development restrictions. As a result, development will occur closer to cities and services for which specific trips are often made and thus energy is often used.

5) Conclusion: The consequences of establishing requirements which limit development and residential density in specified big game habitat areas should prove generally to be an overall benefit not only to big game and the ODFW but also to the environment, the economy, and to the goal of conserving energy. Provided a provision for extenuating circumstances in conjunction with review by ODFW is included, the benefits of limiting development and residential density in specified habitat areas is warranted.

D. A Program to Conserve Big Game Habitat

1) Sensitive Big Game Habitat: All lands deemed sensitive big game habitat have been designated as timberlands in the Comprehensive Plan. The TR zone is applied to timberland areas which are almost entirely managed by Federal agencies or private timber companies. The Timberlands plan designation and the TR zone are guided by the plan policies in the Forest Element of the Douglas County Plan. The following policies from the forest element provide the basis for not only managing the forest resource but also managing sensitive big game habitat areas:

> Douglas County shall regard residential subdivisions and parcelizations in designated timberlands as incompatible with the protection and efficient management of the County's timber resources.
>
> Douglas County encourages the conservation and protection of watersheds, fish and wildlife habitats, and areas of historical, cultural or scenic importance.
>
> Multiple utilization of existing utility rights-of-way shall be encouraged.
>
> Communication facilities to be located in forest areas should be designed to minimize impacts on forest values and uses.
>
> Road widths in forest areas should be limited to the minimum necessary for forest management and safety.

Highways through forest areas should be designated to minimize impacts on forest values and uses.

Before forest land in forest use is allowed to change to nonfarm or nonforest use, the act of justifying an amendment to the applicable comprehensive plan must occur in the manner provided for justifying an exception to State Planning Goal 4, except for those uses found necessary for the public convenience and welfare which may be permitted conditionally.

The following excerpts and policies from the plan provide specific guidance for the designation and implementation of Timberlands (Excerpts from the Timberlands Criteria):

Forest lands designated as Timberlands shall consist primarily of the following:

1. Public and private industry forest lands located contiguously in large blocks;

2. Forested lands geographically or topographically separated from those lands predominantly used for agriculture and nonforest uses;

3. Critical wildlife and fishery habitat areas;

TIMBERLANDS OBJECTIVES, POLICIES AND IMPLEMENTATION STATEMENTS

OBJECTIVE: To protect for resource uses prime forest lands from encroachment by conflicting land uses.

POLICIES:

1. Prohibit the creation of lots or parcels for non-forest uses in designated timberland areas.

2. Prohibit incompatible development such as the construction of nonaccessory dwellings within designated timberlands.

3. Access to public facilities, such as sewer, water, electricity and telephone, unrelated to forest uses, shall be considered incompatible in designated timberland areas.

POLICY IMPLEMENTATION:

1. The Timberland Resource classification is in-

tended to preserve and protect lands for continued timber production, harvesting and related uses, conserve and protect watersheds, wildlife habitats and other such uses associated with forests; provide for the orderly development of both public and private recreational uses as appropriate and not in conflict with the primary intent of the Timberland Resource zone, which is the sustained production of forest products. Use of land not associated with the management and development of forests shall be discouraged to minimize the potential hazards of damage from fire, pollution and conflict caused by nonforest-related residential, commercial, and industrial activities.

Homesite development shall be discouraged within areas designated as timberlands in the plan. When allowed, homesite development shall be clearly accessory and necessary for a permitted use. Homesite development shall be subject to review and in the review process the burden shall be upon the applicant to show that the homesite is compatible with the purpose and policies of the timberlands classification.

2. Further regulations for development occurring in the designated timberlands areas shall include the following:

   a. Where possible, residences shall maintain a setback of 500 feet from adjoining property boundary lines; and

   b. Domestic water supplies for all development within the designated timberlands shall emanate from surface or sub-surface water sources contained within the boundary of the property in question; or

   c. The domestic water supply is obtained from another source with the documented approval of all other affected parties, with the condition that such a use will not affect the owner's (of that water source) right to utilize forest management practices.

The Timberland Resource or TR zone (§3.2.000 of the Land Use and Development Ordinance) was designed to implement the requirements of the Forest Element. Douglas County holds the position that the TR zone in conjunction with the policies of the Comprehensive Plan does conserve the County's forest resources and therefore all "sensitive big game habitat areas". Uses identified as possibly conflicting found within the TR zone are single-family dwellings and recreational lodges. Some of the signif-

icant TR zone requirements which will conserve sensitive habitats are as follows:

> Single-family dwellings may be established, subject to the approval of the Approving Authority, upon a finding that each proposed dwelling:
>
> > Is compatible with the forest use policies of the Douglas County Comprehensive Plan, thereby retaining forest lands for forest uses;
> >
> > Does not materially alter the stability of the overall land use pattern of the area;
> >
> > Is accessory and necessary for a use permitted by §3.2.050;
>
> Privately owned parks, campgrounds, boating facilities, lodges, camps and other such recreational facilities where overnight lodging is provided, upon satisfying the following conditions:
>
> > The use is compatible with the forest use policies of the Douglas County Comprehensive Plan and wildlife habitat.
> >
> > The use does not interfere seriously with forest practices as regulated by ORS 527.610 - 527.730 on adjacent lands devoted to forest uses or with wildlife habitat.
> >
> > The use does not remove an amount of land from forest production that materially alters the stability of the overall land use pattern of the area.
> >
> > The use is found to be:
> >
> > i. situated on land generally unsuitable for the production of forest or farm crops; or
> >
> > ii. There be a general public need for the use outweighing the benefits of the potential forest use, no feasible alternative location exists for the use, and no adverse long-term effects will be created by allowing the use.

With the preceeding Forest Element Plan policies and ordinance provisions and those provided for wildlife, Douglas County will easily satisfy the Oregon Department of Fish and Wildlife's suggested density guideline for sensitive big game habitat areas of 1 dwelling unit per 80 acres. In order to coordinate planning activities and assure compliance with the sensitive big game habitat guideline, Douglas County has amended a policy (Policy 4, p. 95) to provide notice to ODFW of any land use application for a potential conflicting use.

2) Peripheral Big Game Habitat

Peripheral big game habitat areas consist of lands primarily zoned EFU-G and FF. The exception to this rule are those few committed lands sites located in peripheral habitat areas which are zoned primarily RR-5 and the exception area identified in the Columbian White-Tailed Deer habitat discussion. The adverse impact of these committed lands have already been introduced due to their existence. The County cannot go back and retroactively apply density standards to such sites. There are very few sites and their cumulative impact is very minimal. Therefore, the density standards applicable to identified peripheral areas should not be applied to those committed lands identified in the Plan.

The exception area adjacent to Roseburg and discussed in the white-tailed deer habitat area is in a fringe habitat area and adjacent to the Roseburg UGB. The impact on big game habitat is minimal and habitat requirements will be met by the application of the Columbian White-Tailed Deer Overlay.

The prescribed densities in the EFU-G and FF zones are 200 acres without review (§3.3.200(1) and §3.5.200(g)), 199 to 75 acres upon satisfying administrative procedures (§3.3.200(b) and §3.5.200(b)) and below 75 acres subject to special review criteria (Article 42) and Planning Commission review (§2.600). Nonfarm dwellings and second single-family dwellings may be conditionally permitted.

To conserve peripheral big game habitat, Douglas County provides (in Article 32 of the Land Use and Development Ordinance entitled Special Provisions for Natural Resource Areas) specific density provisions to assure general conformance with the peripheral big game management guideline of 1 dwelling per 40 acres. Also, policy 4 on page 195 was adopted to provide ODFW with the opportunity to participate in quasi-judicial reviews for the establishment of a conflicting use.

No special provisions for conserving big game habitat are necessary for the EFU-C, AW and RR zones as they are almost entirely located within designated "impacted" areas of Douglas County.

6. Delete all of Finding 24 on pages 189 and 190.

7. Add in place of Finding 24 the following:

Habitats of Special Concern

a. The Columbian white-tailed deer habitat (as mapped)

b. Riparian vegetation corridors along rivers and streams

c. Significant wetlands as identified in the section on wetlands.

d. Special bird habitat

(INSERT GOAL 5 ANALYSIS FOR 24 a, b, c and d ABOVE UNDER EACH LETTER)

8. Delete Finding 25 on page 191.

9. Amend Policy 4 at the top of page 195 and add Policy 5 under Objective A to read as follows:

4. ~~As a means of avoiding conflict,~~ Douglas County shall ~~involve~~ notify the Oregon Department of Fish and Wildlife of ~~land use changes within identified sensitive and peripheral big game winter range areas and require a resolution of any identified conflicts~~ any quasi-judicial request for permission to engage in activities which may conflict with sensitive or peripheral big game habitats.

5. The County shall prepare a Big Game Habitat Map after consulting with Oregon Department of Fish and Wildlife. The map shall designate sensitive, peripheral and impacted habitat areas. Areas which are identified as committed or exception area within the Plan shall not have the peripheral density requirements applied as such areas already exceed specified densities.

10. Delete Policy Implementation Statements 1 and 2 on page 195.

11. Amend Policy 2 under Objective D on page 196 to read as follows:

Within designated ~~special wildlife habitat areas~~ habitats of special concern, measures that reduce ~~the~~ impacts ~~of~~ from development such as visual or noise buffers, setbacks, and retention of natural vegetation, ~~will~~ may be ~~required~~ employed as a condition to nonresource development approval.

12. Add a Policy 4 under objective D on page 196; it shall read as follows:

Douglas County shall notify the Oregon Department of Fish and Wildlife of any quasi-judicial request for permission to engage in activities which may conflict with habitats of special concern.

13. Delete Policy 4 under Objective E on page 197.

14. Amend Policy 7 under Objective E on page 197 to read as follows:

All roads ~~shall~~ should be located to avoid unstable headwater areas.

A MAP SHOWING BIG GAME HABITAT AREAS IS ON FILE
AT THE PLANNING DEPARTMENT

(The scale of the map precludes its inclusion in this document)

SPECIAL BIRD HABITAT

1. Amend the Plan to include the following section:

D. Special Bird Habitat

Douglas County provides a wide range of bird habitats, and much of the habitat is preserved through existing land use practices. Four types of special bird habitat have been identified which require special consideration if they are to coexist with other desirable uses. These special bird habitat types include eagle nesting sites, osprey nesting sites, great blue heron rookeries and pigeon mineral springs.

Federal law protects the nest and bird; however, consideration must also be given to the ecological balance within the nesting area, if established nesting areas are to be protected. The federal laws applicable to these birds include the act for the "protection of bald and golden eagles" and the Migratory Bird Treaty Act and Endangered Species Act.

Human activity which conflicts with special habitat areas vary with special habitat needs of each species. Therefore, it is difficult to establish a single set of standards which would provide ample security for each nesting site. In most cases, the best method for providing adequate consideration of special habitat needs in conjunction with human activities is through the development of management plans for nest sites.

Eagles

Bald eagles and golden eagles have recently received the greatest amount of attention. Various publications have established recommendations for eagle nest protection. Although these habitat needs are based on available ecological information, it is not always possible to predict the effects of a given amount of disturbance on a particular pair of eagles. Specific land use decisions will need to consider variations in topography and behavior of individual eagles, so that these general management guidelines can be tailored to suit local conditions. Guidelines published by U.S. Fish and Wildlife Service suggest that nesting territories be considered as two areas: a primary zone which is the most critical area immediately around the nest, and a secondary buffer zone to minimize the disturbance and protect the primary zone. The recommended primary zone should include an area 330 feet from the nest. The size and shape should be adjusted to include frequently used perch trees, alternate nests, flight paths and protection from the wind. The recommended size and shape of the secondary zone is also dependent on topography and visibility from the nest. A minimum boundary of 660 feet from the nest is suggested. The publication suggests that there should be no timber harvest in the primary zone unless designed to enhance stand characteristics for the benefit of nesting eagles. There should be no cutting in the primary zone without a site management plan.

Certain activities have time-limited effects but are likely to disturb eagles during the "critical period", i.e., during the time between the arrival of the adults at the nest site and approximately three weeks after the fledging of any young. The critical period will usually fall between January 1 and August 15. During the first twelve weeks of the

critical period, eagles are most vulnerable to disturbance. Human activities such as blasting, use of firearms, road construction, camping, timber harvest, etc., should be avoided during this critical period. It is recommended that an individual management plan be prepared for each nesting site. The plan should consider the role of physical features and human use patterns that are unique to that site, e.g., topography, past land use in the vicinity, remaining habitat, vulnerability to disturbance, and the behavior of particular eagles, flight paths, perching trees, vegetation screens, snags, visibility of feeding areas.

Great Blue Heron

Great blue herons stand 4 feet tall with a wing span of 70 inches. The species can be distinguished as a heron by its long, unfeathered legs and long, dagger-like bill. They are found throughout the United States and parts of southern Canada.

Great blue herons are a colonial nesting species. They are among the earliest birds to breed in the Pacific Northwest, with nest occupancy occurring about the middle of February. Great blue herons are wariest of intruders at the nest site during pair formation and early stages of incubation. Repeated disturbances may result in nest abandonment. The average departure from the nest for the young is 81 days. The entire nesting cycle roughly ends during the first part of July.

Great blue heron rookeries are found in a variety of vegetative types ranging from hard-stem bullrush to Douglas fir. The shared characteristic of all rookeries is their isolation from human disturbance. The need for isolation of nesting areas and, to a lesser extent, foraging areas sheltered from human disturbance, makes recreational opportunities, timber management and other human activities conflicting uses during nesting periods. Timber harvest and associated activities within 300 feet of the outer nests of a heronry during breeding season would probably result in its abandonment, according to various studies.

Historically, great blue herons have been thought to take significant numbers of game fish and have been considered economically important because of this predation. However, recent finding studies indicate their impact on game fish to be exaggerated (Palmer, 1962). Other than their impact on commercially or recreationally exploitable fish populations, great blue herons have little if any economic importance.

Recommendations for protection of heron rookeries include: establishment of a 300 foot buffer zone - 100 yards circling a colony from which all conflicting uses are excluded; timber harvest to take into consideration windfall of nesting trees and wind damage to young or nests; timing timber harvest activity within 1/2 mile of rookeries not to be conducted during breeding season from February to mid-July.

Bald

Osprey

Of all the nesting habitat areas, the osprey is the most visible. These nesting areas are usually out in the open to begin with, in the tops of snags approximately 100 to 150 feet high. There has been success

in providing platforms for nesting areas. The osprey can be conditioned to minor disturbances, if they already exist when nesting begins. However, osprey nesting sites can be disturbed by intensive recreational activity such as campsites, boating and water skiing. The intrusion of such recreational activities should be limited to an area outside a 300 foot radius of the nest. Other conflicting activities such as timber management (i.e., thinning, harvesting, snag elimination in nesting areas during the breeding season) can cause the abandonment of a nest. Conflicting uses should be avoided during the breeding season of April to September. Various studies also suggest a secondary buffer zone of 600 feet around the nest be established to protect the nesting habitat.

Pigeon Mineral Springs

These springs provide nutrients needed to sustain the life cycle of pigeons. Large numbers of pigeons congregate at such springs and can become easy prey if hunting occurs in these areas. Although pigeons are more tolerant of human activity, springs would be rendered unusable if all vegetation were removed. Birds require perch trees around springs and some vegetative protection.

Since the preliminary inventory of nesting sites and habitat areas was compiled on page II-52 through II-54 of the Natural Features Element, a screening process has been completed by ODFW to determine existing significant sites. Many sites included in the original inventory were found to have lost the habitat quality or they no longer exist. Federal sites included on the original map were not analyzed further. These sites are 1C sites and are under federal jurisdiction. Such bird habitats are given consideration through the management and planning process of federal lands. It is the responsibility of the federal government to resolve any conflicts and establish a conflict resolution process. The County in conjunction with Oregon Department of Fish and Wildlife identified nesting sites which exist on nonfederal land. Although a site specific location is desirable, the level of detail provided by ODFW was to the nearest quarter section. There is a reluctance to refine the location due to the problems of possible intrusion or vandalism of the sites if they are made common knowledge. The ODFW is able to specifically locate each site, and will do so when requested to comment on proposed activities.

A. Application of the Goal 5 process for Special Bird Habitat: The following information addresses the location, quality and quantity of the resource:

1) Location: The following is a listing of sites as closely as ODFW would identify them:

Location	Township	Range	Section	1/4 Section	Source
Bald Eagle Nest Sites	20S	10W	36	NE	ODFW
	20S	11W	31	SE	ODFW
	20S	11W	31	SE	ODFW
	20S	12W	11	SE	ODFW
	22S	9W	16	SW	ODFW

Golden Eagle Nest Sites	24S	6W	34	SE	ODFW
	24S	5W	30	SE	ODFW
	27S	5W	33	23	ODVW
Blue Heron Rookery Sites	26S	7W	24	NE	ODFW
	27S	6W	5	NW	ODFW
Osprey Nest Sites	22S	8W	20	SW	ODFW
	22S	8W	35	S1/2,NE1/4, N1/2,SE1/4	ODFW
	22S	9W	16	SE	ODFW
	22S	9W	17	NW	ODFW
	22S	9W	18	SE1/4,SE1/4 18 SW1/4,SW1/4 17 NW1/4,NW1/4 20 NE1/4,NE1/4 19	ODFW
	23S	7W	4	SW	ODFW
	23S	7W	8	NE	ODFW
	23S	7W	18	S1/2,SW1/4 7 N1/2,NW1/4 18	ODFW
	24S	7W	21	NW	ODFW
	25S	7W	8	SW	ODFW
	26S	6W	30	NE	ODFW
	27S	6W	5	NW	ODFW
	30S	2W	33	NW	ODFW
	30S	3W	34	NE	ODFW
	30S	4W	26	NE	ODFW
	30S	4W	8	SE	ODFW
	30S	5W	24	NW	ODFW
	30S	5W	29	NW	ODFW
	31S	7W	8	SW	ODFW
	31S	7W	34	SE	ODFW
	31S	8W	35	SW	ODFW
Pigeon Springs	22S	4W	8	SW	ODFW
	25S	1W	36	NE	ODFW
	26S	4W	14	SE	ODFW

2) Quality: The quality of these sites is good as they are currently used nesting sites indicating the acceptable quality of the habitat area.

3) Quantity: Each inventoried area contains one nesting site and each designation encompasses one quarter section. However, these nesting sites in most cases will not require the entire quarter section to be protected. The actual impact area will vary with type of bird and characteristics of the site, requiring individual management plans. Therefore, an exact determination of acres needed to protect nesting habitat areas cannot be made.

B. Potentially conflicting Uses in Special Bird Habitat Areas: In reviewing the zoning designations of the identified habitat areas, three resource zones were found to be applied. These

were Exclusive Farm Use - Grazing (EFU-G), Timber Resource (TR) and Farm Forest Transitional (FF).

Some resource uses, as well as nonresource uses, were identified as having potential conflicts with these habitat areas. In many cases, mitigation could be provided to allow the use and still preserve the habitat. The three major areas of conflict centered on timber management (especially harvesting and road construction), recreation and residential development. Specific potentially conflicting uses contained within the TR, EFU-G, and FF zones are as follows:

Zone	Permitted Uses	Conditional Uses
TR	Timber harvest & road construction	Single-family dwellings
	Mining & quarrying rock	Private recreation facilities
	Recreational facilities	Solid waste disposal sites
		Wood processing facility
FF	Same as TR	Single-family dwellings
	Single-family dwelling	Commercial in conjunction with farm use
	Schools, churches	Mining
	Utility facilities	Recreation
		Airports
		Energy generation facilities & transmission lines
EFU-G	Same as FF	Same as FF

C. Economic, Social, Environmental and Energy Consequences of Conserving Big Game Habitats.

1) Economic consequences: The major economic impact is associated with timber harvesting or management. If no timber harvest were permitted within the identified 4,000 acres, a significant amount of merchantable timber would be removed from the timber supply base. There is a current depressed level of employment in the wood products sector, related to demand conditions in the national economy. However, beneath toady's concerns are projections for a dip in wood products production in the 1980's and 1990's due to the availability. A further reduction of timber supply as a result of curtailment of forest practices for

nonforest production purposes would intensify the projected downturn and increase the rate of unemployment.

By not allowing timber harvesting, road construction would not be necessary. If road construction were not permitted, it would affect the levels of timber harvest and require alternate logging systems increasing logging cost, and perhaps making harvesting of the trees uneconomical.

Good quality rock and other minerals are often difficult to locate. Road construction costs would be greatly increased if rock were to be transported from other areas, as a major factor in rock cost is transportation. Could cause a decline in employment within this particular sector.

Recreational facilities are abundant throughout the County. There may be a small loss in facilities but generally there would be no loss to the tourist industry due to lack of facilities. There would be economic loss to the particular owner of a parcel if his intentions were for commercial recreational use.

By permitting these uses, minimal economic impact would result by not preserving the nesting sites.

There is a negative economic consequence of applying regulation to single-family residences or similar development which are generally borne by individuals. In some instances, this can become an extreme financial hardship to an individual.

2) Social consequences: The negative social consequences of limiting residential development in habitat areas means the desire to live in rural areas for owners of affected parcels may remain unsatisfied. If the areas could not be harvested, the decline in production would contribute to shortages of building materials. The increased unemployment may add to the unstable community structure requiring workers to seek employment out of county, disrupting social structures as well.

Recreational opportunities as far as camping, hunting, off-road vehicles, etc., would be channeled to other areas. However, by limiting such conflicting uses, naturalists and bird watchers would have enhanced opportunities. Actions to limit uses or to allow uses will act as a catalyst for conflict over management practices of causing community polarization.

2.

3) Environmental consequences: The environmental consequences of limiting development in nesting habitat areas are positive. Opportunities for birds to nest in a habitat without repeated interference or disturbances from man

should be a positive consequence. Timber harvesting, if permitted, would remove cover and change the major vegetation. Could destroy nesting sites, roosting trees and generally cause disturbance which would cause birds to leave an area. These impacts can be mitigated by regulating when harvesting occurs and individual management plans. Other techniques, such as selective logging and leaving snags or building platforms can often mitigate some negative impacts of logging. Road construction causes major disturbance to birds and creates access to nesting sites which would increase conflicts associated with human associations such as vandalism, fires, loud noises and gunfire.

The limitation on nonresource development such as single-family dwellings would limit disturbances and not introduce a use which may have a negative effect on a nesting site.

The limiting of recreation would not encourage human intrusion, again minimizing those types of conflicts. Vehicular noise would be limited by no road building but would hamper firefighting access.

4) Energy consequences: The energy consequences of not allowing conflicting uses are minimal. There would be a savings in fuel consumption by not logging, building roads or maintaining roads.

5) Conclusion: Based on the results of the ESEE analysis, it would be detrimental to not allow the conflicting uses, particularly when considering the economic impacts. However, the economic impact can be diminished by allowing conflicting uses within the quarter section and protecting the nesting sites by a variety of methods, such as establishing an overlay zone and conflict resolution process.

D. Douglas County's Program to Achieve the Goal. The County's program to achieve the goal consists of the Comprehensive Plan objectives, policies and implementing ordinances of Land Use and Development Ordinance Section 3.32.00.

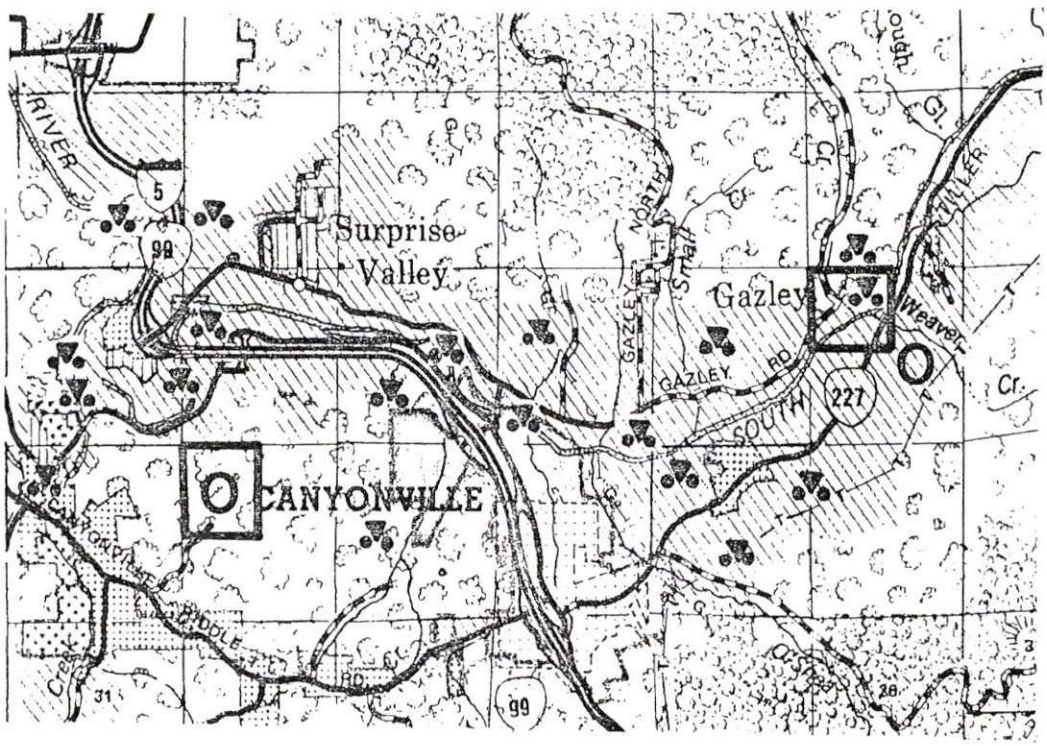
Add the following policies to Habitats of Special Concern on p. 196 of the Plan:

The Department of Forestry, prior to issuing a permit for timber harvest shall consult the Plan map of Habitats of Special Concern and determine if such activity will be conducted within a designated habitat area. If it is found that the activity is within such a designation, the Department of Forestry shall coordinate with Oregon Department of Fish and Wildlife

to determine the exact location of the nesting site or special habitat area.

Property owners of lands containing Habitats of Special Concern shall be encouraged to develop a management plan in conjunction with the Oregon Department of Fish and Wildlife prior to beginning any activity which may adversely affect the habitat. Such management plans shall consider nesting trees, perch trees, critical nesting period, roosting sites and buffer zones.

The County shall establish an overlay zone which includes the nest site and adjacent lands necessary to protect the nest site. The exact location of the nest site will be determined by ODFW and they will consult with the property owner and Department of Forestry. The overlay zone shall require a management plan be developed in conjunction with ODFW prior to commencement of any conflicting use. The following habitat protection overlay zone areas shall be established around identified nest sites and mineral springs:



a. Eagle and Osprey Nests - an overlay zone with a radius of at least 660 feet from the nest shall be established around the nest tree. The actual shape of the zone should be determined on a site-by-site basis to include perching trees and trees that will provide protection from the wind and serve as alternative nest sites.

b. Heron Rookeries and Pigeon Mineral Springs - an overlay zone with a radius of at least 300 feet from the rookery or mineral springs.

DOUGLAS
COUNTY

PLANNING DEPARTMENT

COURTHOUSE ANNEX NO. 2 · 205 S.E. JACKSON ST. · ROSEBURG, OREGON 97470 · (503) 673-1111

October 4, 1982

MEMORANDUM

TO: DOUGLAS COUNTY BOARD OF COMMISSIONERS

FROM: DOUGLAS COUNTY PLANNING DEPARTMENT

RE: PROPOSED AMENDMENTS TO DOUGLAS COUNTY COMPREHENSIVE PLAN AMENDMENTS (Additions to BLUE document dated Planning Commission September 23, 1982; Board of Commissioners October 6, 1982)

The following items are recommended for addition or change to the proposed amendments to the Douglas County Comprehensive Plan. These changes are based on the Planning Commission action on September 23, 1982, and written and oral comments received during the review period.

LAND USE ELEMENT

1. Amend the proposed amendment to number 4 under "Density", "Committed Residential" on page 418 to read as follows:

> Committed - Lot of Record - Indicates a committed area where, according to County information, a combination of constraints (as listed on the following page - "density criteria") limit development potential. In areas designated Lot of Record, only existing (and vacant) lots of record shall receive additional development.

2. Amend the proposed amendment to the first sentence of paragraph 3 on page 418 to read as follows:

> Residential areas designated as "Lot of Record" on the plan map are intended to receive either the lowest density rural residential zone designation (RR-5) or for parcels 10 acres or greater in size the AW (Agriculture and Woodlot) zone (thus precluding further parcelization).

SPECIAL BIRD HABITAT

3. Amend Section D on page 94 of the amendment proposal to read as follows:

D. Douglas County's Program to Achieve the Goal: The County's program to achieve the goal consists of the Forest Practices Act as administered by the Department of Forestry, the Comprehensive Plan objectives, policies and implementing ordinances (Land Use and Development Ordinance §3.32.00).

4. Amend the proposed policies on page 94 under No. 2 to read as follows:

1. The Department of Forestry, upon the receipt of Notification of Operation, shall consult the Plan map of Special Bird Habitats and determine if such activity will be conducted within a designated habitat area. If it is found that the activity is within such a designation, the Department of Forestry shall coordinate with Oregon Department of Fish and Wildlife to determine the exact location of the nesting site or special habitat area.

2. Property owners of lands containing Special Bird Habitats shall be encouraged to develop a management plan or pre-operation plan in conjunction with the Oregon Department of Fish and Wildlife prior to beginning any activity which may adversely affect the habitat. Such management plans or pre-operation plans shall consider nesting trees, perch trees, critical nesting period, roosting sites and buffer zones.

3. The County shall establish an overlay zone which includes the nest site and adjacent lands necessary to protect the nest site. The exact location of the nest site will be determined by ODFW and they will consult with the property owner and Department of Forestry. The overlay zone shall require a management plan or pre-operation plan prior to the commencement of any conflicting use. The following habitat protection overlay zone areas shall be established around identified nest sites and mineral springs:

a. Eagle and Osprey Nests - an overlay zone with a radius of at least 650 feet from the nest shall be established around the nest tree. The actual shape of the zone should be determined on a site-by site basis to include perching trees and trees that will provide protection from the wind and serve as alternative nest sites.

b. Heron Rookeries and Pigeon Mineral Springs - an overlay zone with a radius of at least 300 feet from the rookery or mineral springs.

NATURAL AREAS

5. Amend the proposed Natural Areas Findings Nos. 9 and 11 on page 114 of the proposed plan amendments to read as follows:

9. The Roseburg District of the Bureau of Land Management has designated Myrtle Island as a timber preservation area and Research Natural Area.

11. Several additional Research Natural Areas and areas of critical environmental concern have been proposed by the Roseburg District of the BLM.

6. Amend the chart on page 117 of the proposed amendments to delete the word "proposed" from No. 80. The name reads as:

80 Myrtle Island RNA

7. Amend the proposed amendments to Natural Areas on page 121 so that item 7c reads as follows:

c. Quantity: 240 acres.

OUTSTANDING SCENIC VIEWS AND SITES

8. Amend the proposed amendment to Outstanding Scenic Views and Sites on page 130. The paragraph under the heading BLM INVENTORY should read as follows:

The BLM visual resource management inventory was reviewed to identify outstanding scenic areas outside of the Umpqua National Forest and coastal area. The BLM scenic class applies only to BLM lands; however, it can be used as a general indicator of scenic quality. Additional studies may be needed to determine the scenic quality of surrounding private lands. The BLM system categorizes areas under several classes of Visual Resource Management Objectives based upon a combination of three factors: scenic quality, visual sensitivity and distance zone. Several areas were rated as Class A (high) Scenic Quality, with the majority of areas rated Class B (moderate) and Class C (minimal). Each inventoried viewshed was analyzed and it was determined that Class B and C areas were common throughout the County and did not possess outstanding visual resources. The Class B scenery reflected visual quality that was appealing but not outstanding. These areas did nto have unique features which could not be found frequently within the County. The Class C scenery was of a minimal visual quality and lacked variation of soils, water, rocks or vegetation. Often the Class C scenery were landscapes on which man's activities have degraded the scenic values. These Class B and C areas are not included within the plan inventory due to the fact that the information available on location, quality and quantity did not indicate any outstanding scenic views or sites, therefore not a primary visual resource requiring special protection.

ESTUARINE PLAN AMENDMENTS

14. Add to page 17 of Coastal Resources Support Document:

Estuarine Subarea No. XIII: Winchester Creek
Description: Winchester Creek from Winchester Bay to 1000 feet above head of tide.

SHORELAND PLAN AMENDMENTS

15. Add to page 61 of the Coastal Resources Support Document:

Shorelands Subarea No. 5: Winchester Creek
Subarea Description: Shorelands in Subarea No. 5 extend from Winchester Bay to 1000 feet above designated head of tide. West of Highway 101 the Shorelands are limited to lands one foot above MHHW. For areas east of Highway 101, the upland extent of shorelands management varies. On the north bank of Winchester Creek, the shorelands extend from MHHW to the dike which protects the southern end of Broadway, Clearlake and Diamond Streets. Elsewhere, with the exception of lands located south of Winchester Creek and developed as timberlands, shorelands management extends to those lands within 100 feet of the middle of the creek at MLLW to 1000 feet above the head of tide.

DOUGLAS
COUNTY

PLANNING DEPARTMENT

COURTHOUSE ANNEX NO. 2 · 205 S.E. JACKSON ST. · ROSEBURG, OREGON 97470 · (503) 673-1111

October 4, 1982

MEMORANDUM

TO: Douglas County Board of Commissioners

FROM: Douglas County Planning Department

RE: Proposed Amendments to Douglas County Land Use and Development Ordinance (Additions to GREEN document dated Board of Commissioners October 6, 1982.)

The following four items are recommended for addition or change to the proposed amendments to the Land Use and Development Ordinance.

1. By Planning Commission action on September 23, add to the definition of "campground" after facilities in line 2, except commercial activities such as grocery stores and laundromats.
2. By Planning Commission action on September 23, amend the provision contained §3.35.800(E)(4) to allow a 60 day period of time rather than the 30 currently stated.
3. To correct the proposed amendment in §3.32.300 Peripheral Big Game Habitat Overlay, change "less" in line 4 of §3.32.300(C)(1) to "greater".
4. To clarify the coordinative role of affected State agencies and Douglas County in the protection of habitat sites and processing of requests for development approval or Notification of Operation, amend the following portions of §3.32.500:

   (a) Amend §3.32.500(C)(1) Initiation to read:

   (1) The conflict resolution process shall be initiated by Douglas County or the Oregon State Department of Forestry when a request for development or Notification of Operation, respectively, is received for an identified area. The affected agency shall notify the Oregon Department of Fish and Wildlife immediately.

(b) Amend §3.32.500(C)(4) Management Plan to read:

(4) Management Plan and Pre-operation Plan

If the site would be affected, Oregon Department of Fish and Wildlife will encourage the property owner to develop a management plan or pre-operation plan to preserve the habitat site. Such plans shall consider nesting trees, perch trees, critical nesting periods, roosting sites and buffer areas.

(c) Amend §3.32.500(C)(5) Approval of Activity to read:

(5) Approval of Activity

a. The Oregon Department of Forestry shall conduct a pre-operation inspection prior to commencement of any activities subject to the Forest Practices Act within areas identified as special bird habitat on the Comprehensive Plan. Such pre-operation inspections shall be coordinated between the Oregon Department of Fish and Wildlife, the operator and the Forest Practices Forester and will result in a pre-operation plan being developed.

b. For activities other than those subject to the Forest Practices Act, Douglas County shall not approve requests made for potentially conflicting activities until a management plan prepared in conjunction with the Oregon Department of Fish and Wildlife is submitted as part of the application.

JEE/mas

CODE

will be protected from significant conflicting uses by this classification. This overlay classification will promote: nonpre-emptive underlying uses, a process for consideration for acquisition, and allow other uses subject to administrative review.

10. Amend §3.2.100(2) to read:

Solid waste disposal sites of ten (10) acres or less for disposal of industrial wastes or development of a County solid waste transfer station; the placement of hydroelectric, solar, wind or geothermal generation facilities transmission lines, pipes or substations and communication facilities; water resources, aggregate minerals or other subsurface resources upon findings that the use:

11. Amend §3.5.100(15) to read:

Solid waste disposal sites ~~as provided by ORS 215.213(2)(k)~~ of ten (10) acres or less for disposal of industrial wastes or development of a County solid waste transfer station;

12. Amend §3.6.100 to add a new use (11):

Winery.

13. Amend §3.30.220, paragraph 2, and §3.30.270(7) to include references to the recently completed floodplain studies for Calapooya and Elk creeks.

14. Add a new Section:

ARTICLE 32

SUPPLEMENTARY PROVISIONS FOR NATURAL RESOURCE AREAS

SECTION 3.32.000

This Article, Supplementary Provisions for Natural Resource Areas, is designed to provide protection for a number of natural resource areas throughout Douglas County. The Article consists of several overlay districts that provide additional development standards or special processes for development in protected areas. The overlay districts are designed to minimize uses which conflict with the resource values being protected and manage the resource areas so as to preserve their original character.

SECTION 32.100 Mineral Resources Overlay

A. Purposes

The Mineral Resources Overlay is designed to conserve prime mineral resource sites from conflicting uses and promote nonpre-emptive uses of these needed sites. The overlay is designed to ensure that structural development on mineral sites does not preclude the future availability and use of the mineral resource. Sites are identified on the 1C Mineral Resource Sites Table under the Mineral and Energy Resources section of the Natural Features Element of the Comprehensive Plan.

B. Permitted Uses

Within this overlay classification, dwellings, churches, schools and accessory structures to these uses shall not be permitted. Farm uses and forest uses shall be permitted outright. All other allowed uses in the underlying zone are permitted conditionally and shall be subject to the conditional use process and supplemental criteria of subsection (c) of this section.

C. Supplemental Criteria for Approval

In the approval of a use or conditional use permitted in the underlying zone, the County shall find:

1) That the use cannot be placed on an alternative site; and

2) That there are extenuating circumstances that make the proposed use more valuable than the resource. If there is no alternative site for the proposed use, and the extenuating circumstances are valid, then the proposed use shall be allowed if it conforms to all other requirements of the Land Use and Development Ordinance.

SECTION 3.32.200 Riparian Vegetation Corridor Overlay (RCVO)

A. Purpose

The Riparian Vegetation Corridor Overlay shall apply to all properties and land use designations located within 50 feet of the bankline of all perennial and intermittent water courses in Douglas County as identified on the Plan map.

B. Permitted Uses

All uses allowed in the underlying zone may be permitted or conditionally permitted in an area regulated by the Riparian Vegetation Corridor Overlay. However, structural development shall be subject to the provisions of subsection (C) of this Section.

C. Setback Requirements for Structural Development

A building setback of fifty (50) feet horizontally from the bank of all identified perennial and intermittent water courses shall be maintained unless the County ministerially finds, after consultation with the Oregon Department of Fish and Wildlife, that such setback is unnecessary as a mitigation measure for the protection of wildlife. If agreement cannot be reached, a Variance, pursuant to Article 40, shall be required to reduce the setback, and reduction of the setback will not jeopardize streambank stability, water quality, etc.

SECTION 3.32.300 Peripheral Big Game Habitat Overlay

A. Purpose

The Peripheral Big Game Habitat Overlay is designed to preserve identified peripheral habitat areas by ~~providing supplementary~~ development standards which promote an area-wide dwelling density consistent with such habitat management. A density of 1 dwelling unit per 40 acres shall be maintained in areas so designated on the Peripheral Big Game Habitat Map of the Comprehensive Plan.

B. Permitted Uses

All uses allowed in the underlying zone may be permitted or conditionally permitted. However, dwellings shall be subject to the density considerations contained in subsection (C) of this Section.

C. Density Provision

1. All quasi-judicial requests for dwellings or land divisions that will result in eventual placement of a dwelling, or administrative review of nonresource dwellings (ORS 215.203(3)) which could result in an average density of less than 1 dwelling per 40 acres, shall be referred to the Oregon Department of Fish and Wildlife (ODFW) for review and recommendation. If the ODFW cannot recommend approval or suggest acceptable mitigation measures, a variance, pursuant to Article 40, shall be required.

SECTION 3.32.400 Columbian White-Tailed Deer Habitat Overlay

A. Purpose

The Columbian White-Tailed Deer Habitat Overlay is designed to protect and conserve areas of prime CWTD habitat by limiting uses that conflict with maintenance of the habitat area. It will be applied to areas identified on the Columbian White-Tailed Deer Habitat map of the Comprehensive Plan and will require special standards for approval of structural developments.

B. Permitted Uses

All uses allowed in the underlying zone may be permitted or conditionally permitted in an area regulated by the Columbian White-Tailed Deer Habitat Overlay. However, structural development shall be subject to the provisions of subsection (C) of this Section.

C. Setback Requirements for Structural Development

A building setback of one hundred (100) feet horizontally from the bank of all identified perennial and intermittent water courses shall be maintained unless the County ministerially finds, after consultation with the Oregon Department of Fish and Wildlife, that such setback is unnecessary as a mitigation measure for the protection of wildlife. If agreement cannot be reached, a Variance, pursuant to Article 40, shall be required to reduce the setback.

SECTION 3.32.500 Special Bird Habitat Overlay

A. Purpose

The Special Bird Habitat Overlay is designed to provide a coordinative mechanism for resolving potentially conflicting uses with established Special Bird Habitats. The goal of the Overlay is to preserve such habitat areas, especially established nesting sites and adjacent lands necessary to protect those sites. The process will allow review of development proposals in the quarter section of land surrounding sites identified on the Special Bird Habitat Map of the Comprehensive Plan.

B. Permitted Uses

Uses allowed in the underlying zone(s) are permitted or conditionally permitted in the Special Bird Habitat Overlay, subject to the conflict resolution process outlined in subsection (C) of this Section.

C. Conflict Resolution Process

1. Initiation

The conflict resolution process shall be initiated by Douglas County or the Oregon State Forestry Department when a request for development approval or Forest Harvest Permit, respectively, is received for an identified area. The affected agency shall notify the ODFW immediately.

2. Location of Site

The ODFW will precisely locate the identified site and determine if the proposed activity will affect the actual habitat site. ODFW will consider the site affected if the activity is:

a. within 660 feet of an eagle or osprey nest;

b. within 300 feet of a heron rookery or pigeon mineral spring.

3. If ODFW determines that the site will not be affected, the provisions of the Overlay district shall not apply.

4. Management plan
If the site would be affected, ODFW will encourage the property owner to develop a management plan to preserve the habitat site. Such management plan shall consider nesting trees, perch trees, critical nesting periods, roosting sites and buffer areas.

5. Approval of activity.

a. Oregon State Forestry Department will suspend approval of a request for Forest Harvest Permit for 15 days from receipt in order to allow sufficient time for the conflict resolution process to be conducted.

b. Douglas County shall not approve requests made for potentially conflicting activities until a management plan prepared in conjunction with ODFW is submitted as part of the application.

SECTION 3.32.600 Natural Area Overlay

A. Purpose

This overlay classifiction is intended to pre-emt conflicting uses in areas identified by the Comprehensive Plan as containing significant natural value. The overlay is designed to protect the identified natural value by allowing only uses which will not permanently destroy the natural value.

B. Permitted Uses

Uses allowed in the underlying zone shall be subject to the conditional use review pursuant to §2.060(a) of this Ordinance.

C. Approval Standard

In the evaluation of any use subject to the Natural Area Overlay, findings will be required demonstrating that the designated natural value will not be damaged by the use or activity. If a proposed use or activity would result in the permanent destruction of natural value, then the request shall be denied.

SECTION 3.32.700 Significant Wetlands Overlay (SW)

A. Purpose

The Significant Wetlands Overlay shall apply to major swamps, bogs, marshes and transitional lands identified by the Oregon Department of Fish and Wildlife as having good to excellent wetland qualities and designated on the Significant Wetlands maps of the Comprehensive Plan. The SW Overlay zone shall require an additional development standard in designated resource areas. Development in the areas zoned for nonresource use shall not be subject to the provisions of this Overlay.

B. Permitted Uses

All uses in the underlying zone may be permitted or conditionally permitted in an area regulated by the SW Overlay. However, structural development shall be subject to the provisions of subsection (C) of this Section.

C. Setback Requirements

With the exception of wetland areas presently designated for nonresource use in the County's Comprehensive Plan, a building setback of fifty (50) feet horizontally from the bank of all significant wetlands shall be maintained unless the County ministerially finds, after consultation with the Oregon Department of Fish and Wildlife, that such a setback is unnecessary as a mitigation measure for the protection of the wetland. If agreement cannot be reached, a variance, pursuant to Article 40, shall be required to reduce the setback.

15. Amend §3.35.400 to read:

SECTION 3.35.400 ~~Historic, Archaeological and Cultural Overlay~~ Cultural, Historic and Archaeological Resources Overlay

The purpose of this overlay district is to reasonably assure that ~~such~~ resources classified as "significant" in Douglas County's Historic Resource Register are conserved and protected, while providing an expedient process for reviewing land uses actions that may affect identified sites.

Prior to approval of a ~~development~~ building permit or other land use action, the following measures shall be utilized:

1. Administratively determine ~~whether a new or expanding land use is~~ the following:

   a. Whether the application for a building permit pertains to a registered significant cultural or historic resource;

COURTHOUSE ANNEX NO. 2 · 205 S.E. JACKSON ST. · ROSEBURG, OREGON 97470 · (503) 673-1111

October 4, 1982

MEMORANDUM

TO: Douglas County Board of Commissioners

FROM: Douglas County Planning Department

RE: Proposed Amendments to Douglas County Land Use and Development Ordinance (Additions to GREEN document dated Board of Commissioners October 6, 1982.)

The following four items are recommended for addition or change to the proposed amendments to the Land Use and Development Ordinance.

1. By Planning Commission action on September 23, add to the definition of "campground" after facilities in line 2, except commercial activities such as grocery stores and laundromats.
2. By Planning Commission action on September 23, amend the provision contained §3.35.800(E)(4) to allow a 60 day period of time rather than the 30 currently stated.
3. To correct the proposed amendment in §3.32.300 Peripheral Big Game Habitat Overlay, change "less" in line 4 of §3.32.300(C)(1) to "greater".
4. To clarify the coordinative role of affected State agencies and Douglas County in the protection of habitat sites and processing of requests for development approval or Notification of Operation, amend the following portions of §3.32.500:

   (a) Amend §3.32.500(C)(1) Initiation to read:

   (1) The conflict resolution process shall be initiated by Douglas County or the Oregon State Department of Forestry when a request for development or Notification of Operation, respectively, is received for an identified area. The affected agency shall notify the Oregon Department of Fish and Wildlife immediately.

(b) Amend §3.32.500(C)(4) Management Plan to read:

(4) Management Plan and Pre-operation Plan

If the site would be affected, Oregon Department of Fish and Wildlife will encourage the property owner to develop a management plan or pre-operation plan to preserve the habitat site. Such plans shall consider nesting trees, perch trees, critical nesting periods, roosting sites and buffer areas.

(c) Amend §3.32.500(C)(5) Approval of Activity to read:

(5) Approval of Activity

a. The Oregon Department of Forestry shall conduct a pre-operation inspection prior to commencement of any activities subject to the Forest Practices Act within areas identified as special bird habitat on the Comprehensive Plan. Such pre-operation inspections shall be coordinated between the Oregon Department of Fish and Wildlife, the operator and the Forest Practices Forester and will result in a pre-operation plan being developed.

b. For activities other than those subject to the Forest Practices Act, Douglas County shall not approve requests made for potentially conflicting activities until a management plan prepared in conjunction with the Oregon Department of Fish and Wildlife is submitted as part of the application.

CODE

will be protected from significant conflicting uses by this classification. This overlay classification will promote: nonpre-emptive underlying uses, a process for consideration for acquisition, and allow other uses subject to administrative review.

10. Amend §3.2.100(2) to read:

Solid waste disposal sites of ten (10) acres or less for disposal of industrial wastes or development of a County solid waste transfer station; the placement of hydroelectric, solar, wind or geothermal generation facilities transmission lines, pipes or substations and communication facilities; water resources, aggregate minerals or other subsurface resources upon findings that the use:

11. Amend §3.5.100(15) to read:

Solid waste disposal sites ~~as provided by ORS 215.213(2)(k)~~ of ten (10) acres or less for disposal of industrial wastes or development of a County solid waste transfer station;

12. Amend §3.6.100 to add a new use (11):

Winery.

13. Amend §3.30.220, paragraph 2, and §3.30.270(7) to include references to the recently completed floodplain studies for Calapooya and Elk creeks.

14. Add a new Section:

ARTICLE 32

SUPPLEMENTARY PROVISIONS FOR NATURAL RESOURCE AREAS

SECTION 3.32.000

This Article, Supplementary Provisions for Natural Resource Areas, is designed to provide protection for a number of natural resource areas throughout Douglas County. The Article consists of several overlay districts that provide additional development standards or special processes for development in protected areas. The overlay districts are designed to minimize uses which conflict with the resource values being protected and manage the resource areas so as to preserve their original character.

SECTION 32.100 Mineral Resources Overlay

A. Purposes

The Mineral Resources Overlay is designed to conserve prime mineral resource sites from conflicting uses and promote nonpre-emptive uses of these needed sites. The overlay is designed to ensure that structural development on mineral sites does not preclude the future availability and use of the mineral resource. Sites are identified on the 1C Mineral Resource Sites Table under the Mineral and Energy Resources section of the Natural Features Element of the Comprehensive Plan.

B. Permitted Uses

Within this overlay classification, dwellings, churches, schools and accessory structures to these uses shall not be permitted. Farm uses and forest uses shall be permitted outright. All other allowed uses in the underlying zone are permitted conditionally and shall be subject to the conditional use process and supplemental criteria of subsection (c) of this section.

C. Supplemental Criteria for Approval

In the approval of a use or conditional use permitted in the underlying zone, the County shall find:

1) That the use cannot be placed on an alternative site; and

2) That there are extenuating circumstances that make the proposed use more valuable than the resource. If there is no alternative site for the proposed use, and the extenuating circumstances are valid, then the proposed use shall be allowed if it conforms to all other requirements of the Land Use and Development Ordinance.

SECTION 3.32.200 Riparian Vegetation Corridor Overlay (RCVO)

A. Purpose

The Riparian Vegetation Corridor Overlay shall apply to all properties and land use designations located within 50 feet of the bankline of all perennial and intermittent water courses in Douglas County as identified on the Plan map.

B. Permitted Uses

All uses allowed in the underlying zone may be permitted or conditionally permitted in an area regulated by the Riparian Vegetation Corridor Overlay. However, structural development shall be subject to the provisions of subsection (C) of this Section.

C. Setback Requirements for Structural Development

A building setback of fifty (50) feet horizontally from the bank of all identified perennial and intermittent water courses shall be maintained unless the County ministerially finds, after consultation with the Oregon Department of Fish and Wildlife, that such setback is unnecessary as a mitigation measure for the protection of wildlife. If agreement cannot be reached, a Variance, pursuant to Article 40, shall be required to reduce the setback, and reduction of the setback will not jeopardize streambank stability, water quality, etc.

SECTION 3.32.300 Peripheral Big Game Habitat Overlay

A. Purpose

The Peripheral Big Game Habitat Overlay is designed to preserve identified peripheral habitat areas by ~~providing supplementary~~ development standards which promote an area-wide dwelling density consistent with such habitat management. A density of 1 dwelling unit per 40 acres shall be maintained in areas so designated on the Peripheral Big Game Habitat Map of the Comprehensive Plan.

B. Permitted Uses

All uses allowed in the underlying zone may be permitted or conditionally permitted. However, dwellings shall be subject to the density considerations contained in subsection (C) of this Section.

C. Density Provision

1. All quasi-judicial requests for dwellings or land divisions that will result in eventual placement of a dwelling, or administrative review of nonresource dwellings (ORS 215.203(3)) which could result in an average density of less than 1 dwelling per 40 acres, shall be referred to the Oregon Department of Fish and Wildlife (ODFW) for review and recommendation. If the ODFW cannot recommend approval or suggest acceptable mitigation measures, a variance, pursuant to Article 40, shall be required.

SECTION 3.32.400 Columbian White-Tailed Deer Habitat Overlay

A. Purpose

The Columbian White-Tailed Deer Habitat Overlay is designed to protect and conserve areas of prime CWTD habitat by limiting uses that conflict with maintenance of the habitat area. It will be applied to areas identified on the Columbian White-Tailed Deer Habitat map of the Comprehensive Plan and will require special standards for approval of structural developments.

B. Permitted Uses

All uses allowed in the underlying zone may be permitted or conditionally permitted in an area regulated by the Columbian White-Tailed Deer Habitat Overlay. However, structural development shall be subject to the provisions of subsection (C) of this Section.

C. Setback Requirements for Structural Development

A building setback of one hundred (100) feet horizontally from the bank of all identified perennial and intermittent water courses shall be maintained unless the County ministerially finds, after consultation with the Oregon Department of Fish and Wildlife, that such setback is unnecessary as a mitigation measure for the protection of wildlife. If agreement cannot be reached, a Variance, pursuant to Article 40, shall be required to reduce the setback.

SECTION 3.32.500 Special Bird Habitat Overlay

A. Purpose

The Special Bird Habitat Overlay is designed to provide a coordinative mechanism for resolving potentially conflicting uses with established Special Bird Habitats. The goal of the Overlay is to preserve such habitat areas, especially established nesting sites and adjacent lands necessary to protect those sites. The process will allow review of development proposals in the quarter section of land surrounding sites identified on the Special Bird Habitat Map of the Comprehensive Plan.

B. Permitted Uses

Uses allowed in the underlying zone(s) are permitted or conditionally permitted in the Special Bird Habitat Overlay, subject to the conflict resolution process outlined in subsection (C) of this Section.

C. Conflict Resolution Process

1. Initiation

The conflict resolution process shall be initiated by Douglas County or the Oregon State Forestry Department when a request for development approval or Forest Harvest Permit, respectively, is received for an identified area. The affected agency shall notify the ODFW immediately.

2. Location of Site

The ODFW will precisely locate the identified site and determine if the proposed activity will affect the actual habitat site. ODFW will consider the site affected if the activity is:

a. within 660 feet of an eagle or osprey nest;

b. within 300 feet of a heron rookery or pigeon mineral spring.

3. If ODFW determines that the site will not be affected, the provisions of the Overlay district shall not apply.

4. Management plan
If the site would be affected, ODFW will encourage the property owner to develop a management plan to preserve the habitat site. Such management plan shall consider nesting trees, perch trees, critical nesting periods, roosting sites and buffer areas.

5. Approval of activity.

a. Oregon State Forestry Department will suspend approval of a request for Forest Harvest Permit for 15 days from receipt in order to allow sufficient time for the conflict resolution process to be conducted.

b. Douglas County shall not approve requests made for potentially conflicting activities until a management plan prepared in conjunction with ODFW is submitted as part of the application.

SECTION 3.32.600 Natural Area Overlay

A. Purpose

This overlay classifiction is intended to pre-emt conflicting uses in areas identified by the Comprehensive Plan as containing significant natural value. The overlay is designed to protect the identified natural value by allowing only uses which will not permanently destroy the natural value.

B. Permitted Uses

Uses allowed in the underlying zone shall be subject to the conditional use review pursuant to §2.060(a) of this Ordinance.

C. Approval Standard

In the evaluation of any use subject to the Natural Area Overlay, findings will be required demonstrating that the designated natural value will not be damaged by the use or activity. If a proposed use or activity would result in the permanent destruction of natural value, then the request shall be denied.

SECTION 3.32.700 Significant Wetlands Overlay (SW)

A. Purpose

The Significant Wetlands Overlay shall apply to major swamps, bogs, marshes and transitional lands identified by the Oregon Department of Fish and Wildlife as having good to excellent wetland qualities and designated on the Significant Wetlands maps of the Comprehensive Plan. The SW Overlay zone shall require an additional development standard in designated resource areas. Development in the areas zoned for nonresource use shall not be subject to the provisions of this Overlay.

B. Permitted Uses

All uses in the underlying zone may be permitted or conditionally permitted in an area regulated by the SW Overlay. However, structural development shall be subject to the provisions of subsection (C) of this Section.

C. Setback Requirements

With the exception of wetland areas presently designated for nonresource use in the County's Comprehensive Plan, a building setback of fifty (50) feet horizontally from the bank of all significant wetlands shall be maintained unless the County ministerially finds, after consultation with the Oregon Department of Fish and Wildlife, that such a setback is unnecessary as a mitigation measure for the protection of the wetland. If agreement cannot be reached, a variance, pursuant to Article 40, shall be required to reduce the setback.

15. Amend §3.35.400 to read:

SECTION 3.35.400 ~~Historic, Archaeological and Cultural Overlay~~ Cultural, Historic and Archaeological Resources Overlay

The purpose of this overlay district is to reasonably assure that ~~such~~ resources classified as "significant" in Douglas County's Historic Resource Register are conserved and protected, while providing an expedient process for reviewing land uses actions that may affect identified sites.

Prior to approval of a ~~development~~ building permit or other land use action, the following measures shall be utilized:

1. Administratively determine ~~whether a new or expanding land use is~~ the following:

   a. Whether the application for a building permit pertains to a registered significant cultural or historic resource;

b. Whether the application for a new or expanded land use is within or on a registered archaeological site.

2. Upon determination that an application pertains to a registered significant resource, as described in subsection 1(a) or 1(b) above, the Director shall notify and forward the application to the chairman of the Historic Resource Review Committee.

3. Upon notification from the Director of an application referenced in subsection 1(a) or 1(b) above, the chairman of the Historic Resource Review Committee shall call for a hearing pursuant to the provisions of Chapter 2 of the Douglas County Land Use and Development Ordinance.

4. The Historic Resource Review Committee shall conduct the public hearing, review the application, construct findings and render a decision in accordance with §9.070 for alterations, exterior remodeling, or new construction; §9.080 for demolitions; [and §9.0 for archaeological sites (to be completed later].

16. Amend §3.35.300 changing the word "throughfares" to "thoroughfares".

17. Add a new section, 3.35.800, to read as follows:

SECTION 3.35.800 Potential Park or Public Recreational Area Overlay (PO)

The potential park or recreation area overlay classification is intended to protect and conserve areas identified as containing public value for: park or recreational use, aesthetic or visual value, camping, picnicking, activities and passive outdoor games and activities. These areas, as identified in the Comprehensive Plan, will be protected from significant conflicting uses by this classification. This overlay classification will promote: nonpre-emptive underlying uses, a process for consideration for acquisition, and allow other uses subject to administrative review.

A. Except as provided below, uses allowed in areas subject to the potential park or recreational area overlay shall be set forth in the underlying zoning district.

B. Property development standards of the underlying zone shall apply to development within the PO designation. In addition, development shall be subject to architectural control under §3.35.300 except that the phrase in that section "to achieve attractive communities and safe thoroughfares" is changed to, "to protect and conserve the park and recreation values of the area."

C. Where permitted by the underlying zone(s), uses, activities and structures shall be designed to protect and conserve the park and recreation values of the area. Only those uses which are or may be made compatible with the park and recreational values set forth in the Comprehensive Plan shall be permitted. The primary use of the

b. Whether the application for a new or expanded land use is within or on a registered archaeological site.

2. Upon determination that an application pertains to a registered significant resource, as described in subsection 1(a) or 1(b) above, the Director shall notify and forward the application to the chairman of the Historic Resource Review Committee.

3. Upon notification from the Director of an application referenced in subsection 1(a) or 1(b) above, the chairman of the Historic Resource Review Committee shall call for a hearing pursuant to the provisions of Chapter 2 of the Douglas County Land Use and Development Ordinance.

4. The Historic Resource Review Committee shall conduct the public hearing, review the application, construct findings and render a decision in accordance with §9.070 for alterations, exterior remodeling, or new construction; §9.080 for demolitions; [and §9.0 for archaeological sites (to be completed later].

16. Amend §3.35.300 changing the word "throughfares" to "thoroughfares".

17. Add a new section, 3.35.800, to read as follows:

SECTION 3.35.800 Potential Park or Public Recreational Area Overlay (PO)

The potential park or recreation area overlay classification is intended to protect and conserve areas identified as containing public value for: park or recreational use, aesthetic or visual value, camping, picnicking, activities and passive outdoor games and activities. These areas, as identified in the Comprehensive Plan, will be protected from significant conflicting uses by this classification. This overlay classification will promote: nonpre-emptive underlying uses, a process for consideration for acquisition, and allow other uses subject to administrative review.

A. Except as provided below, uses allowed in areas subject to the potential park or recreational area overlay shall be set forth in the underlying zoning district.

B. Property development standards of the underlying zone shall apply to development within the PO designation. In addition, development shall be subject to architectural control under §3.35.300 except that the phrase in that section "to achieve attractive communities and safe thoroughfares" is changed to, "to protect and conserve the park and recreation values of the area."

C. Where permitted by the underlying zone(s), uses, activities and structures shall be designed to protect and conserve the park and recreation values of the area. Only those uses which are or may be made compatible with the park and recreational values set forth in the Comprehensive Plan shall be permitted. The primary use of the

PO classification shall be the protection and conservation of the potential park and recreational site. Uses which cannot be made compatible shall not be permitted, except as provided in subsection E(4) for forest crops.

D. Uses and activities which are permitted conditionally in the underlying zone(s) are permitted conditionally in the PO designation upon a finding that the use or activity does not interfere with the future park or recreational use of the site. Uses that cannot be made compatible or interfere shall not be permitted, except as provided in subsection E(4) for forest crops.

E. Forest crops shall be harvested in such a manner as to maintain as nearly as reasonably is practicable the potential park and recreational values of the site.

(1) The State Forester shall forward a copy of the notification required of operators, timber owners and landowners under the Oregon Forest Practices Act (ORS 527.670(2)) to the Planning Director and shall not waive the 15 day period provided in OAR 629-24-107.

(2) Prior to any operator, timber owner of land owner commencing an operation (the terms operator, timber owner, land owner and operation have the same meaning as defined in ORS 527.620) such person shall develop a management plan in conjunction with the Board of Commissioners or its designee.

(3) Management plans shall consider a general schematic landscape plan indicating the technique and materials to be used for timber regeneration, screening, soil stabilization and other revegetation or buffering practices, curvilinear and selectively thinned timber harvest boundaries, the selective retention of timber stands to avoid "ridge lined and notching" or "tufts" and the type and stability of soils on and adjacent to the site of the proposed harvest.

(4) The County shall have 30 days from the date management plans are submitted to initiate acquisition of the property. If acquisition has not been initiated within 30 days, the forest crop may be harvested as provided in the management plan even if such harvest is incompatible.

F. If, after consideration of management plans or of the architectural controls required for development for permitted or conditional use it is determined that the operation or development cannot be compatible with park and recreation values, then the County may consider acquisition of the property involved through ORS [illegible] other appropriate steps and measures.

18. Add a new section to Article 39 as follows:

SECTION 3.39.050 Criteria for Review

The Approving Authority may grant a request for conditional use approval if the following criteria are met:

1. the proposed use is or may be made compatible with existing adjacent uses and other uses permitted in the underlying zone.

2. the proposed use is consistent with the general and specific purposes of this Ordinance and the Comprehensive Plan.

3. the proposed use is compatible with any other criteria contained in specific zoning district regulations of the Ordinance.

19. Amend Article 45 by adding to §3.45.100 the following:

C. Applications approved pursuant to A1 or A2 of this Article shall be consistent with commercial agricultural uses, the agricultural objectives of the Plan, and the agricultural and land use policies of the Plan.

Chapter 4 Land Divisions

20. Amend 4.150(3)(b) to allow time limits for phased subdivision development of 24, 36 and 48 months for Phase 1, Phase 2 and Phase 3, respectively.

21. Amend 4.150(5)(a) to read:

Approval of a preliminary subdivision plan shall be valid for ~~twelve (12)~~ twenty-four (24) months. . . .

22. Amend 4.250(1)(e)(1) to read:

Approval of a preliminary partition plan shall be valid for ~~twelve (12)~~ twenty-four (24) months. . . .

Chapter 6 Quasi-Judicial Plan Amendment

23. Amend §6.300 to read:

Applications for Quasi-Judicial Plan Amendment may be submitted at any time, and shall include a completed application on forms provided by the Planning Department and the appropriate fee. Quasi-Judicial Plan Amendment hearings shall normally be scheduled and conducted on the second Thursday of April and October of each year.

Exceptions to the April and October dates may be allowed for hearings at other times of the year to accommodate:

amendments initiated by the Board of Commissioners to provide for public projects,

amendments initiated by an applicant for development which would promote economic diversification for the County and for which the Board directs the Planning Director to establish an alternate hearing date in the interest of reducing processing time.

In any case, all applications shall be filed with the Director at least 60 days prior to a hearing date and other provisions of this Chapter shall be met.

Chapter 9 Cultural and Historic Resource Conservation

24. Amend §9.040, Subsection 1 (p. 9-3) to read as follows:

The Committee shall develop and adopt concise criteria for evaluating structures, sites, objects and districts. This criteria shall be the standard for deciding whether a potential resource possesses qualities of cultural or historic significance and should therefore be listed in the Douglas County Historic Resource Register, and afforded protection through the provisions of §9.070 through §9.090 of this Ordinance; possesses qualities of special historic interest and would therefore be eligible for signing or monumenting and listed as such in the Register; or is of general historic interest and listed as such in the register.

25. Amend §9.040, Subsection 6 (p. 9-4) to read as follows:

The Committee shall review all demolition and alteration permit requests received by the Building and Planning Departments for "significant" resources listed in Douglas County's Historic Resource Register.

26. Amend §9.070, Subsection 1 (p. 9-6) to read as follows:

Upon notification from the Director's of receipt of a building permit application to change the exterior of a significant historic structure listed in the Register or to construct a new structure on a ~~public or private designated historical~~ "significant" cultural or historic resource site or in a Historic District listed in the Register, the Chairman shall call a meeting of the Committee for the purpose of determining, in hearing, whether the proposed change will alter the resource's historical significance. The Committee shall consider criteria for historic significance, information about the resource contained in the Register, and any new information by County

staff and parties. The Director shall give notice of the hearing pursuant to §2.065(f).

27. Amend §9.070, Subsection 4 (p. 9-6) to read as follows:

The Committee shall approve the change if the treatment proposed is determined to be harmonious and compatible with the character of the resource of Historic District. The Historic Resource Review Committee shall find the alteration harmonious and compatible with the resource or historic district with respect to style, scale, texture and construction materials and/or find that the alteration will enhance the historical value of the resource. Conditions may be attached to approval if the Committee so deems it necessary. The Committee shall disapprove the request if the proposal will prove to be unsightly, grotesque or otherwise reduce the resource's historic value or significance.

28. Amend §9.080, Subsection 2 (p. 9-7) to read as follows:

The Committee shall ~~hear~~ review the application, ~~taking into consideration~~ and construct findings addressing the structure's state of repair, the reasonableness of repair, ~~or~~ restoration costs, the uniqueness of the resource and ~~appropriate criteria~~ the economic, social, environmental and energy consequences of approving or denying the application. Based on the findings, the HRRC may approve, deny or attach conditions to an approval to conserve the value of the resource. A decision and recommendation shall be rendered within 45 days of the Director's receipt of the application. The applicant may waive the 45 day limit in writing at the time of application.

VICTOR ATIYEH
GOVERNOR

Department of Fish and Wildlife
OFFICE OF THE DIRECTOR
506 S.W. MILL STREET, P.O. BOX 3503, PORTLAND, OREGON 97208

December 9, 1980

RECEIVED
DEC 10 1980
LANE COUNTY PLANNING

Mr. Wes Kvarsten, Director
Department of Land Conservation
and Development
1175 Court Street, N.E.
Salem, OR 97310

Dear Mr. Kvarsten:

The Oregon Department of Fish and Wildlife has reviewed those elements of the Lane County Plan that were available to us. We had great difficulty in reviewing the County's Plan prior to your November 21 memorandum, as we were unable to locate a list identifying the complete County submittal. Furthermore, some of the submitted materials were not available in your Portland office, nor could we obtain copies of them from the County. The Plan's format also made review a difficult task. Based on a review of available materials, we oppose acknowledgement for failure to comply with Goals 2, 5, 15, 16, 17 and 18.

The Department has coordinated with Lane County throughout the planning process. We have provided fish and wildlife inventory documents (including identification of sensitive habitats), a Fish and Wildlife Habitat Plan, estuarine habitat classification materials, comments on draft plan elements, served on planning committees and considerable personal communications.

Goal 2

The information available for us to review did not include a complete identification of issues and problems or inventories and other factual information for all applicable statewide planning goals. We feel this fails to fulfill the requirements of Goal 2. Our concern is principally related to inventory data, and the identification of and programs to resolve conflicts between fish and wildlife and other uses. These concerns will be discussed in greater detail under discussions specific to Goals 5, 15, 16, 17 and 18.

Goal 5

To be consistent with Goal 5 the plan must address the following topics relating to fish and wildlife;

1. Description of fish and wildlife resources, including an inventory,
2. identification of sensitive habits,
3. policies commensurate to the abundance and quality of habitats and anticipated land-use activities,

4. ordinances as needed to implement policies, and

5. plan provision to resolve conflicts between natural resources and other land-uses.

The Lane County Plan does not satisfy all of Goal 5's requirements related to fish and wildlife resources.

The Oregon Department of Fish and Wildlife has provided planning background materials to Lane County for nearly ten years. However, it appears that the County has not utilized this inventory information since fish and wildlife inventories and distribution and abundance information provided in subarea technical reports are very general and/or incomplete.

The Plan includes a series of detailed habitat maps that list many important wildlife areas; however, the maps do not specifically identify sensitive fish and waterfowl habitats. Important riparian vegetation is denoted around bodies of water and along Class I streams. This would include much sensitive waterfowl and fish habitats. The County's definition of a Class I stream states, "Waters which are valuable for domestic use, are important for angling or other recreation and/or used by significant numbers of fish for spawning, rearing or migration routes". However, in our opinion the inference that could be drawn from this information, that all Class I streams are sensitive fish habitat, is too all inclusive and does not meet Goal requirements for information on resource location, quality and quantity. The problem with lack of specific identification of sensitive waterfowl habitat is analagous to the problem concerning the lack of specific identification of sensitive fish habitat.

The Plan's fish and wildlife Goal statement (page 25, General Plan Goals and Policies) is inconsistent with Statewide Planning Goal 5. The County Plan Goal states, "Land-use decisions and land management practices shall consider conservation of fish and wildlife resources". Goal 5 states that natural resources will be protected. The County's Goal statement does not appear to be harmonious with the intent of Goal 5. We suggest that the statement would be acceptable if it were modified to read: "Land-use decisions and land management practices shall be undertaken in a manner that will conserve and protect fish and wildlife resources".

The Plan's fish and wildlife policy statements (page 25) express the intent of the County to protect fish and wildlife resources. However, the selection of words used in several of these statements (i.e., encourage, evaluation, consideration) and the "shall consider" wording in the Goal statement combine in a manner that appears discretionary and in conflict with the intent of Goal 5. These concerns could be resolved if the County modifies its fish and wildlife Goal statement as previously mentioned.

Policy statement 4 (page 25) states, "Coordinate development in important deer and elk winter range in order to maintain deer and elk populations compatible with applicable goals, considering the use of the land by private owners". The term "applicable goals", according to County planning staff, refers to Department of Fish and Wildlife management goals or objectives for

big game numbers, as well as goals of other agencies or entities. We asked the County to identify the objective for this Policy and were told by staff that the statement was purposely vague. In our opinion the County should modify or further clarify this statement in accordance with statewide planning goals for correct interpretation.

The Plan's zoning ordinances do not satisfy Department recommendations, developed several years ago, for residential development densities within big game range. Our original recommendations indicated that the desirable level of density within deer winter range was the equivalent of one dwelling per 80 acres or the equivalent of one dwelling per 40 acres with cluster development. In elk winter range the desirable density level was the equivalent of one dwelling per 160 acres or one per 80 acres with cluster development.

During LCDC review of the Yamhill County Comprehensive Plan, the Department modified its procedures for identifying important big game habitat and recommendations on the density of residential development within big game range. A copy of these recommendatons is attached. These revised recommendations were provided to Lane County approximately two months ago. After reviewing the County zoning district maps, the Department has determined that there are significant areas within the County where permitted residential development levels exceed the Department recommendations for sensitive and/or peripheral big game range. It appears that approximately 90% of the Mohawk-Camp Creek and the Spencer Creek subareas would permit development densities in excess of recommendations for sensitive and peripheral habitats. The most restricted development density on this big game range appears to be one dwelling per 20 acres; however, present zoning allows considerable development at greater levels.

In the remainder of the County most of the sensitive big game range is within the Forest Management (FM 40) Zoning District, which would be acceptable if the County required clustering. There does, however, appear to be other significant areas of conflict between permitted residential density levels and peripheral big game range throughout the County. Most of the conflict appears along the foothill fringe of the Willamette Valley and the smaller side valleys.

The ordinance section "Special Exceptions to Minimum Area Requirements" (10.350-05) further complicates the Plan's handling of residential dwellings in areas of important habitat. The criterion for allowing an exception is compatibility with farm and forest uses [10.350-15(2)(a)(ii)]. However, the Plan does not define "forest use" or identify the conflict between residential density and fish and wildlife resources.

Furthermore, the compatibility provision cited above [10.350-15(2)(a)(ii)], does not effect the development of additional residences for relatives who may share in the operation of the applicant's land [10.250-10(1)]. This provision would potentially add to the conflict between residential density and fish and wildlife resources.

The Department recommends that one potential solution to the major Goal 5 fish and wildlife resource deficiency (i.e., residential development densities

within big game range) would be the creation of a sensitive environmental concern overlay zoning district. This type of approach, similar to that developed by Multnomah County, could satisfy our concern without the necessity of modifying all of the ordinances affecting zoning districts within big game range. It appears that many of the agriculture and forestry zoning districts, through their purpose statements, exclude consideration for forest uses other than timber production (i.e., FF-20, A-1, A-2, GR-10, AGT, AG-I and AG-II). These districts include important fish and wildlife habitats, thus our concern centers on the ability of the County to implement planning actions for the protection of fish and wildlife habitats.

We recommend changing the purpose statement on these zoning districts to reflect that the intent of the district is to provide for all "forest uses" consistent with the Goal 4 definition. This would clarify that watershed protection, fish and wildlife habitat and recreation are included within the intent of the district. The purpose statements for the FM, F-1 and F-2 Forest Districts indicates the intent of the districts is "to conserve forest lands for forest uses in accordance with LCDC Goal 4". Our concern is that since the County does not define "forest uses" within the Plan, we can only assume that the terms usage is consistent with the Goal 4 definition.

A number of the zoning districts not only allow principle residential density at levels greater than Department recommendations for big game range, but also allow the construction of single family dwellings for persons employed on the premises [example 10.105-42(2)], down to a minimum average of five acres. This provision in the F-F20, GR-10, AGT, GR-1 and GR-II zoning districts poses added potential conflict between wildlife and development.

The Important Agricultural Land District (A-1) does not include a minimum lot size requirement within the ordinance. The Lane County Planning Commission will determine the appropriate lot size for each division considered within the district. Our concern is that this decision may be made without consideration of impacts on important fish and wildlife resources.

The County has indicated an interest in maintaining riparian vegetation. However, there are no provisions in the ordinances for protecting this sensitive vegetative community. We have made concerted efforts with the County to incorporate this need in the comprehensive plan.

Goal 15

The County's Greenway element appears to be well done, however, we are concerned with various aspects. The Plan appears to lack location or identification of the vegetative fringe, and the identification of and programs to resolve conflicts between uses.

Policies in the Greenway Plan appear adequate, yet without additional plan guidance we are uncertain as to the County's means for resolving conflicting issues. For example, the Plan's goal and policy statement for Sand and Gravel and Fish and Wildlife individually appear satisfactory. Yet, maps in the Plan show optimum gravel resource area designations in areas with significant

fish and wildlife habitat values. Furthermore, ordinance provision 10.322-15 lists both protection of significant habitats and protection of aggregate resources as guidelines for issuance of a Greenway Permit. We do not suggest that these two values are mutually exclusive, but desire that the County's procedures and emphasis for dealing with such conflicts be made clear.

Ordinance provision 10.322-15 places as a criterion for issuance of a Greenway Permit the protection or enhancement of the "vegetative fringe". We were unable to find this term identified by definition or located on a map. We appreciate the difficulty of locating this area on a map or of defining the term by text. However, we suggest that they at least need a set of criteria to use in a case by case evaluation.

Goals 16 and 17

The Department has provided the County with considerable technical assistance in regards to estuarine and shoreland planning. We assisted the County's consultant in development of the coastal inventory and dredge material disposal reports. We also provided the County with estuarine habitat classification material, written comments on draft coastal reports and considerable input via personal communications. The Coastal Goals Compliance Report and supporting ordinances are well done. However, they do not satisfy Goals 16 and 17. This Department's comments on the draft compliance report are attached.

Goal 16

The plan does not, in our opinion, contain appropriate policies to allow development of necessary implementation provisions to insure compliance with the goal. We understand that general estuary wide policies may not be required if policies relating to estuary wide goal requirements are repeated for each management unit class. We feel this has not been accomplished. In addition, we could not find policy statements addressing several estuarine issues, such as restoration and mitigation and in-water disposal of dredged materials.

Log storage policies as presented in the County's Plan, key the continuance of all existing sites to Division of State Land leases. We do not believe that this will insure that future decisions on these sites are consistent with the Environmental Quality Commission's log storage policy for Oregon (October 24, 1975). DSL leases are normally issued for 10 year and 20 year periods, whereas any log storage site which is not used for 5 years is no longer considered active by the EQC. Future use of such a location would require EQC approval which would be based upon evaluation of the site.

Specific comments on the Goal 16 portion of the Compliance Report are as follows:

1. Conservation Unit policy No. 3 implies that major alterations (dredging and filling) are allowed for aquaculture, water-dependent recreation or navigation improvements. It has been

our understanding that such actions within conservation units would require an exception.

2. The Plan identifies two restoration sites, both of which are located within a natural estuarine unit. We believe that there is considerable question as to the appropriateness of utilizing the sites for restoration. Furthermore, we have identified several other potential restoration sites to the County.

3. Estuarine Management Unit "B" has been identified as a conservation unit. We can support that designation but the Plan's discussion of the unit needs revision. It is true that this cove area's productivity is small in context to the entire estuary. However, it is an important element of the estuarine system, as it provides a significant portion of productive tide flat within the estuary's marine subsection. The discussion also needs revision to clarify that an exception would be needed to conduct the major alteration of this cove area to create a boat basin. We were unable to locate conservation policy No. 5, referenced in this section.

4. Estuarine Management Unit "C" has appropriately been designated as a natural estuarine unit. The boundaries need to be expanded to include all of this area; it has some of the highest diversity and quantity of organisms within the estuary. Maps submitted with our June 16, 1980 comments identify the boundaries of this highly productive area.

5. The major intertidal areas located across the channel from MU "C" should be designated natural. The location of this area was identified in our June 16, 1980 comments.

6. The small area contained in MU "D.1" is only a portion of the major tideflat marsh complex contained in MU "D". Thus, it should be included within MU "D" as a natural unit.

7. Two small marsh areas in shoreland MU's 25 and 8 should receive an aquatic conservation designation. These areas are indicated as marsh on estuarine habitat classification material completed by this Department for LCDC.

8. Ordinance 10.230-20(1) needs another criterion which would state that logs should not ground a low water.

9. Ordinance 10.230-20(2) needs to identify surface water area as a resource which is not to be severely impacted by structures. Additional criteria could also establish a test for water dependency and establish guidelines for float size and extension into waterway.

10. Ordinance 10.230-20(3) and (4) needs additional criteria which specify no significant alteration.

11. Ordinance 10.235-20(4) Aquaculture is normally a water-dependent commercial use. Thus, criterion (ii) appears inappropriate.

Goal 17

The Coastal Compliance Report deals with shorelands in a similar manner to estuarine areas. Thus, we have a concern for the lack of overall shoreline policies similar to that expressed for Goal 16. We are also concerned with the apparent omission of an adequate identification of mitigation sites including a process for protecting these areas. We were also unable to locate any areas identified as especially suited for water-dependent development. If this is true we must question maintaining the shallow draft classification, at least above Florence.

Specific comments on the Goal 17 portion of the Compliance Report are as follows:

1. The Department is soundly opposed to the deletion of the Prime Wildlife Area designation in shoreland unit 21. Deletion of this designation is inconsistent with inventory material provided by this Department and the Wilsey and Ham inventory report.

2. The residential designation of MU 27 is inconsistent with inventory materials and Goal 17. The unit would in our opinion require an exception to Goals 4 and 17. The timbered shorelands between Gleneda and Lawson Creek contain some of the highest shoreland wildlife habitat values on Siuslaw Bay.

3. The designation of shoreland unit 2.1 as a mixed development shoreland is based largely upon designation of adjoining estuarine area as conservation. We have opposed the conservation designation of this estuarine area both in our comments on the City of Florence Plan and in this letter. Thus, we must object to this shoreland designation until the appropriate language is added to assure that upland uses will be consistent with the "natural" designation of the adjacent aquatic area.

4. Ordinance 10.240 (Significant Natural Shorelands) appears to apply to about 10 (3 estuarine and 7 lake) of the nearly 80 shoreland units. The stated purpose (10.240.05) seems to apply to shoreland areas similar to those discussed in Goal 17, Coastal Shoreland Uses (1). Yet some of the permitted and special uses are of much greater intensity than is consistent with the Goal. Furthermore, the arbitrary footage standard contained in 10.240-45 should be replaced with a procedure for a site by site evaluation to identify accurately the extent of riparian vegetation.

5. Ordinance 10.240 (Prime Wildlife Shorelands) appears to apply to about 15 (1 estuarine and 14 lake) of the nearly 80 shoreland units. The stated purpose, as in the Significant Natural Shoreland, appears to describe land which would be subject to Goal 17's Coastal Shoreland Uses (1). Yet some of the permitted and special uses are of much greater intensity than is consistent with the Goal. Furthermore, the arbitrary footage standard contained in 10.240-45 should be replaced with a procedure for a site by site evaluation to identify accurately the extent of riparian vegetation.

6. Ordinance 10.250 (National Resource Conservation) appears to apply to about 35 (12 estuarine and 23 lake) of the nearly 80 shoreland management units. This designation is the shoreland category most appropriate for resource lands without special significant natural features. We believe that provision for fill contained in 10.250-20(2) should be changed to that contained in 10.260-20(2) (Mixed Development) or the use should be prohibited similar to other shoreland categories. The identification of riparian resources as expressed in 10.250-45(3) should be modified by deleting the arbitrary footage standard for site by site evaluation.

7. Ordinance 10.255 (Residential Development) appears to apply to about 11 (6 estuarine and 5 lake) of the nearly 80 shoreland management units. This designation is intended to identify residential areas within urbanizable areas and committed lands outside urbanizable areas. We oppose the assignment of this designation to estuarine shoreland unit 27, as we feel the platting of subdivision lots is not a sufficient action on its own to commit timberlands with high wildlife values for nonforest uses. Comments previously made in discussion on other shoreland units (identification of riparian resources and significant shoreland habitats) apply to this unit (10.255-45(3).

8. Ordiniance 10.260 (Mixed Development) appears to apply to 7 of the 29 estuarine shoreland units. The purpose of the unit as expressed in 10.260-10 is to protect sites for water-dependent and water-related uses. Yet, the special uses identified in 10.260-15 and -20 do not meet goal requirements for protecting sites that are especially suited for water-dependent development. We believe the County needs to either state that it has no ESWD shorelands, revise this ordinance to address ESWD shorelands, or draft an additional one which addresses ESWD shorelands. Comments previously offered regarding riparian vegetation identification and significant shoreland habitats are appropriate for 10.260-45(3).

9. Ordinance 10.265-05 is to be utilized by the County to satisfy Goals 16 and 17 requirements for protection of dredge material

disposal and mitigation sites. We do not believe the allowance for a 90 day notice to the Port is acceptable as the only means to protect these sites for dredge material disposal or mitigation. The district should have broader geographic application than that expressed in 10.265-05.

10. Policy No. 3 for Prime Wildlife Shorelands put this Department in the position of responding to issues outside our expertise (identification of hazardous vegetation). We are, however, available to comment on impacts to fish and wildlife resources.

11. The Department has not taken a position on the restriction of gas motor propelled boats on small coastal lakes in Lane County as is indicated on page 61 of the Coastal Compliance Report. Our field biologist did advise the County that such a restriction would not impair angling opportunities at several coastal lakes.

Goal 18

The Plan, as we mentioned for Goals 16 and 17, does not contain overall policy statements for Goal 18. The beaches and dune areas contain considerable fish and wildlife resources, but there is no specific policy in any of the landform categories addressing the need to protect areas of biological importance and significant wildlife habitat except for two snowy plover nesting sites. We also did not find necessary ordinance provisions to satisfy Goal 18's statement:

> "Uses shall be based on the capabilities and limitations of beach and dune areas to sustain different levels of use or development, and the need to protect areas of critical environmental concern, areas having scenic, scientific, or biological importance, and significant wildlife habitat".

In conclusion, the Department applauds the substantial efforts of Lane County and its citizens in formulating the multi-volume County Plan. Our opposition to compliance with Goals 2, 5, 15-18 is not intended to belittle this effort. We offer our full assistance to work with the County during the development of plan revisions needed for obtaining acknowledgement.

If we may clarify any of our comments please call.

Sincerely,

Jim Lauman
Staff Biologist

Lane County Board of Commissioners
Otto t'Hooft, Chairman
Courthouse, Public Service Building
125 East Eighth Avenue
Eugene, Oregon 97401

Dear Sir:

The Department of Fish and Wildlife has completed review of the draft "Coastal Goals Compliance Report" and proposed amendments. We compliment the county for drafting a document which follows the requirements of Goals 16, 17 and 18 and considers the needs of the citizens of the county.

As I stated during the June 12th hearing, the Department supports adoption of the Coastal Goals Compliance Report. However, we do have several suggestions we wish to offer for your consideration.

These are:

1. Page 17. Policy 1 (Natural)
   Replace existing language with:

   "Authorized log storage sites in existence as of July 1, 1980, are considered a grandfathered use which may be continued. Additional sites or expansion of existing sites must be authorized by appropriate state and federal agencies. However, due to the impacts of log storage in intertidal areas, Lane County recommends against expansion of existing sites or creation of new storage sites in Natural management units".

   We recommend this new language to alleviate wording in the June 12th draft which "tells" the DSL how it will operate its lease laws. We also attempt to omit controversial language in the proposed amendments which suggests that all existing log storage is water dependent.

2. Page 18. Policy 3 (Natural)

   The policy should be retained as originally drafted in the June 12 draft. The Department of Fish and Wildlife is solely responsible by ORS for commercial fishing and clamming. This department would oppose the proposed amendment. However, a statement in the plan which clarifies the county's feelings would be welcomed.

3. Page 18. Policy 1 (Conservation)

   Change the policy wording similiar to No. 1 above.

4. Page 19. Policy 6 (Conservation)

   Proposed new policy:

   Filling, dredging and other activities which degrade natural estuarine values will only be allowed if they constitute a minor alteration of the estuary or are part of an active restoration project and:

   a. are required for navigation or other water-dependent uses which require an estuarine location,

   b. if a public need is demonstrated,

   c. no upland location exists, and

   d. adverse impacts are minimized.

5. Page 19, 2nd paragraph (Development)

   The amendment offered in May 15 appendix should be incorporated into report.

6. Page 20-21. Mitigation and Restoration

   The Department encourages the county to identify potential sites even if they are currently private-diked lands in agricultural use. We have identified some of these sites (blue color) in the attached maps. The Department does not favor removal of the two islands as suggested in ORD803. The islands have developed substantial fish and wildlife values which would be impacted by such a project.

7. Page 22. Conditional uses (Natural)

   Change aquaculture to aquaculture facilities. Delete commercial clamming and fishing.

   The reason for these changes is that these activities are regulated under statute by the Department of Fish and Wildlife.

8. Page 22. Permitted uses (Conservation)

   Change aquaculture to aquaculture facilities. See reason expressed in number 7 above.

9. Page 24. Proposed Management Unit B (Conservation)

We offer the following modifications to the language proposed in the amendments:

Discussion: The Port of Siuslaw has expressed a desire to develop a boat basin and harbor of refuge in the upriver cove, (DOMSEA Bay) when the jetties are extended. The cove area does contain clams, shrimp and other benthic organisms, but biological productivity is minor in the content of the estuary as a whole. The site is, however, biologically productive and valuable for fish and wildlife, especially birds, of the lower bay. The site would provide good shelter with reconstruction of the jetty and has the additional advantage of proximity to the river mouth. The State Marine Board cites a 12% increase in larger boats in Lane County in 1979 and supports development of the harbor to help provide moorage for existing boats and anticipated future increases in moorage need. Lane County supports development of the harbor of refuge contingent on the Port meeting the requirements of state and federal agencies, including providing the county with sufficient data to develop an exception to Goal 16. Special care should be exercised to protect the upriver Piddock Bay area from adverse development impacts.

The small cove immediately west of DOMSEA Bay and north of the north jetty at approximately River Mile .5 was formed by water washing through gaps in the existing jetty. The cove supports ~~xxxxxxx~~ shorebirds. The cove may require some filling to allow for jetty maintenance or reconstruction. Any filling of the cove shall be the minimum necessary with total filling of the cove avoided. The cove shall be used only as needed for expansion and reconstruction of jetties, subject to state and federal agency requirements.

I must point out that the Department has agreed with the Fish and Wildlife Service's position on the proposed boat basin. However, we are willing to re-evaluate the proposal when sufficient data is available to address the criteria required for an exception.

10. Page 25. Management Unit E

We support the language in the June 12th draft for this management unit as we do not favor removal of the two islands.

11. Page 33. Policy 8 (Prime Wildlife Area)

We offer the following revised policy statement:

Timber harvesting shall be in accord with the Oregon Forest Practices Act. Lane County recognizes that the current Forest Practices Rules do not contain adequate provisions to implement requirements of Goal 17. Thus, the county encourages the State Forester to evaluate the Rules as required by Goal 17, ~~implementation requirements~~ Until such an evaluation is completed, timber harvesting activities in the Prime Wildlife Area should be in accord with the Forest Practices Act after consultation within the Department of Fish and Wildlife to determine a harvest plan which will result in the least impact on wildlife inhabiting the designated area.

12. Page 34. Policy 6 (Significant Natural Area)

Revise language similiar to that proposed in number 11 above.

13. Page 48. Prime Wildlife MU20

Shoreland management 20 is an upriver extension of the prime wildlife shorelands referred to in points 14 and 15 below. We concur with removing from this unit pasturelands and aquatic marshes previously identified in these comments. However, this Department strongly opposes the proposed amendment to delete this unit.

14. Page 49. Prime Wildlife MU21

The Department is soundly opposed to the proposed amendment's attempt to remove the Prime Wildlife Area designations from the south side of the estuary from Glenada to the upper end of Duncan Slough (shoreland units 20 and 21).

We also oppose the draft language in the June 12th draft. We do, however, support the description of management units 20 and 21 in the Feb. 1 draft with provisions for modifying the 1,000 foot allowance in 18-11-29 to allow an approximately 5-acre buffer to protect the heron rookery.

Modifications of the Feb. 1 draft as represented in the June 12th draft and in the May 15 list of amendments are not supportable by biological data from this agency or the Wilsey and Ham report.

15. Page 48. Residential Development MU 28

This forested shoreland habitat should be classified "Natural Resource Preservation" with Prime Wildlife Area adjacent to the estuary.

We are opposed to the Residential Development designation. To place these shorelands in the Residential Development designation the county must develop data to take an exception to Goals 4 and 17. The timbered shorelands between Glenada and Lawson Creek possess some of the highest shoreland wildlife habitat values on Siuslaw Bay.

The maps submitted with the draft report contain some errors. These relate to placement of shoreland designations on aquatic areas and omission of some valuable habitats from natural management units. We do not fault the county for these mapping errors as they are relatively minor. We have recently provided county staff with an estuary habitat classification map completed by our department in 1979. Our habitat maps were completed under contract with LCDC and are being used by that agency in acknowledgement reviews.

Please relate the numbered comment below to corresponding numbers on the attached county maps.

1) The natural aquatic management unit should be expanded to include the area delineated. This area has been identified as containing some of the highest diversity and quantity of organisms within the estuary. It includes the only known habitat in Siuslaw Bay for certain clam species.

2) This area should be re-designated natural. Its expanse of intertidal area and natural resources place it, according to goal language, with the natural designation. The unit description should allow repair of the rock groins.

3) This marsh area should be natural and placed in aquatic unit "D".

4) This marsh area should be natural and placed in aquatic unit "D".

5) The marsh area east of the North Fork should be natural and placed in unit "E".

6) These areas are potential restoration sites.

7) Management unit "E" should be enlarged to include this natural marsh area.

8) These marsh areas should be included in the natural aquatic management unit "F".

9) This marsh area should be included in natural aquatic management unit "F:.

10) These parcels are potential restoration sites.

11) This is a potential restoration site.

~~12) This is a potential restoration site.~~

13) This marsh area should receive a conservation aquatic designation.

~~14) These parcels are potential restoration sites.~~

15) This marsh habitat should be placed in natural management unit "H".

16) These marsh habitats should be placed in natural management unit "H".

17) This is a potential restoration site.

18) This marsh should be placed in natural aquatic unit "H" or "I".

~~19) These parcels are potential restoration sites.~~

20) These marsh areas should be placed in natural aquatic unit "I".

I again take this opportunity to compliment the county on the excellent job of drafting a coastal goal compliance report. The coastal goals are very specific and demanding and we believe the county's report follows the intent of these goals. Our comments are not offered to criticize but to assist the county in meeting goal requirements.

We have enjoyed the opportunity to work with the county in this portion of the planning process. If we can be of assistance in reviewing additional portions of the county's comprehensive plan or clarify any comments in this letter, please call.

Sincerely,

Jim Lauman for

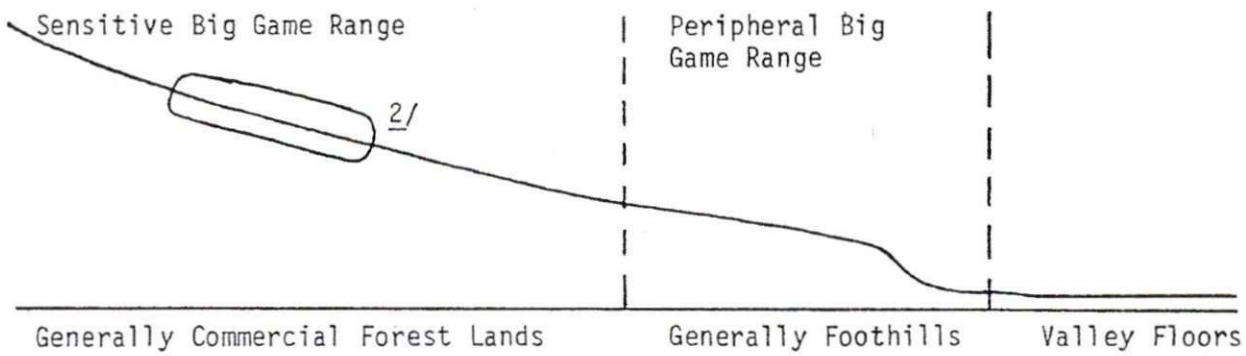
Jim Lauman, Asst. Chief
Environmental Management Section

JL:pb

BIG GAME RANGES - COAST RANGE

Definitions

Sensitive Big Game Range - That portion of the county which supports the majority of big game. In general these lands are sparsely developed commercial forest lands. They also provide the majority of big game recreational opportunity.



Peripheral Big Game Range - Foothill areas of the county generally located between commercial forest lands and valley floors. These lands support substantial big game populations and serve as a wintering area for animals from sensitive range in severe winters. However, conflicts exist between big game and other uses. These existing conflicts limit management options and recreational opportunities.

Impacted Big Game Range - Those areas of the county that have existing levels of land-use which preclude future wildlife management options of maintaining viable wildlife populations and recreational opportunity. These areas frequently contain populations of big game animals.

Development Within Big Game Ranges 1/

1. Sensitive Big Game Range: 1:80 acres
2. Peripheral Big Game Range: 1:40 acres

* The plans should not allow for subdivisions or partitioning below the recommended density levels.

1/ The Department's recommendations relate to overall residential density and not minimum lot sizes.

2/ Lands already developed to a density which precludes big game usage should not be included within big game range maps.

VICTOR ATIYEH
GOVERNOR

Department of Fish and Wildlife
NORTHWEST REGION
ROUTE 5, BOX 325, CORVALLIS, OREGON 97330 PHONE 757-4186

June 16, 1980

Lane County Board of Commissioners
Otto t'Hooft, Chairman
Courthouse, Public Service Building
125 East Eighth Avenue
Eugene, Oregon 97401

Dear Sir:

The Department of Fish and Wildlife has completed review of the draft "Coastal Goals Compliance Report" and proposed amendments. We compliment the county for drafting a document which follows the requirements of Goals 16, 17 and 18 and considers the needs of the citizens of the county.

As I stated during the June 12th hearing, the Department supports adoption of the Coastal Goals Compliance Report. However, we do have several suggestions we wish to offer for your consideration.

These are:

1. Page 17. Policy 1 (Natural)
Replace existing language with:

"Authorized log storage sites in existence as of July 1, 1980, are considered a grandfathered use which may be continued. Additional sites or expansion of existing sites must be authorized by appropriate state and federal agencies. However, due to the impacts of log storage in intertidal areas, Lane County recommends against expansion of existing sites or creation of new storage sites in Natural management units".

We recommend this new language to alleviate wording in the June 12th draft which "tells" the DSL how it will operate its lease laws. We also attempt to omit controversial language in the proposed amendments which suggests that all existing log storage is water dependent.

2. Page 18. Policy 3 (Natural)

The policy should be retained as originally drafted in the June 12 draft. The Department of Fish and Wildlife is solely responsible by ORS for commercial fishing and clamming. This department would oppose the proposed amendment. However, a statement in the plan which clarifies the county's feelings would be welcomed.

9. Page 24. Proposed Management Unit B (Conservation)

We offer the following modifications to the language proposed in the amendments:

Discussion: The Port of Siuslaw has expressed a desire to develop a boat basin and harbor of refuge in the upriver cove, (DOMSEA Bay) when the jetties are extended. The cove area does contain clams, shrimp and other benthic organisms, but biological productivity is minor in the content of the estuary as a whole. The site is, however, biologically productive and valuable for fish and wildlife, especially birds, of the lower bay. The site would provide good shelter with reconstruction of the jetty and has the additional advantage of proximity to the river mouth. The State Marine Board cites a 12% increase in larger boats in Lane County in 1979 and supports development of the harbor to help provide moorage for existing boats and anticipated future increases in moorage need. Lane County supports development of the harbor of refuge contingent on the Port meeting the requirements of state and federal agencies, including providing the county with sufficient data to develop an exception to Goal 16. Special care should be exercised to protect the upriver Piddock Bay area from adverse development impacts.

The small cove immediately west of DOMSEA Bay and north of the north jetty at approximately River Mile .5 was formed by water washing through gaps in the existing jetty. The cove supports ~~xxxxxxxx~~ shorebirds. The cove may require some filling to allow for jetty maintenance or reconstruction. Any filling of the cove shall be the minimum necessary with total filling of the cove avoided. The cove shall be used only as needed for expansion and reconstruction of jetties, subject to state and federal agency requirements.

I must point out that the Department has agreed with the Fish and Wildlife Service's position on the proposed boat basin. However, we are willing to re-evaluate the proposal when sufficient data is available to address the criteria required for an exception.

10. Page 25. Management Unit E

We support the language in the June 12th draft for this management unit as we do not favor removal of the two islands.

15. Page 48. Residential Development MU 28

This forested shoreland habitat should be classified "Natural Resource Preservation" with Prime Wildlife Area adjacent to the estuary.

We are opposed to the Residential Development designation. To place these shorelands in the Residential Development designation the county must develop data to take an exception to Goals 4 and 17. The timbered shorelands between Glenada and Lawson Creek possess some of the highest shoreland wildlife habitat values on Siuslaw Bay.

The maps submitted with the draft report contain some errors. These relate to placement of shoreland designations on aquatic areas and omission of some valuable habitats from natural management units. We do not fault the county for these mapping errors as they are relatively minor. We have recently provided county staff with an estuary habitat classification map completed by our department in 1979. Our habitat maps were completed under contract with LCDC and are being used by that agency in acknowledgement reviews.

Please relate the numbered comment below to corresponding numbers on the attached county maps.

1) The natural aquatic management unit should be expanded to include the area delineated. This area has been identified as containing some of the highest diversity and quantity of organisms within the estuary. It includes the only known habitat in Siuslaw Bay for certain clam species.

2) This area should be re-designated natural. Its expanse of intertidal area and natural resources place it, according to goal language, with the natural designation. The unit description should allow repair of the rock groins.

3) This marsh area should be natural and placed in aquatic unit "D".

4) This marsh area should be natural and placed in aquatic unit "D".

5) The marsh area east of the North Fork should be natural and placed in unit "E".

6) These areas are potential restoration sites.

7) Management unit "E" should be enlarged to include this natural marsh area.

RECEIVED
JUN 18 1980
OREGON FISH & WILDLIFE
HEADQUARTERS

IN THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY, OREGON

ORDINANCE NO. 11-84

IN THE MATTER OF REVISING CHAPTER 16 THE RURAL DEVELOPMENT CODE OF LANE COUNTY TO:

1. MAKE CERTAIN HOUSEKEEPING REVISIONS TO THE HEARINGS OFFICIAL SPECIAL USE APPROVAL CRITERIA OF THE EXCLUSIVE FARM USE (E) ZONE TO ADOPT THE GREENWAY DEVELOPMENT PERMIT APPROVAL CRITERIA FOR AGGREGATE EXTRACTION, AND NOT TO APPLY ANY OTHER CRITERIA FOR AGGREGATE EXTRACTION, FOR LANDS ZONED E AND IN THE GREENWAY.
2. MAKE NUMEROUS REVISIONS TO THE DEVELOPMENT CODE TO BRING IT INTO COMPLIANCE WITH THE REQUIREMENTS OF THE DLCD STAFF REPORT DATED JULY 26, 1984. THESE REVISIONS INCLUDE:
   - A. ADDING A SUBSECTION TO LC 16.005 TO PROVIDE STANDARDS, PROCEDURES AND CRITERIA FOR THE PROTECTION OF AREAS DESIGNATED BY THE RURAL COMPREHENSIVE PLAN AS SENSITIVE BIRD HABITAT.
   - B. ADDING THE DEFINITION OF "HISTORIC STRUCTURE OR SITE."
   - C. REVISING THE DEFINITION OF "WETLAND" IN ORDER TO BE CONSISTENT WITH THE STATEWIDE PLANNING GOAL DEFINITION OF THAT TERM.
   - D. REVISING THE SITING REQUIREMENTS IN THE IMPACTED FOREST, F-2 ZONE TO PROVIDE FOR CLUSTERING OF RESIDENCES ON EXISTING TRACTS.
   - E. REVISING THE PROPERTY DEVELOPMENT STANDARDS OF THE EXCLUSIVE FARM USE, E, ZONE TO ADD REQUIREMENTS FOR CLUSTERING OF RESIDENCES ON EXISTING TRACTS.
   - F. ADDING RIPARIAN SETBACK AND MAINTENANCE STANDARDS TO THE NATURAL RESOURCE, NR, ZONE.
   - G. REVISING THE GREENWAY DELOPMENT PERMITS TO:

i. ELIMINATE ALL THE LANGUAGE FOLLOWING THE PHRASE "OR PERSONAL NONCOMMERCIAL USE" IN LC 16.254(3) (k).
ii. ENSURE THAT ONLY WATER-DEPENDENT AND WATER-RELATED USES ARE EXEMPT FROM THE 100-FOOT GREENWAY SETBACK REQUIREMENT.
iii. PROVIDE NOTICE OF DEPARTMENT ACTIONS FOR A GREENWAY DEVELOPMENT PERMIT TO ODOT.
iv. REQUIRE A GREENWAY DEVELOPMENT PERMIT FOR DEVELOPMENT IN DESIGNATED "URBAN" AREAS.

OR IN THE ALTERNATIVE OF "G" ABOVE

H. ADOPT A NEW GREENWAY PERMIT SECTION

3. ADOPT A SAVINGS AND SEVERABILITY CLAUSE.

WHEREAS, on March 1, 1983, Lane County submitted its Rural Comprehensive Plan to the Land Conservation and Development Commission for acknowledgment, and

WHEREAS, since submitted, objections to the plan have been received, and the Department of Land Conservation and Development Commission staff have reviewed the plan, and

WHEREAS. Lane County has now received DLCD's staff reports and is now in a position to revise the Development Code to bring it to an acknowledgeable standard, now, therefore

THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY ORDAINS AS FOLLOWS:

Chapter 16 of Lane Code is hereby amended by removing and substituting the following pages:

REMOVE THESE PAGES	INSERT THESE PAGES
16-3 to 16-4 (a total of two pages)	16-3 to 16-4b (a total of four pages)
-------	16-16a (a total of one new page)
16-24	16-24 to 16-24a

(3) Conditions. The following conditions may be imposed at the time of approval of a development for which a permit or application is required and for which a finding has been made as required in LC 16.005(2) above in order to ensure site and area stability:

(a) Maintain vegetation and eliminate widespread destruction of vegetation.

(b) Carefully design new roads and buildings with respect to:

(i) Placement of roads and structures on the surface topography.

(ii) Surface drainage on and aroung the site.

(iii) Drainage from buildings and road surfaces.

(iv) Placement of septic tank disposal fields.

(c) Careful construction of roads and buildings:

(i) Avoid cutting toeslopes of slump blocks.

(ii) Careful grading around the site, especially avoiding oversteepened cut banks.

(iii) Revegetating disturbed areas as soon as possible.

(d) Certification by a geologist or engineer that the above conditions have been complied with and/or that a hazard does not exist.

(4) Sensitive Bird Habitat Protection Standards and Criteria. All uses or activities permitted or conditionally permitted within the zones identified in LC 16.005(4)(a) below shall be subject to the additional procedures and requirements in LC 16.005(4)(b)-(g) below, provided such uses are located on property identified as a sensitive bird habitat area via Rural Comprehensive Plan Flora and Fauna Policy 18 and LM 11.400.

(a) Applicable Zones.

Zone Classification	Abbreviation	Section No.
Nonimpacted Forest Lands	F-1, RCP	16.210
Impacted Forest Lands	F-2, RCP	16.211
Exclusive Farm Use	E-RCP	16.212
Natural Resource	NR-RCP	16.213
Marginal Lands	ML-RCP	16.214
Park and Recreation	PR-RCP	16.215
Sand, Gravel and Rock Products	SG-RCP	16.217
Sand, Gravel and Rock Products Combining Processing	SG-CP-RCP	16.218
Public Facility	PF-RCP	16.219
Limited Commercial	C-1, RCP	16.220
Neighborhood Commercial	C-2, RCP	16.221
Commercial	C-3, RCP	16.222
Rural Commercial	C-R, RCP	16.223
Limited Industrial	M-1, RCP	16.224

F. Adding riparian setback and maintenance standards to the Natural Resource, NR, Zone.

G. Revising the Greenway Development Permit requirements to:

i. Eliminate all the language following the phrase "or personal noncommercial use" in LC 16.254(2)(k).

ii. Ensure that only water-dependent and water-related uses are exempt from the 100-foot Greenway setback requirement.

iii. Provide notice of Department actions for a Greenway Development Permit to ODOT.

iv. Require a Greenway Development Permit for development in designated "urban" areas.

OR IN THE ALTERNATIVE

H. Adopt a new Greenway Permit section.

If any section, subsection, sentence, clause, phrase of portion of this Ordinance is for any reason held invalid or unconstitutional by any court of competent jurisdiction, such portion shall be deemed a separate, distinct and independent provision and such holding shall not affect the validity of the remaining portions thereof.

The application of Chapter 16 to rural Lane County repealed by this Ordinance shall remain in force to authorize prosecution of persons in violation thereof prior to the effective date of this Ordinance.

While not part of this Ordinance, we adopt the attached Exhibit "A" as findings in support of this decision.

Enacted this 12th day of Sept., 1984.

Chair, Lane County Board of Commissioners

Debbie E. Mohr
Recording Secretary for this Meeting of the Board

(a total of one page)	(a total of two pages)
16-44 (a total of one page)	16-44 to 16-44a (a total of two pages)
16-56 (a total of one page)	16-56 to 16-56a (a total of two pages)
16-58 to 16-60 (a total of three pages)	16-58 to 16-60 (a total of three pages)
16-62 (a total of one page)	16-62 to 16-62b (a total of three pages)
16-241 to 16-245 (a total of five pages) or in the alternative 16-239 to 16-245 (a total of seven pages)	16-241 to 16-244 (a total of four pages) 16.239 to 16.245 (a total of seven pages)

Said pages are attached hereto and incorporated herein by reference. The purpose of these substitutions is to:

1. Make certain housekeeping revisions to the Hearings Official Special Use Approval Criteria of the Exclusive Farm Use (E) Zone to adopt the Greenway Development Permit Approval Criteria for aggregate extraction, and to not apply any other criteria for aggregate extraction, for lands zoned E and in the Greenway.

2. Make numerous revisions to the Development Code to bring it into compliance with the requirements of the DLCD staff reportdated July 26, 1984. These revisions include:

   A. Adding a subsection to LC 16.005 to provide standards, procedures and criteria for the protection of areas designated by the Rural Comprehensive Plan as sensitive bird habitat.

   B. Adding the definition of "Historic Structure or Site".

   C. Revising the definition of "wetland" in order to be consistent with the Statewide Planning Goal definition of that term.

   D. Revising the siting requirements in the Impacted Forest, F-2, Zone to provide for clustering of residences on existing tracts.

   E. Revising the property development standards of the Exclusive Farm Use, E, Zone to add requirements for clustering of residences on existing tracts.

Light Industrial	M-2, RCP	16.225

Suburban Residential	RA-RCP	16.229
Garden Apartment Residential	RG-RCP	16.230
Rural Residential	RR-RCP	16.231
Destination Resort	DR-RCP	16.232

(b) Development Plan Submittal. The person proposing the development shall submit plans to the Department which sufficiently identify the location, nature and scope of the proposed use or activity.

(c) Referral. Upon receipt of the plans identified in LC 16.005(4)(b) above, the Department shall refer a copy of the plans to the Oregon Department of Fish and Wildlife (ODFW).

(d) ODFW Review. Upon receipt of the plans identified in LC 16.005(4)(b) above, the ODFW shall review the proposed use of activity and make a determination of whether or not the use or activity would affect a sensitive bird habitat. In making this review and determination, the ODFW shall consult with the affected landowner(s) and appropriate state agencies, and shall address the standards in LC 16.005(4)(d)(i) and (ii) below. The basis for the determination shall be stated in writing, completed within seven working days of receipt, and then submitted to the Department (Lane County).

(i) A sensitive bird habitat will be considered affected by a use or activity if the use or activity is located within 660 feet of an eagle or osprey site or within 300 feet of a heron rookery or pigeon mineral spring.

(ii) A sensitive bird habitat may also be considered affected by a use or activity if the use or activity is located a greater distance than specified in LC 16.005(4)(d)(i) above, considering unique conditions of topograph or the individual habits of the bird(s).

(e) No Affects Determined. If the ODFW determines that the sensitive habitat area will not be affected, then the ODFW will give the Department written notice of its determination, and Lane County may proceed with authorization of the use or activity, or with the processing of any other required applications.

(f) Affects Determined and Protection Plan. If the ODFW determines that the sensitive habitat area will be affected, the ODFW shall work with the affected landowner(s) in the development of a site specific habitat protection plan. The plan shall consider the proposed use or activity and its interrelationship to and

affects upon nesting trees, perch trees, critical nesting period roosting sites and/or buffers for wind, vision and noise. The plan must contain a statement of reasons, supported by facts, explaining why the sensitive bird habitat would not be adversely affected by the proposed use or activity. The plan shall then be submitted to the Department.

(g) Director Approval. The proposed uses or activities identified in the habitat protection plan shall be reviewed by the Director pursuant to LC 14.100 and shall be allowed if in conformance with the following approval criteria:

(i) The proposed use or activity would not adversely impact a sensitive wildlife habitat.

(ii) Conditions placed upon the approval of the habitat protection plan would avoid or eliminate any adverse impacts upon a sensitive wildlife habitat. Conditions may include setbacks, limitations upon the time period for the operation of the use or activity and/or prohibition of conflicting uses.

(h) LC 16.005(4)(a)-(g) do not apply to the protection of sensitive bird habitat from forest practices as regulated by the Forest Practices Act and as regulated by the COOPERATIVE AGREEMENT BETWEEN OREGON STATE BOARD OF FORESTRY AND OREGON STATE FISH AND WILDLIFE COMMISSION as adopted by Lane County in Rural Comprehensive Plan Goal 5 Flora and Fauna Policy 17.

16.006 Compliance Required.

(1) No person shall engage in, or cause to occur, a development which does not comply with the Lane County Land Use and Development Chapter.

(2) A development shall be approved by the Director, or other Approving Authority, according to the provisions of this Chapter.

(3) Unless appealed, a decision on any application shall be final upon expiration of the period provided for filing an appeal or, if appealed, upon rendering of the decision by the reviewing body.

16.007 Compliance With Rural Comprehensive Plan. In the event of any conflict between any provision of this Chapter and provisions of the Rural Comprehensive Plan of Lane County, or duly adopted portions, elements or amendments of such Plan, the more restrictive provisions shall prevail.

16.008 Interpretation. When in the administration of this Chapter there is doubt regarding the intent of the Chap-

Yard, Front. A yard between the front line of the building (exclusive of steps) and the front property line.

Yard, Rear. An open, unoccupied space on the same lot with a building, between the rear line of the building (exclusive of steps, porches and accessory buildings) and the rear line of the lot.

Yard, Side. An open, unoccupied space on the same lot with a building, between the sidewall line of the building and the side line of the lot.

(j) A dwelling or mobile home not provided in conjunction with farm use provided:

(i) The dwelling or mobile home is situated upon a legal lot with soils predominantly in capability classes IV through VIII as determined by the Agricultural Capability Classification System in use by the United States Department of Agriculture Soil Conservation Service on Oct. 12, 1983.

(ii) The dwelling or mobile home, or the activities associated with the dwelling or mobile home, will not force a significant change in or significantly increase the cost of accepted farming practices on nearby lands devoted to farm use

(iii) The dwelling or mobile home is situated upon generally unsuitable land for the production of farm crops and livestock, considering the terrain, adverse soil or land conditions, drainage and flooding, location and size of the tract. A lot or parcel shall not be considered unsuitable solely because of its size or location if it can reasonably be put to farm use in conjunction with other land.

(iv) The approval of a dwelling or mobile home shall comply with the provisions of ORS 215.236, 1983 Replacement Part, regarding establishment of the nonfarm residence; procedures; disqualification for farm use valuation; and additional tax or penalty.

(k) A transmission tower over 200 feet in height.

(5) Hearings Official Special Use Approval Criteria.

(a) Compatibility of the use or activities associated with the use with the Agricultural Lands Policies of the Rural Comprehensive Plan Policies, ORS 215.243 and the purpose of this zone.

(b) The use, or activities associated with the use, will not force a significant change in or significantly increase the cost of accepted farming practices on nearby lands devoted to farm use.

(c) The use, or activities associated with the use, complies with other conditions considered necessary by the Approval Authority in order to meet the applicable approval criteria.

(d) The above criteria shall not be applicable to uses identified under LC 16.212(4)(b) above if such uses are also subject to review under Willamette Greenway requirement LC 16.254(3).

(6) Farm Operations.

(a) A farm operation is all agricultural activities occurring under a single management. For purposes of this section, it is immaterial whether the activities occur on a single parcel of land, on contiguous parcels of

(ii) Sufficient water outlets, together with serviceable hose not less than three-quarter inch inside diameter and a nozzle to reach the dwelling and nearby improvements.

(iii) The water supply, pump, hose and nozzle shall be maintained as a connected, operating unit ready for immediate use during period of fire danger.

(d) Shall have a spark arrestor on any chimneys and a fire retardant roof.

(8) Siting and Fire/Safety Standards for Dwellings.

All dwellings and mobile homes conditionally permitted above:

(a) The Approval Authority shall balance the setback standards of LC.211(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.211 in order to minimize adverse impacts upon forest uses and to assure optimal siting of proposed residences consistent with the purposes of the F-2 zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU.

(ii) Residences to be sited upon all other tracts shall be sited as follows:

(aa) Where possible, in consideration of the dimensions and topography of the tract, at least 500 feet from adjoining lines of property zoned F-1 and 100 feet from adjoining lines of property zoned F-2 or EFU.

(bb) On the least valuable farm or forest areas of the tract or located near residences on other tracts.

(b) Shall maintain a fuel break of 50 feet around the residence. Fuel breaks shall be free of hazardous fuels in the form of native vegetation. Irrigation or fire resistent vegetation shall be planted within the fuel break to prevent undue soil erosion. Fuel breaks shall be continually maintained and may contain individual tree specimens, however plant material shall not provide a means of readily spreading fire. Fuel breaks shall comply with the riparian vegetation protection standards of LC 16.211(9)(b) and (c) below.

(c) Shall provide an adequate fire suppression system. Unless otherwise authorized by the local fire official, the minimum acceptable system shall include the following:

(i) A water supply such as a pond, stream, tank, well, sump or any combination thereof, together with a delivery system capable of sustaining a volume of 20 gallons per minute for not less than 20 minutes.

a structure listed on the National Register of Historic Places or a State Inventory of Historic Places.

Tract. A lot, parcel or unsubdivided or unpartitioned land under the same ownership. Contiguous units of unsubdivided or partitioned land under the same ownership shall be considered a single tract.

Urban. Those places which must have an incorporated city. Such areas may include lands adjacent to and outside the incorporated city and may also: (a) have concentrations of persons who generally reside and work in the area, and (b) have supporting public facilities and services.

Urbanizable. Those lands within an urban growth boundary and which are identified and (a) determined to be necessary and suitable for future urban use areas, and (b) can be served by urban services and facilities, and (c) are needed for the expansion of an urban area.

Use. The purpose for which land, submerged or submersible lands, the water surface or a building is arranged, designed or intended, or for which either land or building is or may be occupied or maintained.

Veterinary Clinic. Synonymous with the definition of "animal hospital".

Water Dependent Use. A use or activity which can be carried out only on, in or adjacent to water areas because the use requires access to the water body for waterborne transportation, recreation, energy production or source of water.

Water Related Use. Uses which are not directly dependent upon access to a water body, but which provide goods or services that are directly associated with water dependent land or waterway use, and which, if not located adjacent to water, would result in public loss of quality in the goods or services offered. Except as necessary for water dependent or water related uses or facilities, residences, parking lots, spoil or dump sites, roads and highways, restaurants, businesses, factories and trailer parks are not generally considered dependent on or related to water location needs.

Wetlands. Land areas where excess water is the dominant factor determining the nature of soil development and the types of plant and animal communities living at the soil surface. Wetland soils retain sufficient moisture to support aquatic or semiaquatic plant life. In marine and estuarine areas, wetlands are bounded at the lower extreme by extreme low water; in freshwater areas, by a depth of six feet. The areas below wetlands are submerged lands.

Width. The horizontal distance between the side boundary lines measured in the mean direction of the front and rear boundary lines.

Yard. An open space on the same lot with a building unoccupied and obstructed from the ground upward, except as otherwise provided herein.

Historic Structure or Site. Property which had been identified by Lane County in its adopted Rural Comprehensive Plan findings as:

(1) Historically significant.

(2) In need of protection in order to preserve its historical significance, and for which the means of protection shall be the application of the Historic Structures or Sites Combining (/H-RCP) Zone.

The above sites are also identified separately in LM 11.300.

ter or the suitability of uses not specified, the Director shall request an interpretation of the provision by the Board of County Commissioners. The Board shall issue an interpretation to resolve the doubt, but such interpretation shall not have the effect of amending the provisions of this Chapter. Any interpretation of the Chapter shall be deemed an administrative action and shall be based on the following considerations:

(1) The Lane County Comprehensive Plan.

(2) The purpose and intent of the Chapter as applied to the particular section in question.

(3) The opinion of the County Counsel.

Copies of such interpretations shall be indexed and kept on file in the Department and may be reviewed by the public upon request.

16.009 Restrictiveness. Where the conditions imposed by a provision of this Chapter overlap, the provisions which are more restrictive shall govern.

16.010 Severability. If any section, paragraph, subsection, clause, sentence or provision of this Chapter shall be adjudged by any court of competent jurisdiction to be unconstitutional or invalid, such judgment shall not affect, impair, invalidate or nullify the remainder of this Chapter, and the effect thereof shall be confined to the section, paragraph, subsection, clause, sentence or provision immediately involved in the controversy in which such judgment or decree shall be rendered, it being the intent of the governing body to enact the remainder of this Chapter notwithstanding the parts so declared unconstitutional or invalid. Further, should any section, paragraph, subsection, clause, sentence or provision of this Chapter be judicially declared unreasonable or inapplicable to a particular premises or to a particular use at any particular location, such declaration or judgment shall not affect, impair, invalidate or nullify such section, paragraph, subsection, clause, sentence or provision as to any other premises or use.

16.011 Introductory Provisions. In order to achieve the purposes outlined in LC 16.003, and to assure that the development and use of land in Lane County conforms to the Rural Comprehensive Plan, zone classifications have been established for all unincorporated areas outside of adopted urban growth boundaries and within Lane County. These zones specify regulations for the use of land and property development standards, and use applied by boundaries indicated on the Lane County Rural Comprehensive Plan Zoning Maps.

land or on separate parcels of land. It is also immaterial if the operator has less than fee interest in the land on which the agricultural activity occurs.

dwelling has been approved pursuant to the above LC 16.212(4)(j) above and if the division would not conflict with the purpose of this zone.

(e) Divisions pursuant to LC 16.212(7)(a),(b),(c) or (d) above are subject to the applicable application procedures of LC Chapter 13 and the applicable review procedures of LC Chapter 14. Divisions under LC 16.212(7)(a) and (b) above shall also require that a statement be placed on the face of the map for the partition disclosing that a dwelling or mobile home is not guaranteed unless the provisions of this zone for obtaining a dwelling or mobile home are met.

(f) A person who sells or otherwise transfers real property zoned Exclusive Farm Use (E) may retain a life estate in a dwelling or mobile home on that property and the tract of land under and around the dwelling or mobile home. Partition approval is not required for the creation of such a life estate.

(8) Property Development Standards. All uses or activities permitted or conditionally permitted above, except farm use, shall be subject to the following development standards:

(a) The Approval Authority shall balance the setback standards of LC 16.212(8)(a) with the siting requirements and application approval criteria specified elsewhere in LC 16.212 in order to minimize adverse impacts upon forest uses and to assure optimal siting of proposed residences consistent with the purposes of the E zone.

(i) Residences to be sited upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be sited as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.212(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU.

(ii) Residences to be sited upon all other tracts shall be sited as follows:

(aa) Where possible, in consideration of the dimensions and topography of the tract, at least 500 feet from adjoining lines of property zoned F-1 and 100 feet from adjoining lines of property zoned F-2 or EFU.

(bb) On the least valuable farm or forest areas of the tract or located near residences on other tracts.

(iv) The following uses and activities are excepted from the above standards:

(aa) Commercial forest practices regulated by the Oregon Forest Practices Act.

(bb) Vegetation removal necessary to provide water access for a water dependent use.

(cc) Removal of dead or diseased vegetation that poses a safety or health hazards.

(dd) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

(e) Signs.

(i) Signs shall not extend over a public right-of-way or project beyond the property line.

(ii) Signs shall not be illuminated or capable of movement.

(iii) Signs shall be limited to 200 square feet in area.

(9) Residence Maintenance, Repair and Replacement Standards.

(a) Maintenance and repair of lawfully existing residences shall be permitted in the Exclusive Farm Use (E) zone.

(b) Replacement of any residence lawfully existing, occupied, suitable for occupancy or in the process of being constructed shall be permitted. The replacement need not be in kind (i.e., a mobile home may replace a dwelling or vice versa). Any replacement authorized under this subsection shall be for a residence to be located on the same site as the previous residence and such replacement shall commence within one year of the date of removal of the previous residence.

(b) Property Line Setbacks. No structure other than a fence or sign shall be located closer than 20 feet from the right-of-way of a County or local access-public road and 10 feet from all other property lines except as provided below.

(c) Class I Stream Setbacks. No structure other than a fence or sign shall be located closer than 100 feet from the ordinary high water of a Class I stream designated for riparian vegetation protection by the Rural Comprehensive Plan. A lesser setback may be allowed if:

(i) The Department of Fish and Wildlife is consulted by the Department at least 10 days prior to issuing a permit for a structure; and

(ii) The riparian vegetation does not actually extend all the way into the 100-foot setback to the location of the proposed structure, and the riparian vegetation has not been removed in violation of the below riparian vegetation maintenance standards; or

(iii) An application for a variance to the above setback standard has been approved pursuant to LC 16.256 with findings of compliance to the Rural Comprehensive Plan policies for the protection of Class I streams and riparian vegetation.

(d) Maintenance Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Rural Comprehensive Plan:

(i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.212(8)(c)(i) above. Where vegetation removal beyond that allowed in LC 16.212(8)(c)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(b) Class I Stream Setbacks. No structure other than a fence or sign shall be located closer than 100 feet from a wetland or from the ordinary high water of a Class I stream designated for riparian vegetation protection by the Rural Comprehensive Plan. A lesser setback may be allowed if:

(i) The Department of Fish and Wildlife is consulted by the Department at least 10 days prior to issuing a permit for a structure; and

(ii) The riparian vegetation does not actually extend all the way into the 100-foot setback to the location of the proposed structure, and the riparian vegetation has not been removed in violation of the below riparian vegetation maintenance standards; or

(iii) An application for a variance to the above setback standard has been approved pursuant to LC 16.256 with findings of compliance to the Rural Comprehensive Plan policies for the protection of wetlands, Class I streams and riparian vegetation.

(c) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation within wetlands or along Class I streams designated for riparian vegetation protection by the Rural Comprehensive Plan:

(i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.213(6)(b)(i) above. Where vegetation removal beyond that allowed in LC 16.213(6)(b)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(aa) Vegetation removal necessary to provide water access for a water dependent use.

(b) Fish and wildlife habitat management and the propagation of fish and wildlife.

(3) Special Uses - Director Approval. The following uses are subject to approval by the Director pursuant to LC 14.100:

(a) Single-family dwelling(s) or mobile home(s) for residential purpose for watchman, caretaker or operator in conjunction with use permitted in the district.

(4) Special Uses - Director Official Approval. The following uses are subject to approval by the Hearings Official pursuant to LC 14.300:

(a) Piers and boat houses.

(b) Single-family dwelling or mobile home and accessory structures.

(c) Farm uses as defined by ORS 215.203(2), and any accessory uses.

(d) Forest uses and any accessory uses.

(5) Conditional Use Criteria. Uses conditionally permitted under LC 16.213(4) above are subject to compliance with the following criteria:

(a) (i) Evidence is provided supporting reasons why the proposed use should be sited in a natural resource area.

(ii) That the proposed site is on land generally unsuitable for natural resource uses.

(b) That the proposed use will not significantly impact natural resource uses on adjacent and nearby natural resource lands, and will not significantly impact natural resources on the site of the proposed uses;

(c) That the proposed use will not significantly increase the costs of natural resource management on adjacent and nearby natural resource lands.

(d) That the site is limited in size to that area suitable and appropriate only for the needs of the proposed use;

(e) That, where necessary, measures are taken to minimize potential negative impacts on adjacent and nearby NR zoned lands, and these measures may be established as conditions of approval; and

(f) That the proposed use is consistent with the policies contained in the Rural Comprehensive Plan and the purpose of the NR zone.

(6) Property Development Standards. All uses or activities permitted or conditionally permitted above, shall be subject to the following development standards:

(a) Property Line Setbacks. No structure other than a fence or sign shall be located closer than 20 feet from the right-of-way of a County or local access-public road and 10 feet from all other property lines, except as provided below.

(bb) Removal of dead or diseased vegetation that poses a safety or health hazard.

(cc) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

proposed for lands within the boundaries of the Willamette River Greenway adopted and as revised from time to time by the Oregon Land Conservation and Development Commission, except as provided below:

(a) Customary dredging and channel maintenance conducted under permit from the State of Oregon.

(b) Seasonal increases in gravel operations as provided under permit from the State of Oregon.

(c)tThe placing by a public agency of signs, markers, aids, etc. to serve the public.

(d) Activities to protect, conserve, enhance and maintain public lands, except that a substantial increase in the level of development of existing public recreational, scenic, historical or natural uses on public lands shall require review as provided by this section.

(e) Erosion control operations required in emergency situations for the safety and protection of property.

(f) Construction or use of a building other than a dwelling whether or not within 150 feet of the ordinary low waterline when the building is customarily provided in conjunction with a farm use; provided the structure does not exceed 12 feet in height nor exists for longer than six months.

(g) Farm use.

(h) Reasonable emergency procedures necessary for the safety or protection of property.

(i) Maintenance and repair usual and necessary for the continuance of an existing use. Landscaping, construction of driveways, modification of existing structures or facilities adjacent to a residence as are usual and necessary to such use and enjoyment.

(j) The propagation of timber or the cutting of timber which is done for public safety or personal noncommercial use.

(k) Irrigation pumps and water intakes and other utility lines in conjunction with an agricultural use.

(l) Uses which are pursuant to one of the following Lane County Land Development actions when such action has been approved or adopted consistent with the Greenway Development Permit approval requirements of 16.254(4) below and notification requirements of LC 16.254(7) below.

(i) Planned Unit Developments, as provided in 10.700.

(ii) Unzoned Area Development Permits, as provided in LC 9.700.

(4) Greenway Development Permit Approval. A decision to approve a Greenway Development Permit shall require findings that the proposed intensification, change of use or development conforms to the following criteria, and setback requirements:

(dd) Protection, conservation or preservation of areas along the alluvial bottomlands and lands with severe soil limitations from intensive development.

(ee) Consideration of the impacts from consumptive uses of water (i.e., domestic, agriculture, industrial) and nonconsumptive uses (i.e., recreation and natural resources) in efforts of maintaining sufficient flows to support water users.

(ff) Sustenance and enhancement of water quality by managing or controlling sources of water pollution from uses, such as domestic and industrial wastes, agricultural and timber runoff, septic tank seepage, gravel operations and other intermittent sources.

(gg) Maintenance and sustenance of natural riparian vegetation found upon the lower alluvial bottomlands and upper terraces bordering the river for the following reasons: provide habitat, food and shade for wildlife; protect natural areas; anchor river bank soils and protect agricultural land from seasonal erosion; ensure scenic quality and screening of uses from the river; control trespass; and to control pollution sources to the river.

(hh) Protection from erosion.

(ii) Protection and conservation of lands designated as aggregate resources within the adopted Willamette Greenway Plan.

(b) Setback Requirement; Exceptions. New intensifications, developments and changes of use shall be set back 100 feet from ordinary high waterline of the river, except for a water related or water dependent use.

(5) Conditions. Reasonable conditions may be imposed in connection with a Greenway Development Permit as necessary to meet the purposes of this section. Guarantees and evidence may be required that such conditions will be or are being complied with. Such conditions may include, but are not limited to, requiring:

(a) Special yards and spaces.

(b) Fences and walls.

(c) Special off street parking and loading requirements.

(d) Street and road dedications and improvements (or bonds).

(e) Control of points of vehicular ingress and egress.

(f) Special provisions on signs.

(a) Criteria.

(i) The development protects or enhances the existing vegetative fringe between the activity and the river. Where such protective action is shown to be impractical under the circumstances, the maximum landscaped area or open space shall be provided between the activity and the river and the development provides for the reestablishment of vegetative cover where it will be significantly removed during the process of land development.

(ii) Public access to and along the river either is not necessary or the necessary access will be provided by appropriate legal means.

(iii) Preservation and maintenance of land inventoried as "agriculture" in the adopted Willamette River Greenway Plan for farm use as provided for in Goal 3 and minimize interference with the long-term capacity of lands for farm use.

(iv) Protection, conservation or preservation of significant scenic areas, viewpoints and vistas.

(v) Harvesting of timber in a manner that wildlife habitat, riparian and other significant vegetation and the natural scenic qualities of the Greenway will be preserved, conserved or restored and otherwise result in only the partial harvest of timber beyond the vegetative fringe.

(vi) Minimize vandalism and trespass.

(vii) Location of development away from the river to the greatest possible degree.

(viii) Protection of significant fish, wildlife habitat and natural areas.

(ix) Is compatible with the Willamette River Greenway based upon the following considerations:

(aa) A development which is a mining or a mineral extraction and/or processing operation must include mining or extraction and/or processing methods which are designed to minimize adverse effects upon water quality, fish and wildlife, vegetation, bank stabilization, stream flow, visual quality, noise, safety and to guarantee necessary reclamation.

(bb) Protection, preservation, rehabilitation, reconstruction or restoration of significant historic and archeological resources.

(cc) Preserve areas of annual flooding, floodplains and wetlands.

(g) Landscaping and maintenance thereof.

(h) Maintenance of grounds.

(i) Control of noise vibration, odors or other similar nuisances.

(j) A time period within which the proposed use shall be developed.

(k) A limit on total duration of use.

(l) Control of scale, bulk and coverage of proposal.

(6) Application and Review Procedure. Application for a Greenway Development Permit shall be made as provided by LC 14.040 and reviewed by the Hearings Official as provided by LC 14.300.

(7) Additional Notice. Immediate notice of an application shall be given the State Department of Transportation by certified mail, return receipt requested, and provision shall be made to provide notice to any individual or group requesting notice in writing. Notice of the action taken by Lane County on an application shall be furnished by regular mail to the State Department of Transportation.

(8) Conflicting Provisions. In the case of any conflict between the provisions of this section and other provisions in Lane Code, the more restrictive provisions shall apply.

(9) Nonauthority for Public Use of Private Property. Nothing in this section is intended to authorize public use of private property. Public use of private property is a trespass unless appropriate easements and access have been acquired in accordance with law to authorize such use.

(10) Nonconforming Uses. Except as modified in this section, LC 16.251(1) to (8) shall apply to properties within the Willamette Greenway Boundaries. Any change or intensification as those terms discussed in LC 16.254(2)(f) and (g) above of a nonconforming use shall be prohibited unless a Greenway Development Permit is issued for it.

Legislative Findings in Support of Ordinance No. 11-84
Exhibit A

The Board of County Commissioners of Lane County finds that it is necessary to make the following changes in Lane Code Ch 16 to bring it to an acknowledgeable standard:

1. Make certain housekeeping revisions to the hearings official special use approval criteria of the Exclusive Farm Use (E) zone to adopt the greenway development permit approval criteria for aggregate extraction, and not to apply any other criteria for aggregate extraction, for lands zoned E and in the greenway.

This change insures that, for all areas within the Willamette River Greenway and zoned Exclusive Farm Use (E), the more stringent requirements of Goal 15 sections C.3.d. will be applied to aggregate extraction. Unlike Exclusive Farm Use lands not within the Willamette River Greenway, those within the greenway require protection of water quality, fish and wildlife habitats, vegetation, bank stabilizaiton, streamflow, visual quality, noise, safety and required reclamation. Section C.3.d. requirements are necessary to insure protection of those areas within the greenway.

2A. Adding a subsection to LC 16.005 to provide standards, procedures and criteria for the protection of areas designated by the rural comprehensive plan is sensitive bird habitat.

These changes to Lane Code require the County to submit development plans for uses located on property identified as a sensitive bird habitat area to the Oregon Department of Fish and Wildlife (ODFW) for evaluation as to the impact the development will have on the habitat. It also deems habitats to be affected if development occurs in close proximity thereto. If the ODFW determines that the habitat will be affected, the changes call for cooperation between the landowner and ODFW to avoid or eliminate those adverse impacts. Only then is the plan taken under advisement by the Director. These changes, providing a two step process and coordination among the landowner, ODFW and the County, insure that sensitive bird habitats will be protected. It bears noting that, for activities regulated by the Forest Practices Act, the requirements of the Cooperative Agreement Between the Oregon State Board of Forestry and the Oregon State Fish and Wildlife Commission as adopted by Lane County in its Goal 5, Flora and Fauna policy 17, prevail.

E. Revising the property development standards of the Exclusive Farm Use, E, zone to add requirements for clustering of residences on existing tracts.

This change to LC 16.212(8) mimics the change reviewed, supra, for LC 16.211(8) and is inserted into the Code for the same reasons. Small groupings of residences will have less of an adverse impact on wildlife and resource uses in the big game range than would more scattered residences. However, if not within the big game range, mitigation of possible adverse effects on the resource uses of neighboring properties is a more important consideration. In any given case, either clustering the residences or scattering them somewhat may be preferable, given the characteristics both of the property upon which the development is proposed and the characteristics and uses of the surrounding properties. This balancing test will ensure a mitigation of adverse impacts to wildlife as well as resource uses.

F. Adding riparian setback and maintenance standards to the Natural Resource, NR, zone.

The Natural Resource Zone (NR-RCP) (Lane Code, Section 16.213) which is, in part, intended to protect aquatic and other wildlife habitat areas. Although major developemnt in the NR zone is not anticipated, the NR zone permits a variety of structures which should be required to be set back in order to protect riparian vegetation just as they are in other zoning districts. For this reason, riparian setback and vegetation maintenance standards have been added to the NR zone. These provisions require cooperation between the County and the Department of Fish and Wildlife for Class I stream setbacks, and closely parallel the riparian requirements to be applied in other zones.

G. Revising the Greenway Development Permits to:

i. Eliminate all the language following the phrase "or personal noncommercial use" in LC 16.254(3)(k)

ii. Ensure that only water-dependent and water-related uses are exempt from the 100-foot greenway setback requirement.

iii. Provide notice of department actions for a greenway development permit to ODOT, and

iv. Requiring a greenway development permit for development in designated "urban" areas.

B. Adding the definition of "Historic Structure or Site".

This change is basically a housekeeping measure as historic structures and sites were referred to in the Code, Working Papers and Policies, but that term was not defined. In addition, (2) makes it clear that the application of the Historic Structures or Sites Combining zone shall be the means of protection of these sites.

C. Revising the definition of "wetland" in order to be consistent with the state-wide planning goal definition of that term.

This is also a housekeeping measure, designed to clearly establish in the implementing measures a definition of "wetlands" which is consistent with the Statewide Planning Goal definition of that term.

D. Revising the siting requirement in the impacted forest, F-2 Zone to provide for clustering of residences on existing tracts.

Under Lane Code Ch. 16 as amended here, residences in the Impacted Forest zones (F-2) which are also located within a designated big game range will be required to be sited near existing residences and with minimal intrusions into forest areas undeveloped by non-forest uses. Setback dimension guidelines (balanced with lot dimensions, proximity to other residences and intrusions into forests area) are also set forth. Notwithstanding the fact that the property is zoned F-2, a concerted effort should be made to locate new residences so as to avoid adversely impacting resource uses and big game habitats. This change in LC 16.211(8) will, on the whole, provide for siting criteria which will protect those interests.

For properties zoned F-2 which are not within a designated big game range, the first criteria to be addressed is that of the suggested setback requirements, taking into account the particular dimensional characteristics of the property. Once a range of possible locations for the dwelling is established, a particular spot should be chosen based on location of the areas in the tract of areas of least natural resource value or in closest proximity to existing residences. Proximity to existing residences is less important for parcels not within designated big game ranges for the reason that wildlife will not be adversely affected by a scattering of residences in these areas.

These changes in the Code are direct results of the requirements of the DLCD staff as outlined in their July 19, 1984, staff report. Excerpts from that report which explain why these changes are made follow:

> "...(S)ubsection (k), which exempts certain kinds of timber harvest activities, is inappropriate. That subsection is consistent with the Greenway Interim Order, but the Goal itself does not exempt such activities from local Greenway review. It has been the Commission's practice to allow propagation of timber or cutting of timber for public safety or personal non-commercial use to be exempt from local Greenway permit review. To that extent, the first part of subsection (k) is acceptable. However, the second part (which exempts harvest activities if consistnet with an approved permit under the FPA, for a farm woodlot less than 20 acres, or if consistent with recommendations of ODOT to DOF), is not." page 91

> "...(A)ccording to the Goal, only water-dependent and water-related intensifications, developments, or changes of use themselves are exempt from Greenway setback requirements. However, Lane County also exempts uses <u>in conjuction with</u> water-related and water-dependent uses. As noted in a number of other reviews, this is inconsistent with the Goal, since it would allow a number of uses to be exempt from the setback which are not envisioned by the Goal. The County's ordinances also identify two ways in which exceptions to the 100-foot setback are permitted. One of these is if a proposal would provide better protection of Greenway values, and the other is if such protection is not applicable to the proposal. The Goal does not permit exceptions to the setback, except for water-dependent and water-related uses, even if a proposal might enhance Greenway values. This is because the intent of the Goal is to keep structures separated from the river and to protect areas immediately adjacent to the river for water-dependent and water-related uses. For example, a restaurant, including landscaping and other amenities may, in the opinion of a Hearings Officer, enhance Greenway values. However, it is not, by definition, a water-related or water-dependent use and therefore, is not permitted within the established Greenway setback." pages 85 and 86

"Section 16.254(6) requires the County to notify the Department of Transportation when an application is made. The ordinance does not require the County to also notify that agency of actions taken on an application. This is required by Goal 15 (Section G)." page 86

"Section 16.254(2) of the Lane Code lists those uses and activities that do not require a Greenway Development Permit. All are consistent with Goal 15 except subsections (a) and (k). Subsection (a) exempts uses "where the location is within areas designated as 'urban' on Greenway maps adopted by the Oregon Land Conservation and Development Commission and is beyond 150 feet of the ordinary low waterline." As noted in the 1981 denial order for Lane County, and intensification, change of use or development in "urban" Greenway areas, as defined in Goal 15, and as designated in the ODOT Greenway Plan, is subject to local Greenway review. (Note: The term, 'urban' as used in the context of Goal 15 is not the same as that used in Goal 14. In this case, 'urban' refers to designations in the ODOT Greenway Plan)." page 83

The changes listed in 2G of this ordinance are designed to alleviate the concerns of DLCD staff, noted above, and to bring the Lane Code into compliance with Goal 15.

IN THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY, OREGON

ORDER 84-9-12-3) IN THE MATTER OF ADOPTING
) A SUPPLEMENTAL FINDING IN
) SUPPORT OF PA 883

WHEREAS, in PA 883, the Rural Comprehensive Plan Ordinance that adopted the plan policies, 28 working papers, while not part of the Ordinance itself, were adopted in support thereof, and

WHEREAS, since PA 883's adoption, it has come to our attention that certain soils information in Appendix I to the Forest Lands Working Paper is not entirely accurate, now, therefore, be it

ORDERED, that the following supplemental finding is hereby adopted in order to identify the correct soils information to use when determining commercial forest soils.

"Appendix I of the Forest Lands Working Paper was intended as an example of commercial forest soils and their corresponding CFSC ratings. However, these soils and ratings are not complete and are not entirely accurate. Therefore, Appendix I should not be utilized when determining commercial forest soils. Instead, the most current soils Data and Soils Interpretations as utilized by the U.S. Dept. of Agriculture soil Conservation Service should be relied upon in conjunction with the definition of "commercial forest land" (50 CFSC) as adopted by the Board of Commissioners in Ordinance No. PA 889, Exhibit "C".

Dated this 12th day of Sept., 1984.

Chair, Lane County Office of Legal Counsel

IN THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY, OREGON

ORDER 84-9-12-4

) IN THE MATTER OF ADOPTING
) A SUPPLEMENTAL FINDING IN
) SUPPORT OF PA 889

WHEREAS in PA 889, we amended the Rural Comprehensive Plan policies established in PA 883, and

WHEREAS, in PA 889 we adopted four findings supporting the 40 acre minimum lot size in the F-1 Non-Impacted Forest Land Zone, and

WHEREAS, based upon evidence already in the record, DLCD staff have asked that an additional finding be made in support of that lot size, now, therefore, be it

ORDERED, that supplemental finding No. 5, set forth below, is adopted, and added to Exhibit D to PA 889.

"5.) Commercial Forest representatives in Lane County ~~requested~~ indicated 40 acres as a ~~minimum~~ typical lot size in the F-1 zone based upon 40 acres being a commonly acquired, managed and exchanged unit of commercial forest land in Lane County."

Dated this 12th day of Sept., 1984.

Chair, Lane County Board of Commissioners

IN THE BOARD OF COUNTY COMMISSIONERS OF LANE COUNTY, OREGON

ORDINANCE NO. 11-91A

FILED
AUG 05 1991
COUNTY CLERK
FOR LANE COUNTY OR
BY Jessi K. DuBois

) IN THE MATTER OF AMENDING CHAPTER 16 OF LANE CODE TO REVISE THE NONIMPACTED FOREST LANDS (F-1, RCP), IMPACTED FOREST LANDS (F-2, RCP) AND PARK AND RECREATION (PR-RCP) ZONES TO MAKE CERTAIN PERMITTED USES SUBJECT TO DIRECTOR APPROVAL, REVISE THE SITING STANDARDS FOR NEW STRUCTURES, AND ADD NOTICE REQUIREMENTS FOR DWELLING OR LAND DIVISION APPEALS; REMOVE THE AGRICULTURE/FOREST (AF, RCP) ZONE; MAKE HOUSEKEEPING CHANGES; AND ADOPTING A SEVERABILITY CLAUSE AND FINDINGS

The Board of County Commissioners of Lane County ordains as follows:

Chapter 16 of Lane Code is hereby amended by removing and substituting the following pages:

REMOVE THESE PAGES	INSERT THESE PAGES
16.005(2) - 16.005(4), i.e. 16-3 (a total of one page)	16.005(2) - 16.005(4), i.e. 16-3 (a total of one page)
16.011 - 16.012, i.e. 16-7 (a total of one page)	16.011 - 16.012, i.e. 16-7 (a total of one page)
16.100(1) - 16.100(4) to 16.211(10) - 16.211(10), i.e. 16-28 to 16-50 (a total of 36 pages)	16.100(1) - 16.100(3) to 16.211(10) - 16.211(10), i.e. 16-28 to 16-50 (a total of 34 pages)
16.215(1) - 16.215(3) to 16.215(10) - 16.215(10), i.e. 16-77 to 16-81f (a total of 14 pages)	16.215(1) - 16.215(2) to 16.215(10) - 16.215(10), i.e. 16-77 to 16-81e (a total of 13 pages)

Said pages are attached hereto and incorporated herein by reference. The purpose of these substitutions is to amend the Nonimpacted Forest Lands (F-1, RCP), Impacted Forest Lands (F-2, RCP) and Park and Recreation (PR-RCP) zones to make certain permitted uses subject to Di-

rector approval, revise the siting standards for new structures, and add notice requirements for dwelling or land division appeals; remove the Agriculture/Forest (AF, RCP) zone; make housekeeping changes; and adopting a severability clause and findings.

If any section, subsection, sentence, clause, phrase or portion of this Ordinance is for any reason held invalid or unconstitutional by a court of competent jurisdiction, such section or portion shall be deemed a separate, distinct and independent provision and such holding shall not affect the validity of the remaining portions hereof.

While not part of this Ordinance, findings in attached Exhibit "A" are adopted in support of this decision.

Enacted this 31st day of July, 1991.

Chair, Lane County Board of Commissioners

Recording Secretary for this Meeting of the Board

APPROVED AS TO FORM
DATE 7/11/91 County
OFFICE OF LEGAL COUNSEL

2 - IN THE MATTER OF AMENDING CHAPTER 16 OF LANE CODE TO REVISE THE NONIMPACTED FOREST LANDS (F-1, RCP), IMPACTED FOREST LANDS (F-2, RCP) AND PARK AND RECREATION (PR-RCP) ZONES TO MAKE CERTAIN PERMITTED USES SUBJECT TO DIRECTOR APPROVAL, REVISE THE SITING STANDARDS FOR NEW STRUCTURES, AND ADD NOTICE REQUIREMENTS FOR DWELLING OR LAND DIVISION APPEALS; REMOVE THE AGRICULTURE/FOREST (AF, RCP) ZONE; MAKE HOUSEKEEPING CHANGES; AND ADOPTING A SEVERABILITY CLAUSE AND FINDINGS

ORDINANCE NO. 11-91A EXHIBIT "A"

1. On January 24, 1991 the Land Conservation and Development Commission ("LCDC") acknowledged Lane County's Rural Comprehensive Plan ("RCP") and land use regulations, with respect to compliance with Statewide Planning Goal 4, with signing of the acknowledgment order delayed until certain amendments identified by LCDC were adopted by Lane County. These amendments were identified in the January 10, 1991 DLCD staff report for Lane County's acknowledgment of compliance request.

2. At its regular meeting on July 9, 1991, the Lane County Board of Commissioners ("Board") conducted the first reading of this ordinance, and at its regular meeting on July 31, 1991, the Board conducted the second reading of this ordinance, held a duly noticed public hearing, accepted testimony and reviewed the proposed amendments.

3. Order to comply #1 of the January 10, 1991 DLCD staff report required Lane County to delete destination resorts from LC 16.210(2)(q) (F-1 zone) and 16.211(2)(q) (F-2 zone). LCDC's reason for this request was based upon their interpretation that the destination resort requirements in ORS 197.435 to ORS 197.465 and Goal 8 require counties to complete a county wide inventory of developable areas for destination resorts before destination resorts can be authorized as permitted uses in forest zones. This ordinance deletes destination resorts from the F-1 and F-2 zones and therefore complies with LCDC's request and Goal 4.

4. Order to comply #2 of the January 10, 1991 DLCD staff report required Lane County to incorporate certain "weighing" of the siting standards into the F-1, F-2 and PR zones and to make these standards applicable to all residences and structures. In response to this in order to comply, Lane County has:

   a. Incorporated the following "weighing" language from OAR 660-06-029, "A governing body shall weigh the standards in OAR 660-06-029 together with the requirements in OAR 660-06-035 to identify the building site.", into the preambles of the siting standards of the F-1, F-2 and PR zones which state, "The standards in LC 16.___ below shall be weighed together with the requirements in LC 16.___ to identify the building site." Since the LC 16 code language for the weighing of the siting standards in the F-1, F-2 and PR zones incorporates the OAR 660-06-029 language, the weighing standard in Lane Code complies with Goal 4 as implemented by OAR 660-06-029.

   b. Revised sections LC 16.210(6)(a)&(b) (F-1 zone), LC 16.211(8)(a)&(b) (F-2 zone) and LC 16.215(10)(a)&(b)to delete all references limiting these standards to big game habit areas, with the result that these standards have now become applicable to all areas. This therefore complies with the LCDC in order to comply with Goal 4 and OAR 660-06-029.

5. Order to comply #3 of the January 10, 1991 DLCD staff report required Lane County to amend LC 16.210(6)(a)(i) (F-1 zone), LC 16.211(8)(a)(i) (F-2 zone) and LC 16.215(10)(a)(i) (PR zone) to require consideration of three additional wildfire siting standards and to read as follows, "Near residences on other tracts, near existing roads, on the most level part of the tract, at least 30 feet from any ravine, ridge or slope and on the least suitable portion of the tract for forest use."

   In response to this order to comply, Lane County has adopted the following siting standards, as required by LCDC, into LC 16.210(6)(a)(i) (F-1 zone), LC 16.211(8)(a)(i) (F-2 zone) and LC 16.215(10)(a)(i) (PR zone): "Near residences on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use, and at least 30 feet from any ravine, ridge or slope." Since these specific requirements are the ones Lane County was required by LCDC to adopt, these requirements comply with Goal 4 and OAR 660-06-029.

   OAR 660-06-029 provides that the siting standards in -029(1), or their equivalent , shall apply to new dwellings and structures. The rule suggests that equivalent standards satisfying these requirements may include; (1) clustering the dwelling near or among existing dwellings, (2) siting the dwelling close to existing roads, (3) setbacks from adjoining properties, and (4) siting the dwelling on that portion of the parcel least suited for growing trees. Based upon the following findings, Lane County has adopted specific standards into into LC 16.210(6) (F-1 zone), LC 16.211(8) (F-2 zone) and LC 16.215(10) (PR zone) which are the equivalent of the siting standards in OAR 660-06-029(1):

   Finding 1: OAR 660-06-029(1)(a) requires, "The dwelling and structures be sited on the parcel so that they shall have the least impact on nearby or adjoining forest operations; The Oregon Forest Practices Act (FPA) regulates forest operations and establishes minimum standards that protect forest resources, including soil, water and air. In the case of herbicide applications, the FPA requires that when applying herbicides by aircraft, the operator shall leave an unsprayed strip of at least 60 feet adjacent to such dwellings. The requirement of leaving an unsprayed strip of 60 feet may mean that the operator must stop spraying a considerable distance away from any dwelling to avoid any drift within the 60 foot unsprayed strip. The actual distance which is left unsprayed will depend upon site specific conditions at the time of the spraying, but 200 feet is a general guideline. LC 16.210(6)(b) (F-1 zone), LC 16.211(8)(b) (F-2 zone) and LC 16.215(10)(b) require a 500 foot setback from adjoining property zoned F-1 which more than adequately addresses the concerns for spraying and felling operations occurring on properties zones F-1. More than one million acres of forest land in Lane county are zoned F-1, and property in this zone is primarily used for commercial forest management. These section of Lane Code also requires a setback of 100 feet from property zoned F-2 and EFU. The 100 foot setback also addresses the concerns for a 60 foot setback for spraying and a setback for tree felling. Most tree felling operations will not occur in a manner that trespasses on adjacent property, so a greater setback from F-2 and EFU zoned property does not appear necessary.

Finding 2. OAR 660-06-029(1)(c) requires, "The amount of forest land used to site access roads, service corridors, the dwelling and structures is minimized". LC 16.210(6)(a)(i) (F-1 zone), LC 16.211(8)(a)(i) (F-2 zone) and LC 16.215(10)(a)(i) (PR zone) contain the following standards which accomplish the purpose of the above referenced OAR: "Near residences on other tracts" - this discourages the introduction of residences into undeveloped forest areas and therefore "minimizes the use of forest land"; "near existing roads' - by encouraging dwellings to locate near existing roads, this requirement minimizes the construction of new roads and the use of forest land for such roadways; "on the least suitable portion of the tract for forest use" - this minimizes use of forest land by requiring that the least suitable forest land be considered for the homesite or structure.

Finding 3. OAR 660-06-029(1)(b) requires, "The siting ensures that forest operations and accepted farming practices will not be curtailed or impeded;". The requirements discussed in Findings 2 and 3 above ensure that farming and forest practices will not be curtailed or impeded for the reasons mentioned therein.

Finding 4. OAR 660-06-029(1)(d) requires, "The risks associated with wildfire are minimized." LC 16.210(6) (F-1 zone), LC 16.211(8) (F-2 zone) and LC 16.215(10) (PR zone) require that dwellings be sited, "near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use, and at least 30 feet from any ravine, ridge or slope." In addition, these zones establish fire break standards and road design construction standards for residences which are designed to minimize fire hazard. The primary factors in locating a dwelling to minimize the risks associated with wildfire are slope, length of access and fuels. Fire spreads faster and burns hotter as slope steepens. Steepness of slope also complicates fire equipment access, control efforts and fuel modification. Therefore, dwellings should be located on a level portion of the parcel. Homes should not be located on steep slopes or near steep slopes. Natural features which should be avoided when locating homes and access roads include narrow canyons and draws. These features serve as natural chimneys and intensify fire behavior. If the level portion of the parcel is the top of a ridge, the dwelling should be located at least 30 feet back from the slope. The dwelling should be sited to make the access road as short and flat as possible. Short and flat roads will minimize the difficulty in gaining access to the dwelling in case of fire and will also reduce the amount of maintenance needed to keep the road in a condition which is usable by fire fighting equipment. Powerlines are much like access roads. They should be kept as short and on terrain which is as flat as possible. Therefor dwellings should be sited to minimize the length of the powerline serving the homesite. Minimizing the length of the powerline will reduce right-of-way maintenance and minimize the risk of trees and limbs touching the line and causing a fire. Consistent with the guidance above, dwellings, where possible should be located in areas of light fuel that can be maintained as light fuel. The above cited sections of Lane Code also require the owners of the dwelling and structures to maintain a primary fuel-free break area surrounding all structures; clear and maintain a secondary fuel-free break area; and maintain adequate access to the dwelling for fire fighting equipment vehicles in accordance with the provision in "Protecting Your Home from Wildfire," (NFPA). Lane County's proposed standard for fuel breaks includes a secondary fuel break. Additionally, the fuel break, is in

accordance with "Protecting Your Home from Wildfire." "Protecting Your Home from Wildfires" (page 17) states that: "As the slope of the lot increases, additional clearance as far out as 100 feet may be necessary. Beyond the primary break, a secondary fuel break should be required that is free of dead wood and ladder fuels. Older trees should be thinned. While "Protecting Your Home from Wildfire" establishes minimum standards for adoption by the County, the Department of Forestry, in a October 3, 1990 letter offered the recommendations for fuel breaks which Lane County incorporated into the forest zones.

6. Order to comply #4 of the January 10, 1991 DLCD report required Lane County to delete the Agriculture Forest AF zone. LCDC believed that an unjustified component of the zone was the inclusion of the F-2 minimum parcel size which Lane County had not yet justified as complying with the requirements of OAR 660-06-026(a). Since this ordinance deletes the AF zone and all references thereto, it complies with the LCDC directive. This ordinance also complies with Goal 4, because it postpones adoption of the AF zone until such time as a minimum area requirement is developed in compliance with OAR 660-06-026.

7. Order to comply #5 of the January 10, 1991 DLCD report required Lane County to, "Amend the F-1 and F-2 zones to require notice for certain uses consistent with Doughton v. Douglas County, 88 Or App 198 (1987) and ORS 197.015(10(b)(A) and (C) as follows: Delete those uses under subsections (g), (k) and (o) from LC 16.210(2) (F-1 Zone) and from LC 16.211(2) (F-2 Zone) and add them to LC 16.210(3) and to LC 16.211(3)." This requirement was to respond to objections raised by 1000 Friends. Local government actions excluded from that definition are listed in ORS 197.015(10)(b)(A) and (C) as a decision "Which is made under land use standards which do not require interpretation or the exercise of factual, policy or legal judgment." The uses moved to a Director review have been identified by LCDC or 1000 Friends as having one or more elements of a "land use decision". The Code amendments before the Board delete certain uses from the permitted category and move them to Director review limited to determining that the use fits the classification of the zoning. Notice of the Director's decision will be provided as required by LC chapter 14. Since these amendments change the status of certain uses from outright permitted uses to subject to Director review and notice, the amendments comply with ORS 197.015(10) and satisfy the order to comply.

8. A number of housekeeping changes have been made including the following two changes to address comments and objections from 1000 Friends:

   a. LC 16.100(3) has been amended to provide DLCD and the State Department of Forestry with notice of appeals to the Hearings Official. This section of Lane Code already provides as DLCD and the State Department of Forestry with notice of a Director's decision for a forest or nonforest dwelling or a land division. Since OAR 660-06-004(1) requires notice to DLCD and the State Department of Forestry for land use decisions for dwellings and land divisions, and since this notice will be provided for both the original decision and for appeals to the Hearings Official, this amendment complies with OAR 660-06-004(1).

b. The fire safety provisions of the F-1, F-2 and and PR zones have been amended to substitute "shall for "should" where indicated to more clearly require compliance rather than suggested compliance as one might interpret the meaning of "should". This amendment is consistent with OAR 660-06-035 which requires the application of the fire safety standards to new dwellings and structures.

9. Lane Code 16.252 (2) requires that amendments to Lane Code Chapter 16 be consistent with applicable Rural Comprehensive Plan elements and with the Statewide Planning Goals. Based on the record of these proceedings and the findings included above, the Board concludes the proposed amendments to Lane Code Chapter 16 contained in this ordinance comply with Statewide Planning Goal 4, OAR 660, Division 6, and applicable RCP or Lane Code requirements.

(2) Grading, Excavation and Clearing. Grading and clearing by mechanical equipment for either road and/or development purposes may be restricted or regulated by the Approval Authority either at the time of approval of a development permit or of an application if there is a finding that such grading or clearing presents a real threat of pollution, contamination, silting of water bodies or water supplies, erosion and slide damage, or alteration of natural drainage patterns in the area. In all cases, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and erosion control. The character of soils for fills and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose.

(3) Conditions. The following conditions may be imposed at the time of approval of a development for which a permit or application is required and for which a finding has been made as required in LC 16.005(2) above in order to ensure site and area stability:

(a) Maintain vegetation and eliminate widespread destruction of vegetation.

(b) Carefully design new roads and buildings with respect to:

(i) Placement of roads and structures on the surface topography.

(ii) Surface drainage on and around the site.

(iii) Drainage from buildings and road surfaces.

(iv) Placement of septic tank disposal fields.

(c) Careful construction of roads and buildings:

(i) Avoid cutting toeslopes of slump blocks.

(ii) Careful grading around the site, especially avoiding oversteepened cut banks.

(iii) Revegetating disturbed areas as soon as possible.

(d) Certification by a geologist or engineer that the above conditions have been complied with and/or that a hazard does not exist.

(4) Sensitive Bird Habitat Protection Standards and Criteria. All uses or activities permitted or conditionally permitted within the zones identified in LC 16.005(4)(a) below shall be subject to the additional procedures and requirements in LC 16.005(4)(b)-(g) below, provided such uses are located on property identified as a sensitive bird habitat area via Rural Comprehensive Plan Flora and Fauna Policy 18 and LM 11.400.

(a) Applicable Zones.

Zone Classification	Abbreviation	Section No.
Nonimpacted Forest Lands	F-1, RCP	16.210
Impacted Forest Lands	F-2, RCP	16.211
Exclusive Farm Use	E-RCP	16.212

16.011 Introductory Provisions. In order to achieve the purposes outlined in LC 16.003, and to assure that the development and use of land in Lane County conforms to the Rural Comprehensive Plan, zone classifications have been established for all unincorporated areas outside of adopted urban growth boundaries and within Lane County. These zones specify regulations for the use of land and property development standards, and use applied by boundaries indicated on the Lane County Rural Comprehensive Plan Zoning Maps.

16.012 Zone Classifications. For the purpose of this Chapter of Lane Code, the following zones are hereby established:

Zone Classification	Abbreviation	Section No.
Nonimpacted Forest Lands	F-1, RCP	16.210
Impacted Forest Lands	F-2, RCP	16.211
Exclusive Farm Use	E-RCP	16.212
Natural Resource	NR-RCP	16.213
Marginal Lands	ML RCP	16.214
Park and Recreation	PR-RCP	16.215
Quarry and Mining Operations	QM-RCP	16.216
Sand, Gravel and Rock Products	SG-RCP	16.217
Sand, Gravel and Rock Products Combining Processing	SG-CP-RCP	16.218
Public Facility	PF-RCP	16.219
Limited Commercial	C-1, RCP	16.220
Neighborhood Commercial	C-2, RCP	16.221
Commercial	C-3, RCP	16.222
Rural Commercial	C-R, RCP	16.223
Limited Industrial	M-1, RCP	16.224
Light Industrial	M-2, RCP	16.225
Heavy Industrial	M-3, RCP	16.226
Inmate Work Camp	IWC, RCP	16.227
Suburban Residential	RA-RCP	16.229
Garden Apartment Residential	RG-RCP	16.230
Rural Residential	RR-RCP	16.231
Destination Resort	DR-RCP	16.232
Historic Structures or Sites Combining	/H-RCP	16.233
Natural Estuary	/NE-RCP	16.234
Conservation Estuary	/CE-RCP	16.235
Development Estuary	DE-RCP	16.236
Significant Natural Shorelands Combining	/SN-RCP	16.237
Prime Wildlife Shorelands Combining	/PW-RCP	16.238
Natural Resources Conservation Combining	/NRC-RCP	16.239
Residential Development Shorelands Combining	/RD-RCP	16.240

Dredge Material/Mitigation Site		

DEVELOPMENTAL APPROVAL PROCEDURES

RURAL COMPREHENSIVE PLAN

16.100 Development Approval Procedures - Relationship of Lane Code Chapter 14 into Lane Code Chapter 16. Lane Code Chapter 14 is the procedure for submittal, acceptance, investigation and review of applications for development of lands under the jurisdiction of the Lane County Rural Comprehensive Plan with these additions:

(1) Definitions. Abbreviations, terms, phrases, words and their derivatives shall be construed as specified in LC 16.090 above instead of as specified in LC 14.015.

(2) Special Notice and Review Requirements for a dwelling or Mobile Home Subject to Director Approval in the Exclusive Farm Use (E) Zone, LC 16.212(3)(c). When reviewing an application for a dwelling or mobile home conditionally permitted by LC 16.212(3)(c) below, the Director shall:

(a) In addition to the requirements of LC 14.070 (1) for a decision to approve an application in LC 16.100(2) above, specify in the notice that, "persons have 15 days following the date of postmark of the notice to file a written objection on the grounds only that the dwelling or mobile home, or activities associated with either residence, would force a significant change in or significantly increase the costs of accepted farming practices on nearby lands devoted to farm use."

(b) In addition to the requirements of LC 14.100(4), notice of a decision to approve an application in LC 16.100(2) above shall be mailed to persons who have requested notice of such applications and who have paid a reasonable fee imposed by the County to cover the cost of such notice.

(c) In addition to the requirements of LC 14.515(3)(d), an objection received within 15 days of the notice which factually alleges a significant change in or significant increase in the costs of accepted farming practices in nearby lands devoted to farm uses shall constitute sufficient assignment of error by the Approval Authority.

(d) A decision to approve or deny an application identified in LC 16.100(2) above shall become final unless appealed in the manner provided in LC 16.100(2)(a)-(c) above and LC Chapter 14, and unless the appeal is submitted to the Department within 15 days of the date of postmark for the notice of the decision by the Approval Authority.

(3) Special Notice Requirements for Certain Pending Land Use Decisions in Forest Zones. In addition to the requirements of LC 14.100(4), notice of decisions approving or denying applications for dwellings or land divisions in the Nonimpacted Forest Zone (F-1, RCP) pursuant to LC 16.210(8) and the Impacted Forest Zone pursuant to LC 16.211(6), (7) and (10) shall be mailed to the Department of Land Conservation and Development and the Department of Forestry at their Salem and applicable field office at least 10 calendar days prior to the

decision being made. If an appeal is accepted from a decision by the Director approving or denying an application mentioned above, the Department of Land Conservation and Development and the Department of Forestry shall be mailed notice of the hearing to consider the appeal 20 days in advance of the hearing.

(4) Ex Parte Contacts. A communication between County staff and the Planning Commission or Board shall not be considered an ex parte contact for the purposes of LC 14.200(5)(a).

NONIMPACTED FOREST LANDS ZONE (F-1, RCP)

RURAL COMPREHENSIVE PLAN

16.210 Nonimpacted Forest Lands Zone (F-1, RCP).

(1) Purpose. The purpose of the Nonimpacted Forest Lands District (F-1, RCP) is:

(a) To implement the forest land policies of the Lane County Rural Comprehensive Plan, and the forest land policies of the Eugene/Springfield Metro Area General Plan.

(b) To conserve forest land for uses consistent with Statewide Planning Goal #4.

(2) Permitted Uses. The following uses and activities are permitted subject to the general provisions and exceptions set forth by this Chapter of Lane Code.

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of any forest tree species, application of chemicals, and disposal of slash.

(b) Temporary onsite structures which are auxiliary to and used during the term of a particular forest operations.

(c) Physical alteration to the land auxiliary to forest practices including, but not limited to, those made for purposes of exploration, mining, commercial gravel extraction and processing, landfills, dams, reservoirs, road construction or recreational facilities. "Auxiliary" means a use or alteration of the land which provides help or is directly associated with the conduct of a particular forest practice. An auxiliary structure is located on site, temporary in nature, and is not designed to remain for the forest's entire growth cycle from planting to harvesting. An auxiliary use is removed when a particular forest practice has concluded.

(d) Farm use.

(e) Private hunting and fishing operations without any lodging accommodations.

(f) Towers and fire stations for forest fire protection.

(g) Water intake facilities, canals and distribution lines for farm irrigation and ponds.

(h) Caretaker residences for public parks and fish hatcheries.

(i) Exploration for and production of geothermal, gas, oil, and other associated hydrocarbons, including the placement and operation of compressors, separators and other customary production equipment for an individual well adjacent to the well head.

(j) Maintenance, repair or replacement of existing dwellings.

(3) Uses Subject to Director Approval. The following uses may be allowed provided a land use application is submitted pursuant to LC 14.050 and approved pursuant to LC 14.100. The uses in LC 16.210(3)(a)-(u) may be allowed provided requirements in LC 16.210(5) below are met. The uses in LC 16.210(3)(v)-(bb) may be allowed provided the application contains adequate evidence demonstrating the proposed use fits within the listed classification.

(a) Permanent logging equipment repair and storage.

(b) Log scaling and weigh stations.

(c) Parks.

(d) Campgrounds for areas devoted to overnight temporary use for vacation, recreational or emergency purposes, but not for residential purposes and not including intensively developed recreational uses such as swimming pools, tennis courts, retail stores or gas stations. A camping site may be occupied by a tent, travel trailer or recreational vehicle.

(e) Television, microwave, and radio communication facilities and transmission towers.

(f) Fire stations for rural fire protection.

(g) Utility facilities for the purpose of generating five (5) megawatts or less of power.

(h) Aids to navigation and aviation.

(i) Water intake facilities, related treatment facilities, pumping stations, and distribution lines.

(j) Reservoirs and water impoundment.

(k) Cemeteries.

(l) New distribution lines (e.g., electrical, gas, oil, geothermal) with rights-of-way 50 feet or less in width.

(m) Temporary asphalt and concrete batch plants as accessory uses to specific highway projects.

(n) Home occupations, subject to the following conditions and annual review:

(i) Will be operated by a resident of the property on which the business is located.

(ii) Will employ no more than five full or part-time persons.

(iii) Will be operated in an existing dwelling or mobile home, or other existing buildings normally associated with uses permitted under LC 16.210(2) above.

(iv) Any structure that would not otherwise be allowed in this zone shall not be allowed for use as a home occupation.

(v) Will not interfere with existing uses on nearby land or with other uses permitted under LC 16.210(2) above.

(vi) Will comply with sanitation and building code requirements.

(vii) Will not be used as a justification for a zone change.

(viii) Will comply with any additional conditions of approval.

(ix) Approved applications for home occupations shall be valid until December 31 of the year that the application was initially approved or until December 31 of the year for which an extension of the approval was granted by the Director as provided below. Prior to December 31 of each year, the property owner or applicant who received initial approval, or a renewal pursuant to this section, shall provide the Director with written request for renewal of the Home Occupation and written information sufficient to allow the Director to determine if the Conditions of Approval and other approval criteria have been satisfied. The Director shall review this information for each approved home occupation to determine if it continues to comply with the conditions of approval. Home occupations which continue to comply with the conditions of approval shall receive a one-year extension of approval to December 31 of the following year, and such extension shall be put in writing by the Director and mailed to the owner of the property upon which the home occupation is located. Home occupations which do not comply with the conditions of approval, or for which a request for renewal is not received pursuant to this section, shall not receive extended approval by the Director, and the Director shall mail written notice of the decision not to extend the approval to the owner of the property upon which the home occupation is located.

(o) One temporary mobile home in conjunction with an existing dwelling or mobile home provided the following requirements are met:

(i) A resident of the existing dwelling or mobile home and a resident of the temporary mobile home are relatives. "Relative" means grandparent, parent, child, brother, or sister.

(ii) A relative of one of the residences suffers a hardship and needs care from the relative in the other residence.

(iii) Satisfactory evidence of the relative's hardship is furnished which shall include:

(aa) A written statement, on a form provided by the Department, from the relative's physician, therapist or other professional counselor, disclosing the existence and general nature of the hardship.

(bb) A written statement, on the form provided by the Department, disclosing person with the hardship qualifies as a relative of the person who will provide care.

(iv) The temporary mobile home will be located on the same lot or parcel as the existing dwelling or mobile home.

(v) The temporary mobile home will be connected to the same on-site sewage disposal system serving the existing dwelling or mobile home. If the temporary mobile home will use a public sanitary sewer system, use of an on-site sewage disposal system will not be required.

(vi) The temporary mobile home will comply with sanitation and building code requirements.

(vii) Approval of temporary mobile home permits shall be valid until December 31 of the year following the year of original permit approval and may be renewed once every two years until the hardship situations cease.

(p) Expansion of lawfully existing airports.

(q) Public road and highway projects described as follows:

(i) Construction of additional passage and travel lanes requiring the acquisition of additional right-of-way but not resulting in the creation of new parcels.

(ii) Reconstruction or modification of public roads and highways involving the removal or displacement of buildings but not resulting in the creation of new parcels.

(iii) Improvement of public roads and highway-related public facilities such as maintenance yards, weigh stations and rest areas, where additional property or right-of-way is required but not resulting in the creation of new parcels.

(r) Private accommodations for fishing occupied on a temporary basis may be allowed subject to compliance with LC 16.210(6)(a) or (b) below, LC 16.210(6)(c)-(f) below, and the following requirements:

(i) Accommodations are limited to no more than 15 guest rooms as that term is defined in the Oregon Structural Specialty Code.

(ii) Only minor incidental and accessory retail sales are permitted.

(iii) Accommodations are occupied temporarily for the purpose of fishing during fishing seasons authorized by the Oregon Fish and Wildlife Commission.

(iv) Accommodations are located within 1/4 mile of fish bearing Class I waters.

(s) Forest management research and experimentation facilities as defined by ORS 526.215 or where accessory to forest operations.

(t) Permanent facility for the primary processing of forest products.

(u) Disposal site for solid waste approved by Lane County for which the Department of Environmental Quality has granted a permit under ORS 459.245, together with equipment, facilities or buildings necessary for its operation.

(v) Uses to conserve soil, air, and water quality and to provide for wildlife and fisheries resources.

(w) Additional local distribution lines within existing rights-of-way (e.g., electric distribution transformers, meter cabinets, terminal boxes, pedestals), or which provide service hookups, including water service hookups.

(x) Temporary portable facility for the primary processing of forest products.

(y) Exploration for mineral and aggregate resources as defined in ORS Chapter 517.

(z) Widening of roads within existing rights-of-way in conformance with the transportation element of the applicable comprehensive plan including the following public road and highway projects:

(i) Climbing and passing lanes within the right-of-way existing as of July 1, 1987.

(ii) Reconstruction or modification of public roads and highways, not including the addition of travel lanes, where no removal or displacement of buildings would occur, or no new land parcels would result.

(iii) Temporary public road and highway detours that will be abandoned and restored to original condition or use at such time as no longer needed.

(iv) Minor betterment of existing public roads and highway-related facilities, such as maintenance yards, weigh stations and rest areas, within right-of-way existing as of July 1, 1987, and contiguous public-owned property utilized to support the operation and maintenance of public roads and highways.

(aa) Uninhabitable structures accessory to fish and wildlife enhancement.

(bb) Temporary forest labor camps.

(4) Uses Subject to Hearings Official Approval. The following uses may be allowed provided a land use application is submitted pursuant to LC 14.050 and approved by the Hearings Official pursuant to LC 14.300, and provided the requirements in LC 16.210(5) below are met:

(a) Mining and processing of oil, gas, or other subsurface resources, as defined in ORS Chapter 520, and not otherwise permitted under LC 16.210(2)(i) above (e.g., compressors, separators and storage serving multiple wells), and mining and processing of aggregate and mineral resources as defined in ORS Chapter 517.

(b) Firearms training facility.

(c) Private seasonal accommodations for fee hunting operations may be allowed subject to LC 16.210(6)(a) or (b), LC 16.210(6)(c)-(f), and the following requirements:

(i) Accommodations are limited to no more than 15 guest rooms as that term is defined in the Oregon Structural Specialty Code, and

(ii) Only minor incidental and accessory retail sales are permitted.

(iii) Accommodations are occupied temporarily for the purpose of hunting during game bird and big game hunting seasons authorized by the Oregon Fish and Wildlife Commission.

HO STAFF REPORT 9-7-23
ATTACHMENT 6.18

(5) Criteria for Uses Subject to Approval by the Director or Hearings Official. Uses authorized by LC 16.210(3)(a)-(u) and (4) above may be allowed provided the following requirements are met:

(a) The proposed use will not force a significant change in or significantly increase the cost of, accepted farming or forest practices on agriculture or forest lands.

(b) The proposed use will not significantly increase fire hazard or significantly increase fire suppression costs or significantly increase risks to fire suppression personnel.

(c) For uses authorized above in LC 16.210(3)(c), (d), (j), (n), (o) and (r), a written statement recorded with the deed or written contract with the County or its equivalent is obtained from the landowner which recognizes the rights of adjacent and nearby landowners to conduct forest operations consistent with the Forest Practices Act and Rules.

(d) For uses authorized above in LC 16.210(4), the proposed uses will not significantly conflict with the liveability and appropriate uses on adjacent and nearby lands.

(6) Siting Standards for Structures and Other Uses. The following siting standards shall apply to all structures and other uses as specified above in LC 16.210(3) and (4). These standards are designed to make such uses compatible with forest operations and agriculture, to minimize wildfire hazards and risks and to conserve values found on forest lands. The standards in LC 16.210(6)(a)-(b) below shall be weighed together with the requirements in LC 16.210(6)(c) and (e) below to identify the building site.

(a) Setbacks. Residences and accessory structures shall be sited as follows:

(i) Near residences on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet from any ravine, ridge or slope; and

(ii) With minimal intrusion into forest areas undeveloped by nonforest uses; and

(iii) Where possible, when considering LC 16.210(6)(a)(i) and (ii) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU; and

(iv) Not closer than 100 feet from ordinary high water of a Class I stream; and

(v) Not closer than:

(aa) 20 feet from the planned right-of-way of a state road, County road or a local access public road specified in Lane Code Chapter 15; and

(bb) 20 feet from an existing right-of-way of a state road, County road or a local access public road; and

(cc) 10 feet from all other property lines.

(b) The amount of forest lands used to site access roads, service corridors and structures shall be minimized.

(c) Fire Safety Measures. Residences, structures and roads shall comply with the following fire safety measures:

(i) Fuel Breaks. Fuel breaks around residences shall be maintained as follows:

(aa) Primary Safety Zone. The primary safety zone is a fire break extending a minimum of 30 feet in all directions around dwellings. The goal within the primary safety zone is to exclude fuels that will produce flame lengths in excess of one foot. Vegetation within the primary safety zone could include green lawns and low shrubs (less than 24 inches in height). Trees shall be spaced with greater than 15 feet between the crowns and pruned to remove dead and low (less than eight feet) branches. Accumulated leaves, needles, and other dead vegetation shall be removed from beneath trees. Nonflammable materials (i.e., rock) instead of flammable materials (i.e., bark mulch) shall be placed next to the house.

As slope increases, the primary safety zone shall increase away from the house, parallel to the slope and down the slope, as shown in the table below:

Size of the Primary Safety Zone by Percent Slope

% Slope	Feet of Primary Safety Zone	Feet of Additional Safety Zone Down Slope
0	30	0
10	30	50
20	30	75
25	30	100
40	30	150

Building shall be restricted to slopes of less than 40 percent.

(bb) Secondary Fuel Break. The secondary fuel break is a fuel break extending a minimum of 100 feet in all directions around the primary safety zone. The goal of the secondary fuel break is to reduce fuels so that the overall intensity of any wildfire would be lessened and the likelihood of crown fires and crowning is reduced. Vegetation within the secondary fuel break shall be pruned and spaced so that fire will not spread between crowns of trees. Small trees and brush growing underneath larger trees shall be removed to prevent spread of fire up into the crowns of the larger trees. Dead fuels shall be removed.

(ii) Fire Suppression Water Supplies. An adequate fire suppression system shall be provided. Unless otherwise authorized by the local fire official, the minimum acceptable system shall include the following:

(aa) A water supply such as a pond, stream, tank, well, sump or any combination thereof, together with a delivery system capable of sustaining a volume of 20 gallons per minute for not less than 20 minutes. If a water supply is available and suitable for fire protection, such as a swimming pool, pond, stream, or lake, then road access to within 15 feet of the water's edge shall be provided for pumping units. The road access shall accommodate the turnaround of fire fighting equipment during the fire season. Permanent signs shall be posted along the access route to indicate the location of the emergency water source.

(bb) Sufficient water outlets, together with serviceable hose not less than three-quarter inch inside diameter and a nozzle to reach the dwelling and nearby improvements.

(cc) The water supply, pump, hose and nozzle shall be maintained as a connected, operating unit ready for immediate use during period of fire danger.

(iii) Chimneys and Roofs. Residences or structures with any chimneys shall have a spark arrestor on the chimneys, and residences shall have a fire retardant roof.

(d) Domestic Water Supplies. Evidence shall be provided that the domestic water supply is from a source authorized in accordance with the Department of Water Resources Oregon Administrative Rules for the appropriation of ground water (OAR 690, Division 10) or surface water (OAR 690, Division 20) and not from a Class II stream as defined in the Forest Practices Rule (OAR 629-24-101(3)). If the water supply is unavailable from public sources or sources located entirely on the property, then the applicant shall provide evidence that a legal easement has been obtained permitting domestic water lines to cross the properties of affected owners.

(e) Fire Safety Design Standards for Roads and Driveways. Private driveways, roads or bridges accessing only commercial forest uses are not subject to compliance with these fire safety design standards for roads and driveways. An applicant shall provide evidence and a clear explanation which demonstrates why the route of access for fire fighting equipment, from the fire station to the destination point, across public roads, bridges, private roads or private access easements and driveways will comply with the standards specified below in LC 16.210(6)(e). Evidence of compliance with the standards specified in LC 16.210(6)(e) below should include objective information about the fire fighting equipment, the physical nature of the access route, the nature of any proposed improvements to the access route, and it may also include a written verification of compliance from the agency providing fire protection, or a written certification of compliance from an Oregon Registered Professional Engineer. As used herein, "road" means a way of access used for more than one use and accessory uses. As used herein "driveway" means a way of access used for one use and accessory uses.

(i) Road and Driveway Surfaces. Roads shall have unobstructed widths of at least 20 feet including: travel surfaces with widths of at least 16 feet constructed with gravel to a depth sufficient to provide access for fire fighting vehicles and containing at least six inches in depth of gravel or with paving having a crushed base equivalent to six inches of gravel, an unobstructed area two feet in width at right angles with each side of the constructed surface, survey radii of at least 50 feet, and a vertical clearance of at least 13 feet 6 inches. Driveways shall have: constructed widths of at least 12 feet with at least six inches of gravel or with paving having a crushed base equivalent to six inches of gravel and shall have a vertical clearance of 13 feet 6 inches.

(ii) Cul-de-sacs. Any dead-end road over 200 feet in length and not maintained by Lane County shall be considered a cul-de-sac and shall meet these standards for cul-de-sacs. Cul-de-sacs shall have a right-of-way width with a radius of at least 45 feet and an improved surface with a width of at least 36 feet. Dead-end roads shall have cul-de-sacs spaced at intervals of not less than 500 feet. Cul-de-sacs on private roads shall be marked and signed by applicants as "NO PARKING," and such signs shall be of metal or wood construction with minimum dimensions of 12 inches by 12 inches. No cul-de-sacs shall be allowed to cross any slope which will allow chimney-effect draws unless the dangerous effects of the chimney-effect draws have been mitigated by the location of the road and, where necessary, by the creation of permanent fire breaks around the road.

(iii) Bridges and Culverts. Bridges and culverts shall be constructed to sustain a minimum gross vehicle weight of 50,000 lbs. and to maintain a minimum 16-foot road width surface or a minimum 12-foot driveway surface.

(iv) Road and Driveway Grades. Road and driveway grades shall not exceed 16 percent except for short distances when topographic conditions make lesser grades impractical. An applicant must submit objective evidence demonstrating that road and driveway grades in excess of eight percent are adequate for the fire fighting equipment of the agency providing fire protection to access the use, fire fighting equipment and water supply.

(v) Identification. Roads shall be named and addressed in compliance with LC 15.305-15.335.

(vi) Driveway Vehicle Passage Turnouts. Driveways in excess of 200 feet shall provide for a 20-foot passage space (turn out) at a maximum spacing of 400 feet, or wherever visibility is limited these distances shall be reduced to allow for safe visual conduct.

(vii) Modifications and Alternatives. The standards in LC 16.210(6)(e)(i)-(vi) above may be modified by the Approval Authority provided the applicant has submitted objective evidence demonstrating that an alternative standard would insure adequate access for fire fighting equipment from its point of origination to its point of destination. Examples of some possible alternatives to the standards in the above LC 16.210(6)(e)(i)-(vi) are provided below in LC 16.210(6)(vii).

Vehicle passage turnouts constructed at appropriate intervals and constructed to at least eight feet in width with six inches of gravel may be acceptable alternatives to the road and driveway width standards mentioned above in LC 16.210(6)(e)(i). Hammer-head turn-a-rounds may be an acceptable alternative to the standards for cul-de-sacs mentioned above in LC 16.210(6)(e)(ii). Railway flat bed cars of sufficient strength to maintain a minimum gross weight of 50,000 lbs. may be an acceptable alternative for short bridges or private roads and driveways. Road or driveway paving having a crushed base equivalent to six inches of base gravel may be an acceptable alternative for allowing grades in excess of those required above in LC 16.210(6)(e)(iv).

(7) Other Development Standards.

(a) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Comprehensive Plan:

(i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.210(7)(a)(i) above. Where vegetation removal beyond that allowed in LC 16.210(7)(a)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(aa) Commercial forest practices regulated by the Oregon Forest Practices Act.

(bb) Vegetation removal necessary to provide water access for a water dependent use.

(cc) Removal of dead or diseased vegetation that poses a safety or health hazard.

(dd) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

(b) Signs.

(i) Signs shall not extend over a public right-of-way or project beyond the property line.

(ii) Signs shall not be illuminated or capable of movement.

(iii) Signs shall be limited to 200 square feet in area.

(8) Area. The minimum area requirement for the division of land shall be as follows:

(a) 80 acres.

(b) The minimum land division standard in LC 16.210(8)(a) above may be waived to allow a division of forest land involving a dwelling lawfully existing prior to the date of adoption of this rule provided:

(i) The new parcel containing the dwelling is no larger than five acres; and

(ii) The remaining forest parcel, not containing the dwelling, contains 80 acres; or

(iii) The remaining forest parcel, not containing the dwelling, is consolidated with another parcel which together meet the minimum land division standards of LC 16.210(8)(a) above.

(c) The minimum land division standard in LC 16.210(8)(a) above may be waived to allow uses identified above in: LC 16.210(2)(i); LC 16.210(3)(a) through (k), (t) and (u); and LC 16.210(4)(a) and (b); provided that such uses have been approved in compliance with LC 16.210(5) above.

(d) Notice of a decision for an application pursuant to LC 16.210(8) above shall occur in compliance with LC 16.100(3).

IMPACTED FOREST LANDS ZONE (F-2, RCP)

RURAL COMPREHENSIVE PLAN

16.211 Impacted Forest Lands Zone (F-2, RCP).

(1) Purpose. The purpose of the Impacted Forest Lands Zone (F-2, RCP) is:

(a) To implement the forest land policies of the Lane County Rural Comprehensive Plan, and the forest land policies of the Eugene/Springfield Metro Area General Plan.

(b) To conserve forest land for uses consistent with Statewide Planning Goal #4.

(2) Permitted Uses. The following uses and activities are permitted subject to the general provisions and exceptions prescribed by this Chapter of Lane Code.

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of any forest tree species, application of chemicals, and disposal of slash.

(b) Temporary onsite structures which are auxiliary to and used during the term of a particular forest operation.

(c) Physical alteration of the land auxiliary to forest practices including, but not limited to those made for purposes of exploration, mining, commercial gravel extraction and processing, landfills, dams, reservoirs, road construction or recreational facilities. "Auxiliary" means a use or alteration of the land which provides help or is directly associated with the conduct of a particular forest practice. An auxiliary structure is located on site, temporary in nature, and is not designed to remain for the forest's entire growth cycle from planting to harvesting. An auxiliary use is removed when a particular forest practice has concluded.

(d) Farm use.

(e) Private hunting and fishing operations without any lodging accommodations.

(f) Towers and fire stations for forest fire protection.

(g) Water intake facilities, canals and distribution lines for farm irrigation and ponds.

(h) Caretaker residences for public parks and fish hatcheries.

(i) Exploration for and production of geothermal, gas, oil, and other associated hydrocarbons, including the placement and operation of compressors, separators and other customary production equipment for an individual well adjacent to the well head.

(j) Maintenance, repair or replacement of existing dwellings.

(3) Uses Subject to Director Approval. The following uses may be allowed provided a land use application is submitted pursuant to LC 14.050 and approved pursuant to LC 14.100. The uses in LC 16.211(3)(a)-(s) may be allowed provided the requirements in LC 16.211(5) below are met. The uses in LC 16.211(3)(t)-(z) may be allowed provided the application contains adequate evidence demonstrating the proposed use fits within the listed classification.

(a) Permanent logging equipment repair and storage.

(b) Log scaling and weigh stations.

(c) Parks.

(d) Campgrounds for areas devoted to overnight temporary use for vacation, recreational or emergency purposes, but not for residential purposes and not including intensively developed recreational uses such as swimming pools, tennis courts, retail stores or gas stations. A camping site may be occupied by a tent, travel trailer or recreational vehicle.

(e) Television, microwave, and radio communication facilities and transmission towers.

(f) Fire stations for rural fire protection.

(g) Utility facilities for the purpose of generating five megawatts or less of power.

(h) Aids to navigation and aviation.

(i) Water intake facilities, related treatment facilities, pumping stations, and distribution lines.

(j) Reservoirs and water impoundment.

(k) Cemeteries.

(l) New distribution lines (e.g., electrical, gas, oil, geothermal) with rights-of-way 50 feet or less in width.

(m) Temporary asphalt and concrete batch plants as accessory uses to specific highway projects.

(n) Home occupations, subject to the following conditions and annual review:

(i) Will be operated by a resident of the property on which the business is located.

(ii) Will employ no more than five full or part-time persons.

(iii) Will be operated in an existing dwelling or mobile home, or other existing buildings normally associated with uses permitted under LC 16.211(2) above.

(iv) Any structure that would not otherwise be allowed in this zone shall not be allowed for use as a home occupation.

(v) Will not interfere with existing uses on nearby land or with other uses permitted under LC 16.211(2) above.

(vi) Will comply with sanitation and building code requirements.

(vii) Will not be used as a justification for a zone change.

(viii) Will comply with any additional conditions of approval.

(ix) Approved applications for home occupations shall be valid until December 31 of the year that the application was initially approved or until December 31 of the year for which an extension of the approval was granted by the Director as provided below. Prior to December 31 of each year, the property owner or applicant who received initial approval, or a renewal pursuant to this section, shall provide the Director with written request for renewal of the Home Occupation and written information sufficient to allow the Director to determine if the Conditions of Approval and other approval criteria have been satisfied. The Director shall review this information for each approved home occupation to determine if it continues to comply with the conditions of approval. Home occupations which continue to comply with the conditions of approval shall receive a one-year extension of approval to December 31 of the following year, and such extension shall be put in writing by the Director and mailed to the owner of the property upon which the home occupation is located. Home occupations which do not comply with the conditions of approval, or for which a request for renewal is not received pursuant to this section, shall not receive extended approval by the Director, and the Director shall mail written notice of the decision not to extend the approval to the owner of the property upon which the home occupation is located.

(o) One temporary mobile home in conjunction with an existing dwelling or mobile home provided the following requirements are met:

(i) A resident of the existing dwelling or mobile home and a resident of the temporary mobile home are relatives. "Relative" means grandparent, parent, child, brother, or sister.

(ii) A relative of one of the residences suffers a hardship and needs care from the relative in the other residence.

(iii) Satisfactory evidence of the relative's hardship is furnished which shall include:

(aa) A written statement, on a form provided by the Department, from the relative's physician, therapist or other professional counselor, disclosing the existence and general nature of the hardship.

(bb) A written statement, on the form provided by the Department, disclosing person with the hardship qualifies as a relative of the person who will provide care.

(iv) The temporary mobile home will be located on the same lot or parcel as the existing dwelling or mobile home.

(v) The temporary mobile home will be connected to the same on-site sewage disposal system serving the existing dwelling or mobile home. If the temporary mobile home will use a public sanitary sewer system, use of an on-site sewage disposal system will not be required.

(vi) The temporary mobile home will comply with sanitation and building code requirements.

(vii) Approval of temporary mobile home permits shall be valid until December 31 of the year following the year of original permit approval and may be renewed once every two years until the hardship situations cease.

(p) Expansion of lawfully existing airports.

(q) Public road and highway projects described as follows:

(i) Construction of additional passage and travel lanes requiring the acquisition of additional right-of-way but not resulting in the creation of new parcels.

(ii) Reconstruction or modification of public roads and highways involving the removal or displacement of buildings but not resulting in the creation of new parcels.

(iii) Improvement of public roads and highway-related public facilities such as maintenance yards, weigh stations and rest areas, where additional property or right-of-way is required but not resulting in the creation of new parcels.

(r) Private accommodations for fishing occupied on a temporary basis may be allowed subject to compliance with LC 16.211(8)(a) or (b) below, LC 16.211(8)(c)-(f) below, and the following requirements:

(i) Accommodations are limited to no more than 15 guest rooms as that term is defined in the Oregon Structural Specialty Code.

(ii) Only minor incidental and accessory retail sales are permitted.

(iii) Accommodations are occupied temporarily for the purpose of fishing during fishing seasons authorized by the Oregon Fish and Wildlife Commission.

(iv) Accommodations are located within 1/4 mile of fish bearing Class I waters.

(s) Forest management research and experimentation facilities as defined by ORS 526.215 or where accessory to forest operations.

(t) Uses to conserve soil, air, and water quality and to provide for wildlife and fisheries resources.

(u) Additional local distribution lines within existing rights-of-way (e.g., electric distribution transformers, meter cabinets, terminal boxes, pedestals), or which provide service hookups, including water service hookups.

(v) Temporary portable facility for the primary processing of forest products.

(w) Exploration for mineral and aggregate resources as defined in ORS Chapter 517.

(x) Widening of roads within existing rights-of-way in conformance with the transportation element of the applicable comprehensive plan including the following public road and highway projects:

(i) Climbing and passing lanes within the right-of-way existing as of July 1, 1987.

(ii) Reconstruction or modification of public roads and highways, not including the addition of travel lanes, where no removal or displacement of buildings would occur, or no new land parcels would result.

(iii) Temporary public road and highway detours that will be abandoned and restored to original condition or use at such time as no longer needed.

(iv) Minor betterment of existing public roads and highway-related facilities, such as maintenance yards, weigh stations and rest areas, within right-of-way existing as of July 1, 1987, and contiguous public-owned property utilized to support the operation and maintenance of public roads and highways.

(y) Uninhabitable structures accessory to fish and wildlife enhancement.

(z) Temporary forest labor camps.

(4) Uses Subject to Hearings Official Approval. The following uses may be allowed provided a land use application is submitted pursuant to LC 14.050 and approved by the Hearings Official pursuant to LC 14.300 and provided the requirements in LC 16.211(5) below are met:

(a) Permanent facility for the primary processing of forest products.

(b) Disposal site for solid waste approved by Lane County for which the Department of Environmental Quality has granted a permit under ORS 459.245, together with equipment, facilities or buildings necessary for its operation.

(c) Mining and processing of oil, gas, or other subsurface resources, as defined in ORS Chapter 520, and not otherwise permitted under LC 16.211(2)(i) above (e.g., compressors, separators and storage serving multiple wells), and mining and processing of aggregate and mineral resources as defined in ORS Chapter 517.

(d) Firearms training facility.

(e) Private seasonal accommodations for fee hunting operations may be allowed subject to LC 16.211(8)(a) or (b), LC 16.211(8)(c)-(f), and the following requirements:

(i) Accommodations are limited to no more than 15 guest rooms as that term is defined in the Oregon Structural Specialty Code, and

(ii) Only minor incidental and accessory retail sales are permitted.

(iii) Accommodations are occupied temporarily for the purpose of hunting during game bird and big game hunting seasons authorized by the Oregon Fish and Wildlife Commission.

(5) Criteria for Uses Subject to Approval by the Director or Hearings Official. Uses authorized by LC 16.211(3)(a)-(s) and (4) above may be allowed provided the following requirements are met:

(a) The proposed use will not force a significant change in or significantly increase the cost of, accepted farming or forest practices on agriculture or forest lands.

(b) The proposed use will not significantly increase fire hazard or significantly increase fire suppression costs or significantly increase risks to fire suppression personnel.

(c) For uses authorized above in LC 16.211(3)(c), (d), (j), (n), (o) and (r), a written statement recorded with the deed or written contract with the County or its equivalent is obtained from the landowner which recognizes the rights of adjacent and nearby landowners to conduct forest operations consistent with the Forest Practices Act and Rules.

(d) For uses authorized above in LC 16.211(4), the proposed uses will not significantly conflict with the liveability and appropriate uses on adjacent and nearby lands.

(6) Forest Management Dwellings. A forest management dwelling may be allowed provided an application for the forest management dwelling is submitted for Director approval pursuant to LC 14.050 and the application contains substantial evidence that the requirements specified in this subsection, below, have been met, and provided the application is approved pursuant to LC 14.100.

(a) The dwelling shall be necessary for and accessory to forest operations. Part of the forest operations may include cultured Christmas trees. "Necessary for" means the dwelling will contribute substantially to effective and efficient management of the forest land to be managed by the resident(s) of the dwelling. "Accessory to" means that the dwelling is incidental and subordinate to the main forest use.

(b) The applicant shall provide information necessary to complete the Forest Management Plan form, or its equivalent, provided by Lane County regarding the condition and productivity of the lands to be managed, the plan for management of these lands including a chronological description of commercial forest management activities to be undertaken by the resident(s) or under contract and estimates of yield, labor and expenses. Also, information is required showing the site for the proposed dwelling and a description of related fire safety measures. The information must be sufficient to enable the Oregon Department of Forestry within 45 days to determine that:

(i) The information describing the productivity and current condition of the forest land to be managed is complete and accurate; and

(ii) Fulfillment of the forest management plan will result in use of the parcel for the required management purpose in terms of stocking, stand density, and harvest; and

(iii) The siting standards in LC 16.211(8) below have been adequately addressed.

An application for a forest management dwelling is not complete for the purpose of requiring Lane County to take final action on the application within 120 days, as required by ORS 215.428 and LC 14.050, until all the required information including the review and evaluation by the Oregon Department of Forestry required by LC 16.211(6)(b)(i)-(iii) above is submitted to and accepted by the Director.

(c) There are no other dwellings on the property which are vacant or currently occupied by persons not engaged in forestry, which could be used as the principal forest dwelling for the forest operation.

(d) The property qualifies for and is enrolled in one of Oregon's forest tax programs.

(e) The dwelling will not significantly interfere with, significantly increase the costs of, or impede forest or farm management on adjacent forest and agricultural lands.

(f) If road access to the dwelling is by a road owned and maintained by a private party or by the Oregon Department of Forestry, the Bureau of Land Management, or the United States Forest Service, then the applicant shall provide proof of a long-term road access use permit or agreement. The road use permit may require the applicant to agree to accept responsibility for road maintenance.

(g) The forest lands to be managed by the resident of the proposed dwelling or mobile home meet the stocking and survival requirements of the Forest Practices Rules (OAR 629-24-502) at the time authorization for a permanent dwelling is requested. If the lands to be managed do not meet these stocking and survival requirements, a temporary dwelling may be approved subject to the following requirements:

(i) The prospective resident(s) shall agree in writing to remove the temporary dwelling and any accessory structures within 60 days of a determination by the Director pursuant to LC 16.211(6)(g) above that the property has not met the stocking and survival requirements within five years of the date the temporary dwelling was approved.

(ii) The prospective resident(s) shall agree in writing to pay all costs associated with the removal of the dwelling and any accessory structures by Lane County if the prospective resident(s) fails to comply with LC 16.211(6)(g)(i) above. This written agreement with Lane County shall include either a performance bond, cash deposit, irrevocable letter of credit, promissory note, written contract or other similar form of security equal to costs determined by Lane County as needed to remove totally the temporary dwelling and accessory structures from the parcel and any additional costs for legal proceedings.

(iii) Lane County shall determine whether the prospective resident(s) has complied with LC 16.211(6)(g)(i) above within 60 days of the end of the time period prescribed in LC 16.211(6)(g)(i) above. If the prospective resident(s) has not complied with such requirements, Lane County shall secure the removal of the temporary dwelling unless an extension is granted. Lane County may grant an extension of not more than two years if, prior to the expiration of the five-year period referred to in LC 16.211(6)(g)(i) above, the Director has received a written extension request from the applicant together with substantial evidence on which the finding can be made that, due to natural disaster or illness, completion of the requirements in LC 16.211(6)(g)(i) above was not possible.

(iv) Lane County shall enforce the terms of this agreement if the prospective resident(s) fails to meet the stocking and survival requirements of LC 16.211(6)(g) above for the lands to be managed within five years unless the temporary dwelling and accessory structures already have been removed or unless an extension has been granted under LC 16.211(6)(g)(iii) above.

(v) When Lane County has determined that the prospective resident(s) has complied with the requirements of LC 16.211(6)(g)(i), the temporary dwelling may be replaced by a permanently constructed dwelling.

(h) A written statement recorded with the deed or written contract with Lane County is obtained from the landowner which recognizes the rights of adjacent and nearby landowners to conduct forest operations consistent with the forest Practices Act and Rules.

(i) Notice of a decision for an application under LC 16.211(6) above shall occur in compliance with LC 16.100(3).

(7) Dwellings not Related to Forest Management. A dwelling not related to forest management may be allowed provided an application for the dwelling is submitted for Director approval pursuant to LC 14.050 and the application contains substantial evidence that the requirements specified in this subsection, below, have been met, and provided the application is approved pursuant to LC 14.100.

(a) The dwelling would not force a significant change in, significantly increase the costs of, or impede accepted farming or forest practices on agriculture or forest lands; and

(b) The parcel of the proposed dwelling is located within a rural fire protection district or the proposed resident has contracted for residential fire protection; and

(c) A written statement recorded with the deed or written contract with the County or its equivalent is obtained from the landowner which recognizes the rights of adjacent and nearby landowners to conduct forest operations consistent with the Forest Practices Act and Rules; and

(d) The dwelling meets the siting and safety standards in LC 16.211(8) below; and

(e) The parcel on which the dwelling would be located was lawfully created prior to January 25, 1990; and

(f) The parcel on which the dwelling would be located has been disqualified from receiving a farm or forest tax deferral; and

(g) The parcel is composed primarily of soils which are:

(i) Capable of 0 to 49 cubic feet per acre per year (cf/ac/yr) and where this parcel and at least all or part of three other parcels exist within a 160-acre square when centered on the center of the subject parcel; or

(ii) Capable of 50 to 85 cf/ac/yr and where this parcel and at least all or part of seven other parcels exist within a 160-acre square when centered on the center of the subject parcel; or

(iii) Capable of above 85 cf/ac/yr and where this parcel and at least all or part of 11 other parcels exist within a 160-acre square when centered on the center of the subject parcel.

(h) Parcels within urban growth boundaries shall not be counted to satisfy the eligibility requirements under LC 16.211(7)(g) above.

(i) If road access to the dwelling is by a road owned and maintained boy a private party or by the Oregon Department of Forestry, the Bureau of Land Management, or the United States Forest Service, then the applicant shall provide proof of a long-term road access use permit or agreement. The road use permit may require the applicant to agree to accept responsibility for road maintenance.

(j) Dwellings not related to forest management shall not be allowed pursuant to LC 16.211(7) 30 days after the Land Conservation and Development Commission adopts goal and rule amendments establishing secondary lands.

(k) Notice of a decision for an application pursuant to LC 16.211(7) above shall occur in compliance with LC 16.100(3).

(8) Siting Standards for Dwellings, Structures and Other Uses. The following siting standards shall apply to all new dwellings and structures, and other uses as specified above in LC 16.211(3) and (4). These standards are designed to make such uses compatible with forest operations and agriculture, to minimize wildfire hazards and risks and to conserve values found on forest lands. The standards in LC 16.211(8)(a)-(b) below shall be weighed together with the requirements in LC 16.211(8) (c) and (e) below to identify the building site.

(a) Setbacks. Residences and accessory structures shall be sited as follows:

(i) Near residences on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet away from any ravine, ridge or slope; and

(ii) With minimal intrusion into forest areas undeveloped by nonforest uses; and

(iii) Where possible, when considering LC 16.211(8)(a)(i) and (ii) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU; and

(iv) Not closer than 100 feet from ordinary high water of a Class I stream.

(v) Not closer than:

(aa) 20 feet from the planned right of way of a state road, County road or a local access public road specified in Lane Code Chapter 15; and

(bb) 20 feet from an existing right-of-way of a state road, County road or a local access public road; and

(cc) 10 feet from all other property lines.

(b) The amount of forest lands used to site access roads, service corridors and structures shall be minimized.

(c) Fire Safety Measures. Residences, structures and roads shall comply with the following fire safety measures:

(i) Fuel Breaks. Fuel breaks around residences shall be maintained as follows:

(aa) Primary Safety Zone. The primary safety zone is a fire break extending a minimum of 30 feet in all directions around dwellings. The goal within the primary safety zone is to exclude fuels that will produce flame lengths in excess of one foot. Vegetation within the primary safety zone could include green lawns and low shrubs (less than 24 inches in height). Trees shall be spaced with greater than 15 feet between the crown and pruned to remove dead and low (less than eight feet) branches. Accumulated leaves, needles, and other dead vegetation shall be removed from beneath trees. Nonflammable materials (i.e., rock) instead of flammable materials (i.e., bark mulch) shall be placed next to the house.

As slope increases, the primary safety zone shall increase away from the house, parallel to the slope and down the slope, as shown in the table below:

Size of the Primary Safety Zone by Percent Slope

% Slope	Feet of Primary Safety Zone	Feet of Additional Safety Zone Down Slope
0	30	0
10	30	50
20	30	75
25	30	100
40	30	150

Building shall be restricted to slopes of less than 40 percent.

(bb) Secondary Fuel Break. The secondary fuel break is a fuel break extending a minimum of 100 feet in all directions around the primary safety zone. The goal of the secondary fuelbreak is to reduce fuels so that the overall intensity of any wildfire would be lessened and the likelihood of crown fires and crowning is reduced. Vegetation within the secondary fuel break shall be pruned and spaced so that fire will not spread between crowns of

trees. Small trees and brush growing underneath larger trees shall be removed to prevent spread of fire up into the crowns of the larger trees. Dead fuels shall be removed.

(ii) Fire Suppression Water Supplies. An adequate fire suppression system shall be provided. Unless otherwise authorized by the local fire official, the minimum acceptable system shall include the following:

(aa) A water supply such as a pond, stream, tank, well, sump or any combination thereof, together with a delivery system capable of sustaining a volume of 20 gallons per minute for not less than 20 minutes. If a water supply is available and suitable for fire protection, such as a swimming pool, pond, stream, or lake, then road access to within 15 feet of the water's edge shall be provided for pumping units. The road access shall accommodate the turnaround of fire fighting equipment during the fire season. Permanent signs shall be posted along the access route to indicate the location of the emergency water source.

(bb) Sufficient water outlets, together with serviceable hose not less than three-quarter inch inside diameter and a nozzle to reach the dwelling and nearby improvements.

(cc) The water supply, pump, hose and nozzle shall be maintained as a connected, operating unit ready for immediate use during period of fire danger.

(iii) Chimneys and Roofs. Residences or structures with any chimneys shall have a spark arrestor on the chimneys, and residences shall have a fire retardant roof.

(d) Domestic Water Supplies. Evidence shall be provided that the domestic water supply is from a source authorized in accordance with the Department of Water Resources Oregon Administrative Rules for the appropriation of ground water (OAR 690, Division 10) or surface water (OAR 690, Division 20) and not from a Class II stream as defined in the Forest Practices Rule (OAR 629-24-101(3)). If the water supply is unavailable from public sources or sources located entirely on the property, then the applicant shall provide evidence that a legal easement has been obtained permitting domestic water lines to cross the properties of affected owners.

(e) Fire Safety Design Standards for Roads and Driveways. Except for private driveways, roads or bridges accessing only commercial forest uses, an applicant shall provide evidence and a clear explanation which demonstrates why the route of access for fire fighting equipment, from the fire station to the destination point, across public roads, bridges, private roads or private access easements and driveways will comply with the standards specified below in LC 16.211(8)(e). Evidence of compliance with the standards specified in LC 16.211(8)(e) below should include objective information about the fire fighting equipment, the physical nature of the access route, the nature of any proposed improvements to the access route, and it may also include a written verification of compliance from the agency providing fire protection, or a written certification of compliance from an Oregon Registered Professional Engineer. As used herein, "road" means a way of access used for more than one use and accessory uses. As used herein, "driveway" means a way of access used for one use and accessory uses.

(i) Road and Driveway Surfaces. Roads shall have unobstructed widths of at least 20 feet including: travel surfaces with widths of at least 16 feet constructed with gravel to a depth sufficient to provide access for fire fighting vehicles and containing gravel to a depth of at least six inches or with paving having a crushed base equivalent to six inches of gravel, an unobstructed area two feet in width at right angles with each side of the constructed surface, curve radii of at least 50 feet, and a vertical clearance of at least 13 feet 6 inches. Driveways shall have: constructed widths of at least 12 feet with at least six inches of gravel or with paving having a crushed base equivalent to six inches of gravel and shall have a vertical clearance of 13 feet 6 inches.

(ii) Cul-de-sacs. Any dead-end road over 200 feet in length and not maintained by Lane County shall be considered a cul-de-sac and shall meet these standards for cul-de-sacs. Cul-de-sacs shall have a right-of-way width with a radius of at least 45 feet and an improved surface with a width of at least 36 feet. Dead-end roads shall have cul-de-sacs spaced at intervals of not less than 500 feet. Cul-de-sacs on private roads shall be marked and signed by applicants as "NO PARKING," and such signs shall be of metal or wood construction with minimum dimensions of 12 inches by 12 inches. No cul-de-sac shall be allowed to cross any slope which will allow chimney-effect draws unless the dangerous effects of the chimney-effect draws have been mitigated by the location of the road and, where necessary, by the creation of permanent fire breaks around the road.

(iii) Bridges and Culverts. Bridges and culverts shall be constructed to sustain a minimum gross vehicle weight of 50,000 lbs. and to maintain a minimum 16-foot road width surface or a minimum 12-foot driveway surface.

(iv) Road and Driveway Grades. Road and driveway grades shall not exceed 16 percent except for short distances when topographic conditions make lesser grades impractical. An applicant must submit objective evidence demonstrating that road and driveway grades in excess of eight percent are adequate for the fire fighting equipment of the agency providing fire protection to access the use, fire fighting equipment and water supply.

(v) Identification. Roads shall be named and addressed in compliance with LC 15.305-15.335.

(vi) Driveway Vehicle Passage Turnouts. Driveways in excess of 200 feet shall provide for a 20-foot passage space (turn out) at a maximum spacing of 400 feet, or wherever visibility is limited these distances shall be reduced to allow for safe visual conduct.

(vii) Modifications and Alternatives. The standards in LC 16.211(8)(e)(i)-(vi) above may be modified by the Approval Authority provided the applicant has submitted objective evidence demonstrating that an alternative standard would insure adequate access for fire fighting equipment from its point of origination to its point of destination. Examples of some possible alternatives to the standards in the above LC 16.211(8)(e)(i)-(vi) are provided below in LC 16.211(8)(vii). Vehicle passage turnouts constructed at appropriate intervals and constructed to at least eight feed in width with six inches of gravel may be acceptable alternatives to the road and driveway width standards mentioned above in LC 16.211(8)(e)(i). Hammer-head turn-a-rounds may be an acceptable alternative to the standards for cul-de-sacs mentioned above in LC 16.211(8)(e)(ii). Railway flat bed cars of sufficient strength to maintain a minimum gross weight of 50,000 lbs. may be an acceptable alternative for short bridges or private roads and driveways. Road or driveway paving having a crushed base equivalent to six inches of base gravel may be an acceptable alternative for allowing grades in excess of those required above in LC 16.211(8)(e)(iv).

(9) Other Development Standards.

(a) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Comprehensive Plan:

(i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.211(9)(a)(i) above. Where vegetation removal beyond that allowed in LC 16.211(9)(a)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(aa) Commercial forest practices regulated by the Oregon Forest Practices Act.

(bb) Vegetation removal necessary to provide water access for a water dependent use.

(cc) Removal of dead or diseased vegetation that poses a safety or health hazards.

(dd) Removal of vegetation necessary for the maintenance of placement or structural shoreline stabilization.

(b) Signs.

(i) Signs shall not extend over a public right-of-way or project beyond the property line.

(ii) Signs shall not be illuminated or capable of movement.

(iii) Signs shall be limited to 200 square feet in area.

(10) Area. The minimum area requirement for the division of land shall be as follows:

(a) Except as provided in LC 16.211(10)(b) below, for the creation of a woodlot for the purpose of the propagation or harvesting of a forest product, the minimum area shall be at least 20 acres and that which is necessary to meet the acreage minimum requirements specified in LC 16.211(10)(b) below, and additional area to accommodate a homesite, access and fire breaks required by LC 16.211(8) above and a logical parcel layout or use of the parcel. The applicant shall submit sufficient factual documentation to verify that each proposed tract meets the above requirements. Area computations shall be measured consistent with the LC 16.211(10)(b) below.

(b) Except as provided in (c) below, the minimum area requirement for the creation of parcels or lots shall comply with the Douglas fir cubic foot site index and acreage requirements below, provided sufficient factual documentation concerning the forest management, the soils, cubic foot site indices and acreage of the proposed parcel or lots comply with the minimum cubic foot site index/acreage requirements specified below. Whenever a legal lot has cubic foot site indices which fall into more than one of the below categories, compliance with the minimum acreage requirements may be determined by:

(i) Identifying the number of acres in each cubic foot site index category.

(ii) Identifying the percentage of the acreage requirement met for each category. This percentage shall be determined by dividing the number of acres in each category by the acreage minimum number for the same category.

(iii) Adding the percentages identified in LC 16.211(10)(b)(ii) above. The minimum acreage requirement shall have been met if the percentage total is 100 or greater.

Potential Yield cu.ft./acre/yr	Acreage Minimum
(20-49 cf/ac)	64
(50 84 cf/ac)	43
(85 119 cf/ac)	34
(120-164 cf/ac)	24
(165-224 cf/ac)	17

(c) The minimum area for the creation of a lot or parcel, for the purpose of the propagation or harvesting of a forest product shall be 80 acres in the following situation:

(i) The tract to be divided contains at least 160 acres, and

(ii) The proposed lot or parcel is adjacent to land zoned F-1, RCP.

The 80 acres shall be of sufficient dimensions to accommodate a logical lot or parcel layout and forest use of each tract. The applicant shall submit sufficient factual documentation to verify that the proposed lots or parcels comply with the criteria of LC 16.211(10)(c) herein. The provisions of LC 16.211(10)(a) above shall not apply to the division of an 80-acre lot or parcel created pursuant to the criteria of LC 16.211(10)(c) herein unless the property adjacent to the 80-acre lot or parcel is no longer zoned F-1, RCP.

(d) For the creation of a farm parcel, the minimum area shall be 40 acres. A farm management plan including the information required by the Exclusive Farm Use (E) Zone, LC 16.212(2)(g)(v)(ee) below shall be presented by the applicant and shall factually demonstrate the suitability of the land for the intended use. A statement shall be placed on the face of the map for the partition disclosing that a dwelling or mobile home is not guaranteed unless the provisions of this zone for a residence in a mixed farm/forest area are met. The provisions of LC 16.211(10)(a) above shall not apply to the division of a lot or parcel created pursuant to LC 16.211(10)(d) herein.

(e) For the creation of a farm parcel for the purpose of growing grapes, berries or horticultural specialties, the minimum area shall be 20 acres. The management plan and map statement requirements of LC 16.211(10)(c) above shall also apply.

(f) The remaining portion of the parent parcel being divided must also comply with either LC 16.211(10)(a),(b), (c), (d), or (e) above.

(g) The minimum land division standard in LC 16.211(10) above may be waived to allow a division of forestland involving a dwelling lawfully existing prior to January 25, 1990 provided:

(i) The new parcel containinig the dwelling is no larger than five acres; and

(ii) The remaining forest parcel, not containing the dwelling, contains 80 acres; or

(iii) The remaining forest parcel, not containing the dwelling, is consolidated with another parcel which together meet the minimum land division standards of LC 16.211(10)(a) above.

(h) The minimum land division standard in LC 16.211(10) above may be waived to allow uses identified above in: LC 16.211(2)(i); LC 16.211(3)(a) through (k); and LC 16.211(4)(a) through (d); provided that such uses have been approved in compliance with LC 16.211(5) above.

(i) Notice of a decision for an application pursuant to LC 16.211(10) above shall occur in compliance with LC 16.100(3).

PARK AND RECREATION ZONE (PR-RCP)

RURAL COMPREHENSIVE PLAN

16.215 Park and Recreation Zone (PR-RCP).

(1) Purpose. The purpose of the Park and Recreation Zone (PR-RCP) is:

(a) To establish zones within which a variety of recreational activities may be conducted as outright permitted uses without interference from other nonrecreational uses.

(b) To establish standards and criteria to permit and conditionally permit recreational activities within areas for which a built upon or committed exception to a Statewide Planning Goal has been taken, or within a designated nonresource area, or within resource areas for which an exception to a Statewide Planning Goal has not been taken.

(c) To provide protective measures for riparian vegetation along Class I streams designated as significant in the Rural Area Comprehensive Plan.

(d) To implement the policies of the Lane County Rural Area Comprehensive Plan.

(2) Permitted Uses. The following uses and activities are permitted in any area zoned PR-RCP subject to the general provisions and exceptions specified by this Chapter of Lane Code. Uses listed below may be subject to Site Review procedures as specified in LC 16.257, and verification of whether or not this is required must be made prior to development of a permitted use:

(a) Forest operations or forest practices including, but not limited to, reforestation of forest land, road construction and maintenance, harvesting of a forest tree species, application of chemicals and disposal of slash.

(b) Temporary onsite structures which are auxiliary to and used during the term of a particular forest operation.

(c) Physical alteration to the land auxiliary to forest practices including, but not limited to, those made for purposes of exploration, mining, commercial gravel extraction and processing, landfills, dams, reservoirs, road construction or recreational facilities.

(d) Farm use.

(e) Towers and fire stations for forest fire protection.

(f) Water intake facilities, canals and distributions lines for farm irrigation and ponds.

(g) Exploration for and production of geothermal, gas, oil and other associated hydrocarbons, including the placement and operation of compressors, separators and other customary production equipment for an individual well adjacent to the well head.

(3) Uses Subject to Director Approval. The following uses are allowed subject to prior submittal of an application pursuant to LC 14.050 and approval by the Director pursuant to LC 14.100. The uses in LC 16.215(2)(a)-(i) may be allowed subject to conformance with the applicable approval criteria of LC 16.215(5) below. The uses in LC 16.215(3)(j)-(o) may be allowed provided the application contains adequate evidence demonstrating the proposed use fits within the listed classification.

(a) Private hunting and fishing operations without any lodging accommodations.

(b) Caretaker residences for public parks and fish hatcheries.

(c) Parks.

(d) Campgrounds for areas devoted to overnight temporary use for vacation, recreational or emergency purposes, but not for residential purposes and not including intensively developed recreational uses such as swimming pools, tennis courts, retail stores or gas stations. A camping site may be occupied by a tent, travel trailer or recreational vehicle.

(e) Aids to navigation and aviation.

(f) Water intake facilities, related treatment facilities, pumping stations and distribution lines.

(g) Public road and highway projects described as follows:

(i) Construction of additional passage and travel lanes requiring the acquisition of additional right-of-way but not resulting in the creation of new parcels.

(ii) Reconstruction or modification of public roads and highways involving the removal or displacement of buildings but not resulting in the creation of new parcels.

(iii) Improvement of public roads and highway-related public facilities such as maintenance yards, weigh stations and rest areas, where additional property or right-of-way is required but not resulting in the creation of new parcels.

(h) Private accommodations for fishing occupied on a temporary basis may be allowed subject to compliance with LC 16.215(10)(a) or (b) below, LC 16.215(10)(c)-(h) below, and the following requirements.

(i) Accommodations are limited to no more than 15 guest rooms as that term is defined in the Oregon Structural Specialty Code.

(ii) Only minor incidental and accessory retail sales are permitted.

(iii) Accommodations are occupied temporarily for the purpose of fishing during fishing seasons authorized by the Oregon Fish and Wildlife Commission.

(iv) Accommodations are located within 1/4 mile of fish-bearing Class I waters.

(i) Forest management research and experimentation facilities as defined by ORS 526.215 or where accessory to forest operations.

(j) Uses to conserve soil, air, and water quality and to provide for wildlife and fisheries resources.

(k) Additional local distribution lines within existing rights-of-way (e.g., electric distribution transformers, meter cabinets, terminal boxes, pedestals), or which provide service hookups, including water service hookups.

(l) Temporary portable facility for the primary processing of forest products.

(m) Exploration for mineral and aggregate resources as defined in ORS Chapter 517.

(n) Widening of roads within existing rights-of-way in conformance with the transportation element of the applicable comprehensive plan including the following public road and highway projects:

(i) Climbing and passing lanes within the right-of-way existing as of July 1, 1987.

(ii) Reconstruction or modification of public roads and highways, not including the addition of travel lanes, where no removal or displacement of buildings would occur, or no new land parcels would result.

(iii) Temporary public road and highway detours that will be abandoned and restored to original condition or use at such time as no longer needed.

(iv) Minor betterment of existing public roads and highway-related facilities, such as maintenance yards, weigh stations and rest areas, within right-of-way existing as of July 1, 1987, and contiguous public-owned property utilized to support the operation and maintenance of public roads and highways.

(o) Uninhabitable structures accessory to fish and wildlife enhancement.

(4) Uses Subject to Hearings Official Approval. The following uses may be allowed provided a land use application is submitted pursuant to LC 14.050 and approved by the Hearings Official pursuant to LC 14.300, and provided the requirements in LC 16.215(5) below are met:

(a) Firearms training facility.

(b) Private seasonal accommodations for fee hunting operations may be allowed subject to LC 16.215(10)(a) or (b) below, LC 16.215(10)(c)-(h) below, and the following requirements:

(i) Accommodations are limited to no more than 15 guest rooms as that term is defined in the Oregon Structural Specialty Code; and

(ii) Only minor incidental and accessory retail sales are permitted.

(iii) Accommodations are occupied temporarily for the purpose of hunting during game bird and big game hunting seasons authorized by the Oregon Fish and Wildlife Commission.

(5) Criteria for Uses Subject to Approval by the Director or Hearings Official Uses authorized by LC 16.215(3)(a)-(i) and (4) above may be allowed provided the following requirements are met:

(a) The proposed use will not force a significant change in, or significantly increase the cost of, accepted farming or forest practices on agriculture or forest lands.

(b) The proposed use will not significantly increase fire hazard or significantly increase fire suppression costs or significantly increase risks to fire suppression personnel.

(c) For uses authorized above in LC 16.215(3)(c) and (d), a written statement recorded with the deed or written contract with the County or its equivalent is obtained from the landowner which recognizes the rights of adjacent and nearby landowners to conduct forest operations consistent with the Forest Practices Act and Rules.

(d) For uses authorized above in LC 16.215(4), the proposed uses will not significantly conflict with the liveability and appropriate uses on adjacent and nearby lands.

(6) Permitted Uses Within An Exception Area. The following uses and activities are permitted whenever the subject property is included within an area for which a built upon or committed exception has been taken to a Statewide Planning Goal and incorporated into the Lane County Rural Area Comprehensive Plan and subject to Site Review procedures as may be required in LC 16.257:

(a) Any of the uses permitted within the above LC 16.215(2) or LC 16.215(3).

(b) Retail trade of food or new general merchandise conducted within a building not exceeding 750 square feet in total floor area.

(c) Golf courses with or without a country club.

(d) Riding stables.

(e) Bowling.

(f) Gymnasium or athletic club.

(g) Yachting clubs.

(h) Motel, hotel, lodges and other forms of recreational lodging. Any of the above lodging uses may include a restaurant, retail trade of food or new general merchandise exceeding the standard set in LC 16.215(4)(b) above.

(i) Game rooms, miniature golf, go cart tracks.

(j) Boat rentals or boat storage and incidental minor repairs and sale of gas.

(k) Country clubhouse for a golf course which may include a restaurant, retail trade of food or new general merchandise exceeding the standard set in LC 16.215(4)(b) above.

(7) Uses Subject to Hearings Official Approval. The following uses and activities are conditionally permitted subject to submittal of an application pursuant to LC 14.050, approval of the application by the Hearings Official pursuant to LC 14.300, and subject to the compliance with the conditional use criteria specified in LC 16.215(8) below:

(a) Race track.

(b) Amusement park, carnival, circus.

(c) Stadium.

(d) Fairgrounds and amusement park.

(e) Recreational shooting.

(f) Airport and flying field.

(8) Exception Area Conditional Use Permit Criteria. Uses conditionally permitted above in LC 16.215(7) shall be subject to compliance with the following criteria:

(a) The subject property is included within an area for which an exception has been taken to a Statewide Planning Goal and incorporated into the Lane County Rural Area Comprehensive Plan.

(b) The proposed use will not adversely affect the livability, appropriate use, natural resources or scenic character of abutting properties and the surrounding vicinity. (Consideration may be given to harmony in scale, bulk, coverage and density; to the availability of public facilities and utilities; to the harmful effect, if any, upon desirable neighborhood character; to the generation of traffic and capacity of surrounding streets; and to any other relevant impact to the use.)

(c) The proposed use will not be adversely affected by natural hazards, such as floods, slides, erosion.

(d) The proposed use will not alter the stability of the overall land use pattern in the area nor interfere with farm and forest practices and will be compatible with the retention of existing and potential forest uses on the surrounding forest lands. The proposed use will have a water supply of sufficient quantity and quality to meet reasonably foreseeable needs.

(e) The proposed use will have a water supply of sufficient quantity and quality to meet reasonably foreseeable needs.

(9) Exception Area Property Development Standards. All uses or activities permitted or conditionally permitted by LC 16.215(6) and (7) above, except commercial forest practices regulated by the Oregon Forest Practices Act, shall be subject to the following development standards:

(a) Property Line Setbacks. No structure other than a fence or sign shall be located closer than:

(i) 20 feet from the planned right-of-way of a State road, County road or a local access public road specified in Lane Code Chapter 15; and

(ii) 20 feet from an existing right-of-way of a State road, County road or a local access public road; and

(iii) 10 feet from all other property lines except as provided below.

(b) Class I Stream Setbacks. No structure other than a fence or sign shall be located closer than 100 feet from the ordinary high water of a Class I stream designated for riparian vegetation protection by the Comprehensive Plan. A lesser setback may be allowed if:

(i) The Department of Fish and Wildlife is consulted by the Department at least 10 days prior to issuing a permit for a structure; and

(ii) The riparian vegetation does not actually extend all the way into the 100-foot setback to the location of the proposed structure, and the riparian vegetation has not been removed in violation of the below riparian vegetation maintenance standards; or

(iii) An application for a variance to the above setback standard has been approved pursuant to LC 16.256 with findings of compliance to the Comprehensive Plan policies for the protection of Class I streams and riparian vegetation.

(c) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Comprehensive Plan:

(i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.215(9)(c)(i) above. Where vegetation removal beyond that allowed in LC 16.215(9)(c)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(aa) Vegetation removal necessary to provide water access for a water dependent use.

(bb) Removal of dead or diseased vegetation that poses a safety or health hazards.

(cc) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

(d) Signs.

(i) Signs shall not extend over a public right-of-way or project beyond the property line.

(ii) Signs shall not be illuminated or capable of movement.

(iii) Signs shall be limited to 200 square feet in area.

(10) Forest and Farm Area Siting Standards. The following siting standards shall apply to all new structures and dwellings and other uses as specified above in LC 16.215(3) and (4), except for uses regulated under the Oregon Forest Practices Act. These standards are designed to make such uses compatible with forest operations and agriculture, to minimize wildfire hazards and risks and to conserve values found on forest or farm lands. The standards in LC 16.215(10)(a)-(b) below shall be weighed together with the requirements in LC 16.215(10)(c) and (e) below to identify any sites for a residence.

(a) Setbacks. Residences and accessory structures shall be sited as follows:

(i) Near residences on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet from any ravine, ridge or slope; and

(ii) With minimal intrusion into forest areas undeveloped by nonforest uses; and

(iii) Where possible, when considering LC 16.215(10)(a)(i) and (ii) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU; and

(iv) Not closer than 100 feet from ordinary high water of a Class I stream.

(v) Not closer than:

(aa) 20 feet from the planned right-of-way of a state road, County road or a local access public road specified in Lane Code Chapter 15; and

(bb) 20 feet from an existing right-of-way of a state road, County road or a local access public road; and

(cc) 10 feet from all other property lines.

(b) The amount of forest lands used to site access roads, service corridors and structures shall be minimized.

(c) Fire Safety Measures. Residences, structures and roads shall comply with the following fire safety measures:

(i) Fuel Breaks. Fuel breaks around residences shall be maintained as follows:

(aa) Primary Safety Zone. The primary safety zone is a fire break extending a minimum of 30 feet in all directions around dwellings. The goal within the primary safety zone is to exclude fuels that will produce flame lengths in excess of one foot. Vegetation within the primary safety zone could include green lawns and low shrubs (less than 24 inches in height). Trees shall be spaced with greater than 15 feet between the crowns and pruned to remove dead and low (less than eight feet) branches. Accumulated leaves, needles, and other dead vegetation shall be removed from beneath trees. Nonflammable materials (i.e., rock) instead of flammable materials (i.e., bark mulch) shall be placed next to the house.

As slope increases, the primary safety zone shall increase away from the house, parallel to the slope and down the slope, as shown in the table below:

Size of the Primary Safety Zone by Percent Slope

% Slope	Feet of Primary Safety Zone	Feet of Additional Safety Zone Down Slope
0	30	0
10	30	50
20	30	75
25	30	100
40	30	150

Building shall be restricted to slopes of less than 40 percent.

(bb) Secondary Fuel Break. The secondary fuel break is a fuel break extending a minimum of 100 feet in all directions around the primary safety zone. The goal of the secondary fuel break is to reduce fuels so that the overall intensity of any wildfire would be lessened and the likelihood of crown fires and crowning is reduced. Vegetation within the secondary fuel break shall be pruned and spaced so that fire will not spread between crowns of trees. Small trees and brush growing underneath larger trees shall be removed to prevent spread of fire up into the crowns of the larger trees. Dead fuels shall be removed.

(ii) Fire Suppression Water Supplies. An adequate fire suppression system shall be provided. Unless otherwise authorized by the local fire official, the minimum acceptable system shall include the following:

(aa) A water supply such as a pond, stream, tank, well, sump or any combination thereof, together with a delivery system capable of sustaining a volume of 20 gallons per minute for not less than 20 minutes. If a water supply is available and suitable for fire protection, such as a swimming pool, pond, stream, or lake, then road access to within 15 feet of the water's edge shall be provided for pumping units. The road access shall accommodate the turnaround of fire fighting equipment during the fire season. Permanent signs shall be posted along the access route to indicate the location of the emergency water source.

(bb) Sufficient water outlets, together with serviceable hose not less than three-quarter inch inside diameter and a nozzle to reach the dwelling and nearby improvements.

(cc) The water supply, pump, hose and nozzle shall be maintained as a connected, operating unit ready for immediate use during period of fire danger.

(iii) Chimneys and Roofs. Residences or structures with any chimneys shall have a spark arrestor on the chimneys, and residences shall have a fire retardant roof.

(d) Domestic Water Supplies. Evidence shall be provided that the domestic water supply is from a source authorized in accordance with the Department of Water Resources Oregon Administrative Rules for the appropriation of ground water (OAR 690, Division 10) or surface water (OAR 690, Division 20) and not from a Class II stream as defined in the Forest Practices Rule (OAR 629-24-101(3)). If the water supply is unavailable from public sources or sources located entirely on the property, then the applicant shall provide evidence that a legal easement has been obtained permitting domestic water lines to cross the properties of affected owners.

(e) Fire Safety Design Standards for Roads and Driveways. Except for private driveways, roads or bridges accessing only commercial forest uses, an applicant shall provide evidence and a clear explanation which demonstrates why the route of access for fire fighting equipment, from the fire station to the destination point, across public road, bridges, private roads or private access easements and driveways will comply with the standards specified below in LC 16.215(10)(e). Evidence of compliance with the standards specified in LC 16.215(10)(e) below should include objective information about the fire fighting equipment, the physical nature of the access route, the nature of any proposed improvements to the access route, and it may also include a written verification of compliance from the agency providing fire protection, or a written certification of compliance from an Oregon Registered Professional Engineer. As used herein, "road" means a way of access used for more than one use and accessory uses. As used herein "driveway" means a way of access used for one use and accessory uses.

(i) Road and Driveway Surfaces. Roads shall have unobstructed widths of at least 20 feet including: travel surfaces with widths of at least 16 feet constructed with gravel to a depth sufficient to provide access for fire fighting equipment and containing rock to a depth of at least six inches or with paving having a crushed base equivalent to six inches of gravel, an unobstructed area two feet in width at right angles with each side of the constructed surface, curve radii of at least 50 feet, and a vertical clearance of at least 13 feet 6 inches. Driveways shall have: constructed widths of at least 12 feet with at least six inches of gravel or with paving having a crushed base equivalent to six inches of gravel and shall have a vertical clearance of 13 feet 6 inches.

(ii) Cul-de-sacs. Any dead-end road over 200 feet in length and not maintained by Lane County shall be considered a cul-de-sac and shall meet these standards for cul-de-sacs. Cul-de-sacs shall have a right-of-way width with a radius of at least 45 feet and an improved surface with a width of at least 36 feet. Dead-end roads shall have cul-de-sacs spaced at intervals of not less than 500 feet. Cul-de-sacs on private roads shall be marked and signed by applicants as "NO PARKING," and such signs shall be of metal or wood construction with minimum dimensions of 12 inches by 12 inches. No cul-de-sac shall be allowed to cross any slope which will allow chimney-effect draws unless the dangerous effects of the chimney-effect draws have been mitigated by the location of the road and, where necessary, by the creation of permanent fire breaks around the road.

(iii) Bridges and Culverts. Bridges and culverts shall be constructed to sustain a minimum gross vehicle weight of 50,000 lbs. and to maintain a minimum 16-foot road width surface or a minimum 12-foot driveway surface.

(iv) Road and Driveway Grades. Road and driveway grades shall not exceed 16 percent except for short distances when topographic conditions make lesser grades impractical. An applicant must submit objective evidence demonstrating that road and driveway grades in excess of eight percent are adequate for the fire fighting equipment of the agency providing fire protection to access the use, fire fighting equipment and water supply.

(v) Identification. Roads shall be named and addressed in compliance with LC 15.305-15.335.

(vi) Driveway Vehicle Passage Turnouts. Driveways in excess of 200 feet shall provide for a 20-foot passage space (turn out) at a maximum spacing of 400 feet, or wherever visibility is limited these distances shall be reduced to allow for safe visual conduct.

(vii) Modifications and Alternatives. The standards in LC 16.215(10)(e)(i)-(vi) above may be modified by the Approval Authority provided the applicant has submitted objective evidence demonstrating that an alternative standard would insure adequate access for fire fighting equipment from its point of origination to its point of destination. Examples of some possible alternatives to the standards in the above LC 16.215(10)(e)(i)-(vi) are provided below in LC 16.215(10)(vii). Vehicle passage turnouts constructed at appropriate intervals and constructed to at least eight feet in width with six inches of gravel may be acceptable alternatives to the road and driveway width standards mentioned above in LC 16.215(10)(e)(i).

Hammer-head turn-a-rounds may be an acceptable alternative to the standards for cul-de-sacs mentioned above in LC 16.215(10)(e)(ii). Railway flat bed cars of sufficient strength to maintain a minimum gross weight of 50,000 lbs. may be an acceptable alternative for short bridges or private roads and driveways. Road or driveway paving having a crushed base equivalent to six inches of base gravel may be an acceptable alternative for allowing grades in excess of those required above in LC 16.215(10)(e)(iv).

(f) Maintenance, Removal and Replacement of Riparian Vegetation. The following standards shall apply for the maintenance, removal and replacement of riparian vegetation along Class I streams designated for riparian vegetation protection by the Comprehensive Plan:

(i) No more of a tract's existing vegetation shall be cleared from the setback and adjacent area than is necessary for a permitted use, accessory buildings, necessary access, septic requirements and fire safety requirements.

(ii) Construction activities in and adjacent to the setback area shall occur in such a manner so as to avoid unnecessary excavation and/or removal of existing vegetation beyond that required for the facilities indicated in LC 16.215(10)(g)(i) above. Where vegetation removal beyond that allowed in LC 16.215(10)(g)(i) above cannot be avoided, the site shall be replanted during the next replanting season to avoid water sedimentation. The vegetation shall be of indigenous species in order to maintain the natural character of the area.

(iii) A maximum of 25 percent of existing natural vegetation may be removed from the setback area.

(iv) The following uses and activities are excepted from the above standards:

(aa) Commercial forest practices regulated by the Oregon Forest Practices Act.

(bb) Vegetation removal necessary to provide water access for a water dependent use.

(cc) Removal of dead or diseased vegetation that poses a safety or health hazards.

(dd) Removal of vegetation necessary for the maintenance or placement of structural shoreline stabilization.

(g) Signs.

(i) Signs shall not extend over a public right-of-way or project beyond the property line.

(ii) Signs shall not be illuminated or capable of movement.

(iii) Signs shall be limited to 200 square feet in area.

[EXTERNAL]

Diana,

The Home Builders Association of Lane County has been following the discussion at the county and in the community about the 2021 LUBA decisions that have negated small F-2 landowners' rights to a dwelling, thus ending several decades of county practice. This has been devastating for hundreds of owners.

LUBA accomplished this by interpreting an ambiguous county plan policy that has never been interpreted by the County Board. The Board can, however, do its own interpretation of the policy now. As the County attorney will likely advise you, a County Board interpretation that is different from LUBA's will be deferred to if it is plausible, even it conflicts with LUBA's interpretation.

The HBA has prepared a possible interpretation of the ambiguous Policy 11 that should do the job. This interpretation considers all the variables that must be considered. It would restore the F-2 land owners' rights to their status prior to the LUBA decisions in 2021. By definition, an ambiguous plan policy can have multiple interpretations. The HBA believes this interpretation offered here is the best one; however, it only needs to be "plausible" for LUBA to be bound to defer to it.

Please see attached document for additional information.
Please let me know if you have any questions, thoughts or concerns regarding the provided information.

Thank You,
Pete Barrell

Outline of Lane County Board findings to restore F-2 property owners' rights to Forest Template Dwelling approvals on legal lots smaller than 80 acres in Major Big Game Habitat

This states the Board's interpretation of Rural Comprehensive Plan, Goal 5, Policy 11, as it relates to minimum parcel size for a Forest Template Dwelling on land zoned F-2, Impacted Forest, in areas that are mapped as Major or Peripheral Big Game Habitat in the county's Goal 5 program.

The language of Policy 11 is:

> "**Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County.** Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

I. Introduction and Summary

In recent decisions, the Land Use Board of Appeals found that the first sentence of the Policy, shown in **bold**, is ambiguous. See *LandWatch Lane County v. Lane County (Nimpkish LLC)*, __ Or LUBA __ (No. 2020-030, Jan. 23, 2021)(remanding county approval of dwelling approval on 10- acre parcel); *King v. Lane County*, __ Or LUBA __ (LUBA Nos. 2021-047/052, Oct. 15, 2021), *aff'd without opinion* 317 Or App 136, 501 P3d 1058 (2022)(affirming county denial of dwellings on two 12-acre parcels).

Absent any previous interpretation of Policy 11 by this Board, LUBA interpreted Policy 11on its own, without any deference to how the County Planning Director and Hearing Officials have applied the Policy for several decades.

When the County Board, as the governing body that enacts the code, interprets ambiguous code provisions, LUBA is bound to defer to any "plausible" interpretation by the Board. However, absent an interpretation by the County Board, LUBA interprets the language on its own, without any deference to the county Hearings Official or Planning Director, and without deference to previous county practice. See, generally, *Siporen v. City of Medford*, 349 Or 247, 259, 243 P3d 776 (2010)("[W]hen a local government plausibly interprets its own land use regulations by considering and then choosing between or harmonizing conflicting provisions, that interpretation must be affirmed, * * * unless the interpretation is inconsistent with *all* of the 'express language' that is relevant to the interpretation, or inconsistent with the purposes or policies underpinning the regulations." Emphasis original)

The County Board did not have an opportunity to conduct its own interpretation of Policy 11 in the *Nimpkish* and *King* decisions. Recent amendments to Lane Code Chapter14 removed the Board from review of site-specific land use applications. Thus, in *Nimpkish* the Hearing Official followed county practice and approved the dwelling; the appeal was directly to LUBA, which interpreted Policy 11 without deference to the County and remanded the approval as being on a parcel smaller than 80 acres, contrary to Policy 11. In *King* the Hearing Official was obligated to follow LUBA's interpretation in the *Nimpkish* and, therefore, denied the dwellings for being on parcels smaller than 80 acres. LUBA affirmed that decision as consistent with *Nimpkish.*

In this proceeding the County Board intends to conduct its own interpretation of Policy 11. This interpretation is not taking place in the context of a specific application; therefore, the Board is not bound by any decisions in a specific case. As explained in *Siporen*, because the Board, as the governing body, is responsible for the language of its code, the Board interpretation, if plausible, will be afforded great deference when this interpretation is relied upon in county decisions that are later appealed to LUBA and the Courts. The Board believes this interpretation is correct; the Board expects it will be deferred to because it will meet the "plausible" test when it is reviewed by LUBA.

This is an important and timely interpretation for the Board to make. There are many owners of vacant, small tracts of F-2 Impacted Forest land in the County. F-2 tracts, by definition, are intended to be smaller than 80 acres, and the vast majority are much smaller than 40 acres in size. F-2 parcels tend to be located in areas that are close to existing rural development and other small parcels. These small-tract owners have expected, based on decades of county practice, that they would eventually be able to get approval to place a single dwelling on their F-2 land, regardless of the small parcel size, if they can meet the other criteria for a dwelling. That expectation was secure until LUBA issued its own interpretation of Policy 11 in the *Nimpkish* and *King* decisions. Because this interpretation will be upheld on appeal if it is found to be plausible, it should restore owners' rights to dwellings that were negated by the LUBA decisions.

Section II below summarizes LUBA's rationale in its recent decisions that negated F-2 owners' dwelling rights. In section III the Board identifies the text and context of the county plan and code, and its legislative history from acknowledgment in the 1980's, that is relevant to this interpretation. Section IV states and explains this Board's interpretation.

> **Summary:** After its review of the text and context of the plan and code, and the events and documents in the 1980s plan acknowledgment process that is legislative history, the Board determines that Policy 11 is not an independent standard for review of dwelling applications on existing parcels land. More specifically, the ODFW recommended parcel sizes (80 acres in Major Big Game Habitat, and 40 acres in Peripheral Big Game Habitat) are not minimum standards for individual dwelling applications on F-2 units of land. LC 16.211 states the exhaustive list of standards for template dwellings on F-2 land.

It is the Board's expectation that this interpretation will restore the property rights of F-2 land owners to the *status quo ante* – that is, to the situation prior to the *Nimpkish* and *King* decisions.

This is an interpretation of Policy 11 to determine its meaning as it is presently stated, and in the context of the balance of the plan and code. Policy 11 has not changed since it was acknowledged as complying with Goal 5 in 1984. The purpose here is not to make any new policy decisions about whether the Policy 11 or other plan and code provisions do a good enough job to protect big game, or whether regulations should be amended to do a better job. Those points are policy discussions for another day.

II. LUBA's Interpretations in *Nimpkish* and *King*

In *Nimpkish,* LUBA remanded a county approval of a forest template dwelling on a 10-acre F-2 parcel. It held that Policy 11 applies to a forest template dwelling application in Major or Peripheral Big Game Range. Slip op 9. Based on the legislative history materials that were available and examined in *Nimpkish*, LUBA believed that the county's Goal 5 program for Big Game was premised on the county's commitment to honor the 80 and 40-acre density minimums in all applications. LUBA said:

> "We understand DLCD to have concluded that the county's Goal 5 program protects habitat because it adopts residential densities in accordance with ODFW's recommendations and requires that, if 'proposals are made' that exceed those densities, the county will conduct an ESEE analysis for that individual proposal." Slip op 14.

LUBA reasoned that because acknowledgment was premised on a commitment to residential density minimums, Policy 11 must apply directly in the F-2 zone because there is no other basis in the plan or code for ensuring minimum residential densities. Slip op 15. Thus, 80 acre and 40 acre minimums are threshold criteria for any dwelling application on F-2 land in mapped Major and Peripheral Big Game Habitat areas, respectively.

In *King* LUBA reviewed a fuller record of documents relevant to its interpretation. Slip op 13. LUBA agreed Policy 11 is ambiguous. "Policy 11 is ambiguous and requires interpretation to determine whether and how its density limitations function as approval criteria for dwelling permit applications." Slip op 12. Based on the legislative history, LUBA read the addition of clustering and siting standards for forest dwellings as supplementing rather than replacing the ODFW minimum lot size recommendations referenced in Policy 11. Slip op 20. LUBA reached the same conclusion as to the applicability of Policy 11 as in *Nimpkish*.

III. Text, context and legislative history relevant to this interpretation.

The record of the *King* decision identifies the key documents relevant to interpreting Policy 11. In addition to relevant statutes and state rules, these include:

County Plan materials:

- Rural Comprehensive Plan, Goal 5, Policy 11, quoted above, which is the subject of this interpretation.
- The balance of the county's acknowledged Goal 5 program for Big Game habitat, as a significant Goal 5 resource.

County Code materials:

- LC 16.211(5), which is the approval criteria for dwelling on F-2 land.
- The balance of Lane Code Chapter 16.211, regulations for the F-2, Impacted Forest Land.

Working Papers supporting the plan:

- Rural Comprehensive Plan, Flora and Fauna Working Paper (March 1982)
- Addendum to the Flora and Fauna Working Paper (November 1983)

DLCD Plan acknowledgment Staff Reports:

- July 19, 1984 DLCD Staff Report
- August 17, 1984 DLCD Staff Report
- September 12, 1984, DLCD Staff Report

IV. Discussion

LC 16.211 is intended to be an exhaustive listing of the standards that apply to review of Forest Template Dwelling applications. This is evident from the Purpose statement for the zone and the introduction to the Table of Permitted Uses.

The Purpose Statement in LC 16.211(1) says:

> "16.211 Impacted Forest Lands (F-2, RCP) (1) Purpose. The purpose of the Impacted Forest Land (F-2) Zone is to protect and maintain forest lands for grazing, and rangeland use and forest use, consistent with existing and future needs for agricultural and forest products. The F-2 zone is also intended to allow other uses that are compatible with agricultural and forest activities, to protect scenic resources and fish and wildlife habitat, and to maintain and improve the quality of air, water, and land resources of the county.
>
> "The F-2 zone has been applied to lands designated as Forest in the Comprehensive Plan. The provisions of the F-2 zone reflect the forest land policies of the Comprehensive Plan as well as the requirements of ORS Chapter 215 and OAR 660-006. The minimum parcel size and other standards established by this zone are intended to promote commercial forest operations."

The Use Table in LC 16.211(2) says:

> "Table 16.211-1 sets forth the uses allowed in the F-2 zone subject to Type I, II, or III approval processes. This table applies to all new uses, expansions of existing uses, and changes of use when the expanded or changed use would require a Type I, II, or, III process, unless otherwise specified on Table 16.211-1. All uses and their accessory buildings are subject to the general provisions, special conditions, additional restrictions, siting standards, fire siting standards, and exceptions set forth in LC 16.211."

The Table of Permitted Uses includes, as Residential Use 2.4, "Template Dwelling." The code explicitly lists the Template Dwelling use as "permitted subject to standards" and then lists the standards that apply. The listing of standards does not include Policy 11 or any other plan policies. There is no language in the list of standards that invites incorporating any plan policies. The listing of standards in the Table is intended to be exhaustive.

Had the Board intended to include compliance with plan policies as a standard for review of a template dwelling application, it would have referenced those policies in the Table of Permitted Uses in LC 16.211-1.

The context of the zoning code reinforces the standards in LC 16.211 for template dwellings as being exhaustive. Had the plan policies been intended to be included as standards for a template dwelling decision, the code would be explicit about that. For example, the standards for zone changes are explicit that relevant plan policies are standards for the decision. See LC16.252(2). Similarly, the code is explicit that relevant plan policies are standards for a land partition. See LC 13.080(1)(b)(ii).

Policy 11 neither states nor incorporates a minimum lot size for individual template dwellings applications in the F-2 zone.

Policy 11 consists of three sentences. No part of the policy commits the County to applying a minimum lot size to review of individual template dwellings applications on F-2 forest land. The County does not intend that such limits should be read into Policy 11.

Policy 11 primarily anticipates further planning work related to Big Game in the future. It anticipates regulating "overall density," and it anticipates possibly regulating density differently in different regions of the County.

> "Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County."

This work is necessarily planning work to be done in the future, because, as LUBA noted in both decisions, the number and location of regions has not been established, even after 36 years. *King,* Slip op 6 fn 4. Furthermore, some meaning needs to be given to the phrase "overall density." Overall density is not defined in the plan or code. It is not the same thing as a minimum acreage for each dwelling unit. It is something that needs to be figured out in the future.

However, as LUBA confirmed, the county's Goal 5 program for Big Game Habitat was acknowledged, even without the anticipated regional planning work being done. *King*, Slip op 4. LUBA was correct in saying that the establishment of planning regions and setting of "overall residential density" is a statement of work to be done in a post-acknowledgement planning process. *King*, Slip op 28. That planning work has not been started.

The second sentence of Policy 11 is linked to the first sentence.

> "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000."

The first sentence of Policy 11 is context for the second sentence. The phrase "density above that limit" in the second sentence refers back to the "overall residential density" phrase in the first sentence. The entirety of the second sentence will become operative when the future planning work is done. Once overall residential densities are established for regions, and those changes are acknowledged as Post Acknowledgment Plan Amendments, then any densities exceeding the new limits based on regions would trigger a new plan amendment in accordance with state law in OAR 660-16. Therefore, the second sentence is a statement that decision making following future planning work will comply with state law in division 16.

The third sentence in Policy 11 is also related to the first two sentences; it is a commitment to continue working with the ODFW in further planning work for Big Game.

> "The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

This sentence is a directive from the County to itself, committing to coordinate with the ODFW when it undertakes anticipated new work related to planning for Big Game Habitat. This, on its face, is not a standard that applies to a specific land use application. It is not language that applies to a present-day forest template application.

The Flora and Fauna Working Papers document a planning effort for Big Game Habitat that moved away from setting minimum lot sizes for dwelling applications on F-2 land and toward applying siting and clustering standards..

Working Papers are background documents for the comprehensive plan. They reflect the planning process on various topics as that planning process evolved in the several years prior to the plan being submitted for acknowledgment. Working Papers do not state the county's ultimate policy choices for any subject area. Policy choices are found in the plan and implemented in the code. They are, however, useful legislative history.

The Flora and Fauna Working Paper (March 1982) and its Addendum (November 1983) were both completed prior to the County submitting its plan to the state for acknowledgment in 1984. Therefore, the Working Papers are legislative history relating to intent at the time of plan submission.

The Working Paper Addendum reflects a shift in planning for Big Game Habitat that is consistent with this interpretation. The Addendum removed language from the initial Working Paper that emphasized applying density minimums to dwelling decisions. It rejected managing dwelling density as a "mere numbers game." It replaced density language with language that focused on using clustering and siting standards to limit conflicts with big game. As the

Addendum stated: "While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists." Working Paper Addendum at 14.

The county plan and code entered and exited acknowledgment review without minimum lot sizes for dwellings on F-2 land; only clustering and siting standards were strengthened during the state review.

When the County submitted its plan and code for acknowledgment in 1984, Policy 11 was in its current form, the Flora and Fauna Work Paper and its Addendum were complete, and neither the plan nor the code contained minimum lot size standards for dwellings on F-2 land in Big Game Range.

In its initial review of the plan and code, the DLCD explained that regulations in the F-1 zone were adequate for Big Game Habitat protection because dwellings are not permitted in the F-1 zone. July 19, 1984 DLCD Staff Report at 75. With respect to the F-2 zone, the DLCD required changes. DLCD Directive 2.d. to the County was:

> "Amend the F-2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones or contain clustering requirements in those areas." July 19, 1984 DLCD Staff Report at 75 (emphasis added).

That directive posed a policy choice to the County for F-2 land – set minimum lot sizes for dwellings in the F-2 zone or bolster clustering and siting standards. The County opted to change the clustering and siting standards. The September 17, 1984 DLCD Staff Report quoted these changes and found them adequate for acknowledgment. The Report said, at 25:

> "Response
>
> "Lane County has added the following new language to both the F-2 and EFU zones:
>
> > "(a) The approval authority shall balance the setback standards of LC 211(8)(a) with the siting requirements and application approval criteria specified elsewhere in CL 16.211 in order to minimize adverse impact upon forest uses and to assure optimal siting of proposed residences consistent with the purpose of the F-2 [EFU] zone.
> >
> > (i) Residence to be siting upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be siting as follows:
> >
> > (aa) Near residences on other tracts.
> >
> > (bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

"Conclusion

Requirement 2.d. has been met."

In summary, the County entered and exited acknowledgment review without minimum lot sizes for Forest Template Dwelling approvals on F-2 land in mapped Big Game Habitat. The acknowledgment process gave the County the option of protecting Big Game Habitat on F-2 land by establishing minimum lot sizes or bolstering clustering and siting standards. The County chose the latter, and that choice was acknowledged.

Policy 11 is not independently a basis for imposing minimum lot sizes on current F-2 dwelling applications in Big Game Habitat. If it were, the County would not have been given the policy choice during acknowledgment to either adopt minimum lot sizes or clustering and siting standards. The availability of this choice during acknowledgment supports the interpretation made here.

Concerned Parties, Attached is the hearing/pre-hearing written testimony received for Planning Action files 509-PA23-05321, which was the subject of yesterday's second hearing concerning King template dwelling applications. The testimony has been combined into a single document along with an index for your reference. The same testimony is included in the record for yesterday's first hearing, which was addressed in the previous email you should have received. The index is specific to the second hearing. Please contact me directly if you have any questions or require assistance prior to September 20, as Julia Dobberstein, the assigned staff planner for this hearing item is scheduled out of the office until then.

Sometime soon the attached document will be available on our website along with the other hearing related items for the September 7 hearings, which can be found at the following link: https://www.lanecounty.org/cms/One.aspx?pageId=6285782&portalId=3585881&objectId.94636=19715258&contextId.94636=6285783&parentId.94636=19699820. The Hearing recordings have already been posted.

The Hearings Official has allowed for an extended hearing record period subject to the following deadlines:

- Open Record for all parties of record until September 21, 2023 at 4:00 PM;
- Comment/Response to Open Record submittals until October 5, 2023 at 4:00 PM; and
- Final Rebuttal by the Applicant until October 12, 2023 at 4:00 PM.

If you plan to submit information please provide digital copies to me by email prior to the deadline (if your submittal is over 20 pages please also submit a paper copy). Please direct any written communication to Julia and copy me on any emails so we can better assist you and facilitate a smooth process.

Kind regards,

RECEIVED AUG 30 2023

8-26-2023

Dear Lane County,

I'm writing this letter in regards to 3 land parcels zoned Forest F1 to be changed to residential and Industrial for the purpose of developing 2 homesites and 1 Industrial building of 30,000 sq. ft.

If we follow the use of the word "interface" for the land where nature and business people have been allowed to mingle, shall we say, this sort of behavior excludes thoughts that the clearing of these forests to make safe for business folks leaves no forest. Please imagine a value for those trees while still standing and cleansing the air for your next breath. Mr. Kings money should not trump the value of intact mature forests. Animals live and migrate through the airport forested shoulders. Gee, who would have thought? Aren't we loosing enough forests to this disaster policy of clear cutting for 150 years? It has left nothing but a tree farm patchwork just made for conflagration during our dry season fires. Will anyone have the nerve and integrity to say enough on any level of government?

The last comment, if I may, there are dozens of Westfir homes and residents tucked just below the North facing slope below the 3 parcels of Forest zone land. When they drill for water, and excavate for footings and drain fields, it would be helpful and should be required that the applicant provide a topographic map indicating slopes and grades that could effect those below in landslide or runoff extremes!

Please don't enable this obvious fishing for exception to your Code.

RECEIVED AUG 30 2023

LAND MANAGEMENT DIVISION

DWELLINGS in the F1 (NONIMPACTED FOREST) ZONE

PUBLIC WORKS DEPARTMENT *3050 NORTH DELTA HIGHWAY, EUGENE OR 97408*
PLANNING: 541-682-3577 BUILDING: 541-682-4651 SANITATION: 541-682-3754

This guide outlines zoning and land use laws concerning new and existing dwellings in the F1 (Non-Impacted) forest zone. This guide is for informational purposes only and is not to be considered a substitute for the language of state or local regulations. Specific language is found in Lane Code (LC) 16.210, Oregon Revised Statutes (ORS) 215, and Oregon Administrative Rules (OAR) 660-06

The purpose of the F1 zone is, in part, to promote growing and harvesting of forest tree species as the leading use on forest land, and to provide for recreational opportunities and agriculture. This zone is predominantly undeveloped and used for commercial farm or forest uses.

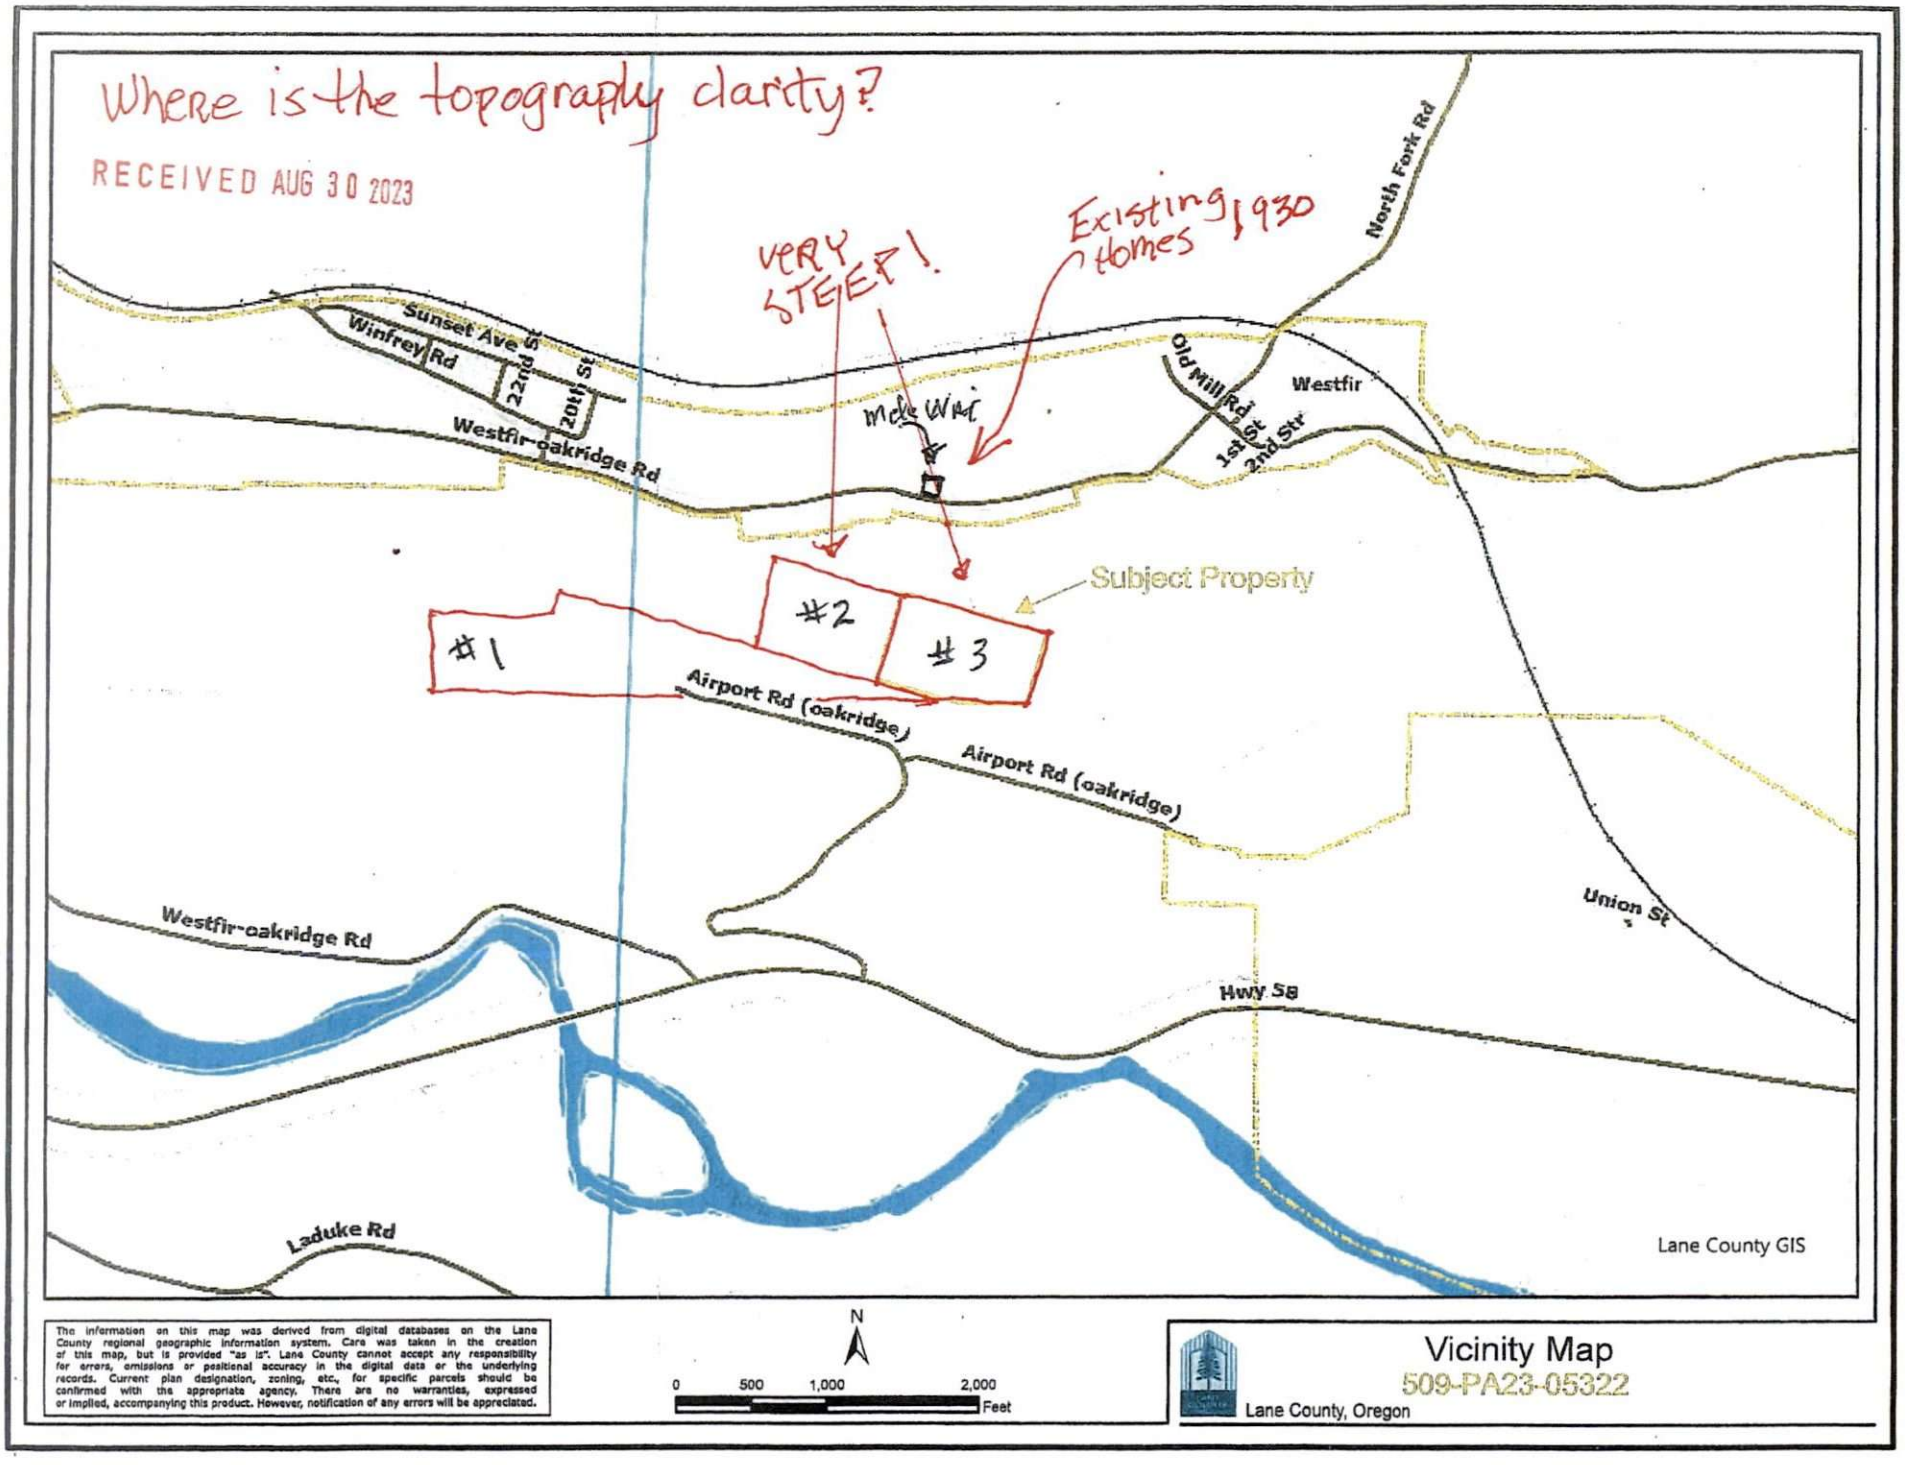
This brochure summarizes the regulations applicable to dwellings in this zone. Refer to the specific language of the code for exceptions and more details.

REPLACEMENT RIGHTS: ORS 215.755

This statute has provisions for the repair or replacement of an existing dwelling. It does not have any provisions for building a new dwelling on vacant land.

In order to replace a dwelling, the existing structure must meet the definition of a dwelling and be lawfully established. If a building permit is used to show the existing dwelling was lawfully established, notice of the Director's decision is not required. If other evidence is submitted, notice is required.

"Lawfully established" means the dwelling was built and placed on the land consistent with the laws and regulations applicable at the time the structure was first used as a dwelling.



To be considered a dwelling, the structure must be occupied as a residence or sleeping place. It must have intact exterior walls and roof structure, indoor plumbing, interior wiring for lights and a heating system. Manufactured homes are considered dwellings, but not hotels, motels, or recreational or camping vehicles.

The new dwelling must be located on the same site as the previous dwelling. The term "same site" is defined as a square with dimensions of 200 feet that is centered on the footprint of the previous dwelling. Within three months after the new dwelling is ready for occupancy, the previous dwelling must be removed from the property or converted to an allowed use.

TEMPORARY MEDICAL HARDSHIP DWELLING: LC 16.210(3)(o)

The F1 zone has a provision for the temporary placement of a manufactured home or park model for a family member. Director approval is required. The temporary dwelling must hook to the existing septic system. Approval is valid until December 31 of the following year. It can be renewed for two years at a time. The temporary dwelling must be removed within 90 days once the hardship is over.

Lane County Hearing Official
c/o Shawna Adams, Planner
Lane County Land Management Division
3050 North Delta Highway
Eugene, OR 97408

Re: PA23-05321, PA23-05322, PA23-05323; Applicants' Hearing Letter

Dear Hearing Official:

This letter addresses primarily procedural issues.

This is a refiling of three Forest Template Dwellings applications that have been at the County before. Two were denied by the HO following the LUBA decision in *Nimpkish. LandWatch Lane County v. Lane County (Nimpkish LLC)*, __ Or LUBA __ (No. 2020-030, Jan. 23, 2021). LUBA then affirmed the denial. *King v. Lane County,* __ Or LUBA __ (LUBA Nos. 2021-047/052, Oct. 15, 2021), *aff'd without opinion* 317 Or App 136, 501 P3d 1058 (2022). The third application did not make it through a Director decision.

These three applications were refiled with two theories supporting approval:

The **first** theory was the 2017 amendments to ORS 197.307(4)(2017), which said, without limitation, that the requirement for clear and objective standards applies to housing. Because LUBA has said the Big Game Policy 11 is ambiguous, the applicant here expected that the HO in this matter would not apply Policy 11. However, on August 29 LUBA added a further gloss on the ORS 197.307(4) caselaw and held that the requirement for clear and objective standards does not apply to housing on EFU land outside UGBs. See *LandWatch Lane County v. Lane County*, LUBA No. 2023-037 (Aug. 28, 2023)(*Helsel*). That opinion remanded the HO's approval of a Relative Farm Help Dwelling for Helsel. That decision may be appealed; however, that is a five-month process. Therefore, the first theory is of no utility in this proceeding.

The **second** theory is that the County Board is ready to do its own interpretation of the Goal 5 Policy 11 in the RCP, and that interpretation will apply to these pending applications. The Board has had before it (since Summer 2022) a proposed interpretation by the Home Builders Association (now the Western Oregon Builders Assn.) that the HBA expects would be upheld at LUBA under the deferential standard that LUBA must apply to Board interpretations. On June 13, 2023 the staff recommended that the Board <u>not</u> take on the interpretation of the Big Game Policy 11, which means the LUBA interpretation would stand, and the Forest Template Dwelling avenue for landowners would remain effectively closed to landowners after being available for several decades. This is the staff's "leave well enough alone" recommendation. However, the Board on June 13 instead committed to interpreting Policy 11 when the next relevant FTD

application comes along. The exact alternative motion proposed by staff in the June 13 AIS, which was approved by the Board, was:

> "Direct staff to elevate the next relevant Hearings Official's decision involving Goal 5, Policy 11 to the Board for their review pursuant to LC 14.080(5). At that time, the Board could adopt a local interpretation of the policy, either by affirming the Hearing's Official interpretation or through an on-the-record review."

These pending applications will be "the next relevant Hearings Official's decision" on the Big Game issue. Thus, as the Staff Report confirms, we can expect the County Board to hear your decision on appeal by the Director, as directed by the County Board on June 13.

In this proceeding the applicants want to be sure that these three applications otherwise can be approved (two were previously approved by the Director) such that the County Board can focus its efforts on interpreting RCP Goal 5, Policy 11.

This raises several procedural questions for discussion in the initial hearing:

1. Will you decide the non-Big Game issues in these applications so that the County Board can focus on the Policy 11 interpretation? The applicants think that would be efficient.

2. Should you provide time for the parties to make the record here that is needed for the Board to do a thorough review of materials relevant to its upcoming interpretation? That seems like the cautious approach to take as the Staff Report suggests that the appeal to the Board will be "on the record."

3. Should your decision venture into the issue of what the Board interpretation should be? That is really your call, of course. However, there may not be much utility in getting into that issue again if it ultimately is up to the Board. There is already a gaggle of interpretations on the doorstep – the HO's original in *Nimpkish*; the LandWatch and King interpretations in the LUBA *King* decisions; LUBA's interpretation in *Nimpkish* as elaborated on in *King*; the HBA's proposal to the County Board (attached to the Staff Report); and now a new suggestion in the Staff Report here – one that says the 80 acre/40 acre standard in the plan materials is really an acknowledged 40/20 standard. The simple thing to do would be to promote the interpretation issue to the Board with the record the parties believe is needed to do the interpretation.

All of the above is offered as a suggestion for organizing the initial hearing.

Sincerely,

Bill Kloos

Bill Kloos

Subject: RE: Party Status - PA23-05321,PA23-05322,PA23-05323

Hello Nicholas, The hearings for these three applications are scheduled for this Thursday at 9:30 am and you can participate online or in person as you prefer.

The agenda with the call-in and meeting room details can be found on the agenda at the following link along with any other information that is posted for the hearing.
https://www.lanecounty.org/cms/One.aspx?pageId=6285782&portalId=3585881&objectId.94636=19771794&contextId.94636=6285783&parentId.94636=19771787

If you choose to participate at the hearings in person, you will be asked to provide your name and mailing address with an indication of whether you are a party in favor, opposed, or neutral concerning the application proposals. A sign-up sheet will be provided in the hearing room for people who wish to testify in person as a part or who wish to request notification of the Hearings Official decision. You can also submit written comments/testimony directly to me in advance for to forward to the Hearings Official at the proceeding. Please include your name, address, and Planning Action file numbers with any testimony to be entered into the Hearings Official proceeding. Feel free to give me a call if you have any questions concerning specifics.

Best regards,

Lane County Land Management & Board of Commissioners

Please confirm receipt of this transmittal and add it to the record for PA23-05321, PA23-05322, PA23-05323. I also request to be made a party with standing.

I have owned a 43 acre property at 20-02-23-00-00600 for many years. I have always had the intention of placing a dwelling on the property. My knowledge of the laws affecting this property and other similar properties I own indicated that I could eventually place a dwelling on it. The property has a large number of homes to the west, south and east. It is a prime candidate for an F2 zoned dwelling.

About a year and a half ago I hired a private land use consultant to work on an application to obtain a dwelling. It did not take long for the consultant to determine that a recent Nimpkish ruling that prevented the placement of a dwelling since the property was less than 80 acres in size. The property was predominantly zoned "Big Game Habitat" with only a small peripheral area which was too steep to place a dwelling on.

The loss of my ability to place a dwelling on the property significantly reduced the value of the property. When legacy family properties were divided up amongst my siblings and I, the property was valued as buildable. Now finding it is not buildable, due to an obscure reading in the Lane County Code - that has never been a part of any historical land use applications/decisions, has created a significant financial loss for me personally.

Thank you for taking the initiative to resolve this very poor ruling and restore my property rights. I really appreciate it.

Tony Drago

September 5, 2023

To whom it may concern

A few years ago, I purchased a piece of property in the Noti area with expectations that my son and his wife would be able to build a home there. I have put a lot of time and money into this piece of property to meet the lane county requirements (application fees, surveying, land consultant, County permits, Driveway rock, Well and cost of the property). After meeting all of Lane County requirements I had to withdraw my application for reasons that were never disclosed in the application process less than a month before approval.

This piece of property is less than 5 acres and is surrounded by homes on three sides. With lane county new rules, the property value has dropped significantly and is undesirable to anyone. After much time lost waiting for property approval, we had to purchase a different home site for our son and his wife.

[EXTERNAL ⚠]

September 6, 2023

Shawna:
My name is Kay King, no relation to Ed King or the LLC applicant in this case. I would like to be a party to this case because I understand that the Board of Commissioners may consider this case to review how the county's big game policy is impacting landowners. Below are is a short summary of my experience – this is all I am able to provide today because of the short notice and timing of this hearing. But I would like to testify to the Board about this issue and I request that the Hearings Official recommend that the Board hear this case.

My family owns forestland near Florence. We have a property that used to have a house and we have family members who would like to build a new house on this land. I understand that we cannot get a replacement permit for a new house under the state rules because of the time that has passed since the old house was demolished. So we would need to qualify for a "template" dwelling permit – the same permit at issue in this case.

We worked hard to put together a template permit application and we even had ODFW visit our property and confirm that a house would not impact big game populations. But after seeing how expensive and time consuming the land use process is and how badly landowners are treated in that process we decided not to move forward with our application. Based on our experience living in the Coast Range and working with ODFW, we know that they county's current big game policy is not based in science and does not promote good stewardship of land. I urge the county to reconsider this policy.

To whom it may concern we purchased our F2 land in 2014 with the understanding we would be able to get a template lot approval. We used our savings to buy the land and hope to build a house on it one day. We finally got to the point of being ready to build and applied to the county for a template lot approval and just before we were approved the decision was made by Luba regarding big game overlay on F2 land. We have been stuck in limbo with a property we cannot sell or build on and would greatly appreciate anything the County Board could help our family with on this matter.

Sincerely

To: ADAMS Shawna L
Subject: Party of Standing PA23-05321, PA23-05322, PA23-05323.

[EXTERNAL ⚠]

Please confirm receipt of this transmittal and add it to the record for PA23-05321, PA23-05322, PA23-05323. I also request to be made a party with standing.

My company purchased a 25 acre property (20-03-26-00-02600) and was within a month of having a template dwelling conditonal use permit approved when Nimkish occurred. Out of the blue, a standard that had never been considered, was not part of the code and not part of any forest dwelling applications in the past suddenly appeared.

We were instructed by Lane County planning staff to withdraw our application or it would be denied. After researching our options the application was pulled.

This property is surrounded by dwellings to the west, east and south. It should have been allowed to receive dwelling approval that we had been working on completing for over two years.

After spending roughly $30,000 to meet road criteria, prepare a conditional use permit, and install a well we were told that we were out of luck because we could not meet a wildlife density standard that did not exist in county code. We had to read through hundreds of pages of material of appeal documents to see how and why this standard was being applied and even after that, it was still very unclear. Anything that takes hundreds of pages to explain should be in the trash can, not public policy.

In the end we had to reduce the price by $100,000 to sell the property as a recreation property. The cash flow was required to pay for other business expenses, including the land that was just devalued. Overall, our loss, including development installed to meet the county standards was in excess of $130,000. This is a hard loss as the property is no longer in my company's ownership.

Thank you for taking the initiative to resolve this very poor ruling.

[EXTERNAL ⚠]

September 6, 2023

To: Lane County Land Management & Board of Commissioners

Subject: Party of Standing PA23-05321, PA23-05322, PA23-05323.

Please confirm receipt of this transmittal and add it to the record for PA23-05321, PA23-05322, PA23-05323. I also request to be made a party with standing.

My wife and I own ten legal lots in Saginaw, Lane County, being Tax Lots: 20-03-03-00-01100, 1105, 1106, 1107 and 20-03-10-00-03900, 04000. They are all zoned F2 and within the peripheral big game habitat -wildlife area. From my work on other people's conditional use permit at the time Nimkish was enacted I was able to determine how this newly established policy affected my ownership.

We are also co-owners of a verified F2 zoned legal lot up the McKenzie River, Lane County: being tax lot 16-65-15-00-00805 that was also made not buildable under this new rule due to the fact that it is in the Big Game Habitat area. This long term investment was also made not buildable for a forestland dwelling under Nimkish.

Based on the density standards applied under nimkish the Saginaw lots would support three dwellings of 40 acres each on three of the legal lots. The remaining seven legal lots are rendered useless under this new habitat plan. This property is surrounded on the north, south, east and west by many dwellings and is suitable for ten dwellings.

We were evaluating how to obtain reduced property tax rates from this new taking law. Since the F2 zoned properties are valued higher than F1 zoned forestland due to their development potential making them "not buildable" significantly devalues them. Other than a tax break we are not sure what other recourse we have to utilize these properties for other than recreation.

Seeing the file on this appeal is very concerning. It seems that parties can throw hundreds of pages of materials into an appeal on a private parties conditional use permit and out pops a new ruling/law and reason to deny a dwelling. At some point the leaders of our County have to take a stand and stop these frivolous appeals.

When we purchased these eleven properties in 2007 and 2017 there were no wildlife density standard in the conditional use application process. On the ten lot purchase we had a pre-application meeting to discuss the requirements and this Nimkish criteria was never discussed as being a requirement.

What is most perplexing to me is that by the very nature of the F2 zone the properties are almost universally less than the habitat acreage standards. The F2 zoned properties tend to be smaller in size and near other similar smaller in size properties with dwellings.

If this habitat density of 1 dwelling per 40 acres in the Peripheral zone and 1 dwelling per 80 acres in the Major Big Game Zone was considered at the time of Zoning: 1) the habitat density would have frustrated the ability to site dwellings on nearly all F2 zoned properties and 2) you might have well just zoned the entire county F1 (not buildable). I have looked at a lot of properties for clients over the past few years and have told all of them to NOT apply due to Nimpkish.

Thank you for working to resolve these very poor ad hoc land use laws that are being generated through the County's never ending appeal process.

Subject: Standing Submittal For PA23-05321, PA23-05322, PA23-05323

Please confirm receipt of this transmittal and add it to the record for PA23-05321, PA23-05322, PA23-05323. I also request to be made a party with standing.

We have owned the 3.3 acre property at 16-02-10--20-00903 for almost 30 years. My husband (now deceased) worked for about 10 years to prove the legal lot on this property. Late 2019 we heard about the new law HB2225 that would eliminate our chance to have a dwelling on this F2 forest zoned property.

We immediately submitted an F2 template dwelling to secure our building rights on the property. The application was denied by the county for 1) not having a legal lot and 2) Nimkish wildlife issue. We received our legal lot approval at the Hearings Official level on appeal. However, the Hearings

Official sided with the county and denied our F2 template dwelling because our property could not satisfy the newly uncovered Nimkish criteria.

We were surprised at the denial due to Nimkish since this was not even a criteria or part of the initial application. It came out of the blue and blindsided us.

So with that said, we've spent around $28,000 on county applications, consulting fees and legal costs in the appeal all to have the single factor for denying our template dwelling be this new Nimkish rule. To add insult to injury, after our denial, HB 2225 went into full force and it seems unlikely that we would *never* be able to have a dwelling on this property.

We have hope that you have a solution to the situation we find ourselves in, to allow Nimkish requirements to be removed, and our dwelling to be approved.

Thank you for your time and consideration

RE: King PA23-05321, PA23-05322, PA 23-05323

Dear staff:

I represent the following clients and submit this letter on their behalf to establish standing: Jeremy Keepers, Greg Demers, ATR Services, Fern Hollow Farms, Melvin McDougal, McDougal Bros, Inv., McDougal Bros, Inc., LeeLynn, Inc, Mike Miller, Weston Hallstead, and MPM Land and Timber, Robert Gill and Lynda McCord.

.

These individuals and entities own impacted (F-2) timberland in Lane County. All of these clients have seen their timberland rights and investments shattered by interpretation and application of Policy 11. Correction is needed. The above support Mr. King's applications and the arguments contained within, and hereby adopt them as their own.

This letter constitutes an appearance that provides the above parties standing pursuant to state law.

Thank you,

/s/ Kimberly JR O'Dea

Kimberly JR O'Dea
Attorney at Law
Representing the above named

Kim O'Dea
Land and Development Law
PO Box 1061, Marcola, OR 97454, (541) 954-0095; Kim@rurallanduse.com

Goal 5 big game habitat in Lane County is protected from most conflicting uses through compliance with the RCP and application of resource land zoning to protect and conserve sensitive wildlife habitats. LC 16.211(5)(a) states that all the listed (i-iv) sighting standards must be meet, with which the applicant currently doesn't comply. Clustering requires that dwellings and other structures are located near each other, and existing roads, dwellings and other structures are located to avoid habitat conflicts and utilize least valuable habitat areas; and road development is minimized. Department staff are concerned that the applicant has not demonstrated how the functions of this Goal 5 resource will be maintained.

The above referenced tax lots are within designated Goal 5 Major Big Game Habitat in a 2017 analysis for West Side Deer and Elk Habitat. Major Big Game Habitat includes areas identified and mapped by the department as providing essential functions and values (e.g., thermal cover, security from predation and harassment, forage quantity, adequate nutritional quality, calving and fawning areas, etc.) for non-migratory deer or elk. Major Habitat is categorized Habitat Category 3 per the department's Fish and Wildlife Mitigation Policy (OAR 635-415-0000 through 0025). The mitigation goal for Habitat Category 3 is no net loss in either habitat quantity or quality (OAR 635-415-0025(3)(a)). The Department shall act to achieve the mitigation goal for Category 3 habitat by requiring avoidance of impacts through alternatives to the proposed development action or mitigation of impacts, if unavoidable, through reliable in-kind, in-proximity habitat mitigation to achieve no net loss in either pre-development habitat quantity or quality. If neither of these options can be achieved, the Department shall recommend against the proposed development action.

It is uncommon that a single development action would have a critical impact on big game. However, development has a cumulative effect on wildlife habitat and associated wildlife populations as well as many other natural resource and social issues important to Oregonians and the residents of Lane County. It was the need to plan and account for these cumulative impacts that resulted in the development of the RCP and it is in the context of cumulative effects that impacts of proposed amendments should be considered. It is the intent of the F-2 Impacted Forest Lands Zone to protect fish and wildlife habitat (LC 16.211(1)). Fragmentation of habitat can impact connectivity between varying habitats that wildlife use as corridors to navigate through our developed landscape. Loss of habitat can have adverse effects on wildlife species with the potential for localized population decline and an increase in human wildlife conflicts (i.e., vehicle strikes, damage, and human health and safety issues). Existing or proposed non-forest or non-farm uses (i.e., dwellings) within the Forest Land District (F-2) must recognize that the intent of the district is to protect resources, and that in the event of a conflict this chapter will be interpreted in favor of resource management practices (LC 10.104-05).

The department relies on local and state compliance with the land use planning goals to consider natural resources, and we can provide technical assistance to the applicant and the county to properly address the impacts to big game and their habitat in a way that is consistent with the department's Fish and Wildlife Habitat Mitigation Policy and the existing Goal 5 protections for wildlife.

Thank you for your consideration of the department's comments. For clarification or any questions, please contact me at 541-757-5301.

Respectfully,

Joseph Stack
Regional Habitat Biologist

Subject: Comments for PA23-05321, 05322, 05323

[EXTERNAL ⚠]

Hearings Officer Davies,

On behalf of 1000 Friends of Oregon, please accept the following comments for the record in the planning actions set for hearing this morning. PA23-05321, 05322, 05323.

The county must correctly apply its Goal 5 big game habitat standards in these applications. Within resource zones, the county must apply the big game density standards of one dwelling per 40 acres and one dwelling per 80 acres depending on the habitat type. These provisions cannot be waived on forestland for reasons similar to those discussed by LUBA in its recent decision in LandWatch Lane County v Lane County, LUBA 2023-037. If the county does not apply the density standards then it must conduct and ESEE analysis pursuant to OAR 660-023 and consistent with Goal 5 and it's implementing provisions.

Please include me in any notice of decision for these matters.

RE: 509-PA23-05321, 509-PA23-05322, 509-PA23-05323

The Oregon Department of Fish and Wildlife (department) appreciates the opportunity to provide comments on the applications for dwellings being proposed in the Impacted Forest Lands (F-2) Zone pursuant to the 'Template Dwelling' provisions on three different properties adjacent to the Oakridge State Airport (T21S, R2E, Section 12, Tax Lot 843, and T21S, R3E, Section 7, Tax Lots 2900 and 2800). It is policy of the state of Oregon to manage fish and wildlife to prevent serious depletion of indigenous species and to provide the optimum recreational and aesthetic benefits for present and future generations of the citizens of this state (ORS 496.012). In accordance with this mission, the department provides the following comments for the record on September 7, 2023.

The department has been engaging with local governments on land use planning since SB 100, the creation of the Statewide Planning Program and adoption of the State Agency Coordination Agreement which ensures the department's role in providing technical assistance to local governments. As local governments drafted comprehensive plans to implement SB 100, the department provided detailed habitat protection plans for each county, which included fish and wildlife habitat inventory information, conflicting uses to those resources and recommendations for protection measures to comply with Statewide Planning Goal 5. The department has consistently recommended density standards to protect wildlife habitat, minimize habitat fragmentation and maintain the carrying capacity of the land for wildlife. For example, the department's Land Use Planning Guide from 1989 includes a wildlife guide for land use planning and specific development densities through development per acre standards for big game. This is consistent with the existing Goal 5 protections in the Lane County Rural Comprehensive Plan (RCP) Flora & Fauna Policy 11.

The department's recommended dwelling density for major big game habitat is one unit per 80 acres or with clustering, one unit per 40 acres The department evaluates dwelling density by using a unit/acre or dwelling per acre approach, where each parcel/tax lot is reviewed on its own to see if it meets the qualifications. While utilizing clustering standards could allow for development of a 40-acre property in major big game habitat, the above-mentioned tax lots are significantly smaller, being approximately 12-13 acres in size. When a lot on which a dwelling will be sited lies within an area designated in the RCP as habitat of big game, the siting of the dwelling must be consistent with the limitation on density upon which the RCP and land use regulations intended to protect (LC 16.211(3)(b)(vii)).

Concerned Parties, Attached are the applicant's Final Rebuttal submittals for the two hearing records that concern the three King template dwelling applications under review. The submittals for both hearing items are the same and were received before the close of the period at 4pm yesterday. These materials will be uploaded to the website at the top of the week, but will likely be combined into a single document and renamed. Parties of record that have provided an address and others that have requested formal notice of the decision will be provided a notice of the decision via standard mail once the Hearings Official has made a decision. We also endeavor to provide a courtesy email with the Hearings Official decision to this list.

https://www.lanecounty.org/cms/One.aspx?pageId=6285782&portalId=3585881&objectId.94636=19771787&contextId.94636=6285783&parentId.94636=19734019

As a reminder, the Hearings Official has allowed for an extended hearing record period subject to the following deadlines:

- ~~Open Record for all parties of record until September 21, 2023 at 4:00 PM;~~
- ~~Comment/Response to Open Record submittals until October 5, 2023 at 4:00 PM; and~~
- ~~Final Rebuttal by the Applicant until October 12, 2023 at 4:00 PM.~~

Re: PA23-05321, PA23-05322, PA23-05323
Applicants' Final Argument

Dear Hearing Official:

Our hearing letter noted two discrete bases for approval: (1) the operation of ORS 197.307(4)(2017), which allows only clear and objective standards to be applied, as in the *Helsel* relative farm help dwelling approval; and (2) the directive of the BCC to the Director to bring this matter to it on appeal, so as to get its opportunity to interpret the ambiguous Big Game Policy 11 in the first instance.

The first basis is on hold, while the Court of Appeals resolves its review of the LUBA decision in *LandWatch Lane County v. Lane County*, LUBA No. 2023-037 (Aug. 28, 2023)(*Helsel*). We have reasserted that basis here to preserve it.

The second basis will unfold before the County Board, provided the Director follows through with their appeal to the BCC as instructed and does so in a timely manner – that is, before the 12 days to request HO reconsideration. Presumably, if the Director acts too slowly, the HO decision could be appealed directly to LUBA by those not interested in BCC review, and the County Board would be edged out of its requested review.

The balance of this letter is in two parts: A. which is the merits of the three pending applications on all issues other than Big Game Policy 11; and B. which is the applicant's perspective on how the BCC should interpret Policy 11. The applicant believes that the most efficient way for the County to proceed on this matter would be for the HO to find compliance with all substantive standards for the three applications but for the Policy 11 question. That would simplify the work for the BCC. It will be able to focus on what it is uniquely qualified to do – state the governing body's interpretation of the ambiguous Policy 11.

A. The merits of the three applications other than the Big Game Policy 11 issue.

PA23-05321 and PA23-05322 were denied by the HO based on LUBA's *Nimpkish* opinion, with the denial being affirmed by LUBA. PA23-05323 was on a slower track; it was never decided by the Director and was withdrawn after the *Nimpkish* decision.

The applicant's intention was to get solid staff support for all three applications on all issues but for Big Game Policy 11, thus simplifying the review by the BCC. We believe that was accomplished. The only substantive issue raised by staff related to where the site plans showed the proposed access to the dwellings. Staff wanted clarity as to whether the access was proposed to be in the existing BPA right-of-way or outside it, which would require more clearing. Our First Open Record submittal included amended Site Plans that more clearly showed the access in the BPA right of way. That minimizes impacts.

B. Applicant's suggested BCC interpretation of Big Game Policy 11.

Enclosed with this Final Argument is a draft interpretation for the Board that we believe should be entitled to be affirmed by LUBA under the deference standard in *Siporen.* Our proposal is based on the proposal of the Home Builders submitted to the Board in 2022. That proposal had good bones. It was included as the last exhibit in the Staff Report. We started with the structure of that proposal and expanded it with more detail, relying on the extensive compilation of documents from the acknowledgment era that the applicant submitted in the First Open Record period. That submittal included "Attachments" 1 through 12. Each attachment was separately paginated for this submittal. Also included was an Annotated Table of Contents for all the Attachments, which were organized chronologically. Thus, a visit to the Annotated Table of Contents provides a chronological stroll through the most exciting highlights of the acknowledgment process from 1980 through 1984.

We have included in this record all the documents we believe are relevant and material to a BCC interpretation because it is unclear whether the BCC will make its decision based on a closed or open record.

The draft interpretation is a bit lengthy. It must account for all the relevant documents; it must consider all suggested plausible interpretations; and it must not conflict with any express language in the plan or code.

The HO has several ways to approach the Policy 11 in the decision:

- Deny the applications based on LUBA's decisions in *Nimpkish/King* and defer the interpretation to BCC, which has a different standard of review than did LUBA;

- Deny and offer some advice to the BCC that the HO considers to be relevant to the BCC interpretation;

- Deny and suggest a complete interpretation for consideration by the BCC.

The first alternative would be the most efficient; it would recognize that the HO and the BCC must apply different rules to the interpretation. The second and third options would have the HO stand in the shoes of the BCC when making suggestions.

The draft interpretation examines two questions:

1. Whether Policy 11 applies: Was Policy 11 intended to be an independent review standard when considering requests for approval of dwellings on F-2 land, as provided for in LC 16.211?

2. What Policy 11 means: In any context where Policy 11 is an independent standard for the decision, what was Policy 11 intended to mean?

Our draft suggests the following interpretation by the BCC regarding those questions:

1. Policy 11 was not intended at the time of acknowledgment to be an independent standard for review of dwelling applications on existing parcels of F-2 land. That intention has not changed in the interim.

2. In any situation where Policy 11 is an independent standard for making land use decisions, the Policy does not incorporate minimum lot or parcel sizes for site-specific dwelling approvals. The reference to "overall residential density" states a target for planning for Big Game Habitat that has not been done. The regulations submitted for acknowledgment intended to resolve residential density in Big Game Habitat through clustering and siting standards, not minimum lot sizes.

Our review of the text, context and legislative history of acknowledgment is in Part III of the draft at page 4. The discussion is divided into three time periods – the **first period** up to the LCDC's denial of the county's first plan and code in 1981; the **second period** up to the February 29, 1984 county adoption of the plan and code that were resubmitted for acknowledgment; and the **third period** of DLCD review and county amendments to comply and LCDC acknowledgment on October 3, 1984.

The **first period** - the failed plan and code - was based on the "subarea" planning model, including for Big Game. That reflected the ODFW's 1980 letter to the BCC explaining how to plan for Big Game. That letter included the following qualification about the 80/40-acre recommendation for dwelling density. "The Department's recommendations relate to overall residential density and not minimum lot size." (Emphasis added).

The **second period** began with the subarea planning model but eventually dropped it in favor of a single set of policies for the entire county. The Flora and Fauna Working Paper (March 1982) was issued early in this period. It reflected the ODFW 1980 advice to plan for "overall residential density" and proposed determining "carrying capacity" for dwellings in habitat by regions. In November 1982 the County adopted its first set of Rural Plan Policies, which included the first two sentences of what is now Policy 11. The Working Paper Addendum was also issued in November 1983. It abandoned the carrying capacity by region methodology in favor of a working with ODFW to arrive at regulations prescribing the manner in which density occurs. This was a major shift, with the operative parts of Policy 11 already in place.

On February 29, 1984 the County adopted the plan and code as resubmitted for acknowledgment. That included the entirety of Policy 11 in its current form. It also included a Purpose statement for the F-2 zone saying those regulations, which contained fire and siting standards, were intended to protect wildlife.

The **third period** was the DLCD review, which included mandated code changes for Big Game, which were made by the County. Those mandates were in response to ODFW and 1000 Friends objections about dwellings in Big Game habitat. In response to those objections, the DLCD required the County to "either require larger minimum lot sizes in Big Game Habitat * * * or contain clustering requirements in those areas." The county chose the latter option and resubmitted the code with clustering requirements but not minimum lot sizes. The DLCD reviewed those amendments, found them to be adequate, and recommended acknowledgment.

Based on the above, Part IV explains the bases for each interpretation. It explains why the standards in the F-2 zone are intended to be an exhaustive list of standards for dwellings. It also explains why Policy 11 was never intended to apply independently to dwelling decisions. Policy 11 does not state or incorporate minimum lot sizes for dwellings. When it was put into the plan in November 1982, the plan still anticipated adopting carrying capacities for regions. The Addendum adopted in 1983 shifted to regulating density without minimum lot sizes. Policy 11 was objected to by the ODFW but upheld by the DLCD without any statement requiring minimum lot sizes. It is important to note, as LandWatch concedes, that at no location in the plan or code or background documents is there a county commitment to minimum lot sizes for individual dwelling decisions.

Part V. of the draft reviews the history of interpretations of Policy 11. Notably, interpretations by the Planning Director and HO have been consistent since acknowledgment. That consistency held until the *Nimpkish/King* LUBA decisions. The interpretation suggested here is consistent with that proposed in 1986 by Planning Staff involved in the acknowledgment. The Staff has, however, proposed a new gloss on the Policy in the Staff Report submitted here. However, that Staff proposal is looking for the "correct" decision, rather than a "plausible" interpretation by the BCC. The LandWatch position in the briefing here is that the County is bound by the LUBA decision; the BCC does not have authority to interpret in the first instance.

That is a short summary of a long draft interpretation.

LandWatch is not at all keen on the BCC doing its job of interpreting Policy 11 – an ambiguous county plan policy. It has filed letters by attorney Malone in the First and Second Open Record periods.

The Malone 9/21 letter asserts that the HO is bound by the LUBA decision. That begs the question of what the BCC may do. It has not yet done an interpretation.

The Malone 9/21 letter takes issue the Staff's proposed interpretation here. The applicant agrees the staff should not be looking for the new "right" interpretation here. It should be supporting

the BCC in making its own interpretation based on what the County intended in the original acknowledged plan. The ODFW materials the staff found for this proceeding are helpful. The Staff's proposed interpretation is flawed in a number of ways. It puts weight on what the ODFW wanted in the acknowledgment process, not what the County wanted. It puts weight on ESEE analyses that were done in the acknowledgment process to give meaning to Policy 11. The county's site-specific ESEE analysis is not relevant to the meaning of Policy 11 as adopted.

The Malone 9/21 letter at 8 takes issue with the HBA's proposed interpretation. The expanded draft interpretation offered here responds to those allegations. Generally, LandWatch points out where the draft interpretation conflicts with the LUBA decision. As a starting point, the LUBA decision did not review a governing body interpretation. A LUBA interpretation applies different rules than a governing body interpretation. For that reason the former can't bind the latter. LUBA looks for the correct or best interpretation in its view. The BCC looks for a plausible interpretation in its view. These are wholly different undertakings.

The Malone 9/12 letter at 12 raises issue preclusion, citing *Nelson*. As LUBA recently pointed out, "issue preclusion does not generally apply in local land use hearings." *O'Connor v. Clackamas County*, __ Or LUBA __ (No. 2019-119, May 26, 2020), citing *Lawrence v. Clackamas County*, 40 Or LUBA 507, 519 (2001), *aff'd*, 180 Or App 495, 43 P3d 1192, *rev den*, 334 Or 327 (2002)." In *Nelson* LUBA declined to apply issue preclusion due to intervening changes in the facts and the law. Here there is no basis for an issue preclusion defense. Here we will have a different final decision maker applying a different legal standard. The BCC will be making a governing body plan interpretation to be reviewed under the plausible interpretation standard. Up to this point we have only Hearing Official interpretations reviewed under the "correct interpretation" standard applied by LUBA.

The Malone 10/5 letter references the letter of testimony dated September 21, 2023 as to what density the ODFW wishes to see to comply with Goal 5, and then argues that the minimum lot size has to be honored to find Goal 5 compliance. This position by ODFW and argument by LandWatch conflates what those parties now believe Goal 5 requires with what the DLCD/LCDC acknowledged as complying with Goal 5 in 1984. LandWatch has conceded that none of the 1984 plan and code provisions that were acknowledged stated an 80/40 minimum lot size. Yet they were acknowledged. Thus, their current position requires reading into the plan and code and acknowledgement numbers and requirements that were not there and still are not there.

//

The Malone 10/5 letter also states a procedural complaint that the applicant's First Open Record submittal is just documents and no argument, and LandWatch reserves the right to respond to arguments based on those documents. All of the applicant's documents, as shown by the annotated Table of Contents, related directly to acknowledgment, and most were also put in by staff. LandWatch is not prejudiced by the applicant having a final argument based on all that is in the record.

Sincerely,

Bill Kloos

Bill Kloos

Applicant's Proposed Interpretation of Big Game Policy 11 by County Board

This states the Board's interpretation of Rural Comprehensive Plan (RCP) Goal 5, Policy 11, as it relates to minimum parcel size for a Forest Template Dwelling on land zoned F-2, Impacted Forest, in areas that are mapped as Major or Peripheral Big Game Habitat in the county's Goal 5 program.

The language of Policy 11 is:

> "**Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County.** Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

I. Introduction and Summary

In recent decisions, the Land Use Board of Appeals found that the first sentence of the Policy, shown in **bold**, is ambiguous.[1]

Absent any previous interpretation of Policy 11 by this Board, LUBA interpreted Policy 11on its own, without any deference to how the County Planning Director and Hearing Officials have applied the Policy for several decades.

It is important for the County Board to do this interpretation because it allows the Board a level of self-determination in how the RCP is to be applied. When the County Board, as the governing body that enacted the plan or code, interprets ambiguous provisions, LUBA is bound to defer to any "plausible" interpretation by the Board. However, absent an interpretation by the County Board, LUBA interprets the language on its own, without any deference to the county Hearings Official or Planning Director, and without deference to previous county practice. See, generally, *Siporen v. City of Medford*, 349 Or 247, 259, 243 P3d 776 (2010)("[W]hen a local government plausibly interprets its own land use regulations by considering and then choosing between or harmonizing conflicting provisions, that interpretation must be affirmed, * * * unless the interpretation is inconsistent with *all* of the 'express language' that is relevant to the interpretation, or inconsistent with the purposes or policies underpinning the regulations." Emphasis original)

---

[1] See *LandWatch Lane County v. Lane County (Nimpkish LLC)*, __ Or LUBA __ (No. 2020-030, Jan. 23, 2021)(remanding county approval of dwelling approval on 10- acre parcel); *King v. Lane County*, __ Or LUBA __ (LUBA Nos. 2021-047/052, Oct. 15, 2021), *aff'd without opinion* 317 Or App 136, 501 P3d 1058 (2022)(affirming county denial of dwellings on two 12-acre parcels).

As explained in *Siporen*, because the Board, as the governing body, is responsible for the language of its code, the Board interpretation, if plausible, will be afforded deference when this interpretation is relied upon in county decisions that are later appealed to LUBA and the Courts. The Board believes this interpretation is correct; the Board expects it will be deferred to because it will meet the "plausible" test when it is reviewed by LUBA.

The County Board did not have an opportunity to conduct its own interpretation of Policy 11 in the *Nimpkish* and *King* decisions. Recent amendments to Lane Code Chapter14 removed the Board from review of site-specific land use applications. Thus, in *Nimpkish* the Hearing Official followed county practice and approved the dwelling; the appeal was directly to LUBA, which interpreted Policy 11 without deference to the County and remanded the approval as being on a parcel smaller than 80 acres, contrary to its interpretation of Policy 11. In *King* the Hearing Official was obligated to follow LUBA's interpretation in the *Nimpkish* and, therefore, denied the dwellings for being on parcels smaller than 80 acres. LUBA affirmed that decision as consistent with *Nimpkish.*

The current code allows only the Planning Director to appeal a decision by the Hearing Official to the County Board. The Planning Director has not filed an appeal to the Board prior to this one. Recognizing the need for guidance as to what plan policies are intended to mean, the Board on June 13, 2023 instructed the Director to bring the next forest template dwelling decision to the Board by filing an appeal. This interpretation is the result of that appeal. Three Forest Template Dwelling decisions are bundled in this appeal. This interpretation applies to all three. More importantly, this interpretation will apply in all instances where the meaning of Policy 11 is in question.

This is an important and timely interpretation for the Board to make. There are many owners of vacant, small tracts of F-2 Impacted Forest land in the County. F-2 tracts, by definition, are intended to be smaller than 80 acres, and the many are much smaller than 40 acres in size, such as in the present applications. F-2 parcels tend to be located in areas that are close to existing rural development and other small parcels. These small-tract owners have expected, based on decades of county practice, that they would eventually be able to get approval to place a single dwelling on their F-2 land, regardless of the small parcel size, if they can meet the other criteria for a dwelling. That expectation was secure until LUBA issued its own interpretation of Policy 11 in the *Nimpkish* and *King* decisions. Because this interpretation will be upheld on appeal if it is found to be plausible, it should restore owners' rights to dwellings that were negated by the LUBA decisions.

This is an interpretation of Policy 11 to determine its meaning as it is presently stated and in the context of the balance of the plan and code. Policy 11 has not changed since it was acknowledged as complying with Goal 5 in 1984. The purpose here is not to make any new policy decisions about whether the Policy 11 or other plan and code provisions do a good enough job to protect big game, or whether regulations should be amended to do a better job. Those points are policy discussions for another day.

It is plain from the plan documents and plan acknowledgment materials that the County anticipated doing more planning for Big Game protection than was actually done and acknowledged by LCDC in 1984 as complying with Goal 5. That additional planning work has not been done yet. The County Board on June 13 directed the Staff to identify what further work should be done. The ODFW should be consulted by Staff prior to reporting back to the Board. Even with that commitment, however, the Board is interpreting the current plan language now in order to give citizens the clarity and benefit of the Board's original intent.

LUBA is correct that Policy 11 is ambiguous and needs to be interpreted. There are two questions that need to be answered about Policy 11:

1. Whether Policy 11 applies: Was Policy 11 intended to be an independent review standard when considering requests for approval of dwellings on F-2 land, as provided for in LC 16.211?

2. What Policy 11 means: In any context where Policy 11 is an independent standard for the decision, what was Policy 11 intended to mean?

Section II below summarizes LUBA's rationale in its recent decisions that negated F-2 owners' dwelling rights. In section III the Board identifies the text and context of the county plan and code, and its legislative history from acknowledgment in the 1980's, that is relevant to this interpretation. Section IV states and explains this Board's interpretation. Section V examines other interpretations of Policy 11.

It is important to recognize that this interpretation is not intended refute the LUBA decision. It is, instead, for this county's governing body to look at its own plan and code, as it was submitted to the DLCD for acknowledgment, and amended during that review process, and determine what the County intended when it adopted the language.

To summarize the Board's interpretation, based on review of the text and context of Policy 11, and review of documents relevant and material to the acknowledgment process in 1984, and considering all of the arguments relevant to the interpretation questions, the Board determines:

1. Policy 11 was not intended at the time of acknowledgment to be an independent standard for review of dwelling applications on existing parcels of F-2 land. That intention has not changed in the interim.

2. In any situation where Policy 11 is an independent standard for making land use decisions, the Policy does not incorporate minimum lot or parcel sizes for site-specific dwelling approvals. The reference to "overall residential density" states a target for planning for Big Game Habitat that has not been done. The regulations submitted for acknowledgment intended to resolve residential density in Big Game Habitat through clustering and siting standards, not minimum lot sizes.

It is the Board's expectation that this interpretation will restore the property rights of F-2 landowners to the *status quo ante* – that is, to the situation prior to the *Nimpkish* and *King* decisions.

All parties in the Hearing Official proceeding submitted materials believed to be relevant to this interpretation. The applicant included a compilation of 12 documents identified as Attachments 1 through 12, as listed in an Annotated Table of Contents. Many of these documents were also submitted by Staff and other parties. We refer to the applicant's "Attachments" here; its Annotated Table of Contents is also attached here for reference.

II. LUBA's Interpretations in *Nimpkish* and *King*

In *Nimpkish,* LUBA remanded a county approval of a forest template dwelling on a 10-acre F-2 parcel. It held that Policy 11 applies to a forest template dwelling application in Major or Peripheral Big Game Range. Slip op 9. Based on the legislative history materials that were available and examined in *Nimpkish*, LUBA believed that the county's Goal 5 program for Big Game was premised on the county's commitment to honor the 80 and 40-acre density minimums in all applications. LUBA said:

> "We understand DLCD to have concluded that the county's Goal 5 program protects habitat because it adopts residential densities in accordance with ODFW's recommendations and requires that, if 'proposals are made' that exceed those densities, the county will conduct an ESEE analysis for that individual proposal." Slip op 14.

LUBA reasoned that because acknowledgment was premised on a commitment to residential density minimums, Policy 11 must apply directly in the F-2 zone because there is no other basis in the plan or code for ensuring minimum residential densities. Slip op 15. Thus, 80-acre and 40-acre minimums are threshold criteria for any dwelling application on F-2 land in mapped Major and Peripheral Big Game Habitat areas, respectively.

In *King* LUBA reviewed a fuller record of documents relevant to its interpretation. Slip op 13. LUBA agreed Policy 11 is ambiguous. "Policy 11 is ambiguous and requires interpretation to determine whether and how its density limitations function as approval criteria for dwelling permit applications." Slip op 12. Based on the legislative history, LUBA read the addition of clustering and siting standards for forest dwellings, which were added to the code to gain acknowledgment, as supplementing rather than replacing the ODFW minimum lot size recommendations referenced in Policy 11. Slip op 20. In *King* LUBA reached the same conclusion as to the applicability of Policy 11 as it did in *Nimpkish.*

Because Policy 11 is ambiguous it is important for the County Board to do its own interpretation.

III. Text, context and legislative history relevant to this interpretation.

The applicant's Annotated Table of Contents and compiled documents includes the most and material documents supporting this interpretation.

Looking at the list of documents provided by the applicant, those documents break into three chronological periods:

A. The period up to and including the county's first plan and code which were denied acknowledgment in 1981.

B. The planning effort from the LCDC denial in 1981 up to the two plan and code ordinances adopted on February 29, 1984.

C. The LCDC 1984 acknowledgment review process, which extended from the June 29 DLCD Staff Report, through the July 19 and September 12 DLCD Staff Reports, and concluding with the October 3, 1984 LCDC Acknowledgment Order.

What follows is a factual, chronological summary of events in those three periods, as they relate to this interpretation. This factual summary is referenced to the applicant's supporting documents. A Table of Contents of the supporting documents is attached here.

A. The period up to and including the county's first plan and code which were denied acknowledgment in 1981.

The County had a failed attempt at acknowledgment in 1981. The LCDC denied acknowledgment on Feb. 13, 1981. Attach 4 page 4. This failed submittal was based on adoption of "subarea plans," which were based on watersheds.

It was during this initial planning effort that the County received ODFW's most direct recommendation about how to avoid conflicts with Big Game Habitat. The recommendation was attached to an ODFW letter to the County Board dated June 16, 1980. Attach 1 page 7. The recommendation discussed the desired density for dwellings in Big Game Habitat to avoid conflict. However, the recommended 80/40-acre lot sizes for Major and Peripheral Big Game Habitat were qualified as <u>not</u> stating minimum lot sizes as the standard. The recommendation included the following qualification in FN 2: "The Department's recommendations relate to <u>overall residential density</u> and not minimum lot size." (Emphasis added). That qualification was never changed by the ODFW in any subsequent communication with the County, and, therefore, it was a foundation for county planning for Big Game.

B. The planning effort from the LCDC denial in 1981 up to the two plan and code ordinances adopted on February 29, 1984,

The second planning effort began with the subarea plan methodology but eventually abandoned that in favor of having a single set of Rural Comprehensive Plan policies organized by the Statewide Planning Goals.

The Flora and Fauna Working Paper was published in March 1982. Attach 2. That Working Paper identified the primary conflict for Big Game Range, based on the 1980 advice from the ODFW:

> "Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game." Attach 2 page 25 para 6. (Emphasis added)

The proposal at that time was still to divide the county into 10-20 regions, look at the number of dwellings and the area of Big Game Range, compare that density to the 1980 ODFW "overall residential density" recommendation, and determine the remaining capacity for dwellings in each region. Exceeding the "overall" density for a region would be a conflict requiring an ESEE analysis to justify. Attach 2 page 26.

The March 1982 Working Paper included a "policy discussion" that emphasized determining the "minimum parcel size for regions in the County," not for the whole County. Attach 2 page 35 item 3.

An Addendum to the Flora and Fauna Working Paper was published in November 1983. Attach 3. The Addendum abandoned the "carrying capacity" by region methodology in favor of applying clustering and siting standards for dwelling in Big Game Range. The replacement language describing the shift is at page 14 of the Addendum. Attach 3 page 16. The key language is at page 16 para 2, describing the rationale for the shift:

> "Although this [carrying capacity methodology] is a useful index, officials of the ODFW stress the fact that a mere 'numbers game' is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists."

The new language in the Addendum committed to further planning work with the ODFW:

> "The county should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner – including the involvement of that agency in land use regulation development." Attach 3 page 17.

In November 1982 the County adopted its first set of Rural Comprehensive Plan Policies. That was done in Ordinance 870 (November 10, 1982). Ordinance 870 and adopted policies remained in effect until repealed by new enactments on Feb. 29, 1984. A full copy of Ord. 870 and the plan policies it adopted appears at Attach 4 page 22. Ordinance 870 contained the initial Policy 11 language, which included the first and second sentences as they appear today, but not the third sentence about working with the ODFW. Attach 4 page 44 item 12.

On February 29, 1984 the County adopted two Ordinances stating its plan and implementing regulations, in anticipation of resubmittal for acknowledgment. Ord. PA 883 adopted the Rural Comprehensive Plan Policies. Attach 4. Ordinance 1-84 adopted the Chapter 16 Development Code. Attach 5.

Ordinance PA 883 legislative findings summarized the county planning efforts to date. Attach 4 pages 5-6. It described the failed plan that was denied for acknowledgment in February 1981. It described the shift to Working Papers to provide technical support for the new plan. Attach 4 page 5. Ordinance PA 883 formally stated that the Working Papers were "supportive technical information used in the preparation of this plan." Attach 4 page 1.

Ordinance PA 883 adopted the Rural Plan Policies as Exhibit B. Attach 4 page 1, 71. The plan policy at issue here, RCP Goal 5, Flora and Fauna Policy 11, was included in the RCP in its present form with three sentences, as quoted above. Attach 4 page 88.

Ordinance 1-84 adopted the F-2 zone regulations in LC 16.211. Attach 5 page 34. The "Purpose" statement of the F-2 zone, as originally written in LC 16.211(1)(1984), was:

> "**Purpose.** The purpose of the Impacted Forest Lands Zone (F-2-RCP) is:
>
> (a) to implement the forest land policies of the Lane County Rural Comprehensive Plan which recognize that certain forest lands are impacted by nonforest uses and merit different treatment than nonimpacted forest lands.
>
> (b) *To conserve forest land for forest uses* consistent with Statewide Planning Goal #4, *including* commercial timber management, watershed protection, maintenance and *protection of fish and wildlife resources*, livestock habitat and recreation.
>
> (c) In area of mixed farm/forest uses where forest uses do not predominate, to conserve such land for uses consistent with Statewide Planning Goals #3 and #4.
>
> (d) To protect lands mentioned in LC 16.211(1)(b) and (c) above from the intrusion of noncompatible uses by restricting nonforest uses or nonforest and nonfarm uses that create potential impacts." Attach 5 page 34 [*Emphasis added*]

Among other dwelling types, the original F-2 zone allowed dwellings necessary and accessory to a forest use. LC 16.211(3)(b)(1984); Attach 5 page 36. All dwellings were subject to "Siting and Fire/Safety Standards for Dwellings" listed in LC 16.211(8)(1984). These included "clustering" options. Attach 5 pages 44-45.

C. The LCDC 1984 acknowledgment review process, which extended from the June 29 DLCD Staff Report, through the July 19 and September 12 DLCD Staff Reports, and concluding with the October 3, 1984 LCDC Acknowledgment Order.

The DLCD issued its first Staff Report reviewing the new county submittal on June 29, 1984. This report did not address Goal 5. Attach 6. However, it included a summary of the acknowledgment review process to date, describing the shift from the failed initial submittal, based on 13 subarea plans, to the current submittal based on a single comprehensive plan policy document. Attach 6 page 8.

The DLCD issued its second Staff Report on July 19, 1984. Attach 7. Part I dealt with Goal 5 compliance for the rural plan area outside the Metro Plan boundary. Attach 7 page 2. The DLCD conclusions for the rural plan area are stated at Attach 7 page 77.

The ODFW raised two objections related to Big Game Habitat. Attach 7 page 36 items 2 and 3.

First, ODFW objected to the language of Policy 11, saying that it allows densities above its recommendations through the ESEE process. Attach 7 page 36 objection 2. Second, ODFW also objected because the F-1 and F-2 zones do not require siting or clustering that must accompany the density levels allowed in those zones. Attach 7 pages 77-78 objection 3.

The DLCD's responses to these objections appear at Attach 7 page 39.

In response to ODFW's first objection, the DLCD said that Policy 11 does not conflict with Goal 5 because it says that densities that exceed the "overall residential densities" will require an ESEE and plan amendment. It explained, however, that the County still needs to amend its code to ensure the recommended densities will be met. "However, the County still needs to adopt measures in its F-2, ML, and EFU zones which ensure that ODFW's density standards will be achieved." Attach 7 page 40 item 3.

In response to ODFW's second objection, the DLCD agreed that the code needs to be amended to ensure density recommendations are met.

> "ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone." Attach 7 page 40 item 3.

Based on those DLCD findings about the ODFW objections, this Staff Report included only a single directive for change (an "In Order To Comply" or "IOTC") relating to Big Game Habitat. That was stated as IOTC 2.d. under directives related to Fish and Wildlife Habitat. IOTC 2.d. required the County to:

> "2.d. Amend the F-2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must <u>either</u> require larger minimum lot sizes in the Big Game Habitat portions of those zones <u>or</u> contain clustering requirements in those areas." Attach 7 page 77. Emphasis added.

With this single IOTC issued relating to Big Game Habitat, the County went to work amending the F-2 and EFU zones as directed by the IOTC 2.d. This was done with two ordinances that also addressed other IOTCs on various subjects.

The first was Ordinance 9-84 adopted on August 9, 1984. Attach 8. This readopted the entire Chapter 16 with nine major changes needed for acknowledgment. The nine topics are stated in the ordinance title. The F-2 district, LC 16.211, appears at Attach 8 page 32. Notwithstanding the reference to the F-2 zone on the title page, this ordinance does not reflect any changes for the F-2 district.

The second was Ordinance 11-84 (Sept. 12, 1984). Attach 9. The title explains this ordinance was making further amendments to Chapter 16 that had been readopted in the Ordinance above. Eight amendment topics are listed in the title. Item D. in the title explains the ordinance is "D. Revising the siting requirements in the Impacted Forests, F-2 Zone to provide clustering of residences on existing tracts."

The introductory language in Ord. 11-84 explains the code amendments are intended to "bring it into compliance with the requirements of the DLCD staff report dated July 26 [*sic* 19], 1984." Attach 9 page 3. The explanation for change 2.D." is:

> "2.D. Revising the siting requirements in the Impacted Forest, F-2, Zone to provide for clustering of residences on existing tracts."

The Ordinance includes "Legislative Findings" as Exhibit A. Attach 9 page 26. These explain the purpose of the changes as being the protection of Big Game Habitat. The relevant statement of purpose is:

> "Under Lane Code Ch. 16 as amended here, residences in the Impacted Forest zones (F-2) which are also located within a designated big game range will be required to be sited near existing residences and with minimal intrusions into forest areas undeveloped by non-forest uses. Setback dimension guidelines (balances with lot dimensions, proximity to other residences and intrusions into forest area) are also set forth. Notwithstanding the fact that the property is zoned F-2, a concerted effort should be made to locate new residences so as to avoid adversely impacting resource uses and big game habitats. This change in LC 16.211(8) will, on the whole, provide for siting criteria which will protect those interests."

The amendments to boost the siting and clustering standards in Big Game Habitat are in LC 16.211(8). They appear at Attach 9 page 12.

On the same day that Ordinance 11-84 was signed, the DLCD issued its September 12, 1984 Staff Report reviewing all the code changes the County was directed to make to comply with the July 19 DLCD Staff Report. Attach 10. This Staff Report described and quoted the clustering and siting amendments the County had made to comply with the DLCD directive about Big Game Habitat, and it said the code complies.

It is not clear why the Director is recommending abandoning the interpretation the Director has stuck with for about four decades. If it is because of the LUBA opinion in *Nimpkish*, then the Director misunderstands the task here. Where, as here, the Board needs to resolve the ambiguity with a plausible interpretation of its own, the Director and the Hearing Official can be most helpful by explaining why, based on the record, the Director's and Hearing Official's four-decade interpretation can be supported as plausible, and, therefore, will be upheld by LUBA on appeal.

The Board's task is to state an interpretation that is not inconsistent with the express language of the plan and code. The Staff Report does not explore the possible answers to that question. Instead, the Director's Staff Report revisits the LUBA interpretation based on a fuller record of the acknowledgment proceeding and attempts to state a single correct interpretation.

The reasoning in the Staff Report supporting this proposed reading relies very heavily on: (1) The language in the 1984 objections filed by 1000 Friends and ODFW related to Policy 11 and code standards for lot size. (2) What the DLCD Staff Reports had to say in summarizing the objections and how the County was approaching the issue. (3) How the DLCD resolved during the acknowledgment process an ESEE analysis for Big Game Habitat in connection with a specific development proposal – Cerro Gordo, near Cottage Grove.

Initially, this is not the correct methodology for determining the meaning the County Board gave to the language it adopted for acknowledgment or the language it adopted during the DLCD review to gain acknowledgment. What 1000 Friends and ODFW and DLCD Staff were thinking or advocating in 1984 does indicate what the County was thinking in 1984. Furthermore, the content of an ESEE analysis for Cerro Gordo is unrelated to the meaning of new standards being adopted and intended to be generally applicable across the County. Each ESEE decision reflects a specific policy decision about a specific development proposal at a particular site. It is not a place to look for County Board intent about the plan and code language it was adopting to be generally applicable.

This new staff recommendation fails to reconcile the very explicit policy choice given to the County by the DLCD on July 19. The Staff is suggesting that the policy choice (between minimum lot standards or clustering) was really a bundling, requiring both minimum lot size and clustering.

VI. Conclusion

In summary, the Board's task here is not to make new Goal 5 policy, although that is something the Board has instructed county planners it is interested in exploring in the future. It is to interpret existing Goal 5 policy in the first sentence of Policy 11 which LUBA has stated, and the Board agrees, is ambiguous. The Board has conducted this interpretation by starting with the text of Policy 11, and then considering the text and context of the policy in the balance of the plan and code, in the Working Papers that are official background for the policy, and in the county's response to the acknowledgment review process. The Board recognizes that there are multiple possible interpretations of the ambiguous sentence. That is the nature of ambiguity. As

the Supreme Court has explained, the County Board is in the best position to interpret ambiguous language because, as the governing body of the county, it adopted the language in question.

Here the Board has interpreted the ambiguous language to mean what the Planning Director and the Hearing Official have said it means in likely hundreds of decisions made over the past four decades. For individual dwelling applications on F-2 land, Policy 11 does not apply as an independent standard; it is applied through the code standards for dwellings in the F-2 zone. Furthermore, Policy 11 does not state a minimum lot size for individual dwellings in Big Game Habitat; that is not evident in the express language of the policy; furthermore, in the acknowledgment process the County chose clustering of dwellings over minimum lot sizes.

Shawna and Julia—Please find attached an order of the Hearings Official confirming staff's determination that Ms. Chada's e-mail should not be included in the record. I will be asking Jim to sign it in my absence and put it in the pony to Julia.

Thanks!

Anne

October 5, 2023

Mr. Keir Miller, Manager
Land Management Division
3050 N. Delta Highway
Eugene, OR 97408

Re: Order; *(PA 23-05321; King)*

Dear Mr. Miller:

On September 7, 2023, the Hearings Official held a hearing on the above-referenced case. At the end of the hearing, the Hearings Official adopted the following open record briefing schedule:

September 21, 2023—Evidence and argument by staff and all parties

October 5, 2023—Response by staff and all parties to the material submitted during the first open record period

October 12, 2023—Final Rebuttal by applicant, no evidence

On September 21st at 12:58 p.m., County staff received an e-mail message from Juine Chada requesting information about how to be added as a concerned party for PA 23-05321. In a response e-mail from staff at 1:41 p.m., staff explained that the open record period was limited to those who appeared at the hearing or those who had previously submitted materials on the matter. Ms. Chada then responded that she was interested in "any and all county land use and zoning decisions that affect rural properties."

On September 23, 2023, County staff received an e-mail from Kim O'Dea, a local land use attorney, who argued that Ms. Chada's letter needed to be included in the record and that staff lacks authority to exclude submissions from the record.

First, it is unclear whether Ms. O'Dea represents Ms. Chada, as there was no indication whether she represents Ms. Chada. Second, the Hearings Official disagrees with Ms. O'Dea that staff does not have authority to exclude submission from the record. Staff routinely refuses to accept submissions that are filed late, beyond the 4:00 p.m. deadline of a particular date provided for submitting open record submissions. Similarly, when a submission is filed by a person who does not have standing or authority to file such submission, staff has the right to refuse to include that submission in the record. That said, even if the staff does not have that authority, the Hearings Official does. As discussed below, the Hearings Official confirms the staff's determination to refuse to include Ms. Chada's e-mail in the record.

Both state law and the Lane Code limit written submissions that are filed during the open record period to those who participated prior to or during the hearing. ORS 197.797(6)(a) and (c); LC 14.070(17)(b) and (d). The procedure set out in the statute and the Code is a bit different that the process generally articulated by the Hearings Official. Under the statute and Code, a participant in the hearing may request that the record be left open for additional submittals for a period no shorter than seven days. Following submittal by that person or entity who requested the record be left open, any "participant" may request in writing an opportunity to respond to any new evidence submitted during that open record period.

The Hearings Official generally builds into the open record period, once requested, an opportunity for responses to the material submitted during the first open record period. In this way, a participant at the hearing need not file a written request to respond to new evidence submitted during the open record period. That said, the statute and the Code still limit the opportunity to participate in the open record period, either in the first open record period, or in response period, to "participants" at the hearing. The Hearings Official articulated this limitation at the hearing, and staff subsequently clarified that limitation in follow up correspondence.

Accordingly, because Ms. Chada did not "participate" at the hearing, she may not provide written submittals during the open record period. Staff was correct in declining to include her e-mail in the record.

Sincerely,

p.p. AD

Anne C. Davies

Hi again Juine, Unfortunately that email you were forwarded was directed to people that had presented testimony to the hearings official on or before the September 7 public hearing. The hearing was closed at that time with the exception of the extended record period schedule specific to those persons already a party.

This means that the time has passed for providing testimony concerning the King applications. However, we are happy to add you to the notice list as a courtesy. Feel free to give me a call if you have questions.

Julia Dobberstein is copied on this email and her number should have been included on the email that was sent to you. Her direct line is 541-682-3958. Can you share who forwarded the email or advise them that the hearing was closed to new parties on August 7?

Best regards,

Shawna Adams | Senior Planner

[EXTERNAL ⚠]

Hi Shawna,
I was not aware of the parties of record until today so I missed the opportunity to be at the September 7 hearing and the chance to provide a written statement for the record today.
Yes, I would like to be added to **any** notices of decisions, scheduled hearings and opportunities to provide oral or written testimony.

My interest is in any and all county land use and zoning decisions that affect rural properties.
My email address is juine@icloud.com

It is my understanding from information you provided to interested parties of record that:

The Hearings Official has allowed for an extended hearing record period subject to the following deadlines:

1. Open Record for all parties of record until September 21, 2023 at 4:00 PM;
2. Comment/Response to Open Record submittals until October 5, 2023 at 4:00 PM; and
3. Final Rebuttal by the Applicant until October 12, 2023 at 4:00 PM.

Would you be so kind to provide Julia Dobberstein's contact information.

Thank you for your help and response.
Sincerely,
Juine Chada

Hello Shawna,
This is Juine Chada who left you a lengthy voicemail today.
I am writing to inquire if you have information about how to proceed to be added to concerned parties of record regarding 509-PA23-05321 (King Hearing #2)
I was forwarded information today indicating that today was the final day for:

Open Record for all parties of record until September 21, 2023 at 4:00 PM

Please let me know as soon as possible.

Sincerely,
Juine Chada

Re: LandWatch Lane County Response Testimony, Request for a Template Dwelling, 509-PA23-05321, PA23-05322, PA23-05323 (King)

Dear Hearings Official,

Please accept this letter in opposition to the application and in support of the issue that has been resolved by LUBA twice and the Court of Appeals once: the applicability and interpretation of Lane County Rural Comprehensive Plan Policy 11.

In response to ODFW's letter, the matter is conclusive, the density standards ensure that Lane County appropriately satisfies the basic conditions of acknowledgment and compliance with goal 5[1]:

> "As local governments drafted comprehensive plans to implement SB 100, the department provided detailed habitat protection plans for each county, which included fish and wildlife habitat inventory information, conflicting uses to those

[1] In this regard, the interpretations of Landwatch, LUBA, and staff are all in agreement. The density standards are half of the acknowledgment equation. In its simplest terms, density standards + siting standards = goal 5 acknowledgment. That inescapable conclusion compels the Hearings Official to deny the applications.

resources and recommendations for protection measures to comply with Statewide Planning Goal 5. *The department has consistently recommended density standards to protect wildlife habitat, minimize habitat fragmentation and maintain the carrying capacity of the land for wildlife.* For example, the department's Land Use Planning Guide from 1989 includes a wildlife guide for land use planning and specific development densities through development per acre standards for big game. This is consistent with the existing Goal 5 protections in the Lane County Rural Comprehensive Plan (RCP) Flora & Fauna Policy 11."

ODFW letter, September 21, 2023 (emphasis added). There is no local government interpretation that can change acknowledgment. Acknowledgment is a matter of compliance with the statewide planning goals, and that is a matter of state law. In its simplest terms, the County Board of Commissioners cannot interpret their way out of this issue, and ODFW's letter confirms that conclusion. Moreover, the County cannot make an interpretation of Policy 11 in a manner that is inconsistent with Goal 5 and its acknowledgment.

ODFW also notes that its historic correspondence with staff "by no means provide a clear and full picture of the discussions that Lane County and department staff had on the discrepancies within the original draft of the Lane County Plan." ODFW letter, September 21, 2023. The ODFW letter also notes that:

> *"[t]he clustering standards outlined in LC 16.211(5)(a) were designed as a tool to minimize the impacts to big game when the department's recommended density is not met.* Goal 5 big game habitat in Lane County is protected from most conflicting uses through compliance with the RCP and application of resource land zoning to protect and conserve sensitive wildlife habitats. LC 16.211(5)(a) states that all the listed (i-iv) siting standards must be met, with which the applicant currently does not comply. Clustering requires that dwellings and other structures are located near each other, and existing roads, dwellings and other structures are located to avoid habitat conflicts and utilize least valuable habitat areas; and road development is minimized. Department staff are concerned that the applicant has not demonstrated how the functions of this Goal 5 resource will be maintained."

ODFW letter, September 21, 2023 (emphasis added). Again, ODFW's conclusion is the same as that argued by LandWatch for years: compliance with the RCP policy 11 is one half of the protection and the other is the siting standards. Both are necessary to accomplish and satisfy the protections afforded Oregonians under Statewide Planning

Goal 5. And without both, there is no compliance with Goal 5 or the County's acknowledgment.

> As it relates to the F-2 zone (Impacted Forestlands), ODFW notes that:
>
> "*Currently, most of the big game habitat in the County falls within the Non-Impacted or Impacted Forest Land zones.* The Impacted Forest Land zone is described as forest land that warrants a high level of protection from conversion to non-forest uses. This land has the capability to produce timber or is designated for one or more of the other forest uses. Statewide Planning Goal 4 and the definition of "other forested lands" includes the values for fish and wildlife habitat, in addition to forestry values. Uses that are not forest or farm related should be allowed only after assurance that such uses will not adversely affect the surrounding forest land.
>
> *It is the intent of the F-2 Impacted Forest Lands Zone to protect fish and wildlife habitat (LC 16.211(1)).* Fragmentation of habitat can impact connectivity between varying habitats that wildlife use as corridors to navigate through our developed landscape. Loss of habitat can have adverse effects on wildlife species with the potential for localized population decline and an increase in human wildlife conflicts (e.g., vehicle strikes, damage, and human health and safety issues). Existing or proposed non-forest or non-farm uses (e.g., dwellings) within the Forest Land District (F-2) must recognize that the intent of the district is to protect resources, and that in the event of a conflict this chapter will be interpreted in favor of resource management practices (LC 10.104-05).
>
> Big game should be considered a resource similar to timber, where game species are managed by the department to maintain healthy big game populations while still providing huntable opportunities to the public."

ODFW letter, September 21, 2023 (emphasis added). ODFW is confirming that F-2 lands are important for wildlife protection and where conflicts exist with other uses, the conflict should be resolved in favor of resource protection. The Homebuilders' interpretation would do just the opposite.

As to the May 8, 1984, letter from ODFW to DLCD attached to staff's submission, the letter is of little assistance because it assumes there would be a minimum lot size for development in the F-2 zone, when, in fact, there is no minimum size for development of an F-2 template dwelling, unlike other counties: "We note that the minimum lot sizes in the F-1 and F-2 zones are the minimum acceptable to correspond to

our density recommendation." Again, unlike other counties, there is no minimum size in Lane County to site a template dwelling on F-2 zoned land, which makes the density recommendations all the more important.

LandWatch agrees with and incorporates 1000 Friends' comments. The basic issue is whether the applicant can lobby the County to use its deferential interpretation to demonstrate compliance. The

As to the applicant's submission of 909 pages, there is no explanation or narrative by which to respond to the evidence submitted. If the applicant subsequent to open record timeline includes a narrative that cites to or relies on what the applicant has submitted, LandWatch reserves the right to respond. Regardless, there does not appear to be anything new in that evidence that would otherwise change LUBA's and the Court of Appeals' decisions.

Finally, it is important that the Hearings Official rule on the applications, not simply lay out the various interpretations. The Board of Commissioners will likely respect the Hearings Official's rationale and analysis as to why the Homebuilders interpretation is legally deficient and why LandWatch's, Staff's, and LUBA's interpretation satisfies the conditions of acknowledgment and protect goal 5 resources. Again, the basic error is that the applicants would like to avoid the density recommendations – whether those are the recommendations advocated by staff or those advocated by LandWatch and LUBA – because it requires an ESEE analysis in the event the density standards are exceeded. As confirmed by ODFW, the density recommendations and resolution of conflicts through the ESEE analysis are a necessary component of Lane County's compliance with Goal 5. The County Board of Commissioners will get no deference in trying to avoid compliance with Goal 5 because compliance with Goal 5 and the conditions of acknowledgment are matters of state law.

LandWatch respectfully requests that the Hearings Official uphold LUBA's and the Court of Appeals' interpretation of Policy 11 and deny the applications.

Sincerely,

Sean T. Malone
Attorney for LandWatch Lane County

LAND MANAGEMENT DIVISION

Waiver/Extension of Statutory Timeline Requirements

Instructions: To waive or extend the statutory timeline requirements applicable to your land use application, please complete all applicable fields, sign, date, and return this form to the address listed below.

I, Bill Kloos, as owner or authorized representative of the owner of
Applicant (Print Name)
the property known as Assessor's Map and Tax Lot(s) Map 21-35-07-30 #2900 that is the subject of the land use application Department File Number PA23-05323 and is the subject of this request, do hereby voluntarily **(Check Only One Box)**:

☒ **Waive** the statutory timeline requirements of ORS 215.427, including any rights to a refund as provided for by ORS 215.427(8), and the associated right to seek mandamus as provided for by ORS 215.429(1). Furthermore, I hereby voluntarily request that the County delay processing of the application until NA. **(6 months maximum)**
(Enter M/D/Y or "/NA" If No Delay Requested)

☐ **Extend** the statutory timeline requirements of ORS 215.427 for _____ days[1] in order to submit
(Enter # Calendar Days)
additional information. Furthermore, I do hereby voluntarily request that the County delay processing of the application for the same number of days. **(check box):** ☐ **Yes** ☐ **No**

I understand:

1) By signing this form, I am making an irrevocable decision to extend/waive the statutory timeline requirements of ORS 215.427. I may not change my mind later except by withdrawing my application, filing a new application, and paying the associated fees.
2) This statutory timeline waiver/extension is given freely and without compulsion by the County, and is not conditioned on any County action apart from granting the delay requested for processing the application, if any.
3) I may request that the County resume processing my application at any time and understand that any such request has no effect on the statutory timeline extension/waiver granted.
4) Lane County is not obligated to accept this statutory timeline waiver/extension request.

Bill Kloos — 9/22/23

Signature (Authorized Representative/Owner) **Date Signed**

Return to: **Lane County – Public Works**
Land Management Division
3050 N. Delta Hwy.
Eugene, OR 97408

[1] Per ORS 215.427(5), the total period of time an application can be put on hold and final action timeline extended by an applicant may not exceed 215 days, except as provided in ORS 215.427(10). Additionally, unless a hold on processing the application is expressly requested in conjunction with a timeline waiver/extension request and accepted by County staff, the County reserves the right to resume processing the application at any time.

May 8, 1984

DEPARTMENT OF LAND
CONSERVATION AND DEVELOPMENT

MAY 9 1984

SALEM

Mr. James Ross, Director
Department of Land Conservation
and Development
1175 Court St., N.E.
Salem, Oregon 97310

Dear Mr. Ross:

The Oregon Department of Fish and Wildlife has completed its review of the Lane County Rural Comprehensive Plan. We have both comments on and objections to the plan:

COMMENTS

For background, you should know that over the last year the Department worked very closely with the County to revise and update inventory information, make recommmendations and review and comment on plan materials (working papers, policies and zoning codes). Throughout the process, we believe a spirit of working cooperation prevailed and until the final hearings the plan overall had our full support.

The Department compliments the County for the Riparian Vegetation protection provisions it has adopted. We believe these provisions are highly workable and will be effective in providing resource protection. We judge them to be among the finest local protection methods in the state. In addition, we support the 1B approach to wetlands as we recognize that specific examination of the resource is needed. Finally, the County has done an excellent job in providing protection for most significant sites identified in the metropolitan area plan. These sites involve wetlands, forest areas and the "Confluence" heronry. In particular, the Department supports the balanced protection mechanisms set out by the County for these sites.

Notwithstanding the fine performance noted above, the following are the points we must raise and on which we base our objection to acknowledgement.

OBJECTIONS

Pudding Creek Heronry

The Department believes an inconsistency exists in the Metropolitan Area Plan. The element on the Pudding Creek Heronry indicates an "NR" plan designation is applied and specifies land exchange as the means to resolve sand and gravel use conflicts. The Department

supported this plan designation and worked extensively to implement it. At this time however, we understand that the zone applied is sand and gravel. We must object to this zoning as it would fail to protect the heronry consistent with plan policy.

Big Game Range

The County was provided clear information on Department policies for protection of game range from conflicting uses. The working paper describes much of the information. Flora and Fauna Policy Number 11 makes a commitment to achieve the Department's overall density recommendations. The policy, however, is flawed in that it regards densities above Department recommendations to constitute a conflict. The Department regards its policies to be the approach which resolves the conflict between dwellings and game range as required by Goal 5.

We note that the minimum lot sizes in the F-1 and F-2 zones are the minimum acceptable to correspond to our density recommendations. Previous drafts of the zone provided larger lot sizes based on the data in the Forest Lands Working Paper. Contrary to the plan policy addressing our recommendations however, the F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany these density levels. We note later that the policy, as written, would seem to apply to all zones where range is present.

Sensitive Bird Nesting and Use Sites (Non-coastal Plan Element)

The plan is ambiguous with regard to this concern. First, it is clear from the Flora/Fauna Working Paper (page 1) the County has complete inventory information. The Department recently updated this information. Second, the County designates some but not all of the inventoried species as Endangered, Threatened or Special Interest Species (Flora and Fauna Report, page 11). Specifically inventoried, but not designated, are Heron Rookeries and Pigeon Mineral Springs. No plan policies specifically address protection of all the species designated by the County or the sensitive species of particular focus on the part of our Department (Bald Eagles, Heron Rookeries, Snowy Plover, Spotted Owls, Osprey nests and Pigeon Springs). Flora/Fauna Plan Policy Number 15 places three of the listed species in a 1B category. The Department believes sufficient information exists to complete the Goal 5 process for species of concern to us by developing a generic ESEE analysis and specifying County protection will cover only non-forest operation uses or activities. Our view is that the location, quantity and quality of information provided the County is similar to that provided to other counties who completed the Goal 5 process and are acknowledged.

Goal 5 Application to Marginal and Nonresource Lands

We have been unable to identify any evidence that Goal 5 has been applied in the process of designating marginal and nonresource lands. This is of great concern to our Department in the context of big game range. Considering plan provisions for lots of record, resource and nonresource related dwellings, marginal lands and nonresource lands, we believe considerable development could occur in game range. As discussed above, the County's commitment to maintain compatible densities is not completely or satisfactorily implemented. That discussion focused on the F-1 and F-2 zones. The Department notes that the policy is to be applied to "regions of the County" which would include marginal and nonresource lands. Finally, it was not possible to determine what marginal and nonresource lands were in game range areas. The zone map format and resource inventory map formats were not easily comparable.

Thank you for the opportunity to express our comments. The Department also will continue its commitment to the County to assist where possible in completing an acknowledgement.

Sincerely,

Neal L. Coenen

Subject: Comments for PA23-05321, 05322, 05323
Date: Thursday, September 21, 2023 3:59:21 PM

[EXTERNAL]

Shawna,

On behalf of 1000 Friends of Oregon, please accept the following comments for the record in the following applications: PA23-05321, 05322, 05323.

1000 Friends disagrees with the Staff's conclusion that the county has adopted or implemented clustering standards that are commensurate with imposing a specific dwelling density that is smaller than the 80-acre or 40-acre dwelling density in ODFW's recommended densities. The county cannot use a post-hoc interpretation of the text of Policy 11 to substitute for its lack of implementation measures. Rather the record is clear that the county has failed to adopt implementation measures contemplated by Policy 11, and in lieu of implementing the comprehensive plan, the county must rely on a site-specific ESEE analysis and the provisions of OAR 660-023.

Although the county adopted siting standards (Staff report Attachment 6.35), the county did not purport to adopt the standards for the purpose of achieving a specific dwelling density greater than dwelling density described by Policy 11. If that were the case, the county would have needed to explicitly state that the siting provisions would allow a specific development density. The county did not do so. The county cannot claim that LDCD or DLCD acknowledged an otherwise unstated Goal 5 density requirement.

Subject: Hearing Recording and Submittals - 509-PA23-05321 (King Hearing #2)

Concerned Parties, Attached is the hearing/pre-hearing written testimony received for Planning Action files 509-PA23-05321, which was the subject of yesterday's second hearing concerning King template dwelling applications. The testimony has been combined into a single document along with an index for your reference. The same testimony is included in the record for yesterday's first hearing, which was addressed in the previous email you should have received. The index is specific to the second hearing. Please contact me directly if you have any questions or require assistance prior to September 20, as Julia Dobberstein, the assigned staff planner for this hearing item is

scheduled out of the office until then.

Sometime soon the attached document will be available on our website along with the other hearing related items for the September 7 hearings, which can be found at the following link: https://www.lanecounty.org/cms/One.aspx?pageId=6285782&portalId=3585881&objectId.94636=19715258&contextId.94636=6285783&parentId.94636=19699820. The Hearing recordings have already been posted.

The Hearings Official has allowed for an extended hearing record period subject to the following deadlines:

- Open Record for all parties of record until September 21, 2023 at 4:00 PM;
- Comment/Response to Open Record submittals until October 5, 2023 at 4:00 PM; and
- Final Rebuttal by the Applicant until October 12, 2023 at 4:00 PM.

If you plan to submit information please provide digital copies to me by email prior to the deadline (if your submittal is over 20 pages please also submit a paper copy). Please direct any written communication to Julia and copy me on any emails so we can better assist you and facilitate a smooth process.

RE: 509-PA23-05321, 509-PA23-05322, 509-PA23-05323

Dear Chairman Farr, Vice Chair Trieger, Commissioner Buch, Commissioner Loveall:

The Oregon Department of Fish and Wildlife (department) appreciates the opportunity to provide comments on the applications for dwellings being proposed in the Impacted Forest Lands (F-2) Zone pursuant to the 'Template Dwelling' provisions on three different properties adjacent to the Oakridge State Airport (T21S, R2E, Section 12, Tax Lot 843, and T21S, R3E, Section 7, Tax Lots 2900 and 2800). It is policy of the state of Oregon to manage fish and wildlife to prevent serious depletion of indigenous species and to provide the optimum recreational and aesthetic benefits for present and future generations of the citizens of this state (ORS 496.012). In accordance with this mission, the department provides the following comments for the record on September 21, 2023.

The department has been engaging with local governments on land use planning since SB 100, the creation of the Statewide Planning Program and adoption of the State Agency Coordination Agreement which ensures the department's role in providing technical assistance to local governments. As local governments drafted comprehensive plans to implement SB 100, the department provided detailed habitat protection plans for each county, which included fish and wildlife habitat inventory information, conflicting uses to those resources and recommendations for protection measures to comply with Statewide Planning Goal 5. The department has consistently recommended density standards to protect wildlife habitat, minimize habitat fragmentation and maintain the carrying capacity of the land for wildlife. For example, the department's Land Use Planning Guide from 1989 includes a wildlife guide for land use planning and specific development densities through development per acre standards for big game. This is consistent with the existing Goal 5 protections in the Lane County Rural Comprehensive Plan (RCP) Flora & Fauna Policy 11.

Department staff, like many of the other concerned parties took time to review the historic correspondence submitted into the record by Lane County staff. It should be noted that these documents by no means provide a clear and full picture of the discussions that Lane County and department staff had on the discrepancies within the original draft of the Lane County Plan. The department letter from December 9, 1980, to the Director of the Department of Land Conservation and Development, states that

the department opposes the acknowledgment of the Lane County Plan because of its failure to satisfy department recommendations for residential development densities. Specifically, this letter stated the department's "*original recommendations indicated that the desirable level of density within deer winter range was the equivalent of one dwelling per 80 acres or the equivalent of one dwelling per 40 acres with cluster development. In elk winter range the desirable density level was the equivalent of one dwelling per 160 acres or one per 80 acres with cluster development.*"

In the mid-1970's, department staff developed a table of recommended dwelling densities within big game range. The Land Conservation and Development Commission accepted the recommended density table as part of our State Agency Coordination program developed in 1977 to comply with the land use planning goals and guidelines (Appendix 1). The densities in the table are similar to what the department had recommended in the 1980 letter and should be interpreted as the intended density standards for the County. Table 1: Wildlife Guide for Land Use Planning, defines development densities as the number of dwellings per acre, these densities fall within two different categories, desirable (recommended) level of development or acceptable level of development when clustering can be applied. The addition of clustering and siting standards for forest dwellings should be seen as supplementary to the department's density recommendations, with the ultimate goal of providing the highest amount of protection for big game. It is in this context that the agency utilizes the Fish and Wildlife Habitat Mitigation Policy in OAR 635-425; avoid impacts first, then minimize, then mitigate.

The clustering standards outlined in LC 16.211(5)(a) were designed as a tool to minimize the impacts to big game when the department's recommended density is not met. Goal 5 big game habitat in Lane County is protected from most conflicting uses through compliance with the RCP and application of resource land zoning to protect and conserve sensitive wildlife habitats. LC 16.211(5)(a) states that all the listed (i-iv) siting standards must be met, with which the applicant currently does not comply. Clustering requires that dwellings and other structures are located near each other, and existing roads, dwellings and other structures are located to avoid habitat conflicts and utilize least valuable habitat areas; and road development is minimized. Department staff are concerned that the applicant has not demonstrated how the functions of this Goal 5 resource will be maintained.

Department staff highlighted the issues the County would face with resources and zoning in its November 1st, 1983, letter to the Lane County Planning Department. The basic issue being that the County needed to determine if a special code would be applied as an overlay to address all fish and wildlife resources or if they would be addressed specifically in other zones. At that time a Natural Resource Zone was being considered for lands that fell within mapped big game habitat, but ultimately the County decided to go in a different direction. Currently, most of the big game habitat in the County falls within the Non-Impacted or Impacted Forest Land zones. The Impacted Forest Land zone is described as forest land that warrants a high level of protection from conversion to non-forest uses. This land has the capability to produce timber or is designated for one or more of the other forest uses. Statewide Planning Goal 4 and the definition of "other forested lands" includes the values for fish and wildlife habitat, in addition to forestry values. Uses that are not forest or farm related should be allowed only after assurance that such uses will not adversely affect the surrounding forest land.

It is the intent of the F-2 Impacted Forest Lands Zone to protect fish and wildlife habitat (LC 16.211(1)). Fragmentation of habitat can impact connectivity between varying habitats that wildlife use as corridors to navigate through our developed landscape. Loss of habitat can have adverse effects on wildlife species with the potential for localized population decline and an increase in human wildlife conflicts (e.g., vehicle strikes, damage, and human health and safety issues). Existing or proposed non-forest or non-farm uses (e.g., dwellings) within the Forest Land District (F-2) must recognize that the intent of the district is to protect resources, and that in the event of a conflict this chapter will be interpreted in favor of resource management practices (LC 10.104-05).

Big game should be considered a resource similar to timber, where game species are managed by the department to maintain healthy big game populations while still providing huntable opportunities to the public. In 2019 alone, hunting and wildlife watching provided significant economic benefit to Lane County, with people spending just over $34 million on these activities according to Travel Oregon's Outdoor Recreation Economic Impact Study completed that year. Intensification of land-use beyond normal agricultural and forestry uses generally conflicts with maintenance of big game populations. Hunting opportunities are usually entirely eliminated when such changes take place, and big game damage problems may develop. It is uncommon that a single development action would have a critical impact on big game. However, development has a cumulative effect on wildlife habitat and associated wildlife populations as well as many other natural resource and social issues important to Oregonians and the residents of Lane County. It was the need to plan and account for these cumulative impacts that resulted in the development of the RCP and it is in the context of cumulative effects that impacts of proposed amendments should be considered.

The department relies on local and state compliance with the land use planning goals to consider natural resources, such as wildlife habitat protecting big game. However, most County Goal 5 programs have not been updated since plan acknowledgement to incorporate the best available data and how to protect significant Goal 5 resources. Department staff recommend the County initiate a revision of their Goal 5 Program, including an update of Policy 11 so that it provides clear and objective standards. The department acknowledges the effort that a project of this magnitude will take and can provide technical assistance to the County regarding the best available data for wildlife habitat, identifying conflicting uses and providing recommendations to address conflicting uses in a way that is consistent with the department's Fish and Wildlife Habitat Mitigation Policy and Goal 5.

Thank you for your consideration of the department's comments. For clarification or any questions, please contact me at 541-757-5301.

Respectfully,

Joseph Stack
Regional Habitat Biologist
Oregon Department of Fish and Wildlife

TABLE 1. WILDLIFE GUIDE FOR LAND USE PLANNING

Table 1. is a guide for the biologist working with local land use plans. The table relates wildlife sensitive habitat to development densities, special land use restrictions, and the expected reduction of carrying capacity. Comments for both desirable and acceptable levels of development are grouped by species or habitat type.

The absence of development provides the optimum situation to maintain and preserve sensitive habitat areas. However, this is an unrealistic expectation. The development densities and projected reductions in carrying capacity are based on professional judgement from many years of Department field experience and interpretation of the literature. There may undergo further refinement as experience and supporting documentation dictate.

Definition of Terms Used in the Table:

Sensitive Habitat Areas - Areas important to the survival of a species or group of species and habitats with limited area. They are listed on the table.

Symbols - C =
D = The desirable level of development
A = The acceptable level of development
X = This item applies
1-1 = Range of reduction in carrying capacity

Compatible Land Uses - Use of land that is compatible with wildlife.

Development Densities - The number of dwellings per acre.

Cluster Development - Concentration of structures on one part of a lot to preserve the remainder of the property for open space habitat.

Reduction of Carrying Capacity - Carrying capacity reduction could be expected to occur within these limits.

Unacceptable Uses - These uses are not compatible with the wildlife present, nor maintenance of the sensitive habitat areas.

Fences - Fencing requirements (conditional use required for change):

No fences = No fences on area

Homestead only = Fence only around house and outbuildings

Livestock control = Only livestock control fences should be built

3-wire, 18" bottom strand = Specification of any fence built

No woven wire = Woven wire not allowed in fence construction

Vegetation Clearing - Clearing restrictions (conditional use required to exceed):

Percentages = Percent of vegetation that may be cleared (shrubs and trees)

50% per 10 years = No more than 50% of vegetation cleared every ten years

Not more than 10% edge = No more than 10% of the edge vegetation should be removed

Not within 50 yards = No vegetation clearing within 50 yards of sensitive areas

Not within 100 yards = No vegetation clearing within 100 yards of sensitive areas

Not cut nest trees = Trees with nest species identified in sensitive areas cannot be cut (e.g., eagle nests)

Roads - Road construction and use restrictions (conditional use required to exceed):

Access only = Roads for access use only

No road in or next to = No road in or next to sensitive habitat areas

No off-road travel = Off-road travel not allowed during period except for farm and forest operations when noted

Special Restriction - Land uses that should not be allowed:

No water crossings = No water fords, crossing only by bridge or open bottom culvert

No developments, 1/4 mile = All developments (buildings and roads) to be 1/4 mile from sensitive habitat areas

No developments below high water = No development below the high water line

Potential for Conflicts (Damage) - Notice to planner and developer that wildlife could cause damage to private property development in this area (e.g., deer damage).

The importance of existing wildlife habitat that is not classified as "sensitive" should be identified in the narrative of each comprehensive land use plan. To assure understanding of this point, the following statement is suggested for inclusion within the comprehensive plan.

"The designation of sensitive areas is not intended to identify only a select group of habitat or wildlife as important. But, rather to focus attention on particular habitat and species that are especially sensitive to land use activities. Few, if any, areas are devoid of wildlife and all areas are subject to land use impacts. Therefore, it is not only important that sensitive habitats or species receive protection, but it is also important to consider impacts of land and water use on all habitats and species."

Table One: WILDLIFE GUIDE FOR LAND USE PLANNING

| SENSITIVE HABITAT AREAS | COMPATIBLE LAND USES | Development Densities (Development/acre) None | 1:640 | 1:320 | 1:160 | 1:80 | 1:40 | 1:20 | 1:10 | 1:<8 | Cluster development | Reduction of Carrying Capacity (percentage) 100 | 80 | 60 | 50 | 30 | 25 | 20 | 10 | 5 | 0 | Acceptable Uses Rock pit | Feed lot | Parks | Dogs at large | Land fills | Water hole | Fire pump hole | Open concrete canal | Major highways | Airports | Grazing | Fence No fence | Homestead only | Livestock control | 3 wire-18" bottom | No woven wire | Conditional Use Considerations: Vegetation Clearing (percent) 10 | 20 | 30 | 50 | Not more than 10% edge | Not within 50 yds | Not within 100 yds | No cut nest trees | Roads Access only | No roads in or next to | Nov.-Apr. | Dec.-Apr. | No off road import | None | Special Restrict. Shawna,

Please find attached LandWatch's Open Record testimony and one exhibit (Exhibit B - LandWatch's Response Brief in the prior *King* matter before the Court of Appeals). Two other exhibits were uploaded to the County earlier today due to their size: (1) Exhibit A - the Court of Appeals Record in *King* and (2) a copy of the June 13, 2023 Board of Commissioners hearing (video). Please add to the record.

Thank you,

Re: LandWatch Lane County Open Record Testimony and Evidence, Request for a Template Dwelling, 509-PA23-05321 (King)

Dear Hearings Official,

Please accept this letter in opposition to the application and in support of the issue that has been resolved by LUBA twice and the Court of Appeals once: the applicability and interpretation of the Lane County Rural Comprehensive Plan Policy 11.

LandWatch understands the County to have included the local record before LUBA for the *King* cases. LandWatch has included as Exhibit A the record before the Court of Appeals in the *King* cases, as well as the video of the County Board's hearing on June 13, 2023, hearing in which the County Board directed staff to elevate the next applicable case to the County Board.

As noted in the *King* decision before LUBA:

> "[t]he principle of *stare decisis* applies to our final opinions. ORS 197.805 (instructing that LUBA decisions 'be made consistently with sound principles governing judicial review'). We will reconsider a prior decision if a party demonstrates that we erred in making it because we were not presented with an

> important argument. *Nicita v. City of Oregon City*, _ Or LUBA _, (LUBA Nos 2020-037/039, Sept 21, 2021) (slip op at 20) (citing Farmers Ins. Co. v. Mowy, 350 Or 686,698,261 P3d 1 (2011)). In *Nimpkish*, no party made any arguments based on either the Addendum or the DLCD staff reports, and our opinion did not address all of those documents in analyzing Policy 11's text, context, and legislative history. We do so now, and we uphold our decision in *Nimpkish*.

Exhibit A, LUBA Record 54. LandWatch believes that a plethora of arguments were made as to the working papers and DLCD staff reports in *Nimpkish*. Those documents were the basis for LandWatch's arguments in *Nimpkish*. Regardless, after *King*, those issues have been put to rest, and the Hearings Official is bound by LUBA's decisions in *Nimpkish* and *King*. As addressed below, the only new information brought forth in this appeal is by County staff, which included correspondence between ODFW and the County. LandWatch does not believe this new information changes the analysis. It must also be noted that the applicant does not set forth anything new in its argument or interpretation that was not set forth previously in *King*.

LUBA/LandWatch's interpretation is the "law of the land" and must be upheld by the Hearings Official.

LUBA's interpretations in *Nimpkish* and *King* are the same as LandWatch's interpretations. LandWatch submits that these cases are the "law of the land," and that the Hearings Official is bound by those decisions. The only reason the applicant repeats its arguments and application here is because the applicant hopes to get deference from the Board of Commissioners. Nothing else has changed, except for the political make-up of the County Board.

LUBA has determined that, under the decisions in *Nimpkish* and *King* interpretation, the County is adequately implementing Goal 5 through its Flora and Fauna policy 11. Importantly, the density recommendations do not prohibit development; instead, the density recommendations require – for those properties that are within big game range and are less than the requisite acreage – the applicant to prepare an ESEE analysis. The applicant has refused to prepare an ESEE analysis and attempt to resolve the conflict through the ESEE process.

LandWatch adopts LUBA's interpretations as set forth in *Nimpkish* (*see* LandWatch Lane County v. Lane County, __ Or LUBA __ (LUBA No. 2020-030, Jan 21, 2021)) and *King* (Exhibit A, LUBA Record 37-68), LandWatch's Response Brief in *King* before LUBA (Exhibit A, LUBA Rec. 77-137) and the Court of Appeals (Exhibit B)

as well as the briefing in *Nimpkish* (Consolidated Record for LUBA No. 2021-052 at 77-94).

Staff's Interpretation misconstrues the correct density standards

With the exception of Lane County/ODFW correspondence[1], staff is relying on the same documents that were at issue in *Nimpkish* and the *King* cases. LandWatch does not believe that correspondence (Attachment 4 from the Staff Report) changes LUBA's decision.[2] In the *King* cases before LUBA and the Court of Appeals, the applicant continually alleged that new documents had been brought forward, when that was not true, and the same documents were considered in *Nimpkish* as were considered by the decision-maker in the *King* cases. LandWatch understands the Lane County/ODFW correspondence to be new but, again, does not believe it materially changes LUBA's analysis and conclusions. Importantly, however, staff's position retains the requirement for an ESEE analysis, which ensures compliance with Goal 5. LandWatch acknowledges that there are statements in the correspondence about decreasing lot sizes increases impacts on big game. *See e.g.*, 4.13 ("our view is that as the lot size decreases (and density increases) the impact increases and needs to be mitigated. This can be done throught ordinance provisions requiring residences: to be as close as possible to each other; located adjacent to existing roads and minimizing residential serving roads."). LandWatch submits that the ESEE analysis coupled with the siting standards results in a conclusion that the conflict should be prohibited, allowed to some extent, or allowed fully. *See* OAR 660-023-0040(5)(a)-(c). That analysis is how the Cerro Gordo property was established, though the analysis occurred pursuant to the defunct Goal 5 ESEE provisions at OAR 660-016-0000 *et seq*. Staff's interpretation leaves the analysis required of the ESEE analysis out of the equation.

Staff relies on Cerro Gordo, for example, but Cerro Gordo was a "nonresource area" and it went through an ESEE analysis and resolution of conflicts:

---

[1] In *Nimpkish*, the parties made public records requests to DLCD, which apparently did not include the correspondence from ODFW to Lane County.

[2] Indeed, that correspondence refers to the 80/40 acres density standards. *See* Staff Report, Attachment, 4.11 and 4.108 ("Sensitive Big Game Range: 1:80 acres" and "Peripheral Big Game Range: 1:40 acres"); Staff report, Attachment 4.2 ("Forest lands above 80 acres, if planned and zoned for 80-acre minimums, would be consistent with our game range policies.").

"the Goal 5 conflicting uses/ESEE consequences analysis for one of the nonresource areas – Cerro Gordo – does not justify the residential densities proposed.... The applicant has proposed a wildlife management plan which calls for clustering buildings and maintaining wildlife corridors. Although the proposed clustering and wildlife corridor measures will help resolve some of the conflicts identified, the overall density of the development 'with clustering' is one unit per five acres. ODWF recommendations are one per 80 acres (or one per 40 acres with clustering) in peripheral habitat. According to the County's own plan (Policy 11), such densities cannot be exceeded without beign justified through an ESEE consequences analysis ..."

Staff Report at 7-8. First, Cerro Gordo was apparently non-resource land, and there was an ESEE analysis that resolved any conflicts by imposing clustering and wildlife corridors. It is the ESEE analysis – through its resolution of conflicts (OAR 660-023-0040(5)) – which allows the County to determine to what extent clustering and siting standards can resolve the conflict.

Staff has also performed an analysis of the many documents, including staff reports, working papers, amendments, etc. After that analysis, staff came to a slightly different conclusion than LandWatch and LUBA and the Court of Appeals. Staff's interpretation is different only as it relates to the density calculation. Whereas LUBA has ruled and LandWatch has maintained that the density 80/40 for primary/peripheral, staff alleges that the correct density is less when considering clustering. For example, staff alleges as follows:

- "Specifically, the Director asks the Hearings Official to consider text, context, and legislative history which indicates that, at the time of plan adoption and acknowledgment, DLCD, the county, and ODFW recognized the applicable density standard under Policy 11 to be much less restrictive than the one dwelling/80-acre standard that has been presumed to apply. In the Director's view, the legislative history and context makes clear that Policy 11 allows double the density that was presumed in Nimpkish and King, meaning that the subject properties would only need to be 40 acres in size, rather than 80 acres, to meet the applicable Policy 11 density standard for dwelling approval." Staff Report, 2 of 11.

- "As LUBA concluded in King, 'the legislative history is reasonably clear that the LC 16.211(5) clustering standards were intended to supplement, rather than to replace, the other components of the county's Goal 5 program, including Policy

> 11'. Equally clear to the Director, is that the F-2 siting standards were adopted to allow for the doubling of densities in big game habitat in keeping with Policy 11 density limitations." Staff Report, 4 of 11.

As noted below, there is no ambiguity in the working papers' basic conclusion:

> 'The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall densities for Peripheral Big Game Range at one dwelling unit per 40 [acres]; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/ 40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game.' Record 542."

Nimpkish, slip p at 5, n 3. Those are the standards referenced in Policy 11. While ODFW appears to presently endorse a standard of "on unit per acres or with clustering, one unit per 40 acres," ODFW letter, September 7, 2023, that is not what was presented above in the Working Paper. Moreover, there is no articulation of how to cluster under any given scenario or what standards apply to cluster a dwelling. Under LandWatch's reading – confirmed by LUBA and the Court of Appeals – that resolution occurs through the ESEE process. *See* OAR 660-023-0040 and -0040(5).

Staff also relies on the following statement from the July 19, 1984, DLCD Staff Report to LCDC:

> "'[Response 3]. ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 zone, since in general, dwellings are not permitted in that zone." (p. 39, emphasis added)[.]"

Staff Report, 5 of 11. This provision was briefed before LUBA. *See* Exhibit A, LUBA Record 20-21 (King LUBA decision, page 16). LandWatch addressed that provision in its LUBA Response Brief:

conflicts between dwellings and big game."). More importantly, DLCD noted that ODFW's objections required *both density standards and siting or clustering requirements*: "ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, *the County's F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones*." R 2021-052 at 908 (R 2021-052 at 146-147) (emphasis added). DLCD also noted that:

> "ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minim lot sizes in the F-1, and F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable. This is a problem in the F-2 and EFU zones in particular, but not in the F-1 zone, since, in general, dwellings are not permitted in that zone."

R 2021-052 at 912 (R 2021-052 at 150); *id.* ("Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made."). The September staff report did not take back or negate any of what was said above. Rather, it just required that one-half of protections be implemented in the code through siting standards and the other half would be implemented through the ODFW's residential density recommendations.

Exhibit A, LUBA Record 101-102 (LandWatch Response Brief in *King*).

Staff also relies on the following provision from the July 19, 1984, DLCD Staff Report to LCDC:

> "'[IOTC 2.d.] Amend the F-2 and EFU zones to carry out the intent of [Policy 11]. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas.' (p. 75, emphasis added)." Staff Report, 5 of 11.

Notably, the County *never required minimum lot sizes for F-2 dwellings.* To repeat, unlike many counties, Lane County has never imposed a minimum lot size for F-2 dwellings. LUBA was well-aware of Lane County's shortcomings in this respect:

> "However, the county's failure to take the step of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that the county is absolved from protecting land included on the Big Game Habitat Inventory as Major Big Game Range through the residential density recommendations referred to in RCP Goal 5, Flora and Fauna Policy 11, or that the density recommendations simply do not apply. Rather, the second sentence of RCP Goal 5, Flora and Fauna Policy 11, remains operative, and it provides that '[a]ny density above [the ODFW recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' The second sentence is not tethered to or derivative of the first sentence, which envisions the creation of zoning areas that the county has never completed. The second sentence does not mention or refer to zoning areas. To find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the county to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgement of its Goal 5 program, and it would have the effect of eliminating the Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program. Moreover, the county must interpret a provision of the RCP that was adopted to implement its Goal 5 program, which protects Big Game Range from conflicting residential development through density standards, in a manner that is not inconsistent with Goal 5. ORS 197.829(1)(d)."

Nimpkish, slip op at 12-14. LUBA goes on to cite support of its conclusion. *See id.* at 14-16.

Finally, while staff has an interpretation that would reduce the density standards by one-half, staff has not addressed the basic conclusion in the Flora and Fauna Working Paper (and identified by LUBA in *Nimpkish*) where the density standards are expressly identified, *with no mention of the a 40/20 acre standard with clustering*:

> "The RCP characterizes the Flora and Fauna Working Paper as 'background information * **to be used to help interpret and understand [the RCP].' RCP Part l(C). The Flora and Fauna Working Paper explains in more detail that the ODFW

residential density recommendations for Major Big Game Range were one dwelling unit per 80 acres:

> 'The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall densities for Peripheral Big Game Range at one dwelling unit per 40 [acres]; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/ 40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game.' Record 542."

Nimpkish, slip p at 5, n 3. Staff's interpretation of a lower density standard requires putting several different disparate citations together, whereas the above citation is straightforward and LUBA has already agreed with it. Therefore, LandWatch respectfully requests that the Hearings Official continue to rely on the density standard articulated in *Nimpkish* and *King*.

Homebuilder's interpretation is contrary to the plain language, underlying policy, and purpose of Policy 11.

The Homebuilders' interpretation falls short for the basic reason that it gives no effect to the density standards identified in the plan and working papers. That is contrary to Lane County's compliance with the goals and compliance with the conditions of acknowledgment, which means that the Homebuilders' post-hoc interpretation is not in compliance with Goal 5. Because the issue here revolves around the issue of goal 5 acknowledgment, and includes many un-performed or unfinished tasks, the issue is necessarily a matter of the correct interpretation of state law, including compliance with goal 5. LUBA has already concluded – and the Court of Appeals has upheld – the conclusion that its interpretation allows the County to comply with Goal 5. To change that interpretation and not require the ESEE analysis in light of a conflict would be contrary to the county's acknowledgment requirements. Therefore, the Homebuilders' interpretation cannot be upheld.

The Homebuilders interpretation alleges that the basic requirement to abide by the density recommendation "is necessarily planning work to be done in the future, ..." Staff Report, Attachment at 7.6 (Homebuilders letter). Not so. The planning requirement is contained in another sentence of the policy, and the subject sentence requires compliance with ODFW's density recommendations.

The Homebuilders interpretation of the second sentence is also contrary to LUBA's decision. The Homebuilders allege that:

> "The entirety of the second sentence will become operative when the future planning work is done. Once overall residential densities are established for regions, and those changes are acknowledged as Post Acknowledgment Plan Amendments, then any densities exceeding the new limits based on regions would trigger a new plan amendment in accordance with state law in OAR 660-16. Therefore, the second sentence is a statement that decision making following future planning work will comply with state law in division 16."

This interpretation hinges upon the as-of-yet-county-action to fulfill acknowledgment, which means that the County is not in compliance with Goal 5 and acknowledgment. The same is true of the Homebuilders' interpretation of the third sentence. There is nothing that actually implements Goal 5, according to the Homebuilders' interpretation. This interpretation does not implement Goal 5, much less account for the plain language to apply the density limitations.

The Homebuilders note that the Working Papers were completed before the Comprehensive Plan because the Comprehensive Plan – including policy 11 at issue here – relies upon the Working Papers. As to what was allegedly "removed," the Homebuilders' interpretation is incorrect, and these same parties briefed this very issue before LUBA and the Court of Appeals:

> "Turning first to the Addendum, intervenor initially responds that it is unclear whether the new language in the Addendum replaced all or only a portion the original language in the Working Paper describing the regional approach. In any case, intervenor argues, the new Addendum language may represent a step back from primary reliance on the regional approach, but nothing in the Addendum purports to completely abandon the ODFW density recommendations or suggests that siting or clustering standards, in themselves, are sufficient to establish compliance with Goal 5.
>
> We agree with intervenor that nothing in the Addendum purports to eliminate or reduce the role of the ODFW density recommendations in the county's program to protect big game habitat. The Addendum left in place the original Working Paper language stating that an overall residential density greater than one dwelling per 80 acres in Major Big Game Range conflicts with Goal 5. See n 9. Notably, both the Working Paper and the Addendum include language describing a process to

ensure compliance with Goal 5 In the event that other identified measures (the regional approach, minimum parcel sizes, and clustering) are insufficient—by applying the Goal 5 rule. In the county's Goal 5 program to protect big game habitat, the process to ensure compliance with Goal 5 is operationally embodied in the second sentence of Policy 11. The county added other measures, as requested by ODFW, but it chose to leave that process in place. LCDC acknowledged Policy 11, and the other components of the county's Goal 5 program, with that process In place. If petitioners are correct that the county's Goal 5 program consists entirely of the siting standards at LC 16.211(5), then the second sentence of Policy 11 is a nullity.

In our view, the legislative history is reasonably clear that the LC 16.211(5) clustering standards were intended to supplement, rather than replace, the other components of the county's Goal 5 program, including Policy 11. The July 19, 1984 DLCD staff report concluded that Policy 11 is insufficient to ensure compliance with Goal 5, and It ultimately required additional measures, but there is no suggestion in any legislative history that the county or DLCD believed that siting standards or any other measures could eliminate the need for Policy 11's density limitations. The July 19, 1984 DLCD staff report addressed criticism that Policy 11 is inadequate:

> 'Objectors are not correct that [Policy 11] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through [Policy II], however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, [Marginal Lands] and EFU Zones which ensure that ODFW's standards will be achieved." 2021-047 Record 149; 2021-052 Record 150.

The foregoing clearly illustrates DLCD's expectation that, while additional measures were necessary to ensure full compliance with Goal 5, the ODFW density standards embodied in Policy 11 would continue to play a role in evaluating development proposals. Nothing in the acknowledgment process eliminated or vitiated the applicability of those density standards to proposed residential development in big game habitat."

Exhibit A, LUBA Record 54-57. Simply put, LUBA has resolved this issue already.

The reference to "mere numbers game" has also been briefed before LUBA and the Court of Appeals. *See* Exhibit A at LUBA Record 18-19 ('Petitioners argue that the language that we relied upon to interpret the reference to 'regions of the County' in the first sentence of Policy 11 was deleted the Addendum and replaced with different language that appears to downplay, a mere 'numbers game,' the regional approach. The new language instead focuses on two other measures: minimum parcel sizes for new parcels in forest zones and siting standards that require clustering of dwellings.' This argument was ultimately rejected under the analysis section of LUBA's decision. *See* Exhibit A, LUBA Record 22-25). It is not a mere numbers game because the ESEE analysis is half of the equation and siting standards are the other half of the equation. Moreover, the ESEE analysis allows for conflict resolution, which is not simply a "numbers game."

The Homebuilders are correct when they state that there is no "minimum lot sizes for dwellings on F-2 land[.]" That means that density standards are important and cannot be simply set aside, as the Homebuilders would like. The Homebuilders also point to statements in the July 19, 1984 DLCD Staff Report at 75, to

> "Amend the F-2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones or contain clustering requirements in those areas." July 19, 1984 DLCD Staff Report at 75 (emphasis added)."

As noted above, the County did not adopt any minimum lot sizes for the F-2 zone, and, therefore, the County opted to also use clustering requirements and siting standards. That, however, does not take away from the fact that the County's policy plainly requires an ESEE analysis in the event of conflict. That policy was adopted and needs to be given some effect. That is the basic shortcoming of the Homebuilders' proposed interpretation. It ignores half of the equation, including the plain language of policy 11.

The Homebuilders' conclusion alleges that the County's policy was an either/or scenario:

> "In summary, the County entered and exited acknowledgment review without minimum lot sizes for Forest Template Dwelling approvals on F-2 land in mapped Big Game Habitat. The acknowledgment process gave the County the option of protecting Big Game Habitat on F-2 land by establishing minimum lot sizes or

bolstering clustering and siting standards. The County chose the latter, and that choice was acknowledged."

Again, the basic problem with the Homebuilders' interpretation, which is indistinguishable from those interpretations set forth in *Nimpkish* and *King*, is that it gives no effect to the plain language of policy 11. The Homebuilders' interpretation, even if given *Siporen* deference, is contrary to the plain text, underlying policy, and purpose of Policy 11.

Issue preclusion bars relitigation of the same issue that LUBA and the Court of Appeals have already resolved.

Issue preclusion bars relitigation of an issue in subsequent proceedings when the issue has been determined by a valid and final determination in a prior proceeding. While issue preclusion does not bar issues previously determined by local government tribunal, *see O'Connor v. Clackamas County*, __ Or LUBA __ (LUBA No. 2019-119, May 26, 2020); *Lawrence v. Clackamas County*, 40 Or LUBA 507, 519 (2001), *aff'd*, 180 Or App 495, 43 P3d 8 1192, *rev den*, 334 Or 327 (2002), here, the issue has been determined by both LUBA (*Nimpkish* and *King*) and the Court of Appeals (*King*). Issue preclusion has been found when all of the following are satisfied:

> (1) The issue in the two proceedings must be identical. (2) The issue must have been actually litigated and essential to a final decision on the merits in the prior proceeding. (3) The party sought to be precluded had a full and fair opportunity to be heard. (4) The party sought to be precluded was a party or was in privity with a party in the prior proceeding. (5) The prior proceeding was the type of proceeding to which a court will give preclusive effect.

Nelson v. Clackamas County, 19 Or LUBA 131 (1990). Here, (1) the issue is the same as *King* – the correct interpretation of policy 11; (2) the *King* cases were fully litigated previously, up to the Court of Appeals; (3) the parties here had the opportunity to be heard in *King* because (4) they were parties in the prior proceeding. Finally, (5) these matters were resolved before LUBA and the Court of Appeals, which should give preclusive effect to the same arguments presented here. The parties and staff appear to acknowledge that this is just a "re-filing" of a matter that has already been resolved.

LandWatch respectfully requests that the Hearings Official uphold LUBA's and the Court of Appeals' interpretation of Policy 11 and deny the applications.

Sincerely,

Sean T. Malone
Attorney for LandWatch Lane County

I. STATEMENT OF THE CASE

A. Response to the Nature of the Proceeding and Relief Sought

Petitioners allege, more than once, that the Planning Director determined that all relevant criteria had been satisfied, but that is misleading because the controlling case, *LandWatch Lane County v. Lane County,* __ Or LUBA __ (LUBA No. 2020-030, Jan 21, 2021) (*Nimpkish*), had not issued from LUBA until *after* the Planning Director's decision issued:

> "The planning director approved the applications, and intervenor appealed each decision to the hearings officer. After the appeals were filed, we issued our decision in *LandWatch Lane County v. Lane County*, __ Or LUBA __ (LUBA No. 2020-030, Jan 21, 2021) (*Nimpkish*). Briefly, in *Nimpkish*, we held that the county's Statewide Planning Goal 5 (Natural Resources, Scenic and Historic Areas, and Open Spaces) program to protect big game habitat includes a comprehensive plan policy that limits the density of dwellings in big game habitat."

ER-3-4. After planning staff became aware of *Nimpkish,* planning staff recommended denial and the Hearings Official denied the applications: "Based on our holdings in *Nimpkish,* planning staff recommended denial of the applications. The hearings officer held hearings on each and denied each application." ER-4.

Respondent LandWatch Lane County respectfully requests that the Court of Appeals affirm LUBA's decision.

B. Response to the Nature of the Final Agency Decision to be Reviewed

The decision on appeal is a LUBA final opinion and order that affirms the Lane County Hearings Official's denial of two applications for forest template dwellings.[1]

C. Response to Jurisdiction

Respondent agrees that this Court has jurisdiction to hear this matter.

D. Timeliness of the Appeal

Respondents agree that the appeal is timely.

E. Questions Presented

Respondent disagrees with Petitioners' characterization of the questions presented and offers the following questions instead:

1. Did LUBA account for all portions of Policy 11, including the first two sentences that explain that ODFW's residential density recommendations would be used to identify conflicts, and, if exceeded, an ESEE analysis, pursuant to OAR 660-16-000 would be used to resolve those conflicts?

---

[1] Respondent's citations to the record will be to the Excerpt of Record as "ER", and the record from LUBA to the Court of Appeals as "LUBA Rec." As noted by LUBA, "[t]he county transmitted separate records for LUBA Nos. 2021-047 and 2021-052," *King,* slip op at 11 n 7 (ER-11, n 7), and LUBA referred to the record in LUBA No. 2021-047 as "2021-047 Record" and LUBA No. 2021-052 as "2021-052 Record." Petitioners simply cite to EJK record, which fails to distinguish between the two records at issue. Respondents will cite to the record as LUBA did, so that the records are distinguishable.

2. Was Policy 11, which contains the direction to use ODFW's residential density recommendations, adopted as part of Lane County's comprehensive plan and acknowledged by LCDC?

3. If no party is attempting to invalidate any part of the code or policy, then is there any legal basis to allege that the County's and LUBA's decisions constitute a collateral attack?

F. Response to Petitioners' Summary of Arguments

LUBA did not err. At the heart of Petitioners' faulty argument is that the County's Goal 5 program to protect Big Game Range rests solely on siting/clustering standards. The very obvious problem with this argument is that it fails to account for the direction in Policy 11 to use ODFW's residential density recommendations for Big Game Range. Policy 11's first and, and more importantly, second sentences were initially proposed as part of the Working Papers and subsequently adopted and acknowledged, unchanged, by LCDC. The proposal for clustering/siting requirements do not fully implement Policy 11 because the policy itself requires that residential density not exceed specific ODFW recommendations, a requirement that is not implemented in Lane Code, and, if the residential density requirement is exceeded, then the applicant must resolve the conflict through a Goal 5 ESEE process (via OAR 660-16-000). It is only the third sentence of Policy 11 that refers to siting/clustering standards.

Petitioners' theory only accounts for half of the County's program to protect Big Game Range, and ignores the other half, which relies on ODFW's residential dwelling recommendations. Moreover, under Petitioner's theory, the Wildlife Inventory Maps for Big Game Range, adopted pursuant to Goal 5, would be superfluous. Finally, if Petitioners were correct that the ODFW recommendations could be ignored, then the County would not be complying with a condition that LCDC required for acknowledgement of their comprehensive plan.

G. Summary of Facts

Respondent draws their summary of facts from LUBA's recitation of the facts:

> "Petitioners each applied for approval of a forest template dwelling pursuant to ORS 215.750, OAR 660-006-0027, and the Lane Code (LC) provisions implementing that statute and rule. The properties are contigiuos; each is approximately 12 acres in size; both are zoned Impacted Forest Lands (F-2), a zone that implements Statewide Planning Goal 4 (Forest Lands); and both are designated as Major Big Game Range.
>
> The planning director approved the applications, and intervenor appealed each decision to the hearings officer. After the appeals were filed, we issued our decision in *LandWatch Lane County v. Lane County*, __ Or LUBA __ (LUBA No. 2020-030, Jan 21, 2021) (*Nimpkish*). Briefly, in *Nimpkish*, we held that the county's Statewide Planning goal 5 (Natural Resources, Scenic and Historic Areas, and Open Spaces) program to protect big game habitat includes a comprehensive plan policy that limits the density of dwellings in big game habitat. We discuss our decision in *Nimpkish* in more detail later in this opinion.
>
> Based on our holdings in *Nimpkish*, planning staff recommended denial of the applications. The hearings officer held hearings on and denied each application. These appeals followed."

ER-3-4.

II. FIRST ASSIGNMENT OF ERROR – LUBA's decision was not unlawful in substance. LUBA's decision accounts for all relevant caselaw and for all portions of Policy 11, including the ODFW residential dwelling recommendations, that implement the County's Goal 5 program to protect Big Game Range. Policy 11 was adopted into the comprehensive plan in order to gain acknowledgment by LCDC. LUBA also accounted for the County's Flora and Fauna Working Papers and LCDC acknowledgment reports as part of the acknowledgment process. Petitioners' theory fails to account for ODFW's recommendations in Policy 11, as well as their adoption and acknowledgment.

A. Preservation of Error

Respondent does not contest preservation.

B. Standard of Review

Respondent does not disagree with standard of review.

C. Argument

1. Introduction

LUBA's decision is not unlawful in substance. Rather, LUBA's decision was well-reasoned and based on a series of cases, including *Save TV Butte v. Lane County*, __ Or LUBA __ (LUBA No. 2017-031, Jan 8, 2018), *Cattoche v. Lane County*, __ Or LUBA __ (LUBA No. 2018-109, May 22, 2019), and *LandWatch Lane County v. Lane County*, __ Or LUBA __ (LUBA No. 2020-030, Jan 21, 2021) (*Nimpkish*), as well as a host of documents, including Lane County's Flora and Fauna Working Papers, Addendum to the Flora and Fauna Working Papers,

and a series of DLCD staff reports issued during Lane County's comprehensive plan acknowledgment proceedings. To overturn this case, the Court of Appeals would have to effectively overturn LUBA's decisions in *Save TV Butte*, *Cattoche, Nimpkish,* and *King v. Lane County,* __ Or LUBA __ (LUBA Nos. 2021-047/052, October 15 ,2021) (*King)*, the consolidated decision on review here.

Petitioners begin from an erroneous first step, alleging that the County engaged in a "policy choice for managing big game habitat on land zoned F-2 through *only* clustering and siting development standards, …." Opening Brief at 10 (emphasis added). Petitioners narrow focus on only the siting/clustering provisions ignores the plain language of Policy 11 that requires an ESEE analysis in the absence of compliance with the ODFW residential density recommendations. *See* LUBA Rec 9 ("Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.*"*). That language was a product of the Working Papers, introduced at the beginning of the acknowledgment proceedings, was never changed during the acknowledgment proceedings, and, ultimately, adopted into the comprehensive plan and acknowledged.

2. Respondent's Response to Petitioner's "Legal Framework"

Petitioners have included a section entitled "Legal Framework" that contains argument, mischaracterizations, and omissions. It is important to review the recent caselaw about Lane County's program to protect big game range under Goal 5. But first, it is necessary to review the comprehensive plan policy at issue. Flora and Fauna Policy 11 (Policy 11) provides as follows:

> "Oregon Department of Fish and Wildlife [(ODFW)] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with [ODFW] officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program."

LUBA Rec 9. The first sentence establishes that the County would use ODFW's residential density recommendations to determine the allowable residential units within regions of the County.[2] All parties agree that Lane County never divided the County into regions, which was a requirement of its acknowledged

---

[2] Those recommendations are found in the working paper, and they provide for one dwelling per 80 acres in Major Big Game Habitat and one dwelling per 40 acres in Peripheral Big Game Habitat. *See* 2021-047 Record (Working Papers Addendum: "The primary conflict to big game … is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 areas; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game.").

comprehensive plan, and all parties agree that ODFW did establish residential densities for Major and Peripheral Big Game Habitat in the County. The second sentence provides that any residential density above what ODFW established will be considered to be a conflict with Goal 5 and that an ESEE analysis would be used to resolve the conflict. OAR 660-16-000 was the original Goal 5 codification of the ESEE analysis that was in effect at the time of acknowledgment. The final sentence commits the County to continue working with ODFW and rely upon existing land use regulations (such as the siting and clustering requirements that were adopted the same day as acknowledgment). This means that the Goal 5 program to protect Big Game Range is comprised of two parts: (1) ODFW's residential density recommendations (and the ESEE process if that density is exceeded); and (2) the siting/clustering provisions adopted by the County. Petitioners would have this Court ignore the first half of the program and rely solely on the second half of the program. As the Court can tell from simply reviewing the policy's plain language, Petitioners' narrow focus is unavailing and fails to account for the requirements in the first and second sentence, which are not implemented through land use regulations.

Turning to the caselaw addressing the County's Goal 5 program to protect Big Game Range, chronologically, the first case is *Save TV Butte v. Lane County*, __ Or LUBA __ (LUBA No. 2017-031, January 8, 2018). At issue in that case was

whether Lane County was required to protect Big Game Range Habitat at all, despite Lane County designating parts of the County as Major Big Game Range, Peripheral Big Game Range, and Impacted Big Game Range[3]. LUBA determined that the inventoried big game habitat is a "significant or important" resource (i.e., 1C) under Goal 5:

> "The county's Flora & Fauna Working Paper (1) identifies the Lane County Wildlife Inventory Maps that were developed based on ODFW big game range maps, (2) identifies the location, quality and quantity of the big game range, (3) identifies conflicts with big game range and (4) explains how those conflicts are to be mitigated by existing zoning. Supp. Rec. 4785-89. Based on what the county did in the Flora & Fauna Working Paper, it is most accurate to say the county adopted a 1C inventory decision, *i.e.,* that the inventoried big game habitat is 'significant or important.' While one can question whether the Flora & Fauna Working Paper complies fully with the Goal 5 rule, it is quite clear the county did not adopt a 1A decision, and despite the planner's suggestions to the contrary, it did not adopt a 1B decision either, because it adopted in the Flora & Fauna Working Paper, which explains how the county will go about implementing ODFW's density recommendations in big game ranges. We agree with petitioners that the county erroneously determined that its adopted inventory of big game habitat is not 'an acknowledged list of significant resources ...."

*Save TV Butte, s*lip op at 26-27.

Then, in *Cattoche v. Lane County,* __ Or LUBA __ (LUBA No. 2018-109, May 22, 2019), LUBA explained that the County did not "quantify a residential density allowed in the F-2 zone, and instead used the ODFW 40-acre standard for areas inventoried as Peripheral Big Game Range [and the 80-acres standard for

[3] Impacted Big Game Range has no protections, and ODFW did not adopt minimum residential density for Impacted Big Game Range.

areas inventoried as Major Big Game Range][4]," despite that the County's "initial intent was to preserve the 40-acre standard through zoning":

> "As discussed below, as part of its program to achieve Goal 5, the county has adopted a standard of no more than one dwelling per 40-acres to protect Peripheral Big Game Range (Residential Density Standard). That standard is found in the Flora & Fauna March 1992 Lane County Comprehensive Plan Working Paper Revisions document (Flora and Fauna Working Paper), [ ]. The Flora and Fauna Working Paper indicates that the initial intent was to preserve the 40-acre standard through *zoning*. However, the county's inclusion of the subject property in the Peripheral Big Game Range inventory is geographical and is not tied to or dependent on the current F-2 zoning. The challenged decision does not purport to remove the subject property from the Peripheral Big Game Range inventory and associated habitat protections, including the limitation of one dwelling per 40 acres.
>
> * * *
>
> The Flora and Fauna Working Paper the county incorporated into its findings explains that the Big Game Range protection:
>
> > 'premise is to work overall density figures into minimum lot size recommendations for regions of the County, rather than postponing the issue by referrals to ODFW for every land division application. The anticipated result is to base zoning by region on the overall residential densities or ODFW minimum parcel size recommendations, thereby creating no conflict with Goal 5.' [ ].
>
> The Flora and Fauna Working Paper states that the county will be divided into regions and the county will determine the number of existing residences and the:
>
> > 'additional number of residences allowable to still fall within the overall density level. Built upon and committed areas are subtracted out, as they are treated as Impacted Range. From the figure of

[4] At issue in *Cattoche* was land designated Peripheral Big Game Range (one residence per 40 acres) and, here, it is Major Big Game Range (one residence per 80 acres).

> remaining residences and acreage, a residential carrying capacity will be determined. This figure, or the ODFW figure of 40 [or 80] acres, whichever is lesser, will be recommended in the region for residential density for big game purposes.
>
> * * * * *
>
> If this figure is ever exceeded, it constitutes a conflict with Big Game Range. [ ].'

The Body of the Flora and Fauna Working Paper therefore states that the lesser of this figure or the county's 40-acre figure [or in this case the 80-acre figure because the property is designated Major Big Game] will be 'recommended in the region for residential density for big game purposes.' *Id.* If this figure is exceeded, there is a conflict and an ESEE analysis is required. *Id. Ultimately, however, the Flora and Fauna Working Paper identified as its selected strategy that 'ODFW recommendations on overall residential density with Peripheral and Major Big Game Range shall be a determinant in minimum parcel size for regions of the County.'* [].

In the challenged decision, the county did not identify the level of residential density allowed in the F-2 zone * * * *

We observe that the F-2 zone does not provide a general residential density standard. The use table for impacted forest zones lists six types of dwellings allowed in the F-2 zone. LC Table 16.211, 2.1-2.6. Those dwellings include: (1) caretaker residence for public parks and pubic fish hatcheries, (2) large tract forest dwelling, (3) lot of record dwelling, (4) template dwelling, (5) replacement dwelling, (6) temporary hardship dwelling. *Id.* A large tract forest dwelling may be allowed in the F-2 zone on a tract that is 'at least 160 contiguous acres or 200 acres in one ownership that are not contiguous but are in Lane County or adjacent counties and zoned for forest use.' LC 16.211(3)(a)(ii). The remaining five types of dwellings do not require a particular minimum lot or parcel size. LC 16.211(3). The minimum lot or parcel size for new or adjusted lots or parcels in the F-2 zone is 80 acres. LC 16.211(7); *see also* ORS 215.780 (providing generally applicable 80-acre minimum requirement); OAR 660-006-0026 (same). However, the F-2 zoning indicates that predominant land ownerships are 80 acres or less. *Accordingly, as we understand it, the county did not quantify a residential density allowed in the F-2 zone, and instead used the ODFW 40-*

> *acre standard for areas inventoried as Peripheral Big Game Range [and an 80-acre standard for areas inventoried as Major Big Game Range].*"

Cattoche, slip op *16-21 (emphasis added). Densities were not incorporated into the zoning – let alone the F-2 zoning – and regions were not identified. Instead, it was the 40- and 80-acre residential density standards for Peripheral and Major Big Game designations, respectively, that were adopted and this standard, in addition to the siting/clustering requirements, comprises the Goal 5 program to protect Big Game Range in Lane County.

Next, in *Nimpkish*, in reliance on OAR 660-006-0027(6)(a) and OAR 660-006-0025(6), the caselaw above, and the legislative history contained in the Flora and Fauna working papers and the DLCD acknowledgment reports, Petitioners argued that:

> "RCP Goal 5, Flora and Fauna Policy 11, applies to the application and that, because the density of the subject property with a forest template dwelling would be one dwelling unit per 10 acres, which would exceed the ODFW recommendations on overall density for protection of Major Big Game Range, the applicant could not be approved absent 'resolution in accordance with OAR 660-16-000.'"

*Nimpkish, s*lip op at 5-6. LUBA agreed and determined that:

> "the county's failure to take the step of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that the county is absolved from protecting land included on the Big Game Habitat Inventory as Major Big Game Range through the residential density recommendations referred to in RCP Goal 5, Flora and Fauna Policy 11, or that the density recommendations simply do not apply. Rather, the *second sentence* of RCP Goal 5, Flora and Fauna Policy 11, remains operative, and it provides that

'[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' The second sentence is not tethered to or derivative of the first sentence, which envisions the creation of zoning areas that the county has never completed. The second sentence does not mention or refer to zoning areas. To find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the count to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgment of its Goal 5 program, and it would have the effect of eliminating the Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program. Moreover, the county must interpret a provision of the RCP that was adopted to implement its Goal 5 program, which protects Big Game Range from conflicting residential development through density standards, in a manner that is not inconsistent with Goal 5. ORS 197.829(1)(d).

This view is supported by language in DLCD's final staff report leading to acknowledgment of the county's proposed program, DLCD explained its understanding of why the county's program did not conflict with Goal 5:

> 'Objectors are not correct that [RCP Goal 5, Flora and Fauna Policy 11,] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. *The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis.'* Record 212-13- (emphasis added).

We understand DLCD to have concluded that the county's Goal 5 program protects habitat because it adopts residential densities in accordance with ODFW's recommendations and requires that, if 'proposals are made' that exceed those densities, the county will conduct an ESEE analysis for that individual proposal.

* * *

The siting and clustering standards in LC 16.211(5)(a) do not quantify a residential density standard. A requirement to site dwellings '[n]ear

> dwellings on other tracts' is not a density standard. LC 16.211(5)(a)(i). Nor do the rest of the F-2 zone provisions support the hearings officer's interpretation. The use table for the F-2 zone lists six types of allowed dwellings, five of which do not require any particular parcel size. The F-2 zone does not provide any residential density standard at all. As we explained in *Cattoche v. Lane County*, the county has not quantified a residential density standard in the F-2 zone but 'instead use[s] the ODFW 40-acre standard [referenced in RCP Goal 5, Flora and Fauna Policy 11, and the Flora and Fauna Working Paper] for areas inventoried as Peripheral Big Game Range.' 79 LUBA 466, 479 (2019). Similarly, here, we conclude that the county uses the one-dwelling-per-80-acres standard referenced in RCP Goal 5, Flora and Fauna Policy 11, and the Flora and Fauna Working Paper to determine the allowed residential density in areas inventoried as Major Big Game Range."

Nimpkish, slip op at 12-15. LUBA concluded that Policy 11 applied to template dwelling applications, and where the density exceeds ODFW recommendations, an ESEE analysis must be prepared to resolve the conflict.

As for the challenged decision, the legal background provided by LUBA is worth repeating here:

> "Goal 5 is [intended] '[t]o protect natural resources and conserve scenic and historic areas and open spaces.' OAR 660-015-0000(5). In order to implement Goal 5, local governments are required to 'adopt programs that will protect natural resources.' *Id.* The county's program to protect natural resources was acknowledged by the Lane Conservation and Development Commission (LCDC) to comply with Goal 5 in 1984. The county's Goal 5 program includes a map and inventory of big game habitat determined to be 'significant or important' within the meaning of OAR 660-016-0000(5)(c) (Big Game Habitat Inventory). *Save TV Butte v. Lane County*, 77 Or LUBA 22, 40 (2018). As noted, the subject properties are included on that inventory as Major Big Game Range.
>
> One component of the county's acknowledged Goal 5 program is Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11 (Policy 11), which provides:

> 'Oregon Department of Fish and Wildlife [(ODFW)] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with [ODFW] officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resource zoning program.'

The ODFW recommendations referenced in Policy 11 consist of an overall residential density standard of one dwelling per 80 acres in Major Big Game Range and one dwelling per 40 acres in Peripheral Big Game Range.

The application of Policy 11 to proposed development in big game habitat was at the heart of the parties' dispute in *Nimpkish*, and it is one of the issues in these appeals. In *Nimpkish,* we concluded that Policy 11 is part of and implements the county's acknowledged Goal 5 program to protect big game habitat and that the county was required to comply with the second sentence of Policy 11, which provides that proposed densities above ODFW's recommendations conflict with Goal 5 and that conflicts must be resolved through application of the Goal 5 rule. The hearings officer in *Nimpkish* concluded that Policy 11 did not apply to proposed dwellings on existing parcels and that it applied only in the context of land divisions and zone changes. We rejected that interpretation, concluding that nothing in the text, context, or legislative history of Policy 11 suggests that its applicability is so limited. To give some effect to the second sentence of Policy 11, we held, the county must apply Policy 11 to residential development where the proposed density exceeds the ODFW recommendations. Because it was undisputed in *Nimpkish* that the proposed density exceeded the applicable limitation of one dwelling unit per 80 acres, we further concluded that the proposed density conflicted with Goal 5. As required by the second sentence of Policy 11, the proposed density could be 'allowed only after resolution in accordance with OAR 660-16-000.' Accordingly, we remanded the decision for further proceedings.

In the present cases, the hearings officer relied on our holdings in *Nimpkish* that (1) Policy 11 applies to proposed residential development of

> existing parcels within big game habitat and (2) an applicant for such development must either demonstrate that the proposed development complies with the applicable density standard or seek resolution of the conflict under the Goal 5 rule. As discussed under the second assignment of error, petitioners argued that Policy 11 could be satisfied by demonstrating that the average residential density across all Major Big Game Range in the entire county is less than one dwelling per 80 acres. The hearings officer rejected that effort to demonstrate that the proposed dwellings comply with the applicable density standard, concluded that the proposed dwellings in fact do not comply with the applicable density standard, and, because petitioners had not attempted to resolve the conflicts under the Goal 5 rule, denied both applications."

ER-4-8.

Petitioners' "legal framework" section alleges that "LCDC acknowledged the … siting standards, finding that they not only implement the intent of Flora and Fauna Policy #11, but also comply with the Goal 5 requirements for big game habitat on F-2 land without the use of any density requirements or minimum parcels sizes." Opening Brief at 13. This statement is patently false. At no point did LCDC state that ODFW's residential density recommendations were no longer part of the program to protect Big Game Range pursuant to Goal 5. The density recommendations began in the Working Papers, then proposed in the LCDC acknowledgment reports, and finally adopted into the acknowledged comprehensive plan.

The applicant also argues under the "legal framework" that "[c]compliance with plan policies is not required for template dwelling applications[.]" Opening Brief at 15. As noted above, in *Nimpkish,* and in LUBA's decision on review, two

administrative rules require that applicable comprehensive plan policies apply to template dwelling applications, which Petitioners failed to cite in their brief, despite being the first step in the analysis:

- "OAR 660-006-0027(6)(a) provides, in relevant part, that '[a] proposed 'template' dwelling under this rule is allowed only if '[i]t will comply with the requirements of an acknowledged comprehensive plan, acknowledged land use regulations, and other provisions of law.' OAR 660-006-0025(6) provides that '[n]othing in this rule relieves governing bodies from complying with other requirements contained in the comprehensive plan or implementing ordinances such as the requirements addressing other resource values (e.g., Goal 5) that exist on forest lands." *Nimpkish*, slip op at 8, n 5.

- "Further, as we noted in *Nimpkish*, OAR 660-006-0027(6)(a) and OAR 660-006-0025(6), which LCDC adopted to implement ORS 215.750, specifically allow the county to apply standards in its comprehensive plan to forest template dwellings. __ Or LUBA at __ n 5 (slip op at 8 n 5[)]. As far as petitioners have established, there is no statutory, code-based, or other legal prohibition on the county applying Policy 11, or any other applicable comprehensive plan provision, to approval or denial of forest template dwellings; in the F-2 zone." *King,* slip op at 11-12 (ER-11-12); *see also King*, slip op at 12, n 8 (ER-12 n 8).

Either Petitioners have failed to appreciate the relevance of these administrative rules, which are central to both *Nimpkish* and *King*, or Petitioners intentionally omitted any mention of these rules in their briefing.

Petitioners next cite to Policy 11 and allege that: "LUBA reads Policy #11's second sentence in isolation, and it assumes that the only way to demonstrate compliance with Goal 5 is through density standards or through the Goal 5 rule ESEE process set forth in OAR 660 division 16." Opening Brief at 15. Again,

Petitioners misstate LUBA's conclusion in *Nimpkish* and *King*. LUBA thoroughly addressed all of Policy 11, the LCDC acknowledgment reports, the Flora and Fauna working papers wherein ODFW delineated its residential density recommendations, administrative rules ignored by Petitioners, and so forth.

The legislative history demonstrates that the ODFW density standards *and* siting standards/clustering provisions are how LCDC understood Lane County to implement Goal 5 protections for big game range. In fact, to do otherwise would ignore the Policy 11's specific requirement for compliance with ODFW's residential density recommendations. Petitioners allege that "LCDC acknowledged a different approach for F-2 zoned lands (as well as EFU-zoned lands) as sufficient to comply with the Goal 5 requirements for big game habitat in Lane County," Opening Brief at 15, *all the while ignoring that Policy 11 is part of the acknowledged comprehensive plan*. Petitioners entire case is premised upon ignoring the central policy at issue and the relevant excerpts from the Working Papers and LCDC's acknowledgement reports.

3. Petitioners mischaracterize LCDC's acknowledgement process for Lane County's Goal 5 Program to Protect Big Game Range

Petitioners mischaracterize LCDC's acknowledgment process. At the heart of Petitioners' shortcomings is the failure to account for the first two sentences of Policy 11, which require an ESEE analysis if ODFW's residential density recommendations were exceeded. These sentences were settled on early in the

acknowledgment process and were never changed or removed. The remaining issue was to either double the minimum lot size or implement siting/clustering requirements, and the County chose the latter. What was acknowledged, therefore, was a combination of Policy 11's requirement for compliance with ODFW's residential density recommendations and the siting/clustering requirements as the Goal 5 program to protect Big Game Range. As noted by LUBA, the siting/clustering requirements do not impose minimum densities. *See Nimpkish*, slip op at 15 ("The siting and clustering standards in LC 16.211(5)(a) do not quantify a residential density standard. A requirement to site dwellings '[n]ear dwellings on other tracts' is not a density standard. LC 16.211(5)(a)(i).").

Petitioners include a chronology of Lane County's comprehensive plan acknowledgment process, specifically for Goal 5 compliance. Petitioners allege that the "course of the acknowledgment proceedings, the options provided to the County for demonstrating goal 5 compliance, and the policy choice the County made and LCDC acknowledged lay bare the error in LUBA's interpretation and decision." Opening Brief at 17. Just as Petitioners omitted the caselaw on Lane County's Goal 5 compliance and the relevant administrative rules, Petitioners omit important components of the acknowledgment process that run counter to Petitioners' theory.

Petitioners point to the 1982 Working Paper, wherein the County proposed one methodology that included "dividing the County into 10 to 20 regions." It is undisputed that such a methodology has never been put into place by the County, as noted in both *Cattoche* and *Nimpkish*. *See supra*. The County proposed the first two sentences of what would become Policy 11 (then, referred to as Policy 12) in the 1982 Working Paper, ER-42, and those two sentences were ultimately adopted and acknowledged. Petitioners' interpretation does not account for these first two sentences, and the failure to give any effect to those sentences means that, under the Petitioners' interpretation, the County would not apply a standard that the County proposed as a condition of acknowledgment. Petitioners point to what it refers to as "a clear policy shift in how the County would approach big game habitat density standards," Opening Brief at 18, but the very obvious problem for Petitioners is that the first two sentences of policy 11 were adopted and acknowledged, unchanged from their initial proposal. If there was a change in policy, it did not affect those two sentences.

Petitioners then broadly allege that:

> "The County abandoned the 'regional carrying capacity' methodology, deleting the respective findings from the Working Paper, in favor of continuing to apply residential development restrictions and acreage requirements to commercial timber zoning (F-1) and some other zones, applying clustering and siting standards where appropriate elsewhere (F-2 and EFU), and utilizing the ESEE process when zoning provisions do not succeed in pre-empting conflicts (i.e., development proposals cannot comply

> with the relevant density standards or clustering and siting standards). ER-39."

The citation to ER-39 is what replaced some deleted language, which has been disputed. Policy 11, itself, however, was never deleted, and, in fact, Policy 11 was adopted and acknowledged. Under Petitioners' reading, Policy 11's direction to comply with ODFW's density recommendations and Goal 5 would be entirely lost in favor of only siting/clustering requirements. Again, the inescapable problem for Petitioners *is that Policy 11 was adopted and acknowledged* and there are no land use regulations in Lane Code implementing the residential density standard in Policy 11. As noted by LUBA in *Nimpkish*, siting/clustering standards do not quantify a minimum density standard, so those standards do not implement ODFW's minimum density recommendations, slip op at 15, and, importantly, Petitioners do not challenge that holding, here. Siting/clustering standards are addressed in Policy 11's final sentence, and that final sentence is implemented by those standards.

As to what was deleted, LUBA explained in the challenged decision that, regardless of whether a paragraph or more was deleted, the conclusion is the same: the program to protect Big Game Range includes (1) ODFW's minimum density recommendations and (2) siting/clustering standards. LUBA explained:

> "Petitioners argue that the language that we relied upon to interpret the reference to 'regions of the County' in the first sentence of Policy 11 was deleted by the Addendum and replaced with different language that appears

to downplay, as a mere 'numbers game,' the regional approach. The new language instead focuses on two other measures: minimum parcel sizes for new parcels in forest zones and siting standards that require clustering of dwellings.

Petitioners argue that the deletion of the language discussing a regional approach, and the inclusion of new language referring to clustering and siting standards, supports their view that the county proposed, and LCDC acknowledged, abandoning any reliance on density limitations as part of the county's Goal 5 program to protect big game habitat. Instead, petitioners argue, the county chose to rely solely on the siting standards at LC 16.211(5) to protect big game habitat.

* * *

Turning first to the Addendum, intervenor initially responds that it is unclear whether the new language in the Addendum replaced all or only a portion of the original language in the Working Paper describing the regional approach. In any case, intervenor argues, the new Addendum language may represent a step back from primary reliance on the regional approach, *but nothing in the Addendum purports to completely abandon the ODFW density recommendations or suggests that siting or clustering standards, in themselves, are sufficient to establish compliance with Goal 5.*

We agree with intervenor that *nothing in the addendum purports to eliminate or reduce the role of the ODFW density recommendations in the county's program to protect big game habitat. The Addendum left in place the original Working Paper language stating that an overall residential density greater than one dwelling per 80 acres in Major Big Game Range conflicts with Goal 5. See* n 9. Notably, both the Working Paper and the Addendum include language describing a process to ensure compliance with Goal 5 in the event that other identified measures (the regional approach, minimum parcel sizes, and clustering) are insufficient – by applying the Goal 5 rule. In the county's Goal 5 program to protect big game habitat, the process to ensure compliance with Goal 5 is operationally embodied in the second sentence of Policy 11. The county added other measures, as requested by ODFW, but it chose to leave that process in place. LCDC acknowledged Policy 11, and the other components of the county's Goal 5 program, with that process in place. If petitioners are correct that the

county's Goal 5 program consists entirely of the siting standards at LC 16.211(5), then the second sentence of Policy 11 is a nullity.

In our view, the legislative history is reasonably clear the LC 16.211(5) clustering standards were intended to supplement, rather than replace, the other components of the county's Goal 5, including Policy 11. The July 19, 1984 DLCD staff report concluded that Policy 11 is insufficient to ensure compliance with Goal 5, and it ultimately required additional measures, but there is no suggestion in any legislative history that the county or DLCD believed that siting standards or any other measures could eliminate the need for Policy 11's density limitations. The July 19, 1984 DLCD staff report addressed criticism that Policy 11 is inadequate:

> 'Objectors are not correct that [Policy 11] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through [Policy 11], however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2 [Marginal Lands] and EFU Zones which ensure that ODFW's density standards will be achieved.' 2021-047 Record 149; 2021-052 record 150.'

The foregoing clearly illustrates DLCD's expectation that, while additional measures were necessary to ensure full compliance with Goal 5, the ODFW density standards embodied in Policy 11 would continue to play a role in evaluating development proposals. Nothing in the acknowledgment process eliminated or vitiated the applicability of those density standards to proposed residential development in big game habitat.

* * *

For purposes of the first assignment of error, however, we reject petitioners' arguments that LUBA erred in concluding in *Nimpkish* that Policy 11 is applicable as an approval criterion to development proposals that may exceed the ODFW density recommendations."

Petitioners continue their protests but cannot escape the fact that Policy 11's first two sentences were adopted and acknowledged and are expressed in mandatory language. Petitioners acknowledge that Policy 11 complies with Goal 5. Opening Brief at 21 ("the Staff Report disagreed with the objectors, in part, and concluded that the amended RCP Policy #11 (the same now as it was in 1984) complies with Goal 5."). That should be the end of the inquiry because Petitioners concede that Policy 11, including its first two sentences, complies with Goal 5, and there is no argument that those first two sentences have ever been implemented in the code and there is no argument that the siting/clustering standards do not quantify a minimum residential density. *Nimpkish,* slip op at 15. In fact, LCDC noted that "ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations," but that language *was included* in the adopted and acknowledged Policy 11.

Petitioners next point to the following quote: "[w]ithout siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable)." This is essentially the same directive given in the In-Order-To-Comply: either enact siting/clustering requirements or increase the minimum lot size. As noted by Petitioners, the In-Order-To-Comply directive states that "the zones must either require larger minimum lot sizes in the Big Game habit portions

of those zones or contain clustering requirements in those areas." ER-57. The County did not double the minimum lot sizes and, instead, adopted siting/clustering standards. That choice did not affect Policy 11's requirement to comply with ODFW's residential density standard, as noted by LCDC: "Densities above those recommended by ODFW would certainly constitute a conflict with big game. The county has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made." ER-56. That policy was already proposed and never changed but more was required: either double the minimum lot sizes or adopt siting/clustering standards. The County chose the latter, in addition to the ODFW residential density recommendations. The September DLCD staff report settled on one-half of the protections for Big Game Range, and the other half (the ODFW recommendations) had already been settled prior to the September staff report. Most importantly, those ODFW recommendations were adopted and acknowledged.

Petitioners believe that siting/clustering standards are the only mechanism by which the County's comprehensive plan could be acknowledged and comply with Goal 5. That position, however, ignores the adopted and acknowledged language in Policy 11. LCDC explicitly understood "[d]ensities above those recommended by ODFW would certainly constitute a conflict with big game," and

that "[t]he county has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made." ER-56. LUBA and Respondent recognize LCDC's acknowledgement of the ODFW recommendations and the ESEE to resolve conflicts are one-half of the County's program to protect Big Game Range. The other half of the program, as required by ODFW and acknowledged by LCDC, was either doubling the minimum lot size or implementing siting/clustering standards. As noted by Petitioners, those siting/clustering standards were adopted into Lane Code, but ODFW's minimum density recommendations were also left in place in the Policy 11.

Petitioners then steer off course by citing to DLCD's summary about forestlands, under Goal 4, instead of Goal 5. *See* Opening Brief at 23-24. The two block quotes do not reference or otherwise affect the acknowledgment process for Goal 5. Petitioners' theories about the F-1 and F-2 zone are a red herring, as they are departure from the Goal 5 program to protect Big Game Range.

Petitioners next present this Court with a false statement, alleging that "[i]mposing ODFW minimum parcel sizes for F-2 land would have, due to the 80-acre or less standard in the Plan to apply the F-2 zone, prevented all or nearly all residential development on those parcels." Under ODFW's residential density recommendations, residential development is not prohibited. Instead, if residential

density is greater than one residence per 80 acres in Major Big Game Range (or 40 acres in Peripheral Big Game Range), then that is considered a conflict with Goal 5, and an ESEE analysis is necessary to resolve that conflict, as provided by the plain language of Policy 11 and acknowledged by LCDC.

In apparent disregard for the plain language of Policy 11, Petitioners confidently and incorrectly allege that "[t]he County did not adopt ODFW recommended minimum parcel sizes for the F-2 or EFU zones as a Goal 5 implementing measure." Petition at 26. There was no need to implement ODFW's recommendations in the code because they were already in place in Policy 11 and the Working Papers, and that language was never restricted, removed, or negated.

At Opening Brief 27, Petitioners point to a 1986 planning staff memo that concedes that both Policy 11 and the adopted clustering requirements constitute the Goal 5 program to protect Big Game Range:

> "Goal 5 Flora and Fauna Policy #11 together with the clustering requirements of the F-2/RCP zone (LC 16.211(8)) and of the EFU/RCP zone (LC 16.212(8)) determine allowable residential densities within the Big Game Range Habitat areas."

It is Policy 11 "*together with the clustering requirements*" that determines the allowable residential density. In other words, it is both the policy and clustering requirements. The policy is one half of the Big Game Range protections and the siting/clustering standards is the other half. This is exactly what Respondent argued in *Nimpkish* and in the consolidated cases on review, and LUBA has

agreed. That 1986 memo goes on to reiterate that LCDC required the County, at the request of ODFW, to either double the minimum lot sizes or impose clustering requirements. *See* Opening Brief at 27. The operative portion of Policy 11 *had already been settled* and was not otherwise changed. The only remaining loose end was to either increase the minimum lot size or adopt siting/clustering standards, and the County chose the latter to gain acknowledgment.

4. Response to Petitioner's Argument.

Petitioners continue to rehash the same argument, and Respondents are compelled to respond. Again, Petitioners misconstrue the process and its conclusion when they allege that "LCDC found the County's F-2 residential code amendments, made during the acknowledgment process, as adequately implementing the intent of the big game habitat protections afforded by Policy #11 by using clustering and siting standards and without the use of ODFW recommended minimum parcel sizes." Opening Brief at 28. As noted by Petitioners in their brief, the first two sentences of Policy 11 were settled early in the process and those sentences never changed. LCDC specifically acknowledged that the County chose to prepare an ESEE analysis if there was a conflict with ODFW's residential density recommendations. At no point did LCDC reject that policy choice and, the Court can be certain of this, because that language was adopted and acknowledged, and the siting/clustering requirements do not quantify

a minimum residential density standard. In fact, Petitioners slip up and concede that it is "both the adopted policies and the adopted code provisions" that comprise the program to protect Big Game Range. Opening Brief at 28-29.

Petitioners also fail to account for the Wildlife Inventory Maps, referenced in *Save TV Butte*, that identify where, in the County, the Big Game habitat is Major, Peripheral, or Impacted. The ODFW recommendations are couched in terms of Major and Peripheral (and there are no protections for Impacted Big Game habitat). Without the ODFW recommendations, there would be no greater or different protections afforded to Major or Peripheral. The entire premise of ODFW's recommendations is that some Big Game Range habitat is of greater quality than others and Peripheral Big Game Range has a greater density (40 acres per dwelling) than Major Big Game Range (80 acres). *See* ER-6 ("The ODFW recommendations referenced in Policy 11 consist of an overall residential density standard of one dwelling per 80 acres in Major Big Game Range and one dwelling per 40 acres in Peripheral Big Game Range."). The Wildlife Inventory maps and ODFW big game range maps would become superfluous under Petitioners reading, and those maps are inventoried under Goal 5. *See Save TV Butte,* slip op at 26 ("The county's Flora and Fauna Working Paper (1) identifies the Lane County Wildlife Inventory Maps that were developed based on ODFW big game range

maps, (2) identifies the location, quality and quantity of the big game range, (3) identifies conflicts with big game range ....").

5. LCDC's acknowledgment legislative history establishes that Policy 11 and clustering/sting requirements are the protections for Goal 5 Big Game Range

Petitioners continue to rehash their same argument under a different heading, alleging that "[t]he County elected to use siting and clustering standards to comply with the Goal 5 big game habitat protection requirements contained in Policy 11 for land zoned F-2 and EFU, instead of and without reliance on ODFW recommended minimum lot sizes or density standards for those zones." Opening Brief at 30. Petitioners have not pointed to anything in the DLCD staff reports that changes the conclusion about ODFW's "recommended densities as the approach to resolve conflicts between dwellings and big game range." R 2021-052 at 908 (R 2021-052 at 146); *id.* at 912 (R 2021-052 at 150) ("ODFW is correct that its recommended density standards ... would constitute an approach to resolve and/or prevent conflicts between dwellings and big game."). More importantly, DLCD noted that ODFW's objections required *both density standards and siting or clustering requirements*: "ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, the County's F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones." R 2021-052 at 908 (R

2021-052 at 146-147) (emphasis added). LCDC understood that Policy 11 contained an important component of the Goal 5 protections because it noted that "[d]ensities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made." ER-56. Policy 11 already "adopt[ed] ODFW's density recommendations in big game habitat areas" and the only remaining issue is whether, as directed by the DLCD, the County would double the minimum lot size or adopt siting/clustering standards, in addition to what was already included in Policy 11.

Petitioner next takes a detour into allegations of what appears to be a collateral attack argument, alleging that "[t]he time to have challenged that approach and LCDC's conclusions concerning the relationship between the adopted code provisions, Policy #11 and Goal 5 was at the time of acknowledgment." Opening Brief at 30-31. Ironically, it is the applicant that is challenging the meaning of the adopted code provisions, Policy 11, and Goal 5 acknowledgment process. Regardless, Petitioners have already concluded that Policy 11 is ambiguous, and no party (nor did LUBA) attempts to invalidate Policy 11. As such, any allegation of collateral attack is meritless.

6. Response to Petitioners' arguments about "Planning efforts cited in Policy #11."

Petitioners next turn to the "planning efforts" for Policy 11. *See* Opening Brief at 32. Petitioners point to the intention to "break the County down into regions," but, as demonstrated above, Lane County never fulfilled that component of their comprehensive plan, as explained in *Cattoche. See supra*. LUBA also understood that the County's failure did not allow the County to simply abandon its Goal 5 program to protect Big Game Range. *See Nimpkish,* slip at 13 ("'To find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the count to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgment of its Goal 5 program, and it would have the effect of eliminating the Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program."). Notably, Petitioners do not challenge *Cattoche's* holding here nor did Petitioners do so before LUBA. In apparent ignorance of *Cattoche*, Petitioners fail to understand that "the Flora and Fauna Working Paper identified as its selected strategy that 'ODFW recommendations on overall residential density with Peripheral and Major Big Game Range shall be a determinant in minimum parcel size for regions of the County.'" *Cattoche*, slip op at 19. Petitioners attempt to plug the holes in its theory, a theory already disproven by LUBA's explanation in

Cattoche, by alleging that the reason that the relevant language remained in Policy 11 is "anyone's guess" and "lost to history."' Opening Brief at 33.

Petitioners next turn to the third sentence of Policy 11. Opening Brief at 33. Petitioners allege that the County "ultimately adopted clustering and siting standards," pursuant to this sentence, which is correct, but that leaves the first two sentences of Policy 11 unresolved under Petitioners' theory. The first two sentences, as explained throughout, are one-half of the Goal 5 program to protect Big Game Range and the last sentence is the second half of the program. There is simply no support for Petitioners' position, nor did LUBA agree, that only the third sentence is intended to fully implement the program embodied in Policy 11.

In apparent contradiction to their argument, Petitioners also allege, rather confusingly, that "the first two sentences of Policy #11 recognize that the County will apply the ODFW recommended density standards where appropriate." Opening Brief at 34. There is no logic behind this allegation and there is no attempt to explain when it is "appropriate" to apply the density standards. ODFW, the Working Papers, and the LCDC acknowledgment reports already inform when the residential density recommendations are to be applied. Petitioners are simply not presenting a coherent legal theory.

7. <u>LUBA did not commit an interpretive error in *Nimpkish* and *King*</u>

Petitioners allege that *Nimpkish* contained an incomplete record. Respondent disputed that below[5], *See* LUBA Rec at 88-89, but, regardless, Petitioners maintain that the complete record has been presented to LUBA in the appealed decision. LUBA, however, continued to disagree with Petitioners in *King*. In other words, the unfounded notion that *Nimpkish* was based on an incomplete record is irrelevant because Petitioners have apparently produced the full record here, and LUBA continues to disagree.

Petitioners allege that "LUBA's decision effectively disregards the plain legislative history that demonstrates that the County's policy choice and intent to implement big game protections in the F-2 zone through clustering and siting standards only, …." Opening Brief at 35. To accept Petitioners' position, this Court must entirely ignore the entirety of Policy 11 and only focus on the third sentence. That, unfortunately, would make the first two sentences superfluous, as well as the Wildlife Inventory Maps adopted by the County, which identify the different Big Game Range habitats (*i.e.*, Major, Peripheral, Impacted). ORS 174.010. Petitioners' allegation that that "LUBA's interpretive exercise erred by proceeding as if acknowledgment never happened" is simply unfounded. Over the

---

[5] At no point have Petitioners identified what documents were allegedly omitted in *Nimpkish*. LandWatch Lane County was party to both *Nimpkish* and *King*, and established that all acknowledgment reports and working papers were included *Nimpkish* and *King*.

course of *Cattoche*, *Nimpkish*, and *King*, the acknowledgment process has been repeatedly scrutinized.

8. LUBA did not misunderstand the framework for Lane County's Goal 5 Big Game Range program acknowledged by LCDC

Without relying on all of the relevant caselaw, Petitioners incredulously allege that LUBA either misunderstood the program to protect big game range or ignored the options DLCD gave the County for complying with Goal 5. Opening Brief at 35. As is evident from *Save TV Butte, Cattoche, Nimpkish,* and *King*, it remains to be seen what has been ignored, and LUBA has fully addressed the acknowledgment process and the resulting program to protect Big Game Range. Indeed, Petitioners do not identify any ignored provisions. Instead, Petitioners repeat their basic claim that only siting/clustering requirements constitute the program to protect Big Game Range.

Petitioners focus on LUBA's finding that "[t]he county added other measures, as requested by ODFW, but chose to leave that [*i.e.*, ODFW's recommended residential densities] process alone. ER-20." Opening Brief at 35. Instead of addressing the first two sentences of Policy 11 and accounting for their adoption and acknowledgment, Petitioners narrowly focus, as they have repeatedly done, on a final condition to either double the minimum lot sizes or adopt siting/clustering requirements. Again, ODFW's residential density recommendations remained unchanged in Policy 11.

Importantly, as LUBA noted, if Petitioners (and others proposing similar development of Lane County's resource lands) are correct, then the County will have not complied with a requirement LCDC understood that the County would impose to gain acknowledgment. As noted by LUBA, "[t]o find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the County to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgment of its Goal 5 program[.]" Nimpkis, slip op at 13. The very premise of Petitioners' argument is that the requirements imposed to gain acknowledgment could not have been satisfied by the County. Petitioners have wrapped themselves into such contradictions that they are arguing that the County did not implement the conditions and requirements necessary to gain acknowledgment from LCDC.

Petitioners next return to their theory about what was deleted and what was not deleted in the Flora and Fauna Working Paper, but that has already been addressed above, *see supra*.

9. Petitioners' unfocused argument about the correct weight placed upon the Working Papers and the Acknowledgment procedures is unavailing.

On one hand, Petitioners fault the decision in *Nimpkish* for not considering all of the materials below[6], including the Working Papers and Addendum, and, on the other hand, Petitioners allege that "LUBA's position relies too heavily on the Flora and Fauna Working Paper and the Addendum." Opening Brief at 39. Petitioners would like to have their cake and eat it too. Petitioners then allege that LUBA ignored a host of documents that LUBA clearly did, in fact, consider, especially if one considers the caselaw that Petitioners ignored.

Petitioners then acknowledge that LUBA treated the working paper as "background information * * * to be used to help interpret and understand [the RCP]," ER-14, which is consistent with how LUBA has treated such working papers in past cases. *See* Opening Brief at 39-40. Petitioners allege that the Working Papers do "not reflect the options DLCD gave to the County for bringing the Lane Code into compliance with Goal 5 or the choices the County made during the acknowledgment proceedings. Again, the obvious problem is that the first two sentences of the Comprehensive Plan were initially settled upon during the DLCD process, drew upon the Working Papers, and ultimately adopted within Policy 11. The subsequent options to either double the minimum lot size or enact siting/clustering requirements did not negate or affect the requirement for ODFW's

---

[6] Again, Respondents disagree, and Respondents demonstrated below that all relevant materials were before the local government and LUBA in both *Nimpkish* and *King*.

residential density recommendations and the possibility for an ESEE analysis to resolve the conflict in the event recommended densities were exceeded. Had there been an intent to do away with ODFW's residential density recommendations, then that language would have been removed from the Policy. Again, Petitioners cannot explain away the policy's plain language. Petitioners attempt to sow confusion by alleging that LUBA focused on the Working Papers instead of the acknowledgment proceedings is simply unfounded. Over the course of numerous cases, LUBA has exhaustively addressed the Working Paper, the Addendum, and the LCDC acknowledgment reports.

IV. Conclusion

For the reasons set forth above, Respondent respectfully requests that this Court affirm LUBA's Order and Opinion.

FINAL OPINION
AND ORDER

Appeal from Lane County.

LUBA Record 000005

Bill Kloos filed the petition for review and reply brief and argued on behalf of petitioners.

No appearance by Lane County.

Sean Malone filed the response brief and argued on behalf of intervenor-respondent.

RYAN, Board Member; ZAMUDIO, Board Chair; RUDD, Board Member, participated in the decision.

AFFIRMED 10/15/2021

You are entitled to judicial review of this Order. Judicial review is governed by the provisions of ORS 197.850.

Opinion by Ryan.

NATURE OF THE DECISION

In these consolidated appeals, petitioners appeal two hearings officer decisions denying applications for forest template dwellings.

MOTION TO INTERVENE

Landwatch Lane County (intervenor) moves to intervene on the side of the county. There is no opposition to the motion, and it is allowed.

FACTS

Petitioners each applied for approval of a forest template dwelling pursuant to ORS 215.750, OAR 660-006-0027, and the Lane Code (LC) provisions implementing that statute and rule.[1] The properties are contiguous; each is approximately 12 acres in size; both are zoned Impacted Forest Lands (F-2), a zone that implements Statewide Planning Goal 4 (Forest Lands); and both are designated as Major Big Game Range.

The planning director approved the applications, and intervenor appealed each decision to the hearings officer. After the appeals were filed, we issued our

---

[1] Briefly, ORS 215.750 and OAR 660-006-0027 allow a county to approve a dwelling on land zoned for forest use if (1) all or part of a prescribed number of lots or parcels that existed on January 1, 1993, are located within a 160-acre square "template" that is centered on the center of the subject parcel and (2) at least three dwellings existed on the other lots or parcels on January 1, 1993. The prescribed number of lots or parcels differs depending on the quality of the soils on the subject parcel and whether the parcel is located in eastern or western Oregon.

decision in *Landwatch Lane County v. Lane County*, ___ Or LUBA ___ (LUBA No 2020-030, Jan 21, 2021) (*Nimpkish*). Briefly, in *Nimpkish*, we held that the county's Statewide Planning Goal 5 (Natural Resources, Scenic and Historic Areas, and Open Spaces) program to protect big game habitat includes a comprehensive plan policy that limits the density of dwellings in big game habitat. We discuss our decision in *Nimpkish* in more detail later in this opinion.

Based on our holdings in *Nimpkish*, planning staff recommended denial of the applications. The hearings officer held hearings on and denied each application. These appeals followed.

INTRODUCTION

Goal 5 is "[t]o protect natural resources and conserve scenic and historic areas and open spaces." OAR 660-015-0000(5). In order to implement Goal 5, local governments are required to "adopt programs that will protect natural resources." *Id.* The county's program to protect natural resources was acknowledged by the Land Conservation and Development Commission (LCDC) to comply with Goal 5 in 1984. The county's Goal 5 program includes a map and inventory of big game habitat determined to be "significant or important" within the meaning of OAR 660-016-0000(5)(c) (Big Game Habitat Inventory). *Save*

TV Butte v. Lane County, 77 Or LUBA 22, 40 (2018).[2] As noted, the subject properties are included on that inventory as Major Big Game Range.[3]

One component of the county's acknowledged Goal 5 program is Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11 (Policy 11), which provides:

> "Oregon Department of Fish and Wildlife [(ODFW)] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with [ODFW] officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

---

[2] LCDC adopted Goal 5 in 1974. It adopted its first set of Goal 5 rules in 1981, which are codified at OAR chapter 660, division 16. In 1996, LCDC adopted a second set of Goal 5 rules, which are codified at OAR chapter 660, division 23. Because LCDC acknowledged the county's program to protect natural resources in 1984, the 1981 rules applied. *See Delta Property Co., LLC v. Lane County*, 271 Or App 612, 616-19, 617 n 1, 352 P3d 86 (2015).

[3] The Lane County Wildlife Inventory maps were developed based on Oregon Department of Fish and Wildlife big game habitat maps and identify the location, quality, and quantity of big game habitat, identify conflicts with big game habitat, and explain how those conflicts are to be mitigated. *Nimpkish*, ___ Or LUBA at ___ n 2 (slip op at 4 n 2).

The ODFW recommendations referenced in Policy 11 consist of an overall residential density standard of one dwelling per 80 acres in Major Big Game Range and one dwelling per 40 acres in Peripheral Big Game Range.

The application of Policy 11 to proposed development in big game habitat was at the heart of the parties' dispute in *Nimpkish*, and it is one of the issues in these appeals. In *Nimpkish*, we concluded that Policy 11 is part of and implements the county's acknowledged Goal 5 program to protect big game habitat and that the county was required to comply with the second sentence of Policy 11, which provides that proposed densities above ODFW's recommendations conflict with Goal 5 and that conflicts must be resolved through application of the Goal 5 rule. The hearings officer in *Nimpkish* concluded that Policy 11 did not apply to proposed dwellings on existing parcels and that it applied only in the context of land divisions and zone changes. We rejected that interpretation, concluding that nothing in the text, context, or legislative history of Policy 11 suggests that its applicability is so limited. To give some effect to the second sentence of Policy 11, we held, the county must apply Policy 11 to residential development where the proposed density exceeds the ODFW recommendations.[4] Because it was

---

[4] We noted in *Nimpkish* that, in the 36 years since acknowledgment, the county has made no attempt to implement a regional approach to applying density limitations, as described in the first sentence of Policy 11. However, we held:

> "[T]he county's failure to take the step of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that

undisputed in *Nimpkish* that the proposed density exceeded the applicable limitation of one dwelling unit per 80 acres, we further concluded that the proposed density conflicted with Goal 5. As required by the second sentence of Policy 11, the proposed density could be "allowed only after resolution in accordance with OAR 660-16-000." Accordingly, we remanded the decision for further proceedings.

In the present cases, the hearings officer relied on our holdings in *Nimpkish* that (1) Policy 11 applies to proposed residential development of existing parcels within big game habitat and (2) an applicant for such development must either demonstrate that the proposed development complies with the applicable density

---

> the county is absolved from protecting land included on the Big Game Habitat Inventory as Major Big Game Range through the residential density recommendations referred to in [Policy 11] or that the density recommendations simply do not apply. Rather, the *second sentence* of [Policy 11] remains operative, and it provides that '[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' The second sentence is not tethered to or derivative of the first sentence, which envisions the creation of zoning areas that the county has never completed. The second sentence does not mention or refer to zoning areas. To find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the county to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgement of its Goal 5 program, and it would have the effect of eliminating the Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program." *Nimpkish*, ___ Or LUBA at ___ (slip op at 12-13) (emphasis in original; footnote omitted).

standard or seek resolution of the conflict under the Goal 5 rule. As discussed under the second assignment of error, petitioners argued that Policy 11 could be satisfied by demonstrating that the average residential density across all Major Big Game Range in the entire county is less than one dwelling per 80 acres. The hearings officer rejected that effort to demonstrate that the proposed dwellings comply with the applicable density standard, concluded that the proposed dwellings in fact do not comply with the applicable density standard, and, because petitioners had not attempted to resolve the conflicts under the Goal 5 rule, denied both applications.

On appeal, under the first assignment of error, petitioners urge us to revisit our first holding in *Nimpkish* that Policy 11 applies as an approval criterion to proposed dwellings in big game habitat. In the alternative, under the second assignment of error, petitioners argue that, if Policy 11 does apply to the subject applications, then the hearings officer erred in rejecting petitioners' proposed interpretation of Policy 11 and in adopting an interpretation of Policy 11 that is not supported by its text, context, or legislative history. Under the third assignment of error, petitioners challenge the hearings officer's comments on the evidence that petitioners offered to demonstrate compliance with the applicable density standard under their proposed interpretation of Policy 11.

FIRST ASSIGNMENT OF ERROR

Petitioners argue that LUBA erred in concluding, in *Nimpkish*, that Policy 11, specifically the second sentence of Policy 11, applies as an approval criterion

to applications for dwellings in big game habitat. According to petitioners, the county's acknowledged Goal 5 program to protect big game habitat with respect to conflicting residential uses is entirely implemented by LC 16.211(5), which provides siting standards that regulate the location of development on parcels in the F-2 zone.[5]

The LC includes a minimum parcel size of 80 acres for *new parcels* in the F-2 zone. LC 16.211(7)(a). However, it does not include a minimum parcel size

---

[5] LC 16.211(5) provides, in relevant part:

> "The following siting criteria apply to all new uses, activities, and structures allowed by LC 16.211. These criteria are designed to make such uses compatible with forest operations, to minimize wildfire hazards and risks and to conserve values found on forest lands. * * *
>
> "(a) Residences, dwellings, and structures must be sited as follows:
>
> "(i) Near dwellings on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet from any ravine, ridge or slope greater than 40 percent (40%);
>
> "(ii) With minimal intrusion into forest areas undeveloped by nonforest uses; [and]
>
> "(iii) Where possible, * * * at least 500 feet from the adjoining lines of property zoned [Nonimpacted Forest Lands] and 100 feet from the adjoining lines of property zoned F-2 or [Exclusive Farm Use.]"

for *dwellings* in the F-2 zone or any other standards that implement the ODFW density standards referenced in Policy 11. Nonetheless, petitioners argue that, as a matter of text, context, and legislative history, those density standards do not apply to proposed dwellings in the F-2 zone. Instead, petitioners argue, the county's acknowledged Goal 5 program to protect Major Big Game Range from the impacts of dwellings in the F-2 zone is limited to the siting standards at LC 16.211(5).

A. ORS 215.416(8)(a)

ORS 215.416(8)(a) enjoins counties to affirm or deny permit applications based on standards and criteria "set forth in the zoning ordinance or other appropriate ordinance or regulation of the county."[6] In the first subassignment of error, petitioners argue that, because Policy 11 is not listed or explicitly identified in LC 16.211 as one of the approval criteria for forest template dwellings, it cannot be applied as an approval criterion.

---

[6] ORS 215.416(8)(a) provides:

> "Approval or denial of a permit application shall be based on standards and criteria which shall be set forth in the zoning ordinance or other appropriate ordinance or regulation of the county and which shall relate approval or denial of a permit application to the zoning ordinance and comprehensive plan for the area in which the proposed use of land would occur and to the zoning ordinance and comprehensive plan for the county as a whole."

Intervenor responds that no party raised ORS 215.416(8)(a) as an issue below or otherwise argued that, because LC 16.211 does not list Policy 11 as an approval criterion for forest template dwellings, Policy 11 cannot constitute an applicable criterion. Accordingly, intervenor argues, such issues are waived pursuant to ORS 197.763(1) and ORS 197.835(3). In the petition for review, petitioners cite 2021-052 Record 27, 317, and 582 to preserve all of the arguments under the first assignment of error.[7] Petitioners do not otherwise respond to intervenor's waiver argument. We have reviewed the cited record pages, and we agree with intervenor that nothing in them raises the issues raised in the first subassignment of error.

However, even if the issue was preserved, we agree with intervenor that ORS 215.416(8)(a) does not prohibit the hearings officer from applying Policy 11 to forest template dwelling applications. First, ORS 215.416(8)(a) does not limit the county to applying only those standards that are set forth in its zoning ordinance, such as LC 16.211. It also allows for the application of "other appropriate ordinance[s] or regulation[s] of the county," which is broad enough to include the county's comprehensive plan. Further, as we noted in *Nimpkish*, OAR 660-006-0027(6)(a) and OAR 660-006-0025(6), which LCDC adopted to implement ORS 215.750, specifically allow the county to apply standards in its

[7] The county transmitted separate records for LUBA Nos. 2021-047 and 2021-052. We refer to the record in LUBA No. 2021-047 as "2021-047 Record." We refer to the record in LUBA No. 2021-052 as "2021-052 Record."

comprehensive plan to forest template dwellings. ___ Or LUBA at ___ n 5 (slip op at 8 n 5.[8] As far as petitioners have established, there is no statutory, code-based, or other legal prohibition on the county applying Policy 11, or any other applicable comprehensive plan provision, to approval or denial of forest template dwellings in the F-2 zone.

The first subassignment of error is denied.

B. Remaining Subassignments of Error

Petitioners' remaining subassignments of error argue that, even if there is no legal impediment to applying Policy 11 as an approval criterion, for several reasons, LUBA erred in *Nimpkish* in interpreting Policy 11 to function as an approval criterion under the county's Goal 5 program, given its text, context, and legislative history.

Petitioners first observe—correctly—that Policy 11 is ambiguous and requires interpretation to determine whether and how its density limitations function as approval criteria for dwelling permit applications. In these subassignments of error, petitioners urge us to revisit the question of *whether* the

---

[8] OAR 660-006-0027(6)(a) provides that proposed template dwellings are allowed only if they "will comply with the requirements of an acknowledged comprehensive plan, acknowledged land use regulations, and other provisions of law." OAR 660-006-0025(6) provides that "[n]othing in this rule relieves governing bodies from complying with other requirements contained in the comprehensive plan or implementing ordinances such as the requirements addressing other resource values (e.g., Goal 5) that exist on forest lands."

density limitations in Policy 11 apply as approval criteria. In the second assignment of error, discussed below, petitioners assume that the density limitations apply but challenge the hearings officer's interpretation of *how* they apply.

Turning to petitioners' challenges to the hearings officer's reliance on our holdings in *Nimpkish*, petitioners argue that, while it may be plausible to interpret Policy 11 to constitute an applicable approval criterion, the better interpretation, considering all of the text, context, and legislative history, is that Policy 11 does not apply to development proposals in big game habitat and that the only standards that apply to such development under the county's acknowledged Goal 5 program are the siting standards in LC 16.211(5). That argument is based primarily on documents that we did not discuss in *Nimpkish*, some of which were included in the record in *Nimpkish* and all of which are included in the records in the present appeals.

1. Addendum to Flora and Fauna Working Paper

The county's Goal 5 program was developed, in part, by relying on a March 1982 Flora and Fauna Working Paper (the Working Paper), as amended by a November 1983 Addendum to the Flora and Fauna Working Paper (the Addendum). The county and the Department of Land Conservation and Development (DLCD) relied on the Working Paper and the Addendum as

background documents to the RCP.[9] In *Nimpkish*, the record included, and we relied, in part, on the Working Paper to interpret the first sentence of Policy 11 that refers to "regions of the County." *Nimpkish*, ___ Or LUBA at ___ (slip op at 12). That Working Paper language explained that the county had intended to divide the county into 10 to 20 regions and determine for each region the number of acres, existing dwellings, and additional dwellings allowable to comply with the applicable density limitation. *Id.* at ___ n 7 (slip op at 10 n 7).

Petitioners argue that the language that we relied upon to interpret the reference to "regions of the County" in the first sentence of Policy 11 was deleted by the Addendum and replaced with different language that appears to downplay, as a mere "numbers game," the regional approach.[10] The new language instead

---

[9] The RCP characterizes the Working Paper as "background information * * * to be used to help interpret and understand [the RCP]." RCP Part 1(C). The Working Paper explains in more detail that the ODFW residential density recommendations for Major Big Game Range were one dwelling unit per 80 acres:

> "The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall densities for Peripheral Big Game Range at one dwelling unit per 40 [acres]; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game." 2021-047 Record 525; 2021-052 Record 522.

[10] The inserted text states:

focuses on two other measures: minimum parcel sizes for new parcels in forest zones and siting standards that require clustering of dwellings.

> "Although [the regional approach] is a useful index, officials of the ODFW stress the fact that a mere 'numbers game' is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.
>
> "A prime example is that of 'clustering' dwelling units in Peripheral or Major Range areas—siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.
>
> "The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirements of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.
>
> "* * * * *
>
> "The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner—including the involvement of that agency in land use regulation development. If the zoning procedure described above does not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the [Goal 5] process and determine new ways of dealing with conflicts. The process should follow the Goal 5 Rule format, and center on weighing the relative benefits of dwelling unit construction against those of Big Game Range maintenance." 2021-047 Record 556; 2021-052 Record 553.

Petitioners argue that the deletion of the language discussing a regional approach, and the inclusion of new language referring to clustering and siting standards, supports their view that the county proposed, and LCDC acknowledged, abandoning any reliance on density limitations as part of the county's Goal 5 program to protect big game habitat. Instead, petitioners argue, the county chose to rely solely on the siting standards at LC 16.211(5) to protect big game habitat.

2. DLCD Staff Reports

The second set of documents that petitioners rely upon are two DLCD staff reports that, in petitioners' view, demonstrate that DLCD accepted that the county intended to protect big game habitat *exclusively* via the LC 16.211(5) siting standards and would not implement *any* density limitations on dwellings in big game habitat.

In addressing ODFW's objections to the adequacy of the county's initial efforts to protect big game habitat, including Policy 11, the July 19, 1984 DLCD staff report commented:

> "ODFW is correct that the County's [Nonimpacted Forest Lands (F-1)] and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-l, F-2 and [Exclusive Farm Use (EFU)] zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable)." 2021-047 Record 149; 2021-052 Record 150.

LUBA Record 000020

The July 19, 1984 DLCD staff report concluded that, in order to comply with Goal 5, the county had to, among other things,

> "[a]mend the F-2 and EFU zones to carry out the intent of [Policy 11]. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas." 2021-047 Record 186; 2021-052 Record 187.

Petitioners argue that DLCD gave the county a choice to demonstrate full compliance with Goal 5: *either* require larger minimum lot sizes in big game habitat *or* adopt clustering requirements in such areas.[11] Petitioners contend that the county chose the latter option. The September 12, 1984 DLCD staff report explained that the county had subsequently adopted an earlier version of the siting standards at LC 16.211(5), and it recommended that LCDC acknowledge the county's legislation as complying with Goal 5. 2021-047 Record 286-87; 2021-052 Record 287-88.

---

[11] As mentioned, the LC currently limits the size of *new parcels* in the F-2 zone to 80 acres. LC 16.211(7)(a). At the time of the 1983 to 1984 acknowledgment proceedings, the minimum parcel size in the F-2 zone was "20 acres for creation of a woodlot or farm parcel for growing grapes, berries, or horticultural specialties, and 40 acres for creation of a farm parcel." 2021-047 Record 143; 2021-052 Record 144. At some point not shown in the records, the county apparently amended the F-2 zone to specify a minimum parcel size of 80 acres for new parcels. However, the purpose statement of the F-2 zone explains that "[t]he minimum parcel size and other standards established by this zone are intended to promote commercial forest operations." LC 16.211(1). Thus, it is not clear what role, if any, the current 80-acre minimum parcel size in the F-2 zone plays as part of the county's Goal 5 program to protect big game habitat.

According to petitioners, the foregoing legislative history indicates that LCDC acknowledged that compliance with the siting standards at LC 16.211(5) is sufficient, without more, to ensure that residential development in big game habitat is consistent with Goal 5. Under this view, petitioners argue, Policy 11 plays no role in approving proposed dwellings in big game habitat.

3. Analysis

The principle of *stare decisis* applies to our final opinions. ORS 197.805 (instructing that LUBA decisions "be made consistently with sound principles governing judicial review"). We will reconsider a prior decision if a party demonstrates that we erred in making it because we were not presented with an important argument. *Nicita v. City of Oregon City*, ___ Or LUBA ___, ___ (LUBA Nos 2020-037/039, Sept 21, 2021) (slip op at 20) (citing *Farmers Ins. Co. v. Mowry*, 350 Or 686, 698, 261 P3d 1 (2011)). In *Nimpkish*, no party made any arguments based on either the Addendum or the DLCD staff reports, and our opinion did not address all of those documents in analyzing Policy 11's text, context, and legislative history. We do so now, and we uphold our decision in *Nimpkish*.

Turning first to the Addendum, intervenor initially responds that it is unclear whether the new language in the Addendum replaced all or only a portion

of the original language in the Working Paper describing the regional approach.[12] In any case, intervenor argues, the new Addendum language may represent a step back from primary reliance on the regional approach, but nothing in the Addendum purports to completely abandon the ODFW density recommendations or suggests that siting or clustering standards, in themselves, are sufficient to establish compliance with Goal 5.

We agree with intervenor that nothing in the Addendum purports to eliminate or reduce the role of the ODFW density recommendations in the county's program to protect big game habitat. The Addendum left in place the original Working Paper language stating that an overall residential density greater than one dwelling per 80 acres in Major Big Game Range conflicts with Goal 5. *See* n 9. Notably, both the Working Paper and the Addendum include language describing a process to ensure compliance with Goal 5 in the event that other identified measures (the regional approach, minimum parcel sizes, and clustering) are insufficient—by applying the Goal 5 rule. In the county's Goal 5

---

[12] Under the heading "Working Paper Revisions," the Addendum instructs, "DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place[.]" 2021-047 Record 543, 556; 2021-052 Record 540, 553. Intervenor argues that it is unclear whether the Addendum intended to delete only the last paragraph on page 24 and the remainder of *that paragraph* at the top of page 25 or whether it intended to delete all of the paragraphs on page 25. For purposes of our analysis, we assume, as petitioners do, that the Addendum was intended to replace all of the paragraphs on page 25 of the Working Paper.

program to protect big game habitat, the process to ensure compliance with Goal 5 is operationally embodied in the second sentence of Policy 11. The county added other measures, as requested by ODFW, but it chose to leave that process in place. LCDC acknowledged Policy 11, and the other components of the county's Goal 5 program, with that process in place. If petitioners are correct that the county's Goal 5 program consists entirely of the siting standards at LC 16.211(5), then the second sentence of Policy 11 is a nullity.

In our view, the legislative history is reasonably clear that the LC 16.211(5) clustering standards were intended to supplement, rather than replace, the other components of the county's Goal 5 program, including Policy 11. The July 19, 1984 DLCD staff report concluded that Policy 11 is insufficient to ensure compliance with Goal 5, and it ultimately required additional measures, but there is no suggestion in any legislative history that the county or DLCD believed that siting standards or any other measures could eliminate the need for Policy 11's density limitations. The July 19, 1984 DLCD staff report addressed criticism that Policy 11 is inadequate:

> "Objectors are not correct that [Policy 11] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through [Policy 11], however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, [Marginal Lands] and EFU Zones which ensure that ODFW's

density standards will be achieved." 2021-047 Record 149; 2021-052 Record 150.

The foregoing clearly illustrates DLCD's expectation that, while additional measures were necessary to ensure full compliance with Goal 5, the ODFW density standards embodied in Policy 11 would continue to play a role in evaluating development proposals. Nothing in the acknowledgment process eliminated or vitiated the applicability of those density standards to proposed residential development in big game habitat.

We consider petitioners' arguments below regarding exactly what role Policy 11 plays in the county's Goal 5 program to protect big game habitat. For purposes of the first assignment of error, however, we reject petitioners' arguments that LUBA erred in concluding in *Nimpkish* that Policy 11 is applicable as an approval criterion to development proposals that may exceed the ODFW density recommendations.

The first assignment of error is denied.

SECOND ASSIGNMENT OF ERROR

In the second assignment of error, petitioners challenge the hearings officer's interpretations regarding how the Policy 11 density limitations are properly applied.

We repeat the text of Policy 11, numbering each of the three sentences:

> "[1] [ODFW] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. [2] Any density above that limit shall be considered to conflict with Goal 5

> and will be allowed only after resolution in accordance with OAR 660-16-000. [3] The County shall work with [ODFW] officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

As noted, the text of Policy 11 is ambiguous and requires interpretation to determine how to apply the ODFW density limitations for purposes of the second sentence. The hearings officer observed:

> "Anybody who has studied residential densities, either in urban or rural settings, understand[s] that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings/acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county." 2021-047 Record 5; 2021-052 Record 5.

Before the hearings officer, petitioners attempted to demonstrate compliance with Policy 11 based on their interpretation of that policy. Specifically, petitioners argued that, to determine whether the "overall residential density" exceeds one dwelling per 80 acres, the applicant need only (1) determine the number of acres in the county designated as Major Big Game Range, including all federal, state, and private lands (roughly 2.5 million acres, stretching from the Cascade Range to the Pacific Ocean), and (2) divide that number by the number of existing dwellings in areas designated as Major Big Game Range (roughly 3,137 dwellings). The resulting number, in petitioners' view, is the "overall residential density" (in this case, an average of approximately one dwelling per 819 acres). Alternatively, petitioners performed the same

calculations using large regions of the county, for example, by dividing the county into eastern and western halves at Interstate 5 and separately calculating the "overall residential density" in each half (also resulting in densities of less than one dwelling per 80 acres).

The hearings officer rejected that approach. The hearings officer first noted that, in *Nimpkish*, LUBA remanded, in part, because there was no dispute that development of the 10-acre subject property would violate the one-dwelling-per-80-acres density limitation. That conclusion can be read to suggest that Policy 11 imposes, essentially, a minimum parcel size of 80 acres for dwellings in big game habitat. The hearings officer characterized that suggestion as *dicta* because the primary issue in *Nimpkish* was whether Policy 11 applies, not how it should be applied or what denominator should be used in determining residential density.

Given the lack of dispute in *Nimpkish* that the proposed dwelling violated Policy 11, we agree with the hearings officer that it was not necessary for LUBA to suggest any particular approach to applying Policy 11. To the extent that we suggested in *Nimpkish* that Policy 11 effectively imposes a minimum parcel size of 80 acres for dwellings, that suggestion was *dicta* and, moreover, not supported by any analysis.

The hearings officer conducted an analysis of the text and context of Policy 11, along with relevant case law, in order to evaluate the parties' arguments regarding permissible approaches to demonstrating compliance with Policy 11. As noted, the hearings officer ultimately rejected petitioners' interpretation that

the appropriate denominator for determining residential density is the roughly 2.5 million acres of the county that are designated as Major Big Game Range. Instead, the hearings officer held that, until the county divides the county into regions as described in the first sentence of Policy 11, the only appropriate denominator for purposes of applying the second sentence of Policy 11 is the acreage of the subject parcel. As a practical matter, the hearings officer noted, this means that a proposed dwelling on a parcel less than 80 acres in size can be approved in big game habitat only pursuant to the Goal 5 rule, as described in the second sentence of Policy 11.

As further support for their conclusion that the appropriate denominator is the subject parcel's acreage, the hearings officer cited *Wetherell v. Douglas County*, 44 Or LUBA 745 (2003), which involved a destination resort proposal and a code provision that limited residential density to one dwelling per 40 acres in peripheral big game habitat. The code did not specify the appropriate denominator for purposes of applying that density standard, so the county applied as the denominator a large planning area consisting of 1,121,378 acres. Under the county's interpretation, the subject 500 acres could have been developed at a much greater density than one dwelling per 40 acres, as long as the *average* density across the 1,121,387-acre planning area remained below that ratio. However, we rejected that interpretation as inconsistent with the purpose of the density standard, which was to protect big game habitat from residential density. Absent specification in the code of a different denominator, we held that the

denominator most consistent with the purpose of the density standard was the acreage of the subject property.

The hearings officer applied our reasoning in *Wetherell* to the present cases, rejecting petitioners' proposal to use over 2.5 million acres of the county as the denominator because that interpretation is inconsistent with the purpose of the residential density standard to protect big game habitat. Further, the hearings officer concluded that, absent definition by the county of a different denominator, based on regional averages or some other approach, the only denominator that is consistent with the purpose of the density standard is the acreage of the subject property. Consequently, the hearings officer concluded, the proposed densities conflict with Goal 5 and can be approved only via application of the Goal 5 rule, pursuant to the second sentence of Policy 11.

Petitioners challenge the hearings officer's interpretations. First, petitioners distinguish *Wetherell* because, unlike the code provision at issue in that case, Policy 11 references an "overall" residential density. Petitioners argue that the qualifier "overall" clearly denotes some kind of *averaging* of multiple parcel sizes and that no averaging is possible when only the acreage of the subject property is considered.

The hearings officer noted that, while the adjective "overall" appears in the first sentence of Policy 11, it does not appear in the second sentence. Instead, the second sentence refers simply to "that limit." The hearings officer concluded

that the second sentence of Policy 11 has no express denominator.[13] We understand the hearings officer to have concluded that, for purposes of the second sentence, no averaging or "overall" density need be calculated.

We agree with petitioners that the phrase "that limit" in the second sentence of Policy 11 refers to the ODFW density standards, which are described in terms of an "overall residential density." We further agree with petitioners that the term "overall" suggests averaging more than one unit or number, for example, averaging parcel sizes for two or more parcels. However, we see no mathematical or logical reason why the appropriate denominator cannot be based on the number of acres in a single unit of land. That, in fact, is the approach that the county board

---

[13] The findings state:

> "The applicant argues that the term 'overall' in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County on the east or west side of Interstate 5. [Intervenor] points out that the use of the term 'overall' in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of 'overall residential density.' The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to 'determine the allowable number of residential dwelling units within regions of the county.' The next sentence does not use the 'overall' modifier: 'Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal." 2021-047 Record 5-6; 2021-052 Record 5-6.

of commissioners adopted, and LUBA affirmed, in *Cattoche v. Lane County*, 79 Or LUBA 466 (2019).

Cattoche involved a proposal to rezone a 131.55-acre parcel in order to subdivide it and develop it with two additional dwellings, for a total of three dwellings. The parcel was designated as Peripheral Big Game Range and, pursuant to Policy 11, the county applied a density standard of one dwelling per 40 acres. The county found that the Policy 11 density standard was satisfied because the resulting density of the three dwellings would have been less than one dwelling per 40 acres, using the 131.55 acres of the subject parcel as the denominator. On appeal to LUBA, the petitioners argued that the commissioners misapplied the one-dwelling-per-40-acres density standard by failing to include in their density calculation the dwellings on and acreage of an adjoining property that was previously part of the same tract. Although we remanded the decision on other grounds, we rejected the petitioners' argument and affirmed the commissioners' implicit interpretation of the density standard as limiting the denominator to the acreage of the subject property.

Cattoche illustrates that the county has, in at least some cases, chosen to calculate "overall residential density" for purposes of Policy 11 based solely on the acreage of the subject property. We therefore reject petitioners' categorical argument that, in all cases, the denominator used to determine "overall residential density" must be based on averaging the acreage of multiple parcels. It is true that, in *Cattoche*, the subject parcel was relatively large and could be developed

with multiple dwellings consistent with the ODFW density limitations. However, petitioners identify no principled reason why the size of the subject parcels makes a difference. *Cattoche* also involved a zone change application, while the present cases do not. However, we perceive no principled basis to calculate the denominator differently based on whether the proposed development involves a zone change.

Based on the legislative history of Policy 11, it is reasonably clear that the phrase "overall residential density" was originally formulated with the expectation that the county would engage in a post-acknowledgment process that, among other things, would identify some 10 to 20 regions of the county and determine, based on the number of acres and existing dwelling units within each region, how many new dwelling units can be constructed within each region consistent with the ODFW density standards. However, as noted, ODFW apparently had concerns about the adequacy of that regional approach to ensuring compliance with Goal 5, and it ultimately recommended that the county adopt additional measures while leaving the original density limitations in place. As also noted, the county has made no effort in the intervening post-acknowledgment period to adopt a regional approach or, indeed, any regulations fleshing out how "overall residential density" should be calculated. In the absence of such regulations, *Cattoche* suggests that the county has chosen to apply the density limitations in Policy 11 using the acreage of the subject parcel as the

relevant denominator. Petitioners have not demonstrated that that approach is legal error.

In any case, petitioners have certainly not demonstrated that the only permissible denominator is the total acreage of vast portions of the county designated as Major Big Game Range. While *Wetherell* involved a different code provision and different facts, it is instructive in noting that ambiguous regulations implementing a statewide planning goal must be interpreted in a manner that is consistent with the goal that they implement. ORS 197.829(1)(d). The obvious purpose of the ODFW density limitations is to protect big game habitat from conflicts by limiting residential density. Because big game habitat is not fungible, determining residential density in that context is necessarily an inquiry into reasonably *local* circumstances. It seems highly inconsistent with Goal 5 and the purpose of the density limitations to justify high-density residential development in one area of big game habitat based on the fact that, hundreds of miles away, on the other side of the county, there are public forests and large private commercial timber holdings with little or no residential development. In that sense, petitioners' preferred approach to calculating overall residential density, using vast portions of the county as the denominator, is much more of a mere "numbers game" than the regional approach about which ODFW expressed reservations during the acknowledgment process.

In sum, petitioners have not demonstrated that the hearings officer erred in calculating residential density based on the acreage of the subject property.

Accordingly, the hearings officer did not err in concluding that the proposed densities conflict with Goal 5 and that those conflicts must be resolved based on application of the Goal 5 rule.

The second assignment of error is denied.

THIRD ASSIGNMENT OF ERROR

In support of their theory of how to determine residential density, petitioners relied on data taken from various non-county sources regarding how many acres in the county are designated as Major Big Game Range and how many dwellings exist thereon. In one portion of their decisions, the hearings officer expressed skepticism that data and evidence that is not included in the county's comprehensive plan can be used to support quasi-judicial decisions, citing Statewide Planning Goal 2 (Land Use Planning) and case law interpreting that goal. 2021-047 Record 8-9; 2021-052 Record 8-9.

Goal 2 requires that land use decisions be supported by an "adequate factual base." The hearings officer understood the cited cases to stand for the proposition that, where an applicant relies on a buildable lands inventory or similar inventory to support a land use decision, the inventory must be adopted into the applicable comprehensive plan. In a footnote, the hearings officer noted that their musings regarding Goal 2 are not necessary to support the primary conclusion that the appropriate denominator is the acreage of the subject property. 2021-047 Record 9 n 8; 2021-052 Record 9 n 8.

On appeal, petitioners argue that the hearings officer misconstrued Goal 2, the applicable case law, and the applicable county legislation to the extent that they concluded that petitioners' evidence can be relied upon to support the decisions only if it is adopted into the county's comprehensive plan.

We need not resolve this assignment of error because petitioners challenge a legal conclusion that is, at best, a contingent and alternative basis for denying the applications. We would have to address challenges to that contingent conclusion only if we had rejected the hearings officer's primary conclusion and affirmed petitioners' preferred approach to determining overall residential density for purposes of Policy 11. However, we have instead affirmed the hearings officer's primary conclusion and rejected petitioners' preferred approach. Accordingly, petitioners' arguments under the third assignment of error provide no basis for reversal or remand.

The third assignment of error is denied.

The county's decisions are affirmed.

CERTIFICATE OF FILING AND SERVICE

I certify that on October 28, 2021, I filed the foregoing by electronic filing with the Appellate Court Administrator.

I further certify that on October 28, 2021, I served a true and correct copy of the foregoing on the parties listed below, by certified mail, return receipt requested:

FINAL OPINION
AND ORDER

Appeal from Lane County.

LUBA Record 000037

Bill Kloos filed the petition for review and reply brief and argued on behalf of petitioners.

No appearance by Lane County.

Sean Malone filed the response brief and argued on behalf of intervenor-respondent.

RYAN, Board Member; ZAMUDIO, Board Chair; RUDD, Board Member, participated in the decision.

AFFIRMED 10/15/2021

You are entitled to judicial review of this Order. Judicial review is governed by the provisions of ORS 197.850.

Opinion by Ryan.

NATURE OF THE DECISION

In these consolidated appeals, petitioners appeal two hearings officer decisions denying applications for forest template dwellings.

MOTION TO INTERVENE

Landwatch Lane County (intervenor) moves to intervene on the side of the county. There is no opposition to the motion, and it is allowed.

FACTS

Petitioners each applied for approval of a forest template dwelling pursuant to ORS 215.750, OAR 660-006-0027, and the Lane Code (LC) provisions implementing that statute and rule.[1] The properties are contiguous; each is approximately 12 acres in size; both are zoned Impacted Forest Lands (F-2), a zone that implements Statewide Planning Goal 4 (Forest Lands); and both are designated as Major Big Game Range.

The planning director approved the applications, and intervenor appealed each decision to the hearings officer. After the appeals were filed, we issued our

---

[1] Briefly, ORS 215.750 and OAR 660-006-0027 allow a county to approve a dwelling on land zoned for forest use if (1) all or part of a prescribed number of lots or parcels that existed on January 1, 1993, are located within a 160-acre square "template" that is centered on the center of the subject parcel and (2) at least three dwellings existed on the other lots or parcels on January 1, 1993. The prescribed number of lots or parcels differs depending on the quality of the soils on the subject parcel and whether the parcel is located in eastern or western Oregon.

decision in *Landwatch Lane County v. Lane County*, ___ Or LUBA ___ (LUBA No 2020-030, Jan 21, 2021) (*Nimpkish*). Briefly, in *Nimpkish*, we held that the county's Statewide Planning Goal 5 (Natural Resources, Scenic and Historic Areas, and Open Spaces) program to protect big game habitat includes a comprehensive plan policy that limits the density of dwellings in big game habitat. We discuss our decision in *Nimpkish* in more detail later in this opinion.

Based on our holdings in *Nimpkish*, planning staff recommended denial of the applications. The hearings officer held hearings on and denied each application. These appeals followed.

INTRODUCTION

Goal 5 is "[t]o protect natural resources and conserve scenic and historic areas and open spaces." OAR 660-015-0000(5). In order to implement Goal 5, local governments are required to "adopt programs that will protect natural resources." *Id.* The county's program to protect natural resources was acknowledged by the Land Conservation and Development Commission (LCDC) to comply with Goal 5 in 1984. The county's Goal 5 program includes a map and inventory of big game habitat determined to be "significant or important" within the meaning of OAR 660-016-0000(5)(c) (Big Game Habitat Inventory). *Save*

TV Butte v. Lane County, 77 Or LUBA 22, 40 (2018).[2] As noted, the subject properties are included on that inventory as Major Big Game Range.[3]

One component of the county's acknowledged Goal 5 program is Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11 (Policy 11), which provides:

> "Oregon Department of Fish and Wildlife [(ODFW)] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with [ODFW] officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

---

[2] LCDC adopted Goal 5 in 1974. It adopted its first set of Goal 5 rules in 1981, which are codified at OAR chapter 660, division 16. In 1996, LCDC adopted a second set of Goal 5 rules, which are codified at OAR chapter 660, division 23. Because LCDC acknowledged the county's program to protect natural resources in 1984, the 1981 rules applied. *See Delta Property Co., LLC v. Lane County*, 271 Or App 612, 616-19, 617 n 1, 352 P3d 86 (2015).

[3] The Lane County Wildlife Inventory maps were developed based on Oregon Department of Fish and Wildlife big game habitat maps and identify the location, quality, and quantity of big game habitat, identify conflicts with big game habitat, and explain how those conflicts are to be mitigated. *Nimpkish*, ___ Or LUBA at ___ n 2 (slip op at 4 n 2).

The ODFW recommendations referenced in Policy 11 consist of an overall residential density standard of one dwelling per 80 acres in Major Big Game Range and one dwelling per 40 acres in Peripheral Big Game Range.

The application of Policy 11 to proposed development in big game habitat was at the heart of the parties' dispute in *Nimpkish*, and it is one of the issues in these appeals. In *Nimpkish*, we concluded that Policy 11 is part of and implements the county's acknowledged Goal 5 program to protect big game habitat and that the county was required to comply with the second sentence of Policy 11, which provides that proposed densities above ODFW's recommendations conflict with Goal 5 and that conflicts must be resolved through application of the Goal 5 rule. The hearings officer in *Nimpkish* concluded that Policy 11 did not apply to proposed dwellings on existing parcels and that it applied only in the context of land divisions and zone changes. We rejected that interpretation, concluding that nothing in the text, context, or legislative history of Policy 11 suggests that its applicability is so limited. To give some effect to the second sentence of Policy 11, we held, the county must apply Policy 11 to residential development where the proposed density exceeds the ODFW recommendations.[4] Because it was

---

[4] We noted in *Nimpkish* that, in the 36 years since acknowledgment, the county has made no attempt to implement a regional approach to applying density limitations, as described in the first sentence of Policy 11. However, we held:

> "[T]he county's failure to take the step of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that

undisputed in *Nimpkish* that the proposed density exceeded the applicable limitation of one dwelling unit per 80 acres, we further concluded that the proposed density conflicted with Goal 5. As required by the second sentence of Policy 11, the proposed density could be "allowed only after resolution in accordance with OAR 660-16-000." Accordingly, we remanded the decision for further proceedings.

In the present cases, the hearings officer relied on our holdings in *Nimpkish* that (1) Policy 11 applies to proposed residential development of existing parcels within big game habitat and (2) an applicant for such development must either demonstrate that the proposed development complies with the applicable density

---

> the county is absolved from protecting land included on the Big Game Habitat Inventory as Major Big Game Range through the residential density recommendations referred to in [Policy 11] or that the density recommendations simply do not apply. Rather, the *second sentence* of [Policy 11] remains operative, and it provides that '[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' The second sentence is not tethered to or derivative of the first sentence, which envisions the creation of zoning areas that the county has never completed. The second sentence does not mention or refer to zoning areas. To find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the county to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgement of its Goal 5 program, and it would have the effect of eliminating the Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program." *Nimpkish*, ___ Or LUBA at ___ (slip op at 12-13) (emphasis in original; footnote omitted).

standard or seek resolution of the conflict under the Goal 5 rule. As discussed under the second assignment of error, petitioners argued that Policy 11 could be satisfied by demonstrating that the average residential density across all Major Big Game Range in the entire county is less than one dwelling per 80 acres. The hearings officer rejected that effort to demonstrate that the proposed dwellings comply with the applicable density standard, concluded that the proposed dwellings in fact do not comply with the applicable density standard, and, because petitioners had not attempted to resolve the conflicts under the Goal 5 rule, denied both applications.

On appeal, under the first assignment of error, petitioners urge us to revisit our first holding in *Nimpkish* that Policy 11 applies as an approval criterion to proposed dwellings in big game habitat. In the alternative, under the second assignment of error, petitioners argue that, if Policy 11 does apply to the subject applications, then the hearings officer erred in rejecting petitioners' proposed interpretation of Policy 11 and in adopting an interpretation of Policy 11 that is not supported by its text, context, or legislative history. Under the third assignment of error, petitioners challenge the hearings officer's comments on the evidence that petitioners offered to demonstrate compliance with the applicable density standard under their proposed interpretation of Policy 11.

FIRST ASSIGNMENT OF ERROR

Petitioners argue that LUBA erred in concluding, in *Nimpkish*, that Policy 11, specifically the second sentence of Policy 11, applies as an approval criterion

to applications for dwellings in big game habitat. According to petitioners, the county's acknowledged Goal 5 program to protect big game habitat with respect to conflicting residential uses is entirely implemented by LC 16.211(5), which provides siting standards that regulate the location of development on parcels in the F-2 zone.[5]

The LC includes a minimum parcel size of 80 acres for *new parcels* in the F-2 zone. LC 16.211(7)(a). However, it does not include a minimum parcel size

---

[5] LC 16.211(5) provides, in relevant part:

> "The following siting criteria apply to all new uses, activities, and structures allowed by LC 16.211. These criteria are designed to make such uses compatible with forest operations, to minimize wildfire hazards and risks and to conserve values found on forest lands. * * *
>
> "(a) Residences, dwellings, and structures must be sited as follows:
>
> "(i) Near dwellings on other tracts, near existing roads, on the most level part of the tract, on the least suitable portion of the tract for forest use and at least 30 feet from any ravine, ridge or slope greater than 40 percent (40%);
>
> "(ii) With minimal intrusion into forest areas undeveloped by nonforest uses; [and]
>
> "(iii) Where possible, * * * at least 500 feet from the adjoining lines of property zoned [Nonimpacted Forest Lands] and 100 feet from the adjoining lines of property zoned F-2 or [Exclusive Farm Use.]"

for *dwellings* in the F-2 zone or any other standards that implement the ODFW density standards referenced in Policy 11. Nonetheless, petitioners argue that, as a matter of text, context, and legislative history, those density standards do not apply to proposed dwellings in the F-2 zone. Instead, petitioners argue, the county's acknowledged Goal 5 program to protect Major Big Game Range from the impacts of dwellings in the F-2 zone is limited to the siting standards at LC 16.211(5).

A. ORS 215.416(8)(a)

ORS 215.416(8)(a) enjoins counties to affirm or deny permit applications based on standards and criteria "set forth in the zoning ordinance or other appropriate ordinance or regulation of the county."[6] In the first subassignment of error, petitioners argue that, because Policy 11 is not listed or explicitly identified in LC 16.211 as one of the approval criteria for forest template dwellings, it cannot be applied as an approval criterion.

---

[6] ORS 215.416(8)(a) provides:

> "Approval or denial of a permit application shall be based on standards and criteria which shall be set forth in the zoning ordinance or other appropriate ordinance or regulation of the county and which shall relate approval or denial of a permit application to the zoning ordinance and comprehensive plan for the area in which the proposed use of land would occur and to the zoning ordinance and comprehensive plan for the county as a whole."

Intervenor responds that no party raised ORS 215.416(8)(a) as an issue below or otherwise argued that, because LC 16.211 does not list Policy 11 as an approval criterion for forest template dwellings, Policy 11 cannot constitute an applicable criterion. Accordingly, intervenor argues, such issues are waived pursuant to ORS 197.763(1) and ORS 197.835(3). In the petition for review, petitioners cite 2021-052 Record 27, 317, and 582 to preserve all of the arguments under the first assignment of error.[7] Petitioners do not otherwise respond to intervenor's waiver argument. We have reviewed the cited record pages, and we agree with intervenor that nothing in them raises the issues raised in the first subassignment of error.

However, even if the issue was preserved, we agree with intervenor that ORS 215.416(8)(a) does not prohibit the hearings officer from applying Policy 11 to forest template dwelling applications. First, ORS 215.416(8)(a) does not limit the county to applying only those standards that are set forth in its zoning ordinance, such as LC 16.211. It also allows for the application of "other appropriate ordinance[s] or regulation[s] of the county," which is broad enough to include the county's comprehensive plan. Further, as we noted in *Nimpkish*, OAR 660-006-0027(6)(a) and OAR 660-006-0025(6), which LCDC adopted to implement ORS 215.750, specifically allow the county to apply standards in its

---

[7] The county transmitted separate records for LUBA Nos. 2021-047 and 2021-052. We refer to the record in LUBA No. 2021-047 as "2021-047 Record." We refer to the record in LUBA No. 2021-052 as "2021-052 Record."

comprehensive plan to forest template dwellings. ___ Or LUBA at ___ n 5 (slip op at 8 n 5.[8] As far as petitioners have established, there is no statutory, code-based, or other legal prohibition on the county applying Policy 11, or any other applicable comprehensive plan provision, to approval or denial of forest template dwellings in the F-2 zone.

The first subassignment of error is denied.

B. Remaining Subassignments of Error

Petitioners' remaining subassignments of error argue that, even if there is no legal impediment to applying Policy 11 as an approval criterion, for several reasons, LUBA erred in *Nimpkish* in interpreting Policy 11 to function as an approval criterion under the county's Goal 5 program, given its text, context, and legislative history.

Petitioners first observe—correctly—that Policy 11 is ambiguous and requires interpretation to determine whether and how its density limitations function as approval criteria for dwelling permit applications. In these subassignments of error, petitioners urge us to revisit the question of *whether* the

---

[8] OAR 660-006-0027(6)(a) provides that proposed template dwellings are allowed only if they "will comply with the requirements of an acknowledged comprehensive plan, acknowledged land use regulations, and other provisions of law." OAR 660-006-0025(6) provides that "[n]othing in this rule relieves governing bodies from complying with other requirements contained in the comprehensive plan or implementing ordinances such as the requirements addressing other resource values (e.g., Goal 5) that exist on forest lands."

density limitations in Policy 11 apply as approval criteria. In the second assignment of error, discussed below, petitioners assume that the density limitations apply but challenge the hearings officer's interpretation of *how* they apply.

Turning to petitioners' challenges to the hearings officer's reliance on our holdings in *Nimpkish*, petitioners argue that, while it may be plausible to interpret Policy 11 to constitute an applicable approval criterion, the better interpretation, considering all of the text, context, and legislative history, is that Policy 11 does not apply to development proposals in big game habitat and that the only standards that apply to such development under the county's acknowledged Goal 5 program are the siting standards in LC 16.211(5). That argument is based primarily on documents that we did not discuss in *Nimpkish*, some of which were included in the record in *Nimpkish* and all of which are included in the records in the present appeals.

1. Addendum to Flora and Fauna Working Paper

The county's Goal 5 program was developed, in part, by relying on a March 1982 Flora and Fauna Working Paper (the Working Paper), as amended by a November 1983 Addendum to the Flora and Fauna Working Paper (the Addendum). The county and the Department of Land Conservation and Development (DLCD) relied on the Working Paper and the Addendum as

background documents to the RCP.[9] In *Nimpkish*, the record included, and we relied, in part, on the Working Paper to interpret the first sentence of Policy 11 that refers to "regions of the County." *Nimpkish*, ___ Or LUBA at ___ (slip op at 12). That Working Paper language explained that the county had intended to divide the county into 10 to 20 regions and determine for each region the number of acres, existing dwellings, and additional dwellings allowable to comply with the applicable density limitation. *Id.* at ___ n 7 (slip op at 10 n 7).

Petitioners argue that the language that we relied upon to interpret the reference to "regions of the County" in the first sentence of Policy 11 was deleted by the Addendum and replaced with different language that appears to downplay, as a mere "numbers game," the regional approach.[10] The new language instead

---

[9] The RCP characterizes the Working Paper as "background information * * * to be used to help interpret and understand [the RCP]." RCP Part 1(C). The Working Paper explains in more detail that the ODFW residential density recommendations for Major Big Game Range were one dwelling unit per 80 acres:

> "The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall densities for Peripheral Big Game Range at one dwelling unit per 40 [acres]; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game." 2021-047 Record 525; 2021-052 Record 522.

[10] The inserted text states:

focuses on two other measures: minimum parcel sizes for new parcels in forest zones and siting standards that require clustering of dwellings.

> "Although [the regional approach] is a useful index, officials of the ODFW stress the fact that a mere 'numbers game' is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.
>
> "A prime example is that of 'clustering' dwelling units in Peripheral or Major Range areas—siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.
>
> "The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirements of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.
>
> "* * * * *
>
> "The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner—including the involvement of that agency in land use regulation development. If the zoning procedure described above does not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the [Goal 5] process and determine new ways of dealing with conflicts. The process should follow the Goal 5 Rule format, and center on weighing the relative benefits of dwelling unit construction against those of Big Game Range maintenance." 2021-047 Record 556; 2021-052 Record 553.

LUBA Record 000051

Petitioners argue that the deletion of the language discussing a regional approach, and the inclusion of new language referring to clustering and siting standards, supports their view that the county proposed, and LCDC acknowledged, abandoning any reliance on density limitations as part of the county's Goal 5 program to protect big game habitat. Instead, petitioners argue, the county chose to rely solely on the siting standards at LC 16.211(5) to protect big game habitat.

2. DLCD Staff Reports

The second set of documents that petitioners rely upon are two DLCD staff reports that, in petitioners' view, demonstrate that DLCD accepted that the county intended to protect big game habitat *exclusively* via the LC 16.211(5) siting standards and would not implement *any* density limitations on dwellings in big game habitat.

In addressing ODFW's objections to the adequacy of the county's initial efforts to protect big game habitat, including Policy 11, the July 19, 1984 DLCD staff report commented:

> "ODFW is correct that the County's [Nonimpacted Forest Lands (F-1)] and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-l, F-2 and [Exclusive Farm Use (EFU)] zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable)." 2021-047 Record 149; 2021-052 Record 150.

The July 19, 1984 DLCD staff report concluded that, in order to comply with Goal 5, the county had to, among other things,

> "[a]mend the F-2 and EFU zones to carry out the intent of [Policy 11]. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones, or contain clustering requirements in those areas." 2021-047 Record 186; 2021-052 Record 187.

Petitioners argue that DLCD gave the county a choice to demonstrate full compliance with Goal 5: *either* require larger minimum lot sizes in big game habitat *or* adopt clustering requirements in such areas.[11] Petitioners contend that the county chose the latter option. The September 12, 1984 DLCD staff report explained that the county had subsequently adopted an earlier version of the siting standards at LC 16.211(5), and it recommended that LCDC acknowledge the county's legislation as complying with Goal 5. 2021-047 Record 286-87; 2021-052 Record 287-88.

---

[11] As mentioned, the LC currently limits the size of *new parcels* in the F-2 zone to 80 acres. LC 16.211(7)(a). At the time of the 1983 to 1984 acknowledgment proceedings, the minimum parcel size in the F-2 zone was "20 acres for creation of a woodlot or farm parcel for growing grapes, berries, or horticultural specialties, and 40 acres for creation of a farm parcel." 2021-047 Record 143; 2021-052 Record 144. At some point not shown in the records, the county apparently amended the F-2 zone to specify a minimum parcel size of 80 acres for new parcels. However, the purpose statement of the F-2 zone explains that "[t]he minimum parcel size and other standards established by this zone are intended to promote commercial forest operations." LC 16.211(1). Thus, it is not clear what role, if any, the current 80-acre minimum parcel size in the F-2 zone plays as part of the county's Goal 5 program to protect big game habitat.

According to petitioners, the foregoing legislative history indicates that LCDC acknowledged that compliance with the siting standards at LC 16.211(5) is sufficient, without more, to ensure that residential development in big game habitat is consistent with Goal 5. Under this view, petitioners argue, Policy 11 plays no role in approving proposed dwellings in big game habitat.

3. Analysis

The principle of *stare decisis* applies to our final opinions. ORS 197.805 (instructing that LUBA decisions "be made consistently with sound principles governing judicial review"). We will reconsider a prior decision if a party demonstrates that we erred in making it because we were not presented with an important argument. *Nicita v. City of Oregon City*, ___ Or LUBA ___, ___ (LUBA Nos 2020-037/039, Sept 21, 2021) (slip op at 20) (citing *Farmers Ins. Co. v. Mowry*, 350 Or 686, 698, 261 P3d 1 (2011)). In *Nimpkish*, no party made any arguments based on either the Addendum or the DLCD staff reports, and our opinion did not address all of those documents in analyzing Policy 11's text, context, and legislative history. We do so now, and we uphold our decision in *Nimpkish*.

Turning first to the Addendum, intervenor initially responds that it is unclear whether the new language in the Addendum replaced all or only a portion

of the original language in the Working Paper describing the regional approach.[12] In any case, intervenor argues, the new Addendum language may represent a step back from primary reliance on the regional approach, but nothing in the Addendum purports to completely abandon the ODFW density recommendations or suggests that siting or clustering standards, in themselves, are sufficient to establish compliance with Goal 5.

We agree with intervenor that nothing in the Addendum purports to eliminate or reduce the role of the ODFW density recommendations in the county's program to protect big game habitat. The Addendum left in place the original Working Paper language stating that an overall residential density greater than one dwelling per 80 acres in Major Big Game Range conflicts with Goal 5. *See* n 9. Notably, both the Working Paper and the Addendum include language describing a process to ensure compliance with Goal 5 in the event that other identified measures (the regional approach, minimum parcel sizes, and clustering) are insufficient—by applying the Goal 5 rule. In the county's Goal 5

---

[12] Under the heading "Working Paper Revisions," the Addendum instructs, "DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place[.]" 2021-047 Record 543, 556; 2021-052 Record 540, 553. Intervenor argues that it is unclear whether the Addendum intended to delete only the last paragraph on page 24 and the remainder of *that paragraph* at the top of page 25 or whether it intended to delete all of the paragraphs on page 25. For purposes of our analysis, we assume, as petitioners do, that the Addendum was intended to replace all of the paragraphs on page 25 of the Working Paper.

program to protect big game habitat, the process to ensure compliance with Goal 5 is operationally embodied in the second sentence of Policy 11. The county added other measures, as requested by ODFW, but it chose to leave that process in place. LCDC acknowledged Policy 11, and the other components of the county's Goal 5 program, with that process in place. If petitioners are correct that the county's Goal 5 program consists entirely of the siting standards at LC 16.211(5), then the second sentence of Policy 11 is a nullity.

In our view, the legislative history is reasonably clear that the LC 16.211(5) clustering standards were intended to supplement, rather than replace, the other components of the county's Goal 5 program, including Policy 11. The July 19, 1984 DLCD staff report concluded that Policy 11 is insufficient to ensure compliance with Goal 5, and it ultimately required additional measures, but there is no suggestion in any legislative history that the county or DLCD believed that siting standards or any other measures could eliminate the need for Policy 11's density limitations. The July 19, 1984 DLCD staff report addressed criticism that Policy 11 is inadequate:

> "Objectors are not correct that [Policy 11] violates Goal 5. Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through [Policy 11], however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made. This would require a plan amendment and could only take place if justified based on the Goal 5 analysis. However, as noted previously, the County still needs to adopt measures in its F-2, [Marginal Lands] and EFU Zones which ensure that ODFW's

density standards will be achieved." 2021-047 Record 149; 2021-052 Record 150.

The foregoing clearly illustrates DLCD's expectation that, while additional measures were necessary to ensure full compliance with Goal 5, the ODFW density standards embodied in Policy 11 would continue to play a role in evaluating development proposals. Nothing in the acknowledgment process eliminated or vitiated the applicability of those density standards to proposed residential development in big game habitat.

We consider petitioners' arguments below regarding exactly what role Policy 11 plays in the county's Goal 5 program to protect big game habitat. For purposes of the first assignment of error, however, we reject petitioners' arguments that LUBA erred in concluding in *Nimpkish* that Policy 11 is applicable as an approval criterion to development proposals that may exceed the ODFW density recommendations.

The first assignment of error is denied.

SECOND ASSIGNMENT OF ERROR

In the second assignment of error, petitioners challenge the hearings officer's interpretations regarding how the Policy 11 density limitations are properly applied.

We repeat the text of Policy 11, numbering each of the three sentences:

> "[1] [ODFW] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. [2] Any density above that limit shall be considered to conflict with Goal 5

> and will be allowed only after resolution in accordance with OAR 660-16-000. [3] The County shall work with [ODFW] officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

As noted, the text of Policy 11 is ambiguous and requires interpretation to determine how to apply the ODFW density limitations for purposes of the second sentence. The hearings officer observed:

> "Anybody who has studied residential densities, either in urban or rural settings, understand[s] that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings/acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county." 2021-047 Record 5; 2021-052 Record 5.

Before the hearings officer, petitioners attempted to demonstrate compliance with Policy 11 based on their interpretation of that policy. Specifically, petitioners argued that, to determine whether the "overall residential density" exceeds one dwelling per 80 acres, the applicant need only (1) determine the number of acres in the county designated as Major Big Game Range, including all federal, state, and private lands (roughly 2.5 million acres, stretching from the Cascade Range to the Pacific Ocean), and (2) divide that number by the number of existing dwellings in areas designated as Major Big Game Range (roughly 3,137 dwellings). The resulting number, in petitioners' view, is the "overall residential density" (in this case, an average of approximately one dwelling per 819 acres). Alternatively, petitioners performed the same

calculations using large regions of the county, for example, by dividing the county into eastern and western halves at Interstate 5 and separately calculating the "overall residential density" in each half (also resulting in densities of less than one dwelling per 80 acres).

The hearings officer rejected that approach. The hearings officer first noted that, in *Nimpkish*, LUBA remanded, in part, because there was no dispute that development of the 10-acre subject property would violate the one-dwelling-per-80-acres density limitation. That conclusion can be read to suggest that Policy 11 imposes, essentially, a minimum parcel size of 80 acres for dwellings in big game habitat. The hearings officer characterized that suggestion as *dicta* because the primary issue in *Nimpkish* was whether Policy 11 applies, not how it should be applied or what denominator should be used in determining residential density.

Given the lack of dispute in *Nimpkish* that the proposed dwelling violated Policy 11, we agree with the hearings officer that it was not necessary for LUBA to suggest any particular approach to applying Policy 11. To the extent that we suggested in *Nimpkish* that Policy 11 effectively imposes a minimum parcel size of 80 acres for dwellings, that suggestion was *dicta* and, moreover, not supported by any analysis.

The hearings officer conducted an analysis of the text and context of Policy 11, along with relevant case law, in order to evaluate the parties' arguments regarding permissible approaches to demonstrating compliance with Policy 11. As noted, the hearings officer ultimately rejected petitioners' interpretation that

the appropriate denominator for determining residential density is the roughly 2.5 million acres of the county that are designated as Major Big Game Range. Instead, the hearings officer held that, until the county divides the county into regions as described in the first sentence of Policy 11, the only appropriate denominator for purposes of applying the second sentence of Policy 11 is the acreage of the subject parcel. As a practical matter, the hearings officer noted, this means that a proposed dwelling on a parcel less than 80 acres in size can be approved in big game habitat only pursuant to the Goal 5 rule, as described in the second sentence of Policy 11.

As further support for their conclusion that the appropriate denominator is the subject parcel's acreage, the hearings officer cited *Wetherell v. Douglas County*, 44 Or LUBA 745 (2003), which involved a destination resort proposal and a code provision that limited residential density to one dwelling per 40 acres in peripheral big game habitat. The code did not specify the appropriate denominator for purposes of applying that density standard, so the county applied as the denominator a large planning area consisting of 1,121,378 acres. Under the county's interpretation, the subject 500 acres could have been developed at a much greater density than one dwelling per 40 acres, as long as the *average* density across the 1,121,387-acre planning area remained below that ratio. However, we rejected that interpretation as inconsistent with the purpose of the density standard, which was to protect big game habitat from residential density. Absent specification in the code of a different denominator, we held that the

denominator most consistent with the purpose of the density standard was the acreage of the subject property.

The hearings officer applied our reasoning in *Wetherell* to the present cases, rejecting petitioners' proposal to use over 2.5 million acres of the county as the denominator because that interpretation is inconsistent with the purpose of the residential density standard to protect big game habitat. Further, the hearings officer concluded that, absent definition by the county of a different denominator, based on regional averages or some other approach, the only denominator that is consistent with the purpose of the density standard is the acreage of the subject property. Consequently, the hearings officer concluded, the proposed densities conflict with Goal 5 and can be approved only via application of the Goal 5 rule, pursuant to the second sentence of Policy 11.

Petitioners challenge the hearings officer's interpretations. First, petitioners distinguish *Wetherell* because, unlike the code provision at issue in that case, Policy 11 references an "overall" residential density. Petitioners argue that the qualifier "overall" clearly denotes some kind of *averaging* of multiple parcel sizes and that no averaging is possible when only the acreage of the subject property is considered.

The hearings officer noted that, while the adjective "overall" appears in the first sentence of Policy 11, it does not appear in the second sentence. Instead, the second sentence refers simply to "that limit." The hearings officer concluded

that the second sentence of Policy 11 has no express denominator.[13] We understand the hearings officer to have concluded that, for purposes of the second sentence, no averaging or "overall" density need be calculated.

We agree with petitioners that the phrase "that limit" in the second sentence of Policy 11 refers to the ODFW density standards, which are described in terms of an "overall residential density." We further agree with petitioners that the term "overall" suggests averaging more than one unit or number, for example, averaging parcel sizes for two or more parcels. However, we see no mathematical or logical reason why the appropriate denominator cannot be based on the number of acres in a single unit of land. That, in fact, is the approach that the county board

---

[13] The findings state:

> "The applicant argues that the term 'overall' in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County on the east or west side of Interstate 5. [Intervenor] points out that the use of the term 'overall' in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of 'overall residential density.' The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to 'determine the allowable number of residential dwelling units within regions of the county.' The next sentence does not use the 'overall' modifier: 'Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal." 2021-047 Record 5-6; 2021-052 Record 5-6.

of commissioners adopted, and LUBA affirmed, in *Cattoche v. Lane County*, 79 Or LUBA 466 (2019).

Cattoche involved a proposal to rezone a 131.55-acre parcel in order to subdivide it and develop it with two additional dwellings, for a total of three dwellings. The parcel was designated as Peripheral Big Game Range and, pursuant to Policy 11, the county applied a density standard of one dwelling per 40 acres. The county found that the Policy 11 density standard was satisfied because the resulting density of the three dwellings would have been less than one dwelling per 40 acres, using the 131.55 acres of the subject parcel as the denominator. On appeal to LUBA, the petitioners argued that the commissioners misapplied the one-dwelling-per-40-acres density standard by failing to include in their density calculation the dwellings on and acreage of an adjoining property that was previously part of the same tract. Although we remanded the decision on other grounds, we rejected the petitioners' argument and affirmed the commissioners' implicit interpretation of the density standard as limiting the denominator to the acreage of the subject property.

Cattoche illustrates that the county has, in at least some cases, chosen to calculate "overall residential density" for purposes of Policy 11 based solely on the acreage of the subject property. We therefore reject petitioners' categorical argument that, in all cases, the denominator used to determine "overall residential density" must be based on averaging the acreage of multiple parcels. It is true that, in *Cattoche*, the subject parcel was relatively large and could be developed

with multiple dwellings consistent with the ODFW density limitations. However, petitioners identify no principled reason why the size of the subject parcels makes a difference. *Cattoche* also involved a zone change application, while the present cases do not. However, we perceive no principled basis to calculate the denominator differently based on whether the proposed development involves a zone change.

Based on the legislative history of Policy 11, it is reasonably clear that the phrase "overall residential density" was originally formulated with the expectation that the county would engage in a post-acknowledgment process that, among other things, would identify some 10 to 20 regions of the county and determine, based on the number of acres and existing dwelling units within each region, how many new dwelling units can be constructed within each region consistent with the ODFW density standards. However, as noted, ODFW apparently had concerns about the adequacy of that regional approach to ensuring compliance with Goal 5, and it ultimately recommended that the county adopt additional measures while leaving the original density limitations in place. As also noted, the county has made no effort in the intervening post-acknowledgment period to adopt a regional approach or, indeed, any regulations fleshing out how "overall residential density" should be calculated. In the absence of such regulations, *Cattoche* suggests that the county has chosen to apply the density limitations in Policy 11 using the acreage of the subject parcel as the

relevant denominator. Petitioners have not demonstrated that that approach is legal error.

In any case, petitioners have certainly not demonstrated that the only permissible denominator is the total acreage of vast portions of the county designated as Major Big Game Range. While *Wetherell* involved a different code provision and different facts, it is instructive in noting that ambiguous regulations implementing a statewide planning goal must be interpreted in a manner that is consistent with the goal that they implement. ORS 197.829(1)(d). The obvious purpose of the ODFW density limitations is to protect big game habitat from conflicts by limiting residential density. Because big game habitat is not fungible, determining residential density in that context is necessarily an inquiry into reasonably *local* circumstances. It seems highly inconsistent with Goal 5 and the purpose of the density limitations to justify high-density residential development in one area of big game habitat based on the fact that, hundreds of miles away, on the other side of the county, there are public forests and large private commercial timber holdings with little or no residential development. In that sense, petitioners' preferred approach to calculating overall residential density, using vast portions of the county as the denominator, is much more of a mere "numbers game" than the regional approach about which ODFW expressed reservations during the acknowledgment process.

In sum, petitioners have not demonstrated that the hearings officer erred in calculating residential density based on the acreage of the subject property.

Accordingly, the hearings officer did not err in concluding that the proposed densities conflict with Goal 5 and that those conflicts must be resolved based on application of the Goal 5 rule.

The second assignment of error is denied.

THIRD ASSIGNMENT OF ERROR

In support of their theory of how to determine residential density, petitioners relied on data taken from various non-county sources regarding how many acres in the county are designated as Major Big Game Range and how many dwellings exist thereon. In one portion of their decisions, the hearings officer expressed skepticism that data and evidence that is not included in the county's comprehensive plan can be used to support quasi-judicial decisions, citing Statewide Planning Goal 2 (Land Use Planning) and case law interpreting that goal. 2021-047 Record 8-9; 2021-052 Record 8-9.

Goal 2 requires that land use decisions be supported by an "adequate factual base." The hearings officer understood the cited cases to stand for the proposition that, where an applicant relies on a buildable lands inventory or similar inventory to support a land use decision, the inventory must be adopted into the applicable comprehensive plan. In a footnote, the hearings officer noted that their musings regarding Goal 2 are not necessary to support the primary conclusion that the appropriate denominator is the acreage of the subject property. 2021-047 Record 9 n 8; 2021-052 Record 9 n 8.

On appeal, petitioners argue that the hearings officer misconstrued Goal 2, the applicable case law, and the applicable county legislation to the extent that they concluded that petitioners' evidence can be relied upon to support the decisions only if it is adopted into the county's comprehensive plan.

We need not resolve this assignment of error because petitioners challenge a legal conclusion that is, at best, a contingent and alternative basis for denying the applications. We would have to address challenges to that contingent conclusion only if we had rejected the hearings officer's primary conclusion and affirmed petitioners' preferred approach to determining overall residential density for purposes of Policy 11. However, we have instead affirmed the hearings officer's primary conclusion and rejected petitioners' preferred approach. Accordingly, petitioners' arguments under the third assignment of error provide no basis for reversal or remand.

The third assignment of error is denied.

The county's decisions are affirmed.

Certificate of Mailing

I hereby certify that I served the foregoing Final Opinion and Order for LUBA No. 2021-047/052 on October 15, 2021, by mailing to said parties or their attorney a true copy thereof contained in a sealed envelope with postage prepaid addressed to said parties or their attorney as follows:

Of Attorneys for Respondent Lane County

1. Petitioners intentionally included the entire *Nimpkish* LUBA record in the local record of this proceeding.

The petition recites that the *Nimpkish* decision was not dealing with all the correct documents. Intervenor takes great issue with that characterization. Int. Br at 7 line 9.

Petitioner's point, throughout its initial briefing, was that several references to documents in the *Nimpkish* opinion as being the final relevant documents were not in fact the final version of those documents. It is for that reason that petitioners included the entirety of the *Nimpkish* LUBA record in the record of this local proceeding.

Most relevant, of course, is the LUBA reference in *Nimpkish* to the March 1982 Flora and Fauna Working Paper, when the November 1983 version of the Working Paper was what was finally reviewed for acknowledgment. Also relevant is the Board's reference to language in the July 18, 1984 DLCD Staff Report as being the final position of the agency, when it was actually the September 17, 1984 DLCD Staff Report that stated the agency's final position on what was being acknowledged.

2. Intervenor misstates the final language of the Flora and Fauna Working Paper.

A critical question is what constitutes the final language of the county's working paper for flora and fauna. The original working paper was dated March

1982. See Petition at App-36. The addendum was issued in November 1983. See Petition at App-39.

Note that the addendum was issued well before the July 1984 DLCD Staff Report on acknowledgment. It was the amended working paper that entered the formal acknowledgment process.

The operative language stating the county's policy choice as to what was being removed from the working paper and what was being added appeared in the addendum. It is at petition App-40.

> "DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place: * * * *'

Intervenor asks the Board to give the instruction above the following meaning:

> "DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of **the first paragraph of** text on page 25, and ADD the following in its place: * * * *'

Petitioner, of course, believes that the reading immediately above inserts editorial language into the instruction that is not there, contrary to the most basic rule of construction.

In the view of intervenor, the language of page of page 25 of the working paper, other than the first paragraph being stricken, would remain in the working paper. Petition App-38. To this would be added the new language on page 14 of the addendum. Petition App-40.

The problem with intervenor's reading, of course, is that the language it would like to leave in the working paper fundamentally conflicts with the language that was plainly added in the addendum. The language on page 25 elaborates upon the paragraph that intervenor agrees was deleted. Both the plain language and the logic of the argument being made in the addendum support only the conclusion that the entirety of page 25 of the working paper was dropped.

The addendum language reflects a clear policy shift at the county as to how to deal with the needs of big game. The original working paper reflected a commitment to the ODFW 40/80 standard as a baseline methodology. Petition App-38. That was dropped in the addendum with a clear statement of policy rejecting a "mere numbers game." The policy choice was to rely on the very restrictive nature of the zoning for commercial timber lands (no dwellings allowed on F-1 land) together with clustering and siting standards in the code. Petition App-40.

LUBA should reject the intervenor's invitation to read back into the working paper language that was excised in the November 1983 addendum and which would render the working paper a hodge-podge of conflicting policy statements.

Dated: August 9, 2021.

Respectfully submitted,

/s/ *Bill Kloos*

I. RESPONSE TO PETITIONERS' STANDING TO APPEAL

Intervenor-Respondent LandWatch Lane County (Intervenor) does not contest Petitioners' standing to appeal.

II. RESPONSE TO STATEMENT OF THE CASE

A. NATURE OF THE LAND USE DECISION AND RELIEF SOUGHT

Intervenor requests that LUBA affirm the County's decision.

B. SUMMARY OF RESPONSE TO ARGUMENTS

1. Response to First Assignment of Error. LUBA correctly decided the *Nimpkish* decision and the Hearings Official was correct to adhere to that decision. The full record was before LUBA in Nimpkish and Petitioners offer no new evidence. The arguments are the same as those presented to LUBA in Nimpkish. Petitioners' allegations about the Flora and Fauna Working Papers and the administrative rules are incorrect.

2. Response to Second Assignment of Error. Petitioners' *ad hoc* density denominator has no basis in the Comprehensive Plan, the Working Papers, or the Acknowledgment Reports, and it should be rejected. The applicable density denominator is the subject property where a Template Dwelling is proposed in Major or Peripheral Big Game Range.

LUBA Record 000082

3. Response to Third Assignment of Error. The Hearings Official did not err in finding that Petitioners could not, consistent with Goal 2, aggregate plan data to demonstrate compliance with Policy 11, absent a plan amendment.

C. RESPONSE TO PETIIONERS' SUMMARY OF MATERIAL FACTS

Intervenor does not contest the "Summary of Material Facts" presented by Petitioner.

III. JURISDICTION

Intervenor does not dispute that LUBA has jurisdiction over this matter.

V. RESPONSE TO ARGUMENTS

A. RESPONSE TO PETITIONERS' "INTRODUCTION TO ALL ASSIGNMENTS OF ERROR"

Much of what Petitioners put in their "introduction to all assignments of error" is background information. However, Petitioners attempt to recite LUBA's rationale for its decision in *LandWatch Lane County v. Lane County,* __ Or LUBA __ (LUBA No. 2020-030, Jan. 21, 2021) (*Nimpkish*) is not accurate. *See* Petition at 9-10. For example, Petitioners omit any mention of the administrative rules referenced in the *Nimpkish* petition for review and cited by LUBA. *See Nimpkish*, slip op at 8, n. 5. Next, while Petitioners allege that LUBA did not apply Policy 11, LUBA clearly stated that:

LUBA Record 000083

> "In conclusion, we agree with petitioners that the hearings officer's conclusion that RCP Goal 5, Flora and Fauna Policy 11, does not apply because the application does not involve a land division or a zone change improperly construes RCP Goal 5, Flora and Fauna Policy 11. There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres. Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' RCP Goal 5, Flora and Fauna Policy 11."

Nimpkish, slip op at 15-16; *id.* at 15 ("Similarly, here, we conclude that the county uses the one-dwelling-per-80-acres standard referenced in RCP Goal 5, Flora and Fauna Policy 11, and the Flora and Fauna Working Paper to determine the allowed residential density in areas inventoried as Major Big Game Range."). LUBA's closing paragraph is as close to applying Policy 11 as it gets. Petitioners concede these points. *see* Petition at 10. To the extent this is dicta is *dicta*, it sets forth LUBA's rationale for applying Policy 11, and LUBA should be consistent in its application. Petitioners allege that, "most importantly, the methodology prescribed in Policy 11 for meeting the ODFW density recommendations is inherently ambiguous and requires interpretation. LUBA typically allows the County to take a stab at the initial interpretation of an ambiguous standard." Petition at 11. That is exactly what happened here given that the Hearings Official in *Nimpkish* interpreted Policy 11 (and did so incorrectly) and the Hearings Official here attempted to interpret and apply Policy 11 (and did so correctly).

B. RESPONSE TO FIRST ASSIGNMENT OF ERROR – LUBA correctly decided the *Nimpkish* decision and the Hearings Official was correct to adhere to that decision

1. Preservation of assignment of error

At page 14 and 17 of the Petition and First assignment of Error, Petitioner cites to ORS 215.416(8)(a). At no point in the record does the applicant cite to that provision or even quote language from the statutory provision relied upon now. Because Petitioners never cited to or quoted ORS 215.416(8)(a), this statutory provision below, Petitioners cannot do that for the first time before LUBA.

Moreover, as to the merits of the *Nimpkish* case, that which Petitioners contest here, the Hearings Official acknowledged that the applicant did not challenge the holding of *Nimpkish*. After reviewing the holding in *Nimpkish*, the Hearings Official stated that:

> "The petitioners in *Nimpkish* focused on the second sentence of Policy 11, arguing that the County is prohibited from allowing residential density above the ODFW-recommended limits without first conducting an Economic, Social, Environmental, and Energy (ESEE) analysis. LUBA agreed.
>
> The applicant in this case does not challenge that holding *per se*. Rather, he argues that the addition of this one dwelling does not violate the ODFW-recommended limits, and therefore, an ESEE is not required. That contention is based on his interpretation of the significance of the term 'overall' in Policy 11."

R 2021-047 at 4. The Hearings Official's decisions then goes on to address that issue specifically and does not re-address the merits of the *Nimpkish* decision.

Even the Hearings Official expressly did not understand the applicant to be re-litigating the holding in *Nimpkish*.

Petitioners also allege that they "explicitly incorporated into their local argument briefing in *Nimpkish* in which the applicant there asserted at LUBA that 'The Hearings Official correctly concluded that Goal 5, Flora and Fauna, Policy 11 regarding overall residential densities for protection of Big Game Habitat in the acknowledged comprehensive plan did not apply as criteria for a forest template dwelling." Petition at 15. What the applicant quotes, however, was not expressly set forth when Petitioners incorporated the *Nimpkish* briefing below. Instead, the applicant pointed to the issue of the "zoning approach," which was put to rest in *Nimpkish*:

> "VI. Policy 11 does not apply directly because the required ESEE analysis was done as part of the County acknowledgment process.
>
> In Nimpkish, the property owner was represented by Mike Farthing. For the reasons set for [sic] in Mr. Evans [sic] brief, any required ESEE analysis has already been done. The County took a 'zoning' approach. The arguments set forth in the attached briefs (Exhibit K1 and K2) are incorporated herein and adopted as my own, as are any of Mr. Farthings' arguments contained within the LUBA record. Exhibit K3."

R 2021-052 at 317. Petitioners do not rely on the "zoning" argument, but rather allege a specific argument buried in the *Nimpkish* briefing that was generally incorporated. In other words, what the applicant relies on here is based upon the allegation below that "[t]he arguments set forth in the attached briefs (Exhibit K1

and K2) are incorporated herein and adopted as my own, as are any of Mr. Farthings' arguments contained within the LUBA record." *Id.* In other words, Petitioners believe that the Hearings Official was required to scour the entirety of the briefing and the record in *Nimpkish* to respond to all arguments. This proves far, far too much. Unless specifically raised, Petitioners cannot rely on the entirety of the briefing and the record in *Nimpkish* to raise specific issues therein.

2. Standard of review

Intervenor does not contest the standard of review.

3. Response to Petitioners' Argument

a. Petitioners simply attempt to relitigate Nimpkish

On one hand, Petitioners allege that "[t]he First Assignment below is not a simple rehash of the merits that was lost in *Nimpkish*," Petition at 12, and, on the other hand, Petitioners purport, in their preservation of error, to have "explicitly incorporated into their local argument the briefing in *Nimpkish* in which the applicant there asserted at LUBA that 'The Hearings Official correctly concluded that Goal 5, Flora and Fauna, Policy 11 regarding overall residential densities for protection of Big Game Habitat in the acknowledged comprehensive plan did not apply as criteria for a forest template dwelling.' Petitioners' Lttr (March 18, 2021) incorporating LUBA brief, EJK Rec 317; and *Nimpkish* responding brief, EJK Rec 582," Petition at 15. Indeed, Petitioners rely on an incorporation of not just all of

the briefing in *Nimpkish* but also the entire record in *Nimpkish*. *See* R 2021-052 at 317 ("The arguments set forth in the attached briefs (Exhibit K1 and K2) are incorporated herein and adopted as my own, *as are any of Mr. Farthing's arguments contained within the LUBA record.*") (emphasis added). The irony of alleging that the First Assignment of Error is not a rehash while relying on an incorporation of the applicant's briefing in *Nimpkish* is plainly apparent.

Petitioners also allege that "it is apparent from review of the source documents that *Nimpkish* was not dealing with all the correct documents. At least what is indicated by the references in the opinion." Petition at 12. Intervenor adamantly disagrees with Petitioners' characterization of whether the "correct documents" were considered. Nothing new and pertinent is presented here that was not already presented in *Nimpkish*. This allegation is apparently focused on two issues, one related to the working papers and one related to the staff reports. Because these issues are wholly unfounded, Intervenors will dispose of them at the outset. The *Nimpkish* record was included in the record for this case. *See* Record, Table of Contents, Page 3, Item 7.1.a.viii. Exhibit K: Nimpkish brief and record (R 2021-052 at 576-1736). The Flora and Fauna Working Papers were included in the *Nimpkish* record at R 2021-052 at 1257-1279. The June 29 and July 19, 1984 staff

reports[1] are located in the *Nimpkish* record at R 2021-052 at 752-939, and the September 12, 1984 staff report[2] is located in the *Nimpkish* record at R 2021-052 at 1324-1368.

b. Response to First Sub-Assignment of Error: The Hearings Official's decision was based on Policy 11, an applicable standard

Petitioners' First Assignment of Error is hopelessly unfocused, with bolded paragraphs at the beginning that do not reflect the bolded paragraphs within the body of the argument that would appear to divide the assignment of error into four parts. Intervenor will do their best to respond to the variety of arguments presented, haphazard as they have been set forth, by responding to the numbered and bolded paragraphs that occur throughout the First Assignment of Error.

The First bolded language presented by Petitioners is as follows:

"1. Policy 11 is not in the code's exhaustive list of standards for Forest Template Dwellings; it is implemented through the code; based on text and context and explicit language in the acknowledgment proceeding, it is not an independent, mandatory standard for Forest Template Dwellings. The Hearings Official's obligation is to make decisions based

[1] The *Nimpkish* record contained a DLCD Acknowledgment staff report dated June 29 and July 27, 1984, (R 2021-052 at 752-939) (header beginning on second page has both dates), and another staff report dated only dated July 19, 1984, R 2021-052 at 112-240 (header beginning on second page has only one date). All citations herein are contained within both of these documents, and Intervenors have not found any differences with the exception of the addition of the June 29 staff report into the document with both dates.

[2] Petitioners refer to this as the "Sept 17, 1984: DLCD Staff Report re acknowledgment," Petition at 27, but the correct date is September 12, 1984 and the Commission action occurred on September 13, 1984.

on the standards in the code. ORS 215.416(8)(a). Here, the decision was made based on an inapplicable standard."

Petition at 17 (bold in original). As noted above, this issue has been waived because the applicant never cited to, argued about, or quoted the language of ORS 215.416(8)(a).

Petitioners begin by citing caselaw about whether a comprehensive plan policy constitutes an approval standard, *see* Petition at 17-18, but never applies that caselaw to policy 11. Regardless, Intervenors here (and petitioners in *Nimpkish*) made that very argument to LUBA in *Nimpkish* and LUBA already decided that issue. This is nothing more than a re-hash of an already settled matter that was not appealed further. Intervenor included their Petition for Review from *Nimpkish* into the record and specifically argued this issue:

> "For a comprehensive plan to act as decision criteria, LUBA has determined that the text and context of the comprehensive plan must establish both (1) that the plan requirement is mandatory (rather than hortatory or aspirational) and (2) that the mandate must be applied directly as a permit approval standard for the permit decision on appeal. *Friends of the Hood River Waterfront v. City of Hood River,* 68 Or LUBA 459 (2013). Here, when coupled with the administrative and statutory provisions cited above, Flora and Fauna Policy 11's use of mandatory terms and that Policy 11 applies in circumstances where residential density exceeds the ODFW recommendations, Policy 11 must apply as an approval standard or criterion.
>
> The Lane County Rural Comprehensive Plan contains policies related to big game range, and Flora and Fauna policy 11 provides as follows:
>
> "*Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of*

> *the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.* The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

Appx 14; R 506. The two italicized sentences at the beginning of the policy are mandatory, using the word "shall" on two occasions and "will" and the operative command is that any density above the ODFW recommendation will result in a conflict that must be resolved through an ESEE analysis. The administrative rule cited is the old Goal 5 administrative rule, which contained the requirement for an ESEE analysis at the time the county plan was adopted."

R 2021-047 at 32-33. There is more to the argument, *see* R 2021-047 at 33-42, but, again, LUBA has already decided the issue raised here.

Petitioners move on to argue that "[t]he text of this code supports a conclusion that for this kind of application the relevant standards are to be found in the code, not in the plan." Petition at 18. Petitioners fail to address the operative administrative rules and statute that were the beginning of the analysis in *Nimpkish*, as noted in the LandWatch's Petition for Review:

> "Uses authorized in Forest Zones are set forth in OAR 660-006-0025 and statute, and OAR 660-006-0025(1)(d) provides for '[d]wellings authorized by ORS 215.705 to 215.757[,]' which includes forest template dwellings, the type of dwelling at the center of the challenged approval. *See* ORS 215.750. OAR 660-006-0025(6), in turn, provides that '[n]othing in this rule relieves governing bodies from complying with other requirements contained in the comprehensive plan or implementing ordinances such as the requirements addressing other resource values (e.g., Goal 5) that exist on forest lands.' *See also* ORS 215.416(4)(a); OAR 660-006-0027(6)(a) ('A proposed

> 'template' dwelling under this rule is not allowed ... if it is prohibited by or will not comply with the requirements of an acknowledged comprehensive plan, acknowledged land use regulations, or other provisions of law.'). On its face, this provision, which the Hearings Official fails to address, appears to acknowledge that comprehensive plan policies, and explicitly those comprehensive plan policies that implement Goal 5, apply to dwelling approvals and other uses in the forest zone, including requests for template dwellings."

R 31-32. Petitioners solely focus on the code but fail to address the provisions above that expressly state that the comprehensive plan policies (including those under Goal 5) are applicable. Petitioners allege that "the code includes no statement, suggestion, hint or room for discussion that any plan policy might also be a standard to be applied." Petition at 18. The problem with Petitioners' argument is that it fails to address the administrative rule provisions cited by the Petitioner in *Nimpkish* and specifically cited by LUBA in its decision. *See Nimpkish*, slip op at 8, n. 5 (citing OAR 660-006-0027(6)(a) and OAR 660-006-0025(6)). The mere fact that Lane County ignored its policy for almost four decades and failed to implement that policy through its code simply bolsters LUBA's decision in *Nimpkish* and Intervenor's arguments here that the policy itself is applicable and not found within the code. In other words, the County's willful ignorance of an applicable plan policy and subsequent refusal to implement that plan policy is not somehow evidence that the plan policy does not apply.

Petitioners also rely upon the purpose statement for the F-2 zone to somehow support its argument. Purpose statements are not approval criteria.

While the applicant alleges that the "standards listed in the code for Forest Template Dwellings are intended to protect Goal 5 wildlife resources, too," that is not what the purpose statement says. The purpose provision instead alleges that the purpose is, amongst other things, "to protect scenic resources and fish and wildlife habitat, and to maintain and improve the quality of air, water, and land resources of the county." The habitat here is not simply "wildlife habitat" but something more specific: Inventoried Major Big Game Range habitat. Throughout Lane County, there is a great deal of wildlife habitat, not just big game. Petitioners are once again jumping to conclusions. Regardless, the applicant fails to address, in any cursory or meaningful way, the administrative rule provisions cited above. *See* OAR 660-006-0027(6)(a) and OAR 660-006-0025(6). Without addressing these bases for applying the comprehensive plan, Petitioners' allegations miss the mark entirely. It is not surprising that the applicant does not find policy 11 in the code, and the reason for that is because the standard is in the comprehensive plan, as permitted by OAR 660-006-0027(6)(a) and OAR 660-006-0025(6). Indeed, Goal 5 comprehensive plan policies are directly referenced in OAR 660-006-0027(6)(a). While Petitioners make bare allegations about the County's intent to "incorporate density limits directly into the standards for Forest Template dwellings," the applicant again fails to demonstrate why it is legal error to find that authority in the above cited administrative rules,

and, furthermore, why LUBA should reconsider and overrule its holding in *Nimpkish*. After ignoring the text of policy 11 and the administrative rules cited above that were also cited in *Nimpkish*, Petitioners fault LUBA for allegedly "fail[ing] to follow the correct methodology to identify the applicable standards." Petition at 21. It is Petitioners who fail to follow the correct methodology.

Petitioners next analyze policy 11, focusing initially on the first sentence and more specifically the phrase "overall residential density." Petition at 22. Petitioners then allege that the "minimum lot size of 40/80 acres may be one plausible interpretation. However, it is not the only possible interpretation and is not likely the best interpretation." *Id.* The applicant is simply jumping to conclusions, untethered to the Working Paper, the language of the comprehensive plan, and so forth. The phrase "overall residential density" clearly refers to the densities listed in the working papers, and Petitioners fail to otherwise explain ODFW's 40/80 acre densities explicitly set forth in the working papers. For example, the working paper states, and LUBA cites to in *Nimpkish*, that the:

> "ODFW has recommended *overall* densities for Peripheral Big Game Range at one dwelling unit per 40 [acres]; for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: *overall residential density* greater than one dwelling unit/40 acres in Peripheral Range and * * * one dwelling unit/80 acres in Major Range conflicts with habitat for big game."

Nimpkish, slip op at 5, n.3 (emphasis added). Clearly, the phrase "overall residential density" used in policy 11 of the comprehensive plan and the phrases

"overall densities" and "overall residential density" used in the Working Papers refer to the same thing. Petitioners then point to the word "regions," and questions its use in the policy. LUBA resolved this issue in *Nimpkish*. As noted in the decision, which quotes the working papers, the original intent was that

> "[t]he County will be divided into regions convenient for planning purposes. These have not yet been determined but will probably result in 10-20 regions in the County.
>
> Within these regions, determinations will be made of acreages, number of existing residences, and additional number of residences allowable to still fall within the overall density level. Built upon and committed areas are subtracted out, as they are treated as Impacted Range. From the figure of remaining residences and acreage, a residential carrying capacity will be determined. This figure, or the ODFW figure of 40 or 80 acres, whichever is lesser, will be recommended in the region for residential density for big game purposes. This, along with other resource land requirements will be used to determine appropriate zoning in an area.
>
> If this figure is ever exceeded, it constitutes a conflict with Big Game Range. ESEE consequences must be determined and analyzed at that time. Prior to dividing the County into regions and making the above determinations, it is impossible to determine if conflicts will exist in any regions. The expectation, based on examining trial areas, is that the recommendations of ODFW can be incorporated without creating a conflict."

Nimpkish, slip op at 10-11, n. 7. LUBA next addressed the use of the term "regions":

> "The first sentence of RCP Goal 5, Flora and Fauna Policy 11, refers to the process that the county was supposed to follow, which included taking actions to identify '10-20 regions' and to 'base zoning by region on the overall residential densities or ODFW minimum parcel size recommendations.' *See* n. 7. All parties agree that, during the 36 years since its Goal 5 program was acknowledged, the county has never taken the steps described in the first sentence and has never created any 'regions' or

> 'base[d] zoning by region on the overall densities or ODFW minimum parcel size recommendations.
>
> * * *
>
> However, the county's failure to take the step of identifying regions and basing zoning by region on either overall residential densities or ODFW minimum parcel size recommendations does not mean that the county is absolved from protecting land included on the Big Game habitat Inventory as Major Big Game Range through the residential density recommendations referred to in RCP Goal 5, Flora and Fauna Policy 11, or that the density recommendations simply do not apply. Rather, the *second sentence* of the RCP Goal 5, Flora and Fauna Policy 11, remains operative, and it provides that '[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.' The second sentence is not tethered to or derivative of the first sentence, which envisions the creation of zoning areas that the county has never completed. The second sentence does not mention or refer to zoning. To find that the second sentence has no effect absent the creation of zoning areas would be to allow the count to fail to perform an action it assured LCDC it would perform in order to obtain acknowledgment of its goal 5 program, and it would have the effect of eliminating Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program. Moreover, the county must interpret a provision of the RCP that was adopted to implement its Goal 5 program, which protects Big Game Range from conflicting residential development through density standards, in a manner that is not inconsistent with Goal 5. ORS 197.829(1)(d)."

Nimpkish, slip op at 12-14. LUBA goes on to explain how "[t]his view is supported by language in DLCD's final staff report leading to acknowledgment of the county's Goal 5 program." *See id.* at 14.

Petitioners next turn to the phrase "that limit" in the second sentence and allege that "[c]ontrary to LUBA statement in *Nimpkish*, the second sentence is tethered to the first. 'That limit' refers to the 'overall residential density' in the

first sentence, which needs to be calculated by some methodology that is not stated in the policy." Petition at 22. There are a great deal of missteps and mistakes in the Petitioners' rationale. First, the context of the Hearings Official's decision in *Nimpkish* must be understood. There the Hearings Official determined that policy 11 only applied to rezones and land divisions. That is why LUBA stated that "[t]he second sentence is not tethered to or derivative of the first sentence, which envisions the creation of *zoning areas* [or regions] that the county has never completed." *Nimpkish,* slip op at 13. The "zoning areas" or "regions" that were never completed are not necessary to the second sentence because they residential density recommendations still apply, otherwise the County will not fully implement Goal 5. *See Nimpkish,* slip op at 12 ("All parties agree that, during the 36 years since its Goal 5 program was acknowledged, the county has never taken the steps described in the first sentence and has never created any 'regions' or 'base[d] zoning by region on the overall residential densities or ODFW minimum parcel size recommendations."), and an interpretation that is contrary to Goal 5 would be contrary to law, *id.* at 13 ("the county must interpret a provision of the RCP that was adopted to implement its Goal 5 program, which protects Big Game Range from conflicting residential development through density standards, in a manner that is not inconsistent with Goal 5. ORS 197.829(1)(d)."). The working papers demonstrate that the "overall residential densities" are the 40/80 acres-per-

dwelling standard referenced in the working papers. The methodology is simple. If, in Major Big Game habitat, a dwelling is proposed on a property that is less than 80 acres, a conflict exists that must be resolved through an ESEE analysis.

Next, Petitioners refer to the first sentence and then lead into a "discussion in the Second Assignment that looks at the total forest zone acreage and the total units in the forest zones to document the average or 'overall residential density.'" Petition at 23. This issue is the focus of the Second Assignment of Error and will be addressed there fully. Petitioners are simply making up their own standards at this point, alleging that the "overall residential density," despite what is said in the working papers, is something that has no reference in any documentation. Petitioners' allegations are entirely speculative, and have no basis in any action or policy of Lane County.

Petitioners address the second sentence of policy 11, stating that "[t]he second sentence established the threshold of density that constitutes a conflict and triggers an ESEE." Petition at 23. Petitioners are generally correct but the threshold density is well understood and it is set out in the working papers: 40 acres per dwelling in Peripheral Big Game Range and 80 acres per dwelling in Major Big Game Range. R 2021-052 at 1241 ("The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one

dwelling unit per 40 acres; for Major Big Game range at one dwelling unit per 80 acres."). Petitioners have no explanation for those densities and that is a fatal error in their argument.

The applicant also cites some vague violation of ORS 215.416.(8)(a), a statutory provision never cited or quoted below. The argument appears to be that ORS 215.416(8)(a) was violated because the "plan policy was not identified by the code in the list of standards in LC 16.211 that apply to Forest Template Dwelling applications." Petition at 23-24. As noted above, Petitioners fail to challenge the applicability of OAR 660-006-0027(6)(a) and OAR 660-006-0025(6) and further fail to demonstrate why that provision – by its plain terms – prohibits the application of mandatory policies intended to implement Goal 5. Petitioners' argument is unavailing because policy 11 is set forth in the comprehensive plan. The mere fact that the County and the many applicants over the years have ignored and avoided compliance does not assist the Petitioners' arguments. Moreover, there was no question whether the County was required to apply policy 11 to the subject application in light of the *Nimpkish* decision, and, therefore, Petitioners' arguments related to ORS 215.416(8)(a) have no merit.

c. <u>Response to Second and Third Sub-Assignments of Error: The full record was before LUBA in Nimpkish and Petitioners offer no new evidence. The arguments are the same as those presented to LUBA in Nimpkish.</u>

Petitioners next move on to what appears to be their Second and Third assignments of error in their second argument under the First Assignment of Error:

> "2. The County erred in applying the *Nimpkish* holding, which said the County had committed to the DLCD that it would apply the ODFW density standards directly to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true.
>
> 3. The county erred in applying the *Nimpkish* holding, which said that the DLCD understood it was acknowledging direct application of ODFW density standards to dwelling decisions. The fuller record of the acknowledgment proceeding shows the contrary is true."

Petition at 24.

First, Petitioners allege that LUBA quoted from something other than the "Final Staff Report." First, it is without question that the June/July and September staff reports were in the record in *Nimpkish*, just as they are here. *See* R 2021-052 at 752-939 (DLCD staff report June 29/July 19, 1984); R 2021-052 at 1324-1368 (September 12, 1984 staff report). Petitioners ascribe no significance to any other staff reports. For example, for the August 17, 1984 staff report, Petitioners merely allege that "Report says DLCD staff met with county staff on August 8; IOTC 2.d is still outstanding." Petition at 27. Second, LUBA was well aware of the final staff report, dated September 12, 1984, in *Nimpkish*. *See* R 2021-052 at 81 (quoting Hearings Official's findings in *Nimpkish* referring to the September 12, 1984, DLCD compliance report). In fact, petitioners in *Nimpkish* cited to and quoted from the September 12, 1984, report. *See* R 2021-052 at 90 ("The DLCD

Supplemental Staff Report (September 12, 1984) provides as follows [and quoting 2.d.]. Third, Petitioners ascribe no significance to that misstatement, and Petitioners have not pointed to anything in the September staff report that changes the conclusion about ODFW's "recommended densities as the approach to resolve conflicts between dwellings and game range." R 2021-052 at 908 (R 2021-052 at 146); *id.* at 912 (R 2021-052 at 150) ("ODFW is correct that its recommended density standards ... would constitute an approach to resolve and/or prevent conflicts between dwellings and big game."). More importantly, DLCD noted that ODFW's objections required *both density standards and siting or clustering requirements*: "ODFW objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, *the County's F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones*." R 2021-052 at 908 (R 2021-052 at 146-147) (emphasis added). DLCD also noted that:

> "ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, nor do they set forth siting or clustering requirements. Without siting and clustering requirements, the minim lot sizes in the F-1, and F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable. This is a problem in the F-2 and EFU zones in particular, but not in the F-1 zone, since, in general, dwellings are not permitted in that zone."

R 2021-052 at 912 (R 2021-052 at 150); *id.* ("Densities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County

has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made."). The September staff report did not take back or negate any of what was said above. Rather, it just required that one-half of protections be implemented in the code through siting standards and the other half would be implemented through the ODFW's residential density recommendations.

Petitioners' pages of bullet points purport to summarize the staff reports, many without citations to the record. *See* Petition at 26-29. Again, as noted above, none of what the Petitioner points to here is different than what the parties addressed in *Nimpkish*. For example, Petitioners simply rehash arguments about 2.d. and clustering already set forth in *Nimpkish*. *See* R 2021-052 at 90 (petition for review in *Nimpkish*, addressing 2.d. requirement, stating that "[2.d.] appl[ies] to the last sentence of Policy 11, which expressly address 'siting requirements: The county shall work with [ODFW] officials to prevent conflicts between development and Big Game range through land use regulation in resource areas, *siting requirements* and similar activities which are already a part of the County's rural resources zoning program.'"); R 2021-052 at 90 ("In addition to Policy 11 and the ODFW recommendations, there are also, however, the siting standards that were carried forward as part of the acknowledgment process."); R 2021-052 at 587, 594 (response brief in *Nimpkish* addressing requirement 2.d.). The petitioner

in *Nimpkish* alleged that "[t]hese siting standards apply regardless of whether the particular property proposed for a dwelling is less than or greater than 80 acres, but if the property proposed for a dwelling is less than the residential density, then the first two sentences of Policy 11 serve to carry out the program to achieve Goal 5 by requiring an ESEE analysis. In other words, together, the adopted Policy 11 and the siting standards carry out Goal 5 for big game range." R 2021-052 at 91-92. DLCD clearly noted, as pointed out by Petitioner, that "[d]ensities above those recommended by ODFW would certainly constitute a conflict with big game habitat. The County has, through this policy, however, simply indicated that it intends to resolve them by applying the entire Goal 5 process when such proposals are made." R 92. As it relates to clustering, LUBA correctly determined that:

> "[t]he siting and clustering standards in LC 16.211(5)(a) do not quantify a residential density standard. A requirement to site dwellings '[n]ear dwellings on other tracts' is not a density standard. LC 16.211(5)(a)(i). Nor do the rest of the F-2 zone provisions support the hearings officer's interpretation. The use table for the F-2 zone lists six types of allowed dwellings, five of which do not require any particular parcel size. The F-2 zone does not provide any residential density standard at all."

Nimpkish, slip op at 15. The issues about 2.d., siting standards, clustering requirements, and so forth have all been briefed and resolved by LUBA.

Petitioners are essentially asking LUBA to reconsider their decision in *Nimpkish* because they have not pointed to anything new that was not already raised or addressed in *Nimpkish*. As LUBA has recently held, LUBA lacks the

ability to reconsider a decision. *See Roninger v. Klamath County*, __ Or LUBA __ (LUBA No. 2021-027, July 28, 2021), slip op at 3 ("We do not have authority to reconsider our final decision in light of petitioner's arguments in this appeal. *Sarti v. City of Lake Oswego,* 20 Or LUBA 562 (1991) (explaining that LUBA lacks statutory authority to reconsider its final decision)."). Even if this case is not governed by those cases, the applicant never accounts for the administrative rules allowing plan policies to apply, fails to demonstrate how the September staff report walked back any of the density standard requirements, resolution of conflicts through an ESEE analysis, and so forth. Petitioners focus on only half of the protections: siting standards and clustering requirements. Petitioners fail to give any effect to the recommended density standards that are addressed in the June/July staff report, even though the requirement is expressly included in policy 11. If Petitioners were correct, the particular language in policy 11 would never have been included.

d. Response to Fourth Sub-Assignment of Error: Petitioners' allegations about the Flora and Fauna Working Papers and the administrative rules are incorrect

Petitioners Fourth Sub-Assignment of Error under the First Assignment of Error focuses on the Working Papers and, finally, the administrative rules and is set forth as follows:

"4. Other aids *Nimpkish* relied upon to read Policy 11 into the standards for Forest Template Dwellings are not a basis for amending a clear list of standards through interpretation."

Petition at 29. Petitioners point to footnote 7 in *Nimpkish*, *see Nimpkish,* slip op at 10-11, and allege that "the language from the 1982 working paper quoted in *Nimpkish* 7 was completely stricken from the working paper by the November 1983 'Flora and Fauna Working Paper Addendum.'" Petition at 30. In short, and it is dealt with in more detail below, Petitioners misread the instructions to delete the entirety of the paragraph beginning on page 24 and the entirety of page 25, instead of deleting the text of the paragraph beginning on page 24 and the remainder of the paragraph on page 25. *See* R 2021-052 at 48 ( ) ("DELETE text beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place[.]").

First, this same issue was raised in *Nimpkish* in Mr. Farthing's Response Brief, and, in fact, Mr. Farthing quoted the exact same provision from the 1984 Addendum to the Working Papers that Petitioners here quote:

> "Also cancelled was the regional approach to forestland zoning that had been previously proposed. Rec 542-543, 573. Instead, it was replaced with the adoption of the following policy in the Addendum to the Flora and Fauna Working Paper:
>
> > J. DELETE text: beginning with the last paragraph on page 24 of the Working Paper through the remainder of text on page 25, and ADD the following in its place:

Although this is a useful index, officials of the ODFW stress the fact that a mere 'numbers game' is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists.

A prime example is that of 'clustering' dwelling units in Peripheral or Major Range areas – siting dwellings on large tracts of timber or agricultural land near lot lines, near roads, and near one another. This leaves the balance of the land unimpacted.

The means to prevent conflict is appropriate zoning and siting regulations. As a general rule, the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirements of Peripheral Range. Since commercial timber zoning is very restrictive of dwelling unit placement, it is unlikely that conflicts will occur.

Within Developed and Committed areas. ODFW officials are examining the utility of continuing to designate some of these lands as either Peripheral or Major Range. Developed and Committed areas should be considered as Impacted, and contiguous uses permitted.

The County should continue to work with the ODFW to resolve the issue of Big Game Range designation and protection in a mutually acceptable manner – including the involvement of that agency in land use regulation development. If the zoning procedure described above does not succeed in pre-empting conflicts with the resource, it will be necessary for the County to go through the ESEE process and determine new ways of dealing with the conflicts. The process should follow the Goal 5 Rule format, and center on weighing the relative benefits of dwelling unit construction against those of Big Game Range maintenance.

Policies concerning this issue are proposed in the concluding section of this Working Paper.'

(Emphasis supplied) Rec 573."

See R 2021-052 at 588-590. The above quote is the same quote that occurs at Petitioners' Appendix 40 that Petitioners highlight in the argument about deleted text. Petitioners, in their reply in *Nimpkish*, addressed this issue, stating:

> "The Response Brief focuses on amendments to the Working Paper, Response at 8-9, but those amendments do not delete the density recommendations on page 24 and only deletes a single paragraph that spans page 24 and 25 (R 542-543). Regardless, the added text explicitly states that "the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirements of Peripheral Range," but that does not account for the majority of template dwellings, including the one at issue here, that exist on dramatically smaller lots. In fact, Lane County has no minimum acreage size for a forest template dwelling. *See Cattoche,* slip op at 21 ("the county did not quantify a residential density allowed in the F-2 zone"). When those density recommendations are not met, Policy 11 plainly requires an ESEE analysis to resolve the conflict. Siting standards and clustering have the potential resolve the conflict *when the density recommendations are met.* More importantly, the Working Papers did not change Policy 11's text."

Intervenors' Appendix at 6-7 (LandWatch Reply Brief in *Nimpkish*). Intervenors 1,000 Friends, in *Nimpkish*, also concluded in their reply brief that:

> "[p]age 14 of the addendum replaces the last paragraph on page 24 and the 'remainder of the text on page 25' left over from the last paragraph on page 24. The rest of page 25 remains in the Working Paper. And even if that were not the case, DLCD and LCDC relied on the plain text of Policy 11 and the amended Working Paper to conclude that Policy 11 triggers Goal 5 when a proposal exceeds ODFW's recommended dwelling densities in big game habitat. The applicant's proposal exceeds those limits in this case."

Intervenor's Appendix at 14-15 (1000 Friends Reply Brief in *Nimpkish*). As explained in *Nimpkish* above and below, the direction was to delete the entirety of the text from the paragraph that spans pages 24-25 of the Working Paper. Again,

these issues were already presented to LUBA, and LUBA resolved those issues. Petitioners offer nothing new.

Second, the copy of the Working Paper used by Petitioners contains handwritten notes, alleging "deleted in addendum" (Petitioners' App-37) and "deleted by addendum" (App-38). LUBA should be mindful of those unauthorized additions.

Third, and most importantly, Petitioners completely misread the direction from the 1984 Working Paper Addendum. The 1984 Addendum states: "DELETE text beginning with the paragraph on page 24 of the Working Paper through the remainder of the text on page 25, and ADD the following in its place[.]" R 2021-052 at 48 (Petitioner's App-40). As noted above and in the reply brief in *Nimpkish*, the direction was to delete the paragraph that began on page 24 and the remainder of the paragraph on page 25, not the entirety of page 25. Regardless, the language to be added in place of the deleted paragraph again specifically addresses the 40/80-acre density recommendations. Clearly, those figures were not intended to be lost in the acknowledgment process. Moreover, the language in policy 11 remained unchanged.

Fourth, under Petitioners' reading, if there was no requirement for a a density standard, then there would be no appreciable difference between Major and Peripheral big game range because siting standards and clustering requirements

apply to both. There would be no additional protection afforded Major Big Game over Peripheral Big Game as there is with ODFW's residential density recommendations. Petitioners are simply wrong to assume that the direction was to delete everything rather than the identified paragraph that spans pages 24-25 of the working paper. *See* R 2021-052 at 522-523 (Petitioner's App-37-38). Petitioners are incorrect to argue that "the County chose to rely on clustering and siting standards, and the LCDC acknowledged that choice, as implemented by the Count, as consistent with Goal 5." Petition at 31. This ignores the text of policy 11, the existing ODFW recommendations, and fails to differentiate, in any way, between the Major and Peripheral ranges inventoried by the County, which would render the difference utterly meaningless.

Petitioners finally turn their focus on OAR 660-006-0025(6) ("[n]othing in this rule relieves governing bodies from complying with other requirements contained in the comprehensive plan or implementing ordinances such as the requirements addressing other resource values (e.g., Goal 5) that exist on forest lands.") and OAR 660-006-0027(6)(a) ("A proposed 'template' dwelling under this rule is not allowed … if it is prohibited by or will not comply with the requirements of an acknowledged comprehensive plan, acknowledged land use regulations, or other provisions of law."). The applicant's only defense against these provisions is that "the acknowledged code in this instance is a complete list

of standards for review of Forest Template Dwellings." Petition at 32. In light of Policy 11, clearly, it is not, and the applicant simply ignores the plain text of the administrative rules, and fails to otherwise account for their explicit reference to Goal 5 and Forest Template Dwellings.

Petitioners move on to their "conclusion" to the First Assignment of Error, repeating their arguments. *See* Petition at 32-34. Intervenors will respond to each of the six concluding paragraphs. First, Policy 11 was acknowledged and it contains specific language that residential density recommendations for big game would require an ESEE analysis if there is a conflict. The Working Papers explicitly identify when the conflict occurs:

> "The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game Range at one dwelling unit per 40 acres; for Major Big Game Range at one dwelling unit per 80 acres. * * * to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range * * * conflicts with habitat for big game."

R 2021-052 at 522 (Flora and Fauna Draft Working Paper, Page 24). Petitioners fail to explain away these requirements.

Second, the June/July staff report that identified the ESEE analysis as the means to resolve conflicts when ODFW's recommendations are exceeded was never overruled in the September staff report. The clustering/siting requirements were half of the protections and the density recommendations were the other half of the protections. *See* R 2021-052 at 908 (R 2021-052 at 146-147): "ODFW

objects because, contrary to Policy 11 which adopts ODFW's density recommendations in big game habitat areas, *the County's F-1 and F-2 zones do not provide the siting or clustering requirements that need to accompany the density levels allowed in those zones*." (emphasis added). If the density recommendations were not included, then the difference between Major and Peripheral Big Game Range would be meaningless because clustering/siting requirements would apply to both without any greater protections for Major Big Game Range.

Third, the applicant focuses only on the September staff report's with the "option of minimum lot sizes or clustering standards" and ignores the entirety of the June/July staff report. Clustering standards alone are not adequate to implement Policy 11 and comply with Goal 5. Clustering/siting standards are simply half of the protections, as indicated by the June/July staff reports, and there would be no additional protections for Major Big Game Range as compared to Peripheral Big Game Range if only clustering/siting requirements were enough to implement policy 11 and comply with Goal 5.

Petitioners Fourth argument simply repeats the arguments above.

Fifth, the applicant has not identified any significant issue with identifying the June/July staff report as the final report. LUBA had before it the September staff report and all parties addressed the September report. A simple misstatement without any significance is not subject to reversal or remand.

Petitioners final concluding argument is that LUBA was "way off track … to conclude that Policy 11 had to be applied directly for any part of it to be given effect." LUBA's decision was not appealed, and without the density recommendations applying to Major and Peripheral Big Game Range, there would be no meaningful difference in protections for these two different Big Game Ranges. Moreover, the applicant simply ignores the June/July staff report.

Petitioners has not provided a single argument that was not already addressed in *Nimpkish*, and the LUBA should not accept Petitioners' invitation to overrule its prior ruling, assuming that is even possible.

C. RESPONSE TO SECOND ASSIGNMENT OF ERROR –.

1. Preservation of assignment of error

Intervenor does not contest preservation because this issue constituted the bulk of the arguments below. Unlike the issue presented in the First Assignment of Error, the Second Assignment of Error was squarely raised below.

2. Standard of review

Intervenor does not contest the standard of review.

3. Response to Petitioners' Assignment of Error

As to Petitioners' Second Assignment of Error, Petitioners attempt to create their own regions of the County, instead of using ODFW's explicit recommendations, that are nothing more than *ad hoc* calculations that have no

support whatsoever in the text, context, or legislative history. They are purely of the Petitioners' own machinations. In response, the Hearings Official reviewed the text, context, and caselaw, and rejected Petitioners' arguments, ultimately agreeing with Intervenor that in Big Game Range, an applicant for a forest template dwelling must prepare an ESEE analysis if the proposed dwelling exceeds ODFW's recommended residential densities.

The Hearings Official also determined that "[e]ven if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that he could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan." R 2021-047 at 8. Analogizing to Goal 10's buildable lands inventory,

> "which must be incorporated into the comprehensive plan, so that future applicants are using the same data.
>
> As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study. Until that work is completed, Policy 11 makes clear, any density above the ODFW recommended density limits 'shall be considered to conflict with Goal 5' and will be allowed only following an ESEE analysis."

R 2021-047 at 9. In response to Policy 11's text referring to "Oregon Department of Fish and Wildlife recommendations," the applicant turns to the dictionary, instead of turning to ODFW's recommendations contained in the working papers

that unequivocally identify density standards for Major and Peripheral Big Game Range. The mere fact that the County never identified the regions of the County does not absolve the County from complying with Goal 5. Petitioners first step is a misstep. Petitioners focus on "overall" while ignoring any of the other text, including "Oregon Department of Fish and Wildlife recommendations," is telling. Clearly, reference to the agency and its recommendations would indicate that the agency made some recommendations on density, and it is undisputed that those recommendations are included in the Flora and Fauna Working Papers that Petitioners cite to in their Petition at page 37. Petitioners concede that Policy 11's reference to "overall residential density" matches what is in the Working Papers. Petition at 37. Petitioners allege that there is no reference to "minimum lot size for any dwelling" but that is because residential density recommendations and clustering/siting requirements constitute the protections for Big Game Range. The County never implemented minimum lot sizes for the F-2 zone, as acknowledged in *Nimpkish* and *Cattoche*. Petitioners have not pointed to anything that compels the use of an *ad hoc* density denominator that has no basis in the Comprehensive Plan, Working Papers, or the DLCD staff reports.

Petitioners next attempt to pull some support from the Working Paper addendum by pointing to a paragraph that acknowledges that the 40/80-acre density standard is a "useful index," but "a mere 'numbers game' is not the

optimum manner to deal with conflicts to the Big Game Range resource." Petition at 38. This is not a rejection of the density standards because (1) it does not reject anything from the June/July staff report about conflicts, density recommendations, and ESEE analysis to resolve the conflict, and (2) the same page references the 40/80-acre zones that would apply to Peripheral and Major Big Game Range, respectively. Petitioners ignore that paragraph because it does not support Petitioners' narrative.

Petitioners present two sentences addressing the "acknowledgment reports" and simply dismisses the objections by ODFW – the agency that formulated residential density recommendations – and 1000 Friends objections to Policy 11. Petitioners make the far-fetched argument that the "summary sheds no light on how to operationalize 'overall," despite the fact that they are ODFW's recommendations. Petitioners refuse to see what is right in front of them.

Petitioners next return to the code in an attempt to resolve alleged ambiguities in the code. Petition at 38. In doing so, Petitioners rely, again, on the acknowledgment review that it has already raised numerous times. The density standards were already addressed and the objections resolved in the June/July staff report. That was the first half of the Big Game protections. The only remaining issue was whether the clustering/siting requirements would be implemented in the code, which was the second half of the Big Game protections. Again, without the

density recommendations, there would be no difference in protections for Major and Peripheral Big Game Range. That difference would be rendered meaningless under Petitioners' unfounded theory.

Petitioners next allege that the "[t]ext, context and legislative history indicate that Policy 11 does not state a minimum lot size standard for a dwelling." Petition at 39. Petitioners attempt to confuse and conflate by using "minimum lot size" and "residential density recommendations." The former was never implemented, and the residential density recommendations are contained in the Working Papers and referenced in Policy 11.

Intervenors believe that the ultimate conclusion reached by the Hearings Official is the same as the statement in *Nimpkish* from LUBA that the property at issue is the relevant density denominator:

> "There is no dispute that the density of *the subject property* with the proposed dwelling would exceed one dwelling unit per 80 acres. Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-15-000."

Nimpkish, slip op at 15 (emphasis added). While Intervenors believe that LUBA's conclusion resolves the issue, Intervenors also agree with and incorporate the Hearings Official's analysis. Petitioners do not distinguish *Wetherell v. Douglas County,* 44 Or LUBA 745, 756 (2003), in any meaningful manner. Instead,

Petitioners return to the word "overall" to the exclusion of virtually all other text in Policy 11. *See* Petition at 40.

Petitioners next argue that their interpretation is most consistent with the "overall residential density" standard. *See* Petition at 40-41. Again, Petitioners ignore all other language, including the identification of the agency that provides the density recommendations. Instead of looking to ODFW's density recommendations, Petitioners concoct their own density recommendations. *See* Petition at 40-41. Petitioners' density recommendations do not arise from anything other than the isolated word "overall," and Petitioners ignore all text, context, and caselaw that LUBA, the Hearings Official, and Intervenors rely upon.

D. RESPONSE TO THIRD ASSIGNMENT OF ERROR – The Hearings Official did not err in finding that Petitioners could not, consistent with Goal 2, aggregate plan data to demonstrate compliance with Policy 11, absent a plan amendment.

1. Preservation of assignment of error

Intervenor does not contest preservation.

2. Standard of review

Intervenor does not contest the standard of review.

3. Response to Petitioners' Arguments

As they must, Petitioners next turn to the Hearings Official's alternative holding cited above, related to Goal 2. Petitioners allege that "[n]o one takes issue with the source or the quality of the data or the math," Petition at 41, but

Intervenors and the Hearings Official take issue with the applicability of Petitioners *ad hoc* methodology that has no basis in the Comprehensive Plan, Working Papers, or Acknowledgment staff reports. Petitioners ask LUBA to ignore Policy 11's text and the Working Papers' express ODFW residential density recommendations, and, instead, approve Petitioners' methodology based entirely on a single word: "overall." While Petitioners call the Hearings Official's rationale "nonsense," Petition at 42, Intervenors believe that Petitioners' unsupported methodology is more applicable to that term.

Petitioners again focus exclusively on the term "overall" to the exclusion of all other text in Policy 11. That alone should demonstrate that Petitioners' theory is misplaced and without merit. The Hearings Official correctly understood that any such density standard must originate from the comprehensive plan (and ODFW), and there is simply nothing in Petitioners' theory that originates from the Comprehensive Plan with the exception of a single, isolated word. Petitioners allege that "'[o]verall residential density' has a meaning that can be operationalized with the plan as is," but, again, that ignores that the "overall residential density" is qualified by the phrase "Oregon Department of Fish and Wildlife recommendations on overall residential density." With that qualifying information, it is readily apparent that the acknowledged policy 11 contemplates a particular recommendation from ODFW, and that density recommendation is

unequivocally found within the Working Papers, as has exhaustively been demonstrated both here and in *Nimpkish*. An "adequate factual basis for the policy" exists because the ODFW recommended density referred to in the Policy is found in Working Papers. Petitioners do not address the density listed in the Working Papers and that failure is fatal to their argument. Petitioners cannot introduce a density without addressing the ODFW's residential density recommendations that are referenced *in the Comprehensive Plan.* It is axiomatic that if Petitioners want to include a density standard that is not found in or referenced in the Comprehensive Plan, then a comprehensive plan amendment would have to be promulgated to introduce a new density standard and determine that it is compatible with the requirements Goal 5. Petitioners conclude that the "Hearings Official has not explained why any of this effort runs afoul of Goal 2." Petition at 45. To the contrary, the Hearings Official spent two pages of her decision demonstrating why introducing a density standard that has no basis in the Comprehensive Plan, the Working Papers, or the Acknowledgment staff reports is not compatible with Goal 2, and, in the absence of "regional study" that was initially contemplated, "Policy 11 makes clear, any density above the ODFW recommended density limits 'shall be considered to conflict with Goal 5' and will be allowed only following an ESEE analysis." R 2021-052 at 9 (Petitioners' App-8).

VI. CONCLUSION

Intervenor respectfully requests that LUBA affirm the County's decision.

Respectfully submitted this 2nd day of August, 2021.

I. Reply Brief

A. REPLY TO FIRST ASSIGNMENT OF ERROR

The Response Brief half-heartedly and repeatedly alleges that Policy 11 should not require an ESEE analysis because that has not happened for 36 years. (Response Brief at 3, 4, 5, 6, 8 etc.). It should also be known that even preparing ESEE analyses in the context of plan amendments and zone changes is only a recent phenomenon in Lane County. Simply put, past unlawful practice and alleged backroom deals (or "grand bargain[s]" (Response at 13)) at the "11th hour" that are only known to a handful of individuals are not dispositive.[1] Notably, the allegations about the "grand bargain" are not evidenced in the acknowledgment staff reports and orders, and, most importantly, there is no evidence of them in the comprehensive plan. Instead of following the alleged backroom deals known only to a few planners, Petitioners believe the goals, statutes, rules, and local criteria (including the comprehensive plan) should guide the outcome here.

The Response Brief alleges that there is "no mention of Policy 11" in the implementation of the F-2 provisions, yet, there is Policy 11 in the comprehensive plan and OAR 660-006-0025(6), ORS 215.416(4)(a), and OAR 660-006-0027(6)(a) ("A proposed 'template' dwelling under this rule is not allowed ... if it

[1] Oregon's land use system is not contingent upon backroom deals and grand bargains that are hidden from the public and only know by a few former planners now working as development consultants.

is prohibited by or will not comply with the requirements of an acknowledged comprehensive plan, acknowledged land use regulations, or other provisions of law."). These provisions are undeniably state law and the decision-maker here is not the County Board; therefore, *Siporen* deference does not apply to this case.

Petitioner argues that the 1984 acknowledgement disposes of any and all requirements of Policy 11. Response 6-8. Petitioner does not question that the third sentence is implemented by adopted land use regulations for siting standards. However, that third sentence does not account for the mandate to use ODFW density recommendations to determine conflicts and then explicitly use the ESEE analysis process to resolve that conflict, *as set forth in the first and second sentence*. That is the problem for both the Intervenor and the Hearings Official's findings: they fail to account for and therefore misapply Policy 11. In other words, there is more to Policy 11 than what is implemented, and, coupled with the statutes and rules, the first and second sentences apply directly to proposals for template dwellings if they exceed the density standards, only to be resolved by an ESEE analysis. The Response Brief fails to point to any land use regulation that implements the first and second sentence of Policy 11.

The Response relies upon the recollections of former County planners who are now development consultants themselves. LUBA has previously disagreed with the planners in their recollections in other Lane County Goal 5 cases. *See*

Save TV Butte v. Lane County, __ Or LUBA __ (LUBA No. 201-031, Jan. 8, 2018) (LUBA disagreeing with planner that alleged County did not designate big game habitat as 1C significant). Inside information of backroom deals should be treated with skepticism, especially when compared with the actual acknowledgment orders and ultimately the comprehensive plan that was adopted. Policy 11 was adopted; and the Response Brief ignores Policy 11's first two sentences.

The Response Brief focuses on amendments to the Working Paper, Response at 8-9, but those amendments do not delete the density recommendations on page 24 and only deletes a single paragraph that spans page 24 and 25 (R 542-543). Regardless, the added text explicitly states that "the County's 80-acre forest land zone will satisfy the requirements of Major Range, and the 40-acre zone will satisfy the requirements of Peripheral Range," but that does not account for the majority of template dwellings, including the one at issue here, that exist on dramatically smaller lots. In fact, Lane County has no minimum acreage size for a forest template dwelling. *See Cattoche,* slip op at 21 ("the county did not quantify a residential density allowed in the F-2 zone"). When those density recommendations are not met, Policy 11 plainly requires an ESEE analysis to resolve the conflict. Siting standards and clustering have the potential resolve the conflict *when the density recommendations are met.* More importantly, the Working Papers did not change Policy 11's text.

The Response Brief also attempts to rely on a separate Hearings Official decision that differed in its analysis. Response 16. That decision was not challenged, nor is it at issue here.

B. REPLY TO SECOND ASSIGNMENT OF ERROR

The Response Brief attempts to read a "feasibility" finding into the decision, but the decision does not contain such a finding. Moreover, it is Mr. Remboldt, the geotechnical consultant, that determined that "a more comprehensive evaluation (Level II) when the actual development is proposed" is necessary because the "development is within a very high landslide hazard area[, which] is an indication that that potential development problems may exist." Appx 11 (R12). If that is so, then there is good reason that there was no feasibility finding: because such a finding was not justified absent a more comprehensive geotechnical evaluation. That Level II report is intended to ensure that the geohazard criteria are satisfied, but Petitioners have no opportunity to challenge whether the report *does, in fact, satisfy the criteria*. The very fact that building inspector is looking for problems that would require restrictions is evidence of discretionary decision-making not suitable for a building official.

C. REPLY TO SECOND ASSIGNMENT OF ERROR

If the prohibition on placing more than one template dwelling on a tract can be so easily avoided by splitting up the tract, while retaining control over the tract,

then the Hearings Official's interpretation is contrary to the underlying policy and purpose of ORS 215.750(4)(c) and its local implementing provision, then that interpretation cannot be affirmed.

II. CONCLUSION

Petitioner respectfully requests that LUBA reverse or remand the County's decision.

Respectfully submitted this 3rd day of November, 2020.

Attorney for Intervenor-Respondent

Intervenor-Respondent's (the applicant) Response mischaracterizes the timing and significance of the amendments to the flora and fauna working paper in the 1983 addendum. The applicant also misinterprets the extent of the amendment. R-573 (Addendum 14).

The county created the November 1983 addendum (R-558-579) before the "waning days of the summer of 1984." Resp-LandWatch 8:8-12; R-559. The 1983 addendum was attached to DLCD's 1984 June/July staff report. R-56; *see* R-201 (citing identified primary conflict from "Working Paper p.24" and quoting "Addendum, p.14"). The changes to the working paper were not part of some last-minute deal, and they did not change the text of Policy 11. *Compare* R-202, 332 and App-3.

Siting requirements were part of Policy 11 from the beginning. R-202. They were not implemented as part of a last-minute compromise for the F-1 zone. Resp-LandWatch 8:18-20. In its first report, DLCD understood that "the F-1 zone does not allow dwellings." R-206, 336. And referring to the last sentence in Policy 11, objectors pointed out "that the... Addendum and Policy 11 prescribe clustering and siting standards, but these are not carried out in the F-2 zone." R-209, 339 (citing addendum 14).

In its response to objections, DLCD recognized that the lack of siting requirements was "a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone." R-213. The county addressed that objection by proposing clustering provisions for dwellings in the F-2 zone. R-649-50. In its September report, DLCD concluded that siting requirement had been met. R-650. The applicant's proposed spin on events is simply wrong. The resolution of that objection did not involve some grand compromise related to the F-1 zone.

Nothing in the applicant's Response challenges the fact that ODFW's recommended densities define when a conflict occurs in big game habitat. R-542 (Working Paper 24). Nothing changes the fact that the minimum parcel sizes in the F-2 do not address overall dwelling densities. And nothing in the applicant's Response challenges the plain language of the first two sentences of Policy 11, which as DLCD recognized in its staff report, require the county to address "[d]ensities above those recommended by ODFW" by "applying the entire Goal 5 process when such proposals are made." R-212-213. The county did not address the objections to the first two sentences of Policy 11 after

DLCD's June/July staff report, because DLCD concluded that Policy 11 complied with Goal 5. R-213.

Instead of adopting ODFW's density standards directly into its resource zones—which "would constitute an approach to resolve and/or prevent conflicts between dwellings and big game habitat"—the county chose to choose to rely on the process outlined in Policy 11. *See* App-5-6 (Excerpt from Linn County Comprehensive Plan, showing example of county that implemented DLCD density standards in its resource zones). That policy requires implementing measures to establish regions, which Lane County "still needs to adopt." R-212. That was true in 1984, and it is true today. In 1996, Lane County proposed but ultimately postponed addressing density conflicts in big game habitat. R-404. Until it is fully implemented, Policy 11, requires the county to address proposals that exceed ODFW density limits using the Goal 5 ESEE process.

Finally, the applicant is wrong about the extent of the amendment to the Working Paper in the November 1983 addendum. Page 14 of the addendum replaces the last paragraph on page 24 and the "remainder of the text on page 25" left over from the last paragraph on page 24. The

rest of page 25 remains in the Working Paper. And even if that were not the case, DLCD and LCDC relied on the plain text of Policy 11 and the amended Working Paper to conclude that Policy 11 triggers Goal 5 when a proposal exceeds ODFW's recommended dwelling densities in big game habitat. The applicant's proposal exceeds those limits in this case.

RE: **New Conference Call Instructions for Oral Argument**
King et al v. Lane County
LUBA No. 2021-047/052

The oral argument that is scheduled for August 24, 2021 at 1:00 PM will be held via telephone conference.

Please be advised the conference call instructions have changed. Please call **844-766-2282** and enter the access code of **620100** to participate in the conference call.

Respondent will arrange for any oversize exhibits listed in the record to be transmitted to the board prior to oral argument.

OAR 661-010-0040(3) provides that "A party shall seek the consent of other parties before requesting a change in the scheduled time or date for oral argument." If you need to request a change to the date or time scheduled for oral argument, please contact LUBA by phone or email to inquire about available dates and times in advance of requesting a change. LUBA has a busy docket and cannot guarantee that your preferred date and/or time can be accommodated, but will provide you with available dates and times.

I. PETITIONERS' STANDING 1

II. STATEMENT OF THE CASE 1

A. Nature of the Land Use Decision and Relief Sought 1

B. Summary of Arguments 3

C. Summary of Material Facts 7

III. LUBA'S JURISDICTION 7

IV. INTRODUCTION TO ALL ASSIGNMENTS 8

A. Lane County Forest Template Dwelling decisions are frequent visitors to LUBA. 8

B. *Nimpkish* addressed the applicability of Policy 11, not its meaning. 9

C. The First Assignment raises an issue not addressed in *Nimpkish* 12

V. ASSIGNMENTS OF ERROR 14

First Assignment

The Hearings Official erred in applying RCP, Goal 5 Flora and Fauna Policy 11 to this site-specific Forest Template Dwelling application. More specifically:

They erred in applying standards other than those identified in the acknowledged code as the standards for making the decision, contrary to ORS 215.416(8)(a). Policy 11 is not listed; it is not acknowledged as among the approval standards; it was explicitly acknowledged as being implemented through the code.

They erred in applying plan Policy 11 directly in this decision when the Purpose section of the F-2 zone is explicit that relevant Goal 5 wildlife plan provisions are implemented through the code.

They erred in applying the *Nimpkish* holding, which said the County had committed to the DLCD that it would apply the ODFW density standards directly to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true.

They erred in applying the *Nimpkish* holding, which said that the DLCD understood it was acknowledging direct application of ODFW density standards to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true.

They erred in finding that Petitioners did not directly challenge LUBA's holding in *Nimpkish* that Policy 11 applies directly to this application. It was directly challenged. App-4 last para. 14

A. Preservation of Error 15

B. Standard of Review 15

C. Argument 16

1. Policy 11 is not in the code's exhaustive list of standards for Forest Template Dwellings; it is implemented through the code; based on text and context and explicit language in the acknowledgment proceeding, it is not an independent, mandatory standard for Forest Template Dwellings. The Hearing Official's obligation is to make decisions based on the standards in the code. ORS 215.416(8)(a). Here the decision was made based on an inapplicable standard. 17

2. The County erred in applying the *Nimpkish* holding, which said the County had committed to the DLCD that it would apply the ODFW density standards directly to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true 24

3. The county erred in applying the *Nimpkish* holding, which said that the DLCD understood it was acknowledging direct application of ODFW density standards to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true 24

4. Other aids *Nimpkish* relied upon to read Policy 11 into the standards for Forest Template Dwellings are not a basis for amending a clear list of standards through interpretation 29

Second Assignment

The Hearings Official erred in findings that the Policy 11 imposes an 80-acre minimum lot size standard for a Forest Template Dwelling in Major Big Game habitat.

A. Preservation of Error 35

B. Standard of Review.....35

C. Argument 35

1. Starting Points 36

2. Text - Ordinary meaning of "overall." 36

3. Legislative history as context 37

4. Code language as context 38

5. Summary of text, context and legislative history 39

6. The Hearings Official erred by reading Policy 11 to create a minimum lot size standard for a dwelling 39

7. Petitioners' methodology is most consistent with the "overall residential density" standard in Policy 11 and demonstrates compliance 40

Third Assignment

The Hearings Official erred in finding that Petitioners could not, consistent with Goal 2, aggregate plan data to demonstrate compliance with Policy 11, absent a plan amendment

A. Preservation of Error.....41

B. Standard of Review.....42

C. Argument 42

VI. CONCLUSION 45

I. PETITIONER'S STANDING

Petitioners EJK Investments and Edward J. King (Petitioners) are the property owners and the Applicants, and each timely filed a Notice of Intent to Appeal. ORS 197.830(2).

II. STATEMENT OF THE CASE

A. Nature of the Land Use Decision and Relief Sought

The decisions on appeal are Hearings Official reversals of Planning Director approvals of forest template dwelling applications. Rec-3. The reversals resulted in the denials of the applications.

This is a consolidated appeal of separate decisions issued on the same day and resolved on the same legal theory. Separate records were filed with LUBA.

The decisions are included in the Appendix. The Hearings Official's decision in EJK Investments (EJK) is at App-1; the related Director decision is at App-9. The Hearings Official's decision in Edward J. King (King) is at App-18; the related Director decision is at App-26. The decisions are the same in all aspects relevant and material to this appeal. Therefore, references herein will be to the EJK decision and record unless otherwise noted.

The sole basis for the denials was the application of Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11. LUBA's recent decision in *1000 Friends of Oregon v. Lane County*, __ Or LUBA __ (No. 2020-030, Jan. 21, 2021) (*Nimpkish*) determined that Policy 11 applies as an

independent mandatory standard to forest template dwelling applications. In these decisions the Hearings Official followed *Nimpkish*, applying Policy 11 as an independent, mandatory standard, then interpreted the policy in the first instance, determined the applications did not comply, and then denied them.

Petitioners assert that the Hearings Official misinterpreted and misapplied Policy; each application complies with the relevant standards under a correct interpretation of the policy. Because Policy 11 was the sole basis for the Hearings Official to deny the applications, and the Hearings Official erred in applying the policy to deny the applications, LUBA should reverse the denials and order the County to approve the applications. ORS 197.835(10)(a)(A); ORS 197.835(9)(a)(D).

The First Assignment contends that the Hearings Official erred in applying Policy 11 at all. The language of the code and its legislative history compel the conclusion that Policy 11 does not apply as an independent, mandatory standard, but rather that Policy 11 is implemented through the code. In raising this assignment, the Petitioners necessarily are requesting LUBA to revisit its reasoning in *Nimpkish*, specifically to address legislative history, included in the record of this proceeding, that was not discussed by the Board in that decision.

The Second Assignment starts with the assumption that the Board will continue to rely on its reasoning in *Nimpkish* that Policy 11 applies to these

decisions, and it challenges the Hearing Official's conclusion that the proposal does not comply with Policy 11.

The Third Assignment is derivative of the Second Assignment. It challenges what appears to be the Hearing Official's conclusion that an applicant cannot demonstrate compliance with Policy 11 without amending the plan inventories. The Hearing Official's legal theory here was not raised or briefed in the local proceeding, and it is based on a misinterpretation of what Policy 11 means.

B. Summary of Arguments

All assignments relate to Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.

> "Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

First Assignment: The Hearings Official applied Policy 11 to these decisions because *Nimpkish* found the policy to be a mandatory, independent standard for Forest Template Dwellings. However, the code states a complete list of standards that apply to such decisions; it contains no open-ended or

catchall standards that might invite tapping Policy 11; and it is prefaced with a "Purpose" statement that says the code provisions are intended to protect wildlife habitat and to implement the Goal 4 Rule. Nevertheless, *Nimpkish* held that Policy 11 must be directly applied in addition to the code standards.

The *Nimpkish* opinion appears to have headed in that direction based on two things it states as fact, which are not facts. **First**, it quotes at length from the "Flora and Fauna Working Paper (1982)" which committed the County to develop regional "carrying capacities" for dwellings in Big Game habitat, and then either apply those numbers to its decisions or simply apply the ODFW recommendations for minimum lot sizes for dwellings in Big Game habitat. However, the opinion seems unaware that the quoted Working Paper language was deleted in an addendum – the "Flora and Fauna Working Paper Addendum (1983)." The addendum language instead committed the County to add clustering and siting standards to its code; the DLCD gave the County a choice – either stick with the ODFW lot size recommendations or adopt clustering and siting standards. The County chose the latter approach, adopted the new code standards, and that policy choice was explicitly acknowledged.

Second, the opinion recites that in the acknowledgment process the County committed to apply the ODFW density standards, and DLCD acknowledged the plan based on that commitment. *Nimpkish* references a July 19, 1984 DLCD acknowledgment Staff Report for that proposition. However,

there were two subsequent Staff Reports prior to acknowledgment – August 17 and September 12. The July 19 Staff Report imposed an In Order to Comply ("IOTC") 2.d, which required the County to amend the code to implement Policy 11 either by requiring larger minimum lot sizes in the Big Game Habitat portions of the F-2 zone or by imposing clustering requirements in the zone. App-54, IOTC 2.d. The September 12 Staff report confirmed that the County had added clustering and siting standards to the code, and it recommended acknowledgment based on this code change. Acknowledgment happened.

Thus, the final acknowledgment report stated that Policy 11 was being implemented by amended code language. That language is in the code today. That should settle things.

Nimpkish made a number of secondary, contextual arguments in support of its holding. However, Petitioners hope that when these two very basic factual premises are corrected, LUBA will agree that Policy 11 does not apply independently. The notion that Policy 11 should apply independently simply does not square with the County having complied with the DLCD's directive to implement Policy 11 with code amendments that impose clustering requirements.

Second Assignment: Assuming that Policy 11 must be applied, it first must be interpreted because it is ambiguous. What does it mean to comply with "recommendations on overall residential density for protection of big game?"

Nimpkish included comments on the meaning of this standard, but those were plainly *dicta* because, as the Hearings Official recognized here, the County had not applied Policy 11, and *Nimpkish* dealt with whether Policy 11 applies, not what it means.

Petitioners believe the key, operative phrase is "overall residential density." The ODFW recommendation is 80 acres for dwellings in Major Big Game Range. Policy 11 requires meeting an "overall residential density." That is different from meeting a minimum lot size for any single dwelling.

In these applications, Petitioners used county plan data to summarize the total acreage in Major Big Game Range in the county, and for different parts of the county, and the total number of dwellings in the same areas. All that data, in the record, shows the overall density to range from 406 to 3,137 acres per dwelling (Rec 1745), which is way, way less dense than 80 acres per dwelling.

The Hearings Official interpreted the standard to require a minimum lot size of 80 acres for any dwelling, and neither of these dwellings is on a lot that large. Petitioners request the Board to hold that the Petitioners' interpretation of the standard is correct, and the Hearings Official got it wrong.

Third Assignment: In a second basis for denial, which was not raised or briefed by any party, the Hearings Official held that Policy 11 can't be complied with consistent with Goal 2 unless evidence of compliance is amended to the plan as a new plan inventory. This is a collateral attack on the acknowledged

plan policy.

C. Summary of Material Facts

EJK and King filed respective applications for Forest Template Dwelling approvals in the same neighborhood near Oakridge in rural Lane County. EJK application, EJK Rec 2085; King application, King Rec 2021. These were Type II applications subject to an initial administrative decision and potential appeal and hearing.

Each application was approved by the Director within the first week after LUBA entered its *Nimpkish* opinion. The EJK Director approval for a 12-acre parcel is at App-9. That decision includes a color vicinity map and site plan at App- 15 to 17. The King Director approval for a 13-acre parcel is at App-26. That decision includes a color vicinity map and site plan at App-32 to 34.

LandWatch Lane County appealed both approvals. The appeals were processed together and were heard by the Lane County Hearings Official. The decisions recite that a hearing was held on March 4, 2021, and the records were held open until April 8. App-1. Decisions were entered on April 19. The EJK decision is at App-1. The King decision is at App-18.

These appeals followed.

III. LUBA'S JURISDICTION

The decision is a final "land use decision" per ORS 197.015(10)(a)(A)(iii). LUBA has jurisdiction over review of final land use

decisions. ORS 197.825.

IV. INTRODUCTION TO ALL ASSIGNMENTS

The policy at issue is RCP, Goal 5, Flora and Fauna Policy 11:

> "Oregon Department of Fish and Wildlife [(ODFW)] recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with [ODFW] officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."

The points below are a preface to both assignments of error.

A. Lane County Forest Template Dwelling decisions are frequent visitors to LUBA.

There have been 12 Lane County Forest Template Dwelling decisions issued by LUBA since the start of 2016.[1] *Nimpkish* is the only decision among the dozen that even addressed Policy 11 in any fashion.

Only two other LUBA opinions have addressed Policy 11, both Marginal Lands rezonings, and neither of those addressed the meaning of the policy. See *LandWatch Lane County v. Lane County (Benedick)*, __ Or LUBA __ (No. 2016-115, April 17, 2017) (affirming Marginal Lands); and *LandWatch Lane*

[1] Of these 12 appeals, 6 approvals were affirmed, four were remanded, and two were dismissed.

County v. Lane County (Iverson), __ Or LUBA __ (No. 2016-019, June 13, 2016) (remanding Marginal Lands).

B. *Nimpkish* addressed the applicability of Policy 11, not its meaning.

The County in *Nimpkish* did not apply Policy 11, the Hearings Official having found that the policy was not an independent, mandatory standard applicable to Forest Template Dwelling applications. The Board held that it was.

> "We review the hearings officer's interpretation of the RCP and the LC to determine whether the hearings officer "[i]mproperly construed the applicable law." ORS 197.835(9)(a)(D). In construing the law, we will consider the text and context of the law at issue in order to determine the intent of the enacting body. * * * * For the reasons explained below, we agree with petitioners that RCP Goal 5, Flora and Fauna Policy 11, applies to intervenor's application for a forest template dwelling on property included on the county's Big Game Habitat Inventory of Major Big Game Range." Slip op 9.
>
> "* * * *
> "In conclusion, we agree with petitioners that the hearings officer's conclusion that RCP Goal 5, Flora and Fauna Policy 11, does not apply because the application does not involve a land division or a zone change improperly construes RCP Goal 5, Flora and Fauna Policy 11." Slip op 15.

The Board's rationale for this holding was that: (1) The text of Policy 11 states the applicability of the policy and does not support it as applying to only land divisions and zone changes; (2) giving meaning to the density limits in the second sentence of the policy supports applying the policy to dwelling applications; (3) directly applying the density limits in the second sentence of

Policy 11 is needed to honor the county's commitment to the DLCD in the acknowledgment review; and (4) directly applying the density limits in the second sentence of Policy 11 is what the DLCD understood it was acknowledging.

Because the county decision in *Nimpkish* decision did not apply Policy 11, there was no county determination about compliance methodology for LUBA to review.

That said, there is language in the *Nimpkish* opinion that addresses applying the density recommendations. For example:

> "Similarly, here, we conclude that the county uses the one-dwelling-per-80-acres standard referenced in RCP Goal 5, Flora and Fauna Policy 11, and the Flora and Fauna Working Paper to determine the allowed residential density in areas inventoried as Major Big Game Range." Slip Op 15.

and

> "There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres. Accordingly, the proposed dwelling "shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." RCP Goal 5, Flora and Fauna Policy 11." Slip op 15-16.

Petitioners fully expect that Intervenor will assert that the Board has determined that applying Policy 11 requires having an 80-acre minimum lot size for any Forest Template Dwelling approval in Major Big Game habitat, based on the language above. That assertion would be erroneous.

Any language in *Nimpkish* that suggests how Policy 11 is to be applied in the context of a site-specific application is mere *dictum*, for several reasons. First, the County did not attempt to apply the density standard in *Nimpkish*; hence there was nothing for LUBA to review with respect to the correct methodology.

Second, and relatedly, the two decisions on appeal here are the first county decisions to apply Policy 11 to a Forest Template Dwelling application. Any discussion by LUBA in any previous opinion about how Policy 11 is to be applied is necessarily advisory – *dictum*.

Third, and most importantly, the methodology prescribed in Policy 11 for meeting the ODFW density recommendations is inherently ambiguous and requires interpretation. LUBA typically allows the County to take a stab at the initial interpretation of an ambiguous standard. *Elenes v. Deschutes County*, 78 Or LUBA 483, 492 (2018); *Moreland v. City of Depoe Bay*, 48 Or LUBA 136, 146-47 (2004); *Opp v. City of Portland*, 153 Or App 10, 14, 955 P2d 768, *rev den*, 327 Or 620 (1998) (LUBA's exercise of the interpretive authority is permissive rather than mandatory, and LUBA may remand the decision to the local government to provide an interpretation that the decision omits).

Policy 11 is not wanting for ambiguity. The policy requires the County to apply ODFW recommendations "on overall residential density for protection of big game." A Goal 5 conflict exists for "[a]ny density above that limit."

What is the meaning of "overall residential density?" Is it an 80-acre minimum lot size for each application, as the Hearings Official determined in this instance? Is it assuring that the total number of dwellings in the Major Big Game Range is at least 80 acres per dwelling on average? Does is require a regional calculation of an 80-acre average density? Any of these is plausible. A term is ambiguous when it is capable of more than one plausible interpretation. *Tirumali v. City of Portland*, 169 Or App 241, 246, 7 P3d 761 (2000). That is certainly the situation here.

Because the methodology stated in Policy 11 is ambiguous, and because the ambiguity was not addressed in *Nimpkish*, any references in *Nimpkish* to the correct methodology for complying with the policy must be considered mere *dictum*. Petitioner's challenge to the meaning given to the Policy 11 methodology is the subject of the Second Assignment. The parties' analysis of that issue will be the first focused discussion of the county's attempt to interpret and apply the methodology.

C. Petitioners' First Assignment raises an issue not addressed in *Nimpkish*.

The First Assignment below is not a simple rehash of the merits that was lost in *Nimpkish*. As discussed in much greater detail below, it is apparent from review of the source documents that *Nimpkish* was not dealing with all the correct documents. At least that is what is indicated by the references in the opinion.

Nimpkish took its basic navigational steer from a county Working Paper on Flora and Fauna. However, the working paper referenced in *Nimpkish* was not the final adopted version. The Addendum to the Working Paper deleted the language that LUBA quoted and relied upon in *Nimpkish*. The opinion is silent about the Addendum.

Similarly, *Nimpkish* relied upon statements in the DLCD acknowledgment Staff Reports reciting what the County was proposing. However, the opinion only references the initial DLCD Staff Report dated July 19, 1984. There were two subsequent DLCD Staff Reports. Those later reports allowed the County to opt for clustering and siting standards for forest dwellings, rather than a wooden application of ODFW recommended minimum parcel sizes. That county policy choice was expressly confirmed in a subsequent staff report and acknowledged.

In summary, Petitioners believe that the *Nimpkish* opinion relied on some very basic misconceptions about what documents are relevant and material to the inquiry, and those misconceptions sent the analysis in the wrong direction. Petitioners request a second look here, based on the fuller, accurate documents.

V. ASSIGNMENTS OF ERROR

First Assignment

The Hearings Official erred in applying RCP, Goal 5 Flora and Fauna Policy 11 to this site-specific Forest Template Dwelling application. More specifically:

> **They erred in applying standards other than those identified in the acknowledged code as the standards for making the decision, contrary to ORS 215.416(8)(a). Policy 11 is not listed; it is not acknowledged as among the approval standards; it was explicitly acknowledged as being implemented through the code.**
>
> **They erred in applying plan Policy 11 directly in this decision when the Purpose section of the F-2 zone is explicit that relevant Goal 5 wildlife plan provisions are implemented through the code.**
>
> **They erred in applying the *Nimpkish* holding, which said the County had committed to the DLCD that it would apply the ODFW density standards directly to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true.**
>
> **They erred in applying the *Nimpkish* holding, which said that the DLCD understood it was acknowledging direct application of ODFW density standards to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true.**
>
> **They erred in finding that Petitioners did not directly challenge LUBA's holding in *Nimpkish* that Policy 11 applies directly to this application. It was directly challenged. App-4 last para.**

This assignment contends that Policy 11 does not apply directly to Forest Template Dwelling decisions. It takes issue with the *Nimpkish* holding based on a fuller statement of the text and context of the policy, including the acknowledgment administrative history of Policy 11.

//

A. Preservation of Error

This issue was summarized in Petitioners' April 1, 2021 post-hearing submittal, which asserted that "Policy 11 does not apply directly, because by complying with LC 16.211 no conflict [with Goal 5 Major Big Game resources] exists." EJK Rec 27.

Petitioners also explicitly incorporated into their local argument the briefing in *Nimpkish* in which the applicant there asserted at LUBA that "The Hearings Official correctly concluded that Goal 5, Flora and Fauna, Policy 11 regarding overall residential densities for protection of Big Game Habitat in the acknowledged comprehensive plan did not apply as criteria for a forest template dwelling." Petitioners' Lttr (March 18, 2021) incorporating LUBA brief, EJK Rec 317; and *Nimpkish* responding brief, EJK Rec 582.

The Policy 11 interpretation issue is preserved. *Gadda v. Gadda*, 341 Or 1, 7-11, 136 P3d 1099 (2006) (a party need only put the construction of a particular statute at issue to preserve an interpretation issue for appeal).

B. Standard of Review

The standard of review here is the same as LUBA summarized in *Nimpkish.*

> "We review the hearings officer's interpretation of the RCP and the LC to determine whether the hearings officer "[i]mproperly construed the applicable law." ORS 197.835(9)(a)(D). In construing the law, we will consider the text and context of the law at issue in order to determine the intent of the enacting body. *PGE*

v. Bureau of Labor and Industries, 317 Or 606, 610-12, 859 P2d 1143 (1993); *State v. Gaines*, 346 Or 160, 171-72, 206 P3d 1042 (2009)." Slip op 9.

The rules of statutory construction apply to the interpretation of local ordinances. *Western Land & Cattle, Inc. v. Umatilla County*, 230 Or App 202, 210, 214 P3d 68 (2009). The purpose of statutory construction is to identify the correct interpretation, whether or not asserted by the parties. *Lovinger v. Lane County*, 206 Or App 557, 565, 138 P3d 51 (2006) (citing *Stull v. Hoke*, 326 Or 72, 77, 948 P2d 722 (1997)).

C. Argument

The Hearings Official's decision followed closely on the heels of the *Nimpkish* opinion, which allowed the Hearings Official to make short work of the question of the applicability of Policy 11. They treated *Nimpkish* as dispositive that Policy 11 is an independent, mandatory standard for a Forest Template Dwelling decision. "LUBA held that Policy 11 does apply to an application for a forest template dwelling." App-3. Then they moved on to the second issue – what compliance with Policy 11 means. On that issue they agreed that the *Nimpkish* opinion had offered only *dicta*, but they followed the *dicta*. App-4 para 4.

Because the Hearings Official did not conduct their own analysis of whether Policy 11 applies independently, this Petition necessarily involves

revisiting the correctness of the *Nimpkish* holding.

1. Policy 11 is not in the code's exhaustive list of standards for Forest Template Dwellings; it is implemented through the code; based on text and context and explicit language in the acknowledgment proceeding, it is not an independent, mandatory standard for Forest Template Dwellings. The Hearing Official's obligation is to make decisions based on the standards in the code. ORS 215.416(8)(a). Here the decision was made based on an inapplicable standard.

A decision maker's most basic obligation is to limit themselves to making a decision under the standards that are relevant to the decision. ORS 215.416(8)(a).[2] What constitutes a standard for a decision is a question of law. *Holland v. City of Cannon Beach*, 154 Or App 450, 458, 962 P2d 701 (1998).

The Board recognizes that whether a plan policy constitutes an approval standard depends upon the wording and context of the specific plan provision. *Bennett v. City of Dallas*, 17 Or LUBA 450, 456, *aff'd* 96 Or App 645, 773 P2d 1340 (1989). In analyzing plan policies, the Board has recognized that there are several different categories that plan policies fall into. The Board has explicitly

---

[2] ORS 215.416(8)(a):

> "Approval or denial of a permit application shall be based on standards and criteria which shall be set forth in the zoning ordinance or other appropriate ordinance or regulation of the county and which shall relate approval or denial of a permit application to the zoning ordinance and comprehensive plan for the area in which the proposed use of land would occur and to the zoning ordinance and comprehensive plan for the county as a whole."

recognized: (1) plan policies that apply directly to a development application; (2) plan policies that may not apply to a particular development application because the standard expressed in that policy is irrelevant to the particular application; and (3) policies that, even if relevant, do not apply directly because they are implemented by other land use regulation standards that do apply directly to the development application. *Shelter Resources v. City of Cannon Beach*, 27 Or LUBA 229, 235 (1994).

The text of this code supports a conclusion that for this kind of application the relevant standards are to be found in the code, not in the plan.

The Lane Code authorizes Forest Template Dwellings; it lists the standards that apply to review of that proposed use; the listed standards do not include any plan policies; and they do not include any open-ended, catch-all invitations to go to the plan. *See*, LC Chapter 16.211 excerpt at App-64; "Template Dwelling" use authorized in Table 16.211-1, Item 2.4, App-67; and the eight substantive standards for review at LC 16.211(3)(c)(i)-(viii), App-74.

More specifically, the code explicitly lists the Template Dwelling use as "permitted subject to standards" and then lists the standards that apply. Noteworthy here is that the code includes no statement, suggestion, hint or room for discussion that any plan policy might also be a standard to be applied. App-74.

The text of the code also includes language explaining that standards

listed in the code for Forest Template Dwellings are intended to protect Goal 5 wildlife resources, too. The purpose statement includes:

> "16.211 Impacted Forest Lands (F-2, RCP) (1) Purpose. The purpose of the Impacted Forest Land (F-2) Zone is to protect and maintain forest lands for grazing, and rangeland use and forest use, consistent with existing and future needs for agricultural and forest products. The F-2 zone is also intended to allow other uses that are compatible with agricultural and forest activities, to protect scenic resources and fish and wildlife habitat, and to maintain and improve the quality of air, water, and land resources of the county.
>
> "The F-2 zone has been applied to lands designated as Forest in the Comprehensive Plan. The provisions of the F-2 zone reflect the forest land policies of the Comprehensive Plan as well as the requirements of ORS Chapter 215 and OAR 660-006. The minimum parcel size and other standards established by this zone are intended to promote commercial forest operations."

This reinforces the conclusion that standards for Forest Template Dwellings are found in LC 16.211 and not other places, like the plan, too.

The context of the code reinforces what the text above says – the standards for Forest Template Dwellings are in the code, not the code and the plan. The code explicitly lists the plan as a source of standards for other kinds of land use decisions, but not for Forest Template Dwellings. The use of a term in one section, but not in another section of the same statute indicates a purposeful omission. *PGE*, 317 Or at 611. The Rural Comprehensive Plan Policies are listed as among the standards for zone changes and land divisions, for example.

The code states zone change standards in LC 16.252(2). That subsection

identifies the plan as a source of standards.

> "Criteria. Zonings, rezonings and changes in the requirements of this chapter shall be enacted to achieve the general purpose of this chapter and shall not be contrary to the public interest. In addition, zonings and rezonings shall be consistent with the specific purposes of the zone classification proposed, applicable Rural Comprehensive Plan elements and components, and Statewide Planning Goals for any portion of Lane County which has not been acknowledged for compliance with the Statewide Planning Goals by the Land Conservation and Development Commission." [Emphasis added]

The code states standards for land partition approval in LC 13.060. LC 13.060(1)(b)(ii) says:

> "For all partitions within the Eugene-Springfield Metropolitan Area General Plan boundary, provide evidence that the proposal complies with the density requirements of the applicable plan designation." [Emphasis added]

The same requirement is stated for subdivisions at LC 13.080(1)(b)(ii).

As the above demonstrates, the governing body knows how to expressly require compliance with comprehensive plan policies. Mandating compliance with a plan policy when it is not expressly required by the code impermissibly inserts an approval standard that has been omitted by the governing body. ORS 174.010.[3]

---

[3] ORS 174.010 provides:

> "In the construction of a statute, the office of the judge is simply to ascertain and declare what is, in terms or in substance, contained therein, not to insert what has been omitted, or to omit what has been inserted; and where there are several provisions or particulars

Had the governing body intended to incorporate density limits directly into the standards for Forest Template dwellings, it would have been easy enough to do. The County could have put in the code the 40 and 80-acre density limits for dwellings in the Big Game categories. Or it could have included RCP Policy 11 in the list of standards for the dwellings by calling out Policy 11 as applicable. However, the governing body did neither.

The Board in the *Nimpkish* opinion failed to follow the correct methodology to identify the applicable standards. The Board should have looked at the code text listing the standards for Forest Template Dwellings and found it to be a clear list that did not invoke Policy 11, which is reinforced by the context in the "Purpose" supporting the conclusion that the adopted standards were sensitive to Goal 5 issues. No interpretation was needed of what standards apply. See *Whipple v. Howser*, 291 Or 475, 487, 632 P2d 782 (1981) (unnecessary and improper to conduct interpretation when language is sufficiently clear).

Instead, the Board accepted the invitation of petitioner in *Nimpkish* to read Policy 11 into the list of code standards. That was based on the Board's interpretation of the first two sentences of Policy 11. Each of those sentences is ambiguous.

---

such construction is, if possible, to be adopted as will give effect to all."

The first sentence of Policy 11 is:

> "Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County." (Emphasis added.)

The reference to "overall residential density" is ambiguous. This does not state a policy on minimum parcel size for any dwelling. It suggests a more sophisticated calculation that paints an "overall" picture. Yes, a minimum lot size of 40/80 acres may be one, plausible interpretation. However, it is not the only possible interpretation and is not likely the best interpretation. "Overall" suggests something other than a simple minimum lot size per unit. Furthermore, if the simple 40/80-acre minimum lot standard were the correct meaning, there would be no need to reference "regions," as the policy does. See discussion in Second Assignment.

The second sentence of Policy 11 is:

> "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." [Emphasis added]

This is also ambiguous. Contrary to LUBA statement in *Nimpkish,* the second sentence is tethered to the first. "That limit" refers to the "overall residential density" in the first sentence, which needs to be calculated by some methodology that is not stated in the policy.

Even if LUBA were to start its analysis with Policy 11, rather than with

the exhaustive list of standards in the code, there is still no basis to force Policy 11 into the list of standards. Each sentence of Policy 11 has a plausible meaning without the need to inject it into the list of forest template dwelling approval standards. Each sentence has a meaning that is implemented through the code via the explicit standards.

The first sentence anticipates an "overall residential density" that determines the "allowable number of residential units within regions of the County." The discussion in the Second Assignment looks at the total forest zone acreage and the total units in the forest zones to document the average or "overall residential density." That density is way, way less dense than the 40 and 80-acre ODWF recommendations. *See,* e.g., Rec 322-28 (Lane Council of Governments (LCOG) Lane County Big Game Range analysis); Rec-1744-1752 (LCOG Lane County Big Game Range Density Analysis (showing densities of 1 dwelling/ 819 acres, 1 dwelling / 1,415 acres and 1 dwelling / 406 acres under different county area scenarios)).

The second sentence establishes the threshold of density that constitutes a conflict and triggers an ESEE.

The third sentence is a directive from the County to itself about prospective planning it intends to do with the ODFW.

The Board should conclude that the Hearings Official erred when they applied plan Policy 11 to this decision when that plan policy was not identified

by the code in the list of standards in LC 16.211 that apply to Forest Template Dwelling applications. Based on text and context of the code, Policy 11 is not an independent, mandatory standard for the decision. Reading Policy 11 into the code's list of dwelling standards would effectively amend the code through interpretation to give effect to the ambiguous Policy 11 as the Board, and now the Hearings Official, would interpret it. Code language that is too strict or too loose may be amended, but not via interpretations. *West Hills & Island Neighbors v. Multnomah County*, 68 Or App 782, 787, 683 P2d 1032, *rev den* 298 Or 150 (1984) ("[W]hat the county did here was an attempt to achieve by interpretation what could only be accomplished by an amendment of its ordinance.").

2. The County erred in applying the *Nimpkish* holding, which said the County had committed to the DLCD that it would apply the ODFW density standards directly to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true.

3. The county erred in applying the *Nimpkish* holding, which said that the DLCD understood it was acknowledging direct application of ODFW density standards to dwelling decisions. The fuller record of the acknowledgment proceeding shows that the contrary is true.

The *Nimpkish* opinion looked to excerpts from the county's Flora and Fauna Working Paper and the DLCD Staff Reports in the early 1980s acknowledgment proceeding as administrative history to aid in determining whether Policy 11 applies directly to dwelling decisions. Based on its review of those documents, LUBA characterized the county and the agency's positions

about the second sentence of Policy 11 as follows:

> "Rather, the *second sentence* of RCP Goal 5, Flora and Fauna Policy 11, remains operative, and it provides that "[a]ny density above [the ODFW-recommended density] limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." The second sentence is not tethered to or derivative of the first sentence, which envisions the creation of zoning areas that the county has never completed. The second sentence does not mention or refer to zoning areas. To find that the second sentence simply has no effect absent the creation of zoning areas would be to allow the county to fail to perform an action that it assured LCDC it would perform in order to obtain acknowledgement of its Goal 5 program, and it would have the effect of eliminating the Goal 5 protections for Big Game Range that LCDC understood were in place when it acknowledged the program." Slip op 13; Fn 9 omitted.

LUBA quoted from what it understood to be "language in the DLCD's final staff report leading to acknowledgment of the county's Goal 5 program." Slip op 14. Based on this LUBA reasoned:

> "We understand DLCD to have concluded that the county's Goal 5 program protects habitat because it adopts residential densities in accordance with ODFW's recommendations and requires that, if "proposals are made" that exceed those densities, the county will conduct an ESEE analysis for that individual proposal." Slip op 14.

LUBA's assumption about how the acknowledgment review was finally resolved was based on an erroneous assumption about what constituted the final Staff Report. LUBA was quoting from page 39 of the July 19, 1984 DLCD Staff Report, which the Board apparently believed was the final staff report. App-53, 3rd para. However, what was discussed by LUBA in *Nimpkish* was not

the final staff report. The final DLCD Staff Report accompanying acknowledgment was dated September 12, 1984. App-58 to 63.

Here is a chronology of the key events in the acknowledgment saga, with references to excerpts in the Appendix and fuller documents in the record.

- March 1982: The County issued is "Flora and Fauna Working Paper." App-35; Excerpt at EJK Rec 43; full Report at EJK Rec 498. This Report:
    - Proposed a methodology to derive a carrying capacity for dwellings in Big Game range in 10-20 regions of the County. App-37 to 38.
- November 1983: The County issued its "Addendum to Working Paper: Flora & Fauna." App-39; excerpt at EJK Rec 47-51; full Report at EJK Rec 538. This Report:
    - Abandoned the "carrying capacity" methodology in favor of applying clustering and siting standards. App-40.
    - Committed to continue planning work with the ODFW and conduct a new ESEE if the clustering and siting standards methodology was not effective at avoiding conflicts. App-40.
    - Added to Policy 11 the third sentence, as it appears today. App-41.
- February 1984: County adopted "Rural Comprehensive Plan Policies," including Policy 11 in its current form. Excerpt App-44 to 45; EJK Rec 52-53.
- July 19, 1984: DLCD Staff Report re acknowledgment. App-46; EJK Rec 54-63; full Staff Report at EJK Rec 112. In this Staff Report:
    - ODFW and 1000 Friends objection as to residential densities in Big Game habitat is at page 36. App-51.
    - Report says: RCP Policy 11 (the same now as in 1984) (quoted at Report page 39, App-53) complies with Goal 5.
    - Report says the F-2 code standards need work:

However, "the County still needs to adopt measures in its F-2, ML, and EFU zones which ensure that ODFW's density standards will be achieved. * * * * ODFW is correct that the County's F-1 and F-2 zones do not incorporate ODFW's development density recommendations, or do they set forth siting or clustering requirements. Without siting and clustering requirements, the minimum lot sizes in the F-1, F-2 and E zones are half that recommended by ODFW (i.e., the minimum lot sizes would have to be doubled to be acceptable). This is a problem in the F-2 and EFU zones in particular, but not in the F-1 Zone, since in general, dwellings are not permitted in that zone." App-53.

- The In-Order-To-Comply conclusion was:

  2.d. "Amend the F-2 and EFU zones to carry out the intent of the Flora and Fauna Policy 11. Specifically, the zones must either require larger minimum lot sizes in the Big Game Habitat portions of those zones or contain clustering requirements in those areas." *Id.* at 75, App-54 (emphasis added).

- August 17, 1984: DLCD Staff Report re acknowledgment. App-56; excerpt at EJK Rec 54; Full Staff Report at EJK Rec 242.

  - Report says DLCD staff met with county staff on August 8; IOTC 2.d. is still outstanding. App-57.

- Sept. 17, 1984: DLCD Staff Report re acknowledgment. App-58; excerpt at EJK Rec 66-69; full Staff Report at EJK Rec 263.

  - Report says that in response to the IOTC 2.d. requiring either larger lot sizes or clustering the County has amended the code to require clustering, etc., and with those changes the code complies with Goal 5. Staff Report at 25, App-59. The operative quote is:

    "Response

    "Lane County has added the following new language to both the F-2 and EFU zones:

"(a) The approval authority shall balance the setback standards of LC 211(8)(a) with the siting requirements and application approval criteria specified elsewhere in CL 16.211 in order to minimize adverse impact upon forest uses and to assure optimal siting of proposed residences consistent with the purpose of the F-2 [EFU] zone.

(i) Residence to be siting upon tracts located within a big game range as designated by the Department of Fish and Wildlife shall be siting as follows:

(aa) Near residences on other tracts.

(bb) With minimal intrusion into forest areas undeveloped by nonforest uses.

(cc) Where possible, when considering LC 16.211(8)(a)(i)(aa) and (bb) above and the dimensions and topography of the tract, at least 500 feet from the adjoining lines of property zoned F-1 and 100 feet from the adjoining lines of property zoned F-2 or EFU."

"Conclusion

Requirement 2.d. has been met."

- On page 36 of the Staff Report, incorporated into the Acknowledgement Order, LCDC makes its ultimate conclusion:

"Conclusion – Goal 5. Lane County complies with Goal 5." App-61.

So, looking at what the County and the LCDC did in the acknowledgment process, the following unequivocal conclusions jump off the pages at the reader:

- Policy 11 went into and exited from the acknowledgment process in the same form as it appears today. The LCDC explicitly acknowledged it as adequate to comply with Goal 5.

- Policy 11 was acknowledged as adequate without regional planning for Big Game being done or required to be done on any time frame.

- In contrast, the code standards for F-2 dwellings in Big Game habitat were not adequate, and the LCDC issued an IOTC on July 19 – IOTC 2.d. – which directed the County to amend the F-2 zone to "carry out the intent of the Flora and Fauna Policy 11." That is, the DLCD intended that the code should implement Policy 11.

- The IOTC explicitly afforded the County the option of either meeting the ODFW development density standards for lot sizes or adopting clustering requirements for the F-2 zone.

- The County opted to adopt clustering standards instead of increasing lot size requirements.

- The LCDC reviewed the new clustering standards for the F-2 zone and acknowledged those as in compliance with Goal 5 for Big Game habitat.

- The code standards for Forest Template Dwellings were acknowledged without a minimum lot size for dwellings on existing lots in Big Game habitat; meeting the clustering standards in the code is enough for the code to comply with Goal 5.

4. Other aids *Nimpkish* relied upon to read Policy 11 into the standards for Forest Template Dwellings are not a basis for amending a clear list of standards through interpretation.

Flora and Fauna Working Paper (1982): Throughout the opinion, *Nimpkish* leans heavily on the initial Working Paper as context to conclude that the County committed to apply the ODFW density limitations and to read Policy 11 into the dwelling review standards. *Nimpkish* footnote 7 quotes extensively from that section of the 1982 working paper that proposes a methodology to divide the county into 10-20 regions and then determine a carrying capacity for dwellings in Big Game habitat, stating a commitment to implement the carrying

capacities or the ODFW density recommendations, whichever is less.

There are several shortcomings with assigning any contextual weight to this working paper language as *Nimpkish* did. First, the language from the 1982 working paper quoted in *Nimpkish* footnote 7 was completely stricken from the working paper by the November 1983 "Flora and Fauna Working Paper Addendum." See chronology above. The 1982 Working Paper language that was stricken is on pages 24 and 25 and is indicated with a margin notation at App-37 to 38. The replacement language in the Addendum is at App-40 to 41. Simply put, *Nimpkish* stated as relevant context working paper language that was completely replaced by the County.

Second, 1983 amendments to the Working Paper, which were published eight months before the first DLCD Goal 5 Staff Report in July 1984, reflected a clear policy shift by the County away from a "mere numbers game" for density and toward a focus on clustering and siting standards. "While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists." 1983 Working Paper Addendum at 14, App-40, Rec 48. Thus, all of the DLCD Staff Reports issued after the Staff Report cited by LUBA in *Nimpkish* were reviewing a plan and code that had shifted away from strict conformance with minimum lot size standards and toward clustering and siting requirements. The changes required by the IOTC 2.d. plainly afforded the County the option of

refining its code clustering and siting standards or incorporating the ODFW minimum lot standards. The County elected to tune up its code clustering standards, and the LCDC acknowledged the final standards, now reflected in the code.

In summary, because it referenced the wrong version of the working paper, *Nimpkish* described the ultimate county policy choice backwards. The County did not choose to insert ODFW density standards directly in its code. Instead of a "mere numbers game," the County chose to rely on clustering and siting standards, and the LCDC acknowledged that choice, as implemented by the County, as consistent with Goal 5.

OAR 660-006-0025 and 0027: Footnote 5 in the *Nimpkish* opinion references OAR 660-006-0025 and 027, presumably in support of the direct application of Policy 11. Subsection 27 is a Goal 4 rule saying that Forest Template Dwelling approvals must comply with acknowledged plans, code and other applicable law. To the extent that a party may again point to this rule as a basis for direct application of Policy 11, it is important to restate that the acknowledged code in this instance is a complete list of standards for review of Forest Template Dwellings. Relevant plan policies are implemented through the code. This should be apparent from the code's exhaustive listing of standards and the lack of any catch-all standard. The Purpose statement of the F-2 zone says that the code implements the Goal 4 Rule. And the acknowledgment

proceeding, which put the plan and the code under the acknowledgment scalpel, is devoid of any suggestion that that plan Policy 11 is cross-pollinated into the code standards. On the contrary, the DLCD required amending the F-2 code to implement Policy 11.

Summary: Based on all of the above, Petitioners suggest that the following assumptions reflected in the *Nimpkish* opinion are unsupported by, and indeed contradicted by, the merits of the acknowledgment.

First, it was erroneous for *Nimpkish* to opine that any aspect of Policy 11 that remains unfulfilled (e.g., the more specific planning for forest dwelling parcel sizes for regions of the county) has any bearing on whether Policy 11 should be applied directly to Forest Template Dwellings. Policy 11 took its current form prior to the first acknowledgment Staff Report in July 1984, and it was found to be adequate and consistent with Goal 5 even with envisioned planning work for regions being undone.

Second, *Nimpkish* was simply wrong to say that the County had represented to the LCDC that it would apply any minimum lot size standards in making decisions on individual dwelling applications in Big Game range. The DLCD gave the County an option in its IOTC on Big Game habitat – bigger dwelling lots or clustering – and the County opted to go with clustering standards. The DLCD reviewed that choice and blessed it with the oil of acknowledgment.

Third, *Nimpkish* was also wrong to say that the LCDC acknowledged the code expecting the County to apply larger minimum lot sizes in its code to dwelling approvals in Big Game habitat. Again, the full acknowledgment documentation shows that the LCDC gave the County the option of larger minimum lot sizes or clustering standards, the county adopted specific clustering standards, and the LCDC explicitly said those were adequate to implement Policy 11 and comply with Goal 5.

Fourth, *Nimpkish* was in error to rely on the acknowledgment proceedings in any fashion as support for reading RCP Policy 11 into the standards for Forest Template Dwellings. The opposite is the situation. The acknowledgment findings stated that RCP Policy 11 complied with Goal 5 and, separately, the code standards with the clustering requirement implemented Policy 11 and also complied with Goal 5.

Fifth, the "linkage" that *Nimpkish* posited between Policy 11 and the code standards for Forest Template Dwellings, based on the acknowledgment reports, is unfounded in the acknowledgment reports and is contrary to the plain language of the acknowledgment reports. The opinion refers to the July 19, 1984 Staff Report as being the final report. It was not. There were two subsequent reports, as listed above. The final report confirmed the adoption of the clustering standards and said those satisfied the IOTC 2.d.

Finally, it was way off track for LUBA to conclude that Policy 11 had to

be applied directly for any part of it to be given effect. IOTC 2.d. required amending the F-2 zone in order implement Policy 11. That was done and acknowledged. Making Policy 11 directly applicable again, after the code was amended to give effect to Policy 11, runs directly contrary to what was acknowledged.

It appears to Petitioners that the wrong turn apparent in *Nimpkish* is attributable primarily to: (1) assuming the county's approach to dwelling density in Big Game habitat was stated in language in the 1982 Working Paper that was later removed in the 1983 Working Paper Addendum; and (2) failing to recognize that the Goal 5 Big Game habitat IOTC 2.d. gave the County the choice between putting larger minimum lot sizes in its code or clustering and siting standards, and that the County chose the latter, and the LCDC acknowledged that choice. There is no need to reach into Policy 11 to borrow minimum lot sizes for dwellings because the LCDC acknowledged the code clustering and siting standards as adequate to do the job.

In conclusion, LUBA should revisit *Nimpkish* based on the fuller working paper and acknowledgment documentation contained in this record and discussed above, and it should conclude that Policy 11 does not apply directly to this application.

//

//

Second Assignment

The Hearings Official erred in findings that the Policy 11 imposes an 80-acre minimum lot size standard for a Forest Template Dwelling in Major Big Game habitat.

Here we begin with the assumption that LUBA determines that Policy 11 applies directly. In that event, the County erred in holding that a dwelling can't be approved consistent with Policy 11 on a parcel under 80 acres in size absent an ESEE analysis, which is a plan amendment. EJK, App-7; King, App-24.

A. Preservation of Error

The bulk of the applicant's submittal to the County in the local appeal was an attempt to demonstrate compliance with the density standard of Policy 11. See applicant's final argument. EJK Rec 16-17.

B. Standard of Review

See First Assignment.

C. Argument

The Hearings Official recognized the "overall residential density" standard is ambiguous and looked to text, context and also case law from another county. They concluded that an 80-acre minimum lot size is required. A shopping list of considerations contributed to that conclusion, including because they thought that is what LUBA would likely say.

> "The Hearings Official believes that the applicant's proposed interpretation in this case is similar to the position taken by Douglas County in *Wetherell.* LUBA rejected that interpretation,

> and the Hearings Official feels certain that LUBA would, for the reasons set forth above, also reject the applicant's interpretation in this case. Until the County conducts its region-by-region analysis, which is called for in Policy 11, the density denominator must be the subject property." (App-6 to 7; Footnote 7 omitted)

Petitioner believes that a basic text/context/legislative history inquiry leads to a contrary conclusion.

1. Starting points.

We begin with the following baseline points from the First Assignment discussion.

1. The county's Goal 5 program for Major Big Game habit is acknowledged. *Nimpkish*, slip op 12 line 19.

2. As discussed in the First Assignment, Policy 11 was explicitly acknowledged as being implemented by the final clustering and siting standards in the F-2 zone.

3. The commitment in Policy 11 to conduct regional analysis and to continue working with the ODFW to better understand residential impact on habitat was not a condition of gaining acknowledgment of the policy or its implementing code.

2. Text - Ordinary meaning of "overall."

Absent a definition in the plan, the dictionary is the starting point for the meaning of "overall" residential density. The most relevant definition is:

"3. Overall *** 1: including everything between the two extreme

points * * *2a: taking all units into account * * * b: of or relating to something as a whole: viewed as a whole."

Webster's Third New Int'l Dictionary, 1606 (unabridged ed 2002).

This definition does not easily reduce to a minimum parcel size for any dwelling approval. It fits much more closely with an averaging of all parcel sizes.

3. Legislative history as context.

a. **Working Paper:** Missing from the record is any document from the ODFW that explicitly states the agency's recommendations. The closest source is a secondary source in the 1982 Working Paper, which is legislative history:

> "The primary conflict to big game, as mentioned earlier is residential use at certain densities. ODFW has recommended overall residential densities for Peripheral Big Game at one dwelling unit per 40 areas (*sic*); for Major Big Game Range at one dwelling unit per 80 acres. Therefore, to restate the conflict: overall residential density greater than one dwelling unit/40 acres in Peripheral Range and one dwelling unit/80 acres in Major Range conflicts with habitat for big game." App-37.

This legislative history matches the policy as it emerged in the plan. In each instance the reference is to "overall residential density." In neither instance is there a reference to minimum lot size for anydwelling, which would have been a very easy metric to state if that had been the intent communicated by the ODFW to the County.

b. The **Working Paper Addendum** continues the discussion of the 80/40 overall density standard with negative language about a minimum lot size

standard for any dwelling.

> "Although this is a useful index, officials of the ODFW stress the fact that a mere 'numbers game' is not the optimum manner to deal with conflicts to the Big Game Range resource. While overall densities are important indicators of conflict, the manner in which these densities occur can either create worse conflict or reduce that which already exists." App-40.

Rejecting the numbers game in favor of the manner that densities occur is fundamentally inconsistent with a minimum lot size standard for any dwelling.

c. The **acknowledgment reports** are also legislative history. The July 19, 1984 Staff Report summarizes ODFW and 1000 Friends objections to Policy 11. App-52. That summary sheds no light on how to operationalize "overall."

4. Code language a context.

Ambiguities in the plan may be resolved by reference to the implementing code, which is a part of the plan. *McKay Creek Valley Assn. v. Washington County*, 104 Or App 690, 692, 803 P2d 753 (1990)(The code is a part of the plan and can properly be considered to resolve an ambiguity in the plan.)

In this instance Policy 11 entered and exited acknowledgment without change, but the code implementing that plan policy was required to be amended. Acknowledgment review required implementing Policy 11 by amending the standards for Big Game habitat to <u>either</u> require larger minimum lot sizes in resource zones <u>or</u> contain clustering requirements. The County chose the latter approach, and that choice was acknowledged. See discussion in First

Assignment.

If the LCDC understood Policy 11 as setting a minimum lot size standard across the board for any dwelling in Big Game habitat, then the DLCD would not have afforded the County the option to choose clustering standards versus minimum lot sizes in the implementing code. In that circumstance only a minimum lot size would ensure the plan and its implanting regulations are in sync.

5. Summary of text, context and legislative history.

Text, context and legislative history indicate that Policy 11 does not state a minimum lot size standard for a dwelling. Its implementing code also does not state a minimum lot size. "Overall residential density" connotes an averaging or considering all the habitat; "minimum lot size" does not.

6. The Hearings Official erred by reading Policy 11 to create a minimum lot size standard for a dwelling.

a. The Hearing Official erroneously relied on the Douglas County code to give meaning to Policy 11. App-5. In *Wetherell v. Douglas County*, 44 Or LUBA 745, 756 fn 4 (2003), LUBA interpreted this code provision:

> "All quasi-judicial requests for dwellings or land divisions that will result in eventual placement of a dwelling, or administrative review of nonresource dwellings (ORS 215.213(3)) which could result in an average density of greater than 1 dwelling per 40 acres, shall be referred to the Oregon Department of Fish and Wildlife (ODFW) for review and recommendation. If the ODFW cannot recommend approval or suggest acceptable mitigation measures, a Variance, pursuant to Article 40, shall be required."

LUBA read the code provision as applying the 40-acre minimum lot size to the 500-acre development proposal, not to a 1,121,378-acre part of the County. There are many reasons why *Wetherell* has no utility in interpreting Policy 11. Starkest perhaps is that the Douglas County provision is not qualified by "overall," and, furthermore, Lane County has code language with clustering standards as an alternative to minimum lot size. More importantly, perhaps, an ambiguous Lane County plan policy must be interpreted based on text, context and legislative history of the county that enacted it, not legislation from a different county or another planet.

b. The Hearings Official reasoned that the subject property must meet the 80-acre standards until the County does the region-by-region analysis called for in Policy 11. App-7 para 1. This is a holding that Policy 11 imposes an 80-acre minimum lot standard until the County gets something different acknowledged. Again, this reads the term "overall" out of the policy, and it ignores the code was acknowledged to implement Policy 11 with clustering rather than a minimum lot standard. In addition, this line of reasoning reads a contingency into the acknowledgment that was not present in the language of the acknowledgment Staff Reports.

7. Petitioners' methodology is most consistent with the "overall residential density" standard in Policy 11 and demonstrates compliance.

Petitioners submitted evidence of overall density of residences in Major

Big Game Range using the county's own plan data. The methodology was:

> "1. Determine the acreage of the Major Big Game Range within Lane County's Rural Comprehensive Plan outside of Metro Plan, UGB's and Developed and Committed Areas.
>
> 2. Identify the number of dwellings that fall within that amount of acreage.
>
> 3. Determine the overall density of dwellings per acre."

The full Report appears at App-77 and EJK Rec 1744. It shows that there are 3,137 dwellings on 2,571,426 acres of Major Big Game Range in rural Lane County – outside the Metro Plan, UGBs and exception lands. The average is 1 dwelling per 819 acres. This is an overall density that demonstrates compliance with Policy 11.

Third Assignment

The Hearings Official erred in finding that Petitioners could not, consistent with Goal 2, aggregate plan data to demonstrate compliance with Policy 11, absent a plan amendment.

The Second Assignment describes how Petitioners had the local intergovernmental planning agency (Lane Council of Governments) aggregate and then map data on plan designations, Major Big Game Range acreages, and dwellings to arrive at density – the data that the County says is relevant to applying Policy 11. No one takes issue with the source or the quality of the data or the math. However, the Hearings Official appears to be saying that Goal 2 prevents the Petitioners from using those data to demonstrate compliance with

the plan policy density standard unless the data are first adopted by the County and acknowledged as a plan inventory. App-7 to 8.

This second, belt-and-suspenders theory for denial of the applications is the sole creation of the Hearings Official. It was not raised or briefed by any party below. Not having been briefed, it is not well thought out. It is just nonsense.

A. Preservation of Error

This basis for denial was not raised in the proceeding below by any party, as best Petitioners can determine. Because it appeared for the first time in the decision, the preservation rule does not apply.

B. Standard of Review

See First Assignment.

C. Argument

The Hearing Official's position is that if any meaning is given to "overall" other than the 80-acre minimum lot standard, then there is now way consistent with Goal 2 for an applicant to demonstrate compliance with Policy 11 absent a plan amendment:

> "Even if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that the applicant could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan." App-7.

The Hearings Official continued:

> "As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study." App-8.

The Hearings Official concluded:

> "The applicant's argument for approval hinges on its proposed interpretation of Policy 11, which allows a density calculation that is based on using the entire County (or a very large swath of the County) as the density denominator. As discussed above, that interpretation would do little if anything to protect the County's designated Major Big Game Range from conflicting residential development. It is thus inconsistent with Goal 5 and is not reasonable or correct.
>
> "Because the County has not yet completed its regional study, the only appropriate density denominator is the subject property. In this case, the subject property is only 13.28 acres, and the ODFW-recommended overall residential density of one dwelling per 80 acres is exceeded. An ESEE is required. Because no ESEE analysis has been provided, the Planning Director's approval must be reversed." App-8.

If the Hearings Official is saying that a finding of compliance with Policy 11 cannot be made absent a regional study that is incorporated into the plan that is legally incorrect. Policy 11 was acknowledged without any requirement for regional studies. "Overall residential density" has a meaning that can be operationalized with the plan as is. Because Policy 11 is acknowledged, there necessarily must be an adequate factual basis for the policy in the plan, in the form of an inventory or otherwise; otherwise Policy 11 would not have been acknowledged.

If the Policy must be applied, there must be an avenue for compliance without a new plan amendment. The Hearing Official's finding to the contrary conflicts with the status of Policy 11 as part of an acknowledged plan. It amounts to a collateral attack on the acknowledged plan. The Hearings Official is saying, in different words, that if Policy 11 means anything other than a minimum lot size then a new inventory and plan amendment is needed to put te policy into effect. Yet we already know, from the acknowledgment order, that the policy is effective and consistent with the goals.

Putting aside the "regional analysis," if Policy 11 requires looking at a county-wide density calculation, it must be possible to make that calculation with data that is available in the acknowledged plan. "Overall residential density" was acknowledged to mean something that can be determined from the factual base for the plan. To borrow from the Hearing Official's own logic, Goal 2 required the County to have an adequate factual basis for Policy 11 to gain acknowledgment. If the Hearings Official is putting an interpretation on the policy that prevents it from being applied without a plan amendment, then that suggests they are assigning the wrong meaning to the policy. Petitioners see only two exit strategies for giving meaning to Policy 11 without requiring a plan amendment. 1) Recognize that the policy was acknowledged as being implemented by the code. 2) Or recognize that the "overall" qualifier means comparing the average residential density with the 80-acre standard. Under

either view the Petitioners have proved up.

Finally, if Policy 11 means looking at the average density as being the measure of "overall," then all of the data Petitioners have submitted is inventory data or simple evidence. The summary of plan acreage is from the county's own data base. The location and acreage of the Major Big Game Range is from the county's plan inventory. All the Petitioners are doing is adding evidence of residential dwellings to the other two inventories. The Hearings Official has not explained why any of this effort runs afoul of Goal 2.

VI. CONCLUSION

For the reasons provided above, LUBA should reverse the Hearings Official's decision and order the county to approve the applications consistent with the Planning Director's approval of the forest template dwelling applications.

Dated: July 12, 2021.

Respectfully submitted,

/s/ Bill Kloos

Bill Kloos, OSB #811400
Attorney for Petitioners

Statement of Criteria

Lane Code 16.211(5) and (8)
House Bill 2225

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 2900, assessor's map 21–35–07–30, which is immediately north of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries.

   The property is approximately 12.05 acres and is vacant except for an existing roadway and powerlines largely within an east-west Bonneville Power Administration easement that transects the property.

   The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The entire property is designated Major Big Game by the Oregon Department of Fish and Wildlife (ODFW) Habitat Maps.

2. The subject application is one of two template dwelling applications approved by the Planning Director on the same date. The other application concerns a forest template dwelling proposal on a contiguous 13.28-acre parcel identified as tax lot 2800 of the same assessor's map, which is also designated Big Game Range.

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 20–05064) BY E.J.K. INVESTMENTS FOR A FOREST TEMPLATE DWELLING ON TAX LOT 2900, ASSESSOR'S MAP 21–35–07–30 IS REVERSED.

Justification for the Decision

The applicant is requesting approval to construct a single–family forest template dwelling in the F-2 zone as provided by Lane Code 16.211(5)(c).

A. Goal 5

The subject property is designated Major Big Game Habitat. Big Game Habitat is a Statewide Planning Goal 5 resource and thus is entitled to certain protections. Goal 5 (Open Spaces, Scenic and Historic Areas and Natural Resources) sets forth a process for evaluating, inventorying, and protecting significant natural resources, including big game habitat. The evaluation includes consideration of uses that conflict with the protected significant resource. In order to implement Goal 5, local governments are required to

adopt programs that will protect natural resources, and includes consideration and weighing the values of conflicting uses and the natural resource. OAR 660-015-0000(5).

ODFW has determined that the main use that conflicts with, and poses a significant threat to, big game habitat is residential development. Lane County's Goal 5 program includes the following comprehensive plan policy that implements Goal 5 and is intended to address this main conflict:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."* Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.[1]

The *Nimpkish* appeal referenced above involved a request for a forest template dwelling on a 10-acre property. The appellant in that case argued that a dwelling on a 10-acre property would violate the recommended density limitation (80 dwellings per acre), and thus violated Policy 11. The applicant asserted that Policy 11 did not apply to discrete land use applications for forest template dwellings. LUBA held that Policy 11 does apply to an application for a forest template dwelling.

As LUBA explained, the first sentence of Policy 11 acknowledges that the County is using the ODFW density recommendations as the baseline. The first sentence, and the County's Working Paper, also acknowledges that the County intended to study different regions of the County (most likely the County would be divided into 10 to 20 different regions in that study) to come up with a "residential carrying capacity." That information would then be used to determine appropriate zoning in the area. The petitioners in *Nimpkish* focused on the second sentence of Policy 11, arguing that the County is prohibited from allowing residential density above the ODFW-recommended limits without first conducting an Economic, Social, Environmental, and Energy (ESEE) analysis. LUBA agreed.

The applicant in this case does not challenge that holding *per se*. Rather, it argues that the addition of this one dwelling does not violate the ODFW-recommended limits, and therefore, an ESEE analysis is not required. That contention is based on the applicant's interpretation of the significance of the term "overall" in Policy 11.

---

[1] The ODFW recommendation for overall residential density in the Major Big Game Range Habitat is no more than 80 dwellings per acre. For Peripheral Big Game Range Habitat, the recommended density is no more than 40 dwellings per acre.

Anybody who has studied residential densities, either in urban or rural settings, understand that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings / acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county. The applicant argues that the denominator here should be the entire County, or at least a very large portion of the County, because Policy 11 uses the term "overall residential density."[2]

LandWatch relies on one sentence in LUBA's decision in *Nimpkish* in support of its argument that the subject property, not the entire County, must serve as the density denominator: "There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres." Slip op. 15.[3]

The applicant contends that LandWatch cannot rely on that statement because it was technically *dicta*. The issue addressed in that statement (whether the addition of the proposed dwelling would constitute a conflict that triggered an ESEE analysis) was not before LUBA in the *Nimpkish* appeal. The issue in that appeal was whether Policy 11 applied to a discrete application for a forest template dwelling. The Hearings Official had held that it did not, and LUBA overturned that ruling. On that basis, the decision was remanded. LUBA was not called upon to address (and the parties presumably did not brief) the issue of what the appropriate density denominator would be once it was determined that Policy 11 applied.

It may well be that LUBA's statement in *Nimpkish* that "the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres" was *dicta*. That said, even if that statement was *dicta* and, thus, is not clear precedent in this case, it seems clear that LUBA believed that, if Policy 11 applied, the appropriate density denominator would be the subject property. In other words, if the issue had been before LUBA, we now know how LUBA would have ruled. However, because LUBA made that statement somewhat in passing, it did not conduct a full interpretation of Policy 11 to reach that conclusion. That analysis is now provided here.

Text

The applicant argues that the term "overall" in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County

---

[2] Applicant submitted evidence supporting his conclusion that the "overall density" when viewed at the County level, is well below the ODFW recommended "overall density." He also submitted documentation regarding the residential density of smaller subsets of the County; *i.e.*, the area east of Interstate 5 and the area west of Interstate 5; regions divided by highway corridors; and watershed regions. All sets of numbers confirmed his theory that the residential densities are well below the ODFW recommended "overall" densities. Thus, the addition of one dwelling would not result in a Goal 5 conflict.

[3] LUBA then went on to make the following legal conclusion: "Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.'"

on the east or west side of Interstate 5. LandWatch points out that the use of the term "overall" in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of "overall residential density." The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to "determine the allowable number of residential dwelling units within regions of the county." The next sentence does not use the "overall" modifier: "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal.

Context/Caselaw

RCP Policy 11 implements Goal 5. Accordingly, Policy 11 must be interpreted in a manner that is consistent with the Goal that it implements. As stated above, Goal 5 is aimed at preserving and protecting significant natural resources, such as big game habitat. The evident purpose of applying a residential density limit is to minimize human impacts to wildlife habitat. LandWatch asserts that the applicant's proposed interpretation would effectively permit large areas protected as wildlife habitat to be developed at densities that destroy its value as wildlife habitat.

In a 2003 LUBA appeal, Douglas County made an interpretation of its code that is similar to the interpretation of Policy 11 that the applicant presents in this appeal. *See Wetherell v. Douglas County*, 44 Or LUBA 745 (2003). The application in that case was for approval of a site plan for a destination resort. The property fell within an area designated as Peripheral Big Game Habitat. The request was therefore subject to a code provision (LUDO 3.32.300) that limited residential density to one dwelling unit per 40 acres.[4] As is the case here, the code provision did not explicitly state the appropriate density denominator. The County determined that the appropriate density denominator under the applicable code provisions was an area of the county that included 1,121,378 acres.[5] On appeal to LUBA, the opponent argued that the proper denominator was a 500-acre portion of the subject 2,700-acre ranch. The Hearings Official sets forth LUBA's analysis in that case at length, because the analysis is the exact same analysis the Hearings Official adopts in this appeal:

> "LUDO 3.32.200 provides no express denominator for the density standard, so the county's view that the pertinent denominator is a 1,121,378-acre area of the county is not necessarily inconsistent with the text of LUDO 3.32.200. However, we agree with petitioners that that view is inconsistent with the purpose of the

[4] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[5] The area the county used was the Calapooya and Elk Creek geographic Planning Advisory Committee area.

density standard, to "preserve identified peripheral habitat areas." See n 4. Neither intervenors nor the county's decision provides any basis to question petitioners' view that the purpose of the density standard is to preserve big game wildlife habitat by minimizing human impacts on that habitat, specifically by limiting the density of residential uses. Under the county's view, large areas of Goal 5-protected wildlife habitat may be developed at residential densities that significantly exceed one dwelling per 40 acres, as long as the average density over a much larger area of the county does not exceed that standard. As the county interpreted LUDO 3.32.300, it will have no regulatory effect at all until over 28,000 dwellings are built in the 1,121,378-acre PBGHO. At that point, its regulatory effect would change from nonexistent to exceedingly harsh, because it would effectively impose a residential building moratorium throughout the PBGHO. * * * It seems exceedingly unlikely to us that anyone who thought about how LUDO 3.32.300 would be implemented could possibly have intended that it work in that way.

* * *

A construction of LUDO 3.32.300 that is far more consistent with its apparent purpose and the language of LUDO 3.32.300 is that the denominator for the one dwelling per 40-acre density limit is the subject property, in this case the 500 acres that make up the proposed destination resort.

* * *

We recognize that a density standard that permitted selection of some larger local area, i.e., a local area larger than the 500-acre subject property but smaller than the 1,121,378-acre applied here, might provide the county with desirable flexibility to permit clustered residential development in areas with lesser habitat value if some way could be found to further limit or bar residential development altogether in areas with high habitat value. However desirable that flexibility might be, as written, LUDO 3.32.300 does not permit application of the one dwelling unit per 40 acres standard over an area that is larger than the property that is the subject of the application. If the county wishes the density limit to apply in some other manner, it must amend LUDO 3.32.300 to achieve that result. In sum, the county's view that the denominator required by the LUDO 3.32.300 density standard is a 1,121,378-acre portion of the county is not reasonable and correct."[6]

The Hearings Official believes that the applicant's proposed interpretation in this case is similar to the position taken by Douglas County in *Wetherell*.[7] LUBA rejected that

[6] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[7] The applicant attempts to distinguish *Wetherell—Wetherell* did not involve a forest template dwelling application; *Wetherell* interpreted a code provision, not a comp plan policy; and the Douglas County code provision at issue did not include the term "overall." While the posture of that case was a bit different, the policy considerations and analysis are the same. The term "overall" in Policy 11 refers to the ODFW

interpretation, and the Hearings Official feels certain that LUBA would, for the reasons set forth above, also reject the applicant's interpretation in this case. Until the County conducts its region-by-region analysis, which is called for in Policy 11, the density denominator must be the subject property.

The applicant may assert that this approach is overly restrictive because it essentially means that a forest template dwelling proposed on a property smaller than 80 acres in the Major Big Game Habitat area will always be deemed to conflict with the resource. The Hearings Official responds that the determination of a conflict does not result in the development being prohibited. It merely requires that an ESEE analysis be conducted to determine whether the additional dwelling would harm the protected resource.

Summary

The subject property in this case is only 13.28 acres in size. If the forest template dwelling were approved, the residential density would exceed the ODFW recommended density of one dwelling per 80 acres, and, absent an ESEE analysis, would violate Policy 11.

B. Goal 2

Even if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that the applicant could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan.

Statewide Planning Goal 2 (Land Use Planning) requires that land use decisions be based on an "adequate factual base." There are circumstances where that requirement demands that the "factual base" upon which the quasi-judicial decision is based be found in the comprehensive plan. For instance, both LUBA and the Oregon Court of Appeals have held that for purposes of Statewide Planning Goal 10, an inventory of buildable lands that is relied upon for a quasi-judicial decision must first be adopted as part of the comprehensive plan. *See D.S. Parklane Development Inc. v. Metro*, 165 Or App 1, 994 P2d 1205 (2000); *1000 Friends of Oregon v. City of Dundee*, 203 Or App 207, 216, 124 P3d 1249 (2005); *Lengkeek v. City of Tangent*, 50 Or LUBA 367 (2005); *Lengkeek v. City of Tangent*, 52 Or LUBA 509, 515 (2006). This requirement reflects the emphasis in Goal 2 on consistency and predictability. "Citizens must be able to rely on the fact that the acknowledged comprehensive plan and information integrated in that plan will serve

---

density recommendation, which is apparently stated as an "overall residential density" standard. As LandWatch points out, the second sentence of Policy 11 does not use the "overall" modifier. Accordingly, this case is similar to *Wetherell*, where the text of the code did not spell out the density denominator. The context provided by the policies furthered by Goal 5 protections are the same in both cases--in *Wetherell*, those policies were set forth in the code's purpose section; in this case, the Goal 5 policies are relevant to the interpretation because Policy 11 implements Goal 5 and must be interpreted in a manner that is consistent with Goal 5. An interpretation that does nothing to protect big game habitat from conflicting residential uses is not consistent with Goal 5.

as the basis for land use decisions, rather than running the risk of being 'sandbagged' by government's reliance on new data." *1000 Friends of Oregon v. City of Dundee*, 203 Or App at 216.

The question here is whether the information provided by the applicant is regular, run of the mill evidence that can be relied upon, or whether it is more in the vein of a buildable lands inventory, which must be incorporated into the comprehensive plan, so that future applicants are using the same data.

As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study. Until that work is completed, Policy 11 makes clear, any density above the ODFW recommended density limits "shall be considered to conflict with Goal 5" and will be allowed only following an ESEE analysis.

The ideal solution is for the County to conduct the regional studies that Policy 11 and the Working Paper call for. Arguably, an applicant could perform all or some part of that work. However, if it were relied upon by an applicant to justify foregoing the ESEE analysis called for in Policy 11, then the documentation would have to first be adopted into the comprehensive plan.[8]

Conclusion

The applicant's argument for approval hinges on its proposed interpretation of Policy 11, which allows a density calculation that is based on using the entire County (or a very large swath of the County) as the density denominator. As discussed above, that interpretation would do little if anything to protect the County's designated Major Big Game Range from conflicting residential development. It is thus inconsistent with Goal 5 and is not reasonable or correct.

Because the County has not yet completed its regional study, the only appropriate density denominator is the subject property. In this case, the subject property is only 13.28 acres, and the ODFW-recommended overall residential density of one dwelling per 80 acres is exceeded. An ESEE analysis is required. Because no ESEE analysis has been provided, the Planning Director's approval must be reversed.

Respectfully Submitted,

Anne C. Davies
Lane County Hearings Official

[8] This Goal 2 discussion is not necessary for the Hearings Official's conclusion in this appeal. The Policy 11 interpretation set forth above stands on its own. If, on appeal, LUBA disagrees with the Goal 2 discussion, it could still affirm the Hearings Official's decision.

NOTICE OF PENDING LAND USE DECISION BY THE LANE COUNTY PLANNING DIRECTOR

Mailing Date:	JAN 27 2021
Department File:	509-PA20-05064
Owner/Applicant:	E.J.K. Investments
Agent:	Kim O'Dea – Law Office of Bill Kloos
Map & Tax Lot:	21-35-07-30-02900
Address:	N/A
Size:	12.05 +/- Acres
Base Zone:	Impacted Forest Lands (F-2)
Combining Zone:	Airport Safety Combining Zone (/AS)
Comprehensive Plan:	Lane County Rural Comprehensive Plan (/RCP)

You own or occupy property near the above referenced property that is the subject of a land use application and pending decision for conditional **Approval** of this application by the Lane County Planning Director.

Notice to mortgagee, lien holder, vendor or seller: ORS Chapter 215 requires that if you receive this notice, it must be forwarded to the purchaser.

The purpose of this notice is to inform you about the proposal and pending decision, where you may receive more information and the requirements if you wish to appeal the pending decision by the Director to the Lane County Hearings Official. Any person who is adversely affected or aggrieved or who is entitled to written notice may appeal the decision by filing a written appeal in the manner and within the time period as provided below. Mailing of this notice to you precludes an appeal directly to the Land Use Board of Appeals.

PROPOSAL: A request for Director Approval of dwelling in the Impacted Forest Lands (F-2) Zone pursuant to the 'Template Dwelling' provisions of Lane Code 16.211(5) and (8) and House Bill 2225.

Enclosed is a vicinity map and site plan that shows the proposed location of the dwelling.

The proposed use that could be authorized by approval of the land use application is: One single family dwelling on the subject property.

The application, all documents and evidence relied upon by the applicant, the applicable criteria, and a copy of the Lane County Planning Director's report can be made available electronically at no cost, and copies will be provided at reasonable cost. The Lane County Land Management Division representative to contact is **Shawna Adams** at **(541) 682-8904** or **shawna.adams@co.lane.or.us**.

This decision will become final at 4 P.M. on FEB 08 2021 unless before this time a completed **APPLICATION FOR AN APPEAL OF A DECISION BY THE PLANNING DIRECTOR** form is submitted to and received by the Lane County Land Management Division. **This form is enclosed and must be used if you wish to appeal this decision. To complete this form and appeal the decision:**

1. Fill in the required information along with all of the materials and information required in the appeal form, the appeal fee, and all materials required by LC 14.080(1).
2. Submit the completed appeal to the Planning Director so that the Director receives it prior to the date and time that the decision becomes final (see above deadline). The Director will reject an appeal if it: (a) is not received prior to the date and time that the decision becomes final or (b) is incomplete.
3. To be accepted, appeals must satisfy all the requirements of Lane Code 14.080(1). A Type II decision issued by the Director for which a hearing has not been held may be appealed by a person who is entitled to written notice or any person who is adversely affected or aggrieved by the application.

Failure to raise an issue in a hearing—in person or in writing—or failure to provide statements of evidence sufficient to afford the Approval Authority an opportunity to respond to the issue precludes raising the issue in an appeal to the Land Use Board of Appeals (LUBA).

EXHIBIT A

CONDITIONS OF APPROVAL
509-PA20-05064

All of the following conditions are binding on the applicant or successive owner(s) of the parcel or successive applicant(s) who exercise this approval action.

1. Approval of 509-PA20-05064 is valid for a four-year period from the final date of approval unless and extension is granted in accordance with Lane Code Chapter 14 provisions in effect at the time the request is made.

2. The dwelling must be located within the reduced 70 x110-foot approved home site area shown in **Exhibit C**.

3. The dwelling must be located at least 30 feet away from any ravine, ridge or slope greater than 40 percent.

4. The subject properties are located within the Airport Safety Combining Zone (/AS) and the Transitional Surface of the Oakridge Airport. Development shall comply with the applicable requirements of LC 16.246. Pursuant to LC 16.246(3)(a) and (5)(e), no structure or object shall be erected, altered, allowed to grow or be maintained in such a manner as to penetrate the Transitional Surface.

The following conditions shall be met prior to the expiration date in condition #1 and prior to approval of a building or placement permit for a dwelling, septic system, or accessory structure. Failure to meet conditions of approval as specified prior to the expiration date, and if no extension has been granted prior to that date, shall invalidate this approval, and the development rights conditionally allowed by this planning action shall cease:

5. Complete, have notarized, and record the enclosed *Farm and Forest Management Agreement* with an attached "Exhibit A" depicting the legal description of the property (which must be recorded together with the Agreement at the Lane County Deeds and Records office).

6. Submit a stocking survey report for the subject parcel prepared by a qualified forester to the Lane County Assessor. Submit a copy of the stocking survey report to Lane County Land Management Division with evidence of receipt by Lane County Assessment and Taxation.

7. Obtain Lane County Facility Permit to verify the shared access easement approach to Airport Road is adequate to support a shared approach to multiple properties/dwellings as proposed. For more information about Facility Permits, contact 541-682-6902 or visit: https://lanecounty.org/ government/ county_departments/ public_works/right-of-way_permits/facility_permits/.

8. Any private access easements serving the subject property must comply with LC 15.055(4), (5), and (7), specifically including provisions for utilities. Submit a copy of the recorded access easement(s) demonstrating compliance with this requirement and specifically including documentation verifying legal right of use for any segments coinciding with BPA access and transmission line easements. This can be satisfied by providing a copy of BPA approval or court rulings.

9. Improve the existing roadway access Airport Road and the dwelling site to the minimum standards of LC 16.211(8)(e) and the applicable standards of Lane Code Chapter 15. The shared access easement road between Airport Road and the easternmost base of the driveway loop must be improved to road standards, with turnarounds spaced not more than 500 feet. Between the shared access easement road and the home

site, the driveway loop must be improved to driveway standards with a turnaround. As specified in LC 16.211(8)(e), Oregon Registered Professional Engineer or fire district certifications must be provided for the road and driveway grades that exceed eight percent and for any culverts or bridges.

10. Submit written verification from the Hazeldell Rural Fire Protection District, or written certification from an Oregon Registered Professional Engineer, stating that the route of access for firefighting equipment from the fire station to the building site, across public roads, bridges, and driveways comply with and meet the construction standards Lane Code 16.211(8)(e) and the Fire District standards.

11. Physically establish the primary and secondary fuel breaks in compliance with Lane Code 16.211(8)(c)(i). These fuel breaks shall be maintained in perpetuity. The minimum primary safety zone surrounding the proposed dwelling shall be at least 30 feet plus the Additional Safety Zone Down Slope as applicable. The minimum secondary fuel breaks surrounding the primary safety zone shall be at least 100 feet to the extent this can be established on lands owned or controlled by the owner. Primary fuel breaks, including any Additional Safety Zone Down Slopes, must be fully accommodated on site. The approved preliminary site plan in **Exhibit C** must be revised accordingly.

12. Provide evidence to the Planning Director that the domestic water supply is from a source authorized in accordance with the Water Resources Department's administrative rules for the appropriation of ground water or surface water and not from a Class II stream as defined in the Forest Practices Rule (OAR Chapter 629). This can be satisfied by providing a copy of the Well Log for the property that complies with the requirements outlined in Lane Manual Chapter 9.160, specifically a five-hour flow test.

13. Upon completion of **conditions #5 through #12**, the applicant shall complete and submit a Land Use Application form to Verify Compliance with Conditions of Approval, with the required processing fee. **Attach to this form a copy of:**

- Signed, notarized, and recorded Farm Use and Forest Management Agreement and description of property, along with all required exhibits;
- Recorded shared access easement(s) with BPA right of use documentation;
- Approved facility permit;
- Forest stocking survey with evidence of receipt from the County Assessor;
- Well log or well constructor's report and pump test that complies with the Lane Manual 9.160;
- Verification letter from the Hazeldell Rural Fire Protection District, or written certification from an Oregon Registered Professional Engineer, regarding adequacy of access route and the adequacy of the constructed road and driveway improvements;
- A revised final Site Plan that conforms with the approved plan, drawn to scale, including the same information, and meeting other minimum standards of the Land Management Division. These plans shall show the primary and secondary fuel breaks surrounding the proposed dwelling as required by Lane Code 16.211(8)(c)(i), the entire access between Airport Road and the home site, surfacing widths, turnouts, turnarounds, bridges, culverts, airport surface, easements, including BPA easements, transmission lines etc.

14. As part of the Verification of Conditions process, the access road, driveway and fuel breaks must be field inspected by Planning Office staff to verify that requirements stated in **conditions #3, #9, and #11** have been met. Failure to meet minimum fuel break and/or driveway and/or grade standards as in LC 16.211(8)(e) and (c) upon first inspection may require an additional application for fuel break and road inspection, with the applicable fee, at the determination of the Planning Director.

15. Upon completion of Verification of Conditions, submit a building permit to verify that the construction of the dwelling meets current Oregon Structural Specialty Code application for the proposed dwelling, with the

appropriate deposit fee. Contact the Building Program at 541-682-4651 and the On-Site Wastewater Program at 541-682-3754 with questions regarding building and sanitation requirements.

16. In the building or placement permit application submittal, the applicant shall submit a site plan demonstrating that the parcel configuration, and the proposed dwelling, driveway, and septic system, are located consistent with the final approved site development plan, except as authorized by the Planning Director. Per Lane Code Chapter 14, modifications to the final approved site plan not within the scope of the original approval may be subject to a new Type II or Type III Modification of Approval.

The following condition shall be met prior to building permit issuance for above ground construction.

17. Prior to building permit submittal, the applicant must submit documentation demonstrating compliance with LC 16.246(3)(a) and (5)(e), with the maximum height limitation to be indicated on the building permit plans. Preliminary calculations under **Finding 28** indicate a single-story structure is feasible.

18. Prior to building permit submittal, the property owner must complete a FAA Form 7460-1 for the proposed dwelling and return to Seth Thompson, Aviation Planner at ODA and receive a Letter of Determination for the proposed construction as required by OAR 738-070-0060. Submit a copy of the completed form and letter of determination to Lane County Land Management Division at the time of building permit.

The following condition shall be met prior to approval for legal occupancy of the proposed dwelling.

19. The proposed dwelling shall meet the following requirements, to be indicated on the building permit plans and verified by the Lane County Building Official:
    a. All buildings or structures with chimneys shall have a spark arrester on all chimneys.
    b. Wood shingles, wood shakes, or shingles made from wood products for use as roof covering materials for dwellings and accessory structures are prohibited. Such use is a violation of ORS 215.730(1)(b)(A) and subject to civil penalties as contained in Chapter 5, Lane Code. This provision applies to new roofs, reinstallation of roofs, and repair of roofs.

The following conditions are provided for informational purposes and shall be fulfilled as they apply to the proposed development:

20. The applicant is responsible for complying with any applicable local, state, and federal laws, including Oregon Department of State Lands (DSL) and/or Army Corps of Engineers (ACOE) wetland regulations and Oregon Department of Aviation (ODA) and Federal Aviation Administration (FAA) requirements. See **Exhibit H** for more information about ODA and FAA requirements.

21. Future development must comply with the limitations and standards of the Airport Safety Combining Zone, LC 16.246.

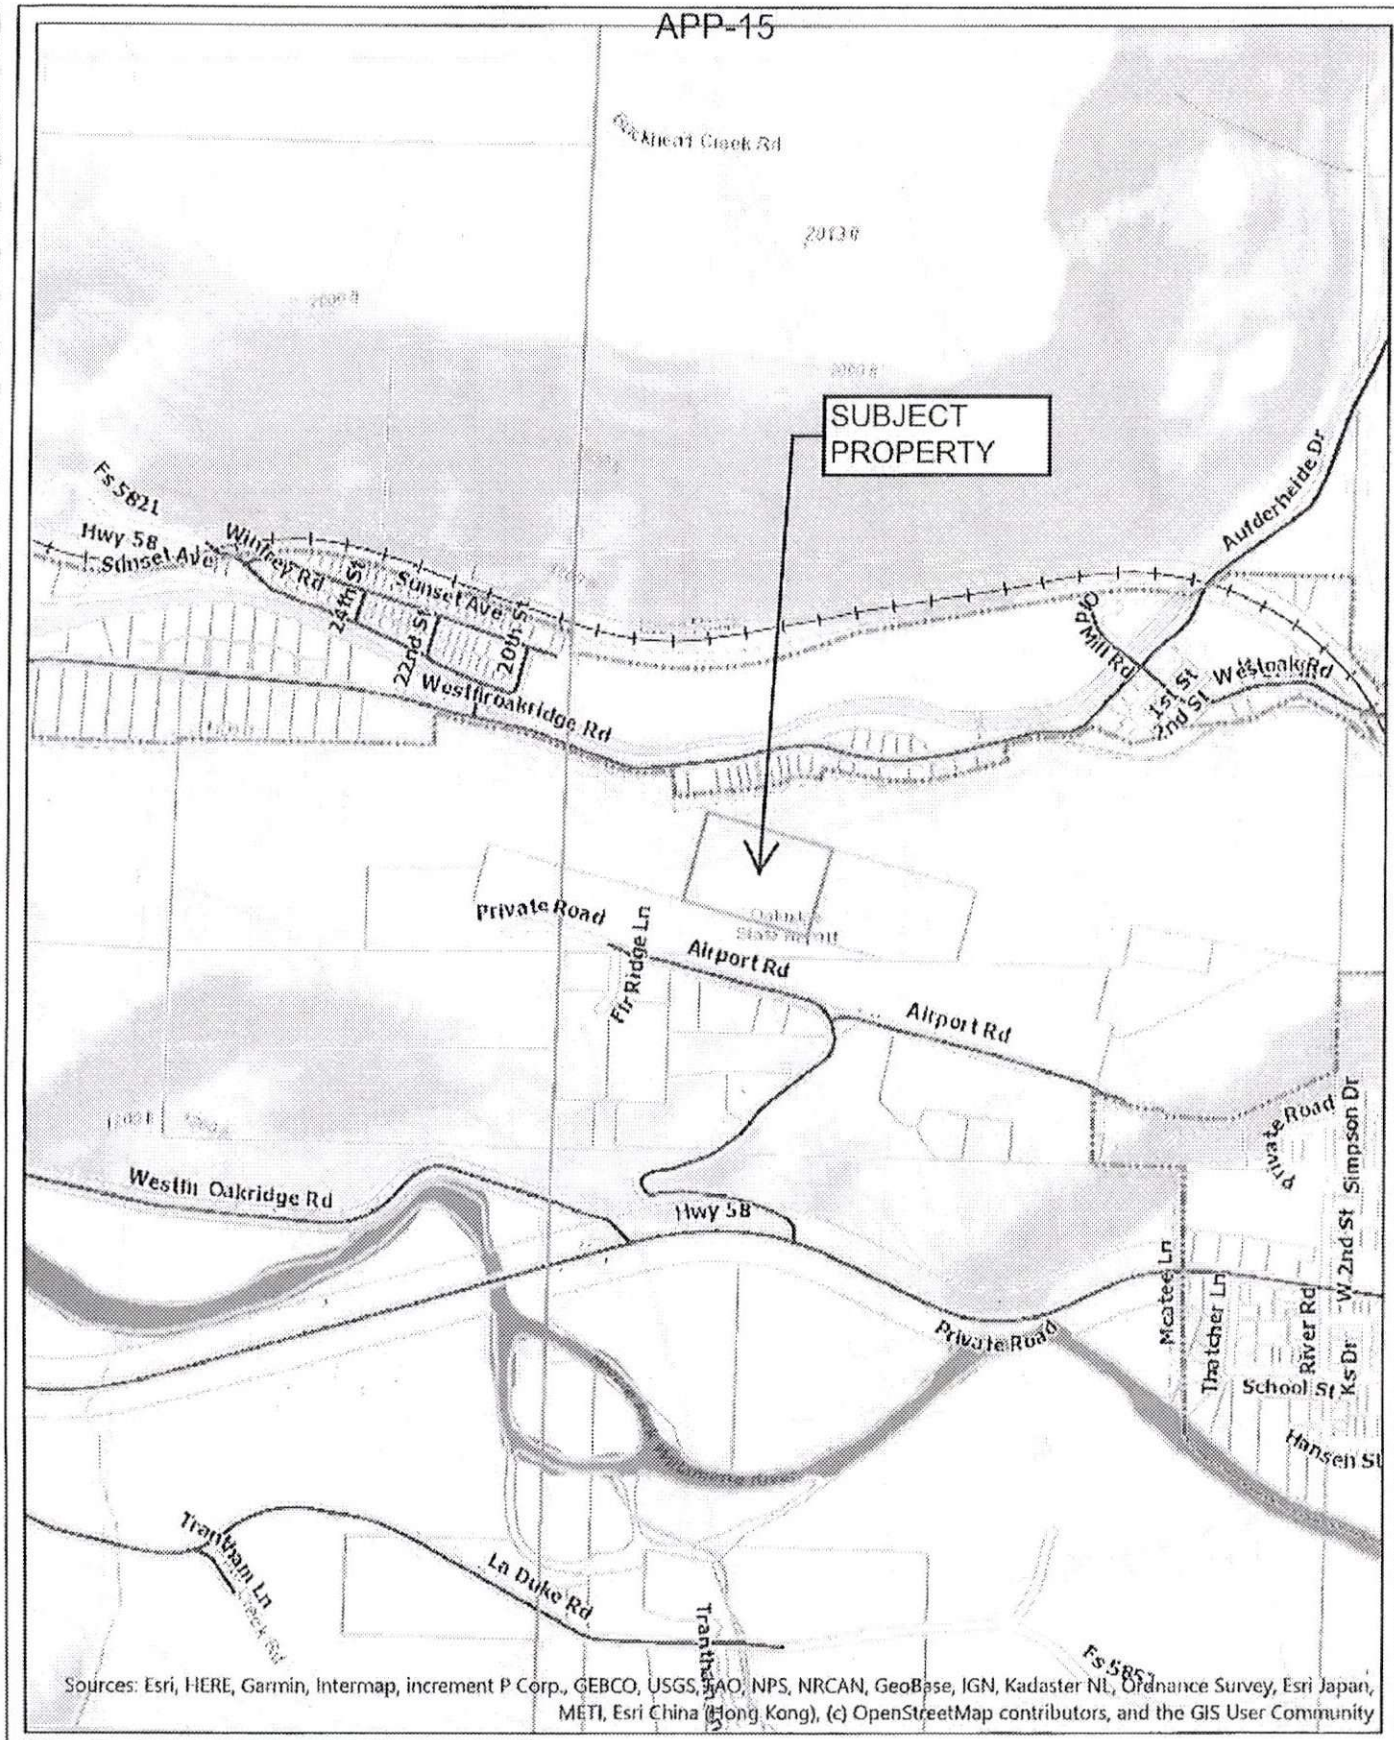
22. The applicant is responsible for procuring the necessary agreements with the Bonneville Power Association. Recent and past BPA communications indicate that portions of tax lots 2800 & 2900 are encumbered by an easement for high-voltage transmission lines and an access road easement. Per the BPA, these easements grant certain rights to BPA and limit the landowner's use within the easement area. A portion of BPA's rights include the right of ingress and egress, and the right to keep the easements free and clear of vegetation and buildings, sheds, fences, roads or any other type of structure. All activities planned within the BPA easement need to be reviewed by BPA prior to their occurrence. Do not build, dig or plant within the easement area without first contacting BPA. Requests for information regarding the process for reviewing proposed uses of the easement may be addressed to Janai Soto at jasoto@bpa.gov or 541/988-7409.

23. Per LC 16.005, excessive grading, excavation and clearing shall be avoided when detrimental to soil stability and the character of soils for fill and the characteristics of parcels or lots made usable by means of fill shall be suitable for the intended purpose.

24. The subject property is within a "High" and "Moderate" landslide susceptibility area according to DOGAMI. This designation may require a geotechnical report with submittal of a building permit. Please contact the Lane County Building Department at 541-682-4651 to confirm requirements.

25. Any future naming of the proposed shared access easement road is subject to the provisions of LC 15.305 through 15.335.

26. Storm water runoff from the subject property shall not be directed to the Lane County road right-of-way or into any Lane County drainage facility, including roadside ditches.



27. The owner shall plant a sufficient number of trees on the tract to demonstrate that the tract is reasonably expected to meet Department of Forestry stocking requirements at the time specified in Department of Forestry administrative rules. It is the owner's responsibility to document that the required tree planting was done in conformance with the criteria of Lane Code 16.211(5)(e). If the Department of Forestry determines that the tract does not meet those requirements and notifies the owner and the Assessor that the land is not being managed as forest land, the Assessor will remove the forest land designation pursuant to ORS 321.359 and impose the additional tax pursuant to ORS 321.372. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry. Information regarding Department of Forestry stocking requirements can be obtained through the Department of Forestry at (541) 935-2283 (in western Lane County); (541) 726-2501 (in eastern Lane County).

28. The following is provided for informational purposes as an **Advisory Notice**: Section 93.040(1) of the Oregon Revised Statutes requires the following statement to be included in the body of any instrument transferring or contracting to transfer fee title to real property:

"THIS INSTRUMENT WILL NOT ALLOW USE OF THE PROPERTY DESCRIBED IN THIS INSTRUMENT IN VIOLATION OF APPLICABLE LAND USE LAWS AND REGULATIONS. BEFORE SIGNING OR ACCEPTING THIS INSTRUMENT, THE PERSON ACQUIRING FEE TITLE TO THE PROPERTY SHOULD CHECK WITH THE APPROPRIATE CITY OR COUNTY PLANNING DEPARTMENT TO VERIFY APPROVED USES AND TO DETERMINE ANY LIMITS ON LAWSUITS AGAINST FARMING OR FOREST PRACTICES AS DEFINED IN ORS 30.930."

This Oregon Law disclosure requirement serves a constructive purpose. Approval of a residence for this property is contingent upon compliance with the conditions of the special use permit, and any future owners of the subject property need to understand and adhere to these conditions. This disclosure statement should alert the cautious and potential purchaser to inquire with the Lane County Land Management Division about the conditions of this special use permit.

BEFORE THE LANE COUNTY HEARINGS OFFICIAL

APPEAL OF A PLANNING DIRECTOR APPROVAL OF A TEMPLATE DWELLING WITHIN AN F–2 DISTRICT

Application Summary

On February 5, 2020, the applicant, Edward J. King, filed an application seeking to establish a dwelling in the Impacted Forest Lands (F–2) zone on tax lot 2800, assessor's map 21–35–07-30. PA 20-05066. The application was deemed complete on March 6, 2020. On January 27, 2021, the Director approved the application, and on February 8, 2021, a timely appeal was submitted by LandWatch Lane County (LandWatch).

On January 21, 2021, six days before the Planning Director issued their decision approving the subject application, the Oregon Land Use Board of Appeals (LUBA) issued its decision in *LandWatch Lane County v. Lane County (Nimpkish)*, ___ Or LUBA ___ (LUBA No. 2020-030, January 21, 2021). As discussed further below, LandWatch based its appeal in this case on LUBA's holding in *Nimpkish*. In its staff report to the Hearings Official, staff concurred with LandWatch as to the significance of *Nimpkish* to the resolution of this appeal, and recommended denial.

Parties of Record

Edward J. King (Kim O'Dea)
Michael Farthing
LandWatch Lane County (Lauri Segel; Sean Malone)

Jim McLaughlin

Application History

Hearing Date: March 4, 2021
(Record Held Open Until April 8, 2021)

Decision Date: April 19, 2021

Appeal Deadline

A party may request reconsideration of this decision by the Hearings Official, pursuant to Lane Code 14.080(1)(a)(iii) and (1)(b), by filing a notice of appeal within 12 business days after the date the notice of decision was mailed. If a party seeking further review chooses not to seek reconsideration, they must file an appeal directly with LUBA within the timelines set forth in state law. See LUBA's website for more information on appeal deadlines.

//////////////

Statement of Criteria

Lane Code 16.211(5) and (8)
House Bill 2225

Findings of Fact

1. The property subject to this application, hereinafter referred to as the "subject property," is located on tax lot 2800, assessor's map 21–35–07–30, which is immediately north of the Oakridge Airport and situated between the Westfir and Oakridge Urban Growth Boundaries.

   The property is approximately 13.28 acres and is vacant except for an existing roadway and powerlines largely within an east-west Bonneville Power Administration easement that transects the property.

   The subject property is designated Forest in the Lane County Rural Comprehensive Plan and is zoned Impacted Forest Land (F–2, RCP), consistent with that plan designation. The entire property is designated Major Big Game by the Oregon Department of Fish and Wildlife (ODFW) Habitat Maps.

2. The subject application is one of two template dwelling applications approved by the Planning Director on the same date. The other application concerns a forest template dwelling proposal on a contiguous 12.05-acre parcel identified as tax lot 2900 of the same assessor's map, which is also designated Big Game Range.

Decision

THE PLANNING DIRECTOR DECISION APPROVING THE REQUEST (PA 20–05066) BY EDWARD J. KING FOR A FOREST TEMPLATE DWELLING ON TAX LOT 2800, ASSESSOR'S MAP 21–35–07–30 IS REVERSED.

Justification for the Decision

The applicant is requesting approval to construct a single–family forest template dwelling in the F-2 zone as provided by Lane Code 16.211(5)(c).

A. Goal 5

The subject property is designated Major Big Game Habitat. Big Game Habitat is a Statewide Planning Goal 5 resource and thus is entitled to certain protections. Goal 5 (Open Spaces, Scenic and Historic Areas and Natural Resources) sets forth a process for evaluating, inventorying, and protecting significant natural resources, including big game habitat. The evaluation includes consideration of uses that conflict with the protected significant resource. In order to implement Goal 5, local governments are required to

adopt programs that will protect natural resources, and includes consideration and weighing the values of conflicting uses and the natural resource. OAR 660-015-0000(5).

ODFW has determined that the main use that conflicts with, and poses a significant threat to, big game habitat is residential development. Lane County's Goal 5 program includes the following comprehensive plan policy that implements Goal 5 and is intended to address this main conflict:

> *"Oregon Department of Fish and Wildlife recommendations on overall residential density for protection of big game shall be used to determine the allowable number of residential units within regions of the County. Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000. The County shall work with Oregon Department of Fish and Wildlife officials to prevent conflicts between development and Big Game Range through land use regulation in resource areas, siting requirements and similar activities which are already a part of the County's rural resources zoning program."* Lane County Rural Comprehensive Plan (RCP) Goal 5, Flora and Fauna Policy 11.[1]

The *Nimpkish* appeal referenced above involved a request for a forest template dwelling on a 10-acre property. The appellant in that case argued that a dwelling on a 10-acre property would violate the recommended density limitation (80 dwellings per acre), and thus violated Policy 11. The applicant asserted that Policy 11 did not apply to discrete land use applications for forest template dwellings. LUBA held that Policy 11 does apply to an application for a forest template dwelling.

As LUBA explained, the first sentence of Policy 11 acknowledges that the County is using the ODFW density recommendations as the baseline. The first sentence, and the County's Working Paper, also acknowledges that the County intended to study different regions of the County (most likely the County would be divided into 10 to 20 different regions in that study) to come up with a "residential carrying capacity." That information would then be used to determine appropriate zoning in the area. The petitioners in *Nimpkish* focused on the second sentence of Policy 11, arguing that the County is prohibited from allowing residential density above the ODFW-recommended limits without first conducting an Economic, Social, Environmental, and Energy (ESEE) analysis. LUBA agreed.

The applicant in this case does not challenge that holding *per se*. Rather, he argues that the addition of this one dwelling does not violate the ODFW-recommended limits, and therefore, an ESEE analysis is not required. That contention is based on his interpretation of the significance of the term "overall" in Policy 11.

---

[1] The ODFW recommendation for overall residential density in the Major Big Game Range Habitat is no more than 80 dwellings per acre. For Peripheral Big Game Range Habitat, the recommended density is no more than 40 dwellings per acre.

Anybody who has studied residential densities, either in urban or rural settings, understand that the determination of residential density depends on the denominator that is used. That is, the relevant residential density as stated by ODFW is a ratio (dwellings / acre). If the denominator of that ratio (area studied) is a discrete property, the density calculation will be very different than if the denominator is the entire county. The applicant argues that the denominator here should be the entire County, or at least a very large portion of the County, because Policy 11 uses the term "overall residential density."[2]

LandWatch relies on one sentence in LUBA's decision in *Nimpkish* in support of its argument that the subject property, not the entire County, must serve as the density denominator: "There is no dispute that the density of the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres." Slip op. 15.[3]

The applicant contends that LandWatch cannot rely on that statement because it was technically *dicta*. The issue addressed in that statement (whether the addition of the proposed dwelling would constitute a conflict that triggered an ESEE analysis) was not before LUBA in the *Nimpkish* appeal. The issue in that appeal was whether Policy 11 applied to a discrete application for a forest template dwelling. The Hearings Official had held that it did not, and LUBA overturned that ruling. On that basis, the decision was remanded. LUBA was not called upon to address (and the parties presumably did not brief) the issue of what the appropriate density denominator would be once it was determined that Policy 11 applied.

It may well be that LUBA's statement in *Nimpkish* that "the subject property with the proposed dwelling would exceed one dwelling unit per 80 acres" was *dicta*. That said, even if that statement was *dicta* and, thus, is not clear precedent in this case, it seems clear that LUBA believed that, if Policy 11 applied, the density denominator would be the subject property. In other words, if the issue had been before LUBA, we now know how LUBA would have ruled. However, because LUBA made that statement somewhat in passing, it did not conduct a full interpretation of Policy 11 to reach that conclusion. That analysis is now provided here.

Text

The applicant argues that the term "overall" in Policy 11 means that the density denominator must be the entire County, or in the alternative, the portions of the County

---

[2] Applicant submitted evidence supporting his conclusion that the "overall density" when viewed at the County level, is well below the ODFW recommended "overall density." He also submitted documentation regarding the residential density of smaller subsets of the County; *i.e.*, the area east of Interstate 5 and the area west of Interstate 5; regions divided by highway corridors; and watershed regions. All sets of numbers confirmed his theory that the residential densities are well below the ODFW recommended "overall" densities. Thus, the addition of one dwelling would not result in a Goal 5 conflict.

[3] LUBA then went on to make the following legal conclusion: "Accordingly, the proposed dwelling 'shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000.'"

on the east or west side of Interstate 5. LandWatch points out that the use of the term "overall" in Policy 11 relates only to the ODFW recommendation. Apparently, the ODFW density recommendations are stated in terms of "overall residential density." The first sentence of Policy 11 makes clear that the County was going to use those numbers (one dwelling per 80 acres in the Major Big Game habitat) to "determine the allowable number of residential dwelling units within regions of the county." The next sentence does not use the "overall" modifier: "Any density above that limit shall be considered to conflict with Goal 5 and will be allowed only after resolution in accordance with OAR 660-16-000." The second sentence of Policy 11 provides no express denominator for the density standard. So the text itself does not clearly answer the question presented in this appeal.

Context/Caselaw

RCP Policy 11 implements Goal 5. Accordingly, Policy 11 must be interpreted in a manner that is consistent with the Goal that it implements. As stated above, Goal 5 is aimed at preserving and protecting significant natural resources, such as big game habitat. The evident purpose of applying a residential density limit is to minimize human impacts to wildlife habitat. LandWatch asserts that the applicant's proposed interpretation would effectively permit large areas protected as wildlife habitat to be developed at densities that destroy its value as wildlife habitat.

In a 2003 LUBA appeal, Douglas County made an interpretation of its code that is similar to the interpretation of Policy 11 that the applicant presents in this appeal. *See Wetherell v. Douglas County*, 44 Or LUBA 745 (2003). The application in that case was for approval of a site plan for a destination resort. The property fell within an area designated as Peripheral Big Game Habitat. The request was therefore subject to a code provision (LUDO 3.32.300) that limited residential density to one dwelling unit per 40 acres.[4] As is the case here, the code provision did not explicitly state the appropriate density denominator. The County determined that the appropriate density denominator under the applicable code provisions was an area of the county that included 1,121,378 acres.[5] On appeal to LUBA, the opponent argued that the proper denominator was a 500-acre portion of the subject 2,700-acre ranch. The Hearings Official sets forth LUBA's analysis in that case at length, because the analysis is the exact same analysis the Hearings Official adopts in this appeal:

> "LUDO 3.32.200 provides no express denominator for the density standard, so the county's view that the pertinent denominator is a 1,121,378-acre area of the county is not necessarily inconsistent with the text of LUDO 3.32.200. However, we agree with petitioners that that view is inconsistent with the purpose of the

[4] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[5] The area the county used was the Calapooya and Elk Creek geographic Planning Advisory Committee area.

density standard, to "preserve identified peripheral habitat areas." See n 4. Neither intervenors nor the county's decision provides any basis to question petitioners' view that the purpose of the density standard is to preserve big game wildlife habitat by minimizing human impacts on that habitat, specifically by limiting the density of residential uses. Under the county's view, large areas of Goal 5-protected wildlife habitat may be developed at residential densities that significantly exceed one dwelling per 40 acres, as long as the average density over a much larger area of the county does not exceed that standard. As the county interpreted LUDO 3.32.300, it will have no regulatory effect at all until over 28,000 dwellings are built in the 1,121,378-acre PBGHO. At that point, its regulatory effect would change from nonexistent to exceedingly harsh, because it would effectively impose a residential building moratorium throughout the PBGHO. * * * It seems exceedingly unlikely to us that anyone who thought about how LUDO 3.32.300 would be implemented could possibly have intended that it work in that way.

* * *

A construction of LUDO 3.32.300 that is far more consistent with its apparent purpose and the language of LUDO 3.32.300 is that the denominator for the one dwelling per 40-acre density limit is the subject property, in this case the 500 acres that make up the proposed destination resort.

* * *

We recognize that a density standard that permitted selection of some larger local area, i.e., a local area larger than the 500-acre subject property but smaller than the 1,121,378-acre applied here, might provide the county with desirable flexibility to permit clustered residential development in areas with lesser habitat value if some way could be found to further limit or bar residential development altogether in areas with high habitat value. However desirable that flexibility might be, as written, LUDO 3.32.300 does not permit application of the one dwelling unit per 40 acres standard over an area that is larger than the property that is the subject of the application. If the county wishes the density limit to apply in some other manner, it must amend LUDO 3.32.300 to achieve that result. In sum, the county's view that the denominator required by the LUDO 3.32.300 density standard is a 1,121,378-acre portion of the county is not reasonable and correct."[6]

The Hearings Official believes that the applicant's proposed interpretation in this case is similar to the position taken by Douglas County in *Wetherell.*[7] LUBA rejected that

---

[6] Douglas County has a Peripheral Big Game Habitat Overlay (PBGHO) zone that is used to identify and preserve big game habitat. LUDO 3.32.300 provides the purpose, permitted uses, and density limitations within that overlay zone.

[7] The applicant attempts to distinguish *Wetherell—Wetherell* did not involve a forest template dwelling application; *Wetherell* interpreted a code provision, not a comp plan policy; and the Douglas County code provision at issue did not include the term "overall." While the posture of that case was a bit different, the policy considerations and analysis are the same. The term "overall" in Policy 11 refers to the ODFW

interpretation, and the Hearings Official feels certain that LUBA would, for the reasons set forth above, also reject the applicant's interpretation in this case. Until the County conducts its region-by-region analysis, which is called for in Policy 11, the density denominator must be the subject property.

The applicant may assert that this approach is overly restrictive because it essentially means that a forest template dwelling proposed on a property smaller than 80 acres in the Major Big Game Habitat area will always be deemed to conflict with the resource. The Hearings Official responds that the determination of a conflict does not result in the development being prohibited. It merely requires that an ESEE analysis be conducted to determine whether the additional dwelling would harm the protected resource.

Summary

The subject property in this case is only 13.28 acres in size. If the forest template dwelling were approved, the residential density would exceed the ODFW recommended density of one dwelling per 80 acres, and, absent an ESEE analysis, would violate Policy 11.

B. Goal 2

Even if the applicant were correct that the entire county (or even half of the County) could be used as the density denominator, the Hearings Official is doubtful that he could rely on the evidence presented in this appeal without first incorporating it into the comprehensive plan.

Statewide Planning Goal 2 (Land Use Planning) requires that land use decisions be based on an "adequate factual base." There are circumstances where that requirement demands that the "factual base" upon which the quasi-judicial decision is based be found in the comprehensive plan. For instance, both LUBA and the Oregon Court of Appeals have held that for purposes of Statewide Planning Goal 10, an inventory of buildable lands that is relied upon for a quasi-judicial decision must first be adopted as part of the comprehensive plan. *See D.S. Parklane Development Inc. v. Metro*, 165 Or App 1, 994 P2d 1205 (2000); *1000 Friends of Oregon v. City of Dundee*, 203 Or App 207, 216, 124 P3d 1249 (2005); *Lengkeek v. City of Tangent*, 50 Or LUBA 367 (2005); *Lengkeek v. City of Tangent*, 52 Or LUBA 509, 515 (2006). This requirement reflects the emphasis in Goal 2 on consistency and predictability. "Citizens must be able to rely on the fact that the acknowledged comprehensive plan and information integrated in that plan will serve

---

density recommendation, which is apparently stated as an "overall residential density" standard. As LandWatch points out, the second sentence of Policy 11 does not use the "overall" modifier. Accordingly, this case is similar to *Wetherell*, where the text of the code did not spell out the density denominator. The context provided by the policies furthered by Goal 5 protections are the same in both cases--in *Wetherell*, those policies were set forth in the code's purpose section; in this case, the Goal 5 policies are relevant to the interpretation because Policy 11 implements Goal 5 and must be interpreted in a manner that is consistent with Goal 5. An interpretation that does nothing to protect big game habitat from conflicting residential uses is not consistent with Goal 5.

as the basis for land use decisions, rather than running the risk of being 'sandbagged' by government's reliance on new data." *1000 Friends of Oregon v. City of Dundee*, 203 Or App at 216.

The question here is whether the information provided by the applicant is regular, run of the mill evidence that can be relied upon, or whether it is more in the vein of a buildable lands inventory, which must be incorporated into the comprehensive plan, so that future applicants are using the same data.

As explained above, Policy 11 acknowledges that the County has not yet quantified a residential density standard in the F-2 zone. As the Working Paper makes clear, DLCD anticipated that the County would conduct a regional study. Until that work is completed, Policy 11 makes clear, any density above the ODFW recommended density limits "shall be considered to conflict with Goal 5" and will be allowed only following an ESEE analysis.

The ideal solution is for the County to conduct the regional studies that Policy 11 and the Working Paper call for. Arguably, an applicant could perform all or some part of that work. However, if it were relied upon by an applicant to justify foregoing the ESEE analysis called for in Policy 11, then the documentation would have to first be adopted into the comprehensive plan.[8]

Conclusion

The applicant's argument for approval hinges on his proposed interpretation of Policy 11, which allows a density calculation that is based on using the entire County (or a very large swath of the County) as the density denominator. As discussed above, that interpretation would do little if anything to protect the County's designated Major Big Game Range from conflicting residential development. It is thus inconsistent with Goal 5 and is not reasonable or correct.
